Mr. COCKRAN. Not at all. The same dollar through which he had effected one exchange might come back to him in another exchange for another beefsteak. An increase in the number of dollars would do him no good—an increase in the sale of his beefsteaks would be of immense advantage to him. All trade is an exchange of commodities, and money is merely the wheel by which the exchange is usually accomplished. Wheels are not absolutely essential to motion, but they facilitate it. Money does not make trade, but it has wonderfully increased its volume by facilitating exchange. Wheels are of incalculable value to transportation, but to equip a car with more than are necessary to its movement would impede the progress of the vehicle and would be a waste of material. Money is a most important stimulus to trade, but to inflate its volume beyond the needs of commerce is a waste of capital which deranges enterprise and paralyzes industry. There is no profit in exchanging money against money; there is always a profit in exchanging commodities against commodities. If I exchange corn for shoes, the shoemaker makes a profit on the shoes which he sells me, but the exchange is equally profitable to me because it enables me to obtain the shoes for much less than it would cost me to produce them. From what I have said the gentleman who has interrupted me will understand that the prosperity of commerce depends not so much on the volume of money as on its soundness; that the exchange of commodities does not depend so much on the number of circulating wheels as on the efficiency with which each wheel discharges its functions.

Mr. LIVINGSTON. Will the gentleman let us hear him on the double function of money—fixing values as well as the medium of exchange?

Mr. COCKRAN. When the gentleman speaks of money as fixing values and as a medium of exchange he is really stating the same thing in different forms. Money could not be a medium of exchange if it were not a means of fixing or determining values.

Throughout the whole history of the world men have fixed the values of their commodities by fixing the rates at which they would exchange all commodities for some one commodity; that is to say, by a system of equivalence—on the principle that things which are equivalent to the same thing are equivalent to each other. The selection of one commodity among the products of human labor as the standard by which the value of all others should be measured does not in any way affect the value of that particular commodity.

Water is universally accepted as the standard of gravity; that is to say, the substance by comparison with which the weight of any other substance may be measured; but that fact does not increase the weight of any given quantity of water. Value can be measured by gold, silver, copper, iron, lead, or any other commodity. If, for instance, a given quantity of lead be equal in value to five bushels of corn, and the same quantity of lead be equal in value to two bushels of wheat, it is plain that two bushels of wheat are as valuable as five bushels of corn. The equivalence of corn and wheat is thus established with certainty and simplicity. The fact that the value of both cereals was ascertained by comparing them with lead did not in any way affect the value of that metal. If our whole commerce were limited to domestic trade values could be measured by silver as well as by gold. But, since the prices of our staple products are fixed by the prices which they command in markets where values are measured by gold, the crop of the American farmer must necessarily be measured by the metal which is the international standard, no matter what standard of value we had established for our local trade.

Mr. LIVINGSTON. And the crops should be paid for in gold, then.

Mr. COCKRAN. They are always paid for in gold. If the farmer were forced to measure his own product in a commodity of inferior value, while the value of the article he needed was measured in a commodity of superior value, he would be the victim of a monstrous robbery. The only system of legislation which has sanctioned robbery, so far as I know, is the tariff, and that, I am sorry to say, continues oppressive and unjust, notwithstanding the election of this House, which was pledged to its overthrow. [Laughter.]

Mr. Chairman, the purpose of ascertaining the value of commodities is to fix the rates at which they should be exchanged. Money is the means by which values are determined, and that fact makes it the medium of exchange. Trade in its natural form is simply the exchange of all commodities by means of one commodity which we call money. Nobody has ever pretended that trade could be created by government. It can be restricted by government, it can be prohibited by government, but it certainly can not be created by government. Now, money is a feature, an element of trade. In a healthy commercial system it can not,

therefore, be a creation of government; it must be the product of human industry.

Money is a very important feature in facilitating exchange, but as there is no profit in exchanging money against money, while there is a profit in exchanging commodities against each other, everyone engaged in trade seeks to place the largest amount of his capital in commodities and the smallest amount in money. This is the universal law which governs production in all its forms. Steam can not be generated without heat, but the aim of every person who maintains a steam engine is to use the minimum of fuel that will produce a given degree of force. Trade can not be conducted without money, but the aim of commerce is to use the smallest amount of money that will produce the freest circulation of commodities. The smaller the amount of his capital which a man is compelled to keep in the unprofitable form of money the larger the amount at his disposal for the purchase of commodities which yield profits and revenue.

Like all things human, trade is subject to sudden vicissitudes and disturbances. The volume of money necessary to the transaction of business varies with the conditions of commerce. If every trader were forced to keep in readiness the full amount of money which he might at any time need a very large proportion of his capital would yield no profit. In order to economize the amount of money necessary to the operation of trade many men combine their funds in one place of deposit for the double purpose of securing their safekeeping and of increasing their efficiency. Each man's deposit is more than he needs when trade is dull and less than he requires when trade is active. In sudden emergencies one man can borrow from the funds deposited by other men, paying interest for the use of the borrowed moneys. When the conditions which made him a borrower have passed away he repays the loan and restores his own deposit. Other men borrow from his funds when confronted with similar emergencies. The interest paid on each loan is the compensation earned by the depositor for its services in keeping safely the moneys intrusted to it and in apportioning the sums that may be borrowed by each contributor to the fund. This is the operation which we call banking, and which, in its last analysis, is simply a scheme for "pooling" deposits so as to release from the unprofitable condition of money the largest amount of capital that is consistent with the safety of commerce and the maintenance of credit.

By another device bankers have still further economized the amount of capital which traders must keep in the form of money. A bank must always maintain in its vaults as a reserve the funds necessary to meet such of its obligations as may be presented for redemption, and the science of banking is the capacity to correctly estimate the amount of its deposits which may be at any time withdrawn. Money kept as a reserve is not available for loans. The capacity of a bank to accommodate borrowers is therefore equal to the sum of its capital and its deposits, minus the amount kept as a reserve. If a bank be permitted to supplement its supply of money by the use of its own promissory notes it will be able to extend the facilities of its depositors, or, in other words, it will be able to afford them the same accommodation on a smaller deposit by each customer. These papers promises to pay, redeemable on demand, are themselves but a further economy of money. They are not issued for the benefit of the banks, but principally for the benefit of the depositors. Banks can not absorb all the profits of industry. They are the servants, not the masters of commerce. They can find profit only in ministering to the necessities of trade. To promote their efficiency is therefore to widen the scope of enterprise and broaden the field of industry.

For some reason, incomprehensible to me, the banks of this country have provoked violent animosities on the floor of this House which render extremely doubtful the prospects of any legislation intended to increase the scope of their facilities. What reasons have been assigned, Mr. Chairman, for refusing to allow banks to practice economies which are of vast importance to their depositors? I confess I am unable to answer the question. I have listened in vain for any explanation of the reasons which impel gentlemen to treat banks as dangerous foes to the public welfare.

Some gentlemen appear to consider a bank as a veritable bonanza, a mine of endless treasure, a well into which the banker had but to drop a bucket and draw it out full to overflowing with treasure—with profit wrung in some mysterious manner from the sweat of labor, pilfered from self-denial and thrift. I have before me the report of the Comptroller of the Currency, showing the whole profits of the national banks for the year 1894, and they amounted to \$41,955,000, or in round numbers to \$42,000,000. During that period the banks had in their custody and control individual deposits to the amount of \$1,728,418,819. At the same time the actual capital of the banks was \$669,000,000 in round numbers; and their undivided surplus—that is to say, the surplus fund which was additional security for the safety of their debts, their deposits, and their notes—amounted to \$245,000,000. If 3 per cent profit be allowed on the total capital it would amount to twenty million and odd dollars. Deducting

this amount from the \$42,000,000 which they earned, we find that they have been paid for the safe-keeping of the funds of depositors about \$22,000,000. That is to say they have maintained the custody of nearly \$1,800,000,000; they have made that enormous sum available as a capital fund for the productive energies of the whole country; they have moved it from one point of the United States to another; they have placed it here and there, wherever it was needed, wherever it was most effective, wherever it would prove the strongest stimulus to production, and for all this valuable and highly efficient service they were paid less than one-tenth of 1 per cent on the amount of money which they kept faithfully and which they invested prudently.

Mr. COX. Let me call the gentleman's attention to one point right there. While the gentleman's statement may be correct as to the rate of profit which the banks have realized in that direction, he leaves out a very important item in the profits of the banks—the undivided profits charged over on their books as a surplus fund, and going to increase the value of their stock.

Mr. COCKRAN. Mr. Chairman, I have not overlooked that surplus fund; but as it has been in process of accumulation for thirty years; as it now amounts to but \$245,000,000, the gentleman will perceive that it represents a profit of about \$8,000,000 a year during the period which has elapsed since national banks were first incorporated.

Mr. COX. If the gentleman will pardon me one moment more, I will not interrupt him further. When he makes that kind of calculation of the profits of the national banks, it is only fair to recognize the fact that as these undivided profits are passed over to the surplus fund they increase the value of the stocks of the banks all the way through.

Mr. COCKRAN. The gentleman evidently misapprehends my meaning. In the figures which I have given I have not considered the surplus profits. If I should treat surplus profits as part of the capital, the profits of the banks would not equal one-tenth of 1 per cent of the funds in their custody. I am not now discussing any question of profits, but a question of payment for services rendered. And I say that the rate which the depositors of this country—which means the producing masses of our citizens—have paid for the safe-keeping of their moneys, for the management of their capital, for the economies which they have been enabled to practice in the use of money, is less than one-tenth of 1 per cent on the whole amount of the deposits.

Mr. Chairman, if the right to issue notes concerned the banks alone, I would not occupy the time of the House by participating in this discussion. But as banking is one of the forms in which men cooperate to extend their productive power, anything that will increase the facilities and the efficiency of banks must aid and stimulate the industrial production of the country.

The one essential of sound paper money is that it be based on property. By property I do not mean commodities in the narrow or literal sense of the term. I mean assets, commercial assets, quick assets, assets which represent property in existence or property in creation, assets of such obvious and undoubted value that the notes issued against them will be accepted wherever they may be presented. Credit may be defined as the cooperation of men, strangers to each other, in every form of production. Every loan made by a bank is the temporary application of the funds of many men to the enterprise of one man. The note of a manufacturer represents the aid which he has secured from the money capital of his neighbors in the prosecution of his industry. The note of the farmer represents the money of other men by which he was helped to plant his crop. While a note is in process of maturity the growing crop which it helped to plant or the article assuming form in the workshop which it helped to create, is a security for the repayment of the loan. It would be perfectly proper and entirely safe for the bank to issue a note of its own based on the property which through its assistance is in process of creation. By means of that note the bank could make a further loan to the miller who will grind the wheat or to the carrier who will transport the manufactured article, enabling each to discharge with greater efficiency his part in the general scheme of production. Where a bank enjoys this power of issue, and exercises it prudently, it is able to make capital effective for a greater development of trade, for a wider spread of industry. Credit knits men closely together; it makes each man's product a stimulus to the enterprise and the industry of every other producer, and the Government should place no restraint upon a force so beneficent as this except the requirement that it shall be exercised within the limits of prudence. Like every great force credit may be abused and its abuse leads to disastrous results. Supervision by the Government is a check to fraud and recklessness and it should be vigilantly exercised. But the Government has no right to interfere with this branch of trade further than to prevent any bank from defrauding the public by false pretenses through its paper circulation. No conditions should be imposed upon any device to economize money except that there should be actual property behind every note sent into the channels of trade to float our commerce and broaden our industry. [Applause.]

My friend from Tennessee [Mr. Cox] applauds that sentiment. When my friend smiles I feel that the clouds have passed from the sun and that I am sailing under favorable skies.

Mr. COX. I am very glad the gentleman is gratified by anything I do.

Mr. COCKRAN. I have never met my friend that the meeting was not a source of pleasure. One of my deepest regrets at leaving this House is the fact that my association with him must be severed.

Mr. HUTCHESON. Let me ask the gentleman this question: You say the banks should be permitted to issue a note on the note of a farmer. Now, why should the note of a bank be sanctified as money any more than the note of the farmer?

Mr. COCKRAN. The gentleman puts a question which is not unimportant to this discussion. I do not think any commercial paper "should be sanctified as money" except so far as commerce will accept it. If the gentleman will favor me with his attention he will learn that I deny the right of the Government to interfere in any way with the money of the country except to coin some particular metal, some one product of human industry by which custom has declared that all other commodities should be measured. I have always regarded the hand of the Government in the issue of paper money as a destructive hand. Banking, in all its features, is but an economy in the use of money, and an increase in the amount of productive capital. I have stated that before and I repeat it now.

Mr. HUTCHESON. Will the gentleman allow me to elaborate that now?

Mr. COCKRAN. I am afraid that if I do allow the gentleman to elaborate it this speech will run into next week.

Mr. HUTCHESON. The only thing is this—

Mr. COCKRAN. If it be the only thing I will let it go. I do not expect to cover this whole subject, and if only one feature of it be overlooked I shall feel well satisfied.

Mr. HUTCHESON. Under the same tax which you impose you prevent the farmer from having such currency?

Mr. COCKRAN. My dear sir, I am opposed to all tax on currency as such.

Mr. HUTCHESON. Exactly.

Mr. COCKRAN. I am endeavoring to show that it is an entirely unsound method—

Mr. HUTCHESON. Are you opposed, then, to the State tax?

Mr. COCKRAN. I will come to that in time.

Mr. HUTCHESON. I understand you to be opposed to it.

Mr. COCKRAN. I am opposed to any tax on currency. To tax currency is as absurd as to tax blood in the human body. To tax currency is as unwise as to tax the power of a locomotive, the efficiency of an engine, the speed of a steamship. To tax currency is not to tax property, but to tax the most potent force in the creation of property and in the progress of civilization. So much, Mr. Chairman, has been said during this debate about the relations of Government to the currency that I have deemed it necessary to discuss at this length the elementary economic principles that govern the use of money.

Passing now to a consideration of the pending bill, nobody can deny that its principle is sound so far as it provides that notes should be based on the capital of banks; but the provisions of the bill nullify its object. In my opinion if this bill should pass the House and Senate and receive the President's signature it would fall stillborn on our statute books. There would not be one note circulated under it in twenty years. It would be another makeshift as ridiculous as the Sherman Act; it would remain inoperative through the absurdity of its provisions; it would stand a monument to folly; it would be inefficient even as an engine of mischief.

Mr. Chairman, this country is suffering not from a scarcity of money, but from a redundancy of money. When the Sherman Act was under discussion I stated to the House—and the statement was then greeted with derisive laughter, but I think no gentleman will contradict it now—that in the whole history of commerce there never was a panic caused by scarcity of money. Every panic which has disturbed the current of trade, arresting the free exchange of commodities, has been preceded by an inflation either of currency or of credit. The amount of money which can be profitably used in commerce bears a fixed relation to the amount of commodities to be circulated, because while in trade commodities appear to be exchanged against money they are really exchanged against each other.

I have already shown that one dollar is able to exchange commodities worth twenty or fifty dollars in the course of a single day without aid, assistance, or reinforcement; but the dollar which was capable of this efficiency was a dollar whose soundness nobody questioned. Not one of the men through whose hands it passed would have parted with his commodity if he feared or believed that the dollar for which he exchanged it would shrink in value while it remained in his pocket during the day or in his safe overnight.

The butcher would not have parted with his beefsteak if he had

any doubt as to the value of the coin for which he exchanged it. The cutler would not have parted with his knife for a dollar if he feared the money would shrink in value before he could exchange it for another commodity. A doubt as to the value of money causes men to keep close possession of their commodities, reduces money to idleness, and produces that redundancy of currency in the marts of commerce which is always a feature of business depression.

Our currency to-day is redundant beyond the power of commerce to utilize it. The vaults of every bank are now crowded to plethora with money which it can not invest. The rates of interest are so low that there is no profit in loans. At this moment, when a flood of debauched and degraded paper money chokes the channels of our circulation, arresting exchange, impeding trade, preventing prosperity, it is proposed that the banks of the country purchase legal-tender notes for the purpose of depositing them in the Treasury and then issue three dollars in bank notes for every dollar of Government notes that is thus deposited. This operation is described by the supporters of the pending measure as retiring the greenbacks. Now, every note issued against a deposit is a circulation of the deposit itself. This plan of issuing notes against a deposit of greenbacks would not retire the greenbacks but it would make them the permanent basis of all circulating money.

Here again we have an illustration of that demoralizing influence which ambiguous phrases have exercised on economic discussions. "Retirement of the greenbacks" is an expression which kindles hope in the breast of every believer in sound finance, because he assumes that it means the cancellation of the greenbacks. But when he scans this bill he realizes the peculiar capabilities of the politician when he turns economist. He learns that a phrase is often a substitute for a principle—that retirement of the greenbacks does not mean the cancellation of the greenbacks, but the permanent establishment of the greenback as the basis of all our paper money. He discovers that what appeared to be a scheme of currency reduction is really a scheme of currency expansion, and as he finishes the perusal of the measure he feels that if magic was the black art of the dark ages, political economy is a blacker art in this enlightened age of free speech and Democratic institutions. [Laughter.]

With a total circulation amounting to about \$1,700,000,000, with hundreds of millions of dollars idle in the vaults of the banks, does anybody suppose that it is possible to add several additional millions to the circulation and find active occupation for such a volume of money?

Mr. Chairman, it has been said that a deposit of greenbacks in the Treasury is a proper and necessary precaution to secure the notes issued by the banks, but in my opinion it would operate to prevent the banks from making proper provision for the redemption of their notes. I submit that a deposit of coin in the vaults of a bank is a better security for bank notes than a deposit of notes in the vaults of the Treasury. If the greenbacks be retired as money I know of no safe or sensible deposit for the redemption of notes except gold and silver—lawful money of the United States. Bank notes, as we have seen, are but devices for the economy of coin. They can enter into circulation only when there is absolute faith in the ability of the bank to redeem them—not in other notes but in actual money. It has been said that Treasury notes are as good as gold. But banks must redeem their notes, not in things as good as money, but in money itself. All the assets of a solvent bank are as good as money, but the creditor of a bank is entitled to the payment of his claim not in the equivalent of money, but in money itself. A visible supply of good money is then essential to the credit of every bank. Now, money is the one thing which this bill does not provide that a bank shall keep. It forces banks to purchase Treasury notes and deposit them in the Treasury, but even if these notes retained their money character they would not be available for the redemption of bank notes until after the failure of the bank which had deposited them. Thirty per cent of a bank's circulation kept in coin on its own counters would be an ample reserve to protect any issue of notes fairly consistent with its resources, but this bill compels the bank to keep 30 per cent of its issue in an entirely unproductive form where it can not be used for redemption. To secure redemption the Government by this bill deprives the banks of the means of redemption, and by forcing them to keep a portion of their assets in an unproductive form, it greatly enhances the cost of circulation and thereby increases the rate of interest which a bank must charge its customers.

The whole scheme of compelling banks to use Government obligations as the basis of notes is a peculiar misconception of government and banking.

Why, sir, the best security for a note is the property which it helped to create. It may be the highest form of banking prudence to substitute for the asset which is behind a circulating note to-day some other form of property to-morrow. That is something which commerce should judge for itself. The attempt to regulate private business by Congressional enactments is wicked and senseless;

it is a usurpation of power which throws trade into confusion and threatens credit with disaster.

If it be considered advisable to place circulating notes beyond any risk of repudiation, that result can be reached by the establishment of an insurance or guaranty fund.

I believe in insurance because it is an evolution of human experience. Insurance does not prevent losses; but it distributes among many a burden which might be crushing to one. Insurance does not prevent fire, but when a building is burned down it averages the loss among all who contribute to the insurance fund. When a ship is wrecked at sea the loss under a system of insurance is apportioned among many shipowners, all of whom contribute to an insurance or guaranty fund. An insurance system for circulating notes will place behind these evidences of banking debt a fund sufficient to make them absolutely secure whatever the general condition of trade may be.

Mr. Chairman, I believe in the purpose expressed by the framers of this bill, but I oppose its enactment because its provisions are hostile to the principle on which it is based. I am aware that the defeat of this bill will endanger all prospect of currency legislation during this Congress. But it is better to bear the ills we know than risk experiments whose results no man can foretell. If we can not agree upon a plan for the issue of bank notes let us at least suppress the gravest danger which threatens our national credit. The bill suggested by the gentleman from New York [Mr. COOMBS] would not be a complete measure for the regulation of our finances, but it would remove a very serious obstruction to the establishment of a sound monetary system. As I understand it, the gentleman from New York proposes to replace the greenbacks and all the irredeemable notes now circulating as money by bonds for such sums as will make them available for the savings of the people and as a security for bank notes. I am entirely willing to support such a measure. It would be a step, and an important step, toward a solid financial basis. If it would aid the passage of such a measure, I would cheerfully consent that State banks as well as national banks shall be empowered to issue notes against these securities. Indeed I can not understand the prejudice against State banks which has been manifested on this floor, and which many gentlemen have assigned as the basis of their opposition to the bill suggested by the Secretary of the Treasury.

If notes are to be issued upon the basis of assets, what difference can it make where the assets are or who holds them? The assets in the possession of a State bank have just as much commercial value and are just as sound a basis of credit as assets in the possession of a national bank. Where notes are issued against Government bonds the Government becomes the indorser of them, and the note of a State bank indorsed by the Government would be as good as the obligation of the Government itself. In my opinion, to prohibit banks from issuing any paper except such as is based on one particular form of security is a mistake; but that prohibition exists now, and to continue it would add no new embarrassments to the operation of trade.

Mr. RICHARDSON of Michigan. Does not section 9 of the bill provide that 70 per cent of the greenbacks can be retired and 30 per cent sequestered by the guaranty fund?

Mr. COCKRAN. I do not think so. The gentleman must perceive that since no notes can be issued without a deposit of greenbacks, if the plan be carried out, all the notes in the country will be practically reissues of the deposit in the proportion of three new notes for each one deposited.

Mr. RICHARDSON of Michigan. That is true in part, but 30 cents of them can be destroyed as often as \$1 is issued, so that there will be no increase.

Mr. COCKRAN. If the measure now before the House be enacted into law and the banks take full advantage of its provisions they can deposit every dollar of greenbacks and make them the basis of new issues. Indeed, that is the original plan of the bill. I do not believe such a result would actually be accomplished, because, as I have pointed out, the banks could not circulate such an amount of money with any profit to themselves. But when the plan of the bill is defended on the ground that it will never become fully operative it is fair to assume that the whole scheme is either mischievous or ridiculous.

Mr. Chairman, the cancellation of the greenbacks lies at the threshold of all currency reform. Until that form of circulation is retired there is no room for a new and a healthy currency. I recognize the difficulty that lies in the way of any attempt to cancel and discharge the Government promissory notes which now clog the channels of circulation. It has been the fashion in quarters where the principles of finance are well understood to laugh at what is called the "greenback craze." The Greenbacker is described as a species of intellectual freak for the amusement of those who read his utterances in the light of a different experience. But, Mr. Chairman, I have never believed that the majority of my fellow-citizens were deficient in intellect, understanding, or comprehension. The very wide belief that an increase of Government paper notes would to-day revive prosperity throughout the coun-

try is based upon a misapprehension of cause and effect which, though deplorable in its results, is perfectly natural in its origin.

Sir, the greenback is popular because the industrial activity which marked the period of our civil war has been attributed to the issue of paper money, although it was really due to an extraordinary demand by the Government for the products of human labor. No government, out of its revenues, could have paid for all the commodities that were consumed by the huge armies which during four years were maintained in the field. The capacity of the Government to borrow money in the ordinary manner was soon crippled, and recourse was had to a species of forced loans. A plan was devised of issuing promissory notes in payment for supplies and services. In order to give these notes a greater value than the pledge of the Government's credit at that time could give them, they were made legal tender, and thus they became available for the payment of private debts. Wherever a debt was discharged by the use of these notes the Government was substituted in place of the debtor. The person to whom the note was paid at once became a creditor of the Government for the amount of the note which the law compelled him to accept in satisfaction of his debt. In the last analysis this was but a seizure of credits with a promise to repay them at a future day. Happily, the promise has been redeemed to all who have demanded its redemption, but the transaction was none the less a violent, dangerous, and, in my judgment, indefensible exercise of power. This seizure of credits, however, enabled the Government to maintain an extraordinary demand for commodities until the conclusion of the conflict, and that demand stimulated industry to a degree which was wholly unnatural.

The result was a general rise in wages and an appearance of extraordinary prosperity throughout the country. But with the advance in wages there was a natural and corresponding rise in the prices of all commodities. The high rates of wages brought no additional comforts to the laborer when the cost of living advanced in a corresponding ratio. As the demand which began in certain branches of trade spread through the whole industrial field, men who at the beginning of the upward movement received higher wages than their fellows found themselves again on a level with them. The withdrawal of the Government from the market for commodities at the conclusion of the war was a violent shock to the equilibrium of trade. A prolonged industrial depression was the national result. In the midst of the distress which ensued, the people, obeying a very common impulse, turned to the Government for relief. A suggestion that the country embark in another war for the mere purpose of maintaining prices would have shocked the sense even of an angry population. But the assertion that the greenback was the source of prosperity found widespread belief among those who were unable to distinguish between the incidents and the causes of industrial activity. Whenever a period of commercial depression has since visited the country men have won a passing popularity by declaring that a new issue of paper money would dispel the clouds which overhang us and bathe our fields in the sunshine of prosperity.

Now, an issue of greenbacks would not of itself stimulate trade even temporarily. If the Government were engaged in war or in the prosecution of extensive public works, its appearance in the market for labor and commodities would undoubtedly stimulate prices, and a loan in the form of greenbacks might facilitate its operations. But the increase in prices would not be due to this issue of paper money, but to the increased demand for labor and commodities. That demand would have the same effect whether it was sustained by the revenues of the Government or by its credit.

I do not think anybody pretends that greenbacks should be paid out of the Treasury unless there is a debt to be canceled. It is not claimed that they should be paid out as Christmas presents to the favorites of Government officials or that they should be scattered broadcast from the balcony of the Treasury. No greenback will be issued then except where a good dollar would be issued if the greenback were not in existence. The retirement of the greenback would not contract the currency because for each paper dollar canceled a gold dollar would be placed in circulation. There has been a good deal said in this debate about the part which the greenback has played in drawing gold from the Treasury. I think much that has been said on that subject is based on a misapprehension. I dislike very much to differ from my colleague from New York [Mr. HENDRIX] who addressed the committee with so much force yesterday, and for whose judgment and knowledge on this subject I have the most profound respect, but I can not understand how the reissue of the greenback operates to drain the Treasury of gold. When a greenback is paid out it does not create a new obligation; it cancels a debt which would have been paid by a gold dollar in the absence of the greenback. So, when the greenback is presented for redemption, the Government is merely called upon to pay the gold dollar which it would have paid in the first instance but for the greenback. The greenback therefore operates to defer the drain of gold from the Treasury rather than to aggravate it. I say this because the reasons for the cancellation of the

greenback are so obvious and so imperative that it is not necessary to exaggerate them.

The greenback is objectionable as money because it is a debt which does not represent any form of industrial activity. It does not represent any capital applied to the aid or promotion of productive enterprises. It has no business in the channels of circulation which should be filled by money generated by commerce and by commerce alone. It is a debt long past due. It is no feature of actual production. It grew out of the industrial conditions of another generation. It is an endless source of disturbance in business because it is forced into circulation by the Government without any reference to the necessities of trade. It makes the prosperity of the individual dependent on the administration of the Treasury. It drags trade into politics, it makes industry the football of contending parties. It will be a source of embarrassment to the country if the occasion should ever arise when its credit would be essential to the defense of its territory, the assertion of its dignity, or the maintenance of its glory. To leave it in circulation is bad in policy and vicious in morals. The Government which does not pay interest on its lawful debts defaults in its moral obligations. The Government should set the example of that honesty which underlies its laws. It should not do itself that which it would condemn if done by the humblest of its citizens.

The gentleman from Missouri [Mr. BLAND], with a desire probably to discredit my utterances, has intimated that at some time or other I declared the repeal of the Sherman law would end the panic and restore industrial prosperity to the country. I have never said that I possessed any means of averting the consequences of vicious laws. What man sows that must he reap. There is no escape from the bitter fruits of folly and ignorance. We can not give life and activity to trade by the laws of Congress, but when we find commerce prostrated by the weight of vicious legislation we can remove the burden from its shoulders and leave it gradually, slowly perhaps, but surely, to recover its normal vigor. Mr. Chairman, in my opinion, the panic was produced by the McKinley tariff and a vicious financial system acting together, one restricting the volume of production, the other corrupting the medium of exchange on which the activity and therefore the volume of trade depends. [A laugh on the Republican side.] Now, my friend from Maine [Mr. BOUTELLE] does me the honor of greeting that statement with a laugh, yet if he will consider the very nature of protection he will understand that it involves doing business at a loss. Any business which can be carried on at a profit in competition with all the world does not need protection, and in the nature of things could not be made the subject of protection.

A protective system which was universal would benefit nobody. If every person in this House, beginning at one end of the Chamber and ending at the other, should take a dollar from his neighbor's pocket the conclusion of the operation would leave every man just where he was before. Each one would have gained a dollar and lost a dollar. A tariff which permitted all men to exchange their commodities upon a system of prices inflated equally everywhere might restrict the total production of the country, but each man's product would be stimulated in price and restricted in volume to the same degree as his neighbor's. Inasmuch, however, as the vast majority of the products of American labor must be sold at prices fixed in foreign and unprotected markets, the staple products of this country can not be affected by any tariff which we may establish. Those industries which enjoy the benefits of the protective laws are maintained in operation at a loss, but the loss does not fall upon those who conduct them, but upon the self-sustaining, respectable, aggressive industries that ask no favor from our Government and fear no competition anywhere on the globe. [Applause on the Democratic side.]

If a successful merchant, with an extensive and profitable trade, should establish his son in business, and maintain him in it although it was conducted every year at a loss, making good out of the profits of his own prosperous trade the losses incurred in his son's unprofitable commerce, he would be doing precisely what our Government forces the self-sustaining industries to do for the protected industries. [Applause.] If the natural equivalent of three pairs of hose be a bushel of wheat, and by legislation a farmer is compelled to accept two pairs of hose for a bushel of wheat, he is forced to contribute from his prosperous, self-supporting, unprotected agriculture the equivalent of one pair of hose to the maintenance of the unprofitable industry of hosiery. The maker of hose has made a profit on the money invested in his business, not by production, but by taxation—not from anything which he has created, but from the goods of his neighbor which he has been allowed to confiscate. [Applause.]

There has been a loss in one man's business and it has been made good through taxing the industry of another. The losses have not been avoided; they have been transferred from those who incurred them to those who were in no way responsible for them. And these losses, growing year after year in the use of large portions of capital, have been made good by taxation on articles which

enjoyed no benefit and could be granted no advantage under the tariff laws. [Applause on the Democratic side.]

Mr. BOUTELLE. Will the gentleman permit me—

Mr. COCKRAN. I shall be very glad to yield to the gentleman if I can have additional time.

Mr. BOUTELLE. I only desire to pay a tribute to my friend from New York by saying that I have not heard anything like that since the 6th of last November. [Laughter.]

Mr. COCKRAN. The gentleman from Maine, when he shall have lived a little longer, may find that an election does not change my views on economic questions, nor does it cause me to be silent when the truth is questioned. [Applause on the Democratic side.]

Mr. BOUTELLE. I understand that; but I wanted in a mild and gentle way to suggest that the argument the gentleman has just advanced here did not succeed in convincing the people of New York or the people of a large area of the country in the last campaign. I do not know why; perhaps because the gentleman made so few speeches during this campaign.

Mr. COCKRAN. I have well-defined notions as to the real causes of the disaster which overwhelmed the Democratic party in 1894. I think the Democratic party was not in the canvass. [Laughter and applause.] I will admit that frankly.

Mr. BOUTELLE. The gentleman from New York and the gentleman from Maine can never hold a debate on that point. [Laughter.]

Mr. COCKRAN. I think that campaign was conducted by something which masqueraded under the name of Democracy, and which the people ground beneath their heels, as it deserved to be ground. [Applause.] If the gentleman from Maine [Mr. BOUTELLE] bases his belief in the popularity of protection upon the verdict of 1894, I point him to the verdict of 1892 and the verdict of 1890, and I say to him the American people are not inconsistent. They did not intend this year to reverse the policy which they adopted in 1892; but they did intend to condemn the heresies which were engrafted upon party measures by the Democratic caucus, and which were a betrayal of Democratic principles.

Mr. BOUTELLE. That does not even command applause on the Democratic side.

Mr. COCKRAN. Mr. Chairman, I do not speak for applause. I speak to assert the truth, and I hope I will always be ready to assert it on this floor or elsewhere.

Mr. BOUTELLE. That is the reason it does not command applause on the Democratic side.

Mr. COCKRAN. I notice that even the Republican side remained silent, and its silence has not been the subject of remark. I never remember the truth being applauded there. [Applause and laughter on the Democratic side.]

Mr. Chairman, through our tariff laws a large proportion of the business of the country has been carried on at a loss and at the same time a flood of paper obligations issued from the Treasury raised in every man's mind a doubt concerning the soundness of our currency, causing him to hesitate about exchanging commodities of unquestioned value for money of doubtful value. With a steady loss in a large part of our trade, with commerce disturbed by a widespread distrust in the medium of exchange, how could our industrial condition remain prosperous, how could a convulsion be avoided, how could a panic be averted?

And the cloud, dark, sinister, portentous, which every thoughtful man had long seen in the heavens above us, settled down over the country in 1893. After a period of unhealthy, feverish stimulus, the industrial system of this country, weakened by excessive taxation on the one hand, by an attenuated currency on the other, fell prostrate in the dust. The exchange of commodities has been restricted, and consequently the volume of production has been narrowed. There being less commodities to exchange, there is necessarily less trade.

All production has not been suspended, because its total suspension would mean universal starvation; but it has been restricted; it has been reduced in volume; and that restriction, operating to narrow the field upon which exchange can be effected, has produced this period of depression that has not yet passed away and which will not pass away for many weary days and weeks to come—aye, perhaps for years to come. I do not pretend that any law which I can suggest or which the House may adopt can of itself restore prosperity to this country. We can only remove the causes which have robbed us of the natural advantages which our soil has always offered us. Trade and industry, left to the free exertion of their own energies, will soon restore prosperity to the land and happiness to the people.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARTMAN. I ask unanimous consent that the gentleman be permitted to continue.

The CHAIRMAN. The gentleman from Montana asks that the gentleman from New York be allowed to conclude his remarks. Is there objection?

There was no objection.

Mr. COCKRAN. Mr. Chairman, business will not revive until the total production of the country shall have been restored to its normal volume.

One abundant crop will not make the farmer prosperous unless there be abundance of other commodities for which his crop may be exchanged. The mere desire of other men for the things which I have will not profit me unless they have commodities of their own to offer in exchange for mine.

The product of each man obtains a market through the products of all his neighbors. Business prosperity therefore depends on the general abundance of commodities and on the soundness of the medium which facilitates exchange.

Providence has blessed us with a lavish hand. Wherever we turn we witness the inexhaustible bounty of nature. But a short distance from this capital lies the Ohio Valley, where every hill which rises above the traveler's head is a treasure house piled high with wealth of mineral ore, where oil rises from natural springs in sufficient volume to light the universe, where the streets of thrifty towns and cities are lighted by torches fed with gas which is generated by the soil itself, while beyond the heights which inclose it there stretches for 3,000 miles a panorama of surpassing fertility, where the fruits of the tropics are ripening under a generous sun, where the grain of the temperate zone is gathered in abundant harvests, where innumerable flocks and herds graze upon rolling fields—in such a country when labor lacks a market and industry is without profit the laws of man must be framed in hostility to the laws of God. With all these various elements of wealth in active cooperation the total production of this country would be so vast that no willing hands need remain idle, no industrious man need eat the bitter and degrading bread of charity.

Where a free exchange of commodities is promoted by a sound monetary system every man who produces an article of value brings into existence other articles of value from the toil of his fellow-man. The farmer whose crop is ripening in the summer sun will be a customer for the product of the loom, which in anticipation of his demand is kept running night and day. The miner deep in the bowels of the earth, working through passages which the sunlight never penetrates, is moved to labor by the belief that manufacturers are waiting to purchase his ore. The diver who walks the bottom of the sea, searching amid perils and difficulties to reclaim for the use of man the treasure engulfed in storm and in shipwreck; the sailor, heaving and tossing on the crest of the waves, guiding through danger and fatigue the bark laden with the fruits of agriculture, that man, wherever he be, may enjoy the whole bounty of the earth; the carrier who transports the results of human industry to the marts where they will be sold; the merchant who places these wares upon his counter; the consumer who purchases them—all, all are elements in a mighty scheme of mutual support, of mutual assistance, of mutual profit, which we call commerce, and which depends for its efficiency and its power on the soundness of the money by which the industry of each man is made a feature of the industry and production of all men.

We may not hope for any further reduction of the tariff taxation, which hampers industry and restricts production, but the regulation of our finances has never yet been made a party question.

I do not ask this House to grant the banks any favor or special privilege. I ask only that they be left free to maintain at every point of the industrial field the capital that is necessary to the highest development of our natural resources. I appeal to members of this House to show in our commercial affairs that love of liberty which we profess in political discussions. Let us leave to the free exercise of American genius the development of the American continent. Let us leave to commerce the task of creating and establishing the medium by which men will be enabled to exchange the products of every clime at the greatest advantage to the producer. I ask gentlemen on both sides of the chamber to discard the party trappings which become us when we are discussing minor issues, and to approach this subject in the panoply of American patriotism, determined to establish our monetary system, not upon the treacherous quicksands of empirical devices, but upon the sound principles of finance, upon the secure basis of property, on the solid rock of industry. [Applause.]

Mr. HENDERSON of Iowa. I would like to ask the gentleman a question if it would not interrupt him.

Mr. COCKRAN. Go ahead.

Mr. HENDERSON of Iowa. I feel the same anxiety that the gentleman feels and appeals for, to do what is best for the country in the present exigency. Now, do I understand my friend to say that he favors any of the propositions pending before the House?

Mr. COCKRAN. I thought any gentleman would understand from what I have said that I favor the Baltimore plan.

Mr. HENDERSON of Iowa. But you do not favor any plan that is now pending before the House?

Mr. COCKRAN. I do not believe the Baltimore plan would be adopted. It would be expecting too much from this House. [Laughter.]

Mr. HENDERSON of Iowa. Are you in favor of it if it could be passed?

Mr. COCKRAN. If that plan could be adopted it would meet every difficulty in the monetary system of this country.

Mr. HENDERSON of Iowa. What bill? The Carlisle bill?

Mr. COCKRAN. I am speaking of the Baltimore plan.

A MEMBER. But that is not the bill before the House.

Mr. COCKRAN. I understand that.

Mr. HENDERSON of Iowa. There is no such proposition as that before the House.

Mr. COCKRAN. I have described to the gentleman the plan that I would support. I would propose the Baltimore plan myself, but I do not think there is any prospect whatever of its passage, and I have no disposition to make demonstrations before the House for my own diversion or glorification. But there is a bill which would cure some of the evils—

Mr. HENDERSON of Iowa. What is it?

Mr. COCKRAN. The bill that has been introduced by my colleague from New York, Mr. COOMBS. I would support that. I would support the measure introduced by the gentleman from Massachusetts [Mr. WALKER] except one feature—the provision fixing by law the character of the reserve to be maintained by each bank.

Mr. CATCHINGS. Do I understand my friend to say that he would support the Baltimore plan?

Mr. COCKRAN. Yes, sir; I would support it, and support it gladly. I would be glad to father it if I thought there was any prospect of its adoption. It is simply the application of human experience to monetary affairs.

Mr. HENDERSON of Iowa. Does the gentleman believe that the Baltimore plan, or the Coombs plan, or the Walker plan, either one of them, would stop the outflow of gold from the Treasury; and, if so, will he tell us how?

Mr. COCKRAN. No. I am glad the gentleman asked that question!

Mr. HENDERSON of Iowa. Let me finish my question.

Mr. COCKRAN. I think that answer should have a qualification.

Mr. HENDERSON of Iowa. Well, let me finish my question first. The gentleman says no. Now, is not the real question before this Congress, how to raise money to pay our debts, and not any question of banking?

Mr. COCKRAN. I have been endeavoring to show that the greenback is one debt which should be paid. I agree with the gentleman. I believe that if we paid our debts we would have no trouble, and I believe that with our revenues and our credit combined, we have abundant resources to place all our debts on a safe and honest footing.

Mr. BOEN. How? By funding?

Mr. COCKRAN. Yes, sir.

Mr. HENDERSON of Iowa. Is not the real question which we, as representatives of the people, should address our minds to the question of raising revenue to pay our debts?

Mr. COCKRAN. Mr. Chairman, the gentleman has revived at this stage a subject which I thought I had discussed. I believe the support of the Government should be the first object of Congress, and I concede that the revenues are now inadequate to the necessities of the Treasury. But I believe the way to increase the revenues is not to raise the rates of taxation, but to still further diminish them. I appeal to the experience of the whole human race to confirm that statement; and if the gentleman from Iowa (with the authority which he will exercise as a Republican leader over future legislation) will blaze the pathway in that direction, he will find me the humblest, but the most enthusiastic, of his followers. [Laughter.]

Mr. HENDERSON of Iowa. My good friend from New York, whose words I always listen to with great pleasure, whether I agree with him or not, has not, I fear, answered my question. My question is not about how we are to raise the money. What I ask him is, whether the pressing question upon this legislative body at this time is not the question of raising money to pay the daily current running expenses of our Government?

Mr. COCKRAN. That is the question, Mr. Chairman; but it is not all the question.

Mr. BOUTELLE. It is the first question.

Mr. COCKRAN. Well, that depends on which you put first and which you put second. I think the order in which they are placed makes very little difference—

Mr. BOUTELLE rose.

Mr. COCKRAN. Now, I trust that one gentleman at a time will catechise me. Let me answer the gentleman from Iowa. It is quite true that the deficit in the revenue is an embarrassment to the Government. It is also quite true that the deficit in the revenue tends to exhaust the supply of gold, and therefore to cast

doubt on the Government notes which circulate as money. But surely that statement is the strongest possible proof that a financial system is vicious which makes the trade and the commerce of every citizen dependent on the solvency of the Treasury.

In addressing this House my chief object has been to persuade it that every principle of sound policy demands the divorce of the Treasury from the function of furnishing money. Whether the Treasury be bankrupt or prosperous, whether it be full to overflowing or empty of treasure, the circulating medium by which my neighbor and I exchange our commodities should always be independent of any condition in which the Treasury might find itself. The imprudence of a Secretary, or the shortsightedness of legislation, for which I am in no way responsible, which I can not avoid or prevent, affects the money in my pocket, disorders my trade, paralyzes my industry, blights my prospects.

Mr. HENDERSON of Iowa. Now, will my friend allow me a moment further? He knows that I am in thorough sympathy with him in desiring to meet in some efficient way the present condition of the country. I know he will give me credit for that. He has admitted that no financial plan pending before this House will supply the revenues of the Government. He has appealed to the members of this House, irrespective of party, to come to the help of the country. Now, I say that instead of wasting time over the discussion of currency measures which, as is admitted by the distinguished gentleman, and as has been admitted by everyone on both sides of this discussion to whom I have addressed the question, can not give any relief, is not the gentleman at fault in the line of remark he is pursuing, and should he not direct the attention of this body to the sole question of the hour to raise money to meet our obligations?

Mr. COCKRAN. I have just stated that the actual condition of the country strikingly illustrates the folly of making the debts or condition of the Treasury any feature of our monetary system whatever. I have endeavored to prove that it is safer and wiser to base the paper money used in trade on the property assets of all the people of the country than upon the debts of the Government in whatever form they may be.

Mr. WALKER. I should like to have the gentleman from New York point out to this House the foundation for his faith that the Baltimore plan will afford any relief whatever to the Treasury or to the present financial situation of the country, when every man before our committee who was instrumental in devising that plan said that it would afford no relief whatever until we had corrected the financial policy of the Treasury Department with reference to the greenback currency. How can the gentleman have more faith in that plan than its own representatives had?

Mr. COCKRAN. I am not discussing the condition of the Treasury. The gentleman from Massachusetts [Mr. WALKER] and the gentleman from Iowa [Mr. HENDERSON] seem to think that I am discussing here a plan for the relief of the Treasury. I am not. I am discussing a plan for the relief of the people of this country from a vicious monetary system.

Mr. WALKER. Must not that be accomplished through the Treasury?

Mr. COCKRAN. Not necessarily. There is no more reason why the difficulties of the Treasury should embarrass me than that the difficulties of a commercial house like H. B. Claflin should embarrass me. There is no more reason why the condition of the Treasury should disturb my commerce than that the operations of Drexel, Morgan & Co. should interfere with it.

Mr. WALKER. Is it not a fact that the disturbance of the financial condition of the country shows itself first of all in the condition of the Treasury, and that anything which will relieve the Treasury will relieve the country?

Mr. COCKRAN. In one sense the gentleman's statement is correct, but it only shows that our monetary system is on a vicious basis.

Mr. WALKER. That embarrasses the Treasury, does it not?

Mr. COCKRAN. Assuredly it does—or rather I should say the Treasury embarrasses the monetary system.

Mr. WALKER. Then correct that.

Mr. COCKRAN. That is what I am trying to do. I do not say the Baltimore plan would afford any relief whatever to the Treasury; it is not pretended that it would—

Mr. HENDRIX. It was never intended to.

Mr. COCKRAN. And I believe it was never intended to relieve it. Its object is to emancipate the money of the country from the control of the Treasury and to leave the supply of currency to the natural operations of commerce. To support that principle I have taken the floor.

Mr. WALKER. Just one word further. Is it not a fact that it is impossible to do what you say ought to be done and must be done until we direct our attention to the Treasury in its connection with the greenback issues?

Mr. COCKRAN. I do not believe there is any substantial disagreement between the gentleman and me. He says we must turn

our attention to the Treasury. I say we must turn our backs to the Treasury. There seems to be a difference between us, but I think we mean the same thing. I regard the Treasury as a disturbing influence in our currency, and I am sure he regards it in the same light, although we use different words to convey the same meaning. A contribution of \$1 from each inhabitant of the United States would cure the deficit; the losses of the people from the corruption of the currency through the circulation of Government notes may be computed by billions of dollars. The questions of the gentleman from Iowa [Mr. HENDERSON] and the gentleman from Massachusetts [Mr. WALKER] are themselves unanswerable arguments that if the country is to gain a permanent prosperity it must liberate its monetary affairs from the control of the Treasury.

Mr. WALKER. So say we all.

Mr. COCKRAN. I am glad to hear that. If this Congress provide for the extinction of the greenback the currency question will settle itself. If we leave the circulation of commodities to the medium of exchange which trade finds most effective, the Treasury will be at once reduced to its natural functions of collecting from the commerce of the country that proportion of money that is necessary to the support of the Government. When the authority of Government shall have been limited to the lines prescribed by Democratic institutions and Democratic principles, when the currency shall have been emancipated from the control of ignorance and the interference of folly, when it shall have been firmly established upon the industry and the capital of our citizens, it will be no longer a source of danger and disturbance to trade but, like the blood in a healthy body, it will nourish and sustain the industrial forces from which it springs. Trade can not be stimulated by legislation—absolute freedom is its sole security. Let us stop these foolish and abortive attempts to control by human laws the economic forces which control the industrial capacity of man; let us discard the empty and misleading phrases which have betrayed us into extravagant legislation and led us to commercial disaster; let us throw down the barriers to prosperity which ignorance has erected; let us restore freedom to American industry, and this country will become the seat of learning, the fountain of material wealth, the light of intellectual progress throughout the world. [Loud applause.]

Results of Democratic Tariff Legislation.

SPEECH

OF

HON. ALBERT J. HOPKINS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 28, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8310) to amend an act entitled "An act to reduce taxation, to provide revenue for the Government, and for other purposes," which took effect the 28th of August, 1894—

Mr. HOPKINS of Illinois said:

Mr. CHAIRMAN: The bill which has been presented to this committee by the chairman of the Committee on Ways and Means is a confession on the part of that gentleman, and the committee he represents, and the party for which he speaks in this House, of the inadequate and defective character of the legislation known as the Gorman-Brice-Wilson bill. It is a confession on his part that the Democratic party in the long weeks and months that its leaders occupied the attention of Congress and the country in this legislation, was unable to formulate that kind of a bill that would best work to the benefit of the people of the country. It is a confession that the law has involved us in unpleasant diplomatic relations with foreign nations.

When I consider that, Mr. Chairman, I can not but revert for a single moment to the condition of this country under the last Republican Administration, an Administration that gave to the country one of the most perfect pieces of tariff legislation that has ever been placed upon our statute books; a piece of legislation that instead of prostrating the interests and the industries of our people gave them renewed life and vigor. Not only that, but a piece of legislation that increased the import and export trade of the country beyond any figure it had ever reached before in our history. Every person familiar with such affairs knows that

under the reciprocity clause, so called, of the McKinley bill the American producers were able to reach markets in the Spanish colonies and in Central and South American States that had been practically closed to us before the enactment of this law.

Now, Mr. Chairman, what reason was there for the Democratic party disturbing this condition of affairs when it came into power? Was there anything in our foreign or internal trade that required a change so as to equalize conditions? The statistics that are familiar to any person who desires to examine them show, as I have already indicated, that all our manufacturing industries were in a condition more prosperous than they had ever been before. They show that our banking and commercial interests were never in a better condition than they were when the summons was made by the people of the United States in the great Presidential election contest that this country should be turned from the Republican control to that of the Democratic party.

I shall not take the time, Mr. Chairman, to dwell at any length upon this condition of affairs, but I can not refrain from quoting a sentence or two from the last message that was presented to Congress by President Harrison.

In speaking of the condition of our foreign trade, and in calling attention to the splendid results that had been reached under Republican administration, and especially this law that it has been the work of the Democratic party since it came into power to repeal, he said that the value of our exports during the fiscal year 1892 reached the highest figures in the history of the Government, amounting to \$1,030,273,148, exceeding by \$145,797,338 the exports of 1891, and exceeding the value of the imports by \$202,875,686.

So much for our export trade.

Mr. BLAND. Will the gentleman allow me right there?

Mr. HOPKINS of Illinois. Yes.

Mr. BLAND. I wish to suggest to the gentleman that the condition of affairs which he refers to in that year was caused by the fact that we had unusually large crops, and that in Europe, especially in Russia, there was a failure of the crops, and that the exports increased on account of the starvation there and the abundant crops here.

Mr. HOPKINS of Illinois. Mr. Chairman, this country is always a fruitful country under a Republican Administration. [Laughter.] The people of this country always have had good times under Republican Administrations. And I will say to the gentleman that while our export trade was exceptionally large that year, statistics show that from 1890 to the time the Democratic party took control of the Government our internal and foreign trade were increasing steadily and rapidly.

Mr. BRYAN. May I ask the gentleman a question?

Mr. HOPKINS of Illinois. Yes.

Mr. BRYAN. Will you please state to the House the balance of trade the year before and the year afterwards?

Mr. HOPKINS of Illinois. If the gentleman does not know it I will collect the figures and give them to him. I have not the exact figures here, but it is enough for me to say that the condition of our trade was such that there was no claim of hard times by any person, from the hod-carrier to the man who employed thousands of men. There was no claim that soup houses should be established to take care of the unemployed in this country, or that any American interests were not being properly and amply protected by the Administration that was then in power.

Mr. BRYAN. I just want to call the gentleman's attention to the fact that the balance of trade for the year he mentioned was very much larger than for the year preceding and the year after, and therefore was exceptional both in fact and in the cause.

Mr. HOPKINS of Illinois. It shows that it was in excess over the year before; but the gentleman will understand that the full operation of the McKinley bill had not been reached the year before.

Mr. BRYAN. But the year afterwards the balance of trade was against us.

Mr. HOPKINS of Illinois. Yes; your party's success had then begun to have its effect. The point I am making with gentlemen on that side, and especially with the gentleman from Nebraska [Mr. BRYAN], is this, that under the free operations of the McKinley law, a law that has been denounced upon this floor by the gentleman and his colleagues, our commerce and trade with foreign nations increased. Under the reciprocity clause of that law we increased our trade with the Spanish colonies and with the South and Central American States seventy-odd millions of dollars per annum.

Mr. BRYAN. The balance of trade in the year following was against this country, if I recollect correctly, \$18,000,000; at least it fell far below the year previous, and in the next year, and still under the McKinley law.

Mr. HOPKINS of Illinois. I want to say that I do not agree with the gentleman that the balance of trade was against us as he has intimated. It certainly was not while that law was administered by its friends. With the permission of the gentleman,

I will call his attention to a statement made by President Harrison on the increase of our foreign trade under the reciprocity clause of the law of 1890. He said:

The domestic exports to Germany and Austria-Hungary have increased in value from \$47,673,756 to \$57,963,064, an increase of \$10,319,308, or 21.63 per cent. With American countries the value of our exports has increased from \$44,160,285 to \$54,613,598, an increase of \$10,453,313, or 23.67 per cent. The total increase in the value of exports to all the countries with which we have reciprocity agreements has been \$20,772,621. This increase is chiefly in wheat, flour, meat, and dairy products, and in manufactures of iron and steel and lumber. There has been a large increase in the value of imports from all these countries since the commercial agreements went into effect, amounting to \$74,254,525, but it has been entirely in imports from the American countries, consisting mostly of sugar, coffee, india rubber, and crude drugs.

I refer to this as showing the happy condition of the people of this country, both in our domestic trade and in our foreign relations, under the legislation that was repealed and displaced by the bill which is now proposed to be amended as indicated in the speech of the Chairman of the Committee on Ways and Means.

Mr. Chairman, the gentleman who presented this bill, in the very able and elaborate speech he made the other day, placed his grounds for its passage in this House upon the following: First, he would have this bill become a law, and this one-tenth differential duty repealed, because, as I understood him to say, it works in the interest of the sugar trust; and, secondly, the condition of our Treasury under the operation of the present tariff law is such that this half million dollars revenue a year that is derived from this duty may well be dispensed with; and, thirdly, it is a breach of our international agreement with Germany, under what is called the "most-favored-nation clause."

The first reason given I shall take no time to answer. The bare statement of the case, it seems to me, must satisfy every member of this committee that the gentleman is mistaken. To one not versed in all the intricacies of free trade or blessed with more than Oriental imagination, it would seem that the cheaper the sugar trust can get its raw sugars from abroad the better able it will be to increase the dividends to its stockholders.

If there were no sugar trust in existence and all the refineries were competing for trade the repeal of a duty on raw sugar would probably reduce to some extent the price of sugar to the consumer. But where the sugar trade is under the control of one great trust the price to the consumer is dictated by it, and the repeal of this differential duty of one-tenth enables it to add that amount to its profits. The gentleman contends that this trust has its fingers on the throats of the people. He is taking a strange way to relieve that grasp. It may be wise to repeal this differential duty; but certainly not for the reasons advanced by the gentleman having the bill in charge.

Now, Mr. Chairman, let us look at the second reason that was advanced by the gentleman from West Virginia for the repeal of this duty. He said, if I understood him correctly, that in the near future, under the present tariff law, the Treasury will be overflowing with money. I fancy he is the only person in public or private life who indulges in such happy dreams of a replenished Treasury and financial prosperity. I know from reading the CONGRESSIONAL RECORD that no such roseate view is taken by Senators at the other end of the Capitol.

Mr. WILSON of West Virginia. Did the gentleman hear the President's message to-day which confirms all that I said?

Mr. HOPKINS of Illinois. I did hear the message, and there is not a word or a line in it in confirmation of the gentleman's position.

Mr. WILSON of West Virginia. I fear the gentleman did not hear it distinctly.

Mr. HOPKINS of Illinois. I heard it all.

Mr. WILSON of West Virginia. The President says there is no difficulty about the question of the revenue.

Mr. HOPKINS of Illinois. The President's message is, in effect, just the contrary. He shows that while \$116,000,000 of money have been placed in the Treasury of the United States recently by the sale of bonds, \$104,000,000 of that money has been taken to pay the current expenses of the Government. If \$104,000,000 of the money thus raised by the sale of bonds have been required to pay the expenses of the Government, I ask, How is it that the President's position and the position of the gentleman from West Virginia are in accord upon this question?

Mr. Chairman, when I was interrupted I was undertaking to show that the position of Senators who are members of the same party with the gentleman from West Virginia is not in accord with his attitude upon this question. I remember that only a few days ago the leader of the Democratic party in the other branch of Congress, Mr. GORMAN of Maryland, made the broad statement that not only would this tariff law which has been placed upon the statute book by the Democratic party be inadequate in its yield of revenue to meet the expenditures of the Government in 1895, but that under no probable conditions would it raise revenue sufficient to meet the wants of the Government in the fiscal year 1896; and when we come to examine the statements of the

condition of the United States Treasury and the receipts and expenditures of the Government that are given to us day after day and month after month by the Treasury Department, we find that they confirm the position taken by Senator GORMAN of Maryland and refute the contention of the gentleman from West Virginia who favors this proposed pending legislation.

Mr. Chairman, the present tariff law which was so lauded by the gentleman from West Virginia in his argument day before yesterday went into operation on the 28th day of August, 1894. Let us look at the condition of the Treasury of the United States from that time to the present and see whether we are advancing month by month to that happy condition of an overflowing Treasury, which was so beautifully and eloquently depicted by the gentleman from West Virginia when he presented the pending bill to this committee. I have gone carefully over the monthly reports of the Secretary of the Treasury since the act known as the Wilson-Gorman bill has been the law of the land, and I find that in the month of September the Government expended \$7,701,989.73 more than the revenue that it derived from all sources. In the month of October it expended \$13,573,789.79 more than the revenues received from customs dues and all other sources.

In November the Government expended \$9,065,784.81 more than its entire revenues under this bill which is taking us so rapidly to a surplus in the Treasury. In December the Government expended \$5,269,323.73 more than it received from all sources, including customs dues. But the gentleman from West Virginia undertook to satisfy his conscience on this question by reading a daily bulletin issued by the Treasury Department, from which he tried to demonstrate to the members of this committee and to the country that the day before he made his speech the revenues of the Government had exceeded its disbursements by \$89,000. I turn to one of these daily bulletins, dated January 22, 1895, and I find that during this current month, down to and including that day, the Government had expended \$10,292,750.26 more than the revenues it had received. Think of it for a moment.

Mr. WILSON of West Virginia. If the gentleman will look at a later date he will find that that was reduced to eight millions.

Mr. HOPKINS of Illinois. I have given the gentleman and the committee the figures on the 22d day of January, which show that there was a deficit of ten millions two hundred and ninety-two thousand and some odd hundred dollars. As the gentleman says, some days later that deficit was reduced nearly two millions; but I would like to know whether the gentleman understands how that decrease has been brought about. It has been brought about by not paying the pensions that are authorized under the laws of our country. If the gentleman will examine these daily bulletins he will find that on many days the Government expends as high as \$500,000 a day in the payment of pensions. But from January 22 to the present time there have been several days where not a dollar has been expended in this way and as a result the ten millions deficit has been reduced to eight millions.

But by not paying the pensions the Government is not escaping a just obligation. It is simply evading temporarily an obligation which must be paid to the survivors of the late war. This money must be expended, and the \$8,000,000 of expenditures over the receipts to-day will, in my judgment, be increased to nearly \$10,000,000 before the expiration of this month. So that we can see that instead of reaching, under the operations of this law, a position where our expenditures month by month will not be greater than our revenues, there has been every month since this bill has been a law not less than \$5,000,000, and sometimes as high as \$13,000,000, of expenditures over the revenues of the Government.

An examination of the annual report of the Secretary of the Treasury will satisfy any fair-minded man that under the operations of this law there is no hope of any relief to the Treasury of the United States. In his annual report made to Congress the honorable Secretary of the Treasury shows that as compared with the fiscal year 1893 the receipts for 1894 fell off \$88,914,065. Now, these annual revenues are the sums of money that are taken to pay the annual expenses of the Government; and unless we can have legislation which will bring into the Treasury of the United States annually an amount of money equal to or exceeding our annual expenditures, we never can hope to better our financial condition; we never can hope to place back the hundred millions of gold reserve in the Treasury where it was when the Republican party turned over this Government to Democracy; we never can hope, Mr. Chairman, for that happy condition of industrial affairs which prevailed during the four years of General Harrison's Administration.

In the report of the Secretary of the Treasury, where he gives the falling off of the receipts of the Government for 1894 as compared with 1893, he undertakes to make up a part of this by saying that there was a decrease of \$15,953,874.66 in the ordinary expenses of the Government; and, deducting that from the loss in the revenue, he makes the net decrease a little less than \$70,000,000. If any person desires to learn where that decrease in ex-

penditures came from he can find it in the next page of the report of the Secretary of the Treasury, where he gives an item of \$18,180,372.91 that was taken from the appropriations made by the Republican party to the soldiers of this country and covered back into the Treasury of the United States.

Had this Democratic Administration dealt as fairly and as honorably with the soldiers of the late war, the defenders of our flag and country, as did the Republican party during the four years of Republican Administration, instead of this deficit being only \$70,000,000, as stated by the Secretary of the Treasury, it would have amounted to more than \$91,000,000. I am sure I speak the sentiments of the great mass of the people of this country when I denounce a retrenchment that takes from these men the millions of dollars that were provided for them by the legislation of the Republican party and covers the money back into the Treasury for the purpose of making the totals presented in the Secretary's report.

The third proposition, Mr. Chairman, made by the gentleman from West Virginia to show why this bill should become a law and this one-tenth differential duty be repealed, is that it is in violation of our treaty stipulations with Germany. He dwelt most ably and eloquently upon the fraternal relations that should exist between our own nation and foreign countries. I am sure that the Republicans of this House and the country are as desirous as the gentleman himself that our relations with Germany and all other foreign countries should be of an amicable character and that American products should enter the markets of these countries under the most favorable terms. We are reminded, however, when he speaks of the sacred character of treaty agreements, of the ruthless manner in which his party struck down our treaty stipulations with foreign countries under the reciprocity clause of the McKinley bill, and gave to the country a law which has depleted the Treasury of the United States, which has bankrupted many of our large industries, and has brought want and starvation to the doors of the laboring people of this country.

We can not forget, Mr. Chairman, that when the Democratic party repealed the McKinley Act they refused, notwithstanding the suggestions of the Republican members of this House and the Senate, to permit the reciprocity clause of that legislation to remain in force; they refused to permit that statute to remain which had opened the markets of Cuba and Brazil and other South and Central American States to the wheat-growing country of the West and our great milling interests. There is not a member on this floor who has not received communications from the representatives of the milling interests of the country protesting against the striking down of our treaty stipulations with Cuba, Brazil, and other southern countries.

It is well known that our trade with Cuba alone had reached more than 1,000,000 barrels of flour per annum under the reciprocity clause of the McKinley Act, and if I am not mistaken we had reached the same enormous figure in our flour trade with Brazil. And yet, understanding as they did that the wheat growers of the West, the milling interests of the Northwest and the great West, were immediately interested in this, they repealed this act and thereby practically deprived the American producers of this product from entering into the markets of Cuba and Brazil. Consistency is a jewel not possessed by the Democratic party.

I shall not take the time of this committee to go over the arguments which have been so ably and so forcibly presented by my colleagues on the committee, the gentleman from New York [Mr. PAYNE] and the gentleman from Pennsylvania [Mr. DALZELL], showing that the imposition of this differential duty is no infraction of that treaty stipulation. The argument which was presented this morning by the gentleman from Pennsylvania is unanswerable upon that point. His demonstration is as clear as the sunlight in a summer's day that the Secretary of State, in his communication to the President, has mistaken the precedents of this country and the positions which have been assumed by his predecessors in that great office; and he has shown by a line of argument which is unanswerable that by the imposition of this duty we do not interfere in the least with our treaty stipulations with that great country.

Mr. Chairman, the communication which was read here the other day from the German ambassador speaks as though this country had an international agreement with the German Empire on this subject. It has been brought out in debate, however, that the treaty stipulation mentioned is only with the Kingdom of Prussia, and that the other 24 states that form the great German Empire have no lot or parcel in this international agreement which is claimed by the German ambassador and admitted by our Secretary of State to have been violated by our Government when this differential duty of one-tenth of a cent was added to the duty on all sugar from countries paying an export duty.

There is no evidence that has been brought to the attention of this committee that any of this sugar that pays the differential duty is produced in Prussia. It seems to me it would have been

wise on the part of the German ambassador, as well as on the part of this Democratic Administration, to have acquainted the members of this committee with all the facts bearing on this subject. If Congress is to act, full information should have been given to the Members of the House and the Senators.

The exclusion of our beef and meat products from Germany under the order of that country on the 18th day of October last is not because our Government imposed this differential duty on sugar from export or bounty-paying countries. I would like to have the attention of my Democratic colleagues upon this point, because here is a great industry, affecting the West and the Northwest as well; an interest that reaches from Texas on the south to the British Possessions on the north; an interest that has grown to an aggregate of millions of dollars per annum since the negotiations were concluded between the two Governments under the late Republican Administration which admitted these products into the German markets. The statistics that have been given to me by the Agricultural Department show that since the fiscal year 1893 we have exported to Germany from the United States a total of 8,131 head of cattle, of the value of \$776,072; that we have exported in bacon, hams, and pork 47,727,911 pounds, the aggregate value of which is \$3,713,162.

Now, ever since the German Government allowed the importation of American meat products into her markets there has been considerable opposition made to these concessions by one class of German subjects. They have contended that the American meat should be excluded, and the Government in the interest of this class, in my judgment, has taken this differential duty as a pretext to revoke the orders under which American beef and meat products were sold in German markets. The Agricultural Department is in possession of facts relating to this subject which fully warrant my conclusions.

One of our consuls in Germany, in a report to the State Department, uses this language:

The butchers and veterinarians who slaughter and examine cattle and meat at the Bremen slaughterhouse are my authority that the cargo of American cattle which came here were the healthiest ever slaughtered in Bremen.

An American agent who is in Germany to-day under provisions that are made by the Secretary of Agriculture, in a letter that was sent to that Secretary, says, in speaking of the exclusion of American live stock and meats:

In this report I first pay my attention to the dressed beef which has been imported from the United States, and it will not require much space or excessive explanation to show that the quality of the American dressed beef was excellent, and consequently that the prohibition order excluding it from the German market seems not only ridiculous but offensive.

In this report, which is too long to read, our agent shows, from careful and extended inquiries with different persons in the German Empire, that the American meat sent to the German markets is as pure and free from disease as that furnished not only by the native producers, but was as good as the meat sent from Denmark or any other European country.

Now, Mr. Chairman, it seems to me that when the German Government sets up such a false pretense as this, that our cattle and hogs and dressed meat are diseased and hence should be excluded from her markets, that before we repeal this legislation and acknowledge to her that the United States has done her a wrong, we should adopt some legislation which will place Germany in a position where she will admit all American products into her markets under as favorable terms as those from any other foreign country. Let Germany first do justice to these American interests before she has granted to her the concessions she is contending for.

Mr. VAN VOORHIS of New York. Let me ask the gentleman whether other commodities besides sugar are shipped from Germany into the United States?

Mr. HOPKINS of Illinois. Oh, yes; more than \$50,000,000 worth of products are imported from the German Empire annually.

Mr. VAN VOORHIS of New York. Suppose we pass a law prohibiting them from selling their bogus shotguns in this country.

Mr. HOPKINS of Illinois. Well, it would be only what Germany is now doing with reference to certain of our products.

Mr. Chairman, I do not agree with the gentleman from Georgia [Mr. TURNER] who has just addressed the committee, that we should remove this legislation for the purpose of satisfying Germany that we are desirous of her trade. That Government is an aggressive one. Her people are looking out for their own interests, and not for the interests of the American people or the American Government. Germany has placed this restriction upon our products not because her people are offended on account of certain alleged privileges that have been given to the people of this country in our tariff laws, but because they desire to control their markets against the American products.

In the legislation that was given in this country in 1891 by the Republican party the President of the United States is clothed with authority to protect these interests if he will; but if he is

not disposed to stand by America in this controversy with Germany, then it seems to me it is high time for the legislative branch of the Government, by the adoption of the amendment I have proposed, to show not only to him but to the German Government that this differential duty will be collected unless these restrictions upon American products are removed and that Americans are given the same opportunity to enter the ports of that great country and enter the markets there to sell beef, bacon, and pork under as free and fair conditions as are granted to Denmark or any other foreign country.

Why, Mr. Chairman, any other position than this would not be American. I for one can not engage in encomiums upon an Administration, I care not what its political character may be, that will not put American interests first and foremost.

In this matter we do know that Germany has again and again placed conditions and restrictions upon American products that have made it almost impossible for our producers to enter her markets. We do know that she has thrown every obstacle in the way of the American hog entering her ports and displaying his superior qualities in her chief cities.

It was Germany's unfriendly attitude toward American live stock and dressed meats that caused Congress to enact what is known as the meat-inspection law in 1890. Since that date the United States has spent hundreds of thousands of dollars in inspecting cattle, sheep, and dressed meats for exportation. One would suppose that a certificate signed by a Cabinet officer, the Secretary of Agriculture, that a cargo of bacon, ham, and dressed beef has been carefully examined by Government inspectors and is free from any disease would be sufficient. It is a matter of common notoriety, however, that the German authorities ignore the certificate of our Secretary of Agriculture, and make their own inspection of all such products, and often condemn American live stock and meats without reason or justification. Facts in possession of the Agricultural Department fully justify the conclusion that a systematic discrimination is made against American products in all the great German markets.

Now, it seems to me, Mr. Chairman and gentlemen of this committee, that it is high time for the American Government to assert itself, that it is high time for us to say to the country that is sending millions upon millions of dollars of her products here that if she desires the benefits of American markets she must accord to us like privileges and like benefits.

When an officer of the United States holding so high and responsible a position as that of Secretary of Agriculture certifies that a cargo of cattle have been inspected in conformity with the requirements of law and are free from disease and have not been exposed to contagious disease, that certificate should be received by the German authorities without cavil or question. The manner in which it has been treated in Germany is little less than an insult to our Government. Mr. Chairman, a proud and patriotic Administration would not tolerate such disregard of our Government inspections. Germany would long ago have been called to an account for her unjust and unwarranted disregard of our Government inspection of cattle, sheep, and meats that enter her markets if this Administration were possessed of the true American spirit. Instead of looking to the interests of American citizens, instead of protecting the rights of Americans who are engaged in trade with that country, the President and his Secretary of State submit to all of the exactions imposed upon Americans without a murmur.

They say to Germany, "You can disregard the certification of our Secretary of Agriculture, you can disregard the certificate that is made by our Government inspectors, and you can inspect these meats yourselves, and then exclude them if you please, and we will continue to take your products on such terms as you may impose. Not only that, if you are dissatisfied with any legislation that Congress has placed upon our statute books for the benefit of our industries and of our laborers, all you have to do is to make that known to this Administration through your ambassador, and we will quietly and humbly submit and will remove all restrictions that interfere with the free importation of German products into the American market."

Mr. Chairman, if the amendment that I have proposed here is adopted by this House it will inaugurate a new policy in this country. It will say to the German people that the American Government proposes from this time on to look to the interests of her citizens, and that she must from this day forward give Americans the same privileges in her markets that are accorded to other countries, or that all restrictions and limitations that can be imposed for the benefit of American industries and American citizens will be exacted upon all products entering our markets from that Government.

Mr. Chairman, I trust that the amendment I have proposed will receive the approval of my Democratic colleagues. It seems to me that with the facts and figures that have been presented by the Secretary of Agriculture relating to this great industry they can do no less, standing here as they do, to represent the American Government. [Applause.]

Capt. Isaac D. Toll.

SPEECH OF

HON. THOMAS A. E. WEADOCK,
OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 25, 1895.

The House being in Committee of the Whole for the consideration of bills on the Private Calendar, and having under consideration the bill (H. R. 6639) to increase the pension of Capt. Isaac D. Toll—

Mr. WEADOCK said:

Mr. CHAIRMAN: I want you to vote with me and defeat the amendment recommended by the Committee on Pensions. The beneficiary of this bill is 77 years of age. His great grandfather was killed in the Indian wars fighting for the colonies. His grandfather fought for us in the Revolutionary war; his father fought in the war of 1812, and Captain Toll rendered gallant service in the war with Mexico.

His maternal uncle, John I. De Graff, was widely known as a public benefactor, the first president and one of the main projectors of the Mohawk and Hudson Railroad, one of the first (as has been claimed) for passenger travel in the United States, thrice mayor of his native city, Schenectady, N. Y., and twice in Congress, 1827-1829, 1837-1839. By the aid rendered by Mr. De Graff to Commodore McDonough, that gallant officer was enabled to get the fleet ready to meet the enemy on Lake Champlain September 14, 1814, the victorious result of which we know; and will add that Mr. De Graff in his advances to the Government lost by depreciation of Treasury notes \$30,000, \$8,000 of which only was paid to his executor, Judge Jesse D. De Graff, in 1856, the death of Mr. B. Bleeker, of Albany, his most important witness during the prosecution of the claim, cutting off the remainder. The capture of Washington by the British rendered the Government powerless to aid the gallant commodore, so he appealed successfully to Mr. De Graff.

He asks that his pension be raised from \$8 to \$20 a month. The committee refused to allow him more than \$12. I think that this is a case in which this committee will be justified in defeating the amendment of the Committee on Pensions and give this man a pension of \$20 a month.

In support of my contention I ask you to consider his services to his country, which I will briefly recount.

Capt. Isaac D. Toll was captain in the Fifteenth Infantry, United States Army, in the war with Mexico, and served from March 2 to December 4, 1847. The Fifteenth Regiment of United States Infantry was composed of five companies from Ohio, one from Wisconsin, one from Iowa, and three from Michigan.

The companies from Michigan were designated as A, E, and G. Captain Toll, being captain of Company E, proceeded with the army of invasion under General Scott and left Pueblo on the 10th of August, 1847, and participated in the battles of Mexico in the months of August and September of that year, resulting in the capture of that city.

Captain Toll's company had command of the colors and center of the regiment.

On the 27th of April, 1847, the men forming Company E, 91 noncommissioned officers and privates, concentrated at Detroit barracks.

On the 5th of May, after being reviewed by Gen. Hugh Brady, they marched to the wharf to take the steamboat *John Owen* for Toledo, en route to Cincinnati. They went by canal from Toledo and arrived at Cincinnati, Camp Washington, on the 10th of May, and left there on the 18th with the rest of the regiment, except Company G, with New Orleans for their next station, where they arrived on the 29th, and on the 1st of June embarked on the ship *Russia* for Vera Cruz.

Many of the soldiers suffered from ship fever, and as the supply of water seemed insufficient, matters looked gloomy, but upon a measurement it was concluded that, with a favoring breeze, they might, with economy, get through. On the 8th the canvas swelled and they went through the water finely, and on the morning of the 15th grand Orizaba, with its snow-capped dome, looked beautiful in the distance, and they were in the harbor of Vera Cruz.

Maj. F. D. Mills, of Iowa; Lieut. E. C. Marshall, of Kentucky, brother of Thomas F., both of the Fifteenth Regiment, and Capt. Isaac D. Toll first landed at the historic castle of San Juan, and were cordially received by Major Backus, of Monterey fame, a son-in-law of Gen. Hugh Brady, and by Major Smith.

They returned to the ship, taking the town in their way, and the next day took boats and landed with all the men in surf, waist deep, at Camp Twigg, 3 miles above Vera Cruz. Remaining two

days in camp, on the 18th their whole force of about 1,200 under General Pillow, after a late start, encamped at Rio del Media. They were now in the sandy coast country, in the indescribable midsummer heat of the tropics. The next morning the regiment prepared for an early march; but did not move until after 7 o'clock, by which time it should have made nearly half of the day's journey. By noon the intolerable heat and deep sand told severely. Men gave out. The order of the march was broken up, every one for himself.

Captain Toll cautioned his men as to economy in water, and Corporal Napoleon B. Perkins, of Niles, that hardy, brave, foremost, most useful man, carried two large extra rubber bags filled as usual for extra occasions, which he gave judiciously, and with other good management, saved the entire company from loss that fearful day, although ten men died out of the regiment, and many were brought in wagons sent after them and whose lives were only saved by stimulants. With the drum major, Francis Flanders, of Fawn River, and 15 of his company, Captain Toll was the first of the regiment to reach their encampment at River San Juan. The heat was so intense that in order to lighten the load and thereby reach camp earlier, every possible thing that could be discarded in the way of baggage was thrown out on the way, it being a question of life or death; being able even then to make but 12 miles in that memorable march.

The belongings of Captain Toll went with the rest, nor was anything ever recovered. They rested the next day, but the day following proceeded to Paso del Ovejas, going by several unburied bodies blackened by the sun, and began to leave the coast level for higher lands, but the ascent was small. The 22d they encamped at the National Bridge, the heat still excessive, and the usual night alarms disturbing the tired men.

Many of those who fell at Cerro Gordo were buried here. The next morning as they were still ascending the hills beyond Cerro Gordo, Captain Toll's company flanking wagons, he heard rapid musketry firing. The men were soon formed and faced the fire with the deliberation of veterans. The guerrillas shot a little over, as the marks of their bullets showed on the trees. They delivered one volley and we then advanced with trailed arms, the chaparral being very thick, and dispersed them, soon coming upon their low stone-wall breastworks and obtaining some corn cakes or "tortillas," as they were called, which the men found very good. The guerrillas had killed one teamster and wounded two sick soldiers who were riding in the wagons. The affair soon brought General Pillow to the ground, and by his order Captain Toll directed Lieutenant Goodman to scour the other side of the road with half of the company. Colonel Morgan then arrived from some distance in the rear and gave hearty congratulations, the more especially as the voltigeurs who were in advance had not penetrated the chaparral and the company had acted with promptitude.

Captain Toll's company was detailed to escort a forage train, going 11 miles out and returning the same route. Through formidable passes, the ascent being so nearly perpendicular it was almost climbing, in a mountain atmosphere, they saw La Hoya, 13 miles distant, and on the 30th arrived at Cruz Blanco, an elevation of about 7,700 feet. The chilled men, being deficient in tents and blankets, built fires and laid as compactly as possible, nor was their comfort or vitality improved by insufficient and inferior rations, as provisions, as well as tents, had been sacrificed the second day's march from Vera Cruz, and it was only by the most strenuous efforts that a part of the blankets were saved.

Their next encampment was at Perote, July 1, which boasted of a well-constructed fortress, which was occupied by them as a hospital. It was wholly unprotected from the winds, being on a level plain, and the elevation of 7,000 feet made it very unfavorable. Twelve sick men were left there, and soon after they died. Something like ship fever on the Gulf, the terrible heat of the coast country, and the sudden change to mountain atmosphere with insufficient protection had been doing fearful work.

The line of march now lay from Perote to Tepeyahualco, July 3; to Vireyes, July 4; Ojo del Agera, July 5; Elpinel, 6; Acaxote, 7; and on the 8th they reached the beautiful city of Puebla, where they remained until August 10. Here Colonel Morgan highly praised the appearance and discipline of Captain Toll's company. This honor, however, belonged more particularly to First Sergt. John Cunningham.

There was much sickness and many deaths while at Puebla; from the dreadful scourge, from which hardly any were exempt. Not more than half of the original number of Captain Toll's company marched from Puebla, August 10, on their way to the City of Mexico, said company marching at the head of the regiment. The third day's march, to Rio Frio, and the fourth day's, to Venta de Chalco, were forced and told on the men. A few miles from Rio Frio they could view the City of Mexico at their feet. Having now passed the advance guard, they remained here for the 14th and 15th, when they had drill and inspection. They now made a detour by Chalco to avoid the strongly fortified works prepared for them, arriving after two days' march at Xochimilco, August

17, having had a rough march. On the 18th they reached San Augustin, about 13 miles from the City of Mexico. On the 19th they received a heavy fire over the pedregal, confronting General Valencia at Contreras. After crossing a streamlet, Captain Toll directed his men to lie down. His company was on picket guard in constant rain during the night, and at gray of morning, without any food, proceeded to attack an entrenched camp, acting as a supporting force to Colonel Riley's brigade, and taking the camp.

Through a road strewn with debris of a routed army, worn and hungry, they halted at San Angel for half an hour, 5 miles from the battlefield, and each receiving not over 3 ounces of soft bread marched to Cayacan, 8 miles farther.

They were met here by General Scott, still flushed with the morning's victory, who said to them, "Make haste, my sons, or they will be gone before you reach them." They would have taken the order better if they had not been so nearly famished. Capt. R. E. Lee, accompanied by General Pierce and Colonel Morgan, pointed out the way to the enemy, which having done he returned to headquarters or to rejoin General Scott.

Captain Toll's company at this time did not exceed 30 men. The forced marches in ascending the high lands and then descending into the valley, with the work the day before and night in and about Contreras, had further diminished the small number.

The entire regiment had but 283 men. It now, with the New York and South Carolina regiments, the Ninth Infantry, and a few others, had to encounter thousands of the choicest troops under the immediate command of General Santa Anna, being the rear and reserves of the Mexican army, which presented a brilliant and long-extended front. The Michigan companies A and E behaved splendidly under a most galling and destructive fire concentrated upon the regiment before the New York and South Carolina volunteers formed on their left. They had fought three battles, two days without food, and on picket guard in turn at night.

Captain Toll had ordered his first sergeant, John Cunningham, because of illness and utter exhaustion, not to attempt to proceed from Cayacan (Scott's headquarters), where he had left him, but when they had formed in line of battle was surprised to find him at his post. He fought gallantly. Though shot through the thigh, he continued to load and fire, sitting on the ground, until exhausted from loss of blood. The brave fellow died from the wound the third day after the battle.

Captain Toll went three times to obtain permission to charge and failing to obtain it he formed and re-formed the regiment and charged contrary to orders. So successfully and with so much judgment did he push the enemy that his conduct was very much applauded and he ultimately received great commendation. The beloved Colonel Morgan had been severely wounded early in the engagement, and thus they were deprived at a most critical period of the leadership of one whose high courage (proved on other fields) and splendid bearing were ever the admiration of rank and file.

The other Michigan company, A, grandly shared in these dangers, led by the faithful, intrepid Samuel E. Beach, Captain Van Devanter being sick at the hospital of Mixcoac, and the gallant Lieut. E. R. Merrifield being obliged to remain at Pueblo on account of severe illness, where he distinguished himself during the siege of that place by leading a daring assault upon the enemy, and which was commended in official dispatches. The Mexicans fought with spirit, and a heavy body of lancers threatened the left flank. Reno's light battery aided them, and as their ammunition was about exhausted they began to waver, and when pushed broke into a rapid retreat and were then pursued by both infantry and cavalry. Maj. F. D. Mills, of the Fifteenth Regiment, joining the latter, his bay mare carried him farther than any of the army penetrated that day. He had often been cautioned by Captain Toll about riding her into an engagement, as she was beyond the control of any man in the rush of battle. He went beyond the dragoons into the city gates, to his death, contrary to the account of Santa Anna, who stated he had ordered him to be kindly treated, and contrary to the treatment three handsomely dressed, finely mounted Mexican officers received from the regiment at Contreras on the afternoon of the 19th (soon after they crossed the Judregal), who, riding directly in front of the regiment, were saved by Captain Toll's orders from the fire of the leveled muskets.

In the pursuit at Churubusco several of the enemy were taken prisoners, one of whom in capturing him turned his musket upon Captain Toll, but he saved him. As they were halting from the pursuit they saw troops who looked like Mexicans in their dark blue clothing immediately on the lately left battle ground, among their wounded. For a moment this was most alarming. They, however, soon recognized the yells of their own rifle regiment, sent forward too late to render help. After caring for the wounded they proceeded directly (it was then night) to San Antonio, nearly 5 miles, in the rain. A Mr. Lumpkin, of Georgia, most kindly dismounted from his own handsome bay and assisted Captain Toll to mount, as he had been injured, and he rode to

their destination without food and thoroughly drenched, found solid slumber on the brick floor of an upper story of a large hacienda.

The company fared better, the men finding a bountiful supply of straw in a neighboring barn, upon which they slept. The next morning they presented a most ludicrous appearance rather than military, as their clothes, being covered with mud the night before, now had the addition of straw. The achievements of the 19th and 20th of August, 1847, performed by half-famished men, the marches and battles, are matters of record.

The survivors of the regiment were drawn out on the high ground west of El Molino del Rey on the 8th of September, but, while in range of heavy ordnance, did not participate in that most sanguinary battle except as a supporting force. Here Lieutenant Freelon rejoined the company. Lieutenant Titus was also present, and William S. Smith acted as first sergeant. Captain Toll commanded his men on that day, although unfit for duty, and on the 10th went to the hospital at Mixcoac, and on the 13th rode in an ambulance to Chapultepec.

On the 21st day of September, when Captain Toll was officer of the day at the castle, he released 200 more prisoners, who were sent under guard to the city prison, about 2 miles east. At the same time he gave liberty to four military cadets not over 14 years of age, who served bravely as powder monkeys during their assault. When the lads pointed Captain Toll out to their parents they showed their appreciation of his kindness by hugging him on the street. The battles of the Fifteenth Regiment here ended, and General Scott directed that it should garrison Chapultepec, which is 2 miles west of the city.

In January the regiment moved to El Molino del Rey, and soon after marched to Cuernavaca, the company being commanded by Captain Freelon. Captain Toll's official connection with the regiment ceased on the 27th of October, when he resigned his commission.

This course was in accordance with his intentions when he received his appointment, which had been strengthened by ill health, commencing at Vera Cruz, and an injury which he received at Churnbusco which had proved very troublesome.

He had various and important interests at home requiring his attention, and his entering the Army was most inconvenient; he was connected with State military affairs, having held several commissions, including that of major-general; on committee of military affairs in both branches of the legislature; of a family which had been engaged in the early Mohawk Valley Indian wars, having had several relatives engaged at one time. His great-great-grandfather, Capt. Daniel Toll, and his maternal great-great-uncle were killed in the same engagement, at Beechdale, July 18, 1748. He also had relatives in the war for independence, and that of 1812, his father being in the invasion of Canada in 1812, as captain in the New York Flying Artillery. The course for him to adopt was very clear, and he resigned only when actual hostilities had ceased and his services were no longer needed, except perhaps in garrison duties.

He arrived home on the 18th day of December, and a few days later received the following flattering letter from Governor Ransom, from his home at Kalamazoo, which was soon followed by an appointment on his staff:

Allow me to congratulate you on account of the high character you have won for yourself by your gallant conduct and bravery during the period and amid scenes and events of the most brilliant military campaign the world has ever witnessed. I congratulate you on your safe return to your family and friends. I pray God that the laurels you have gained may garland your brow in unfading freshness through a long and happy life, and I most cordially welcome you back to Michigan. Please make my respects to Captain McReynolds, and, if you see him, to Lieutenant Rosecrantz, and believe me most sincerely and truly,

Yours, etc.,

EP. RANSOM.

PONTIAC, MICH., May 23, 1838.

To the PRESIDENT, Washington, D. C.:

In order to explain the purport of this letter it is necessary to state that as Lieutenant of Company A, Fifteenth United States Infantry, war with Mexico, I received a brevet for distinguished conduct at the battles of Contreras and Churnbusco August 30, 1847, and was colonel of the Fifth Regiment of Michigan Infantry, war of rebellion. With the above premises I desire to set forth that Isaac D. Toll, now postmaster at Petoskey, commanded Company E as captain in the same regiment with me, that he acted under my eye with distinguished valor, receiving special commendation, being foremost at critical moments in the battle in forming and leading the men, and everywhere always acted with the greatest promptitude. All who were mentioned honorably received brevets except him. I beg leave to refer to the appendix of President's message to the Thirtieth Congress, being the report of the Secretary of War, pages 105, 106, 107, containing the report of General Pierce of August 23, 1847,* in which the names of Jones, Toll, Hoagland, and Chase occur as captains, and Bowie, Beach, Becket, and Wiley as lieutenants.

I have the honor to be, with great respect, your obedient servant.

SAMUEL E. BEACH.

* Commanders of regiments speak in terms of high commendation of the following officers:
"Captains Jones, Toll, * * * Lieutenant Beach, and others, all of the Fifteenth Regiment."

In the war for the Union Captain Toll, then unable to render military service, aided the cause in every way. During Cleveland's first Administration he served as postmaster of Petoskey, where he has long resided.

In his declining years he has met with adverse fortune, and surely a grateful country will cheerfully indorse the grant of the pension allowed by this bill.

The Currency.

Nothing but evil springs from this imaginary money wherever it is tried.—
James Madison.

SPEECH

OF

HON. GEORGE W. COOPER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8706) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. COOPER of Indiana said:

Mr. CHAIRMAN: I listened with much interest to the remarks of the very able and distinguished gentleman from Maine [Mr. REED] yesterday upon the pending question. He began by calling our attention to the fact that under our present financial system there had devolved upon the Treasury Department, in addition to its ordinary administrative duties, the business of banking; that the United States, having issued its notes and announced its readiness to redeem those notes at the pleasure of the holders, was under the necessity of keeping a reserve constantly on hand for that purpose, and to respond to every demand upon that fund.

He says that the "business establishment" of the Treasury has been running astern, and that instead of borrowing money on its own account it has taken the money of the banking department and reissued it; that the result is what is known in popular phrase as the "endless chain," and that by this process the United States is made purveyor of gold to the rest of the world.

So far, Mr. Chairman, there is no reason to complain of this statement of the case. That such process is and has been going on no one will dispute. But when the gentleman tells us that this condition is not the legitimate and unavoidable operation of our system of finance as affected by existing conditions I must beg leave to dissent. The gentleman knows perfectly well that the Secretary has no power or authority under existing law to borrow money with which to meet current deficiencies; he knows that under the act of May 31, 1878, the Secretary is obliged to take from what he calls the banking department, the redeemed Treasury notes, and reissue them. That law is mandatory; there is no discretion.

Mr. Chairman, I am unable to understand the gentleman when he tells us that this condition of things never need to have occurred under existing law, or that it is not the logical and necessary result from our present system of finance.

He has offered a substitute, and perhaps we may be able to see his real position in this proposed measure. This substitute consists of two sections and, omitting matters of detail, they embody each a separate proposition. The first section confers authority to issue bonds to support the operations of the banking department of the Treasury, and the second to meet the engagements of its business department.

But what disposition does this substitute make of the Treasury notes? Where, in either or both of these sections taken together, is the remedy for the operation of the "endless chain?"

With all due respect to the gentleman, it seems to me that he is just a trifle shy on that question. Now, this substitute will certainly enable the Secretary to replenish his gold reserve, if need be, over and over again; but how are we to escape, what we all deplore, the unprofitable task of furnishing gold to all the world?

There is absolutely nothing in his bill to provide against that contingency.

I know, Mr. Chairman, that the gentleman tells us that the Secretary should not pay out the greenbacks, but should borrow money to meet current deficiencies; but this is equivalent to a repeal of the law of 1878. The gentleman can not repeal that law by his argument; why does he not write it in his substitute. Let us now, therefore, see where the gentleman stands, construing his substitute and his speech together.

First, he would authorize bonds with which to buy gold with which to redeem Treasury notes,

Second, he would authorize bonds to meet Treasury deficiencies, so that the Treasury notes should remain untouched, their fate awaiting some future determination.

Third, he would not repeal but leave in force the law of May 31, 1878, which reads as follows:

And when any of said notes may be redeemed under any law, from any source whatever, and shall belong to the United States, they shall not be retired, canceled, or destroyed, but they shall be reissued, paid out again, and kept in circulation.

Here are the gentleman's words:

Our situation is this: We were redeeming greenbacks when they were presented. If the revenue was equal to the expenditures whenever a greenback was redeemed it would stay in the Treasury, and this notwithstanding the fact the Secretary is authorized to reissue; for it is not either the authorization or even the demand of the law that they shall be reissued that causes the trouble. It is the fact that they are reissued. It is the fact that their reissuance causes this continued depletion of the Treasury.

But the law says they "shall be reissued, paid out again, and kept in circulation." Now, what becomes of the gentleman's contention that the Secretary may retain these notes and issue bonds for other money with which to meet his engagements?

If the gentleman will examine the debates in the Senate while the bill was pending there, he will see that the language used was purposely, deliberately chosen.

Why, sir, an effort was made to amend and modify the bill somewhat after the fashion of the gentleman's conception of this law.

Senator Mathews offered this substitute for that very mandatory provision:

They shall be reissued from time to time as the exigencies of the public service may require.

That substitute was defeated, and the law was enacted as I have given it. There is no escape from this situation except by legislation, and this substitute does not attempt to deal with that which seems to me the most serious cause of the present complication. It neither proposes to retire the Treasury notes nor to modify the law which compels their post-redemption issue.

RETIRE THE TREASURY NOTES.

Mr. Chairman, if the Government embarks in banking and issues paper promises intended to circulate as money it becomes amenable to the conditions and responsibilities which attach to that kind of business. It must be ready at all times to redeem its promises in money on demand or they will depreciate. In order to float these promises and make them equal to gold it was thought necessary to accumulate \$100,000,000 in gold, and that sum has been so kept except when temporarily depleted.

Mr. Chairman, I am in favor of retiring these Treasury notes entirely and finally. I wish to see our Government relieved from the responsibility of the banking business, the Treasury limited to the exercise of its legitimate functions under the Constitution, and the people secured against the danger of an unsound currency.

THE CONSTITUTIONAL QUESTION.

First, I wish to call attention to the fact that the power of the Government under the Constitution to issue its notes and make them a legal tender in payment of debt is and always has been disputed. In the "Plan of a Federal Constitution," as proposed by Charles Pinckney, among the powers which were to be given to the "Legislature of the United States" there were enumerated, "Borrow money and emit bills of credit."

In committee this language was changed so that it read when reported:

Borrow money and emit bills on the credit of the United States.

In the convention Gouverneur Morris moved to strike out the words "and emit bills," and the motion, after a full debate, was carried by the votes of all the States but two, and the clause was made to read as it now stands: "Borrow money on the credit of the United States."

An outline of that debate may be found in the Madison Papers, and if anyone has any doubt as to the purpose of that body to forever prohibit Government issues of paper money, an examination of that discussion will remove that doubt. Mr. Madison said that this action was taken to cut off the pretext for a paper currency, and particularly for making the bills a tender either for public or private debts.

It has been contended, I believe, by some that the authority to coin money included the power to issue a legal-tender paper currency, but it was provided in another section that no State should have power to make anything but "gold and silver coin a tender in payment of debts." It would therefore seem that having discussed and rejected the only proposition which they thought might confer that power upon Congress and having expressly prohibited it to the States, the framers of the Constitution had limited legal-tender money to gold and silver coin.

In a letter written by Mr. Madison to Thomas Jefferson, while the Convention was in session at Philadelphia in July, 1787, he said:

"* * * I am still under the mortification of being restrained from disclosing any part of their proceedings. As soon as I am at liberty I will endeavor to make amends for my silence, and if I ever have the pleasure of seeing you I shall be able to give you full gratification."

In this letter, written as you see at the very time and place when and where the Constitution was being discussed and created, Mr. Madison adds, referring to paper issues:

Nothing but evil springs from this imaginary money wherever it is tried, and yet the appetite for it where it has not been tried continues to be felt.

That great Missourian, Thomas H. Benton, who was then the especial champion of President Jackson, said in the Senate in 1834:

The power granted to Congress to coin money is an authority to stamp metallic money, and is not an authority for emitting slips of paper containing promises to pay money.

He said that he—

was one of those who believed that the Government of the United States was intended to be a hard-money Government. * * * It is the money and the only money of the Constitution, and every early statement on the subject of money confirms that idea.

Mr. Webster, in discussing this subject in the Senate in 1836, said:

Most unquestionably there is no legal tender and there can be no legal tender in this country under the authority of this Government or any other but gold and silver, either the coinage of our own mints or foreign coins, at rates regulated by Congress. This is a constitutional principle, perfectly plain and of the highest importance.

That such was the belief of those who framed the Constitution and of those who interpreted that great instrument to us is shown by the fact that never during the lifetime of any of those illustrious men was a legal-tender issue proposed or seriously discussed.

Such, I repeat, Mr. Chairman, were the views of the fathers of the Republic, and such were the opinions and the practices of those who administered this Government for three-quarters of a century prior and up to the passage of the first legal-tender act in 1862.

If you will read the debates in this House and in the Senate upon the constitutionality of that measure you will be impressed with the reluctance which characterized the resort to this extraordinary and theretofore entirely unassumed authority.

Mr. Conkling said:

The proposition is a new one. No precedent can be urged in its favor; no suggestion of the existence of such a power can be found in the legislative history of the country.

It is hardly too much to say, therefore, that the uniform and universal judgment of statesmen, jurists, and lawyers has denied the constitutional right of Congress to make paper a legal tender for debts to any extent whatever.

Mr. Pendleton said:

When I come to examine the powers of Congress according to the principles of interpretation to which I adhere, I look to the grants of the Constitution. I find no grant of this power in direct terms or, as I think, by fair implication. It is not an accidental omission; it is not an omission through inadvertency; it was intentionally left out of the Constitution, because it was designed that the power should not reside in the Federal Government.

Those who favored the bill did so under the plea that it was a "war measure," a "measure of necessity." Mr. Kellogg said:

If this question came up in ordinary times I am frank to confess that I might perhaps have had some doubt of its constitutionality sufficient to induce me to oppose it. * * * But, sir, in this our extremity, while we are struggling to perpetuate our Government, I am willing to go to the very verge of the Constitution.

Senator Fessenden rested the argument for the action "upon the ground of absolute, overwhelming necessity." He put it in the same category with such acts as confiscation. He said:

The question after all returns: Is this measure absolutely indispensable to procure means? If so, as I said before, necessity knows no law.

Mr. Chairman, it was under conditions and influences such as appear from the statements contained in this discussion that these notes were issued. It is true they were upheld by the courts and their constitutionality affirmed, yet even here they were regarded and treated not as money, but as a Government loan, forced upon the people to meet a great emergency. I quote from the opinion of Justice Bradley. He says:

It is a pledge of the national credit. It is a promise by the Government to pay dollars. The standard of value is not changed. The Government simply demands that its credit shall be accepted and received by public and private creditors during the pending exigency.

No one supposes that these Government certificates are never to be paid—that the day of specie payment is never to return. And it matters not in what form they are issued. * * * Through whatever changes they pass their ultimate destiny is to be paid.

THE PROMISE OF REDEMPTION.

But, Mr. Chairman, not only were these notes issued as I have shown by a great stretch of constitutional authority, under the pressing plea of military necessity, but they were accompanied with a promise of redemption.

The Hon. Hugh McCulloch, an able, honored, and distinguished citizen of Indiana, in his report as Secretary of the Treasury of December 4, 1865, in discussing this subject, said:

The present legal-tender acts were war measures, and while the repeal of those provisions which made the United States notes lawful money is not now recommended, the Secretary is of the opinion that they ought not to remain in force one day longer than shall be necessary to enable the people to prepare for a return to the constitutional currency. It is not supposed that it was the intention of Congress by these acts to introduce a standard of value in times of peace lower than the coin standard, much less to perpetuate the discredit which must attach to a great nation which dishonors its own obligations by unnecessarily keeping in circulation an irredeemable paper currency. It has not in times past been regarded as the province of Congress to furnish the people directly with money in any form. Their authority is to "coin money and fix the value thereof," and inasmuch as a mixed currency, consisting of paper and specie, has been found to be a commercial necessity it would seem also to be their duty to provide, as has been done by the national-currency act, that this paper currency shall be secured beyond any reasonable contingency. To go beyond this, however, and issue Government obligations, making them by statute a legal tender for all debts, public and private, is not believed to be under ordinary circumstances within the scope of their duties or constitutional powers.

The reasons which are sometimes urged in favor of United States notes as a permanent currency are the saving of interest and their perfect safety and uniform value.

The objections to such a policy are that the paper circulation of the currency should be flexible, increasing and decreasing according to the requirements of legitimate business, while if furnished by the Government it would be quite likely to be governed by the necessities of the Treasury, or the interests of parties, rather than the demands of commerce and trade. Besides a permanent Government currency would be greatly in the way of public economy, and would give to the party in possession of the Government a power which it might be under strong temptation to use for other purposes than the public good—keeping the question of the currency constantly before the public as a political question, than which few things would be more injurious to business.

But the great and insuperable objection as already stated to the direct issue of notes by the Government, as a policy, is the fact that the Government of the United States is one of limited and defined powers, and that the authority to issue notes as money is neither expressly given to Congress by the Constitution, nor fairly to be inferred, except as a measure of necessity in a great national emergency. No consideration of a mere pecuniary character should induce an exercise by Congress of powers not clearly contemplated by the instrument upon which our political fabric was established.

Mr. Chairman, this was the view taken by the Secretary in the very first report made by him after the close of the war. It has practically been the view maintained by all the Secretaries from that day to this, so far as I am advised—

Mr. BAILEY. If the gentleman will permit an interruption, does he not remember that Senator SHERMAN expressly recommended that they should not be retired.

Mr. COOPER of Indiana. Perhaps I ought to except Senator SHERMAN on the suggestion of the gentleman from Texas; but I am in doubt of it, for I know that he favored at one time their retirement. It is possible that he has been on both sides of the question. [Laughter.]

Mr. WHEELER of Alabama. Let me remind my friend from Indiana, for whom I entertain the very highest regard, that a Democratic House passed a law expressly providing against their retirement beyond \$346,000,000.

Mr. COOPER of Indiana. I can not be interrupted now. I will answer my good friend from Alabama after I call attention to these recommendations of the Secretaries in brief.

Secretary Bristow in his report December 7, 1874, following the example of his predecessors in office, made an earnest appeal for the retirement of these notes and gave utterance to this very sound and timely warning:

The history of irredeemable paper currency repeats itself whenever and wherever it is used. It increases present prices, deludes the laborer with the idea that he is getting higher wages, and brings a fictitious prosperity from which follow inflation of business and credit and excess of enterprise in ever-increasing ratio, until it is discovered that trade and commerce have become fatally diseased, when confidence is destroyed, and then comes the shock to credit, followed by disaster and depression, and a demand for relief by further issues.

Again, Mr. Chairman, this report reads almost prophetically of conditions which we have but recently seen:

The universal use of, and reliance upon, such a currency tends to blunt the moral sense and impair the natural self-dependence of the people, and trains them to the belief that the Government must directly assist their individual fortunes and business, help them in their personal affairs, and enable them to discharge their debts by partial payment. This inconvertible paper currency begets the delusion that the remedy for private pecuniary distress is in legislative measures, and makes the people unmindful of the fact that the true remedy is in greater production and less spending, and that real prosperity comes only from individual effort and thrift.

In 1876 Secretary Morrill said:

The United States notes, commonly known as legal tender, regarded as a substitute for money, are an anomaly in our monetary system, tolerable and possible only in the exigencies of civil war—the offspring of its perils and limited to its necessities. To allow their continuance as such, after the cause which justified their existence had ceased, is to violate the conditions of their inception and to sanction what was only tolerable as a necessity, by impressing upon it the stamp of legitimacy.

In December, 1884, Secretary McCulloch, having been called again to administer the duties of this high and responsible office nearly twenty years after the date of his report from which I first quoted, said:

A government which engages in banking by furnishing a paper circulating medium must be governed by the rules which prevail with prudent bankers, and be constantly prepared to meet such calls as may be made upon it.

Many persons regard legal-tender notes as being money, and hold that no means should be provided for their redemption. That this is a delusion will be proven whenever there is a large demand for gold for export. They are not money, but merely promises to pay it, and the Government must be prepared to redeem all that may be presented or forfeit its character for solvency.

This language, used ten years ago, is vindicated and exemplified to-day by our experience and present situation. And while some may continue to believe that these notes are money, and for certain reasons so contend, it is, it must be, perfectly plain to those who desire to know the truth that they are drafts upon the national Treasury, and that their nonpayment means national dishonor.

Mr. Chairman, no more able, conscientious, patriotic man ever presided over the Treasury Department than the late lamented Manning. I wish especially to call the attention of my Democratic friends to the very able report made by him on this subject. I refer to his annual report of December 6, 1880. I wish I had time to read extensively from this report, but I have not, and will content myself with calling your attention to his concluding recommendations. No better Democratic platform could be written:

I therefore respectfully recommend:

1. Repeal of the clause in the act of February 28, 1878, making compulsory Treasury purchases of silver, for the reason heretofore given and in order to reduce surplus and unnecessary taxation \$24,000,000 a year.

2. Further reduction of surplus taxation, beginning in a manner which will be suggested below, close down to the necessities of the Government economically administered.

3. Repeal of the act of May 31, 1878, making compulsory post-redemption issues and reissues of United States legal-tender notes, thus facilitating—

4. Gradual purchase and payment of \$346,681,016 outstanding promissory notes of the United States with the present and accruing Treasury surplus, issuing silver certificates in their room, and gold certificates if need be, without contraction of the present circulating volume of the currency, these notes (called greenbacks) being now the only debt due and payable before 1891 except the 3 per cent bonds, which are probably all to be called and paid early in the ensuing fiscal year.

The extraordinary conjunction of opportunity and necessity making practicable so complete a reform in our currency and so large a reform in our taxation, will, perhaps, excuse a reference to the conditions and the method of their execution which were set out in my last annual report, or any repetition of what I have already had the honor to suggest in respectfully urging upon Congress the easy provision of a better currency for the people of the United States than the best now possessed by any nation—"a currency in which every dollar note shall be the representative certificate of a coin dollar actually in the Treasury and payable on demand; a currency in which our monetary unit, coined in gold, or its equivalent coined in silver, shall not be suffered to part company."

The act making compulsory post-redemption issues and reissues of United States notes and the act making compulsory Treasury purchases of silver are each a separate menace to the public tranquility, are each injurious to the public morals, the public faith, and the public interest. But they do not double our difficulties. On the contrary, the repeal of both acts, and the use of the Treasury metal surplus in the substitution of coin certificates for greenbacks, will convert our worst kind of paper currency into the best kind— indefinite promissory notes of debt made legal tender will be converted into representative certificates of coin, held subject to demand.

The present Secretary of the Treasury has had devolved upon him the complex difficulties which his predecessors foresaw and plainly pointed out, and which are due to laws and conditions for which he is in no way responsible. The deficiencies in the revenues are mainly traceable to three causes. First, the McKinley tariff law, which by the confessions of its author and friends was intended to curtail revenues, and which did yield an annually decreasing income to the Treasury; second, to the profligate legislation of the Fifty-first Congress; and third, to the unreasonable delay in the passage of the Wilson bill, caused by factious opposition and partisan obstruction. The resulting deficiencies have only served to expose the weakness of the Treasury situation and to render acute the ills which have continually lurked in its system.

In his annual report for 1893 he very clearly states the situation as he finds it, and in so far as that situation is complicated by the existence of the Treasury notes and the laws relating to them he says:

So long as the Government continues the unwise policy of keeping its own notes outstanding to circulate as currency, and undertakes to provide for their redemption in coin on presentation, it will be, in my opinion, essential for the Secretary of the Treasury to possess the means, or to have the clear and undoubted authority to secure the means, which may from time to time become necessary to enable him to meet such emergencies as the one which has recently occurred in our financial affairs. Under existing legislation the Treasury Department exercises to a larger extent than all the other financial institutions of the country combined the functions of a bank of issue, and while the credit of the Government is so strong that it may not be necessary to maintain at all times the actual coin reserve which experience has shown to be requisite in the case of ordinary banking companies, still it would be manifestly imprudent, to say the least, not to adopt such precautionary measures as would enable the Government in times of unusual monetary disturbance to keep its faith with the people who hold its notes and coins by protecting them against the disastrous effects of an irredeemable and depreciated currency.

While the laws have imposed upon the Treasury Department all the duties and responsibilities of a bank of issue, and to a certain extent the functions of a bank of deposit, they have not conferred upon the Secretary any part of the discretionary powers usually possessed by the executive heads of institutions engaged in conducting this character of financial business. He is bound by mandatory or prohibitory provisions in the statutes to do or not do certain things, without regard to the circumstances which may exist at the time he is required to act, and thus he is allowed no opportunity to take advantage of changes in the situation favorable to the interests of the Government, or to protect its interests from injury when threatened by adverse events or influences. He can neither negotiate temporary loans to meet casual deficiencies nor retire and cancel the notes of the Government

without substituting other currency for them when the revenues are redundant or the circulation excessive, nor can he resort, except to a very limited extent, to any of the expedients which in his judgment may be absolutely necessary to prevent injurious disturbances of the financial situation. These considerations emphasize the necessity for such legislation as will make the Department more independent of speculative interests and operations and enable it to maintain the credit of the Government upon a sound and secure basis.

Whatever objections may be urged against the maintenance of a large coin reserve, procured by the sale of interest-bearing bonds, it must be evident that this course can not be safely avoided unless the Government abandons the policy of issuing its own notes for circulation and limits the functions of the Treasury Department to the collection and disbursement of the public revenues for purely public purposes and to the performance of such other administrative duties as may be appropriate to the character of its organization as a branch of the executive authority.

Now, Mr. Chairman, I have brought down the expressions of opinion which have been carefully, solemnly made from time to time by those who have been charged with responsibility in this Department. They are full of instruction; they ought to have great weight with the legislative branch of the Government.

It is not necessary, Mr. Chairman, to further quote the opinions and recommendations which have come to us from time to time from those who have been in position to realize and to feel the great embarrassment and danger incident to the issue and maintenance of these Treasury notes, nor to attempt to further emphasize their appeal for legislation which will cause them to be finally redeemed. But to my Democratic friends let me say that I realize that some names are more potent than others in our councils, and I wish to call to your minds the testimony and add to what I have said here to-day the approval and sanction of one who has long since passed from among us, but whose spirit still inspires our highest purpose and commands our most loyal service. I refer to the name and the

TEACHINGS OF THOMAS JEFFERSON.

What I am about to read is from a letter addressed by Mr. Jefferson to the President. It is dated Monticello, October 15, 1814. I ought to say perhaps in explanation before I read this letter that during the war of 1812 resort was had to the issue of Treasury notes, not legal tender, for the purpose of carrying on that war, and it was with reference to that matter that he said:

Suppose we require, to carry on the war, an annual loan of twenty millions; then I propose that in the first year you shall lay a tax of two millions, and emit twenty millions of Treasury notes, of a size proper for circulation, and bearing no interest, to the redemption of which the proceeds of that tax shall be inviolably pledged and applied by recalling annually their amount of the identical bills founded on them. The second year lay another tax of two millions and emit twenty millions more. The third year the same, and so on until you have reached the maximum of taxes which ought to be imposed.

Here is a precedent for our proposed action—noninterest-bearing Treasury notes, to be redeemed from the proceeds of a tax inviolably pledged and applied. Further on he says:

All we should have to do would be, when the war should be ended, to leave the gradual extinction of these notes to the operation of the taxes pledged for their redemption; not to suffer a dollar of paper to be emitted either by public or private authority, but let the metallic medium flow back into the channels of circulation and occupy them until another war should oblige us to recur, for its support, to the same resource and the same process on the circulating medium.

Mr. Chairman, he does not content himself with a mere outline of a plan, but with characteristic perspicuity this great man, perfectly tireless in detail, accompanies his letter with a table carefully wrought out by which he indicates with mathematical accuracy the very year in which the last of the notes must be paid.

I have read from the sixth volume of Jefferson's Works, on pages 392 and 393.

In brief, the remedy proposed by Mr. Jefferson was to pay the Treasury notes, stop the further issue of paper money, and "let the metallic medium flow back into the channels of circulation."

Again, on page 189 of the same volume, he says: Every one knows, that although not literally it is nearly true that every paper dollar emitted banishes a silver one from the circulation. A nation, therefore, making its purchases and payments with bills fitted for circulation thrusts an equal sum of coin out of circulation.

There is in this no suggestion of a permanent paper issue. On the contrary, he never spared to teach the distinction between money and paper promises to pay money, which to his clear comprehension was no other than the difference between debt and property.

To my friends around me here who still contend for the free and unlimited coinage of silver, permit me to say that I am wholly unable to understand how you can consistently ask for a wider use of silver while you insist upon the retention of this paper money. Why not retire it and "let the metallic medium flow back into the channels of circulation."

Treasury notes have been resorted to as a method of borrowing by the Government at five different periods in our history. First, in the war of 1812; second, in the panic of 1837; third, during the Mexican war; fourth, in the panic of 1857; and fifth, during the late civil war.

As I have already shown, none of these notes were made a legal tender in the payment of debts prior to the act of 1862. All notes issued prior to that were based solely upon the power to borrow money, and nearly all of them bore some rate of interest. As bearing upon the proposition to retire our outstanding Treasury notes,

I desire to call attention to the opinion of Mr. Benton, expressed in the Senate on the occasion of the authorization of the notes of 1837:

BENTON ON TREASURY NOTES.

I will now say a few words on the policy of issuing Treasury notes in time of peace, or even in time of war, until the ordinary resources of loans and taxes had been tried and exhausted. I am no friend to the issue of Treasury notes of any kind. As loans they are a disguised mode of borrowing and easy to slide into a currency. As a currency it is the most seductive, the most dangerous, and the most liable to abuse of all the descriptions of paper money. The stamping of paper (by the Government) is an operation so much easier than the laying of taxes or of borrowing money that a government in the habit of paper emissions would rarely fail in an emergency to indulge itself too far in the employment of that resource to avoid as much as possible one less auspicious to present popularity.

So said General Hamilton, and Jefferson, Madison, Macon, Randolph, and all the fathers of the Republican (Democratic) church concurred with him. These sagacious statesmen were shy of this facile and seductive resource, "so liable to abuse and so certain of being abused." They held it inadmissible to recur to it in time of peace, and that it could only be thought of amidst the exigencies and perils of war, and that after exhausting the direct and responsible alternative of loans and taxes. Bred in the school of these great men, I come here at this session to oppose at all risks an issue of Treasury notes. I preferred a direct loan, and that for many and cogent reasons. There is a clear authority to borrow in the Constitution; but to find authority to issue these notes we must enter the field of constructive powers.

To borrow is to do a responsible act; it is to incur certain accountability to the constituent, and heavy censure if it can not be justified. To issue these notes is to do an act which few consider of, which takes but little hold of the public mind, which few condemn and some encourage, because it increases the quantum of what is vainly called money. Loans are limited by the capacity at least of one side to borrow and of the other to lend. The issue of these notes has no limit but the will of the makers and the supply of lampblack and rags."

EVILS OF A BAD PRECEDENT.

But, Mr. Chairman, we are met at this point by some who say that conditions have changed; that we can do what our fathers failed to accomplish, what other nations failed to do; that we are above the precedents, and, in short, that we are great enough and strong enough to discard the lessons of experience and defy the limitations of established political science.

It is also contended by others that no danger exists and no harm can come from the continuation of the Treasury notes in circulation because the amount is limited and the responsibility not great when compared with our resources.

Mr. Chairman, these are the very reasons that should move us now to finally close this transaction. It is one of the objections to this kind of paper that in times of business activity and general prosperity, when speculation is active and confidence unshaken, it is mistaken for real money and men build upon it as if it were substance in itself, and then when the time comes, as it always does come, for liquidation, collapse and ruin must follow. It is also one of the symptoms of this fatal malady that the patient can not be undeceived. He will not believe that his misfortune is due to the deceptive influences of the inflated medium, but rather demands that the artificial stimulus be restored and even increased. He is, to borrow an expression from Jefferson, like a dropsical man crying for "Water! water!" or, to use another of his expressions, he insists upon resorting "for the cure of colic to inflations of more wind."

Mr. Chairman, we are not more likely to perform this miracle of making money out of "lampblack and rags" than have the generations of men who have gone before us. We have not yet discovered the philosopher's stone. On the contrary, the continuation of these notes in circulation constantly deceives and misleads those who know nothing of the cost and danger, who have not felt the weight of responsibility or known its harassing details; they form the nothbed out of which has sprung in the last few years so many noxious weeds that the poison from them afflicts our entire body politic.

Perhaps the most vicious of the many offspring of this fruitful error is the Stanford loan bill.

It was introduced in the Fifty-first Congress and was entitled "A bill to provide the Government with means sufficient to supply the national want of a sound circulating medium." The seductive feature of the bill was that it proposed to lend United States notes to "every person who is a citizen of the United States, or who has declared his intentions to become such, and who is the owner in fee of unincumbered agricultural lands." And for that purpose the bill directs that—

The Treasurer of the United States is hereby authorized and directed to cause to be printed, signed, and ready for use . . . circulating notes of the United States.

The very able report of the Finance Committee against this measure, written by the venerable Senator MORRILL, contains much information and sound reason. Among other equally good things, it says:

Many persons may be captivated with the plausible idea of obtaining cheap loans and plenty of money on easy terms, but the experience of enlightened nations shows wherever such reckless financial experiments have been tried that they have ended in commercial crises, bankruptcy, and general national disaster. The principle is unsound and can not bring forth good fruit.

It may not be improper to refer briefly to some of the ill-born national examples which conclusively demonstrate the inexpediency that has always attended all such measures, and their final ruinous catastrophe.

The Mississippi scheme was started in Paris in 1717 by John Law, embracing trade and other privileges, and finally amalgamated with the national bank, which issued an immense amount of paper. Law had promised annual returns of 120 per cent. The stock at first rose to an enormous premium.

Upon the issue of 50,000 new shares there were 300,000 applicants. Soon, however, gold began to be hoarded, and though laws were passed to punish all persons who were found in possession of a sum beyond a fixed amount, large sums were sent out of the country, to Belgium and England, for safe-keeping. In 1790 the bank stopped payment and the whole scheme collapsed, bringing ruin upon all of the great multitude who had unwisely put faith in the financial soundness and integrity of the Mississippi scheme. Law immediately fled the country.

The insurmountable disorder of the French finances, and annual excess of expenditures beyond receipts, without doubt was the first cause of the French Revolution. Fresh loans were required for the treasury every year. The nobles and clergy would not consent to be taxed, and lenders at last refused to lend. The King and Queen sent all their plate to be melted down, but it was insufficient for the public expenditures. The treatise of John Law on "Money and Trade" had been translated into French, and at length Talleyrand brought forward and carried his measure for the confiscation of the whole ecclesiastical property of the Kingdom, reserving a pension to the clergy, and appropriating what was estimated at £80,000,000 to aid the public necessities.

In December, 1789, the assembly ordered a sale of church and crown property to the amount of \$16,000,000 and decreed that a paper currency should be created of that amount, bearing 5 per cent interest, and called assignats, for the redemption of which the confiscated lands were to be sold. Not to enter into all the progressive steps taken, in less than 5 months, by another decree, the assignats were declared a legal tender, with interest at 4 per cent. The public debt rapidly increased, and in 1790 new assignats were created of double the amount. Further large amounts were created in 1791-92, and in 1793 the assignats were at a discount of 30 per cent. Shopkeepers refused them for prime necessities and their shops were plundered in general riots.

With the creation of more assignats in 1793 the convention decreed six years' imprisonment to any person who should sell assignats at less than their nominal value, or make any difference in price whether paid in paper or specie. A silver franc got to be worth six in paper. The penalties for making any difference in price were greatly increased and death was decreed against all who kept back from public sale articles of first necessity. Trade and production nearly ceased. Public functionaries could no longer live on their salaries and one-third of the army deserted.

In 1795 the assignats in nominal value amounted to \$3,800,000,000, and had fallen to one-thousandth part of their nominal value. Finally, the Government refused to part with the national domain at the depreciated value of their paper currency, and destroyed it at a single blow by decreeing "that anyone might make bargains in whatever currency he pleased." Thus dropped out of circulation, perhaps, the largest batch of legal-tender paper currency ever created, notwithstanding it was based upon land security and supported by all the terrors of national power.

The Argentine Republic established in 1856 a great national mortgage bank to make loans on the hypothecation of real estate. The minister of finance regarded it as "a great boon to the people for the reason that land is the great patrimony, the immense capital of the country, and every facility," he said, "should be given to mobilize the capital and increase its value." Its functions were not to loan money on mortgage, but to issue transferable mortgage bonds on the execution of mortgages in its favor, which were put on the market for what they would fetch, with national guaranties to the holder the service of interest and amortization.

The bonds were made payable to bearer and bore interest at not exceeding 8 per cent, and with an annual sinking fund for their ultimate payment of not exceeding 2 per cent. The chairman and directors were appointed by the President of the Republic. The bank was to make no loan of less than \$1,000 nor above \$50,000. The mortgage extended to all other property of the mortgagee, though not mentioned in the mortgage, and no loan was to be granted for more than half the value of the property mortgaged. A delay of over sixty days in the payment of the hypothecary obligation authorized the bank to put up for sale at public auction the property mortgaged, without any legal proceedings, and to award it to the highest bidder.

It is not necessary to say that the financial scheme of the Argentine Republic has been hardly more fortunate than that of John Law, or than that of the assignats of France, and has brought shame and disaster upon the credit of the Argentine Republic. The inflated paper money market became easy for speculators, but specie payments were soon suspended, gold rose to over 200 per cent premium and suddenly went out of the country to pay balances of trade and interest on foreign bonds, and the Argentine national-bank notes are now worth only 50 cents on the dollar.

The Argentine Government is grievously embarrassed and now proposes to obtain relief by the extraordinary measure of offering for sale in Europe at public auction no less than 24,000 square leagues of land in their recently organized territories at a minimum price of \$2 in gold per hectare, or about \$1.25 per acre. These lands, according to the Buenos Ayres Herald, are situated in Terra del Fuego, or in territories where the best lands have already been disposed of in large tracts, or where only swamp lands remain unsold, and would not attract eager bidders among foreigners.

From this desperate measure they hoped to have raised \$120,000,000 of gold to be deposited in the mint for the conversion of the Argentine national-bank notes. The emergency it appears was great, but it is very likely gray hairs will cover the heads of the holders of these notes long before the notes will be redeemed either in gold or silver.

Referring to the scheme of the notorious John Law, to which Senator MORRILL refers in this report, Thomas Jefferson once said, in a letter written by him at Monticello in 1813, that it—ended in France in the bankruptcy of the public treasury, the crush of thousands and thousands of private fortunes, and scenes of desolation and distress equal to those of an invading army burning and laying waste all before it.

THE MONEY OF THE CONSTITUTION.

We frequently hear men declare their undying allegiance to "the money of the Constitution." I shall not be personal. I have no other aim than the preservation of what seems to me the correct principle as applicable to this question. But there are those, I repeat, who contend for the money of the Constitution and at the same time support a money unknown to the Constitution, denied by the Constitution, and despised by its founders.

Here is my good friend from Alabama, General WHEELER, serving notice on me that a Democratic Congress passed the law of 1878 to prevent the retirement of these notes, as if that were an authority against my present position or illustrative of Democratic principles.

Gentlemen must remember the conditions that prevailed at the time that act was passed. We were then just on the eve of coming to a specie basis. We had passed practically through the era of contraction, but we had not yet obtained a fair share of metal-

lic money. The Treasury statement for that year shows that we had in circulation only \$905,793,807, as follows:

	In circulation Mar. 1, 1878.
Gold coin.....	\$82,530,163
Standard silver dollars.....	53,573,833
Subsidiary silver.....	44,364,100
Gold certificates.....	311,436,971
Silver certificates.....	313,888,740
United States notes.....	
National-bank notes.....	
Total.....	905,793,807

From this table it will be seen that we then had no silver dollars and very little gold in circulation. It is a singular coincidence that the Bland-Allison Act was passed this same year. In view of all the vicissitudes of our financial affairs, it seems clear to me that it would have simplified matters very much and probably afforded a happy solution of most, if not all, of our troubles if when the silver coins were issued under the Bland law of 1878 it had been provided that for each dollar so issued a dollar in paper promises should be retired. Our stock of silver and gold, both of coin and bullion, is now about \$1,300,000,000, or \$500,000,000 more than all the money in circulation of every kind in 1878.

I am aware, Mr. Chairman, that the advocacy of this law to prevent the further retirement of the greenback was taken by many as a pledge of the party to Government paper money. It seemed for the time to promise well for the party. It was supposed by some to be a necessary remedy suitable only to the then distressed condition of the country. It was opposed then by some of our ablest Democratic leaders, and the dangers of the movement clearly pointed out. But we should not follow as a precedent that which was done as an exception to, and recognized as a departure from, sound Democratic principles.

I realize that we have honest differences among us upon this subject, differences which seem to be irreconcilable; but, Mr. Chairman, there will be a revision of views, a codification of doctrines, and a unification of the faith. Whatever shades of opinion may divide us, whatever local influences may give color to our convictions or prompt our actions, whatever of pride or resentment growing out of our struggles over this question may now be felt, they will all pass away; and when that time comes, as it must come, our party will be found standing by the Constitution, following the teachings and abiding in the faith of the fathers.

THE COINAGE OF THE CONSTITUTION.

Mr. Chairman, it is not uncommon to hear gentlemen declare that they are for the coinage of the Constitution. We hear this most frequently from those who insist upon the free and unlimited coinage of silver at the ratio of 16 to 1. They seem to think the one thing alone which will answer the demands of the Constitution will be free coinage at 16 to 1. What was the coinage of the Constitution?

There are but two references in that instrument to this subject. Section 8 of Article I declares that—

Congress shall have power * * * to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

Section 10 of the same article declares—

that no State shall coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts.

There is no suggestion of ratios in either of these provisions, except in "regulate the value." No ratio was named, no mint was in existence, no coinage laws or precedents were recognized or adopted or sanctioned. Congress was simply given the power to coin money and regulate the value of that coin.

What was meant by the word regulate as used in that connection? Was it to declare arbitrarily a value not found to exist in the coin? The Congress should fix the standard of weights and measures. This was to be an act arbitrary in its nature, but Congress could not under this grant of power fix values where they did not exist. Necessarily this language means that after establishing a unit of value and providing for various denominations both of gold and silver it was left with Congress to ascertain and declare the relation which the one metal shall sustain to the other in the coinage, viz, how much gold shall be in the one and how much silver shall be in the other to make the dollars equal. But in addition to this the word "regulate" has in it the idea of continuous action, of supervision. The relative value of gold and silver had been constantly changing since the dawn of history.

It is said that in ancient Egypt they were of equal value, or a ratio of 1 to 1. Among the Greeks and Romans the ratio was 9 to 1. It never ran to 12 to 1 until in the seventeenth century. The men who wrote this Constitution knew the use of language, and they knew that the relative value of these metals was constantly changing, and that it was not even uniform among the nations, and so they provided a power to regulate. If we had any doubt on this subject only a slight investigation of the discussion which led up to the first ratio under the Constitution would remove that doubt.

Mr. Jefferson says in his autobiography that some difference of

opinion arose as to the monetary system which should be adopted. The financier, Robert Morris, had submitted to Congress, in 1783, a very complicated and cumbersome system, in which the value of a dollar was to be expressed by 1,440 units. Jefferson tells us that he replied to this and printed his notes, and, putting them into the hands of members of Congress for consideration, that the committee agreed to report on his principle, and he adds: "This was adopted the ensuing year and is the system which now prevails." These notes appear in his published works under the heading, "Notes on the establishment of a money unit and of a coinage for the United States." I will quote his very language on this question. It will be found on page 168, volume 1, and reads as follows:

The proportion between the values of gold and silver is a mercantile problem altogether. It would be inaccurate to fix it by the popular exchanges of a half joe for \$3, a louis for 4 French crowns, or 5 louis for \$23. The first of these would be to adopt the Spanish proportion between gold and silver; the second, the French; the third, a mere popular barter, wherein convenience is consulted more than accuracy. The legal proportion in Spain is 16 for 1; in England 15 for 1; in France 15 for 1. The Spaniards and English are found, in experience, to retain an overproportion of gold coins, and to loose their silver.

The French have a greater proportion of silver. The difference at market has been on the decrease. The Financier states it at present as at 14 for 1. Just principles will lead us to disregard legal proportions altogether; to inquire into the market price of gold in the several countries with which we shall principally be connected in commerce, and to take an average from them. Perhaps we might, with safety, lean to a proportion somewhat above par for gold, considering our neighborhood and commerce with the sources of the coins, and the tendency which the high price of gold in Spain has, to draw thither all that of their mines, leaving silver principally for our and other markets. It is not impossible that 15 for 1 may be found an eligible proportion. I state it, however, as a conjecture only.

Now, just think of it, Mr. Chairman; here are the utterances of the very man who prepared, proposed, and secured the adoption of our coinage system. He tells us that the proportion between the metals is a mercantile problem altogether, and that "just principles would lead us to disregard legal proportions altogether." That we "might lean with safety to a proportion somewhat above par for gold."

The ratio actually adopted was 15 to 1. If there is any coinage of the Constitution it is coinage at the ratio of 15 to 1, or at some ratio which expresses the values of gold and silver in the mercantile world. The first might historically be called the ratio of the Constitution, because it was the first established under the Constitution. The second might be called a constitutional coinage because the spirit of the system as declared by its author was one based on relative commercial values. But, Mr. Chairman, the ratio of 16 to 1 has neither claim to its credit.

As I have said, the power to regulate contained the idea of supervision. This power we have exercised. The first ratio was 15 to 1. Under this ratio we lost all of our gold because we had undervalued it. A bill to change the ratio was proposed in 1834, the object being to procure gold in circulation. Benton was the great champion of the movement. He demanded that "the mint drops should shine in the purses of the poor." He submitted a set of resolutions in the Senate, calling for a joint committee of both Houses to inquire into the cause or causes of our loss of the yellow metal.

A bill was finally introduced which changed the ratio to 16 to 1. It passed both Houses and received the signature of President Jackson. They thought in those days that it was the commercial and not the legal ratio that would keep the metals in circulation. They were hard-money Democrats, and their fame rests largely upon their loyal devotion to sound-money principles.

In speaking upon this bill Mr. Benton said:

That gold was undervalued by the laws of the United States and expelled from circulation was a fact which everybody knew; but there was something else which everybody did not know; which few, in reality, had an opportunity of knowing, but which was necessary to be known to enable the friends of gold to go to work at the right place to effect the recovery of that precious metal which their fathers once possessed, which the subjects of European kings now possess, which the citizens of the young republics to the south all possess, which even the free negroes of San Domingo possess, but which the yeomanry of this America have been deprived of for more than twenty years, and will be deprived of forever unless they discover the cause of the evil and apply the remedy to its root.

Mr. Chairman, it is not my purpose to follow these various expressions of opinion with further comment. I prefer to present the utterances of others rather than to give my own. It occurred to me that possibly the weight of their great names and the clearness and strength of their reasons might have more weight than anything that could be said by the living.

Paper money based alone on faith or mere authority is a delusion and a snare. It is not a new experiment. Almost every nation at some time in its history, either tempted by its necessities or guided by unwise counsels, has pursued this phantom, but each in turn has been compelled to retrace its steps with blasted hopes and bleeding feet. Actual money may not always be needed, and, in fact, comparatively speaking, is little used in the larger fields of commerce and trade; but whatever takes its place must, like warehouse receipts, represent and entitle the holder to the thing of real value.

I submit, therefore, that it is clearly established, both by reason and authority—

First. That the Government ought not to issue paper money;
Second. That there can be no honest money without value—actual commercial value—equal to that which it purports and represents itself to be;

Third. That the precious metals can not be coined and kept in circulation together at a mere arbitrary ratio; that is, without regard to their respective commercial values; and

Fourth. That the Democratic party from the days of Jefferson in all its history has been and is the hard-money party and the honest-money party of the country.

To this I will add a hope and a prophecy that with a worthy, able, and fearless successor to his illustrious predecessors in the Presidential chair, there is nothing which we can do that will strip our party of the laurels won in defense of these doctrines in the past, nor reverse its policy for the future.

William Lilly.

REMARKS

OF

HON. IRVING P. WANGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 9, 1894.

The House having under consideration resolutions of respect to the memory of Hon. William Lilly, late a Representative from Pennsylvania—

Mr. WANGER said:

Mr. SPEAKER: The estimable qualities of him whose death we mourn, and the lessons to be drawn from his useful life and lamented departure from among men have been so graphically brought to our attention by the distinguished gentlemen who have preceded me that my duty may be briefly discharged. General Lilly was as a giant oak of the forest among men. Among the great forces of nature in Pennsylvania, and her sturdy manhood, he hewed his way from a humble station into a position of prominence in business, in official, and in political life. He was a man who attached himself to everyone, however humble, with whom he came in contact; a man whose plain demeanor and blunt speech told of the utter lack of affectation in him, and of the absolute sincerity of every word he uttered; a man in whom you felt, however brief your acquaintance, that so long as you were true to duty and honor you had in him a devoted friend; one who was willing to promote your welfare, and to share with you every opportunity for advancement which he enjoyed. He was a man who made his record and has woven it eternally, so far as mortal affairs are concerned, into the history of the community and State in which he lived.

As has been told, in the days of his youth and the maturer years of his early manhood he was an unflinching Democrat. Yielding to what he believed to be the dictates of patriotic duty toward his country, he severed his allegiance to that party and joined the Republican party, and although the latter party was locally in the minority in the part of the State in which he lived, and he was not without political ambition, he never wavered in his fidelity to that party.

He was never willing to surrender duty in order that personal advantage might accrue to himself.

The locality in which he lived was a grand section of the grand State of Pennsylvania, rich in coal and other mineral deposits, and those were great men who made the prosperity of the Lehigh Valley and enabled the State and the people generally to enjoy the magnificent bounty which Providence had bestowed upon that region; and while General Lilly himself was in the front rank of the successful men who elevated that section and promoted the general prosperity of the citizens there inhabiting, yet there never was a time when success made him at all proud, made him at all evidence any feeling of superiority over anybody less successful than himself, or made him lose the slightest interest in those around him, no matter how young in years or how humble their station in life.

It was one of the elements of his great strength in business and in political life that he had such a keen and lively interest in the young and rising generation, who always felt that his was a hand which would help to elevate them, and when he fell there was a vast number of poor people of the eastern part of Pennsylvania who felt that in his death they had lost a sincere and faithful friend. He has gone from among us. He went almost immediately after he had realized what was said to have been the ambition of his life—a seat in this distinguished body. But, although he is gone, the memory of his sterling virtues lives, and his example incites us all to higher and loftier aspirations toward the performance of our duty to our fellow-men and to this great nation of which it is our rich blessing to be citizens.

The Currency.

SPEECH

OF

HON. JERRY SIMPSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1895,

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8706) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. SIMPSON said:

Mr. CHAIRMAN: I do not know that I can contribute much to the solemnity of this occasion in assisting to preach the funeral oration upon the bill that is now before the House, for I think it is a foregone conclusion that it can not pass. [Laughter.] I listened to the speech of the chairman of the Committee on Banking and Currency this morning, and I confess that I was somewhat surprised that such a bill should come from a committee of which he is the chairman. Knowing his long experience in this House, his ability and his intimate knowledge of the financial affairs of the country, I say I am surprised that he could bring forward such a measure.

Mr. COX. If the gentleman will permit me, that bill never came from that committee with any recommendation from the committee.

Mr. SIMPSON. Mr. Chairman, the bill seems to be disowned by its own parents, and therefore it has no possible chance of success in this world or in this House.

Mr. RAY. Those fellows often turn out the best. [Laughter.]

Mr. SIMPSON. Now, what does this bill propose to do? It proposes to issue bonds for the purpose of borrowing \$500,000,000 in gold. For what purpose? To meet the demands upon the Treasury for the redemption of legal tenders in gold. I asked the chairman of the committee if there was any law upon the statute book, if there was any legal obligation, binding upon the Secretary of the Treasury, compelling him to redeem those outstanding obligations in gold, and the chairman answered, "No; none whatever; only a moral obligation." What is that moral obligation? From what high moral standpoint have we adopted this rule or practice in the United States Treasury? That is one of the evils that we have inherited from our Republican brethren, established in the Treasury, contrary, as I believe, to the law and contrary to the interests of the people of this country, the practice of redeeming the outstanding legal tenders in gold, and we are to-day reaping the fruits of Republican practice and precedent in this respect.

There is no law requiring gold redemption. It never was intended that those obligations should be redeemed in gold. The law specifically says that a certain amount, \$100,000,000 in coin, shall be set aside for the redemption of these notes, and leaves it optional with the Secretary of the Treasury to use either gold or silver. Now, when the country has not the gold, why does not the Secretary use the silver to redeem these outstanding obligations? There is no doubt in my mind, and I presume there is no doubt in the mind of any gentleman in this House, that if the Secretary of the Treasury would use his privilege under the law and redeem these obligations in silver when he has more silver than gold, this raid upon the Treasury for gold would cease at once. That is the sensible business course to pursue, and it is the only way you can stop this raid.

Suppose we pass this measure, and the Secretary of the Treasury is authorized to issue these bonds and borrow this gold, the same endless chain that we have heard about, with its buckets dipping into the Treasury, will in time dip out all of this \$500,000,000 of gold, and the people at last will have the \$750,000,000 of interest to pay besides the \$500,000,000 principal; and after all we shall be just where we started. And that will be the result unless we change this policy and recognize silver as a part of the resources of the Government, as we are bound to do by law. But gentlemen say this bill proposes to retire the legal tenders. No; it does not, except so far as the national banks take out circulation. But suppose they do not take out circulation? They have not done it in the past to any great extent, and it is reasonable to expect that they will continue the same policy in the future. What then? Your legal tenders go out again and go into the hands of people who are taking gold out of the Treasury, and when the time comes around you will have to issue another \$500,000,000 of gold bonds.

I never heard of such a proposition as that coming from men of long experience in Congress, and particularly on this financial question.

Opponents of the free coinage of silver are always free with

their assertions that this Government can not maintain bimetalism without the aid of an international agreement. Whenever free coinage of silver is proposed these wise owls of finance blink their eyes, turn their heads, and croak dismal prophecies of failure should this country alone attempt any such policy. And yet they are free to demand that this country alone of all other civilized nations shall maintain monometallism.

It is a fact well understood by every intelligent gentleman in this House—and that ought to include the majority—that no other civilized nation in the world follows the example of the United States in paying gold coin for its paper obligations. This country never promised to do it, even by implication. The pretense that the performance of more than was promised is to maintain the honor of the country is based upon the idea, very prevalent in Republican circles, that the honor of this country is to be observed only toward the creditor class. There has never been complaint from the caverns of the bankers when the value of their bonds has been increased.

There never has been a protest from the Republican side of this House when the wages of labor have been diminished, when the small stipend paid to the soldiers was reduced by more than half under the avowed policy of the party then in power. No complaint ever greeted the ears of men guilty of such conduct. But they are the first to protest that the honor of this country depends upon paying the creditor twice as much as was nominated in his bond. Shakespeare died too soon. His character of Shylock as his ideal mean man has been eclipsed in the American Congress.

Now, what is the remedy proposed by the gentleman from Maine, the great leader of the Republican party? Why, sir, he says you should issue bonds of small denominations, limited as to the time they are to run, redeemable at the option of the Government in five years, and payable in coin. How is that different from the law we now have in respect to the redemption of our bonds and other obligations? They are now redeemable in coin, and Republican Secretaries of the Treasury have decided that that phrase means gold. They have redeemed in gold. So under the gentleman's proposition the same old game will go on of redeeming in gold, for there is no proposition in his plan to compel the Secretary of the Treasury to pay out anything but gold. That is not a remedy. It is a miserable makeshift, brought forward, I suppose, by the gentleman from Maine to pull the wool over the eyes of the people who are going to vote for President in 1896. But we give you fair warning; gentlemen, that we are "onto" this little game, and it shall not go by unnoticed.

Now, we have here a statement from the Secretary of the Treasury; and we are bound to accept his information as correct because he is the only man who can possibly know what are the revenues of the Government. He says we have \$105,000,000 of surplus in the Treasury to-day. So that the plan of the gentleman from Maine proposing to increase the revenue is a proposition which we have no occasion for, as we are not in need of an increase of revenue. I am satisfied the country is beginning to recover from the baneful influences of high-tariff protection as embodied in the McKinley Act, and that under this new tariff law revenues will gradually increase. But that does not remedy the evil of gold going out of the Treasury. The revenues are not payable in gold to-day. Mr. SHERMAN, when he was Secretary of the Treasury, decided that legal tenders should be received for customs dues of the Government; and silver certificates are now receivable for such dues.

No revenues will be paid in gold. And then how much better off will you be under the plan of the gentleman from Maine for increasing the revenues of the country? The revenue not being payable in gold, no matter how you increase the revenue it is not reasonable to suppose that any great amount of that coin would be paid at the custom-house, especially after you have, by law, created a premium upon gold by giving to it a special use denied to other forms of money issued by this Government. The merest tyro in the study of political economy understands the fact that value resides in use, and is regulated by the law of supply and demand. By providing a use for gold which the greenback and the other forms of money can not perform you have necessarily increased the value of one at the expense of the other.

This was our history during the war. The fact was well appreciated by the gentlemen who controlled the Government at that time. They stand here in this House claiming, par excellence, to be the friends of "honest money," and yet there is the stain upon their party, upon their present leaders—an unrepented sin, since they seek its repetition—of having purposely depreciated the value of the paper money of the Government while it was the sole tender paid to an army fighting for that Government's preservation. It was the boast of the leading financier, who has been indeed a thrifty financier for his own benefit, "it was our policy as the war progressed to depreciate the value of United States notes."

The thrifty gentleman whose habits of economy and simplicity

of tastes have enabled him to amass a vast fortune upon his salary as a Government servant fully understands the effect of a decrease of use upon the value of any form of money, and he explained fully to the American people how that infamous policy of his party has been carried out by legislators in this Congress, who were plotting infamy within sound of the enemy's guns across the Potomac. They depreciated the greenback and increased the value of the gold, the former being paid to the soldiers and the latter to the bank financiers, who are now, as then, standing for "honest money." And now they propose, after a generation has passed away, to repeat that crime and once more plunder the producers of this country in the interest of the bond-holding shysters, who have always opposed any legislation in the interests of the people, any legislation tending to the maintenance of real national honor. I must confess that I expected something better from the great leader of a great party, something which had a little common sense in it, something which had a little business in it. But I have looked in vain in his proposition for anything that will furnish a remedy for present evils.

This bill is a complete surrender on the part of the Democratic party to the banking interests of the country. For many years back—before the close of the war—the money changers have made war upon all issues of money except those that came to the people through the banks. They made war upon the greenbacks at the time they were issued; they put exception clauses in them which depreciated them. They have made war upon silver. And this bill is a complete surrender of the Democratic party to the banking interests, because they come out boldly and say, "We are in favor of retiring the greenbacks and the legal tenders from circulation and giving a free field and a complete monopoly to the national banks of this country." Now, we do not propose to agree to that. I do not believe the people of this country are ready to take out of circulation nearly \$500,000,000 now circulating in the business of the country and bearing no interest, and to issue instead bonds to the amount of five hundred millions bearing gold interest and payable in gold. I am surprised that such a proposition should receive a single vote in this House.

As was stated by the gentleman from Maine, quoting an eminent banker in the city of New York, Mr. St. John, these greenbacks or legal tenders are so good and sound a money that they are actually dangerous. Nobody denies that they are the best currency we have ever had in this country. Yet one of the grounds on which these men are making their efforts to bring us to a gold basis is for the purpose of getting rid of that currency. Everybody understands why they are so anxious to get rid of silver. No proposition comes up here connected with the finances of the country that does not disclose the ruling purpose of these gentlemen to get rid of silver as a part of the money of the country and also to put out of existence the legal tenders, in order, as I said before, to give the bankers a free field.

Mr. RAY. Will the gentleman allow me a question?

Mr. SIMPSON. Why, certainly.

Mr. RAY. You say that your remedy is, when these greenbacks and Treasury notes are presented, to pay them off in gold and silver both?

Mr. SIMPSON. At the option of the Secretary of the Treasury.

Mr. RAY. Now, suppose you do that, this endless chain is in operation, and in time would you not exhaust the silver as well as the gold?

Mr. SIMPSON. I think not.

Mr. RAY. Why not? The law provides that they shall be immediately reissued—paid out again. There is this endless chain. Now, if the present system dips out all the gold, why would not the plan the gentleman proposes dip out all the silver?

Mr. SIMPSON. My idea is—I think everybody understands it—that gold is desirable to-day because you have legislation that makes the gold dollar more valuable than any other dollar. You have taken the gold dollar which formerly circulated as money and you have made it a commodity; it has ceased to perform the functions of money, and is merely a commodity which serves as the basis of trading for speculators. The day that you adopt this policy of paying out silver as well as gold such speculation will cease. Gold will no longer be a commodity, but will perform the functions of money. That is my theory. Of course if you should adopt such legislation as would make silver especially desirable, if you should declare that certain debts must be paid only in silver, then silver would be "dipped out" of the Treasury. But that is not the condition of things with which we are confronted at present.

Mr. HEPBURN. What legislation is there that makes gold more valuable than silver?

Mr. SIMPSON. It is not legislation.

Mr. HEPBURN. The gentleman said "legislation."

Mr. SIMPSON. The cause is, I believe, the violation of the law by the Secretary of the Treasury, assuming that he has authority to pay out gold for the redemption of these certificates instead of coin.

Mr. LIVINGSTON. Let me suggest to the gentleman that the "legislation" was in the act of 1873, which robbed silver of its standing as the unit of value and made gold the unit of value.

Mr. SIMPSON. Let me pass on. I want to show the dangerous policy of issuing bonds; and I want to show by some illustrations what is meant when by special legislation in the interest of gold, as suggested by the gentleman from Georgia, we increased in 1873 the value of the gold dollar by demonetizing silver.

Gentlemen tell us that gold has not gone up, that the gold dollar has not increased in value. They say all other commodities have gone down, when everybody knows that gold has gone up and gone up high, and that it is at a premium to-day. Why, the man that went up in a balloon swore that he did not go up, but that the earth went down. The feeling, he said, that took possession of him was that the earth was sinking from under him; and that is the idea of men who think that gold has not gone up. It has gone away from every other commodity.

These fellows are a little confused, like the Irishman when he heard of the first bonds issued and said to his brother Jimmie, "Jimmie, how about these bonds, the foive-twinties, the siven-thirties, and the tin-forties?" Jimmie says, "Faith and Oi'll till yes. It is this way, yez see: The poor laboring mon has to rise up at 5.30 in the mornin' and worruk until 7.30 in the avenin', so that the bondholder can lie abid until 10.40 in the forenoon."

[Laughter and applause.]

Why, Mr. Chairman, the bondholder can lie in bed all day if he wants to at the expense of the people now. At the close of the war the public debt was a little over \$2,000,000,000. We have already paid on it four and one-half billions, principal and interest, and it will take more to liquidate it and pay off that debt to-day, although only about three-quarters of a billion remain, than would have paid the whole thing off at the close of the war—more corn, more cotton, and more days' labor. And then you tell me that the dollar has not gone up? Certainly it has. And now you want to pile on the people's backs five hundred millions more of bonds and take out of circulation \$500,000,000 of legal tender that does not cost a cent of interest and put nothing in its place except the national bank notes, which will not go into circulation except at the wish of and when it is profitable to the national banks.

As one or two other gentlemen to whom I have offered a part of my time do not seem desirous of occupying it, I wish to add a word or two upon this bill brought forward by the chairman of the Finance Committee; for it seems that all the other members of the committee refuse to father it.

I can see no relief to the country from this bill if enacted into law. As was said by the gentleman from Colorado [Mr. PENCE], I stand here as a Populist, ready to surrender all party advantages, if there were any to be gained, for the purpose of securing any sensible, reasonable measure that will bring relief to the country. But this bill, to my mind, would put the country in a very much worse condition than at present, because its effect will be to pile the taxes higher upon the people of this country, who are already in such a condition that they are unable to bear the burdens imposed upon them. From the newspapers all over this country comes the intelligence of poverty and suffering. Even from Ohio, the home of McKinley—McKinleyized Ohio—we had a few weeks ago an account of 12,000 families who were on the verge of starvation. That is a sample of the condition of things all over the land.

The legislation and the policy of both parties in the past have brought this country to its present bad condition; and I can see no remedy whatever in this bill. I have no fears of its enactment into law. The Democratic party as a party does not support it. I am satisfied of that. The theory is that the substitute of the gentleman from Maine may be enacted into law. Well, sir, you may be enabled in this House and even in the Senate to rally the paid attorneys and representatives of corporations who are legislating for special interests to pass this measure and make it a law. Now, it is well for us to consider what will be the effect of the measure if it becomes a law. You all concede the danger there is in drawing the gold out of the Treasury. The gentleman from Maine says the way to stop that is to increase the revenues of the country. If I understood him correctly his prescription is, "Increase the revenue and the outgo of gold will stop."

Now, according to the ruling of the Secretaries of the Treasury, persons who pay revenue are not compelled to pay in gold, nor are they required to pay any part of such revenue in gold. Then no matter how much surplus you may have in the Treasury, as long as your Secretaries of the Treasury follow out the policy of redeeming outstanding obligations in gold the drain upon the Treasury for gold will continue. This will remain the condition of things no matter how high you pile the revenues and no matter how heavily you tax the people to meet this danger.

There is another danger. The gentleman tells you that the difference between his plan and that brought forward by the gentleman from Illinois is that the bonds under his plan are redeemable in coin. Why, sir, all the bonds have been redeemable in coin; all

the outstanding obligations are redeemable in that way except silver certificates. What have we had as the policy of the Republican party in the past? We are now reaping the evil that they have brought upon us by their official rulings in regard to the mode of redeeming these obligations. Every Republican Secretary of the Treasury in the past has adopted the policy of redeeming in gold.

If any such calamity should come to this country as that the Republicans should regain political control of the Government and if the gentleman from Maine should be chosen President, have we any assurance from him that he will appoint a Secretary of the Treasury whose ruling will be in accordance with the law and who will redeem in coin—in silver when it is necessary, instead of gold? None whatever. He has been as silent as the tomb on that question. He dare not assure the country in advance what will be his policy in that regard. If he will tell me to-day that he will guarantee to the people to appoint a Secretary of the Treasury who will carry out the law and redeem in silver, if necessary, as well as in gold, there will be some excuse for the adoption of the measure he proposes to-day.

Mr. SPRINGER. Will you make him the Populist candidate for the Presidency?

Mr. SIMPSON. Certainly; the Populists will all vote for him.

A MEMBER. You do not want to kill him off, do you?

Mr. SIMPSON. Now, Mr. Chairman, only a few days ago, along with my Populist colleagues, I had the privilege and the honor of helping to kill the so-called Carlisle bill, and I also assumed the responsibility of suggesting a remedy, so called, or a way out of the difficulties surrounding us and those that seemed to confront us in the immediate future. That remedy was to coin the silver bullion now in the Treasury to meet the obligations of the Government, and also to redeem the outstanding obligations either in silver or gold in accordance with the sums which happened to be in the Treasury; that is to say, if there was more silver than gold, use the silver for redemption. If the gold was in excess, let gold be applied for the same purpose. I also suggested that if all other remedies failed, and the Government insisted on issuing bonds, and an interest-bearing debt should follow, that the deficiency might be met by the issue of full legal-tender Treasury notes, as the Supreme Court of the United States has decided that Congress has the right and the power to issue.

The gentleman from Maine [Mr. DINGLEY] on that occasion did me the honor to notice me, and said it would be a kind of Uriah Heap policy. I confess that I was at a very great loss to see what the connection was between the two, and how Uriah Heap could figure as a financier, even in the mind of the gentleman from Maine. I had read David Copperfield and understood something of the peculiarities of Micawber—and I only refer to this now to show how dangerous it is for a New Englander when he undertakes to perpetrate a joke. Some gentleman suggested that perhaps the gentleman from Maine meant Mr. Micawber; and lo and behold! in the next morning's RECORD I saw that the "joke" had been corrected. [Laughter.] I believe it was the very first time in the history of the RECORD that a joke was ever corrected in that publication. The gentleman from Maine [Mr. DINGLEY] should prepare a diagram to explain his witticism.

In the same connection, a few days ago, the gentleman from Illinois [Mr. CANNON] repeated over again an old chestnut we have all heard for many years, about a gentleman from his State, a Mr. Campbell, a Greenbacker, who, he says, if he were living to-day, would be a Populist; and he referred to this in a sort of derisive way as a kind of slur against the Populists and their theories. He spoke of him as going on to show how interest accumulated. He referred to the assertion of this gentleman that if a cent was put out at compound interest at the birth of Christ and regularly compounded from that time down to the present the result would make a globe of metal as large as the world; and they all laughed at the joke, the Republicans all laughed; and I want to say that they laughed at Mr. DINGLEY's joke, too, notwithstanding that it was not a joke.

Mr. STOCKDALE. Notwithstanding that it had to be corrected?

Mr. SIMPSON. Yes.

Now, the gentleman from Illinois never took the trouble to say whether the computation was true or not. But it was. And I want to use it as an illustration to show what interest amounts to. Seven hundred and fifty million dollars of interest on these bonds is to be another burden that you are going to pile on the people of the United States, another attempt to make your legislation accommodate itself to the money changers and bankers.

When, Mr. Chairman, I ask the question, are the common people going to get some legislation in their interest? When will a Democratic member or a Republican member bring forth in this House a measure that is in the interest of the taxpayers of the country; in the interest of the man who labors for his daily bread? He is the man I want to help, not the banker or the financier. Now, if they have any suggestion of that kind let them bring it forward. If some gentleman has a measure of relief to propose

in his behalf, a measure that will take some of the burden of taxation off of his shoulders instead of piling additional burdens upon it, he will find me ready at any time to come to his assistance and aid him in the support of such a measure. [Applause.]

I have just received in a note from a valued friend residing in my State, now on a visit to the East, a letter embodying some criticisms upon the various financial plans submitted to this House, which I will print as a portion of my remarks:

"FINANCIAL FOXES.

"There is an old story of a gathering of chickens in convention for the purpose of determining the best methods of erecting chicken coops and places of safe retirement at night. To the doors of this conclave came a delegation of foxes. Addressing themselves to the chairman, they avowed their desire to submit plans for the consideration of the body. They assured them that, as foxes, they knew all about the chicken industry. They had been intimately associated with it all their lives and their ancestors before them, and their fat, sleek sides were proof of their skill. It is recorded that the foxes departed in chagrin when they perceived that their overtures were answered by significant silence, while the chickens roosted high. They probably thought a hint was intended, and accepted it.

"It has been contended that the line between intelligence and instinct is almost imperceptible. There are certain facts of very recent happening that will tend to strengthen that sentiment. When a McKinley committee gather in their rooms for the purpose of making a tariff bill their doors are immediately surrounded and the members importuned for a hearing by a lot of very foxy manufacturers and forestallers of natural opportunities who 'know all about the tariff; they have been in it all their lives and their fathers before them.' They are 'friends of the tariff' and believe the beneficent institution can only be properly left to the nursing of those who profit by the delegated power of taxation. But when the people show their disgust at such impudent delegation of a sovereign power by turning the rascals out, another set of statesmen gather here for the purpose of reforming the financial system of the country, and lo, the doors of the committee rooms are again besieged. This time it is neither a mob of foxes nor yet of petted manufacturers and forestallers. The onlooker would be puzzled to determine whether it was a syndicate intent upon establishing brass works with their capital all in their cheeks, or a lot of men who had so long reflected the color of their coin as to believe themselves created of a little better dust than the rest of humanity.

"But there are many who need no introduction to this class. They are those who have noted the financial legislation of this country for the past thirty-two years. In the present clamor of men of wealth for 'a sound currency' and 'honest money' is repeated the old familiar 'stop thief' cry under which the people have been plundered in the past. This is an old gang who stood in this capital when an enemy's guns were resounding across the river and higgled for the price of their patriotism. These are the men who never soiled their fingers with the kind of money they demanded must be paid to the soldiers and sailors of the country and to their widows and orphans. While the victorious army was marching past this Capitol there was never heard a word of protest from the caverns of the bankers that heroes were being robbed by being paid in 'rag money.' That cry was only raised when Mr. Banker held the interest-bearing obligations of this Government, enhanced in price by the most iniquitous act ever placed on the statute books of a civilized nation. Then the banker became very anxious to secure the enactment of a law under which the soldier should be forced to pay 'hard money' for a debt contracted in a purposely depreciated currency. Let us examine some of the plans and arguments put forward by these worthies in favor of delegating to them the entire control of the people's money.

"The Secretary of the Treasury is assumed to know all about finance. This is one of the strange anomalies of the age. Merely because the fortunes of politics have enabled him to assume the title of Secretary of the Treasury, he is immediately assumed to know all about the economics of finance. On the same principle the fortunate son-in-law of a musician might be offered the position of musical critic on a newspaper. Let us measure the present Secretary rather by his acts than by his title. He knows what is desired, for he stands with those who demand a 'sound currency and honest money.' He believes with his associate in the Cabinet that the American people have a right to expect the 'best money for the best beef and pork and butter.' Therefore, he brings in a bill for the purpose of securing them in this enjoyment. And what does he propose? He finds, first, that it is impossible for 70,000,000 people to maintain 'a parity of value' between two metals and a sufficient coin reserve. And he sees a way out of the difficulty by delegating that duty to a few thousand bankers. He finds a currency system in which are certain promissory notes of national banks. He finds that these notes are secured by the faith of the Government, and that security for

them is held by the people's agents. Mr. Carlisle proposes to improve on this by substituting a hundred-dollar interest-bearing bond as security for every hundred dollars of notes and held by the people's agents, \$30 of noninterest-bearing notes of the Government held by the people's agents, plus a lot of other collaterals held by the issuers of the notes. Mr. Carlisle must not wonder if the chickens roost high.

"Let us submit a few figures to this eminent financier. Let us suppose his scheme accomplished, what would be the result? The banker with \$100,000 capital would start a bank. He would deposit \$23,500 in Treasury notes of some kind with the Comptroller of the Currency and receive in return \$75,000 in money having the indorsement by the Government, but not a legal tender for the payment of debts even to the extent now possessed by the notes of the national banks. 'But,' says Mr. Carlisle, 'the notes are also secured by the assets of the banks and the wealth of the stockholders.' Mr. Carlisle apparently believes the note holder is thus 'secured.' The Secretary would never have attained his reputation as a lawyer of sagacity if he had allowed a client to loan money and let the borrower hold the security. He would have us believe there is something sacred and all-powerful in a 'bank,' and that a banker's word is as good as his bond. This might be accepted as true as to some bankers' words and bonds, the bankers being allowed to hold both.

"That the banker is perfectly 'secured' will be apparent by a few more figures. He loans his own debts to his customers. The banker's debts are 'secured' by the Government indorsement, and he draws interest on them. This would seem like a species of class legislation. But it is argued that this is not a special privilege, because anybody can become a banker and take advantage of the law. A child in a grammar school would be enabled to show Mr. Carlisle that this would only be possible when the whole people became bankers and nobody baked bread and cleaned the streets. And when the banker loans his debts he receives more than their full equivalent in some sort of security. Then if he loans his \$75,000 he has in his possession other security of more than that amount. The banker is very kindly cared for by Mr. Carlisle and will never think of suggesting chicken raising in his presence. This is what is called a step toward a 'sound currency' and 'honest money.'

"Another proposition of this financier must not be overlooked. It is proposed to relieve the bankers of the necessity of keeping a reserve fund to secure his deposits. The banker is to be left to exercise his own sweet will as to the amount of such security in the form of a reserve necessary to 'sound banking.' He may fix it at 40 per cent or one-half of 1 per cent and run away with that, and all the Government will say is 'It is too bad.' But, I hear some defender of 'sound money' say, 'It is proposed that all the banks shall agree to indorse the bank notes of all banks.' We might hesitate to suggest that the Chemical Bank of New York would refuse to accept such a proposition if we had not heard rumors of that sort from men of vast wealth and high position. Even Horace White scents danger in that proposition. Even the bankers know enough to roost high in face of such danger.

"And now we must contemplate another great financial prophet. Anointed with the oils of office, he steps at once to the front rank of financiers. He was made Comptroller of the Currency, and lo, he is bidden to the bankers' tables and toasted as an 'authority.' Having had surfeit of toasts, Mr. Eckels must not quail if subjected to a few roasts.

"Upon one point Mr. Eckels and all these great lights agree with a pleasing unanimity. They are all well assured that the paper notes of the Government must be suppressed. They rally with one accord under the cry, 'The greenbacks must go.' Some of the lesser lights make pretense of saving a remnant of the offending greenbacks as a sort of 'redeemer' for the evidences of the bank debts. But this is at best only a mere pretense to blind the eyes of those who let sentimentality interfere with their consideration of the great question of 'sound currency and honest money.' All such mere sentiment is out of place where bankers are discussing any question. Sentiment among bankers suggests the old comparison of a powder magazine in hell.

"It is also to be noted that Mr. Eckels duly appreciates the obligations of his situation. He has apparently studied the history of his office and noted with care the conduct of his predecessors, who, if alive, may be addressed in care of some national bank. He stands for the perpetuation of the system of national banks. True, he would enlarge their functions and privileges. He would give them such increase of power as to make it unnecessary for them to wag their little fingers to annul the authority of the people's representatives in Congress assembled. He would so enlarge the bank power as to make a nod sufficient when the people rebel against their exactions. And then, if it were found difficult to secure all the bankers ask for, Mr. Eckels would bury all opposition in a 'commission' composed of experts. In other words, he would call the foxes together to care for the chickens. In the consideration of the suggestions offered by Mr. Eckels it may be

needful to make comparisons with the utterances of his predecessors and their supporters in the defense of 'honest money and a sound currency.' The trail of the fox appears in all.

"STATISTICS.

"As Silas Wegg dipped into poetry, so Mr. Eckels dips into figures. There has been demand for an increase in the volume of money. Such demands always meet with bitter opposition on the part of the bankers. They have learned the significance of the saying that when two employers are seeking one laborer wages are high, and that when two laborers are seeking one employer wages are low. They know that when two investors are hunting for one dollar the dollar is harder to get than when two dollars are seeking for one investor. Mr. Eckels is the faithful employee of the banks. He looks to them for his present salary and for his future remuneration, when the example of their liberality to him is to be made an object lesson for his successor. So Mr. Eckels gathers a lot of statistics to show how much of the daily business of certain communities is transacted by checks and other forms of credit. From his figures Mr. Eckels derives the following conclusions:

There are wide differences as to the extent of the use of credit instruments in retail business between States of the same general character of population and economic conditions, but it would seem, from such results as this investigation show, that if there is a real demand and necessity for a continuous larger medium of exchange, the satisfaction of that demand could and would be met by an increase in the use of credit instruments. It is fair to presume that their use would follow, as the absolute business needs of those engaged in carrying on business of each community are always met. That it is not so met is evidence that the need is not as real as many would suppose from the constant demand made upon Congress to simply increase the volume of the currency. Moreover, if that argument, which is based solely upon the demand for more money, were in any large measure sound, it would amount merely to a demand for an increase in the use of credit, since the purpose served by bank notes in the majority of instances could be equally well served by bank discounts and credit deposits; in other words, by the use of checks.

"Here is a great financier's logic. He ascertains that in some localities there is a continuing use of checks and other forms of credit in the daily transactions, and he concludes—as a banker's agent—that the demand for more money in circulation by those ignorant people without bank accounts can be met perfectly with the suggestion that they use checks. It may be hinted to Mr. Eckels that a Queen of France once sharply rebuked the people who were rushing to Versailles in search of bread by suggesting that they stay at home and 'eat cake.' It is fortunate for Mr. Eckels that a better civilization makes it unnecessary for me to suggest that the basket soon held the Queen's head. There will be no sawdust in the basket to which the political heads of Mr. Eckels and his allies will soon fall, but the baskets will be full, all the same.

"How easy it is for the agent of the national bankers to argue that it is better for the people to use checks and evidences of credit. In his statement of conclusions Mr. Eckels unwittingly exposes the animus of the suggestion. He says, 'The purpose served by bank notes in the majority of instances could be equally well served by bank discounts and credit deposits.' The merest tyro will comprehend the meaning of this statement. It suggests at once the fact that a scarcity of money will make it possible for the banker to supply 'bank discounts and credit deposits.' This is all right for the banker, and if it happens to be death to the user the fact will cause no Comptroller of the Currency to lose sleep.

"Let me suggest to Mr. Eckels facts that might make his present argument seem absurd. He finds that the people of certain sections make use of 'bank discounts and credit deposits' in the transaction of their business. He concludes that such devices are as good as money. I recall passing through the chief city in Mr. Eckels's State during the war. There was every evidence of business activity and more or less of patriotism. The people seemed prosperous, though not many of them had at that time set themselves up as financiers. They were using postage stamps and car tickets as money. I frequently saw both these offered in payment for goods delivered. Some of the goods were called 'wet goods,' and were delivered over counters that dripped with wetness. The condition of the postage stamps after such handling may be imagined, but not described. If Mr. Eckels had been Comptroller at the time would he have concluded, from a statement of the amount of postage stamps and car tickets used in Chicago, that its people did not want any small change? Or if, after Mr. Eckels becomes a well-paid bank president, will he sit on the deck of an ocean greyhound and believe that shipwrecked sailors floating by on a plank need no assistance in the shape of a better means of conveyance, simply because they make use of the best afforded in their misfortunes?

"HOW THEY AID THE GOVERNMENT.

"Equally with his predecessors, Mr. Eckels believes the banks render great aid to the Government. He thus echoes the old cry that the Government actually owes its existence to the patriotism of the banks during the war. According to such authority, the national banks enabled the Government to suppress the rebellion—

by taking out their notes after the surrender of Lee and the disbandment of the armies. Before quoting the statements of the Comptroller in this connection, I want to remind him of what happened while the banks were aiding the Government to suppress the rebellion. Every note issued by the banks was as much an inflation of the currency as if a Treasury note had been issued.

"Mr. Eckels will respond with the assertion that the bank credit was added to that of the Government. Probably the Comptroller would not argue outside a bank parlor that the lesser was greater than the whole or that the inclusive term was less inclusive than the specific. He would not risk his standing as a logician before a gathering of Illinois farmers by the assertion that the circumference of the hub was larger than the tire of the wheel, or that a single pig weighed more than a whole barn full. He knows that the whole includes every part, and he knows, too, that the power of the Government is all the power there is in this country. It may for a time be so delegated as to make the bankers believe themselves omnipotent; but their power is only great as it includes a portion of sovereignty improperly delegated. The man who believes that a banker's indorsement of a piece of Government paper makes it a whit stronger would see no impropriety in the fence painter who sought to improve a summer sunset with his daub brush.

"Among the benefits to the Government named by Mr. Eckels from the operations of the banks is the following:

As Government depositories the national banks have received, stored in their vaults, and accounted for \$5,356,625,891 without expense to the Government. Allowing the rate of three-eighths of 1 per cent as a reasonable compensation for such services, which is the same as that fixed by the act of March 3, 1875, as the compensation of disbursing officers for public buildings, it would amount to \$30,087,347.

"Anyone familiar with the monthly debt statements of the Treasury will appreciate the full significance of this claim. The banks have rendered service to the Government in that they have 'received, stored in their vaults, and accounted for \$5,356,625,891, without expense to the Government.' Surely such a system and such patriots should be well esteemed by the people. The sum named may well enthrall even a Comptroller of the Currency and an anticipating bank president. The banks have held all this money for the Government, and still continue to do so, 'without charge.' They are so intensely patriotic, so determined to render great service to the people, that they actually allow the Secretary of the Treasury to deposit with them millions of money and never charge the Government a cent. But Mr. Eckels is too modest by half, and I want to give him a hint lest he fail of the abundance of reward anticipated by minimizing the fullness of the banker's service in this regard.

"The enormous sum stated by Mr. Eckels as having been handled by the banks for the Government without charge evidences a degree of service to the Government. But it is a sum indicating the gross amount held by the banks for the Government during a long series of years. Mr. Eckels forgot to say that the banks had also held as a continuing daily balance of private deposits nearly \$2,000,000,000, and that, too, without charging the depositors. I recall the fact that this desire of the bankers thus to serve the people is so intense in our great cities that they pay large sums for advertising in order to notify the people of their beneficence. They even go so far in some cases—not national banks—as to pay a small interest on the daily balances.

"Perhaps Mr. Eckels failed to note this fact lest it might suggest that State banks had been even more liberal than the national banks. And before closing this branch of the subject I want to call Mr. Eckels's attention to a little fact. If it shall ever happen that his friends in the national banks get tired of performing this service to the Government, I will be able to help them out, and will give Government bonds as security for every dollar so held, provided the Government will issue bonds payable at its option at 2 per cent per annum. I do not want Mr. Eckels to think I am a shylock, or even a national banker of this age. I am not entirely devoid of patriotism. And when Mr. Eckels makes his comparison between the services of the bankers and the disbursing officers for public buildings perhaps he will explain what would happen to those disbursing officers if they loaned out the money committed to their charge at interest, pocketing the profits thereon.

"SERVICE TO THE PEOPLE.

"Mr. Eckels believes the banks have also rendered service to the public aside from that rendered to the Government. He sums these all up as follows: First, the saving in heavy discounts on the bank currency prevalent before the establishment of the national-bank system. Second, the saving in rates of interests on loans and discounts. Third, the saving in making exchange. Fourth, the saving to customers in making collections.

"In every phrase the Comptroller speaks on the assumption that the old State-bank currency was the condition precedent to that of the national banks. We must hold Mr. Eckels to the truth of history. His is not excusable ignorance. In his position he is bound to know or confess his ignorance and get out. The green-

back had done its work long before the national-bank note became a power in the land. Even at the close of the war the national banks had less than a trifle over \$100,000,000 of their notes in circulation, and the major portion of these were issued after the backbone of the rebellion had been broken. Practically none were issued in 1864. And yet the better greenback had driven the bank note almost entirely out of circulation and bankers were not prating of the Gresham law. Into what might have been a homogeneous currency the bank notes were thrust by men who had as little idea of patriotism as a pig of conic sections.

"There was something to be made out of the necessities, and the bankers of this country sustained the unbroken reputation of their kind. For every dollar in national-bank notes issued during the year 1864 the Government actually paid the bankers issuing them a premium to accept a 6 per cent United States bond. The banker paid in greenbacks say \$100,000 for his bonds. He received \$90,000 in notes indorsed by the Government, and made a lawful money in many important cases, including all payments to the Government except duties on imports and interest on the national debt. He received in advance 6 per cent in coin on the full amount of the debt for one year. This coin in July, 1864, was worth two and a half times its face value in greenbacks, and the banker therefore received in the same kind of money he had paid for his bonds \$105,000, and the Government still owed him the \$100,000 in gold interest-bearing bonds. The man who argues that this was anything less than clear robbery is either devoid of intelligence or honesty.

"And in any of this portion of the Comptroller's argument it is difficult to take him seriously. He asks the victims of his system to believe they are benefited by the magnanimity of the banks. But with the same logic he might demonstrate that the smallpox was a great blessing to the people because it carried off fewer victims than the cholera. If it were true that the national-bank notes had been instrumental in relieving the people from the losses caused by the old system of unregulated State banks of issue, the Comptroller might ask for their continuance only after he had demonstrated that a better system of paper money could not be devised and had never been tested by the people. The fact is as plain as any mathematical demonstration that the Treasury notes of the Government were in use long before the banks mustered up patriotism enough to hold Government bonds as a basis for the loaning of their debts at interest.

"The further fact is that the Treasury notes have always been held at a slight premium over bank notes, and that their being so held is in accordance with a natural law as universal in its operation as that of gravitation. The Treasury notes have a wider use, and, as value resides in use, they must always be proportionately more desired. And once more I must revert to the proposition that the banks have served the public—that is, the Government—by holding vast sums on deposit without interest. Mr. Eckels shows that the national banks hold for the people balances of deposits amounting to \$1,647,017,129. Speaking of a similar service rendered the Government, Mr. Eckels shows that such a service at the rate allowed by law for the disbursing officers of public buildings would have cost the Government over \$20,000,000. Will Mr. Eckels now say that the national banks render such a valuable service to their depositors by holding the sum above stated?

"THE COMPTROLLER'S SUGGESTIONS.

"Now, the Comptroller enters the field with the Secretary of the Treasury and the bankers, suggesting to Congress certain amendments to the banking law. He wants elasticity. In this he is at one with all the volunteer doctors who have appeared before the committee. He admits that 'no better plan for simply insuring the note holder against loss than the present deposit of bonds to secure a bank's circulation' could be devised. But he believes that this plan does not afford 'elasticity.' He would, therefore, have the Government adopt a lesser security, and substitute for the better note 'elasticity.' Furthermore, the Comptroller admits, 'It is the duty of governments to see that the currency which circulates among the people ought always to be of the very highest character, and the soundness of which should never be a subject of inquiry.' Will the Comptroller tell us why this is a function of government? In analyzing the question he would strike the fundamental principle of the whole discussion. He would see that the issue of money is primarily a governmental function. He would discover that this is not because of any 'social compact,' that it was not because of a human statute or constitutional provision, but that it rested in natural law as firmly as the inalienable right of all men to life, liberty, and the pursuit of happiness. Then let him turn to his law books and read once more the foundation for the saying, 'Delegatus delegari non potest.'

"How does Mr. Eckels propose to give us a currency 'of the very highest character?' He asks that we allow the banks to loan us their promissory notes based upon their discounted paper. This is in brief Mr. Eckels's plan. He would have the banks provide a safety fund to redeem their notes by a graduated tax until the

sum secured should equal 5 per cent upon their issues. In other words, it is proposed to secure the 'highest character' for our note circulation by substituting for a Government bond worth more than the notes issued 5 per cent in cash—after a time—and the assets of the banks.

"There are two points in this connection that will require explanation before being accepted by the average citizen who does not hold office. It will be difficult to make sensible people believe that the banks can issue a better currency than the Government. It will be still more difficult to make them believe that a small safety fund is better than the guaranty of the Government. And Mr. Eckels will be asked to explain whether the notes proposed to be issued under his plans, and all of the other plans emanating from Wall street, are to be redeemable in coin, either gold or silver. I know it is claimed that these notes will be redeemable in the precious metals, but the claim is made with a sinister smile. They are to be redeemable at the banks of issue; in other words, a bank note issued in Des Moines, Iowa, is to be redeemed only at the bank of issue, and if it happens that such a note has strayed away from the immediate locality of that bank the sole pretense of coin redemption rests upon the assumption that the holder shall be able to travel miles enough to reach the bank and make the demand, which will doubtless be refused if made. In other words, they are to suspend specie redemption in the interest of the banks.

"But these plans have come so thick and so fast—they have been amended and the amendments amended—they have been changed so rapidly as to suggest a question whether their paternity could be discovered. In all the varying phases of the discussion on the part of the Wall street monometallists one end has been constantly kept in view. This has been the desire to maintain what is called 'the gold basis.' The object of this effort is very plain. It is to secure in the hands of the wealthy bankers and capitalists of the East absolute power of control over the finances of the Government. It is fortunate for the people that men in Congress having convictions and the courage of them have exposed the absurdity of these plans and have thus far defeated them.

"I now want to call your attention to one more gross absurdity in the arguments that have filled the CONGRESSIONAL RECORD and the press devoted to the plans of the Administration. Senator SHERMAN has repeatedly affirmed that the law requires that the parity of the gold and silver coins should be maintained by the Government. This statement has been reiterated by Republican and Democratic admirers of the great financier from Ohio. They assert that this is mandatory upon the Administration because of the clause in the Sherman law referring to the parity of the two metals. In the first place, it is to be observed that these gentlemen willfully and knowingly misquote that law. There is no reference in the act of July, 1890, to a policy for maintaining the parity of gold and silver coin. The expression is that it is the policy of the Government to maintain the parity of these two metals. And there is a vast difference between the attempt to maintain the parity of value of coins and the parity of value of metals. Moreover, it is not mandatory upon the Administration. It is simply a declaration that it has been the policy of this Government to maintain the parity.

"Now, what does this expression mean? It means that in the Sherman Act there was a declaration of a gross absurdity. There is no such thing as maintaining a parity of value of two metals. It is not possible, any more than it would be possible to logically speak of maintaining the parity of value of any other two commodities. But, assuming it were possible, and assuming that the declaration in that law was mandatory, what would be the logical consequence? At the time of the passage of that act silver was worth nearly twice as much in the market, measured by gold, as it is today. The policy of the Government, then, has not been such as to maintain this parity. It does not necessarily follow that because there has been a decline in the market value of silver as a commodity it resulted from the action of the Government. But it can be very plainly seen that this action of the Government has been a potent factor leading up to that result.

"Value resides in use. Our experience has shown the truth of the statement that when a commodity or a money is denied certain uses the value is proportionately decreased. This was thoroughly appreciated during the war, when a successful attempt was made to depreciate the value of our Government paper money. It was thoroughly understood by those who put the 'except' upon the greenback and provided a use for gold coin that paper money could not discharge. The policy of this Government, therefore, in the payment of gold coin in the redemption of its obligations and its refusal under a strict mandate of Congress to pay silver for such purposes has necessarily resulted in the depreciation of silver through the diminishing of its uses. It will naturally follow, therefore, taking the ground of the monometallist, that it was now the bounden duty of the Government to attempt, so far as possible, a restoration of the parity which existed at the time of the passage of the Sherman Act by placing silver upon that equality with gold coin that exists under the statute.

"The Secretary of the Treasury is instructed to redeem silver notes in silver coin struck for that purpose from the metal purchased by the Treasury notes. This he has not done. He is instructed also to redeem the notes of the Government in gold or silver at his discretion. For this policy he has substituted one under which he has redeemed those notes in gold at the option of the holder of the notes, and to the great detriment of the Treasury and to the country. Every rule of logic would lead the Secretary of the Treasury and the Administration to a change of this policy.

"There is but one other point to which I wish to call your attention. In the most recent proposition of the Government for the issuance of coined bonds for the purchase of gold it is provided in the contract, made secretly by the Administration with the representatives of the money power in New York, that if Congress will give authority for the issuance of a bond payable in gold the interest now contemplated at 3½ per cent shall be reduced to 3 per cent. Failing to receive this authority, it is proposed to issue the bonds payable in coin at the higher rate of interest. There will never be an opportunity in the future for any statesman, even with the hardihood of those who sustain the policy of the Administration, to claim that there is any question as to whether the bonds about to be issued are payable strictly according to the contract in silver. The purchasers of those bonds will have received notification by their accepting them at the higher rate of interest and by the refusal of Congress to grant their demand for a gold bond that this Government holds the option to pay them either in gold or silver.

"There is no possible escape from this logic. It is as clear as the noonday sun. They understand perfectly, and it has been made clear in the debates, that the people's representatives have refused their assent to a bond specifically payable in gold. That action has settled the question for all time that this Government has the right to pay in silver coins of the present standard any obligation that is now outstanding, or that may be issued, until a different action is had by Congress. It is well that this point should be made clear before the close of this session of Congress. There should be a record made that this matter was discussed, and that those who took the bonds took them with the full knowledge that the Government should retain its option to pay bonds either in gold or silver, and pay therefore the higher rate of interest.

"P. FAULKNER."

[Here the hammer fell.]

The Currency.

SPEECH

OF

HON. T. J. HUDSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895,

On the joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds.

Mr. HUDSON said:

Mr. SPEAKER: The time for consideration of this resolution is limited to five hours in this House, and there are 356 members waiting to discuss it. It would be unseemly on my part to occupy more than five minutes. It is claimed by the President and Secretary of the Treasury that the Treasury of the United States is laboring under great embarrassments in its efforts to keep a hundred millions of gold as a reserve on hand. It is also claimed by the Executive and the friends of this resolution that the passage of the resolution will save the Government of the United States \$16,000,000. In other words, they say that if you will permit the Treasurer to issue and sell bonds payable principal and increase in gold, the contract already existing between the Secretary of the Treasury and Rothschild & Sons and J. S. Morgan & Co., London bankers, will be abrogated; otherwise the Secretary of the Treasury will be compelled to issue sixty-five millions of coin bonds, running thirty years, at 3½ per cent annual interest, payable quarterly.

This involves, Mr. Speaker, a very serious question, and one which I fear will give this country a great deal of trouble in the near future. It involves a change of base, a denial of the policy heretofore existing of making all our obligations payable in coin. Pass this resolution and the seven hundred millions of our bonds now outstanding will be knocking at the doors of Congress and demanding equal recognition with the sixty-five millions which we are asked to authorize the immediate issue of. Sixteen millions of dollars is quite an important item, and one that ought not to be lightly brushed aside. On the other hand, it is most impor-

tant that we should carefully consider the business interests of this country both now and hereafter.

In my judgment a declaration upon the part of this Government of its intention to adopt a gold basis without possibility of change or retraction would cost the people of the United States many billions of dollars. It would be a full recognition of the demands of the gold shylocks. It would be an abandonment of all hope of future recognition of silver. It would be a turning over of this Government to our bondholders and the gold speculators. It would be a total surrender of the right of the common people to give voice to their will respecting the financial policies of this Government. No observer of public sentiment can have failed to understand that the great majority of the American people are to-day in favor of the full recognition of silver as it existed in this Government prior to 1873, and that sentiment is growing, and as the people read will grow more rapidly in the next few years than it has in the past. The President of the United States and the Secretary of the Treasury have consulted with and been interviewed so often in the last year by the representatives of Wall street and London bankers that they have not had time to consult or listen to the American people.

Mr. Speaker, a great many of our Republican friends who talked and voted in favor of the repeal of the purchasing clause of the Sherman Act have, I am most happy to say, visited their homes and attended the hustings last fall and returned to this Congress fresh from consultation with the honest yeomanry of their districts, and are now standing manfully upon this floor denouncing this gold-idol policy. It will be observed, however, that they have not yet been able to reclaim their leader, the distinguished gentleman from Maine, nor will they succeed in moving the great majority of their leaders from under the baleful influence of the Rothschilds. They will learn sooner or later that the tail can not wag the dog, and that the dog stands by the bondholders.

We are told that a crisis confronts us and ask what we would have done. My reply is, pay our debts according to the strict letter of the law, which we are amply able to do without the issue of a bond of any kind or character. For the purpose of proving conclusively to the country that my statement is right, I call Mr. Carlisle, present Secretary of the Treasury, who, on the 21st of January, 1895, stated before the House Committee on Appropriations that we had a legal right to pay our outstanding obligations in silver. Questioned by Mr. SIBLEY, of that committee, he answered:

Mr. SIBLEY. I would like to ask you (perhaps not entirely connected with the matter under discussion) what objection there could be to having the option of redeeming either in silver or gold lie with the Treasury instead of the note holder.

Secretary CARLISLE. If that policy had been adopted at the beginning of resumption—and I am not saying this for the purpose of criticizing the action of any of my predecessors, or anybody else—but if the policy of reserving to the Government, at the beginning of resumption, the option of redeeming in gold or silver all its paper presented, I believe it would have worked beneficially, and there would have been no trouble growing out of it. But the Secretaries of the Treasury from the beginning of resumption have pursued a policy of redeeming in gold or silver, at the option of the holder of the paper, and if any Secretary had afterwards attempted to change that policy and force silver upon a man who wanted gold, or gold upon a man who wanted silver, and especially if he had made that attempt at such a critical period as we have had in the last two years, my judgment is it would have been very disastrous. There is a vast difference between establishing a policy at the beginning and reversing a policy after it has been long established, and especially after the situation has been changed.

It will be seen that Mr. Carlisle's only excuse for insisting on evading the law and selling bonds is a bad precedent set him by former Republican and Democratic Secretaries of the Treasury. This fully justifies the excuse of an early settler in Arkansas. When charged with stealing hogs (they do not steal hogs in Arkansas now) he admitted that the charge was true, but gave as an excuse for his bad conduct that it was the regular thing in the neighborhood in which he lived.

Now, sir, our Democratic friends have gone before the country and complained of the misdeeds of the Republican party, and justly complained of many things heretofore done by that party, the chief of which were the acts of Republican Secretaries of the Treasury in construing the word "coin," where found in our obligations, to mean "gold." One of the principal reasons for the turning down of that party to the will of the bondholders and money shylocks. In fact, the Democratic party throughout the Middle States, the South, and West was a unit against that policy. No sooner, however, had a Democratic Secretary of the Treasury been comfortably seated in the Treasury than he adopted the craven policy which he and his party had criticised and denounced.

It is pretended that this Government owes a higher obligation to bondholders than to the veterans of the war and the mass of the American people. I deny that proposition. The Populist party emphasize their denial of that proposition, by demanding that all the Government's creditors shall be treated alike. If the Secretary of the Treasury will to-morrow boldly and manfully an-

nounce his determination to pay the debts of this country according to the legal terms of the contract, and stand by that announcement, our financial embarrassment will at once cease and no more bonds will be needed. The Democratic party has repeatedly in its national and State platforms declared in favor of the recognition of silver, and of the payment of our obligations according to the terms of the contract of treating pensioner and bondholder, laborer and banker exactly alike. Do this, and the whole financial embarrassment of our Treasury will disappear as snow before a summer sun.

Mr. Speaker, there can be no higher obligation upon the part of a Government than its obligation to keep faith with the people of the Government. To make a distinction between a bondholder and a day laborer is a crime, is an injustice which enters the home of every toiler and producer in the land. I deny most emphatically, and the great mass of the American people join with me in denying that the Government of the United States owes our foreign bondholders a higher obligation than it does the men who defended the flag and who are to-day maintaining the honor, integrity, and prosperity of our nation. The remedy is simple: pay our bonds and bondholders and our other obligations according to the letter of the law. That, sir, is the duty of the Secretary of the Treasury. Like every other officer of the United States, he is the creature of the law, and has no power except such as is delegated to him by the law. This resolution, Mr. Speaker, is an effort, an expiring effort, upon the part of the Executive of the United States to coerce this Congress into adopting a gold basis. It will not succeed; it ought not to succeed, and the defeat of the measure will be the triumph of the common people.

Policy Regarding Hawaii.

SPEECH

OF

HON. HENRY M. TELLER,

OF COLORADO.

IN THE SENATE OF THE UNITED STATES,

January 26 and February 6, 1895.

The Senate having under consideration, January 26, the resolution relative to the policy to be pursued regarding Hawaii, submitted by Mr. ALLEN on the 24th instant, as amended by the substitute proposed by Mr. VEST, and February 6, the bill (H. R. 834) making appropriations for the diplomatic and consular service for the fiscal year ending June 30, 1896, the pending question being on the amendment of the Committee on Appropriations providing for a telegraphic cable between the United States and the Hawaiian Islands—

Mr. TELLER said:

Mr. PRESIDENT: The amendment to the resolution indorsing the policy of the Administration of course indorses a policy that has not been consistent with the first provision of the resolution, because the President of the United States has not maintained that masterly inactivity, that impartiality, between these people that the resolution declares he has. It can not be denied in the presence of this Senate that the President of the United States has not been impartial; but, on the contrary, the President of the United States attempted to overthrow the existing Government and to reinstate the deposed or destroyed Government. I know the other day when this question was up before the Senate some friends of the Administration denied that. They denied it in spite of the fact that the President had declared, in a semi-official way at least, that he had attempted to restore the deposed Queen and had failed.

If the doctrine of nonintervention that is here praised, and which it is said the President has followed, is the right doctrine, then the President is to be condemned for not having followed it. I know, on the other hand, it will be said that the President did not follow it because there had been misconduct on the part of our officials. Grant that there had been such misconduct, did that justify the President? The fact that Mr. Stevens was officious, as it is said he was, certainly did not justify the President of the United States in attempting to undo what the people had done, even if it was true that they were incited and assisted by Mr. Stevens. It has always been the policy of this Government to recognize a Government that was able to maintain itself. The existing Government was able to maintain itself, did maintain itself, and maintained itself in spite of the efforts made by this Administration to destroy it. It maintained itself in spite of the fact that a national ship was in the harbor and that a special envoy was sent from this Government with a declaration to those people that he came there not in the way Mr. Blount did, who went there for information and to get the facts of the case to lay before the President, but who said, "I come here as an executive officer. I come here to act. When I am ready to act I shall act, but I am sorry to say that I can not tell you now how I will act."

Mr. President, it is a farce to talk about this Administration having been impartial. This Administration attempted to destroy the Government of the Hawaiian Islands. It attempted to destroy it with the moral force of an American ship in the harbor. It attempted to destroy it because it was known in those islands that if they were to be defended against an attack from any part of the world which might be made against them that defense must come from us and under our flag. And if the Queen had agreed that she would not insist upon the execution of the officials of that Government this Government would have been an active participant in the revolution instigated and supported by this Government, and by this Government alone, without the slightest evidence that the people of that country were not content with the administration of affairs when Mr. Willis reached there. I repeat, the only thing that did not make this Administration an active participant in the destruction of that Government was the fact that the Queen said she would commit murder on her inoffensive citizens if she had the opportunity, and neither Mr. Willis nor the Administration dared to brave the indignation of the American people and allow that to be done.

Mr. President, I am not willing to put upon the records of the Senate an absolute falsity, and that is what you do when you say that this Administration has maintained impartiality between the Government existing in Hawaii and those attempting to restore the Queen. If the Queen, the imbecile Queen, the African Queen, is not to-day upon that throne it is because this Administration could not put her there. It attempted it, and, as the President said, "When my plans failed, then I submitted the subject to Congress, and there it is now, and I can not say to you, commissioners of the Queen, that anything will be done." Mr. President, he was safe to say that nothing can be done by this Administration or any other that will reinstate that old imbecile Queen, with her wicked and corrupt administration, that had existed until the best element in those islands was in arms against it. All the good people of those islands were against it without exception. The Portuguese, who are good people; the Germans, the English, and the Americans were in a body against it. The only support she had was from a few parasites and by a portion of the native population, and I do not think I shall do injustice to them if I say they are totally unfit for self-government, and are incapable of maintaining civilization without the vivifying and elevating influences of the European civilization found in that country.

Mr. President, there is some possible ground for a difference of opinion as to what should be the policy of our Government as to those islands. There ought not to be any as to what has been the policy of this Administration. There is no man in the Senate or in the country who has the right American sentiment in his heart who can approve of it. I do not believe the Senators who voted for it in their hearts approve of the cowardly policy or that they approve of the last declarations made by this Administration as to what shall be the status of American citizens in those islands. When Mr. Herbert sent out his last proclamation to our minister saying that if any citizen there should attempt to maintain the existing state of things, and to maintain the Government he should by that act forfeit the right of protection of his Government, he asserted what is not justified in international law.

Every American citizen dwelling on those islands is entitled to the protection of the American Government unless by some violation of international law he has forfeited it. The Secretary of the Navy says that if any American citizen shall attempt either to support or maintain the present Government or to overthrow it then he shall forfeit all rights to protection from this Government. Mr. President, that is not the law of nations.

Mr. CALL. Will the Senator from Colorado allow me to ask a question?

Mr. TELLER. Certainly.

Mr. CALL. I submit to the Senator's consideration the following provision of the treaty between the United States and Hawaii:

And each of the two contracting parties engages that the citizens or subjects of the other residing in their respective States shall enjoy their property and personal security in as full and ample manner as their own citizens or subjects, or the subjects or citizens of the most favored nation, but subject always to the laws and statutes of the two countries, respectively.

That provision makes the citizen of the United States in Hawaii, a foreign country, subject to the laws of the two countries.

Mr. TELLER. The Senator from Florida is correct, as usual. The citizens of the United States dwelling in those islands owe allegiance to the Government there existing, not only by treaty, but by international law; and it is the first time, I venture to say, that it can be found anywhere in the archives of this Government that any officer of this Government has declared that that allegiance did not exist.

Mr. President, every American citizen residing on those islands, I repeat, owes allegiance to the Government there now in existence. They are not required by international law to incorporate themselves in the army, but they are required by international law to obey the laws and to do militia duty if they are called

upon. If the Government of the Hawaiian Islands calls upon any American citizens to-day in those islands to act as a posse comitatus, by the law of nations they are required so to act. If the Government calls upon them to perform police duties they are required so to act.

Mr. CALL. Will the Senator allow me?

Mr. TELLER. Certainly.

Mr. CALL. The point I submitted to the Senator is that the laws of Hawaii forbid, and did so at the time of the revolution, any person a resident there, subject or American citizen, from taking arms or conspiring against the Government then existing. So the Secretary of the Navy says, "If you, an American citizen, violate the laws of Hawaii you violate the laws of the United States, for under this treaty you are compelled to observe those laws."

Mr. TELLER. I am not going back to the treaty. I am talking about the instructions of the Secretary of the Navy, which I will read, which I say find no support in international law. I say there has never emanated from any Department of this Government a declaration as broad.

Mr. VEST. Let me ask the Senator from Colorado a question.

Mr. TELLER. Certainly.

Mr. VEST. Suppose that five hundred or fifty American citizens, recognizing their allegiance to the Government of the United States, are temporarily in Hawaii, that war becomes flagrant between the government de facto and the citizens of that country, and the citizens of the United States see proper to volunteer as soldiers, or to obey the militia law, does the Senator seriously contend that this Government is bound to protect them when they have deliberately and voluntarily taken part in the war?

Mr. TELLER. I do.

Mr. VEST. Well, I deny that proposition.

Mr. TELLER. And that is international law, and the English recognized it during the last war.

Mr. VEST. We never recognized it.

Mr. TELLER. I will lay down the international law, for the benefit of some Senators here who I think have not read it. When a man goes to a foreign country and domiciles himself there temporarily, he does not lose the right of American citizenship, nor does he gain citizenship under the flag of the country to which he goes. He has a right to be protected by that Government while he is there. If that Government fails to protect him, then his own Government can do it, and must do it.

Mr. GRAY. His own government must protect him against what, may I ask the Senator?

Mr. TELLER. It must protect him against any violence or any loss. I do not mean to say that he may not be assaulted, and if assaulted and he has the same opportunities of defense that a citizen of that country has he can not complain.

Mr. GRAY. If he is—

Mr. TELLER. I will finish—

Mr. GRAY. I shall not interrupt the Senator again, because he is always impatient of any interruption.

Mr. TELLER. I am not objecting to the Senator's interruption.

Mr. GRAY. He always objects.

Mr. TELLER. I want to state my position first.

Mr. GRAY. And he has a right to object.

Mr. TELLER. I do not wonder that Senators are in a hurry on this subject. They have adopted some new international law here that will some day work to their trouble and to their disgrace.

Mr. GRAY. We will take international law from another source than from the Senator.

Mr. TELLER. Of course you do not have to take it from me. International law is old. Since the days of Puffendorf and Vattel it has been pretty well established, and the man is ignorant who does not know that there are certain great fundamental principles recognized by every nation in the world. One which can not be denied anywhere is that civic duties may be imposed upon citizens living in a foreign country, militia duty, police duty, posse comitatus duty, and the Senator will not deny it.

Mr. GRAY. That has nothing to do with this case.

Mr. TELLER. It has to do with this case, Mr. President. Here is a country that is threatened with civil war. The Secretary of the Navy sends a ship. He starts it out from our coast. Of course it was not needed, because all the Senators on the other side have declared again and again that it was not needed. I do not know why the President sent it. It is not now needed, but it has gone from here. The instructions that go with it are as follows:

In case of civil war in the islands, extend no aid or support, moral or physical, to any of the parties engaged therein, but keep steadily in view your duty to protect the lives and property of all of such citizens of the United States as shall not by their participation in such civil commotions forfeit their rights in that regard to the protection of the American flag.

As a general proposition that is correct. But that was not

enough. It would have been accepted undoubtedly by any citizen who is familiar with the law of nations as subject to the ordinary law of nations, that if he was called upon by the Hawaiian Government in existence to do certain things which are recognized, and for which they had a right to call on him, that would not be an infringement of its provision. But the Secretary goes further. He is not content with that. In accordance with what has been the policy of this Government, of this Administration, to assist the rebellion—not the partiality that Senators talk about, not non-intervention, but in keeping with what has been the steady policy since the 4th of March, 1893, to undo what the people had done. The Secretary goes further. I want Senators to find anywhere in international law, if they can, support for this, for I say it can not be found:

An American who, during a revolution in a foreign country, participates in an attempt by force of arms or violence to maintain or overthrow—

Maintain or overthrow—

the existing government can not claim that the Government of the United States shall protect him against the consequences of such act.

Do Senators say they agree to it?

Mr. VEST. I do, emphatically.

Mr. WHITE. Will the Senator from Colorado allow me to ask him a question?

Mr. TELLER. I will.

Mr. WHITE. I should like to ask the Senator from Colorado whether, in the event of participation by an American citizen in an internecine disturbance in a foreign country, an act of hostility on the part of those who are on the other side from such citizen can be construed into an act of hostility to the United States?

Mr. TELLER. No, I do not know that it could be.

Mr. WHITE. It seems to me that is the legitimate sequence of the Senator's doctrine; and that is the reason why I asked the question.

Mr. TELLER. That is not the question. The question simply is, has the American citizen who joins with the authorities existing to maintain the existing order of things in a country violated any law of the country in which he lives or any law of his own country, and can protection be withdrawn from American citizens except for a violation of some law, either that of the country where he lives or of his own?

Mr. WHITE. Will the Senator permit me?

Mr. TELLER. Certainly.

Mr. WHITE. In that event, then, taking the Senator's doctrine to be true, it would be the duty of this Government, looking out for its citizens, to interfere as against those who are attempting to overthrow the foreign Government.

Mr. TELLER. That is not the question. The question is, has the Hawaiian Government a right to say to the American citizen who has had the protection of its flag, who lives in the community, "You must help to maintain the existing order of things. The only exception to that is that you shall not be put in the permanent army of the country. International law has made the rule and said you can not be put into the permanent army because you might then be compelled to fight against your own flag."

Now, Mr. President, there is not any question as to what the law is. Every man who domiciles himself in a country, whether a commercial domicile or a perpetual domicile, subjects himself to the laws of that country, and if the law says the militia shall go at the demand of the executive, he must go; if they say, "You must assist in policing the city," he must do it.

Mr. MITCHELL of Oregon. Unless we have a treaty to the contrary.

Mr. TELLER. Unless we have a treaty to the contrary, as suggested, which I do not know we have with any country in the world, because I do not think that any country would allow its subjects residing in a foreign country to decline the burdens of society that they put upon their own members.

Mr. WHITE. Will the Senator permit me?

Mr. TELLER. Certainly.

Mr. WHITE. Is not the question here not as to whether our citizens may do police duty, or military duty, or not, but as to the conditions under which we should interfere? Now, my question to the Senator was whether, in the event our people enlist in a foreign army, either to defend an existing Government or to overthrow it, that shall be a *casus belli* as regards the United States.

Mr. TELLER. The Senator from California can not withdraw from the proposition I am making that the President of the United States through the Secretary of the Navy declared that the support of this Government in accordance with the recognized international law by the citizens of the United States would extradite them; in other words, that it would withdraw them from the protection of this Government. It was a threat made to paralyze the American citizen who might be there. It was a threat made in order to weaken that new Government with the American element, which is strong and great there, who are not citizens

of that country, by which they should withdraw from exercising the ordinary duties put upon domiciled residents by law; and it was done, in my judgment, for the purpose of weakening and destroying and aiding the rebellion that is now going on in those islands.

We might just as well meet this question fairly and squarely. It has been from the beginning the purpose of this Administration to destroy that Government and institute one that had been deposed and destroyed, and this, in my judgment, is a part and parcel of that same effort. If Senators upon the other side of the Chamber want to go to the American people with it, the rebuke that they got in November will be but a passing shower to what they will get when the people get another lick at them.

Mr. President, I said the other day that no single act of this Administration cost it as many votes as the question concerning Hawaii has cost it, and I believe it—not even its financial policy, which has been a stench in the nostrils of the people. This has been more; it has been a decaying corpse and a stench everywhere.

Senators can not shield themselves under the pretense that this Administration has been trying to maintain a steady hand and be impartial. The evidence is too strong that the whole course of this Government has been with the worst element. I repeat, the evidence can not be disputed or denied that if the Queen had merely said, "I will only incarcerate these people in jail and not take their heads off," the Government of the United States would have been an active agent and participant in the rebellion against the established Government of those islands.

Mr. President, I have some feeling on this subject. I hate to see the American Senate debasing itself as I think it debases itself when it declares in favor of this great Government of ours refusing an expression of sympathy with a young Government struggling to better its condition. Although it may not be the highest type of an American Republic, it will compare favorably, Mr. President, with some American Republics called States in the last twenty years, both for the freedom of its citizens and the protection afforded them by law.

[At this point the honorable Senator was interrupted by the expiration of the morning hour.]

Wednesday, February 6, 1895.

Mr. TELLER. Mr. President, several days since, when a resolution offered by the Senator from Nebraska [Mr. ALLEN] was before the Senate, I addressed the Senate somewhat briefly upon the question presented by the resolution. I take advantage of the present occasion to complete what I was unable to complete then, being out off at the expiration of the morning hour by an objection which carried the resolution over, and there has been no opportunity since to present my views on the matter.

I laid down certain principles of international law which I thought to be unquestioned, which were rather sharply contested by the Senator from Missouri [Mr. VEST] and, as I understand, by the Senator from Delaware [Mr. GRAY]. I think, owing to the confusion in the Chamber at that time, I was misunderstood by some of the Senators as to the answer I made to the Senator from Missouri. The Senator from Missouri asked me this question:

Mr. VEST. Suppose that five hundred or fifty American citizens, recognizing their allegiance to the Government of the United States, are temporarily in Hawaii, that war becomes flagrant between the Government de facto and the citizens of that country, and the citizens of the United States see proper to volunteer as soldiers, or to obey the militia law, does the Senator seriously contend that this Government is bound to protect them when they have deliberately and voluntarily taken part in the war?

To that I then answered unhesitatingly, as I do now, in the affirmative. The Senator from Missouri then said:

Mr. VEST. Well, I deny that proposition.

Mr. TELLER. And that is international law, and the English recognized it during the last war.

Mr. VEST. We never recognized it.

Mr. TELLER. I will lay down the international law for the benefit of some Senators here who I think have not read it. When a man goes to a foreign country and domiciles himself there temporarily, he does not lose the right of American citizenship, nor does he gain citizenship under the flag of the country to which he goes. He has a right to be protected by that Government while he is there. If that Government fails to protect him, then his own Government can do it, and must do it.

Perhaps I should have said, instead of "must do it," "should do it," because, of course, there is no way to compel a government to protect its citizens; but it has been the policy of our Government to protect its citizens in every country to which they go unless by some misconduct on their part they have forfeited their right to Government protection. The Senator from Missouri seems to think that if they should perform military service in defense of an existing foreign Government they would thereby forfeit the right to protection by the American Government. The Senator evidently has confounded the duties of neutrals and belligerents; and he was thinking when his ideas ran in this direction of a case where two belligerent powers are contending. Then the neutral or the citizen there of another nation must keep his hands off as far as possible, and the Government must keep its hands off of him.

I want to repeat now that citizens of the United States going into a foreign country, domiciling themselves there temporarily, and not becoming citizens thereof, are subject to all the laws thereof, with reference to police duties, with reference to taxation, with reference to maintaining the Government against insurrections and ementes, and, in fact, with reference to everything, as I stated the other day, except the fact that they can not be put into the regular army of that country.

Mr. GRAY. Mr. President, I should like the Senator from Colorado, if he will, to explain a little further the proposition which he made the other day, and which he has just repeated, presumably from the notes of the reporter, that a citizen of the United States domiciled in a foreign country who enlists or is compelled by the laws applying to all residents to serve in the army of that foreign state is entitled to protection by the United States as against the power of the country in which he is domiciled if engaged in war. Is that the extent of his proposition?

Mr. TELLER. Yes, that was the extent of it, modified as I shall modify it in a moment.

Mr. GRAY. And it must go to that extent in order to meet the case made by the Senator from Missouri.

Mr. TELLER. No.

Mr. GRAY. Because the case made in reference to the Hawaiian Islands, it seems to me, if I recollect aright, is that a citizen of the United States who volunteers or otherwise lawfully engages in the army of an existing government should be protected in some way from the consequences of that enlistment as against the power of that government with which it was at war.

Mr. TELLER. I lay down this as the rule of international law, which can be supported by unquestioned authority, by our own Government and by other modern Governments, as well as by ancient international law. There need not be any mistake about what I mean and what the Senator from Missouri means, because the Senator inquires, when war becomes flagrant between a government de facto and the citizens of a country, not between belligerent nations, but an insurrection and revolution in that country, if people have gone from the United States and have been receiving the protection of the existing foreign government and shall assist in maintaining that government, whether that does not take them out of the category of citizens of the United States to such an extent that they can not be protected by the United States. To that I reply again, as I did before, that it does not. They can be protected not only against the Hawaiian Government, which receives their services, if that Government fails to protect them, but they can be protected, if the revolution should be successful, against any unfair and improper punishment on the part of the revolutionary government which succeeds.

Mr. GRAY. That is another proposition.

Mr. TELLER. It is not a crime for a citizen of the United States temporarily domiciled in a foreign country to assist in maintaining the integrity of the Government to which he owes a quasi allegiance. When I can get the proposition fairly before the Senate I shall attempt to bring the evidence to prove that that is international law.

Mr. VEST. Mr. President, the words I used in putting the question to the Senator—

Mr. TELLER. I have read the Senator's language just as the reporter gave it to me.

Mr. VEST. What I said was "when war becomes flagrant." I did not allude to the exertion of police power or the putting down of what the Senator calls an émeute or civil disturbance; but as I understand the Senator now he says international law goes to this extent: When there are armies in the field and when belligerents confront each other, although it may be the established Government de facto and a portion of its citizens, but who organize armies and who are belligerents de facto also, that in that case an American citizen can go in and assist one of these armies and receive a military commission—

Mr. TELLER. Oh, no; I have not said anything of the kind.

Mr. VEST. That is what I understood the Senator to say.

Mr. TELLER. An American citizen residing in such a country may assist what the Senator calls the de facto Government, the existing Government. He can not assist the other—the revolutionary Government.

Mr. VEST. I will call it the de facto Government. But suppose there is an army in the field which the citizens of that country have organized, at the head of which is a general, with subordinate officers, does the Senator mean that an American citizen domiciled there can go and join that army?

Mr. TELLER. I have distinctly stated that their exertions must be confined to maintaining the existing condition of things.

Mr. VEST. Then, if I understand the Senator, it depends upon which side the citizen takes.

Mr. TELLER. Entirely.

Mr. VEST. Mr. President, I deny that proposition. If the insurrection, the uprising, whatever you may term it, has assumed the proportion of entitling the parties to be called belligerents—we had the same question in the late civil war in this country—

Mr. TELLER. We did, and I shall show the Senator the action in that case.

Mr. VEST. At one time it was declared that the Confederate States were not belligerents. I recollect very distinctly an order that was made in the State of Missouri declaring that any Confederate—General Frémont issued the order—who was captured with arms in his hands should be executed immediately, that he was not entitled to the rights of a belligerent; but the Government at Washington saw the absurdity of that, immediately rescinded the order, and, I think, removed General Frémont from his command. Then the rights of belligerents were accorded to the Confederate States, and they had all the rights which the citizens of an established Government had so far as their military proceedings were concerned.

Mr. TELLER. Mr. President, if I may be allowed to go on and discuss a legal proposition without too many other Senators expressing their legal opinions until I get through, it will be a great deal pleasanter for me, and I think quite as well for them.

There can not be any mistake about my proposition of law. In the first place, every citizen who goes to a foreign country owes allegiance to that country. Of course, he must obey its laws; he must submit to certain embarrassments that follow any existing order of things in an established Government; he must bear the burdens of society as the people do who live there, unless by treaty he is exempt therefrom. I stated the other day that the Government in which he lived would exact from him everything practically that it could of its own citizens in the absence of a treaty, except that it could not put him into the permanent military force of that country. I know Vattel says that a foreigner can not be put into the military force of the country in which he is temporarily residing; but the authorities are unquestioned that he may be put into the militia of the country. The Senator from Missouri imagines one thing when he gets on his feet to-day, and a different thing from what he imagined the other day. He did not suggest the other day that citizens of the United States should take part in a rebellion against an existing order of things, but they were to assist in maintaining the existing order, that is to the extent of joining the militia or doing police duties and the like.

I say that the citizen who complies with the demands made upon him in that particular has not forfeited his right to the protection of the Government where he is temporarily residing, nor of his own, because he can not forfeit either without some violation either of the laws of the country where he is or the laws of the country from which he came.

I hope I make myself distinctly understood, that if a citizen of the United States in a foreign country shall join a revolutionary movement against the existing Government, he has not only committed a crime against his own country—because he has no right to join such a movement; he has no right to lift his hand against a Government with which we are at amity—but he has committed a crime against that foreign Government. Thus he is without the protection of either government. But there is a wide distinction, as the Senator must see, between a citizen domiciled in a country assisting to maintain order and peace, and engaging in revolutionary movements against the government, and it does not make any difference how flagrant war may be, whether it is a big war or a little war, it is the same thing. What I complained of the other day was that this declaration of the Secretary of the Navy went beyond any recognized international law in this, that it said:

An American citizen who during a revolution or insurrection in a foreign country participates in an attempt by force of arms or violence to maintain or overthrow the existing government—

"To maintain or overthrow." One part of his proposition is that the man intends to overthrow, and the other part is that he maintains the existing Government. I desire to call the attention of the Senate to some authorities upon this subject. I will say that a foreign country in which American citizens are domiciled has the right to call on them for certain things, and I find Vattel lays down this rule, speaking of foreigners:

If a nation has a pressing want of the ships, wagons, horses, or even the personal labor of foreigners, she may make use of them, either by free consent or by force.

I do not believe that the Senator from Missouri can find any recognized writer on international law who will dispute that proposition.

I am not left with Vattel alone. The same doctrine is laid down by nearly every writer on international law. I will cite authority to show that we ourselves recognize that doctrine as international law. It does not make any difference, if we so recognize it, whether other nations do or not; it then becomes the law in this country.

Mr. CAFFERY. Will the Senator permit me to ask him a question?

The PRESIDING OFFICER (Mr. PLATT in the chair). Does the Senator from Colorado yield to the Senator from Louisiana?

Mr. TELLER. I will yield, although I should very much prefer to present my authorities in support of my statement.

Mr. CAFFERY. I simply desire to inquire whether Vattel uses the language cited in connection with a case of flagrant war or a mere éménté?

Mr. TELLER. He refers to war. He does not say whether or not it is flagrant war. There is no distinction between flagrant war and war. War is always flagrant.

In support of the declaration I have made that an American citizen does not put off his citizenship—for that is what the contention amounts to—when he goes to a foreign country unless he does some act inconsistent with that citizenship, I wish to call the attention of the Senate to Wharton's Digest, volume 2, page 466. This is the doctrine as laid down by the Secretary of State—Mr. Evarts, I think, being Secretary of State at that time:

The Department holds that for a native American to put off his national character he should put on another. Continued residence of a native American abroad is not expatriation, unless he performs acts inconsistent with his American nationality and consistent only with the formal acquirement of another nationality, and the same rule holds equally good in the case of a naturalized citizen of the United States who may reside abroad elsewhere than in the country of his original allegiance. Existing statutes confirm the principle by providing that citizenship shall flow to the children of American citizens born abroad, the birthright ceasing only with the grandchildren whose fathers have never resided in the United States. Foreign residence, even for two generations, is, therefore, not necessarily expatriation, in the sense of renouncing original allegiance, nor is it necessarily repatriation unless through the conflict of laws of the respective countries and the conclusion of conventional agreements between them.

From the same work I read:

To effect expatriation there must be not only a renunciation of citizenship of the United States, but actual removal for some lawful purpose, and the acquisition of a domicile elsewhere.

That is a decision of the Supreme Court of the United States.

I find also—

Mr. GRAY. From what page does the Senator read?

Mr. TELLER. I have been reading from page 372. I now read from page 373, the whole of the dispatch of Mr. Frelinghuysen to our minister, Mr. Comly, at the Sandwich Islands, of the date of July 1, 1882:

Your dispatch of the 5th ultimo relative to the case of Mr. Peter Cushman Jones, an American citizen resident in Honolulu, has been received.

Mr. Jones, as it appears from his letter to you of the 26th of May, a copy of which you inclose, was born in Boston, Mass., in 1837, and in 1857 took up his residence in the Hawaiian Kingdom, entering into mercantile pursuits there as a domiciled American citizen. Becoming the owner of a merchant vessel there under the Hawaiian flag, it became necessary for him, in order to the maintenance of his rights in that Kingdom, to take an oath of allegiance to the sovereign of the islands. The form of the oath is set out in Mr. Jones's letter thus:

"The undersigned, a native of the United States of America, being duly sworn, upon his oath declares that he will support the constitution and laws of the Hawaiian Islands, and bear true allegiance to His Majesty Kamehameha IV."

Your inquiry is as to what effect this proceeding may have upon the status of Mr. Jones's American citizenship.

It must be remembered that Mr. Jones had been living for many years in those islands.

In becoming a citizen of the United States the law requires that an alien shall not only swear to support the Constitution and laws of this country, but also to renounce all other allegiance, and especially that of the country of which he may be then a subject or citizen. In the oath taken by Mr. Jones there is no such express renunciation of his American citizenship, nor do the circumstances manifest any intention on his part to expatriate himself.

It may, however, at some future time, become a question for judicial investigation in his case.

The doctrine of the executive branch of the Government on this subject is thus expressed by the Attorney-General: "To constitute expatriation there must be an actual removal, followed by foreign residence, accompanied by authentic renunciation of preexisting citizenship" (8 Op., 139), and this view finds support in some judicial decisions (Juando vs. Taylor, 2 Paine, 632).

In the absence of a direct judicial determination of the question, I do not feel disposed to deny to Mr. Jones any right or privilege pertaining to his character of American citizenship, and therefore, while the Department will not undertake to express an authoritative opinion on the effect which his course in Hawaii may ultimately have on his status in that regard, you are authorized to extend to him such protection as may be properly due to a citizen of the United States residing in and having acquired a commercial domicile in a foreign state. This protection must, of course, be limited and qualified by the liabilities and obligations incident to such commercial domicile.

Now I read from that very distinguished lawyer and former Secretary of State, Mr. Marcy, in the Koszta affair.

Mr. GRAY. Will the Senator from Colorado give me the page?

Mr. TELLER. Page 493 of the same volume of Wharton.

Speaking of residence, he says:

It gives the national character of the country not only to native-born and naturalized citizens, but to all residents in it who are there with, or even without, an intention to become citizens, provided they have a domicile therein. Foreigners may, and often do, acquire a domicile in a country, even though they have entered it with the avowed intention not to become naturalized citizens but to return to their native land at some remote or uncertain period; and, whenever they acquire a domicile, international law at once impresses upon them the national character of the country of that domicile. It is a maxim of international law that domicile confers a national character; it does not allow anyone who has a domicile to decline the national character thus conferred; it forces it upon him, often very much against his will and to his great detriment. International law looks only to the national character in determining what country has a right to protect. If a person goes

from this country abroad, with the nationality of the United States, this law enjoins upon other nations to respect him in regard to protection as an American citizen.

I skip a little. He goes on then to define what domicile may be. That is not at all necessary to what I am discussing. Then he proceeds:

This right to protect persons having a domicile, though not native-born or naturalized citizens, rests on the firm foundation of justice, and the claim to be protected is earned by considerations which the protecting power is not at liberty to disregard. Such domiciled citizen pays the same price for his protection as native-born or naturalized citizens pay for theirs. He is under the bonds of allegiance to the country of his residence, and if he breaks them incurs the same penalties; he owes the same obedience to the civil laws, and must discharge the duties they impose on him; his property is in the same way and to the same extent as theirs liable to contribute to the support of the Government.

I call the attention of Senators who question this proposition to the following statement:

In war he shares equally with them in the calamities which may befall the country; his services may be required for its defense; his life may be periled and sacrificed in maintaining its rights and vindicating its honor.

Mr. WHITE. Will the Senator from Colorado yield for a question?

Mr. TELLER. Certainly.

Mr. WHITE. I ask the Senator from Colorado whether it is not true in the case of Hawaii that by treaty American residents are exempted from all military service? Hence they owe no duty of that character to the Hawaiian Government, and any action that they may take in the premises must necessarily therefore be purely voluntary.

Mr. TELLER. Suppose it is voluntary. That is what I claim, that it is voluntary. Of course nobody would contend that if a foreign Government had forced a citizen into its army that that would excuse the Government of the United States from protecting him.

Mr. WHITE. If the Senator from Colorado will excuse and permit me to ask a question I will propound this: Suppose that the service of the resident American is voluntary and that he enters into the Hawaiian service; will it then become the duty of the Government of the United States to see that nobody hurts him while he is serving under arms?

Mr. TELLER. Oh, the Senator from California is not serious when he asks that question.

Mr. WHITE. That is the logical result.

Mr. TELLER. Oh, no; the Senator is not serious when he asks a question of that character.

Mr. WHITE. I should like to have the Senator from Colorado answer it.

Mr. TELLER. I will finish reading the law and then I will reply to the question. It is not exactly right to break into a legal proposition until it is concluded, but in this body we submit to all sorts of interruptions. I suppose the Senator from California thought I was through.

Mr. WHITE. I desire to say that I certainly should not have interrupted the Senator from Colorado without his permission.

Mr. TELLER. In this body one can not very well decline to be interrupted.

Mr. WHITE. The Senator can always do so in my case.

Mr. TELLER. I will continue this paragraph, in the reading of which the Senator from California unwittingly interrupted me.

In nearly all respects his and their condition as to the duties and burdens of Government are undistinguishable; and what reasons can be given why, so far at least as regards protection to person and property abroad as well as at home, his rights should not be coextensive with the rights of native-born or naturalized citizens. By the law of nations they have the same nationality; and what right has any foreign power, for the purpose of making distinction between them, to look behind the character given them by that code which regulates national intercourse? When the law of nations determines the nationality of any man, foreign governments are bound to respect its decision.

Now, I will answer the question of the Senator from California, if he is really in earnest about it and thinks I ought to do so. For instance, we have a treaty with China which provides that our citizens there shall be free from the ordinary obligations of international law in this respect. I think we have a similar treaty with Japan and some other nations. If China, there being war there, or if Japan, it being at war with China, were to seize a citizen of the United States and put him into its army and then let him suffer harm by being exposed to shot, the Government that forced him into its service contrary to the treaty would be compelled to respond to our Government, unless our Government were very derelict in the matter. But if, on the other hand, the law does not compel him to go into the service, and he goes in, then of course for any misfortune that befalls him in war the Government of the United States is not responsible. But having performed that duty to the Government of Japan or China, if the Government ceases to afford him the protection that his residence there demands, then the Government of the United States ought to interfere, although he may have been in the service of that country. That is the law as I lay it down.

Mr. WHITE. Will the Senator from Colorado permit an interruption?

Mr. TELLER. Certainly.

Mr. WHITE. The Senator from Colorado misunderstood me. I did not refer to the action of a person who is forced into service in a foreign land. As I understood the Senator's argument made the other day, which he is now fortifying, he contended that if a citizen of the United States enters the military service of Hawaii and thereby comes into peril, it is in some way the duty of the United States to shield him from any disaster with which he may be threatened because of that voluntary service.

Mr. TELLER. I have never made any such suggestion to anybody at any time or under any circumstances.

Mr. WHITE. That was the suggestion made here the other day.

Mr. TELLER. When we talk about the protection a person is entitled to, it is protection against the Government which exists and against an insurrection which may arise. It is not, however, protection against the natural consequences of his own act when he enters into the army. He takes the chances of being shot by the enemy.

Mr. WHITE. That is my understanding also. I did not so understand the Senator from Colorado, however.

Mr. TELLER. The Senator from California is right about that matter. I did not say what he thinks I did. There is nothing in my remarks to justify the Senator in concluding that I so supposed.

Now I wish to come down to the precise matter with a little exactness. If Senators who challenge this proposition will give me their attention, I will cite a modern case. I have a great number of cases which I do not intend to cite. I do not care to go into any lengthy discussion. I simply enunciated what I thought were well-established principles of international law. They were challenged. Like every other lawyer when his law is challenged, I am a little sensitive about it and want to fortify myself. I think the profession generally is in that condition. I may, perhaps, have been a little more sensitive about this than about some other propositions of law, because I have given a good deal of attention to the question.

I will premise an extract I am about to read by saying that, by the act of March 3, 1863, we put foreigners into our Army under certain conditions. The Government of Great Britain and some other Governments protested against that act. It seemed to be very far-reaching and practically to invade the well-established principles of international law, probably. Our Government then said that any person who had not, by his residence and by conduct here, abandoned his citizenship of the country from which he came might have sixty-five days to renounce his foreign citizenship or depart from the United States. After that the question became one of diplomatic interest between the United States and Great Britain. I will read from Halleck's International Law, as quoted on page 502 of Wharton's Digest, volume 2, which I think the Senator from Delaware [Mr. GRAY] has before him:

In 1861, during the American civil war, the British Government declared that if enforced enlistments of British subjects for the war were persisted in, the Government would be obliged to concert with other neutral powers for the protection of their respective subjects; but neither in the Northern or Southern States was the discharge of any British subject enlisted against his will refused on proper representation.

They could not be so enlisted by international law because, as was said by the Senator from Missouri, the Confederate States were recognized as having belligerent rights. They were a quasi nation so far as concerns the rule of international law as to neutrals.

There is no international law prohibiting the Government of any country from requiring aliens to serve in the militia or police, yet at the above-mentioned date the British Government intimated that if the United States permitted no alternative of providing substitutes, the position of British subjects to be embodied in that militia "would call for every exertion being made in their favor on the part of Her Majesty's Government." The British Government in 1863 informed Mr. Stuart that as a general principle of international law neutral aliens ought not to be compelled to perform any military service (i. e., working in trenches), but that allowance might be made for the conduct of authorities in cities under martial law and in daily peril of the enemy; and in 1864 the British Government saw no reason to interfere in the case of neutral foreigners directed to be enrolled as a local police for New Orleans.

That is from the second volume of Halleck's International Law, as cited in Wharton's Digest. It is the same as in Halleck, but this is the more convenient form to refer to it. On page 506 I find the following:

A resident alien, who has not renounced his native allegiance, is not liable for military service; but it is otherwise if he has, by exercising suffrage under State law or otherwise, renounced such allegiance, even though he was not naturalized.

That of course must apply to the rule which I laid down before; that is, to the permanent military service of the country. He can not be forced into it. I find on page 507 what I shall now read. Mr. Fish, the Secretary of State, to Mr. Williamson, June 13, 1876:

The fact that a resident of Chile is a citizen of the United States does not, where there is no treaty stipulations covering his case, exempt him from service in a civic guard in which all residents are by law required to serve.

Every person who voluntarily brings himself within the jurisdiction of

the country, whether permanently or temporarily, is subject to the operation of its laws, whether he be a citizen or a mere resident, so long as, in the case of the alien resident, no treaty stipulation or principle of international law is contravened.—Mr. Blaine, Secretary of State, to Mr. O'Connor, November 23, 1881.

Aliens domiciled in the United States owe to the Government a local and temporary allegiance, which continues during the period of their residence, and for the violation of which they may become liable to prosecution for treason, just as a citizen. (Carlisle vs. United States, 16 Wall., 147.)

A resident alien owes such obedience to the laws of the country in which he resides, whether municipal or military, as a citizen. Where one resident in New Orleans transmits money across the lines to an agent to buy cotton no valid title is acquired. (Queyrouse's Case, 7 C. Cls., 402.)

Mr. Seward said to Mr. Asboth, March 27, 1867:

In the absence of treaties, citizens of the United States who have been and are remaining domiciled in foreign countries could (can) not be exempt from certain common obligations of citizens of those countries to pay taxes and perform duties imposed for the preservation of public order and the maintenance of the Government. But this may be modified by treaty.

I find on page 509 the following:

A foreigner can not say that he is not bound to obey the laws of the State where he is sojourning.

Mr. President, I do not intend to go at great length into this discussion. I wish to call the attention of the Senate to the construction given by Secretary Bayard as to the protection of American property on those islands. July 12, 1887, Secretary Bayard wrote as follows:

In the absence of any detailed information from you of the late disorders in the domestic control of Hawaii and the changes which have taken place in the official corps of that Government, I am not able to give you other than general instructions, which may be communicated in substance to the commander of vessel or vessels of this Government in the waters of Hawaii, with whom you will freely confer, in order that such prompt and efficient action may be taken as the circumstances may make necessary.

While we abstain from interference with the domestic affairs of Hawaii, in accordance with the policy and practice of this Government, yet obstruction to the channels of legitimate commerce under existing law must not be allowed and American citizens in Hawaii must be protected in their persons and property by the representatives of their country's law and power, and no internal discord must be suffered to impair them.

Your own aid and counsel, as well as the assistance of the officers of the Government vessels, if found necessary, will therefore be promptly afforded to promote the reign of law and respect for orderly government in Hawaii.

That is a declaration by Mr. Bayard that these men could maintain the existing order of things; not only that our troops could do it, but that citizens who are there could do it. I repeat, it is the duty of every citizen domiciled in a country to defend the existing order of things, and I am glad the Senator from Delaware [Mr. GRAY] approves of that proposition. It would be monstrous to say that people can go into a country and have the benefit of its protection, and then, in a sudden revolution, when the Government called upon them to discharge those duties, the citizens of the country who were called upon to discharge them should say, in the absence of a treaty to excuse them from it, that they were not under any obligation so to do.

There might be a distinction made between a controversy with an existing Government in the island of Hawaii and another nation. That might place us in a very embarrassing position if our citizens domiciled there should take part in it. Yet, if there was a war going on between Hawaii and Japan, as I understand international law, the people domiciled there could be put to work on the fortifications, they could be put into any of the ordinary service of protecting a town that is assailed, and the only limit upon their service in behalf of the Government where they live, no matter who its assailant may be, is that in the permanent army of the country they shall not be incorporated. They have the privilege of getting out of the country if they do not want to do the temporary service of which I have spoken.

I stated the other day what I understood to be the reason for that provision of law, that it is supposed when you put men in the permanent army of the country you put them there for some considerable time. Thus a citizen of the United States drafted into the British army might, under some circumstances, be compelled to fight against his own flag. For that reason the international law said that they should not be put permanently in the army.

I understand, I repeat, that the citizens of the United States have the right to assist in maintaining that Government. More than that, Mr. President, it is a duty that they owe to the Government that they should. More than that, it is a duty that they owe to the Government that has protected them and given them the opportunities of trade and commerce that they should. And yet the Secretary of the Navy tells us that if they shall insist in maintaining peace they will forfeit all rights to the protection of the American flag. Mr. President, that is not the law of this land; it is not the law of the world.

A great deal has been said about that country by the Senator from Texas [Mr. MILLS] and other Senators who have discussed this question and the character of their Government. They say it is not a Republic. The Senator from Mississippi [Mr. GEORGE] and the Senator from Texas [Mr. MILLS] spent some time to

prove that it was not a Republic. It may not be, as I said the other day, the highest type of a republic. It is certainly not a monarchical government. It is certainly a great improvement on the old Government. But it is a Republic, and it is as much a Republic as any Republic that ever was organized in the world, considering the length of time since it has been organized, two years. It was said there has been no vote, and the people have not had a voice in it.

The French republican Government did not submit to the people the approval or disapproval of that Government for, as I recollect, nearly five years, and yet we recognized it with great promptness, and declared our sympathy with it and our gratification that they had become a Republic years before they submitted the question to the French people.

Mr. President, changes of government are made by war and revolution. I repeat, there never was a republic established by taking the will of the people by vote in the first instance. If you make that a *sine qua non* you can never have a republic. Nearly, if not all, republics are, like all radical changes of government, born in the throes of war. Mr. President, Hawaii has been recognized as a Republic by the United States and by this Administration. Our minister recognizes it as a Republic and calls it a Republic. The President of the United States recognizes it as a Republic. I have here an extract from the Hawaiian Star of August 27, 1894. I will read the whole of it; it is not very long:

At 11 o'clock this morning United States Minister Albert S. Willis drove to the Government Building. He was met at the door by Major Potter and conducted to the President's room, where the cabinet was in session. Besides the President and his cabinet, Hon. L. A. Thurston, Hawaiian minister to the United States, was present.

When the United States minister entered the executive chamber a hint of something equal, at least, to gratification rested on his face and told plainly that his mission was more in keeping with the nature of things and the relationship of the two countries most interested than upon a former visit in December last.

Addressing the President, Minister Willis said:

"Mr. President: The right of the people of the Hawaiian Islands to establish their own form of Government has been formally acknowledged both by the executive and legislative departments of the United States.

"It seemed therefore, so far as I, the diplomatic agent, had the right, to extend recognition to the Republic of Hawaii, it having been created under the forms of law and existing without effective opposition.

"The action thus taken has, I am glad to state, been fully approved by the proper authorities at Washington. As the highest evidence of that fact I have received an autograph letter from the President of the United States addressed to you, as the President of this Republic.

"In delivering this letter, as instructed, permit me to join in its friendly sentiments and to express the hope that, through the Government now inaugurated, peace, prosperity, and happiness will be secured to all the people of these islands."

The letter from President Cleveland was read, as follows:

GROVER CLEVELAND, *President of the United States, to His Excellency SANFORD B. DOLE, President of the Republic of Hawaii.*

GREAT AND GOOD FRIEND: I have received your letter of the 7th ultimo, by which you announce the establishment and proclamation of the Republic of Hawaii on the Fourth day of July, 1894, and your assumption of the office of President with all the formalities prescribed by the constitution thereof.

I cordially reciprocate the sentiments you express for the continuance of the friendly relations which have existed between the United States and the Hawaiian Islands, and assure you of my best wishes for your personal prosperity.

Written at Washington the 7th day of August, 1894.

Your good friend,

GROVER CLEVELAND.

By the President,

W. Q. GRESHAM, *Secretary of State.*

Replying to the remarks of Minister Willis, President Dole said:

MR. MINISTER: It is with sincere gratification that I have received the information that the President of the United States has confirmed the recognition so promptly extended by your excellency to the Republic of Hawaii.

Permit me on behalf of the Hawaiian people to reciprocate the friendly sentiments expressed by you toward this Government and to assure you of our desire that relations of comity and of commercial intercourse which shall be mutually advantageous may ever exist between the two countries.

Mr. President, I do not think that I need to spend any time in discussing whether Hawaii is a republic or not. There is the official seal of the President of the United States, who has the right to determine that question, that it is a republic. I repeat, it may not be the best republic, according to our ideas, but it is a republic in the family of republics of the world. It is an improvement on the old Government, and if it is not as good as it ought to be, undoubtedly it will be made better in time by the people themselves.

Now, Mr. President, I wish to say a word or two about what I think is a very mistaken notion as to the duty of the Government of the United States in matters of this kind. I regret exceedingly to see on the other side of the Chamber a disposition to insist that when a people struggle from a monarchical to a republican form of government, or from a government of absolute or even qualified monarchical power to a better and freer one, we can not express our sympathies. It is contrary to the entire history and to the entire traditions of this Government of ours. On every occasion whenever a government has been organized that was liberal in character we have announced our sympathy and our support. When the Mexican Government was in danger of the attack of European powers we did not hesitate to say we objected to the

French and the Austrians being in Mexico. We said it in the most pronounced manner possible, and said it at a time when most nations would have supposed we had our hands full, when we had the greatest civil war that was ever inflicted upon any nation in the world to contend with. Mr. Seward made a protest.

Mr. Seward, in his letter to Montholon of December 6, 1865, does not place his objections to French interference in Mexico on the ground of the Monroe doctrine, but on the ground that "the people of every state on the American continent have a right to secure for themselves a republican Government if they choose, and that interference by foreign states to prevent the enjoyment of such institutions deliberately established is wrongful, and in its effect antagonistical to the free and popular form of government existing in the United States."

On April 4, 1864, it was resolved without dissent by the House of Representatives that "the Congress of the United States are unwilling by silence to have the nations of the world under the impression that they are indifferent spectators of the deplorable events now transpiring in the Republic of Mexico, and that they think fit to declare that it does not accord with the policy of the United States to acknowledge any monarchical Government erected on the ruins of any republican Government in America under the auspices of any European power."

Mr. Seward said in the same dispatch that I have read from before:

We recognize the right of sovereign nations to carry on war with each other if they do not invade our right, or menace our safety or just influence. The real cause of our national discontent is that the French army which is now in Mexico is invading a domestic republican Government there, which was established by her people, and with whom the United States sympathize most profoundly, for the avowed purpose of suppressing it, and establishing upon its ruins a foreign monarchical Government, whose presence there, so long as it should endure, could not but be regarded by the people of the United States as injurious and menacing to their own chosen and endeared republican institutions. * * *

On April 6, 1866, Mr. Motley was instructed by Mr. Seward to state to the Austrian Government "that in the event of hostilities being carried on thereafter in Mexico by Austrian subjects, under the command or with the sanction of the Government of Vienna, the United States will feel themselves at liberty to regard those hostilities as constituting a state of war by Austria against the Republic of Mexico; and in regard to such war, waged at this time and under existing circumstances, the United States could not engage to remain as silent and neutral spectators."

It was declarations of that character that forced the Austrian and French Governments out of Mexico.

The President of the United States sent an agent over to determine what was the character of the revolution in Hungary. Against that the Government of Austria protested, and there was a long diplomatic correspondence in reference to it. I think it would be well for some Senators who think the United States should be without sympathy, power, or influence in these matters to read Mr. Webster's letter of the 21st of December, 1850. This was after Mr. Taylor's death, when Mr. Webster was defending the conduct of the former administration, the former Secretary who had gone out of office, the President having died. Mr. Webster said:

The undersigned will first observe that the President is persuaded His Majesty the Emperor of Austria does not think that the Government of the United States ought to view with unconcern the extraordinary events which have occurred, not only in his dominions, but in many other parts of Europe, since February, 1848. The Government and people of the United States, like other intelligent Governments and communities, take a lively interest in the movements and the events of this remarkable age, in whatever part of the world they may be exhibited. But the interest taken by the United States in these events has not proceeded from any disposition to depart from that neutrality toward foreign powers which is among the deepest principles and the most cherished traditions of the political history of the Union. It has been the necessary effect of the unexampled character of the events themselves, which could not fail to arrest the attention of the contemporary world, as they will doubtless fill a memorable page in history. But the undersigned goes further, and freely admits that in proportion as these extraordinary events appeared to have their origin in those great ideas of responsible and popular governments, on which the American constitutions themselves are wholly founded, they could not but command the warm sympathy of the people of this country.

Now, we are told that we must not express any sympathy with a struggling nation; that that is incompatible with the strict neutrality which is spoken of, as if it meant we were to smother all our sympathy and all our hopes and aspirations for those people. Mr. Webster goes on at great length. He says in another place:

But when the United States behold the people of foreign countries, without any such interference, spontaneously moving toward the adoption of institutions like their own, it surely can not be expected of them to remain wholly indifferent spectators.

Certainly the United States may be pardoned, even by those who profess adherence to the principles of absolute Governments, if they entertain an ardent affection for those popular forms of political organization which have so rapidly advanced their own prosperity and happiness, and enabled them, in so short a period, to bring their country and the hemisphere to which it belongs to the notice and respectful regard, not to say the admiration, of the civilized world. Nevertheless, the United States have abstained, at all times, from acts of interference with the political changes of Europe. They can not, however, fail to cherish always a lively interest in the fortunes of nations

struggling for institutions like their own. But this sympathy, so far from being necessarily a hostile feeling toward any of the parties to these great national struggles, is quite consistent with amicable relations with them all. The Hungarian people are three or four times as numerous as the inhabitants of these United States were when the American revolution broke out. They possess, in a distinct language, and in other respects, important elements of a separate nationality, which the Anglo-Saxon race in this country did not possess; and if the United States wish success to countries contending for popular constitutions and national independence, it is only because they regard such constitutions and such national independence not as imaginary but as real blessings.

The Government of Austria had said that the agent of the Government who went to Hungary was a spy. Mr. Webster treated that subject at some length. They had said they might have treated him as a spy, and I will read what Mr. Webster says would have happened if they had treated him as a spy. I read it not because it bears upon this simple question but because it shows what has heretofore been the attitude of the Government when the Government of the United States asserted itself as a great power. Mr. Webster said:

Had the Imperial Government of Austria subjected Mr. Mann to the treatment of a spy, it would have placed itself without the pale of civilization, and the cabinet of Vienna may be assured that if it had carried, or attempted to carry, any such lawless purpose into effect in the case of an authorized agent of this Government the spirit of the people of this country would have demanded immediate hostilities to be waged by the utmost exertion of the power of the Republic—military and naval.

The undersigned reasserts to Mr. Hulemann and to the cabinet of Vienna, and in the presence of the world, that the steps taken by President Taylor, now protested against by the Austrian Government, were warranted by the law of nations and agreeable to the usages of civilized states.

Mr. President, there is a ring in that utterance which I believe every American likes to hear, and I am sorry to say that we have not heard so much of it of late, it seems to me, as we should have heard.

I said not long since, when on the floor discussing this question, that I did not claim that the Democratic party was an un-American party. I claimed that it was an American party, as is our party. Mr. President, the great body of the American people are animated by true American principles and sentiments; they are attached to the Government under which they live; they are attached to our form of government; they are proud of the prestige which this Government has obtained; they are proud of its position amongst the nations of the world, and they are not afraid that we shall embarrass ourselves by expressing sympathy with the struggling people of Hawaii or those of any other land who shall attempt to overthrow a bad government and establish a better.

I shall not bring into this discussion the question of annexation. I am an annexationist; I believe in annexation, and I believe in it because I regard it to be the destiny of this nation to become not only great on this continent but great everywhere else.

I have said before that I imbibed my ideas in the Democratic party; I imbibed them from such great men as Mr. Marcy; I imbibed them from the writings of Mr. Jefferson and Mr. Calhoun; I imbibed them from Mr. Polk.

Mr. President, there never has been a time, until Grover Cleveland became President of the United States, that a Democratic Administration has not been American from the ground up. It was the glory and the boast of the Democratic party before the war that they were the American party, and they brought into their fold hundreds and thousands of intelligent young men who went to it because of its aggressive force, because it was a virile party, a party of strength, a party of movement, a party of aggression. Mr. President, has that party become so effete and so cowardly that we are not to be allowed to express sympathy with the struggling Hawaiians nor to put out our hand to maintain there the order which should exist?

I remember when Mr. Jefferson declared it would round out his public life if he could but attach Cuba to the United States as part and parcel of our Republic. I remember when Mr. Polk proposed, not under the Monroe doctrine, but independent of the Monroe doctrine, that the Government of the United States should take Yucatan, fly its flag over it, and defy the world, and that, too, at a time when it was supposed Great Britain, in violation of the Monroe doctrine, was about to obtain some control over that country.

The Democratic party to-day, Mr. President, may be a party which proposes to confine our flag to the mainland; but if it does so it is false to the traditions of that party and it is not in consonance with the sentiment of the American people.

The Senator from Texas [Mr. MILLS] the other day complained of the treaty we had made concerning the Samoan Islands. I condemn that treaty as much as does the Senator from Texas. It is a treaty we never ought to have made. The United States never ought to be a copartner with any other nation in flying its flag or in controlling any other people. Those islands were offered to us and we could have had them by accepting, but we declined. The same sentiment which dictated declining to take those beautiful islands in the Pacific Ocean when they were offered then prevailed in this Chamber. We could have taken in Samoa and made it a great stopping place for our commerce, and that, too, without

any entangling alliance such as we have got into with Germany and Great Britain. We should have had a valuable acquisition if we had taken them and floated our flag, and our flag alone, over them. We were offered islands in the West Indies, which we ought to have taken, but which we declined. We can see now that we ought to have taken San Domingo and St. Thomas.

The Government of the United States, second in population now of all the great nations of the world, Russia only being superior—I do not, of course, include the great hordes who are held in semi-vassalage under British control—but we are the greatest nation in the world composed of homogeneous people. There is no other nation in the world which has 70,000,000 people all of whom use the same language and who are so harmonious as are ours. There is no nation in the world which has such unbounded resources and whose future promises so much as ours. Why should we be the unconcerned spectators of the affairs of the world? Why should not we, sitting here as we do in the middle of the North American Continent, have our part and our proper influence in the affairs of the world? If benefit can come by national control over other lands we are entitled to it, and if danger may come because of it, Mr. President, there are no people in the world who can look that danger so squarely in the face with so little fear.

I am ashamed when I hear a man say as to these islands, which give us 90 per cent of their trade, which are seated in the center of the great Pacific sea, where our whalers and our vessels of trade must stop as they go to and fro, that it will be dangerous for us to fly our flag over them. Oh, Mr. President, for an hour of Democratic vigor such as we had under Marcy, for such a foreign policy as we had under Webster, and such as we had under Fish, Evarts, and Blaine. The question is, is it our interest to take the Sandwich Islands and attach them to our country, or shall we allow some other power to float its flag there? Nobody here or elsewhere in the United States will for a moment admit that that is a possible thing; and if it is not possible that any other country shall control those islands, why not we? They have been offered to us as a gift from the people; they are of great value; they have a trade greater in proportion to the population than any other country in the world. Some of them are capable of maintaining a vast population beyond what they now have, and they are absolutely necessary to the commerce of this country, and, especially so, if we shall ever build the interoceanic canal. They are important for the protection of our Pacific Coast.

What stands in the way of their acquisition? There is no other nation in the world which dare object to our taking them; not even Great Britain. We can, without disturbing the peace of the world, take them and hold them either as provinces or incorporate them into the autonomy of the States. The first step toward their acquisition was taken, and yet, I regret to say, as I have said before, that I believe nothing but partisanship prevented those islands from becoming a part and parcel of the United States.

Mr. President, I will predict that the next Administration, no matter whether it may call itself Democratic, Republican, or Populist, will see that those islands are a part and parcel of the United States, not necessarily incorporated as a State, but that the flag of the United States shall float over them, not as a stranger flag, but as the flag of the people who live there.

Pacific Railroads.

SPEECH

OF

HON. ASHER G. CARUTH,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 1, 1895.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned—

Mr. CARUTH said:

Mr. CHAIRMAN: I entered this body as a member of the Fiftieth Congress. At that time the results of an investigation made by a Commission, appointed under the act of 1887, were submitted to the House of Representatives, accompanied by a special message from the President of the United States. That message submitted the reports of the majority and minority of the Commission, and the President then urged upon the Congress the speedy settlement of the debt of the railroads to the Government of the United States.

When I entered that Congress I requested of the Speaker of that House no particular committee assignment, feeling myself willing to discharge any duty which might be assigned to me. I was surprised, therefore, when, in the announcement of the committees for the Fiftieth Congress, I was placed upon that having in charge the settlement of the debts of the Pacific railroads to the Government of the United States.

Over that committee the distinguished gentleman from Ohio [Mr. JOSEPH H. OUTHWAITE] presided as chairman. I believe to-day I am the only member now on the Committee on Pacific Railroads who served on that committee during that Congress. I entered upon the discharge of my duty on the committee, Mr. Chairman, with the desire to right the wrongs that I felt had been committed against the Government of the United States and to do all I could to bring about a satisfactory solution of the difficulties then presented.

I was fresh from the prosecution of criminal cases in the courts, and felt that I would like to take a hand in the prosecution of those people who were said to have plundered the Government of the United States and committed high crimes and misdemeanors against the people. I entered upon the discharge of the duties with the desire that out of the investigations then and there commenced there should be brought forth some good for the Government. No man arrived more reluctantly at the conclusion reached in the Fiftieth Congress than I did. I had to abandon my preconceived ideas and to give my adherence to the measure proposed at that session of Congress. And I desire to say now, Mr. Chairman, that the Committee on the Pacific Railroads in the Fiftieth Congress had many hearings. They had witnesses brought before them from all parts of the country. They heard long and learned arguments upon the subject; and when they finally went into executive session for the purpose of arriving at some conclusion it was the unanimous voice of that committee that the measure known then as the Outhwaite bill should be presented to the House and its adoption urged upon the Congress.

The failure of that bill is known to the members of this House. It was considered in the morning hour. An eloquent speech was made in its behalf by the chairman of the committee [Mr. OUTHWAITE], and a learned and convincing argument was delivered by the gentleman from Pennsylvania [Mr. DALZELL] in support of that measure. It was a measure of relief such as we then thought the circumstances of the case demanded. It was an extension of the lien of the Government to all the property of the Union Pacific Railroad, and in consideration of the security given a long extension of the bonds was provided for. We did not report concerning the debt of the Central Pacific Railroad to the country.

Now, the labor of that committee to bring forth any fruit into legislation failed; and when the Democratic party went out of power, when the Fifty-first Congress was elected, and the learned and distinguished gentleman from Maine was made Speaker of the succeeding House, I saw no probability of a settlement of this matter. I saw no hope of any great work being done by the Committee on Pacific Railroads; and I went to the distinguished gentleman from Pennsylvania [Mr. DALZELL], whom I knew would be chairman of that committee, and requested that I be not continued as a member of that committee. On his request the Speaker of the House, in the formation of the committee, omitted my name, and I was not a member of that committee in the Fifty-first Congress; neither did I belong to it in the Fifty-second Congress; and I am glad of it. When we met here in the summer of 1893 and the committees were selected for this Congress I was greatly surprised, and not gratified, to hear my name announced as a member of the Committee on Pacific Railroads.

But I do desire to say that having been assigned to the committee I determined to give to the discharge of the duties of that position all the zeal and all the ability that was at my command, and to endeavor to arrive at a satisfactory solution of this vexed question. The members of the committee, whether upon the minority or majority side here, will bear witness to the fact that that committee has honestly and faithfully endeavored to discharge its duties. A majority has arrived at the conclusion embodied in the pending bill.

To that bill, Mr. Chairman, I give my support; and my reason for that I desire briefly to set forth to this House. We were confronted with a statement of the fact that the debt of the Pacific railroads to the United States was fast maturing, and we came to the conclusion that this debt of nearly \$140,000,000 should be settled in some way. The question was: How could it be done? In what way could we meet the conditions which confronted the Government of the United States; in what way could we add strength to our security that would give promise of the ultimate payment of the vast sum so soon to be due? There was, in the opinion of the majority of the committee, but one way. It was admitted that the Union Pacific Railroad and the Central Pacific Railroad were both insolvent, and the probability was that the property of the roads was not sufficient to pay off the Government after deducting the lien that was prior to that of the United States.

I am not here, Mr. Chairman, to defend the action of those who allowed that blunder in 1864, by which the Government lien was subordinated to other bonds that the road might issue; but I thought as a matter of history that I would endeavor to find out the reasons that animated Congress in giving the road the right to issue these bonds.

That bill is known as the act of July 2, 1864. In the House it was in charge of Hon. Thaddeus Stevens, of Pennsylvania, and he set forth the reasons why the Government of the United States was compelled to give additional aid to this great enterprise. On the 21st of June, 1864, in the debate in the House Mr. Stevens said:

The Central Pacific Company has raised already upon that side of the mountains over \$15,000,000. They have that money to expend and they are expending it. They are building a road over the Sierra Nevada into the silver-mining region at a cost of over a hundred and fifty thousand dollars a mile. It was obvious to the committee that upon this side of the Rocky Mountains it would cost even more than that. I have no doubt that there are sections of country there where it will cost from three to five hundred thousand dollars a mile. It would be impossible, therefore, for the company, under the old concession, to make this road, and we felt that if it was to be made something more ought to be done by the United States. The committee thought that nothing which we could carry through the House would be too much to aid in building this great thoroughfare between the eastern and western population of the country; to unite us with California, whose people, whatever they may have been at the start, are admitted now to be among the purest, both in politics and morals, of any in the United States. We thought it necessary, therefore, to do something to unite us with that people. What could we do? The company asked that we should double the number of bonds, and the Senate actually passed a bill guaranteeing the payment of interest for twenty years, in coin, on double the amount of bonds which the United States originally granted.

Your committee came at once to the determination not to burden the nation at this time with any further liabilities or obligation. They said to the company, "Take what land you choose; it is worth nothing to the Government; it is not held out for sale; it is worth nothing except as it becomes populated, and as you populate it you do us a benefit. Do not ask us for more bonds. We will take off some of the restrictions and make the conditions lighter, so as to enable you to go on with the work."

These are the reasons, set out in the language of the distinguished gentleman from Pennsylvania, the Hon. Thaddeus Stevens, why it became necessary to supplement the act of 1863 with the act of 1864, to give larger concessions to these Pacific railroads, to allow them to place a mortgage upon the roads which should be prior and antecedent to that of the United States, which, under the law of 1863, was to constitute the first mortgage debt.

Under that act of 1864, supplementing the act of 1863, the railroads were built. They were a benefit not only to the men who built them, not only to the enterprise which called them into being, but to the whole United States. They were of great benefit to the Government because they cheapened the carrying of the mails to our Western coast. They were of great benefit to the Government because they lessened greatly the cost of transportation across the plains, which up to that time had been done by wagons and teams. They saved to the Government in the transportation of troops and supplies and munitions of war many million dollars a year. If that iron band had not connected the Eastern with the Western portion of this country we should have spent in actual money for those purposes alone more than \$100,000,000 from that time to this.

Therefore, Mr. Chairman, so far as the question of who was benefited by these roads is concerned, they were a benefit not only to those who built them, to those whose genius conceived the idea and whose enterprise carried it into effect, but they were of great benefit to the Government of the United States. Those roads were also of greatest advantage to the people who lived along their lines. They were not only of great benefit to the United States so far as the actual saving of money was concerned, but they added to the greatness and grandeur and glory of the American Republic.

Why, Mr. Chairman, if we are to calculate the benefits upon the one side and upon the other, we shall find that the benefits to the Government of the United States were greater, ten times told, than the benefit to any one man who was engaged in the promotion of the enterprise. The work went on. One road starting at the East and one at the West, they grew together, until 5 miles west of Ogden, on the 29th day of May, 1869, seven years before the time allowed by the act of 1863 or the act of 1864, this great work was accomplished, the union was made, and the Atlantic and the Pacific coasts of the United States were welded together by these iron bands. And now the opposite coasts of this country of ours are connected so that it takes but a few days for one starting on the Atlantic shore of our country to reach the Golden Gate of the Pacific. And, sir, if there are any people in all the world who have been especially benefited by the building of the Pacific railroads they are the people of California.

Mr. CAMINETTI. When shall we get through paying for it? Mr. CARUTH. When shall you get through paying for it? You are not paying for it any more than anyone else.

Mr. CAMINETTI. Mr. Huntington, in his letter to this House, says that we will have to pay for it, and so does Mr. Stanford.

Mr. CARUTH. That the people of California will have to pay for it?

Mr. CAMINETTI. Yes, sir; and I will show you the letter.

Mr. CARUTH. Who says that?

Mr. CAMINETTI. Mr. Huntington, under his own signature. Mr. CARUTH. He says the people of California will have to pay for this?

Mr. CAMINETTI. Yes, sir.

Mr. CARUTH. All the people who patronize these roads—all who travel over them or send freight over them—pay for these roads. The people of California have a right to make laws for the control of the railroads within their own State; and the Central Pacific Railroad of California was incorporated under the laws of that State and is subject to the jurisdiction of its legislature.

I remember, Mr. Chairman, the terrible scandals connected with the building of these roads, and would be the last man to condone any of the offenses that might have been committed, and the majority of the committee endeavored to do what could by them be done to preserve every right in the Government to pursue the wrongdoers. So gentlemen will find in the pending bill, in section 14, the following language:

That the said companies accepting the provisions of this act, and each of said companies, shall, whenever requested in writing by the Department of Justice of the United States, and so long as the United States shall be the holder and owner of any of the bonds authorized by this act, cause any actions at law or suits in equity or other proceedings to be instituted and prosecuted in the name of said company or companies against any person who is, or has been, a director, officer, agent, or employee of the said company, for the purpose of enforcing any cause of action whatever arising, or which may hereafter arise, out of any alleged violation of duty, misappropriation of assets, or any other act or transaction whatsoever, in respect of which the said Department of Justice shall allege that it desires such action, suit, or other proceeding to be instituted and prosecuted. All such actions, suits, and proceedings shall be conducted by the Attorney-General of the United States, and he shall be fully authorized by the said company or companies to appear for them or it as attorney or solicitor in such actions, suits, or proceedings, and shall have the entire control of the same from the inception thereof to the end of such prosecution, and also the right to take and prosecute any appeal or appeals from any decision or determination made therein. Any sums of money which may be recovered under the provisions of this section shall be paid to the Treasurer of the United States, and by him applied as payment upon the lowest numbered bond or bonds of the company interested in such recovery outstanding under the provisions of this act; the balance remaining after all said bonds are paid shall be paid to the company in whose name the said sums were recovered.

And to "make assurance doubly sure," in the last section of the bill it is declared that "nothing herein contained shall be held to deny, exclude, or impair any right or remedy in the premises now existing in favor of the United States." It will not do for us to be forever looking back and talking of the wrongs which have been done the people by these roads. We must act in the present and look to the needs of the future. We find these to be the conditions which confront us:

First. We have paid out, and will be compelled to pay out, for the Union Pacific Railroad nearly \$69,000,000.

Second. We have paid out, and will be compelled to pay out, for the Central Pacific Railroad about \$63,000,000.

To secure these vast sums we have liens on the Union Pacific Railroad so far as we aided in the building of the line, the Supreme Court of the United States having expressly limited our lien to that portion of the road for the construction of which the bonds were issued. These would give us a second mortgage on so much of the Union Pacific Railroad as commences at a point one-half mile west of Kansas City and stops at the three hundred and ninety-fourth mile post west of the point of beginning, commencing and ending in a prairie. Also on a line starting 3 miles west of the Missouri River and extending to a point 5 miles west of Ogden, where it unites with the Central Pacific Railroad. The entire mileage of the road which was aided by the United States was 1,432.38 miles, and the situation of this debt is as follows:

First mortgage, ahead of the United States.....	\$63,500,000
Lien of the Government and interest thereon (say).....	65,000,000
Total.....	101,500,000
Less amount in sinking fund.....	\$15,500,000
Value of 1,432.38 miles at \$40,000 a mile.....	57,295,200
Total value.....	73,795,200
Deficit.....	28,704,800

The chances are that even this showing could not be maintained and that at a forced sale under foreclosure proceedings the property would not bring more than the first mortgage, and that the Government would lose the entire amount of its debt.

Our account with the Central Pacific would show even worse than this. Our debt is \$63,000,000, and it is agreed, on all hands, that on a forced sale of the property it would not bring the first mortgage debt, which is prior to the lien of the United States. On the Central Pacific Railroad we aided 860.66 miles of the line, and our lien is restricted to the portion of the road lying 5 miles west of Ogden and extending to Sacramento City, a distance of 737.50 miles, and that portion extending from Sacramento City to San Jose, a distance of 123.16 miles. Our line covers no terminals. The Ogden terminus is in a wilderness, and the San Jose terminus is in the open country, 9 miles from the Bay of San Francisco.

The chairman of the railroad commission (Governor Pattison), the gentlemen who constituted the majority of the commission, and the gentleman from California (Judge MAGUIRE), all agree

that the road would bring little, if any, more than the first-mortgage debt.

If we were to state the account with the Central Pacific Railroad, the figures would show as follows:

CENTRAL PACIFIC RAILROADS.	
Amount of first-mortgage bonds.....	\$27,855,680
Debt due United States, say.....	63,000,000
Total.....	90,855,680
Deduct—	
Amount of sinking fund.....	\$3,531,344
Value of roads (Governor Pattison's valuation).....	34,500,000
Deficit.....	41,031,344

With this condition of affairs staring them in the face the Committee on Pacific Railroads entered upon the task of endeavoring to solve the difficulty and bring to an end the troubles which were harassing the Government in connection with these fast-maturing obligations it had given over thirty years ago to aid in constructing these railroads to the Pacific Ocean. There were some who said, Let us buy out the first-mortgage bondholders and run the road. Even if this had not been a bad move to make it would have been a costly one. If we bought up the liens ahead of the Government on the aided lines we would not have a railroad, but only pieces of a road, pieces which began nowhere and ended nowhere—not a system of roads running from one city to another, but only a road without terminal facilities of any sort—and to get this we would have to expend in addition nearly \$40,000,000 in excess of the sinking fund now in the Treasury, but to get a system of railroads running from the Missouri River to San Francisco we would have to spend many millions more.

Hon. E. Ellery Anderson, who is one of the most prominent lawyers in America, a member of the Commission which examined the Pacific railroads, under the act of 1887, a Government director in the Union Pacific and now one of the receivers of that road, at the request of the chairman of the Committee on Pacific Railroads, gave a statement of what it would require to get such a system. Any statement from such a well-informed source is entitled to full consideration and credit. Mr. Anderson says:

The United States Supreme Court has decided on many occasions that the lien of the Government only extended to that part of the aided railroads in respect of which bond aid had actually been issued. This question was presented in reference to the Kansas Pacific Railroad Company in the case of *United States vs. Kansas Pacific*, reported in 90 U. S. page 455, in which case the question involved was substantially whether the lien of the United States covered the entire property from Kansas City to Denver, or whether it was confined to that portion of the railroad situated between Kansas City and a point 393½ miles westerly therefrom. Government aid had been extended to this point, but not beyond. The court held that the Government lien was confined to the Government-aided portion of the road, and also that the Government's right to retain compensation earned, or to require the payment of the 5 per cent of net earnings directed to be paid by the acts of 1862 and 1864 was confined to the aided portion of the road, and did not extend westerly of the point above mentioned.

It follows from the authority cited that a purchase by the Government under a foreclosure of its lien would convey a clear title to the railroad between Omaha and Ogden, subject, of course, to the prior liens thereon. On the line of the Kansas Pacific a similar foreclosure would convey the title from Kansas City to the point 393½ miles westerly therefrom. Such foreclosures and sales would, however, convey no title whatever to the railroad property between the point above referred to and Denver, a distance of nearly 300 miles, nor would they convey title to the large and valuable terminals in the city of Denver, nor to the railroad property between Denver and Cheyenne. For the same reason the title to the Omaha Bridge would not pass, and the right to terminal property in Omaha and in Kansas City would be involved in much uncertainty. It therefore follows that for the purpose of acquiring a complete title to the Union Pacific Railway Company for the 1,822.50 miles referred to in the Reilly bill the Government would have to actually pay and discharge the bonds which are prior to its own lien on that portion of the road which is covered by the Government lien. On the remaining portion it would be compelled to pay or adjust all the existing liens. The following table states the description of the bonds referred to and the amounts thereof. It includes both those bonds which are a first lien on the bond-aided portion and those which are a lien on the nonaided portion:

Union Pacific, Union division, first-mortgage bonds.....	\$27,229,000
Union Pacific, eastern division, first mortgage bonds.....	2,240,000
Kansas Pacific, middle division, first-mortgage bonds.....	4,063,000
Omaha Bridge 8 per cent bonds.....	565,000
Kansas Pacific, Denver extension, sixes.....	4,218,000
Kansas Pacific, Leavenworth Branch, sixes.....	15,000
Denver Pacific first mortgage, sevens.....	4,000
Union Pacific sinking fund, eights.....	3,782,000
Kansas Pacific consolidated mortgage, sixes.....	11,720,000
Omaha Bridge renewal, 5 per cent bonds.....	580,000
Union Pacific Equipment Trust, 5 per cent bonds.....	2,010,000
Kansas Pacific incomes, unsubordinated.....	9,850
Kansas Pacific incomes, subordinated.....	20,550
Coupon certificates.....	285
Kansas Division and collateral mortgage.....	5,000,000
	61,465,785

The sinking fund eights above referred to are junior to the lien of the United States on the division between Omaha and Ogden, and would be cut off by a foreclosure of the United States' lien. As to all the other securities mentioned in the table, they are so related to the property that a foreclosure of the United States' lien would not extinguish them, and it would therefore be impossible to acquire a complete title to the railroad without, in substance, paying all of these liens. There is quite an accumulation of interest on the consolidated mortgage sixes. So that it may fairly be assumed that it would cost the Government of the United States \$60,000,000 to acquire a clear title to the 1,822.50 miles which comprise the Union Pacific Railway.

In addition to the securities above named, there are also outstanding about

\$11,000,000 collateral trust 6 per cent notes; \$3,672,000 collateral trust 6 per cent bonds, and \$4,677,000 collateral trust 6 per cent bonds. The securities involved in these three trusts are of great value to the Union Pacific Railway property, but as they do not form an essential part of the title of the railroad itself, the United States would not be compelled to pay or adjust the bonds under these three trusts.

In regard to the Central Pacific, the outstanding bonds which are prior to the lien of the United States amount to \$27,000,000. The lien of the Government and the mortgage which secures these bonds are coextensive, and embrace the entire railroad from a point 5 miles west of Ogden to Sacramento, and thence to San Jose. A foreclosure of the lien of the United States, together with the payment of these prior bonds, would complete the title from Ogden to Sacramento and to San Jose.

The Government lien does not cover the railroad between Sacramento and Oakland, a distance of 85 miles. For the purpose therefore of completing the title of its railroad to San Francisco the Government would be obliged to construct its own road and acquire title to its own terminals at Oakland and in San Francisco. I am unable to form any accurate estimate of the cost involved, but it is manifest that the entire amount of money required to obtain a complete title from Council Bluffs to San Francisco would be over \$100,000,000. Except as represented by the property thus acquired the claim of the United States against the Union Pacific Railway Company and against the Central Pacific Railway Company would disappear. Except that to the extent of about \$20,000,000, held in the aggregate in the sinking funds of the two companies, the Government would receive a dividend of about 20 per cent on the amounts due it.

In a word, it will take over \$100,000,000 to acquire a complete title for the Government to the railroad between Council Bluffs and San Francisco.

Under these circumstances we did not, in the present condition of the Treasury, deem it advisable to recommend the purchase of the outstanding liens so as to get control of the line of road. Nor, indeed, did we wish to recommend that the Government try the dangerous experiment of entering into the railroad business in competition with its citizens who owned other lines of railroads. The President in his message of January, 1897, had advised against such a course, and the distinguished Secretary of the Treasury had said in his report:

It would be very unfortunate, in my opinion, if the Government should be forced by any combination of circumstances to take possession of and operate these lines of railway, and every reasonable effort should be made by all parties to avoid such a result.

The majority of the committee, therefore, dismissed this plan from consideration as being both undesirable and unwise.

There remained then but two other things which could be done. One was to entirely abandon the debt and let the matter go by default. This meant the loss of over a hundred millions of dollars, and such a loss the Government was in no condition to stand, and there was no reason for giving up the collection of these just claims. The other plan was to approach the consideration of the subject as if it were a business proposition—to treat with the railroads as a wise commercial man would treat with his failing debtors. It was thus that the majority of the committee have acted with these claims, and the ultimatum of the creditor is now proposed to the debtor.

In this bill the creditor says to the debtor, "Strengthen my security and I will give you further time on my debt. Put me in a position where I can hope for ultimate payment, and I will give you an extension." It says to the Union Pacific Railroad, "There is a debt of \$33,000,000 ahead of the obligation you owe me; get that out of the way and I will grant you forbearance, and lower the rate of interest." It says to the Central Pacific, "Pay off the \$27,000,000 of first-mortgage debts on your property, so that I may have the first lien on your railroad, and I will give you further credit at a lower rate of interest." But it says also to both these roads, "I must have in addition a mortgage on all your lines, all its franchises, terminals, and other property in order to add to the security of my debt."

It is a pure business proposition, no foolishness, no "buncombe" about it. It is the best that the Committee on Pacific Railroads thought could be done, and they present it to the House as their plan, give it their indorsement, and recommend its adoption. It is the result of much study, and in its main feature, the funding of the debt, but carries out what every committee of this House which ever had jurisdiction of the matter has recommended; what the Attorney-General of the United States and the Commissioner of Railroads both indorse and approve. Although no one who has ever studied the subject has proposed any other plan of settlement, the opponents of this bill desire its defeat, not because they can present any better plan for settlement, but because they desire no settlement whatever.

They fight the bill because they think that if they are sold the railroads will bring a small price, and the consequence would be that they would require smaller capital stock, and could afford to work cheaper, and for what they will save the people of their particular section in freight charges they selfishly and unpatriotically would sacrifice the vast sums due the Government of the United States. It is this class which holds out only the flimsy hope of getting the money of the Government out of the estates of certain deceased stockholders of the roads, and making these estates pay for acts committed thirty years ago. They know this chance is remote and that the hope they raise may never be realized; but it is useful for the purpose of argument in order to defeat the proposed settlement. The methods adopted by some of the opponents of the pending measure are unworthy, mean, and

degrading, calculated to throw suspicion on the honor and integrity of the American Congress.

They profess to believe that all honesty of purpose and integrity of action is with them and them alone, and all the rest of the world composed of thieves and villains. When they thus assail members of this House and attempt to bring upon this body the suspicion and contempt of the people they become the worst enemies of the Republic. It does not do for anonymous writers to assail the character of representatives of the people. Those who serve here do not do so for the mere money which they earn, because the same industry, intelligence, and zeal devoted to other pursuits would yield far richer pecuniary results, but they seek this high station because of its prominence, because of the distinction conferred and the honor gained, and he is the worst of unchanged assassins who without proof attacks the honor and integrity of members of this body. If anyone be corrupt let the charge be made and the proof be produced against him, but do not for the supposed sin of any one man assail a whole body.

The House of Representatives has shown itself ever ready to investigate the conduct of its members and punish those who have shown themselves unworthy of their positions. Remember the days of the "Credit Mobilier" investigation, when, standing in front of the Speaker, in the presence of their fellow-members, two Representatives received with bowed heads the "absolute condemnation" of the Congress and passed out of this Chamber only to hide their disgrace in the darkness of the tomb.

So far, Mr. Chairman, as I am concerned, I have given to no one subject the thought I have bestowed on this question of the Pacific railroads, because my committee assignments compelled me to do it, and from this study I am prepared to say that I believe this the only measure which will secure the ultimate payment of the vast sums due the Government from these failing corporations, and I do not hesitate, therefore, to earnestly recommend the passage of the pending bill. Let us—

"Cease to lament for that we can not help,
And study help for that which we lament."

The Pacific Railroads.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7798) providing for the refunding of the Pacific Railroad debts to the United States Government—

Mr. MAGUIRE said:

Mr. CHAIRMAN: In discussing the amendment which I have just offered, to exclude the Central Pacific Railroad system from the refunding scheme contemplated in this bill, I would ordinarily confine myself to a statement of the differences between the two great Pacific railroad systems, as they will be affected by this measure.

But, sir, owing to the insufficiency of the time allowed for debate, so many objections to the general scheme of refunding remain unstated that I feel bound to devote a portion of my time to an argument against the entire bill.

I have had the arguments which I made before the Committee on Pacific Railroads against this bill printed, and have sent copies to all members. I hope they have been generally read; but, considering the unreadable masses of printed documents constantly received by Representatives through the mails, I am not willing to trust that my printed arguments have received special attention.

Under leave of the House I had those arguments printed also in the RECORD as an appendix to my speech of August 15 and 16, 1894, against certain claims of the Southern Pacific Company. I will not now repeat the arguments then made, but with a mere summary statement of the objections to the passage of the bill as they occur to me I desire to present a more complete statement of my views concerning the proper disposition of the Pacific railroads after the foreclosure of the existing mortgages.

FRAUDS IN CONSTRUCTION AND OPERATION OF PACIFIC RAILROADS.

Twenty-three years ago, sir, the Credit Mobilier investigation startled this country and aroused the whole people to a fever of indignation by its disclosures of shameless corruption and of the systematic robbery of the Government by the directors of the Union Pacific Railroad Company.

It was shown that through the almost open bribery of public

officers they had secured immense concessions and unjust immunities from the Government, and that through fraudulent contracts with themselves they had diverted to their own pockets tens of millions of dollars' worth of assets of that company which it was their duty to hold in trust for the repayment of the Government's bond subsidy, with the interest to accrue thereon.

Congress, upon these disclosures, passed the act of 1873, which I mentioned in my remarks this morning, requiring suits to be instituted against these fraudulent directors to compel them to restore the diverted assets.

Such suits were instituted in the name of the United States against the directors of the Union Pacific Company; but the United States Supreme Court, unfortunately permitting forms and technicalities to shield the spoliators, finally held that, notwithstanding the statute, the United States Government could not maintain such suits against the directors until the maturity of its claims and default in the payment thereof by the company.

That decision (98 U. S. Reports) applied with equal force to the frauds committed by the directors of the Central Pacific Company, and effectually postponed all action on the part of the Government against the fraudulent directors of all the Pacific railroad companies until the maturity of the Government's second-mortgage bonds and default in their payment.

REILLY BILL CONDONES THE FRAUDS.

That period is now rapidly approaching, and it becomes highly important to those who hold the fruits of the frauds in question that the Government's claims against them be waived.

This would be accomplished by the passage of the bill now under consideration. The decision of which I have spoken very clearly holds the obligations of the directors to the Government to be collateral to the mortgage debts of the companies, even where those obligations arise out of the fraudulent diversion of the assets upon which the Government had a right to rely for payment of the principal debt.

That decision further holds, by necessary implication, that the Government can not even compel the debtor companies to sue the fraudulent directors for such diverted assets until default has been made in the payment of the principal debt.

But even if the companies could be compelled to sue the fraudulent directors, no recovery could possibly be had in such suits because the companies have always had that right of action; and having neglected for more than twenty years to pursue it, they are unquestionably barred by laches and the general statute of limitations from pursuing it now. The same is true of the stockholders.

Of all defrauded parties the Government alone is in a position to sue the directors when the now contemplated default shall be made. The Government's cause of action has not yet arisen, and it alone is not barred.

SECTION 14 WORTHLESS.

Section 14 of the Reilly bill, which in terms requires the companies to sue the fraudulent directors and provides for the conduct of such suits, is absolutely worthless. It is a delusion. The companies have lost their rights against these directors.

Gentlemen of the committee have said, in reply to inquiries, that the acceptance of this act by the companies will constitute an estoppel against the assertion in court that these claims are barred; but that is absurd.

The fraudulent directors are not to be parties to the acceptance of this act, and they can not be estopped by anything that the companies may do.

Nor would it help the matter in the least to provide in this bill that the Government, instead of the companies, should sue the directors, because the extension of credit on the original obligation would postpone if it did not extinguish all collateral obligations.

It follows, therefore, that the first and most certain effect of the passage of the Reilly bill, or of any funding bill whatever, will be to condone the colossal Pacific railroad frauds, and to finally release the fraudulent directors and their estates from their present obligation to restore the stolen assets.

AN ACT TO FUND STEALINGS.

The fraudulent diversion of assets by the directors of these Pacific railroad companies in the matter of construction alone amounted to more than their present debts to the Government.

I have not time to deal with this proposition in detail, but for proof of my statement I refer to the report of the Pacific Railway Commission, particularly to pages 51, 82, and 137.

In view of these facts would it not be well to change the title of the act now under consideration so as to read: "An act to fund the stealings of the Pacific railroad directors and release said directors from all obligations to the Government resulting from such stealings?"

There might also be appropriately added to such title a declaration that the act further provides for levying "a special tax on the people of California, Nevada, Utah, Wyoming, and Nebraska to make good the losses suffered by the Government through such stealings."

CONTINUED DIVERSION OF EARNINGS.

In all that I have thus far said I have dealt only with the frauds committed in the construction of the roads; but the plunder of the companies did not end with the construction of the roads.

For twenty-five years a side copartnership, consisting of a majority of the board of directors under the disguises of various corporate names, has been robbing the Central Pacific Company of its net earnings.

That copartnership is now, under the name of the "Southern Pacific Company of Kentucky," absorbing all of the net earnings of the Central Pacific road, and holds a lease fraudulently made by the directors with themselves by the terms of which they are to absorb all net earnings of the road for the ensuing ninety years.

I called attention this morning to the fact that this fraudulent lease is expressly mentioned and at least by implication ratified by section 6 of the Reilly bill.

Is this House prepared to ratify all of these frauds and to cancel all obligations arising out of them? I think not.

RESTITUTION, NOT PUNISHMENT, SOUGHT.

Gentlemen accuse us of inhumanity in pursuing some of these directors even to their graves in order to punish them for old offenses. Such talk is the veriest nonsense. We do not ask for the punishment of even the living conspirators. We ask only that the stolen assets which are still accessible be pursued and recovered, whether they or their proceeds be in the hands of the original spoliators or in the hands of those to whom they have come by gift, bequest, or inheritance.

This is the usual and ordinary course of procedure among citizens. Why should the Government refuse to pursue it in this particular case?

AN EASY NOVATION.

The gentleman in charge of this bill [Mr. REILLY] tells us that the first thing to be done by each company is to deposit security satisfactory to the Secretary of the Treasury for the payment of the first-mortgage bonds at their maturity, and, he tells us, they will not be likely to do that unless they intend in good faith to carry out all the conditions of the bill.

In this, it seems to me, the gentleman is grievously mistaken.

The first thing to be done by any company desiring to take advantage of the act is to file its acceptance under section 12, which reads as follows:

SEC. 12. That this act shall take effect as to each of the said companies and their branches, respectively, as hereinafter described, upon the acceptance of its terms by the board of directors of such company in writing, over the corporate seal of such company, signed by its president and attested by its secretary, being filed or deposited with the Secretary of the Treasury within six months after the passage of this act, subject, however, to the completion of the settlement and adjustment in this act proposed and provided; but any company which shall not so file its acceptance shall take no benefit from this act.

This acceptance of the act will at once constitute a new contract between the Government and the accepting company, which may or may not be followed, at some time not specified in the act, by the deposit of the collateral bonds or the security for the payment of the first-mortgage bonds.

In the meantime the Government's right to proceed against the company will be absolutely suspended by the new contract, and all obligations collateral to the old contract will be discharged.

The reservations contained in sections 2 and 17 of the bill will doubtless operate as intended upon the companies accepting the act and failing to comply with its provisions, but they can have no effect at all upon the directors and stockholders whose obligations are collateral and who will not be, in any way, parties to the acceptance of the conditions of the act.

It is quite probable that this easy means of escape on the part of the fraudulent directors and their successors in interest will be the extent to which the companies still under their control will avail themselves of the act.

NO LEGISLATION NECESSARY.

Hasty legislation at this time is entirely unnecessary. Existing laws fully enable the Secretary of the Treasury and the Attorney-General to protect the rights and interests of the Government in the Pacific railroad matters.

This being the case, the rights and obligations of all parties should be permitted to ripen and to be enforced in accordance with the laws under which they were contracted.

FICTITIOUS CAPITALIZATION AND OPPRESSIVE CHARGES.

Another effect of the passage of this bill will be to continue the present fictitious capitalization of the Pacific railroads as a basis for excessive and oppressive freight and fare charges.

These roads are capitalized at several times their real value, and their right to earn interest on the fictitious capitalization seems to be conceded by the Interstate Commerce Commission.

For example, the Central Pacific Railroad is capitalized at \$172,000,000, while the Pacific Railway Commission, in 1887, estimated its real value, measured by the cost of reproducing it, to be only \$34,500,000. (Report, page 201.)

If the roads are sold on foreclosure they will bring presumably

about their true value, and their selling price may be taken as their true value for the purpose of fixing freights and fares hereafter.

This is a most important consideration to the people of the West, who maintain these roads, and who must be taxed to pay the funded debt, if this bill should pass.

A TAX ON THE WEST.

It is conceded by all that the funded debt, as contemplated by this bill, must be paid out of the freight and fare charges on the traffic of the roads; but it is claimed that the burden will be distributed with practical equality between the East and the West. It is said that the consumers of the West will pay the excessive freight charges on all commodities shipped westward over the roads, but that the consumers of the East must pay like charges upon all commodities shipped eastward, thus equalizing the burden.

Unfortunately for the West, the almost universal law of trade, that all burdens upon the production, transportation, and exchange of commodities are shifted to and paid by the ultimate consumer, does not apply to the great bulk of the freight shipped from the Pacific to the Atlantic Coast, while it does apply to nearly, if not quite, every commodity shipped westward.

That law applies to all commodities, such as manufactures, the production of which can be gauged according to the demand; but it does not apply, except remotely to discourage the industry generally, to agriculture or horticulture. In those enterprises the yield may be light or excessive, in proportion to demand, from causes wholly independent of the producers' volition or foreknowledge.

The farmers and fruit growers must take their chances always upon the fruitfulness of the seasons, not only in this country but in all countries whose similar products are sold in the same markets with ours, whether at home or abroad.

This distinction between the products of farms and factories in the markets is not new.

It has long been well understood, for example, that, while cost of transportation and tariff taxes are always added to the prices of manufactures imported from Europe and are all ultimately paid by the American consumer, the American farmer has never been able to add any such expenses to the price of his wheat, either in the home or the foreign market.

The reason for this apparent paradox is that the character and extent of soil and climatic conditions favorable to the cultivation of cereals in this country always induce the production of a large surplus of such cereals which must be sold in the world's open market at prices fixed by the world's supply, regardless of the cost of producing or transporting the American product.

The prices so fixed in the world's market fix the prices of such cereals also in the home market at just the cost of transportation less than the world's prices.

So it is with us in dealing with the East; we must pay the freight charges upon most of the commodities which we send to the East for sale, while we are obliged to pay all freight charges upon the Eastern commodities which we consume.

In view of these facts I feel that I have not overstated the hardship which the passage of this bill would impose upon the Pacific States that are tributary to these railroads.

We would simply be required to pay, in excessive freight and passenger rates, during the next fifty years, double the cost of reproducing both of these railroad systems, and leave them at the end of that period entirely to their private owners free from incumbrance. That certainly would not be to us.

There is not a man in this House who would think of recouping the losses of the United States Government through the Pacific railroad subsidies or the dishonesty of their managers by levying a special tax on the people who live in the region traversed by the roads, but under the form of a requirement that the railroad companies pay the amount of those losses you will, by the passage of this bill, really farm out the taxing power to these companies to raise the amount from us by a special tax on our industries and our commerce.

DIFFERENCES BETWEEN UNION AND CENTRAL SYSTEMS.

What I have said applies to both Union Pacific and Central Pacific systems. But, sir, there are several additional objections to funding the bonded debt of the Central Pacific Railroad Company which do not apply to the Union Pacific.

The Central Pacific Company was organized under the laws of California, and its life is absolutely limited by the constitution and laws of that State to fifty years from the date of its organization. It will cease to exist in 1913, while the funding period under this bill will not be completed until 1945.

The company is absolutely incapable of contracting for the payment of the installments provided for in the bill after the year 1913, and will be absolutely incapable of performing such a contract if made.

Again, under the laws of California the stockholders are liable

for the debts of that corporation in the proportion which the stock of each bore to all of the stock issued at the time the obligation was incurred.

Huntington, Hopkins, Stanford, and Crocker at that time owned all of the issued stock, so far as known, in equal shares. Their estates are ample to respond to the amount of the entire claim of the Government. Proceedings are already in progress to establish that liability against the estate of Leland Stanford.

This bill, if passed, will release all of these claims and terminate the proceedings without judicial determination.

Again, the Central Pacific Railroad has at least a third mortgage resting upon it—a blanket mortgage on the whole system for \$16,000,000—which will be prior to the collateral mortgage provided for in the Reilly bill, and rendering the latter absolutely worthless as security to the United States.

Again, the controllers and managers of the Central Pacific Company are the owners of a competing transcontinental railroad, connected with all of the feeders of the Central Pacific Railroad, and will, if a novation be created releasing them from their personal obligations for the Government debt, be more interested in destroying than in building up or maintaining the Central Pacific road.

Further, and perhaps the worst of all these special complications, the Central Pacific Railroad was, in 1885, leased to the Southern Pacific Company of Kentucky for the period of ninety-nine years at a rental so low that it absolutely precludes the Central Pacific Company from complying with the conditions of this act.

Under these circumstances, whatever may be the conclusion as to the propriety of funding the bonded debt of the Union Pacific Company, the Central Pacific can not be treated with upon the same terms.

PACIFIC COAST PROTESTS.

Mr. Chairman, the gentleman from Vermont [Mr. POWERS] on Thursday last and other gentlemen to-day have denounced the mayor of San Francisco for having sent letters and telegrams to this House charging, or at least intimating, that corrupt means might be used to secure the passage of this bill, and denouncing one of the principal beneficiaries of the bill as a corruptionist and a man ready and willing at all times to bribe legislators and other public officers.

These statements have been referred to as slanderous, and the gentleman from Michigan [Mr. WEADOCK] this morning took occasion to denounce Mayor Sutro as a cowardly slanderer. What all this has to do with the merits of the bill under consideration I am quite unable to see. Mr. Sutro has been zealous indeed in his opposition to this measure. Perhaps he has been overzealous, and this overzeal may have created some prejudice where more temperate methods would have secured favorable consideration.

But Mr. Sutro in this matter represents a public sentiment pervading California. That sentiment is voiced most effectively in the monster petition which I presented to this House on Thursday last, containing signatures of more than 200,000, citizens of the Pacific Coast States, voluntarily forwarded to the San Francisco Examiner, upon a publication in its columns for a very short period of a petition protesting against the passage of the bill now under consideration and favoring foreclosure and Government ownership of the Pacific railroads.

That sentiment is also expressed in the joint resolution of the California legislature telegraphed me by Governor Budd and presented by me to the House to-day. Personally Mr. Sutro needs no vindication at my hands. He has been a citizen and continuous resident of San Francisco for more than a quarter of a century and was on the 6th of November last elected mayor of San Francisco by the largest vote ever received by any candidate for mayor of that city.

Although a very wealthy man, Mr. Sutro expended less than \$500 in the campaign, and no man can charge that in any step toward his election to the mayoralty he used a dollar corruptly or improperly. Now, Mr. Sutro's charges are not at all directed to the members of this House, and not one of his communications can be pointed to in which he intimates that any member of this House has been corrupted or is subject to corruption. He charges that Collis P. Huntington is greatly interested in the measure before the House, and that he has never hesitated to resort to bribery for the accomplishment of any purpose of this kind in which he has been interested.

These statements of Mr. Sutro are more than justified by the now famous Huntington-Colton letters, copies of which are accessible. I have a number at my desk. They are to be found also in the report of the Pacific Railway Commission. They were written by Mr. Huntington to David D. Colton, his partner, at San Francisco, and the originals were introduced in evidence in the case of Ellen M. Colton against Leland Stanford and others. They expressly show that bribery of Congressmen in a previous Congress was contemplated and practiced by Mr. Huntington on behalf of the Central Pacific Railroad Company and other interests of its managing directors. These letters justified what Mr. Sutro has

said in his communications and they should be received rather as useful warnings than as insults to any member of this House.

No honest man can read those letters without realizing not only the utter corruptness of the man who wrote them but the shockingly low estimate which he placed upon the moral characters of the people's representatives in the Congresses to which they refer.

He and his associates seem to have proceeded in all their dealings with the Government upon the theory of human character said to have been suggested by Guizot to King Louis Philippe:

"The people! Bah!" said wise Guizot;
"Bribe the needy, high and low;
Pay them, tickle them, scatter wide
Star and ribbon to please their pride;
Give them places, give them pelf;
The law of man is the love of self.
Every conscience may be sold,
Every man has his price in gold."

"We rule, Oh King, on a deep-laid plan,
We know the worthlessness of man."

Mr. Huntington's reports of his successes, read in the light of the all too plain statement of his methods, indicate that, in those Congresses, he found men willing—

To do the tyrant's high behest,
And earn the robber's bribe.

Let those who deprecate what they are pleased to call "slander of the Pacific Railroad builders" remember that C. P. Huntington, one of the builders and one of the principal beneficiaries of the legislation now proposed, is the chief slanderer, upon whose written statements to his partner the assertions objected to are mainly predicated.

Let them remember also that the Pacific Railway Commission found that \$5,000,000, at least, had been expended by the Central Pacific Railroad managers in corruptly influencing legislation, and that Leland Stanford, when interrogated concerning that expenditure by the Commission refused to answer, and was finally relieved by the circuit court upon a technical objection, from his obligation to answer.

I do not blame gentlemen for becoming indignant at the recital of these crimes; but it seems to me that their wrath should prevail rather against the men who committed the crimes than against the man who calls attention to them.

THE "EXAMINER" PETITION.

The following is a copy of the "Examiner petition," as it is universally designated in the West, which I presented to the House on Thursday last:

To the Senate and House of Representatives of the United States:

The undersigned citizens of the United States, residing in the States and Territories most vitally interested in the management of the subsidized transcontinental railways, respectfully represent:

That the bonds issued by the Government in aid of the construction of the Central Pacific, Union Pacific, Western Pacific, Kansas Pacific, Central Branch and Sioux City Pacific railroads will begin to mature on January 16, 1895, and will all fall due within the following four years.

That the principal of these bonds amounts to \$64,623,512, and the interest paid by the Government up to May 31, 1894, and not repaid by the companies, is \$72,362,227.19.

That the companies are under obligations to repay the sums so advanced as the bonds mature; that these obligations are secured by second mortgages on the roads, but there is no probability that any attempt will be made to meet them.

That the roads have been so managed as to diminish the value of the Government security and furnish plausible reasons for making such a compromise as would leave the debts of the company to be paid by future generations of stockholders.

That in the words of the report of Governor Pattison of the Pacific Railway Investigating Commission, "a mere creditor might consent to a compromise which, in the sovereign dealing with a dishonest debtor who had violated all laws and covenants, would be repugnant to public policy. It can not afford to condone fraud, to validate the iniquitous work of the Credit Mobilier, the Contract and Finance Company, and similar organizations, or to ignore the unlawful and outrageous discriminations and extortionate charges and criminal conspiracies for controlling trade which have characterized the administration of these railroads since the date of their completion."

That to the people of the Pacific Coast it is a matter of imperative necessity to have an independent means of communication with their Eastern markets; that the allied transcontinental railroads at present constitute a high barrier to trade; that any new road built by private capital would at once join the old combination, and that the only trustworthy regulator of rates would be a line owned by the public and operated in the public interest.

That the necessity for such a line, obvious enough before, has just been startlingly impressed upon all by the absolute isolation of California and the other Commonwealths served by subsidized roads, and the complete paralysis of business, caused by a quarrel between the roads and their employees in which the people had no interest; a disaster whose recurrence would be impossible in the presence of an open Government line, free from strikes or labor difficulties of any kind, as all branches of the public service are.

In view of these facts we earnestly beg that no extension of time, on any terms whatever, be granted for the payment of the Pacific railroad debts, but that immediately on default in meeting the matured bonds the mortgages be foreclosed and the roads bid in by the Government and operated as national enterprises.

And your petitioners will ever pray, etc.

The great number of signatures—more than 200,000—and the manner of its signing entitle this petition to more than ordinary consideration.

These signatures were not as a rule personally solicited. They came spontaneously upon the mere suggestion in the columns of the San Francisco Examiner that such a petition would aid in defeating the legislation here contemplated.

The following history of the petition as recently published by the Examiner is not only interesting but instructive, as showing the widespread and intense sentiment on the Pacific Coast against any scheme of settlement of the Pacific railroad question which involves saddling these odious monopolies and their fraudulent debts upon us as this measure will do.

Under the leave already given by the House I will print it as a part of my remarks:

HISTORY OF THE PETITION.

On July 20, 1894, the Examiner contained a dispatch, under date of July 19, from Washington, D. C., announcing that a funding bill had been agreed upon and that the House Committee on Pacific Roads was ready to report. The bill provided for an issue of bonds for a period of fifty years at 3 per cent wherewith to pay off the indebtedness of the roads to the Government.

On July 21 an editorial appeared in the Examiner soliciting an expression of opinion from the people of the Pacific Coast on the question as to whether the Government should foreclose and take possession of the railroad. In the same issue was first printed a formal petition against the funding bill and in favor of Government possession of the Central and Union Pacific railroads.

This printed petition appeared every day for about four weeks, and as a result on July 24 there had been received at the Examiner office 2,948 signatures against the bill and in favor of Government ownership.

In the issue of July 22 telegrams were printed from E. V. Debs and C. P. Huntington giving their respective views on the situation, also statements from other prominent people throughout the country.

On July 25 the petition received its first impetus. That day 2,165 signatures were obtained, or an aggregate more than had been obtained collectively for the four days preceding.

On July 27 the roll had increased to 6,509, and on July 30 the total was 11,010. On July 30 the total reached 15,489.

With the issue of July 29 the Examiner circulated amongst the subscribers a large printed form for signatures, which was well received and quickly responded to. On the last day of July the total number of signers was 23,982, all of whom had signed the petition within ten days after the proposition was first submitted, and a month later, or on August 31, the total had reached the magnificent figure of 182,227.

On August 2 Adolph Sutro's first list of 2,906 was received. It was the largest single list up to that time.

On August 3 the total had reached 50,149.

August 4 closed the second week of the campaign of the people, during which 46,016 names were received, being over four times as many as were sent in during the first week, 11,010 being the total for the first week.

August 5 William Farrell, a cigar dealer on Market street, sent in a petition 90 feet long, containing 3,230, the largest list to that date.

On August 7 the 75,000 mark was passed, the total on that day being 76,813.

On August 8 two incidents of note occurred. Adolph Sutro broke the single-petition record with 3,304 names, which helped to swell the total for one day to 10,163, the largest single day's record to date. The total was 86,775.

On August 10 the total went to 100,227. On that date it was decided to close on August 17, and on the same date a large petition to hold 50 names was printed on the front page of the Examiner.

On August 15 the 125,000 mark was passed.

On August 16 the record was broken with 10,276, the largest for a single day up to that time.

On August 17, the day set for closing the lists, the largest single day's returns were received, 11,904, Mr. Sutro having sent in the largest list, containing 3,571. The total was now 155,823, and on that day it was decided to run up to 200,000.

On August 20 the first tabulated list appeared, and on August 25 the 175,000 mark was passed.

On October 9 the list was closed hurriedly to be put in condition to forward to Washington, that its influence might be exerted on the members in the closing days of the last session of Congress, the bill having then been reported. The grand total of names then exceeded 200,000, all voters, and representing every State on the Pacific Coast, California giving a total equal to nearly two-thirds of its voting population. When it was learned that the Reilly bill would not come up at that session the lists were held back. If they could have been reopened the total would have been largely increased.

CALIFORNIA'S GREAT RECORD.

The names for California, by counties, are as follows:

Alameda	4,130	Placer	2,238
Alpine	20	Plumas	540
Amador	970	Riverside	1,601
Butte	2,340	Sacramento	3,446
Calaveras	1,708	Shasta	1,722
Colusa	1,078	Sierra	1,616
Contra Costa	1,618	Siskiyou	2,022
Del Norte	304	Solano	2,146
Eldorado	1,281	Sonoma	4,109
Fresno	4,200	Stanislaus	1,224
Glenn	802	Sutter	642
Humboldt	2,036	Santa Barbara	1,622
Inyo	178	San Benito	1,242
Kern	1,316	San Bernardino	1,925
Kings	1,450	Santa Clara	2,158
Lake	688	Santa Cruz	2,814
Lassen	304	San Diego	3,824
Los Angeles	4,341	San Joaquin	2,086
Los Angeles, city	3,634	San Jose	3,703
Madera	836	San Luis Obispo	2,191
Marin	1,014	San Mateo	870
Mariposa	554	Tehama	1,230
Mendocino	2,194	Trinity	276
Merced	668	Tulare	2,589
Modoc	380	Tuolumne	711
Mono	163	Ventura	1,192
Monterey	2,048	Yolo	1,406
Napa	1,338	Yuba	1,236
Nevada	2,637	San Francisco	50,354
Oakland	5,060		
Orange	789	Total	152,179

OREGON'S QUOTA.

Oregon was enthusiastic on the subject, and the readers of the Examiner in that State sent in a total of 13,028 names, distributed as follows:

Baker	284	Linn	1,060
Benton	160	Malheur	60
Clatsop	372	Marion	819
Clackamas	504	Morrow	88
Columbia	312	Multnomah	274
Coos	1,148	Polk	188
Crook	18	Portland	1,428
Curry	182	Sherman	88
Douglas	1,194	Starkey	12
Gilliam	118	Tillamook	166
Grant	136	Umatilla	280
Harney	136	Union	226
Jackson	1,032	Wallowa	74
Josephine	626	Wasco	161
Klamath	242	Washington	287
Lake	121	Yamhill	374
Lane	784		
Lincoln	134	Total	13,028
Linn	20		

WASHINGTON IN THE FIGHT.

Washington, too, took up the fight and spontaneously sent in 10,955 signatures, the following counties being represented:

Adams	22	Okanogan	29
Chehalis	601	Pacific	59
Challam	378	Pierce	1,228
Clarke	295	San Juan	62
Columbia	76	Skagit	608
Cowlitz	842	Skamania	54
Douglas	1	Snohomish	850
Franklin	60	Spokane	228
Garfield	76	Stevens	138
Island	60	Thurston	668
Jefferson	247	Walla Walla	80
Kings	1,730	Wahkiakum	120
Kittitas	540	Whatcom	729
Kitsap	150	Whitman	632
Klickitat	14	Yakima	196
Lewis	162		
Lincoln	214	Total	10,955
Mason	106		

NEVADA'S EFFORTS.

Nevada's list contained the names of nearly one-third of its voting population, the following counties being represented:

Churchill	62	Ormsby	229
Elko	842	Nye	36
Esmeralda	167	Storey	692
Eureka	171	Weber	8
Douglas	228	White Pine	82
Humboldt	538	Washoe	610
Lander	100		
Lincoln	236	Total	3,638
Lyon	289		

IDAHO DID WELL.

Idaho did quite as well in proportion to its population, sending a total of 2,639 names from the following counties:

Ada	192	Logan	81
Cassia	3	Latham	74
Boise	66	Latah	224
Canyon	100	Kootenai	375
Custer	9	Nez Perces	19
Bingham	3	Oneida	96
Alturas	14	Owyhee	18
Fremont	86	Shoshone	636
Idaho	77		
Elmore	176	Total	2,639
Lemhi	108		

MONTANA'S LIST.

Montana sent in 1,441, as follows:

Beaverhead	43	Meagher	3
Cascade	7	Missoula	101
Custer	88	Park	27
Deer Lodge	201	Ravalli	93
Flathead	21	Silverbow	402
Gallatin	40	Valley	90
Jefferson	114	Yellowstone	41
Lewis and Clarke	133		
Madison	2	Total	1,441

ARIZONA'S ENTHUSIASM

Arizona made the splendid showing of 3,190 names, and would have done better if time could have been granted. The following counties sent petitions:

Apache	38	Pima	251
Cochise	355	Pinal	236
Cocconino	181	Yavapai	570
Gila	249	Yuma	147
Graham	46		
Maricopa	810	Total	3,190
Mohave	307		

UTAH'S CONTRIBUTIONS.

Utah is represented by the following counties:

Beaver	1	Summit	202
Box Elder	65	Washington	18
Carbon	1	Weber	289
Davis	1	Utah	1
Grand	51		
Salt Lake	200	Total	900
San Pete	2		

FROM TEXAS TO PENNSYLVANIA.

Other States also took a lively interest in the work. Colorado sent in 709 names, New Mexico 395, Minnesota 265, Wisconsin 13, New York 13, Missouri 48, Arkansas 219, Nebraska 306, Pennsylvania 23, Wyoming 97, Illinois 72, South Dakota, 109, Ohio 65, Kansas 832 and Texas 296.

Other States in a scattering way raised the grand total to 200,507, making this undoubtedly the largest petition ever presented to Congress from the Pacific Coast.

LABOR FEDERATIONS' MEMORIAL.

I have received hundreds of letters and telegrams from all parts of California and the West, from official as well as from private bodies and individuals, all urging the defeat of this measure as essential to the future prosperity of a great and rich section of the Pacific Coast. I can not now even refer to them specifically, but they undoubtedly speak the universal sentiment of the West, as do the resolutions of the legislatures of California and Colorado, now in session.

But there is one other memorial expressive of the sentiments of the great body of the laboring classes East and West on this subject. It is the memorial adopted by the American Federation of Labor at its last annual session in the city of Denver, in December last.

The memorial is to be found on pages 17 and 18 of the official record of its proceedings, and is as follows:

To the honorable Senate and House of Representatives of the United States of America in Congress assembled:

Your memorialists, citizens of the United States, respectfully protest against the passage of either the bill prepared by the Attorney-General of the United States, now pending in the Senate, or the bill presented by the House Committee on Pacific Railroads, now pending before the House of Representatives, or any other bill of a similar character, both of said bills being for the reorganization of the Union Pacific and Central Pacific railways and for the extension of their securities.

First. Because said bills ignore almost entirely the interests, present and prospective, of the people now occupying and the multitude of citizens hereafter to occupy the vast, rich, and fertile region of country served and vitally affected by said railroad system; a country including the States of Kansas, Nebraska, Colorado, northern New Mexico, northern Texas, Wyoming, Utah, Nevada, Idaho, Oregon, western Montana, and Washington, as well as California, being at least one-quarter of the area of the whole United States, and including a very large extent of what is by all odds the richest part in natural resources of the whole country.

Second. Because they both extend to an unreasonable time for any government to bind, or to legislate for, the people in a new country on such a vital matter, and granting a dangerous franchise for a hundred years, or even fifty years, to come.

Third. We protest against the passage of any such bill, because instead of considering the matter in the light of what ought to be the first question, i.e., the public interest and national welfare, their main consideration is directed to a question of how to recoup the stockholders of the main line of the Union Pacific road, the successors of the Credit Mobilier, the most pampered beneficiaries and the recipients of the largest powers to oppress the people and of the most munificent contributions of Government aid in the history of the country.

Fourth. Because these bills extend and ratify the authority of said beneficiaries to foreclose and to cut off all other stockholders in the branches of the Union Pacific system, who were never aided by the Government, and who owe it nothing. And for the unworthy purpose of using their property to strengthen the Union Pacific security, now only on its main line, it is proposed that the branch lines also shall be mortgaged to the Government to strengthen its security for the whole property, on low valuation and low interest, for fifty or a hundred years to come.

Fifth. Because both bills propose to rehabilitate the Union Pacific corporation with power to run the vast system, main line and branches, as it has heretofore done, discriminating against the development of one part of the country, breaking down its manufactures and building up others, suppressing the trade of one place for the benefit of another, to the enormous profit and aggrandizement of its own company, and especially the persons and parties in control thereof, and that for generations to come.

Sixth. We protest against the Government conferring upon the Union Pacific Railway Company, the Union Pacific system, or the Central Pacific Railroad of California, or any other corporation the credit of the Government to enable either or all of them to borrow money at the rate of 2 or 3 per cent per annum, as is proposed in all the plans for their reorganization.

PUBLIC RAILROAD HIGHWAYS.

But gentlemen who recognize the force of all these arguments against the funding bill, and against the funding scheme generally, are very much concerned lest, upon foreclosure, these roads may possibly fall into the hands of the Government and become public property.

And gentlemen on the other side have studiously and adroitly sought to avail themselves of that prejudice by seeking to force the opponents of the bill to declare for Government ownership and operation of railroads.

Personally I am opposed to the Government operation of railroads, unless it shall finally appear that there is no other way to get rid of the curse of railroad monopoly.

I am opposed to the Government engaging in business enterprises of any kind except such as are necessary incidents of its governmental functions.

But I am more strongly opposed to all grants of privileges or immunities to citizens which enable them to exercise monopoly powers over other citizens.

This latter principle is manifestly superior to the former, and more important, both as regards the stability and purity of republican institutions and the happiness of mankind. I hold that no special privilege should ever be granted or continued by government to any citizen or class or set of citizens, under any circumstances or for any purpose, and that it is the first, highest, constant duty of government to preserve and maintain the equal rights and equal natural opportunities of all her citizens. Monopoly, in its very essence, is an invasion of the natural rights of those subject to its extortions, and is essentially inconsistent with free government.

I hold, therefore, that whenever free competition becomes impossible in any enterprise of general utility, that enterprise properly becomes a public function to the extent necessary to eliminate the element of private monopoly.

But the public function should not be extended beyond the elimination of the monopoly when that factor of the enterprise can be separated from the purely business factors. If the monopoly factor can not be so separated, I do not hesitate to say that the whole enterprise becomes properly a public function.

In railroading the monopoly is in the right of way and roadbed. The business of railroad transportation is not necessarily a monopoly. It is made such only through the absolute private control of railroad highways, now generally permitted. Full and free private competition in transportation over public railroad highways is, however, perfectly feasible.

If our public roads and streets were given over to the exclusive control of private companies, as our railroad highways are, we would suffer the same oppression and extortion at the hands of such companies that we now suffer at the hands of our railroad companies.

They would prevent any but their own wagons from carrying freight or passengers on the roads and streets, and would fix their charges, not according to the value of the service rendered but according to the advantage which would accrue to the shipper or traveler by having his goods or his person transported to the point of destination.

Manifestly it would not be necessary for the Government to go into the business of transporting freight and passengers in order to release the people from the oppressive power of that monopoly. In that case, the true and rational remedy would be to make the ownership and control of the roads and streets a public function, leaving to the perfectly free competition of all common carriers the reductions of freights and fares to the reasonable value of the service rendered in transportation.

The same thing is true of monopoly in transportation upon canals, and the same remedy has been successfully applied to that evil.

Why not make railroads public highways, over which all common carriers may operate their freight and passenger trains upon equal terms, and freely compete with each other for traffic?

There is no real difficulty about applying the public highways plan to railroading. This new kind of public highway, for the new mechanism of transportation, would, it is true, require more Government supervision than the old turnpike road, but not more in proportion to its utility.

The roadbeds, including stations and yards, as well as the time schedules and movements of trains would necessarily be under the absolute control of Government officers.

That would not be, even in the least degree, inconsistent with the private ownership of trains, nor with the free and perfect competition of the independent common carriers operating such trains over the same track.

With locomotives and cars built according to Government regulations; with time schedules fixed by Government officers, and with publicly licensed, though privately employed, engineers and conductors subject to the control of Government superintendents and train dispatchers, in the movement of all trains, the separate private ownership of the trains would cut no figure whatever in the mechanical operation of the railroad. But such a system would constantly secure to the whole people freight and fare rates fixed by free competition, the best possible regulator, at the reasonable value of the service rendered.

The sharp competition which would certainly arise among carriers would not only reduce transportation charges to the minimum and insure the utmost courtesy to the public, but it would also stimulate improvements in train service and equipment, which Government transportation would probably discourage.

This recognition of what seems to be the true relation of public and private functions in railroading would immediately and forever solve the very serious railroad monopoly problem. It would avoid all of the difficulties and dangers involved in any possible scheme of Government transportation, while permanently securing to the people all of the advantages that could possibly result from Government operation of railroads.

It would avoid any great increase in the number of civil servants of the Government, while entirely eliminating railroad influence as a factor in politics.

Under such a system the "railroad influence" would have no more to do with politics than would the county-road influence. It is the element of private monopoly (special privilege) only which now, necessarily, makes the railroad interests a factor in politics. Political power is now necessary and effective to maintain and extend the special privileges of railroad owners, and political manipulation is therefore an essential part of their business.

Eliminate the monopoly element and railroading will become and remain a perfectly honorable and fair private business, serving all, oppressing none, seeking no Government favors, requiring no Government interference with its charges, yielding reasonable

profit to those engaged in it, and diffusing its advantages among the whole people.

This is certainly good Democratic doctrine, for it accords exactly with that most fundamental of all principles of Democracy, as laid down by Thomas Jefferson, "Equal rights to all; special privileges to none."

It has the merit also of being thoroughly practical. And, so far as I know, it has the merit also of being the only practical remedy for the evil of railroad monopoly yet suggested which accords not only with the great principle of Democracy which I have stated, but with that other great though subordinate principle of Democracy which declares that the only proper business of the public agency which we call "Government" is "to govern."

We have not presented, and will refrain from presenting, any substitute or amendment looking to the permanent ownership of the Pacific Railroads by the Government, because we are satisfied that this House is not prepared to adopt any such proposition and that its presentation would weaken rather than strengthen the opposition to the funding bill. The defeat of the bill is our first and principal purpose. In that purpose several elements are united that would be divided upon the other question.

We therefore prefer to postpone the issue as to the ultimate disposition of the roads.

Let the mortgages be foreclosed and the rights of the Government enforced in accordance with existing laws, and let the ultimate disposition of the roads abide the ordinary course of events in such cases or, if need be, the judgment of a future Congress.

The Indebtedness of the Union and Central Pacific Railroads.

SPEECH

OF

HON. THOMAS A. E. WEADOCK,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7708) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1861, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned—

Mr. WEADOCK said:

Mr. CHAIRMAN: The question before us to-day is not whether the Government should in any case aid the construction of railroads owned and controlled by private corporations; nor whether in the methods of the parties who constructed the Pacific roads there was fraud and dishonesty; nor whether enormous profits were made by those who constructed the roads and under the shield of different corporate names made contracts with themselves. The real question is: How can the United States recover the enormous debt of over \$180,000,000 from the Union and Central Pacific railroads, the first being now in the hands of receivers and both being covered by lien prior to that of the United States, amounting to nearly as much as the roads are now worth, on account of the enormous decrease in prices since 1860, when these roads were completed? In the partial report of the Senate Committee on Pacific Railroads will be found a statement of the history of these roads from which extracts will be made:

The scheme of building a transcontinental line of railway to the Pacific Ocean, which had been so long under discussion both in and out of Congress, took practical shape in the Thirty-seventh Congress. On the 1st of July, 1862, an act was passed entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes" (12 Stat., 439). The first section of the act created a corporation composed of 100 persons, whose names were given, together with five commissioners to be appointed by the Secretary of the Interior, with powers of perpetual succession and other attributes of a corporation, to be known as "The Union Pacific Railroad Company," which, with other companies already organized, or which might be organized as therein provided, was to carry out the purposes of the act, as expressed in its title. The capital stock of the company was to be \$100,000,000, divided into shares of \$1,000 each.

The original scheme contemplated one grand trunk line of railroad from a point on the one hundredth meridian of longitude west from Greenwich, between the south margin of the valley of the Republican River and the north margin of the valley of the Platte River, to be fixed by the President of the United States, to the western boundary of the Territory of Nevada, there to connect with a line of road to be constructed by the Central Pacific Railroad Company of California, to be presently described. To accommodate the various Eastern interests, the act provided that no less than six points on the Missouri River should be terminal of branch lines of road, all of which should run westwardly and converge at the initial point on the one hundredth meridian, viz, Kansas City, Leavenworth, Atchison, St. Joseph, Sioux City, and such other point on the western boundary of Iowa as the President of the United States should designate. This point was afterwards fixed at Council Bluffs and Omaha.

A right of way 200 feet wide on each side of the road was granted to all of the lines mentioned; and to aid in their construction public lands, not mineral, in odd-numbered sections, to the amount of 10 sections per mile, 5 on each side of the road, and within 10 miles of the line thereof, were granted to them. As a further aid in the construction of the road, and to induce capitalists to undertake the enterprise, the act provided for the loan to the company of United States 6 per cent thirty-year bonds, of the denomination of \$1,000, to the amount of \$16,000 per mile of road, with treble that amount, or \$48,000 per mile, for 300 miles most mountainous, to wit, 150 miles eastwardly from the western base of the Sierra Nevada and 150 miles westwardly from the eastern base of the Rocky Mountains, and double the original amount, or \$96,000 per mile, for the intervening space between those two mountainous sections, with a further proviso that not more than \$50,000,000 of bonds should be issued for the main line of road.

These bonds were to be delivered to the companies upon the completion of each section of 40 miles of road over the level country, and of 30 miles over the mountainous country from the eastern base of the Rocky Mountains to the western base of the Sierra Nevada. Twenty-five per cent of the bonds issued in aid of the line east of the one hundredth meridian and west of the Sierra Nevada Mountains, and 15 per cent of them between those points were to be reserved until the whole line should be fully completed, and should be forfeited to the Government if the road should not be completed within the time specified in the act. And it was provided that the issue and delivery of the bonds to the company should ipso facto constitute a first mortgage on the whole line of the railroad and telegraph, together with the rolling stock, fixtures, and property of every kind and description, and in consideration of which the bonds were issued; and that, upon the failure or refusal of the company to redeem any of the bonds, when required to do so by the Secretary of the Treasury, in accordance with the provisions of the act, the road, with all the rights, functions, and immunities and appurtenances, and all the granted lands which should then be owned by them, might be taken possession of by the Secretary of the Treasury for the use and benefit of the United States.

The sixth section of the act provided as follows:

"That the grants aforesaid are made upon condition that said company shall pay said bonds at maturity, and shall keep said railroad and telegraph line in repair and use, and shall at all times transmit dispatches over said telegraph line, and transport mails, troops, and munitions of war, supplies, and public stores upon said railroad, for the Government whenever required to do so by any Department thereof, and that the Government shall at all times have the preference in the use of the same for all the purposes aforesaid (at fair and reasonable rates of compensation, not to exceed the amounts paid by private parties for the same kind of service); and all compensation for services rendered for the Government shall be applied to the payment of said bonds and interest, until the whole amount is fully paid. Said company may also pay the United States, wholly or in part, in the same or other bonds, Treasury notes, or other evidences of debt against the United States, to be allowed at par; and after said road is completed, until said bonds and interest are paid, at least 5 per cent of the net earnings of said road shall also be annually applied to the payment hereof."

The inducements offered by the act of 1862 were not sufficient to enlist capital in the Pacific Railway enterprise. Very little stock was subscribed in the company, and no work was done under the act by any of the Eastern companies toward the construction of the roads. Accordingly, on the 2d of July, 1864, an amendatory act was passed by Congress much more favorable to the company. (13 Stat., 356.)

The object and purpose of this legislation and the reasons which actuated Congress in passing it can not be better stated than in the language of the Supreme Court in the "Interest Case," *United States vs. Union Pacific Railroad Company* (91 U. S., 72, 79). In delivering the opinion of the court Mr. Justice Davis said:

"Many of the provisions in the original act of 1862 are outside of the usual course of legislative action concerning grants to railroads and can not be properly construed without reference to the circumstances which existed when it was passed. The war of the rebellion was in progress, and, owing to complications with England, the country had become alarmed for the safety of our Pacific possessions. The loss of them was feared in case those complications should result in an open rupture; but even if this fear were groundless it was quite apparent that we were unable to furnish that degree of protection to the people occupying them which every Government owes to its citizens. It is true the threatened danger was happily averted; but wisdom pointed out the necessity of making suitable provision for the future. This could be done in no better way than by the construction of a railroad across the continent."

"Such a road would bind together the widely separated parts of our common country and furnish a cheap and expeditious mode for the transportation of troops and supplies. If it did nothing more than afford the required protection to the Pacific States it was felt that the Government, in the performance of an imperative duty, could not justly withhold the aid necessary to build it; and so strong and pervading was this opinion that it is by no means certain that the people would not have justified Congress if it had departed from the then settled policy of the country regarding works of internal improvement and charged the Government itself with the direct execution of the enterprise. This enterprise was viewed as a national undertaking for national purposes; and the public mind was directed to the end in view rather than to the particular means of securing it. Although this road was a military necessity, there were other reasons active at the time in producing an opinion for its completion besides the protection of an exposed frontier."

"There was a vast unpeopled territory lying between the Missouri and Sacramento rivers which was practically worthless without the facilities afforded by a railroad for the transportation of persons and property. With its construction the agricultural and mineral resources of this territory could be developed, settlements made where settlements were possible, and thereby the wealth and power of the United States largely increased; and there was also the pressing want, in time of peace even, of an improved and cheaper method for the transportation of the mails and of supplies for the Army and the Indians."

"It was in the presence of these facts that Congress undertook to deal with the subject of this railroad. The difficulties in the way of building it were great, and by many intelligent persons considered insurmountable."

"Although a free people, when resolved upon a course of action, can accomplish great results, the scheme for building a railroad 2,000 miles in length, over deserts, across mountains and through a country inhabited by Indians jealous of intrusion upon their rights, was universally regarded at the time as a bold and hazardous undertaking. It is nothing to the purpose that the apprehended difficulties in a great measure disappeared after trial, and that the road was constructed at less cost of time and money than had been considered possible. No argument can be drawn from the wisdom that comes after the fact. Congress acted with reference to a state of things believed at the time to exist, and in interpreting its legislation no aid can be derived from subsequent events. The project of building the road was not conceived for private ends, and the prevalent opinion was that it could not be worked out by private capital alone. It was a national work, originating in national necessities, and requiring national assistance."

"The policy of the country, to say nothing of the supposed want of consti-

tutional power, stood in the way of the United States taking the work into its own hands. Even if this were not so, reasons of economy suggested that it were better to enlist private capital and enterprise in the project by offering the requisite inducements. Congress undertook to do this in order to promote the construction and operation of a work deemed essential to the security of great public interests."

"It is true, the scheme contemplated profit to individuals; for without a reasonable expectation of this capital could not be obtained, nor the requisite skill and enterprise. . . . But the primary object of the Government was to advance its own interests, and it endeavored to engage individual co-operation as a means to an end—the securing a road which could be used for its own purposes. The obligations, therefore, which were imposed on the company incorporated to build it must depend on the true meaning of the enactment itself, viewed in the light of contemporaneous history."

The methods of construction resorted to by the Union Pacific from time to time have been thoroughly investigated by the committees of Congress.

In the third session of the Forty-second Congress, House, the Poland committee and the Wilson committee, from their respective chairmen and their reports, which are quite exhaustive and voluminous, cover all the ground, and are found in printed form as reports Nos. 77 and 78, third session, Forty-second Congress. These reports, with others, together with the voluminous testimony taken at the time, are bound in one large octavo volume entitled "Reports of Committees, Credit Mobilier Reports, third session Forty-second Congress, 1872-73." Moreover, the commission appointed under the act of March 3, 1887, to investigate "the books, accounts, and methods of railroads which have received aid from the United States, and for other purposes," made an examination of these same matters and filed and submitted their report, which is to be found in Ex. Doc. 51, Fiftieth Congress, first session.

It will be sufficient, perhaps, to say that they all agree in declaring that, in the construction of the Union Pacific road, great profits were realized, which, through the intervention of the famous construction company, known as the "Credit Mobilier of America," were secured to the officers and promoters of the Union Pacific Railroad itself, the determination of the amount of those profits being left to the votes of the beneficiaries thereof. In round numbers, it was found that the cost of constructing the main line from Omaha to Ogden was about fifty and one-half millions of dollars, while the cost to the road was over ninety-four and one-half millions of dollars, leaving a profit to the contractors, who were also the officers, directors, and promoters of the road, of about \$44,000,000.

The report of the Wilson committee on this and other transactions of the officers and directors of the company at that time, after referring to the objects and purposes of the legislation of 1862 and 1864, which were stated very tersely by the committee to be substantially as the Supreme Court afterwards declared in the *Interest Case*, above cited, uses this strong language:

"Congress relied for the performance of these great trusts by the corporators upon their sense of public duty; upon the fact that they were to deal with and protect a large capital of their own which they were to pay in in money; upon the presence of five directors appointed by the President especially to represent the public interests who were to own no stock, one of whom should be a member of every committee, standing or special; upon commissioners to be appointed by the President, who should examine and report upon the work as it progressed; in certain cases upon the certificate of the chief engineer, to be made upon his professional honor; and lastly, upon the reserved power to add to, alter, amend, or repeal the act."

"Your committee find themselves constrained to report that the moneys borrowed by the corporation, under a power given them only to meet the necessities of the construction and endowment of the road have been distributed in dividends among the corporators; that the stock was issued, not to men who paid for it at par in money, but who paid for it at not more than 30 cents on the dollar in road making; that of the Government directors some of them have neglected their duties and others have been interested in the transactions by which the provisions of the organic law have been evaded; that at least one of the commissioners appointed by the President has been directly bribed to betray his trust by the gift of \$25,000; that the chief engineer of the road was largely interested in the contracts for its construction; and that there has been an attempt to prevent the exercise of the reserved power in Congress by inducing influential members of Congress to become interested in the profits of the transaction. So that of the safeguards above enumerated none seems to be left but the sense of public duty of the corporators."

The result of the investigations by the Poland and Wilson committees was, that in the legislative appropriation bill passed March 3, 1873 (17 Stat., 508), a section was added directing the Attorney-General to bring suit in equity—

"In the name of the United States against the Union Pacific Railroad Company, and against all persons who may, in their own names or through any agents, have subscribed for or received capital stock in said road, which stock has not been paid for in full in money, or who may have received, as dividends or otherwise, portions of the capital stock of said road, or the proceeds or avails thereof, or other property of said road, unlawfully and contrary to equity, or who may have received as profits or proceeds of contracts for construction or equipments of said road, or other contracts therewith, moneys or other property which ought, in equity, to belong to said railroad corporation, or who may, under pretense of having complied with the acts to which this is an addition, have wrongfully and unlawfully received from the United States bonds, moneys, or lands which ought, in equity, to be accounted for and paid to said railroad company or to the United States, and to compel payment for said stock, and the collection and payment of such moneys, and the restoration of such property, or its value, either to said railroad corporation or to the United States, whichever shall, in equity, be held entitled thereto."

Under this statute the Attorney-General brought a suit in equity, in the United States circuit court for the district of Connecticut, against the Union Pacific Railroad Company and 169 other defendants, who were averred to have been instrumental in defrauding the company and violating the trusts imposed by the legislation of 1862 and 1864, to recover, for the benefit of the company or of the United States, the money or other property that had been fraudulently obtained.

A demurrer to this bill was sustained on the ground, mainly, that the United States had no right of action in the premises; that the wrongs complained of were against the corporation and its stockholders and not wrongs against the United States; and that redress for alleged fraudulent acts on the part of the directors and managers of the Union Pacific Railroad Company, in breach of their duty to the shareholders, could only be obtained in a suit brought by the corporation, or, if it refused to sue, by a shareholder, and not in a suit by the United States. It was further held that the grant to the company of the land and bond subsidies was not in the nature of a trust, but was absolute, without precedent conditions. The opinion was delivered by Mr. Justice Hunt, and was quite elaborate and exhaustive. It is reported as *The United States vs. The Union Pacific Railroad Company*, 11 Blatch., 385. In discussing the right of the United States to bring the suit, as directed by the act of Congress above set out, the court said:

"Is there a right of action in the United States for the causes thus specified,

or can a right to recover for such cause of action be given to the United States by an act of Congress? Congress may well authorize its Attorney-General to institute suits to recover damages due to the United States, or to redress wrongs which are legally wrongs to the United States, but its action can scarcely create such damages, or cause acts to be wrongs to the United States which are, in their nature, wrongs to another. The United States can not convert to itself the property of another by its own declaration or its own authority, nor can it maintain an action in its own name against A to recover a debt which he may owe to B.

So, if an individual has committed a breach of trust or been guilty of fraud in discharging his duties as an agent of the Union Pacific Railroad Company, the cause of action to redress such wrong and to recover such damages therefor, and the damages themselves, when recovered, belong to the corporation. The suit for such redress must be in the name of the corporation, as plaintiff. As a general rule and under ordinary circumstances no other party can be such plaintiff, and an authority by Congress to the Attorney-General to commence such action in the name of the United States is valueless.

"This principle applies to all the causes of action specified in the act of 1873, except to a portion of the fourth (which was 'against persons who have wrongfully and unlawfully received from the United States bonds, moneys, or lands which ought to be accounted for and paid to the United States,' and which was not embraced in the bill and was conceded not to exist against anyone). Thus, if any person has subscribed for capital stock or received capital stock or shares in the Union Pacific Railroad Company which have not been paid for, the action to recover the money payable by the terms of the subscription must be in the name of the corporation.

"The contract was made with the corporation, as an existing person. The money, if due at all, is, in terms, payable to the corporation as such. In law it must be recovered by the corporation, to be applied by it to the legal necessities of the railroad company. In substance and in form the money must go through and to the corporation, and no creditor, legal or equitable, can maintain an action for its recovery. In certain cases, if the corporation refuses to do its duty, such action may be maintained by the shareholders of the corporation, the corporation being made a party defendant. There may also be a case in which a judgment creditor can maintain an action against his judgment debtor and his creditor to collect his debt after his legal remedies are exhausted. * * * That, however, is not the present case. The debt of the United States has not yet matured. Its bonds, issued to the railroad company, have not yet become payable, and their payment, when they mature, is secured by a specific lien upon the road and its franchises. It is not a case for a creditor's bill."

And then, after reviewing the charges made in the bill against the Credit Mobilier Company, Oakes Ames, and others, in the matter of the construction contracts, that the cost of the railroad was less than one-half the sum represented by the stock and other outstanding liabilities of the company; that much of the stock and bonds of the company were issued not in the interest of the company, but by the managers unlawfully to enrich themselves; and various other charges of fraud and corruption on the part of the directors and managers of the road, the court said:

"Upon the principles and authorities already expressed, the right of recovery for wrongs of this character is in the railroad corporation. Large amounts of money are involved which belong to the corporation and not to the United States; neither the damages nor the right of action belong to the United States. * * * The United States possesses no power to sue for and recover this debt due to the Pacific corporation, and can give none to its Attorney-General."

With respect to the question of an implied trust arising out of the granting acts, to be administered by the corporation so as to carry out the objects and purposes of those acts, as expressed both in their title and in the body of them, the court, after setting out at length the paragraph of the bill making that avowment, went on to say:

"In the sense that all men are bound to deal honestly and act justly in the discharge of their duties, and that whoever receives benefits or advantages from the public, which are expected or intended to produce an advantage to some portion of the people of the country, assumes a trust to effect that advantage, the plaintiff's claim is true. It is not, however, accurate in a legal sense, to say of a bank incorporated for banking purposes, or of an insurance company, or of any similar institution, that it is a trustee of the Government to effect the desired result, or that its property is impressed with a trust for that purpose, which may be enforced in the courts. Such corporation is chartered for private benefit as well as for public advantage, and is legally bound to administer its affairs for the public advantage only to the extent that it does not violate the provisions of its charter or the law of the land. With this limitation, such corporations are authorized to manage their own affairs for their own benefit, and such is the understanding of the Government which grants a charter, and of the individual who accepts it. If, in this respect, a corporation should fail in its duty, the remedy is not by an attempt to enforce its supposed duties to the public as a trust, but to punish its illegal acts by a forfeiture of its charter."

"Not only is no trust expressed, but the idea thereof is excluded by taking a mortgage upon the road, the telegraph, its property, franchises, and all its granted lands remaining unsold. The Government does not rely upon the security of an uncertain and undefined trust, but takes an express mortgage, where it intends to secure to itself the performance of conditions by the company. * * * These affirmative guards and securities furnish strong evidence that Congress did not intend to rely upon a condition or an implied trust, to secure its rights. Whatever trust, guaranty, or protection it desired was reserved in express terms. * * * The expressions, which it is claimed establish a trust, were used that the act might show on its face that the bounty of Congress was bestowed for a constitutional purpose."

"It is apparent to the most superficial reader of the statutes that the great object of Congress was to bestow advantages, and from time to time to increase gratuities to a corporation which should undertake the completion of a railroad to the Pacific. Conditions, restraints, or trusts were but little thought of. * * * This railroad company is not a charitable corporation, nor were the grants for a charitable use. The grants of land and the issuing of bonds are to be considered as gifts, gratuities, voluntary contributions to aid in the construction of works which it was supposed would develop the resources of the country, advance its civilization and improvement, and upon which the mails and munitions of war could be transported. When given and accepted, the power of the donor is at an end, and the absolute ownership is in the corporations. The position of the Government is that of a donor and not that of a creditor or a cestui que trust, except where such position is directly specified. Voluntary conveyance creates no presumption of a trust. The rights of the Government are those which are expressly reserved, and do not arise from an implied trust."

From the decree sustaining the demurrer and dismissing the bill the United States prosecuted an appeal to the Supreme Court, where the decree below was affirmed in every particular. United States vs. Union Pacific Railroad Company (99 U. S., 569). It is unnecessary to quote from the decision of the Supreme Court in this case. Really nothing was added to what had already been said by the circuit court. The language was not the same, but the effect of it was identical. It effectually disposed of all claim that the United States asserted, or could assert, under the statute of 1873, and was an inglorious end-

ing of the Credit Mobilier investigation, from which so much had been anticipated. It clearly indicated, however, that if the frauds that were charged in the bill had actually been committed by those in charge of the Union Pacific Railroad the United States might proceed to a forfeiture of the charter of the company, and, through the medium of a receiver, proceed to close out the affairs of the corporation. That, however, was a proposition of law that would hardly have been disputed even without the authority of the Supreme Court in its support.

No proceedings looking to the forfeiture of the company's charter have ever been inaugurated in any department of the Government, the United States apparently preferring that the company operate its line of road under its charter, and being satisfied, so far, to try and make provision for a sinking fund sufficient to wipe out the debt of the Government when it matures, provisions for which have been signal failures, however.

The most important enactment in this line was the statute of May 7, 1878 (20 Stat., 56), commonly known as the Thurman Act. This statute, which applied only to the Central Pacific and the original Union Pacific roads, grew out of the following conditions and circumstances: At the time of the passage of the Pacific railroad acts of 1862 and 1864, especially when the latter act was passed, it was believed in Congress that the amount which would be realized from the 5 per cent of net earnings and the one-half of the compensation for services rendered for the Government would be amply sufficient as a sinking fund to wipe out the entire Government debt at its maturity. It did not take long after the completion of the road, however, to demonstrate that that expectation would not be realized. The decision of the Supreme Court in 1875, in United States vs. Union Pacific (91 U. S., 72), commonly called the "Interest Case," in which it was held that the company could not be compelled to reimburse the United States for current interest paid on the subsidy bonds until the maturity of the bonds, intensified the situation, and it became a serious question in Congress as to what proceedings should be taken to provide a sinking fund sufficient to wipe out the Government debt at its maturity, it being thoroughly understood by that time that existing provisions of law were wholly inadequate for that purpose.

The result of the consideration given that subject in Congress was the Thurman Act, which provided, among other things, not essential to the present inquiry, that the entire compensation for Government services should be retained and covered into the Treasury of the United States—one-half to the credit of the account for the reimbursement of interest and one-half to the credit of a sinking fund, created by the third section of the act, for the liquidation of the amount which might be due the Government at the maturity of the subsidy bonds. This sinking fund for the Union Pacific was to be made up of the amount just mentioned and such annual sum, not exceeding \$850,000, as, added to the whole compensation for Government services and the 5 per cent of net earnings, would together equal 25 per cent of net earnings of the company, and was to be invested by the Secretary of the Treasury in United States Government bonds, preferably 5 per cent bonds, and the income was to be semiannually invested in the same securities.

It was confidently believed by the authors and promoters of the Thurman Act in Congress that the provisions contained therein, to which we have referred, would solve the whole problem of the Pacific railway debt. It was predicted with great assurance that the amount annually paid into the sinking fund, accumulating at compound interest at the rate of 5 per cent semiannually, would be amply sufficient at the maturity of the Government debt to pay it all off at that time; but, like many other apparently well-laid plans, it has been a practical failure, as will be presently shown.

The companies resisted the Thurman Act on the ground of its unconstitutionality, it being claimed that it impaired the contract relations between the United States and the roads, was not due process of law, and destroyed vested rights which had grown out of the legislation of 1862 and 1864. At October term, 1878, the question came before the Supreme Court in the Sinking-Fund Cases (99 U. S., 700), and was disposed of adversely to the contention of the railroad companies. A majority of the court united in pronouncing the act constitutional, three of the justices dissenting. In delivering the opinion of the court Mr. Chief Justice Waite, after an exhaustive examination and consideration of the various questions presented, said:

"It is sufficient now to say that we think the legislation complained of may be sustained on the ground that it is a reasonable regulation of the administration of the affairs of the corporation and promotive of the interests of the public and the corporations. It takes nothing from the corporation or the stockholders which actually belongs to them. It oppresses no one and inflicts no wrong. It simply gives further assurance of the continued solvency and prosperity of a corporation in which the public are so largely interested and adds another guaranty to the permanent and lasting value of its vast amount of securities. The legislation is also warranted, under the authority, by way of amendment, to change or modify the rights, privileges, and immunities granted by the charter. (99 U. S., 726.)"

As above stated, the Thurman Act has failed as a means of discharging the Government debt at its maturity. Several causes have contributed to this result. In the first place, the net earnings of the company, under the decisions of the Supreme Court in the "Net Earnings Cases," Union Pacific Railroad Company vs. United States (99 U. S., 402), in which it was held that, in ascertaining what are net earnings, expenditures for new construction and new equipment should be deducted from the gross earnings of the road, are very much less than was contemplated by the Thurman Act, since the Union Pacific Company adopted the policy of constructing branch lines of road and deducted such expenditure from its gross earnings.

Secondly, the Secretary of the Treasury, having been restricted by the act to investing the sinking fund in United States bonds of a certain kind, has been unable to obtain those bonds in the market, except at a considerable premium, sometimes as high as 35 per cent. The result has been that a large sum of money belonging to the railroad company has often lain in the Treasury for a considerable time uninvested; and, even when invested at the high premium, the income has been very much less than 5 per cent semiannually, as the authors of the act anticipated, being not to exceed 3 per cent.

Moreover, the rates of fare and prices for transporting freight have decreased, by reason of sharp competition with other roads and other causes, and the amount realized from those sources has been much smaller than was anticipated. So that, as a matter of fact, the sum at present in the sinking fund, after accounting for accrued interest and the investments made, is but little in excess of what it would have been had it lain idle in the Treasury and never been invested at all; and it will largely fall short of meeting the objects and purposes of the act of 1878. The Thurman Act was amended by the fifth section of the act of March 3, 1887 (24 Stat., 488), so as to give the Secretary of the Treasury a broader discretion in the matter of investing the sinking fund. That section is as follows:

"SEC. 5. That the sinking funds which are or may be held in the Treasury for the security of the indebtedness of either or all of said railroad companies may, in addition to the investments now authorized by law, be invested in any bonds of the United States heretofore issued for the benefit of either or all of said companies, or in any of the first-mortgage bonds of either of said companies which have been issued under the authority of any law of the United States and secured by mortgages of their roads and franchises, which by any law of the United States have been made prior and paramount to the mortgage, lien, or other security of the United States in respect of its advances to either of said companies as provided by law."

The Central Pacific:

The Central Pacific Railroad Company of California was incorporated under the laws of that State on the 28th of June, 1861, with a capital stock of \$3,500,000, for the purpose of constructing, owning, and operating a line of railroad and telegraph, commencing at Sacramento and running east to the eastern boundary of the State. Its promoters were desirous of opening up a line of railroad communication to the rich mineral regions of Nevada, just then being opened and developed, and eventually of making a connection with a line of road from the East, which it was then supposed was about to be constructed under the authority and supervision of the United States Government. The Western Pacific Railroad Company was also incorporated about that time, under the general railroad laws of California.

All these California railroad interests sought the aid of the United States in carrying out the purposes of their creation; and, accordingly, in the ninth section of the original Union Pacific act of July 1, 1862, it was provided that—

The Central Pacific Railroad Company of California, a corporation existing under the laws of the State of California, are hereby authorized to construct a railroad and telegraph line from the Pacific coast, at or near San Francisco or the navigable waters of the Sacramento River to the eastern boundary of California, upon the same terms and conditions, in all respects, as are contained in this act for the construction of said railroad and telegraph line first mentioned, and to meet and connect with the first-mentioned railroad and telegraph line on the eastern boundary of California.

The tenth section of the act gave the Central Pacific the right, after constructing its road through California, to proceed in the construction of a railroad on through the Territories to the Missouri River, including the eastern branch lines provided for, until it should meet and connect with those eastern lines, and thus form one continuous line. By the sixteenth section of the amendatory act of 1864 the Central Pacific was restricted to building its line to 150 miles east from the California line; but by the second section of the act of July 3, 1866 (14 Stat., 79), this restriction upon the Central Pacific was removed, and it was permitted to continue the construction of its road until it should meet and connect with the Union Pacific, as originally provided for in the act of 1862.

The Central Pacific Company commenced the construction of its road from Sacramento eastward under the act of 1862, and had completed 31 miles prior to the passage of the amendatory act of 1864. It afterwards, on October 31, 1864, assigned to the Western Pacific Railroad Company the right to construct that portion of its road from Sacramento south to San Jose, and by the act of March 3, 1865 (13 Stat., 404), this assignment was confirmed by Congress, with this proviso:

"That the time within which the said Western Pacific Railroad Company shall be required to construct the first 20 miles of their said road shall be one year from the 1st day of July, 1865, and that the entire road shall be completed from San Jose to Sacramento, connecting at the latter point with the said Central Pacific Railroad, within four years thereafter."

The other legislation of Congress respecting the Central Pacific Railroad Company has been sufficiently described in that relating to the Union Pacific, and nothing need be added. A reference to it is enough for present purposes. Neither is it the purpose to go into the history of the construction of the roads which are now a part of the Central Pacific system. That matter was examined into by the investigating committee of 1887 and in their report, from page 68 to 86, inclusive, they have treated the subject very fully. (Ex. Doc. No. 51, Fiftieth Congress, first session.) It is only necessary to say that the Commission found that, in the construction of these roads, large profits were made which, through the medium of various construction companies composed of the main stockholders and directors of the Central Pacific Company, were turned over to these same stockholders and directors; and the amount of those profits were regulated by those same stockholders and directors and by them only. In round numbers it was found that the profits accruing to these directors and promoters of all the lines of the present Central Pacific Railroad Company amounted to nearly sixty-two and one-half millions of dollars, the cost to them being nearly fifty-eight and one-third millions of dollars, and the cost to the company nearly one hundred and twenty and three-fourths millions of dollars in bonds and stock and cash.

It is but just to say, however, that these directors and promoters of the Central Pacific have always claimed that the roads were constructed in the only way and by the only means that presented themselves, and that the profits realized were not such as the commission found them to be, but were, in fact, nothing whatever at the time of the completion of the roads, the contractors having been paid in depreciated bonds, stocks worth very little at that time, and what cash they received having been long before expended in the construction of the roads. Those matters, however, are not of vital concern here, and are referred to only as matters of equity, to be considered in any adjustment that may be made of the present debts of the company.

By consolidation of various roads the bond-aided line of the Union Pacific, about 1,400 miles in length, is part of the Union Pacific "system" of \$3,000 miles.

The aided Central Pacific is now and since 1870 has been part of the Central Pacific "system," the result of consolidation.

The indebtedness of these aided roads to the Government is, in round numbers, over \$130,000,000.

The Union Pacific is in the hands of receivers, entailing enormous expenditures.

Owing to construction of competing lines, such as the Northern Pacific, and the Canadian Pacific earnings have largely diminished, and these roads, in common with many of the best roads in the country, have sustained great losses.

From 1880 to 1890 the railroad funded debt of this country increased from \$2,392,000,000 to \$5,463,000,000. It is stated in the Bankers' Magazine for January, 1891, that there had been a shrinkage of fifteen millions in the stock of the Chicago, Milwaukee and St. Paul, fourteen millions in Rock Island and Pacific, fourteen millions in New York Central and Hudson River Railroad, and seventeen millions in Union Pacific, while others had depreciated still more.

As stated in the editorial quoted, every commission and every bill reported to either branch of Congress has recommended the extension of the time of payment of the Pacific road's indebtedness.

The Senate committee which investigated the matter in 1887, following the work of the commission, reported that in its opinion the security of the United States on the property of the Central Pacific was inadequate, the property would be substantially ex-

hausted in satisfaction of the first mortgage, and it was inexpedient to redeem from the first mortgage or become the owner of the property, and that it is expedient, necessary, and practicable to secure the indebtedness to the United States by extending the time at a reduced interest.

President Cleveland in his message of January 17, 1888, transmitting the report of the Commission of 1887, said:

No one expects that these railroad companies will be able to pay their immense indebtedness to the Government at its maturity.

Any proceeding or arrangement that would result now or at any other time in putting these roads or any portion of them in the possession and control of the Government is, in my opinion, to be rejected—certainly as long as there is the least chance for indemnification through any other means.

Such means are afforded by the bill now under consideration.

Its terms may be briefly summarized as follows: The companies are to pay off the first liens which now precede those of the Government, for which purpose they may use their money now in the sinking fund, about \$20,000,000, leaving about forty-two millions to be raised by them. The execution of bonds and mortgages on all the aided portions of the roads, including terminals at Omaha, Kansas City, etc., which are not now covered by the Government lien, providing for payment of the entire indebtedness to the Government, with interest at 3 per cent, by semi-annual installments, within a period of fifty years; if default is made in any installment the whole sum to become due. All rights, remedies, together with all present securities, are preserved to the Government, the new bonds and mortgage to be collateral to the present Government lien. The authorization of suits, in the name of the company, to be conducted by the Attorney-General to enforce all rights and remedies of the Government. To insure entire accuracy, I shall print the bill entire as an appendix to my remarks.

I desire to state, first, that the burden of all that has been said against this bill—and the bill itself has been discussed very extensively—is unjust criticism and unfair statement, especially in reference to these payments, the preservation of our present lien, and all rights and remedies of the United States. By the provisions of this bill these payments which are to be made every six months for a period of fifty years, the percentage being computed by an actuary of the Treasury Department, will require the companies to pay every dollar which they owe to the Government of principal and interest, and in addition for all money paid by the Government heretofore, for interest bonds and in addition to that 3 per cent interest upon the amount due the Government from the time this proposition is accepted. That is the bill.

Any gentleman who desires to satisfy himself of these facts has only to take the bill itself and study out its provisions. It requires the companies to pay the first mortgage, applying the sinking fund, now about twenty millions, to that purpose. I desire to say now, particularly to my friend from California [Mr. MAGUIRE], that there is no lawyer upon this floor, outside of the delegation from the State of California, who will give his opinion of this bill, after he shall understand it fairly and right, who will say that it creates any novation or changes any security that the Government has to-day.

On the contrary, it expressly reserves any lien or right or remedy which the United States has to-day. The difficulty with many of the gentlemen who are opposing this bill is that they desire to set up their individual idea of what the law is rather than accept what the Supreme Court of the United States says the law is; for, on one contention and another, on the sinking-fund cases, on the Omaha Bridge case, on the Connecticut case, on the law of 1873, the Supreme Court have held views directly in opposition to the views contended for by gentlemen who are opposing this bill.

Now, in reference to the point which the gentleman from California makes as to the individual liability of these men, that depends upon the constitution of the State of California, and that constitution provides that "each stockholder in a corporation or joint stock association shall be individually and personally liable for such proportion of all its debts and liabilities, contracted or incurred during the time he was a stockholder, as the amount of stock or shares owned by him bears to the whole of the subscribed capital stock or shares of the corporation or association." (Article XIII, section 3.) This liability is an original one, and is incurred at the same time by the corporation and the stockholders.

It will be observed that this individual liability is only incurred "during the time he was a stockholder." It then becomes important to know when the liability to the Government was incurred. It is well known that our bonds were advanced as different sections of the roads were completed.

Gentlemen in opposing this bill thus far have confined themselves mainly to denunciation of Huntington, Hopkins, Crocker, and Stanford, the principal directors, stockholders, and officers of the original Central Pacific and of the Contract and Finance Company. I am not their defender, nor do I make any excuse for their

acts, but I wish to discuss this bill. And, Mr. Chairman, when the gentleman says that each of these four men who have been the rulers of California for so long—one of them, and he the chief, evidently with the consent of the people of California, for they have sent Leland Stanford here by repeated elections—when he says that these four men, or their estates, can be held responsible for this indebtedness, I call attention to the fact that it is not stated or shown in any part of these 6,000 pages of testimony that they had more than a half dozen shares of stock each at the time this indebtedness was incurred.

And when the gentleman from Wisconsin says that these men had thirteen millions each of the stock of the Central Pacific, that they had each a quarter of the stock, some thirteen millions, that was after the Central Pacific and the Western Pacific had been consolidated, years after this indebtedness was incurred—so that it is mere idle denunciation to say that the Government has any remedy against these men under the constitution of California and the laws of that State.

Another thing. Crocker died years ago and his estate is closed. The other Crocker is dead and his estate is closed. Stanford is dead, and the claim of the United States against him as a stockholder, in which it is sought to establish his individual liability, is pending against his estate. Huntington is living, and a suit may be brought against him for whatever is in it. But I am entirely satisfied, and I believe the lawyers upon your committee are satisfied, the Attorney-General of the United States is satisfied, and the special attorney-general of the United States in special charge of this matter is satisfied that there is no valid claim which amounts to anything against these men individually. So far as the liability of these men as directors is concerned, it should be remembered that the owners of all the stock of a corporation, unfortunately, may do what they see fit with it except as to the rights of creditors.

Now, whatever rights we have as a creditor are preserved under this bill. Section 8 provides that the statutory lien created and subsisting under and by virtue of the act of Congress approved July 1, 1862, and the act of July 2, 1864, and the act of May 7, 1878, and under any and all other acts of Congress, to secure the payment of said subsidy bonds and the interest thereon, as set forth in said acts, and upon all the property subject to said statutory lien, shall be and remain in full force for security for the debts owing by each of said companies mentioned in this act to the United States, until the same are fully paid.

And section 14: That the said companies accepting the provisions of this act, and each of said companies, shall, whenever requested in writing by the Department of Justice of the United States, and so long as the United States shall be the holder and owner of any of the bonds authorized by this act, cause any actions at law or suits in equity, or other proceedings, to be instituted and prosecuted in the name of said company or companies against any person who is, or has been, a director, officer, agent, or employee of the said company, for the purpose of enforcing any cause of action whatever arising, or which may hereafter arise, out of any alleged violation of duty, misappropriation of assets, or any other act or transaction whatsoever, in respect of which the said Department of Justice shall allege that it desires such action, suit, or other proceeding to be instituted and prosecuted. All such actions, suits, and proceedings shall be conducted by the Attorney-General of the United States, and he shall be fully authorized by the said company or companies to appear for them or it as attorney or solicitor in such actions, suits, or proceedings, and shall have the entire control of the same from the inception thereof to the end of such prosecution, and also the right to take and prosecute any appeal or appeals from any decision or determination made therein. Any sums of money which may be recovered under the provisions of this section shall be paid to the Treasurer of the United States, and by him applied as payment upon the lowest numbered bond or bonds of the company interested in such recovery outstanding under the provisions of this act; the balance remaining after all said bonds are paid shall be paid to the company in whose name the said sums were recovered.

And section 18 contains the following, in the identical words of the Thurman Act:

And nothing herein contained shall be held to deny, exclude, or impair any right or remedy in the premises now existing in favor of the United States.

Whatever right we have to follow these men is expressly saved by this bill. There has been no innovation. There has been no abandonment of any remedy. There has been no desire on the part of any member of the majority of the committee or on the part of any gentleman supporting this bill to give any vote or take any action which shall prevent the Government of the United States from collecting every dollar that is due to it. The majority of this House, I think, does not wish to tax the people of the United States for the purpose of buying or building a railroad to cheapen freight for the people of California or Nebraska, or other

territory along the line of the Pacific roads, at the expense of all the people of the United States, and that is what the opposition to this bill means.

That is why every provision of the bill has been either willingly misunderstood or unreasonably misstated. That is why gentlemen resort to a method which is always easy—to denounce somebody or something as a reason for not doing a particular thing. But if gentlemen will deal with this matter fairly they will see that the committee have desired, and that the bill shows that that desire has borne fruit, to preserve all the rights and all the remedies that the Government of the United States has to-day against these companies; that nothing will be lost by this bill; and that, on the other hand, if nothing is done now, the foreclosure suit already begun in the courts of the United States upon the first lien or mortgage on the Union Pacific and the other foreclosures against these railroads will exhaust the property, and the Government of the United States will entirely lose all of its debt unless it goes into the Treasury for \$62,000,000 and pays off the first-mortgage lien with the expenses incurred.

Suppose the Government buys the road. Unless it is to continue to operate it, it must lease it or sell it to some railroad company, and that company will make its own terms, which the people will consider onerous rates; that company will have a monopoly. And if instead of denouncing this bill as they have done, if instead of sending irresponsible slanders in the shape of circulars and newspapers by the cowardly slanderer who is now mayor of the city of San Francisco, the people of California would build a competing railroad alongside that of the Central Pacific they would give more benefit to the Pacific Coast than by any proposition which is suggested here for the consideration and the action of this House. It is a bad cause which must be advanced by such methods as have been used against this bill and against any bill in the interest of the people of the United States.

One of these lying circulars is an extract from the San Francisco Examiner, and is dated—

OFFICE OF ADOLPH SUTRO, 30 MONTGOMERY BLOCK,
San Francisco, August 1, 1896.

SIR: Please find herewith my first installment to your petition to Congress against the funding bill, consisting of 2,006 signatures.

What is going on in Washington? Why, it is attempted to bribe Congress into the passage of the so-called Pacific railroad funding bill—ten to twenty thousand dollars for a vote! Members at heart honorably inclined may weaken under the pressure of poverty and will lull their consciences to sleep under subtle arguments that the measure is righteous and beneficial to the Government; and some fine morning you may wake up and find in the telegraphic dispatches from Washington that the funding bill has passed the House of Representatives. If ever passed through the House it is almost sure to pass a corporation Senate, and the only hope then remains in President Cleveland's veto power. Will that be exercised? This is the question no one can decide, but let us hope that it will.

Sign the petition without delay. Let the numbers embrace almost every man on the Coast, and Congress can not well ignore the vote of the people.

Very truly yours,

ADOLPH SUTRO.

To the EDITOR OF THE EXAMINER.

I can not do justice to this infamous libel without quoting the exact words. I denounce these statements as lies. I denounce the author of them as a liar and a coward. It is an insult to the House of Representatives and a crime against the laws of the country to send such vile stuff in the mails. If Adolph Sutro is sane he should be serving time in prison!

Here is another specimen, evidently from the same source. Extracts from Huntington's letters to Colton, all dated in 1874-75, were inclosed in wrappers with a statement in large type like this—

DECLARATION OF HUNTINGTON THAT CONGRESSMEN ARE FOR SALE.

Hon. ———, M. C.

U. S. House of Representatives,
Washington, D. C.—

and sent through the mails to members of this House. It will be seen that this statement is made to apply to members of this House. I am too indignant to ignore these cowardly slanders and treat them only with silent contempt.

Gentlemen have complained of the limited time, three days, allowed for debate on this bill. The Committee on Pacific Railroads desire the fullest debate on this bill; and but for the action of the gentleman from California [Mr. CAMINETTI] this morning we would have had further time for general debate, for it is a bill in which the five-minute debate is practically useless. The gentleman from California [Mr. MAGUIRE] would have had at least an hour, as he should have had; and we would have had sufficient time to reply.

Treat this matter fairly; give to the language of this bill the plain English meaning that it is entitled to; and judging it in that way, not by the wish of those who want the Government to embark upon the Government ownership of railways, or of the small community which rebels against what they consider onerous charges for freight and transportation, you will see that the bill is not amenable to the objections which are made against it.

It saves all the rights of the Government; it embodies a reasonable, business-like proposition for the collection of all the debt and all the interest due the Government.

I could wish that instead of a few hours' debate this debate might be extended for days, in order that every member might have an opportunity to understand the measure.

One word about the time when the bill came before the House. This bill was reported last July; and from that day to this the Committee on the Pacific Railroads, at least a majority of that committee, have been endeavoring to have the bill brought to the attention of the House. We have not desired to limit the consideration to two days or three days or any special time. We desired the fullest investigation and discussion. But I ask gentlemen not to be carried away by misstatements or denunciations.

Every commission that has ever investigated this matter, every President of the United States that has given it attention, every House committee or Senate committee that has had charge of the subject have united in recommending—at least a majority of them—the ideas embraced in this bill. Of the Pacific Railway Commission, which took thousands of pages of testimony on this subject, two of the three members unite in favor of this idea. Every man who is in favor of an intelligent adjustment of the debt due the United States and does not look beyond to something that most particularly affects his own locality, as it seems to me most of those who have given especial attention to the subject do, has favored this bill. If it were not for the fact that in the State of California the very name of the Pacific Railroad has been a rallying cry for parties on this question we should have no difficulty in intelligibly discussing it.

Now what does all this opposition and denunciation mean? The United States Government is asked to follow these stockholders or rather their estates, for only one of them is living, in proceedings for the misapplication of the funds of these companies. The Supreme Court, construing the law passed in 1873, said that the Government was not then in a position to raise any question of that sort. Gentlemen on this floor say that these companies have not performed their agreement. The Supreme Court of the United States in that case said that the Government could not inquire into this question then, because the companies had performed all their agreements. And to-day they have performed all their agreements so far as the law requires, as determined by the Supreme Court.

The Supreme Court of the United States held that they could not be called upon to pay the interest until the debt had matured. The mistake was made in 1864, when the Government lien was subordinated to that of the first mortgage upon the railroad. From that day to this we have been in the position of a second mortgage.

Gentlemen ask, How will this money be raised? This road is mortgaged with second, third, fourth, and still later mortgages. That question has been partially answered in the memorial of the Union Pacific Company, which has been sent to the members of the House.

How will it be done? In the New York Times of February 1, 1895, appears the following notice:

REORGANIZATION OF THE UNION PACIFIC RAILWAY SYSTEM.
OFFICE OF THE REORGANIZATION COMMITTEE.
80 Broadway, New York City.

Referring to the previous notice, the undersigned committee invites bondholders and stockholders of the Union Pacific Railway Company and of other companies comprised in the Union Pacific system to deposit their securities under a preliminary agreement which has been prepared for their protection. Copies of this agreement specifying the securities may be obtained from either of the depositaries.

Deposits may be made with The Mercantile Trust Company, New York City; The American Loan and Trust Company, Boston, Mass.; J. S. Morgan & Co., London, England; Adolph Boissevain & Co., Amsterdam, Holland.

The agreement provides that in case any depositor shall be dissatisfied with the plan of reorganization when submitted by the committee, or in case no plan shall be submitted before the 4th of March next, he may withdraw his securities without charge within thirty days thereafter.

As soon as possible application will be made to list the certificates of deposit upon the stock exchanges of New York, Boston, London, and Amsterdam.

JULY 10, 1891.

Committee.
Secretaries.
of Counsel.

The junior lien holders, stockholders, and others interested in these properties must protect themselves against the loss of this property under prior liens. These men have evidently got together; they have appointed a purchasing committee; and the stock-

holders or the junior lien holders must come in and pay the amount of money which in addition to the sinking fund is necessary to pay off the first mortgage. That is necessary in order to make this bill effective and to protect the property from disintegration and loss.

In my brief time it is not possible to enter into anything like a full discussion of this matter, but I desire especially to assure my friend from California that the objection this morning to his having five minutes additional time was prompted by the fact that the chairman of this committee had just been refused a similar extension. And if he had more time in the opening of the debate, it all came out of the time allowed to this side of the question.

Mr. SWANSON. Allow me a question. How many junior mortgages are there—how many mortgages subsequent to that of the United States?

Mr. WEADOCK. Five or six—possibly more.

Mr. SWANSON. What do they aggregate?

Mr. WEADOCK. Some \$91,000,000.

Mr. SWANSON. What are they quoted at in the markets?

Mr. WEADOCK. I can not answer that question.

Mr. SWANSON. Are they worth anything?

Mr. WEADOCK. Oh, yes.

Mr. SWANSON. Then if the mortgages subsequent to the mortgage of the United States are worth something, if they are selling fairly in the market to-day, why is not the whole mortgage of the United States good?

Mr. WEADOCK. Because if you should sell the road you could not get much or anything more than the amount of the first mortgage, and as these junior lien holders have other securities, the market value of their securities do not warrant the gentleman's conclusion.

Mr. REILLY. The other mortgagees have as their security hundreds and hundreds of miles of railway upon which the Government of the United States has no lien.

Mr. SWANSON. Roads which were not subsidized?

Mr. REILLY. Yes, roads which were not subsidized; roads which are not bond-aided roads, although they are part of the general system.

Mr. SWANSON. The Union Pacific stock is subject to the entire indebtedness?

Mr. REILLY. Yes, sir.

Mr. SWANSON. Why the stock of the Union Pacific is quoted to-day at 10½.

Mr. REILLY. It is worth only 8 or 9 cents on the dollar.

Mr. SWANSON. It would not be worth a cent, as I understand, then, unless the United States Government debt is good?

Mr. REILLY. No, sir.

Mr. SWANSON. I understand the gentleman to admit that this stock is selling at eight or nine or ten dollars a share. Now, there are some ninety odd millions of dollars of securities subsequent to the United States lien. We have a second lien of the Government on all of the roads. What would be the character of the Government security in the event that the settlement is made as you suggest here? What the value of the subsequent liens.

Mr. REILLY. I did not catch the gentleman's point.

Mr. BELL of Texas. If the gentleman will yield to me I think I can explain this matter.

Mr. WEADOCK. Certainly, I will yield.

Mr. BELL of Texas. There are 1,600 miles of these subsidized roads of the Union Pacific system and 8,000 miles of the entire system. The subsequent mortgages cover the 1,600 miles as well as the 8,000 miles—

[Here the hammer fell.]

After several members had addressed the committee, Mr. WEADOCK resumed and concluded his remarks, as follows:

Mr. WEADOCK. In answer to the amendment of the gentleman from Arkansas [Mr. McRAE] I desire to say that his objection to dividends is already covered by the eleventh section of the bill.

Mr. McRAE. That provides 4 per cent. Mine provides none.

Mr. WEADOCK. No; it provides no per cent.

Mr. Chairman, this section goes on to provide that no dividend shall be paid as long as these companies are in arrears to the Government, or any payment of principal or interest, and except so far as the provisions for fine and imprisonment are concerned there is no difference between the amendment offered by the gentleman from Arkansas and the bill; and so far as I am personally concerned I have no objection to the fine or imprisonment if gentlemen desire to add that section.

Now, in answer to the gentleman from Virginia I want to say that the Supreme Court, under the law of 1873, held that only the company could call these directors to account for their misdoings, so far as the corporation was concerned, and these directors themselves owned the stock of the company, so as a matter of fact they were the company, and so far as the United States Government is

concerned, that it could not proceed against these people until they were in default, and when a default had arisen, then that these men, who were the trustees of their own wrong, might be forced to an accounting for the property which they should have applied to the payment of the debt of the United States. And there is not a line in this bill which would prevent the maintaining of that remedy still, especially as in the last section of the bill we provide, in the identical language of the Thurman Act, which has been sustained by the Supreme Court of the United States, that every right and remedy which we have we preserve against those men.

And side by side with that provision the Attorney-General of the United States is authorized by this bill, and is authorized by the law as it stands to-day, to institute proceedings in the courts against these men for the purpose of calling them to account for any malfeasance or for any misapplication of funds.

One word in respect to the securities which the junior mortgagees hold. The Government lien extended, by the decision of the Supreme Court, only to the 1,400 miles of the bond-aided line. These junior securities apply not only to this, but to the entire Union Pacific system, consisting of some 8,000 miles. So far as the stock is concerned, the holders of the stock control the company.

They elect the directors, who elect the officers, and thus they manage the company, notwithstanding all of these things that are sought to be done by the directors and officers. For the present this Union Pacific is in the hands of receivers, and whatever value this stock has in the market comes from two reasons. One is the speculative value, as to whether or not it may not be worth more in the future, and the other is the value it has by reason of the fact that it gives to the stockholders control of the company; and so far as the right of property is concerned in the Government in both the Central and the Union Pacific railroads it is not worth one cent on the dollar as an investment.

Now, these stockholders and junior lien holders, if the money is raised for the purpose of paying off the first mortgage, must give that or some other security or stock for the purchase of the debt, or they will levy upon themselves assessments for the purpose of paying off this first-mortgage debt, just the same as if a merchant had a mortgage upon his store and stock and parties had claims against him with a first mortgage prior to theirs—they would have to make a pro rata assessment upon the whole interest if they wanted to come in; before receiving any money they would have to pay off the first mortgage as contemplated by this bill.

Mr. SWANSON. Will the gentleman yield to me for a question?

Mr. WEADOCK. Yes, sir.

Mr. SWANSON. As I understand, the United States has had no opportunity to test in court as to whether it could attach the real and personal property of these parties and place it to the credit of the public debt of the United States.

Mr. WEADOCK. The United States has had that opportunity for twenty-one years under the law of 1873.

Mr. SWANSON. They could not do it until the debt had matured. Do you not think it would be best to let that be decided first? Let the test be made as to whether the estates are good for a sufficient amount to pay off the indebtedness due the United States. Then it will be time enough to offer a compromise.

Mr. WEADOCK. Mr. Chairman, the Supreme Court held that that goes on until the mortgage is foreclosed, or until there is a judgment for a deficiency against the company. If you are to follow these men, the stockholders, their descendants and estates, it means a foreclosure; it means an assessment on the first mortgage by the Government; it means a foreclosure of the second mortgage; it means the destruction of the security before you can pursue these men. It means suits against men who have been dead for thirty years. It means interminable litigation that nobody will live to see the end of, and I do not believe the remedy is worth anything.

The gentleman from Kansas [Mr. HARRIS], who wants the Government to own these railroads, said that "all the great newspapers of the country were getting on the right side of this question," meaning that they opposed this bill. Allow me to call your attention to a great newspaper, the New York Tribune, which on the day before yesterday, January 31, contained the following editorial:

THE PACIFIC RAILROAD DEBT.

By its action yesterday, allowing portions of three days for discussion of the bill refunding the debts of the Pacific roads to the Government and directing that a vote be taken on Saturday, the House of Representatives has manifested a disposition to treat one business matter at least in a business way. It does not follow as a matter of course that a decision of the question, so far as the House is concerned, will certainly be reached this week. For, in the first place, this Congress has a rooted antipathy to making a final settlement of anything, and in the second place, the men who have been striving many years in Congress and out to bring about Government ownership and operation of railroads do not mean to be balked of their purpose, if it is within the possibilities of parliamentary tactics to effect it. They have long looked upon the occasion of the maturing of the Pacific railroad bonds as the golden opportunity to force their scheme upon the Government.

Repeatedly during the last ten years a majority of both houses of Congress have favored the passage of funding bills looking to a settlement of the whole question, but as often they have been defeated by tactical maneuvers and filibustering proceedings on the part of the advocates of Government control. And always when the subject has been agitated these gentlemen have managed in Congress and the newspapers to divert attention from its consideration as a business proposition between debtor and creditor by thrashing over the old straw of Credit Mobilier scandals and the Gould-Sage management of the Kansas Pacific consolidation. The objective point, however, was always the same—Government control and operation of railroads. During this period every Secretary of the Interior, every Secretary of the Treasury, every Commissioner of Railroads, every board of Government directors, a majority of the investigating commission of 1887, and President Cleveland twice in his annual messages have recommended the refunding of these debts on substantially the same lines as those laid down in the bill now pending in the House. Notwithstanding which the opponents of any plan of settlement have succeeded in staving off final action year after year, until now the approaching maturity of the bonds of all classes makes it imperative upon Congress to act. Even now the advocates of Government purchase and control are unwilling to meet the question squarely and let Congress decide between the two alternatives—to agree upon terms of refunding and settlement, or take possession under foreclosure proceedings and operate the roads.

The turbulent proceedings in the House yesterday over the order of the Committee on Rules providing for a vote this week may be taken as an indication that the same old tactics are to be resorted to which have been so effective heretofore. They will not permit a vote to be taken, if they can prevent it. Foreclosure proceedings have already begun on the first-mortgage bonds of the Union Pacific, to which the Government lien is subordinate. To prevent the forfeiture of its own claims the Government will be under the necessity of asking postponement of these cases. In view of the fact that the Union Pacific makes a proposition to pay off these prior incumbrances as one of the conditions of settlement, the Government is acting the part of the dog in the manger in refusing to move in the matter, and that is what the opponents of the pending bill are anxious to accomplish.

Meantime, it is a fair question for the consideration of Congress which of the two alternatives it will adopt. There is no excuse, indeed, for not meeting it squarely. Legislation of one sort or the other is an imperative and urgent necessity if Congress means to maintain either the credit or the dignity of the Government. If the advocates of Government control are in a majority, they must provide by legislation for carrying out their experiment. There is no authority now for their taking the first step in that direction. If, on the other hand, a majority are in favor of making a settlement with the companies by an extension of the debt, it is equally necessary for this Congress to pass a bill for that purpose.

The gentleman from Kansas, my esteemed colleague on the committee, said also, in answer to my question, that he favored the Government ownership of railroads.

Is not that the real ground of his opposition to the bill?

In his minority report, in which the other two members of the minority did not join, he said:

Transportation has become a great and universal public necessity. It has been the duty of the State from time immemorial to provide highways and all the means and channels of communication and commerce. It is a growing and ever-increasing necessity, and with the greater interdependence of the various portions of the country upon each other the duty of the State becomes more and more imperative to see that this vast power is exercised for the general good, and as rapidly as possible to resume and directly exercise its functions. The highways of a country belong to the State, and transportation over them is not a mere matter of merchandise to be sold or refused solely as private interests or avarice may dictate.

I believe that foreclosure of the Government lien should at once follow default in payment and that a complete transcendent line should be acquired and operated by the only competent and legitimate power, the people, through their Government.

The gentleman from California [Mr. MAGUIRE] also advocates Government ownership; and much of the opposition to this bill comes from the region which the roads traverse.

The Denver Chamber of Commerce on December 7, 1894, memorialized Congress upon the subject, and said, *inter alia*:

And your memorialists further pray your honorable body to enact a law directing the proper officers of the Government to pay off the first mortgage on those parts of the main road, without doing which it has no security, extending from Council Bluffs, Iowa, and Kansas City, Mo., via Denver, to complete that line via Cheyenne, to Sacramento, Cal., and to foreclose the same under the first mortgage and Government lien, or second mortgage, which it holds and will acquire upon the same, the property being exceedingly valuable, and the Government being abundantly able to secure all the money necessary to do so for its consols, to be issued in denominations from \$50 to thousands of dollars, to be placed with the people of the United States and savings institutions as safe investments, secured upon the property, at 3 or 2½ per cent, instead of 6 per cent, as paid at present, per annum, which the net revenues therefrom will pay, and also a fair percentage on the Government's present interest, now only secured by said second mortgage.

And your memorialists further pray that the Government shall be authorized to operate said through line of its railroads by a department to be established for the purpose similar to the Post-Office Department, in order that the Government may receive a fair consideration for its property, without oppression; the other parts of the "system" to be left to a fair adjustment in each separate case according to the legal rights of the parties.

Against this declaration I place the resolution adopted by the National Board of Trade at their recent session in this city:

To the honorable the members of the Senate and House of Representatives in Congress assembled:

The undersigned, a committee of the National Board of Trade, appointed for the purpose, respectfully ask your consideration of the following resolutions unanimously adopted by the National Board of Trade at its convention in Washington, January 31, 1895, alluding to the adjustment of the debt of the Pacific railroads.

Respectfully, yours,

F. B. THURBER, of New York.
DAVID MCMINAMEN, of Pennsylvania.
ALDEN SPEARE, of Massachusetts.
E. P. WILSON, of Ohio.
H. F. DOUSMAN, of Illinois.

III. Subject: Government ownership of railroads and the adjustment of the debt of the Pacific railroads.

Whereas it has been recently proposed that the Government should acquire

and operate the Union and Central Pacific railroads instead of extending its lien thereon; and

Whereas there is perhaps no branch of business which so much requires for its successful conduct the stimulus of private interest, coupled with the best administrative ability, as that of railroads:

Resolved, That the National Board of Trade deprecates all movements looking to the Government ownership of railway lines, but strenuously advocates a wise, firm, and continuous supervision over the operation and management of these great agencies in all matters affecting their relations with the public in the conduct of interstate commerce.

Resolved, In the judgment of this Board the bonded indebtedness of the Pacific railroads to the Government should be extended on the best terms practicable, and to this end we recommend the passage of the bill known as the Reilly bill, now pending in Congress.

In Senate Miscellaneous Document No. 276, second session Fifty-third Congress, the Interstate Commerce Commission sent to the Senate a collection of statements relative to foreign railway ownership and operation from which it will be seen that notwithstanding lower wages paid the rates for travel and freight are higher than in this country. I may be permitted to add my personal experience on Government railroads in Austria-Hungary, Germany, Belgium.

AUSTRALASIA.

About five-sixths of the mileage in Australasia belongs to the various colonial governments. These roads were built principally with moneys derived from large loans negotiated by agents-general, and their value forms one of the principal assets for the public debt. The management of the Victorian and New South Wales railways having resulted in various abuses, they were, about the year 1884, placed under the direct management of a nonpartisan commission. In addition to the management of existing roads, this commission has charge of the construction of new lines.

COMPARISON OF FREIGHT AND PASSENGER RATES ON GOVERNMENT-OWNED ROADS AND ON ROADS IN THE UNITED STATES.

The freight charges on the Australasian railways are considerably greater than on the lines in the United States. It is said, however, that there are circumstances which should be taken into consideration in comparing the charges of the two countries. The people here, nevertheless, are constantly clamoring for a reduction of the rates. The farmers in Victoria insist that it will not pay them to grow grain unless they can get a reduction of fully 50 per cent on the present rates. (Consular Report No. 67.)

A word may be required as to American rates. No doubt we in Australia will never be able to obtain rates as low as those that prevail in the United States, our conditions being radically different; but the extraordinary thing is that the assertion should be persisted in that our Victorian rates are lower than those that are charged in America. The force of mendacity could scarcely further go. In one sense there are no American rates to quote. There are a thousand and one railways in America, and each line has its own schedule, and any fancy list can be prepared. The inquirer can only deal with averages, and taking averages there is no doubt possible. The current number of the *Fortnightly Review* is tolerably accessible to most people, and the inquirer has but to open the article by Mr. J. S. Jeans on the railway subject and he will find the allegation that freights on the United States lines are the lowest in the world.

Mr. Jeans adds: "There is no need for any controversy on this point. The fact is set out in the clearest possible light in the published accounts of the principal American railways. The Pennsylvania system may be taken as a typical case. Over a large portion of this vast system—the largest and most important on the face of the globe under one designation and control—the average ton-mile rate in 1900 was less than a farthing per ton per mile. The average ton-mile rate for the whole system was three-tenths of a penny. That is to say, that throughout this great organization, the average for goods of all classes, first-class goods, second class, and so on, was just over a farthing per ton per mile, while in Victoria, the average for all classes would be more like 3 pence per ton per mile; and it is obvious that wheat and similar low-priced goods may be carried over the Pennsylvania lines at rates which appear to us to be nominal."

Still, when the average American rate for wheat is under one-fourth of a penny per ton per mile, and the average Victorian rate is 1 pence per ton and over, the handicap appears to be excessive. (Extract from the *Argus*, published in the province of Victoria, as contained in Consul-General Maratta's report of May 16, 1894, Consular Reports, volume 65, No. 167, page 579.)

The freight rates in the United States are, in general terms, only five-eighths of those charged on the continent of Europe, and a little less than one-half of those which prevail in Great Britain. (Gen. Horace Porter, *North American Review*, 1891, volume 153, page 718.)

The transportation charges in Russia are 40 per cent higher than in America. Working expenses there are 75 per cent of the gross receipts. (Consular Reports, volume 20, page 250, 1888.)

AUSTRIA-HUNGARY.

In Austria about 40 per cent of the railway mileage is owned, and about 75 per cent is operated, by the State. Upon the expiration of charters, not exceeding ninety years, the lines, lands, and buildings of the companies revert to the Government, but the equipment remains the property of the private owners. Before a railway is opened it must be approved by the minister of commerce. The tariffs of State roads are fixed by the Government; those of the companies are subject to revision by the Government every three years, and the Government has power to reduce rates, if the net earnings exceed 15 per cent on capital.

BELOIUM.

About three-fourths of the railway mileage in Belgium is owned and operated by the State. The roads not owned by the Government will, under the terms of their charters, ultimately revert to it. Railway affairs are administered by a Government "department of railways, post-offices, and telegraph." The laws regulate tariffs. Railways are exempted from taxation.

FRANCE.

At the present date by far the larger portion (about five-sixths) of the French railway system is operated by private companies, each company serving a definite territory and being comparatively free from the competition of other lines. But the railroad properties are ultimately to become the property of Government. This system is a mixed one of State and private ownership. The competition of the private lines compelled the Government to lease some of the State lines to the former. On account of the necessity for great additional taxation, the scheme of nationalization of the railway system was abandoned in 1883.

GERMANY.

In Germany nearly 90 per cent of the railway mileage is owned by the Government. Under the law, the Government is required to manage the railways in the interest of general traffic as a single system. It may cause the construction and equipment of roads and enforce uniform traffic and police regulations. Even the few private railways are controlled by State boards.

GREAT BRITAIN AND IRELAND.

The Government does not own any of the railways. There are stringent regulations provided by law and administered by the railway commission and board of trade. New lines can not be constructed without the sanction of Parliament. The act of 1844 provided that the Government should have the right to acquire any railroad constructed after its date by purchasing the same for a sum equal to twenty-five years' purchase of annual divisible profits, estimated on the average annual profits for the three years preceding the date of purchase. If, however, the average profit for such three years has been less than 10 per cent, and the company thought the purchase price based thereupon was inadequate because of the future prospects of the property, the matter was to be referred to arbitration.

Under this law, however, the Government was not empowered to take branches or extensions of old lines constructed after the date of the act unless it took the whole system, if the company required it to do so. This law, so far as it relates to the Government acquisition of railroads, has never been acted upon. Twenty-three years later (in 1867) a commission appointed by the Government to report on the subject stated: "We are of the opinion that it is inexpedient at present to subvert the policy which has hitherto been adopted of leaving the construction and management of railways to the free enterprise of the people, under such conditions as Parliament may think best to impose for the general welfare of the public."

ITALY.

Italy has tried both State and private railroads, and has come to the conclusion that it is not advantageous for the State to own and operate the railways. The result was a reorganization of the whole railway system. Under the present system private companies operate the State roads under contract with the Government. The contracts run for sixty years, the Government or the companies having the option to terminate them at the end of twenty or forty years' upon a two years' notice.

UNITED STATES.

The National Government does not own or operate any of the railways. It is stated that several of the States have tried ownership in a limited way. Illinois constructed a road at a cost of \$1,000,000, but disposed of it for \$100,000; Indiana had a similar experience; Georgia owns a railroad, but has found it expedient to lease it to a private company; Pennsylvania constructed a railroad from Philadelphia to Columbia, but subsequently sold it; Massachusetts, Michigan, and several other States tried the experiment without success. (Kirkman.)

The following table furnishes a comparison of average passenger rates per mile:

[Gen. Horace Porter, *North American Review*, page 718, volume 153, 1891.]

	First class.	Second class.	Third class.
	Cents.	Cents.	Cents.
United Kingdom.....	4.42	3.20	1.94
France.....	3.86	2.86	2.08
Germany.....	3.10	2.33	1.84
United States.....	2.12		

In Paraguay the first-class rate for passengers is 4½ cents. (Consular Reports, volume 20, page 644, 1889.)

The railway passenger rates in Great Britain may be taken generally as 4, 3, and 2 cents per mile for the first, second, and third classes, respectively. (Consular Reports, volume 40, page 280, 1892.)

Comparative summary showing average rates per mile for passengers and freight in various countries.

[Mail and Interstate Commerce Commission statistics of railways in the United States, 1888.]

Country.	Passenger (pence per mile).			Freight (pence per ton per mile).
	First class.	Second class.	Third class.

* 1888.

NOTE.—Double the above figures to obtain rate in cents.

I do not believe that the best interests of our country demand Government ownership of railways, and the experience of the world shows that belief is well founded.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

APPENDIX.

THE REILLY BILL.

A bill to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1863; also to amend an act approved July 2, 1864, and also an act approved May 7, 1873, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies mentioned.

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to ascertain the amounts of the respective indebted-

ness of the Union Pacific Railroad Company, the Kansas Pacific Railway Company, the Central Branch Union Pacific Railroad Company, the Central Pacific Railroad Company, and the Western Pacific Railroad Company, to which the subsidy bonds of the United States were advanced in aid of the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, pursuant to the acts of Congress approved July 1, 1862, and July 2, 1864, as of the 1st day of January, 1895, to be computed and ascertained as follows:

First. To the total amount of the principal of said bonds of the United States shall be added the interest which shall then have been paid and the interest then and thereafter payable by the United States thereon, until the respective dates of maturity of said bonds, as if no payment had been made or credit given thereon.

Second. From the aggregate amount so ascertained shall be deducted any and all payments or credits of the said indebtedness to the United States as shall appear in the bond and interest accounts of said companies, respectively, with the United States, as of January 1, 1895.

Third. The present worth of the balance so found shall be computed as of January 1, 1895, by discounting the said balance at the rate of 3 per cent per annum for the period between the last-mentioned date and the average date of maturity of the said bonds of the United States. The amount so computed and ascertained shall be deemed to be the amount due to the United States on January 1, 1895.

SEC. 2. When the said companies, or either of them, shall provide as hereinafter required for the payment of the first-mortgage bonds issued by any of said companies which now have priority over the lien of the United States, the bonds of such company secured by a mortgage upon all its franchises and property as hereinafter authorized, shall be received as collateral security for the amount of its indebtedness to the United States, so as aforesaid ascertained, but all liens, mortgages, securities, and remedies under existing laws to secure the payment of said indebtedness are hereby continued in full force and effect. The bonds to be received by the United States shall be dated January 1, 1895; shall be payable, principal and interest, as hereinafter provided; shall bear interest at the rate of 3 per cent per annum, payable semiannually on the 1st day of January and July in each year, any overdue interest on said bonds being payable in cash at the time of delivery of the bonds, and shall be in such sums and in such form as the Secretary of the Treasury shall approve.

SEC. 3. That upon the acceptance of and compliance with the provisions of this act by the said Union Pacific Railroad Company and the said Central Pacific Railroad Company, and the delivery to the United States of such bonds as herein provided, the securities and moneys to the credit of the said company so accepting and complying, in the sinking fund, created pursuant to the act of Congress May 7, 1878, shall be disposed of as follows, to wit: All bonds held in said sinking fund, secured by first mortgage upon any part of the railway of such company covered by the existing lien of the United States, shall be canceled. All other securities and cash in said fund shall be applied in extinguishing, in such manner as shall be approved by the Secretary of the Treasury, any portion of the remainder of the bonds secured by said first mortgages; but said sinking fund shall not be so applied or available under the provisions of this act until said company shall have made provision satisfactory to the Secretary of the Treasury for the payment at or prior to the maturity thereof of all of said bonds secured by said first mortgage and the discharge of such mortgage.

SEC. 4. That the said Union Pacific Railroad Company, successor to the Union Pacific Railroad Company, and the Kansas Pacific Railway Company, and the said Central Branch Union Pacific Railroad Company be, and they are hereby, authorized to make, issue, and deliver to the Secretary of the Treasury each its certain indenture of mortgage, which shall bear date of 1st day of January, 1895, covering and embracing the entire property of the said Central Branch Union Pacific Railroad Company, real, personal, and mixed, and the property of the said Union Pacific Railroad Company as existing and constituted since the consolidation of the Union Pacific, the Kansas Pacific, and the Denver Pacific Railroad companies, effected January 24, 1880, including all the right, title, and interest of such company in any stocks, bonds, or securities, or lands, or any branch lines or auxiliary companies in which said company now has any interest, and which said mortgage shall cover and embrace the railway line of said company from Council Bluffs, Iowa, to the western terminal thereof west of Ogden, Utah, and from Kansas City, Mo., to Cheyenne, Wyo., by way of Denver, Colo., including all terminals at Council Bluffs, Iowa; Omaha, Neb.; Kansas City, Kans.; and Kansas City, Mo.; the Omaha Bridge, and all other terminal properties of said company, and all branch lines, so as to make said mortgage embrace and include the entire line of said company as constituted by said consolidation, extending from Council Bluffs, Iowa, to the terminal west of Ogden, Utah, and from Kansas City, Mo., to Cheyenne, Wyo., making a total mileage of 1,322.59 miles, and all railroads hereafter acquired or constructed by said company or companies, and all their franchises, telegraph lines, rolling stock, fixtures, and property of every kind and description, as well as that which it, its successors or assigns, may hereafter acquire subject to any bona fide, lawful, and paramount lien, claim, or mortgage. A proper and complete description and inventory of all property affected by such mortgage shall be prepared, under the direction of the Secretary of the Treasury, which, when approved by him, shall be filed in his office. But this section of said mortgage shall not be construed to prevent said company from using or disposing of any of its property or assets in the ordinary, proper, or lawful course of its business, in good faith and for valuable consideration, after notice to and with the approval of the Secretary of the Treasury, nor from using or disposing of any of its real or personal property not necessary to the operation of its railroads: Provided, That the proceeds of any such property and any property acquired with the proceeds of any such property owned by said company, whether realized by sale, pledge, or otherwise, shall in like manner and with the same power to dispose of the same be subject to the lien of the said mortgage: Provided, That the said Union Pacific Railroad Company shall relinquish and abandon any and all claim, right, title, interest, and demand to or in a right of way exceeding 100 feet in width, through the lands formerly known as the Delaware and Pottawatomie Indian reservations in the State of Kansas.

SEC. 5. That the Union Pacific Railroad Company shall execute and deliver its said mortgage and bonds for the amount of its indebtedness and the indebtedness of the Kansas Pacific Railway Company to the United States, and the Central Branch Union Pacific Railroad Company shall execute and deliver its mortgage and bonds for the amount of its indebtedness to the United States; and the said bonds of each company shall be numbered consecutively from one to a number which will include the whole amount thereof, and shall be payable in lawful money of the United States. So long as any of said bonds remain unpaid each of said companies shall semiannually, on the 1st days of January and July of each year for a period of ten years, commencing on the 1st day of July, 1895, pay to the Secretary of the Treasury of the United States, in addition to the interest which shall then be due on its indebtedness, one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1895, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, three-fourths of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of

ten years, commencing on the 1st day of July, 1915, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1935, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage, as herein provided; and for a period of ten years, commencing on the 1st day of July, 1955, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage. The said payments of principal shall be applied in payment of said indebtedness so as aforesaid ascertained, and the bonds of said company to an amount equal to such payment, and in the order of the numbers of such bonds, beginning with the lowest unpaid number, shall thereupon be canceled and surrendered to the company.

SEC. 6. That the said Central Pacific Railroad Company, successor to the Central Pacific Railroad Company of California and the Western Pacific Railroad Company, be, and is hereby, authorized to make, issue, and deliver its certain indenture of mortgage, which shall bear date of 1st day of January, 1895, covering and embracing the entire property of such company as at present consolidated, real, personal, and mixed, including all the right, title, and interest of such company in any stocks, bonds, or securities, or lands, or any branch lines or auxiliary companies in which such company has now any interest, and all beneficial interest which it may have in the certain lease of its property to the Southern Pacific Company as hereinafter provided, and all railroads now owned or hereafter acquired or constructed by said Central Pacific Railroad Company, and all their franchises, telegraph lines, rolling stock, fixtures, and property of every kind and description, as well as those which it, its successors or assigns, may hereafter acquire, subject to any bona fide, lawful, prior, and paramount lien, claim, or mortgage upon any of the railroads, franchises, or property now owned by such company, or which such company may hereafter acquire, except as hereinafter provided. A proper and complete description and inventory of all the property affected by such mortgage shall be prepared under the direction of the Secretary of the Treasury, which, when approved by him, shall be filed in his office. But this section of such mortgage shall not be construed to prevent such company from using and disposing of any of its property or assets in the ordinary, proper, and lawful course of its current business, in good faith and for valuable consideration, nor from using and disposing of any of its real and personal property not necessary to the operation of its railroads, after notice to and with the approval of the Secretary of the Treasury, provided that the proceeds of such property, and any property acquired with the proceeds thereof, owned by said company, whether realized by sale, pledge, or otherwise, shall in like manner and with the same power to dispose of the same be subject to the lien of the said mortgage. Until the mortgages, liens, and claims upon the mortgaged premises junior and subordinate to the existing liens of the United States shall have been extinguished the existing liens of the United States shall not be extinguished, but shall remain in full force.

SEC. 7. That the said Central Pacific Railroad Company shall execute and deliver its said mortgage and bonds for its indebtedness to the United States, and the said bonds shall be numbered consecutively from one to a number which will include the whole amount thereof, and shall be payable in lawful money of the United States. So long as any of said bonds remain unpaid said company shall, semiannually, on the 1st days of January and July of each year for a period of ten years, commencing on the 1st day of July, 1895, pay to the Secretary of the Treasury of the United States, in addition to the interest which shall then be due on its indebtedness, one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1915, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage, as herein provided; and for a period of ten years, commencing on the 1st day of July, 1935, said company shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage. The said payments of principal shall be applied in payment of the said indebtedness so as aforesaid ascertained and the bonds of said company to an amount equal to such payment, and in the order of the numbers of such bonds, beginning with the lowest unpaid number, shall thereupon be canceled and surrendered to the company.

SEC. 8. That the statutory lien created and subsisting under and by virtue of the act of Congress approved July 1, 1862, and the act of July 2, 1864, and the act of May 7, 1878, and under any and all other acts of Congress, to secure the payment of said subsidy bonds and the interest thereon, as set forth in said acts, and upon all the property subject to said statutory lien, shall be and remain in full force for security for the debts owing by each of said companies mentioned in this act to the United States, until the same are fully paid.

SEC. 9. That each of the mortgages authorized by the foregoing provisions of this act shall contain a covenant providing that, in the event of any default continuing for ninety days in the said semiannual payments, the entire debt due to the United States from the company making such default shall immediately mature, and shall also contain such other terms and stipulations in conformity with the provisions of this act as may be deemed necessary to efficiently secure the said bonds and the application thereto of the moneys paid to the Secretary of the Treasury for retiring the principal thereof, and as may be approved by the Secretary of the Treasury of the United States. The said mortgages shall be delivered to the Secretary of the Treasury, and upon the delivery thereof shall, respectively, be valid and subsisting mortgages each of all the property of said mortgagor company, real, personal, and mixed, embraced, covered, or required by the terms of this act, and such delivery shall have all the effect of recording the same in any place. Said mortgages shall at all times be open to public inspection, under such rules and regulations as the Secretary may prescribe, and copies thereof, certified by the Secretary of the Treasury, shall, as soon as may be after their respective delivery, be deposited with and recorded by each of the clerks of the circuit court of the United States in the States and the clerks of the supreme courts of the Territories of the United States in which the roadbed, or any part thereof, of said companies, respectively, is situated, which copies and records shall at all times be open to public inspection. All such copies and the recording thereof shall be at the expense of said company.

SEC. 10. That so long as any of the bonds issued by either of the companies, according to the provisions of this act, shall belong to the Government, no

money shall be paid from the United States Treasury for or on account of services rendered to the United States, or any Department of the Government thereof, over or upon the said railroads or telegraph lines heretofore aided by the advance of subsidy bonds, or upon any railroads or telegraph lines owned, leased, or operated by the said companies that issued such bonds, until the installments of principal and interest upon such bonds next maturing after such services are rendered shall be fully paid by such company, as herein provided; but the obligations to pay said installments so to be paid to the United States by said companies, and the obligation of the United States to pay for services, shall be deemed otherwise independent.

SEC. 11. That hereafter, so long as any of the bonds authorized by the provisions of this act shall remain outstanding and unpaid, no dividend shall be paid by the company whose bonds are so outstanding unless the same shall have been actually earned, or unless such company shall have paid all interest due on its bonded debt having a lien prior to the Government and all matured indebtedness and interest then due and payable on its debt to the United States under this act; or unless the said earnings, after deducting all interest accrued but not payable at the time of the declaration of such dividends, shall be sufficient to warrant the payment thereof. In no event shall either of said companies whose bonds are so outstanding pay any dividend exceeding the rate of 4 per cent per annum, unless the said company shall, at the time of declaring such dividends in excess of 4 per cent per annum, so long as any of the said bonds are held by the United States, pay an amount equal to the excess over 4 per cent per annum so declared to the Secretary of the Treasury, to be applied upon the lowest numbered bonds of the principal of the debt of such company to the Government, and unless the earnings of the said company shall suffice to warrant the payment of such excess and also the payment to the Government. Any director or officer who shall declare or pay, or aid in declaring or paying, a dividend prohibited by this act shall, upon conviction in any court of competent jurisdiction, be punished by imprisonment not exceeding two years, or by a fine not exceeding \$5,000, or by both such fine and imprisonment. And that said companies heretofore mentioned, their successors, lessees, and assigns, shall cooperate in making track connections with all railroads of other companies now or hereafter built to points of junction with their roads, and at any point where any railroad shall connect with their roads, or either of them, they and their successors, lessees, and assigns shall afford to all such connecting roads equal times, terms, rates, and facilities for the interchange of traffic, both passenger and freight, between such connecting roads and their respective roads and every part thereof. And any contract, arrangement, or device, by sale, lease, consolidation, through-car service or otherwise, intended for or resulting in any preference or advantage whatsoever to any such railroad so connecting at any such common point, or which shall subject any such railroad so connecting at any such common point to any prejudice or disadvantage whatsoever, is hereby declared to be unlawful.

SEC. 12. That this act shall take effect as to each of the said companies and their branches, respectively, as hereinbefore described, upon the acceptance of its terms by the board of directors of such company in writing, over the corporate seal of such company, signed by its president and attested by its secretary, being filed or deposited with the Secretary of the Treasury within six months after the passage of this act, subject, however, to the completion of the settlement and adjustment in this act proposed and provided; but any company which shall not so file its acceptance shall take no benefit from this act.

SEC. 13. That either of said companies may, at any time after the execution and delivery of their said bonds, but only so long as said bonds are held and owned by the United States, pay the whole or any portion of said bonds, by paying the amount thereof, together with the accrued interest thereon, to the Secretary of the Treasury, who shall thereupon cancel the bonds so paid and deliver the bonds so canceled to the said company.

SEC. 14. That the said companies accepting the provisions of this act, and each of said companies, shall, whenever requested in writing by the Department of Justice of the United States, and so long as the United States shall be the holder and owner of any of the bonds authorized by this act, cause any actions at law or suits in equity, or other proceedings, to be instituted and prosecuted in the name of said company or companies against any person who is, or has been, a director, officer, agent, or employee of the said company, for the purpose of enforcing any cause of action whatever arising, or which may hereafter arise, out of any alleged violation of duty, misappropriation of assets, or any other act or transaction whatsoever, in respect of which the said Department of Justice shall allege that it desires such action, suit, or other proceeding to be instituted and prosecuted. All such actions, suits, and proceedings shall be conducted by the Attorney-General of the United States, and he shall be fully authorized by the said company or companies to appear for them or it as attorney or solicitor in such actions, suits, or proceedings, and shall have the entire control of the same from the inception thereof to the end of such prosecution, and also the right to take and prosecute any appeal or appeals from any decision or determination made therein. Any sums of money which may be recovered under the provisions of this section shall be paid to the Treasurer of the United States, and by him applied as payment upon the lowest numbered bond or bonds of the company interested in such recovery outstanding under the provisions of this act; the balance remaining after all said bonds are paid shall be paid to the company in whose name the said sums were recovered.

SEC. 15. That whenever there shall be default in respect of any obligation or condition for which any lien now exists in favor of the United States upon any property of any Pacific railway company the Attorney-General is hereby authorized to enforce the claim and foreclose any such lien of the United States, by sale or otherwise, by any appropriate legal proceedings to be initiated and prosecuted in the court of appeals of the District of Columbia, which court shall have jurisdiction in the premises, both at law and in equity. In case any suit for the sale of any part of the property upon which the United States have a lien, as aforesaid, shall be brought by or on behalf of any person claiming to be the holder or holders of any other lien thereon, the Attorney-General, in his discretion, may enter the appearance of the United States and file such pleadings and take such action as may be appropriate for the protection of the interests of the United States or for the foreclosure of its lien by sale or otherwise in such suit. Upon said proceeding the said property shall be sold to the highest bidder, subject to any prior lien or incumbrance thereon, and for a sum not less than the amount of the debt due to the United States and of interest thereon to the date of confirmation of the sale, and at such sale the Attorney-General, if in his judgment the interests of the United States so require, may bid the amount of said debt including interest.

SEC. 16. That the purchaser or purchasers at such sale shall keep said railroads and telegraph lines in repair and use, and shall at all times transmit dispatches over such telegraph lines and transport mails, troops, and munitions of war, supplies, and public stores upon such railroads for the Government whenever required by any Department thereof; and the Government shall at all times have the preference in the use of the same for all purposes aforesaid at fair and reasonable rates of compensation, not to exceed the amounts paid to private parties for the same kind of service.

SEC. 17. That it shall be the duty of the Attorney-General to cause the provisions of this act to be enforced, and he shall take all steps needful to that end, and shall make report to the President each year or oftener thereon,

which report shall be laid before Congress. And until the settlement and the execution and delivery of the bonds and mortgage in this act provided for shall be completed all existing provisions of law relating to said companies, respectively, shall remain in force.

SEC. 18. That this act and each and every provision thereof shall severally and respectively be deemed, taken, and held as in alteration and amendment of said act of 1862, and of said act of 1864, and of said act of 1878, respectively, and of all of said acts so far as they are inconsistent with this act; nor shall anything in this act be construed or taken in anywise to affect or impair the right of Congress at any time hereafter further to alter, amend, or repeal the said acts hereinbefore mentioned; and this act shall be subject to alteration, amendment, or repeal, as in the opinion of Congress justice or the public welfare may require; and nothing herein contained shall be held to deny, exclude, or impair any right or remedy in the premises now existing in favor of the United States. This act shall be published and printed as a public act, and in all proceedings may be cited as such.

The Currency.

SPEECH

OF

HON. CHARLES J. BOATNER,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. BOATNER said:

Mr. CHAIRMAN: The principal difficulty which the amendment of the gentleman from Alabama will encounter is that it is in accordance with a certain obsolete document known as the Chicago Democratic platform, and I am perfectly astonished that at this stage of development, after the progress of the last two years, after the change of ideas which has come over the country and to a certain extent come over this House, that any gentleman should be so bold, not to say audacious, as to ask this House to carry into effect a recommendation of the national Democratic platform.

I myself, Mr. Chairman, have been earnestly in favor of such a provision of the law. I have earnestly advocated that a Democratic House should return to some extent at least to Democratic principles, and that when the opportunity is presented it should repeal a provision of law enacted when the Constitution was asleep and when those who had no respect whatever for its limitations had control of the Government.

I have been led to believe, or rather have led myself, by my study and investigation of these subjects, to believe that the use of the taxing power—given by the Constitution of the United States for the purpose of raising a revenue—for the exercise of other powers, was absolutely indefensible upon any ground whatever, and I hoped that a Democratic House would avail itself of the first opportunity to wipe from the statute books a confessedly unconstitutional statute, at least a statute contrary to the spirit of the Constitution to the extent that a power granted is used to accomplish the exercise of one not granted.

But, Mr. Chairman, that is one of the things that have gone by, and we are asked not only to abandon that recommendation of the Democratic platform, but to abandon every issue in the campaign which led up to the election of the present President, and to give our sanction not only to the issue of bonds which may be necessary, but of bonds payable, principal and interest, in gold. Why, sir, when we had under consideration that other measure which was designed and intended to save the country from impending ruin and disaster—I refer to the bill which proposed to repeal the purchasing clause of the Sherman Act—the question was frequently asked of its supporters whether or not the passage of that law, without accompanying legislation, would not inevitably necessitate the issuance of an additional series of bonds, and eventuate in the funding of our greenback circulation in gold bonds? These ideas were derided and the prediction freely made that the repeal of what was called the "cowardly makeshift" would restore confidence, revive business, and give the country a return of that prosperity so ardently desired.

In addressing myself to the subject I said that if we judged the future by the past we might well dread the consequences, as those who were predicting the return of prosperity as the result of the act then under consideration had never yet been known to be right in their prognostications. It is useless and idle, however, to thrash old straw. It is now a historical fact that the repealing act had no perceptible effect, and that those Democrats who supported it because they believed the Administration would aid in the enactment of additional legislation to carry into effect the financial plank of the Democratic platform were woefully deceived.

The President, who calls upon us to free ourselves from the

tyranny of preconceived opinions, seems to become every day more thoroughly unable to modify his own, if that be possible. Contrary to the wishes of the majority of the party, no measure looking in the least toward bimetalism receives consideration. With \$200,000,000 of silver bullion lying idle in the Treasury which could have been coined and used in the payment of debts, it is now admitted that the Secretary of the Treasury has used of the proceeds of bonds sold for redemption purposes more than one hundred millions to pay the debts and expenses of the Government. Just why the addition of one hundred millions of silver circulation to our stock of money would or could have had an injurious effect no one has ever yet explained.

We have before our eyes the example of France, a nation with about half our population and not half our resources, maintaining a silver circulation in excess of ours by something like \$200,000,000, and redeeming her obligations in silver whenever it is necessary to do so. With us, however, everything seems to be sacrificed to the ideas of the New York bankers. They raid the Treasury for gold and then set up a clamor for an additional issue of bonds to replenish the Treasury supply. When it suits their convenience they exhaust this store of gold, and the process may go on ad infinitum.

It is argued that, if the Secretary of the Treasury should exercise the option given him by the laws to redeem Treasury obligations in silver, it would immediately send gold to a premium and put the country on a silver basis. Suppose we admit that to be a fact, who would be hurt by it? Certainly not the mass of the people, or even the mass of the business men. Their obligations are payable in legal-tender money of the United States, and legal-tender money consists of Treasury obligations and of gold and silver. If the withdrawal of gold from circulation should have the effect of depreciating the value of the remainder of our currency, the loss would fall upon the very men who have been putting the United States to enormous expense, and have been disorganizing business in their own interests.

The gold in the United States is now practically out of circulation; it is already at a practical premium, because it can be had only in return for something considered its superior in value. It is being hoarded by bankers and private individuals, and while counted as part of our general circulation, it is not, and serves no other purpose than it served before we resumed specie payments, when it had to be bought like any other commodity.

It is with profound regret that I withhold my consent from any proposition which receives the indorsement of the Administration, and which is deemed necessary by those in authority to sustain the credit of the Government and perform the obligations which the Government owes to the country, but I am utterly unable to agree that there is any necessity or advantage in changing the policy of the Government at this time by issuing gold instead of coin bonds.

If the effect of such a change will be to increase the value of the bond so issued and to obtain a lower rate of interest, from the necessity of the case it must injure the bonds already extant which are payable in coin.

If public honor and the good faith of the Government require that we should issue a bond payable in coin of the highest value, the same public honor would demand the retirement of all coin obligations outstanding, and the substitution of gold obligations. That such a demand would be made and complied with I have no doubt.

It is extraordinary, sir, that a party which carried the country on a platform which demands the continued use of gold and silver as the standard money of the country, and which was considered a conservative declaration in favor of bimetalism, should, in the two years it has been in power, do what the Republican party, although dominated and controlled by the money classes, has never yet dared to attempt; that is, to establish gold monometallism as the fixed policy of this Government. I am unable to perceive how any Democrat, with a proper appreciation of his obligations to his party and a proper respect for the pledges made to the people, can give his consent to a measure diametrically opposed both in letter and in spirit to the fundamental law of the party as declared in its last national convention.

It is very true, sir, that a gold bond might be negotiated at a lower rate of interest, but those who may take any future issue of bonds at a higher rate of interest because they are payable in coin instead of gold will assume very serious responsibility. If they charge a higher rate in compensation for the risk they may run of being paid in silver they can not complain if the Government exercises the option which it has not only reserved but paid for, and there would not be the slightest violation of honor or good faith in making payment in such coin as may be most advantageous to the Government. It can not be said, then, that these bonds were accepted with the conviction that they would be paid in gold, because the higher rate of interest attests the fact that those who will have taken them will have received a pecuniary compensation for the option which the Government reserves to pay in coin. As

a matter of fact the contention that the so-called ambiguity in the terms of the bond will increase the rate of interest is a mere pretense—a mere trader's trick—to drive a better bargain. No such fear is entertained, and the proof of it is found in the fact that the bonds can be negotiated at 4 per cent or under. If there were well-founded apprehension that the Government might pay in coin of less value than that received, the bonds might not be negotiated at all. They would not be worth 50 cents on the dollar, nor would 6, or even 8, per cent be any temptation.

The act to strengthen the public credit, passed in 1869, pledged the faith of the nation to pay all obligations in coin. At that time silver was the equivalent of gold. The Government has construed this declaration to mean that payment was to be made in the best money—in gold, and gold alone—from that day to this, and this, notwithstanding the determined effort made in 1878 by a majority of both parties to change the rule, and to exercise the option in a manner most favorable to the Government.

In my remarks on the banking bill a few days ago I called attention to this fact, and claimed that the policy of the Government had received the indorsement of the people because Mr. Garfield, who had opposed the "Matthews resolution" had, at the next election thereafter been nominated and elected President of the United States; and Mr. Blaine, who also opposed it, continued to the day of his death the great leader of the party. At no time has there been a majority in Congress able to change the rule by law. The incumbent of the Presidential chair, known to be implacably inimical to such a change, has been twice elected President, the last time by an overwhelming majority. Under these circumstances, it is difficult to understand how the Administration has been deluded into the idea that such a change as is now proposed is necessary to strengthen the credit of the Government at home or abroad.

Mr. Chairman, it is a matter of most profound regret to every man who has the welfare of the Democratic party at heart and who believes that its continued ascendancy would promote the prosperity of the people that a sufficient number of Representatives on this floor have stubbornly refused to make any concessions to the dominant sentiment of the party, and have, in a short period of two years, transformed it from a victorious army into a disorganized, disheartened mob of routed militiamen. The results of the last election tell their own story. The solid South is a thing of the past. Leaders who have enjoyed the absolute confidence of their people for a generation have been retired to private life. The party has been asked to unlearn the lessons taught by our great Secretary of the Treasury during the whole course of his political career until his voice was silenced by a Cabinet portfolio. For two years we have been asked to do what we had always promised the people of the United States we would not do.

We are asked to give our sanction to a financial policy which must lead to further depression of prices and the aggravation of public distress, and this because another emergency confronts us. For one I do not admit the existence of the emergency. I do not admit that the United States ought to give its sanction to the claim now made that it will not be true to its obligations. I do not admit that the Treasury Department must be administered in accordance with the interested wishes of the bankers of this or the Old World, or that it is necessary to redeem Treasury obligations in gold to preserve the parity of the circulation; because if their payment in silver would have the effect of sending gold to a premium and depreciating the mass of our circulation, none would be presented for redemption. I do not admit that this Government is less powerful than that of France, or that its credit would be destroyed, or even shaken, by pursuing the policy adopted by that country for the protection of its gold circulation.

For one, Mr. Chairman, I do not hesitate to declare that we ought to enact legislation which would not only permit, but require the retirement of all Treasury obligations subject to redemption at as early a day as practicable. This could easily be done by the coinage of silver in sufficient quantities to gradually absorb the greenback circulation. That is to say, as rapidly as greenbacks are presented for redemption, or as they come into the Treasury in payment of taxes, they should be canceled; and if it becomes necessary to reissue the same amounts of money, the issues should be in legal-tender silver dollars, or paper certificates representing them. By an amendment of our national banking laws on the lines recommended by the Secretary of the Treasury, we would have a national circulation consisting of gold and silver and bank notes redeemable in legal-tender money. The Government would then be relieved of the burden of maintaining the parity of circulation. There would be no necessity for any gold reserve, or a national debt; there would be no contention as to whether the bonds issued by the Government should be payable in gold or in coin. As our bonds became due they could be paid and canceled.

The vast amount of money now locked up, the interest-bearing securities, would be forced into the channels of trade and com-

merce. The values thus released would become subject to State taxation. The immense drain upon the resources of the country in the interest annually sent abroad would be obviated, and if a sound financial system can restore prosperity to the country the system I have outlined would accomplish it. I believe it to be in accordance not only within the principles of sound finance, but with those of the Democratic party and our obligations to the people.

Pacific Railroads.

[From the address of Mr. Seymour D. Thompson before the Bar Association of Kansas on January 25, 1892.]

It is obvious that State legislation can no longer cope with great corporations. It is further obvious that great corporations, such as a railroad company carrying on its business in different States, ought not to be subjected to different rules in different State jurisdictions, but ought to be governed by uniform laws and rules prescribed by the General Government. Precious as is the principle of local self-government, we must confine it to merely local matters. We have outgrown the tribal theory. If the men that made the Federal Constitution could have foreseen the steamboat, the railroad, the telegraph, and the telephone, they would not have left as much power in the hands of the States, and they would have placed more power in the hands of the General Government.

[New York Times' Financial Review, Sunday, February 3, 1895.]

The plunder of stockholders by directors, the shameless looting of corporate properties by their managers, is one of the crying scandals of the day.

[New York Times, Sunday, February 3, 1895—London letter.]

I am assured in the city that as regards the European scare about America's financial condition the ugliest corner has now been turned, and improvement of a steady kind may now be expected. This distrust of the American situation, starting in the time of the Baring crash and becoming acute with the silver crisis of 1893, showed itself first in withdrawals or reductions of the bankers' credits, then in cessation of investments in American enterprises and securities, with its consequent reversal of the ordinary flow of capital westward, and, lastly, and in totals most important, in withdrawal of mercantile credits till imports of goods into America were almost wholly on a cash basis. This in itself would be all right if it did not involve pressure to settle for imports several months in advance of the terms formerly customary. Mr. Cleveland's message and loan please the financiers here. There is, however, a good deal of feeling that dishonesty in railway management must be dealt with more effectively before popular confidence here will be won back altogether.

SPEECH

OF

HON. ISIDOR STRAUS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895,

On the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Mississippi River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1875, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Mr. STRAUS said:

Mr. SPEAKER: In listening to the instructive debate the measure before the House has called forth, I discover that the opposition to the passage of the bill seems to emanate chiefly from two motives—one represented by the residents of the Pacific Coast and along the line of these railroads, who are deeply incensed at the oppression which they have suffered at the hands of these corporations, particularly at the hands of the corporation having its terminus on the Pacific Coast; the other comes from those who imagine that they have an opportunity for avenging the feelings of indignation against the scandalous and colossal frauds which have been committed by the men who originated and controlled these corporations for many years. I sympathize with both, but I can not see the wisdom of their action. It looks to me very much like cutting off your nose to spite your face. We are assured by lawyers on the floor of this House, whose opinions are certainly entitled to respect, that by the passage of this bill the Government forfeits none of its rights against the perpetrators of these wrongs. Such being the case, it seems to me to be the part of wisdom and prudence, and along the line of good business methods, that we should secure to the Government and the people the largest possible sum in the liquidation of this enormous debt and wreak our vengeance upon the betrayers of their trust afterwards.

The wrong the Government has suffered, which seems to stir the blood of the opponents of this bill to fever heat, is not one whit worse than dozens of like occurrences where poor and innocent holders of securities, who could ill afford to bear the loss, have been victimized to even a greater extent. Yet in most instances

where default has been made the part of wisdom has dictated to the individual owners of these securities that a reorganization and not unfriendly foreclosure was the most advisable for the best interest of all concerned. In the management of public affairs we do not go amiss if we follow the path individuals do under similar circumstances. This discussion has emphasized to my mind the idea I have long entertained, that remedial legislation should be had which will make such practices illegal and will enable the public prosecutor to reach them beyond a possibility of escape by legal quibblings and technicalities.

I have not heard of a single fraud charged against the directors of these railroads by the opponents of this bill which is not absolutely reached and could not have been prevented by the provisions of the bill that I have had the honor to introduce, known as H. R. 7740, being a "bill to regulate railroad companies engaged in interstate commerce." This I now offer as an amendment to the bill before the House, and I trust it will receive the support of those who are in favor of its enactment; it should certainly receive the united support of those who are opposed to it.

I listened with considerable interest to the remarks of the honorable gentleman from Kansas [Mr. HARRIS], and particularly to the extract he read from a speech delivered by an eminent lawyer before the Bar Association of Kansas, which seems to point directly to the necessity of just such a bill as I have referred to.

Greater than all the crimes I have heard enumerated against the directors of these railroads, to my mind, is the overpowering one that their dishonest practices by which the roads were robbed of earnings and the proceeds of obligations sold converted into private gains instead of going to the treasurers of the companies—is that these abuses of corporate trusts gave birth to the system of railroad management that has brought discredit upon all forms of American securities abroad. That none of the transgressors have been brought to justice has encouraged practices so that to-day the management of railway properties is a disgrace to American citizenship, and it is the distrust born of such criminal practices which lies at the bottom of our exports of gold almost, if not fully, to as large an extent as the doubt in the stability of our currency system.

I have seen letters from investors abroad who for years have kept large sums invested in various enterprises in this country instructing their bankers to sell every dollar of their holdings as rapidly as the market will absorb them without too much depressing current prices. In one of these letters the correspondent states that if there had occurred a single instance where one of these railway robbers had been placed behind the bars he would still have hope that the American love for honesty and integrity would overcome the barefaced dishonesty which has been rampant in the management of corporate trusts.

There is an old adage, "Experience is the school where man learns wisdom;" to which some one has added, "And fools will learn in no other." What, therefore, would be said of a people who will not even profit by so expensive a school as everyone knows experience to be? I trust that Congress will pass the bill before the House while the flagrant abuses which necessitate this legislation are fresh in the minds of everybody, and not do the work by half, but profit by the experience in applying the remedial legislation which the amendment I have offered so fully provides. The amendment is substantially H. R. 7740, now before the Interstate and Foreign Commerce Committee, which I have every reason for saying will be reported favorably by that committee at an early day and will, I trust, when reported to the House, receive its sanction in case it should fail to become a part of the present bill by the amendment I have offered.

The aggregate value of railway properties in the United States is over ten thousand five hundred millions of dollars. This is equal to about 16 per cent of the assessed total value of all real and personal property in the United States, and is equal to 40 per cent of the assessed value of the real estate, with improvements thereon. This vast aggregate of property is in the hands of men who are supposed to act in the capacity of trustees for the real owners. While this trusteeship nominally rests in a board of directors who are elected annually for the purpose of governing and directing the affairs of the corporation, its actual exercise is to a very large extent in the hands of the officers who are paid for devoting their exclusive time and thought to the consideration of questions that concern the practical daily management of the properties.

While it may be argued that these trustees or directors are selected for their supposed sagacity, experience, and judgment, when it is borne in mind that they give an hour every week, or possibly not more than an hour every month, to the affairs of the corporation at periodical meetings, they can not in the nature of things be as conversant with the requirements and necessities that surround the property as those who are paid to devote their entire time and attention thereto. It is not therefore surprising that in most questions which come up for consideration the directors are more or less guided by the judgment of these officers. It may be said that directors in this event are derelict of their duty, and

show an incompetency for the trusts to which they have been elected, but in dealing with a practical question of this kind we lose sight of the main issue if we theorize upon what should be, instead of recognizing the practical manner in which these questions are necessarily presented and dealt with. So we might as well deal with the situation as in practical experience we find it, rather than speculate on what, ideally considered, it should be.

While a large number of railroads are as sagaciously and as honestly managed as any other enterprise, whether in the hands of corporate bodies or of individuals, the impressive fact is nevertheless forced upon us that railways, representing 25 per cent of the entire capital invested in this form of enterprise in the United States, are at this moment in the hands of receivers. This sad picture, in juxtaposition with the fact that railway companies, by virtue of the necessarily large capital which each company represents, are able to command the best talent the country affords, is suggestive of something more than hard times. All through the period of depression there has been no such proportion of bankruptcy in any department of commercial activity or in any other field of private or corporate investment. Bad management has undoubtedly had quite as much to do with railroad insolvency as bad trade, and shattered confidence, which is the result of bad management, if not of something worse, delays the restoration to solvency of great railway properties even after trade has begun to revive.

Since railway investments constitute the most important single form of investment in the country, and consequently the most conspicuous evidence of general financial conditions, they can not possibly rest under a cloud without impairing the real recuperative force of which other enterprises may give unmistakable evidences. It is therefore not within bounds to state that the restoration of confidence in our railroad securities and railroad management is of importance second only to the question of sound currency—the measure of all value.

There is no more serious obstacle to the return of confidence than the present condition of one-fourth of the railway properties of the United States, and no damper so fatal to some of the chief productive industries of the country as the enforced suspension on nearly all railroads of the normal and necessary work of improvement, renovation, and development. Abroad the scandals of our railway management have inflicted on American credit the most dangerous blow it has received in this generation. Every form of security—State, county, municipal, and industrial—has felt it, and the credit of solvent and well-managed railway properties has suffered from the bad reputation of those which in consequence of reckless management have become bankrupt.

There will be no permanent change in this prevailing sentiment of distrust till measures about whose effective power there can be no dispute have been placed on the statute book, with power of enforcement adequate to the abuses to be corrected. This must be done in a way so plain and unmistakable as to avoid all ambiguity, and by its directness, simplicity, and force circumvent all efforts to have its ends defeated by any device of legal ingenuity. It might be urged as against such legislation that there are already laws enough on the statute books to punish the wrongdoer in any capacity of corporate trust; but if there are such laws that can be enforced the very fact that they are not enforced, and that abuses exist in spite of them, shows the necessity for further legislation.

It requires no proof to demonstrate to every thinking mind that this country has been accelerated in its growth by the aid and confidence of foreign capital. The American name will not be free from the reproach under which it lies with foreign investors because of railroad mismanagement until the obligations of corporate trusts have been more clearly defined and their disregard rendered more difficult and more dangerous.

The Frankfort Zeitung, one of the leading financial papers in Germany, under date of November 20, speaking of the condition of railroad properties and bonds in the United States and the manner in which investors have been misled and deceived, to the question propounded, How can European confidence in American railroad investments be regained, answers:

The control of railroads and their management by their officers and board of directors must be placed under Federal supervision. There is hope that such a desideratum can be accomplished. The question has impressed itself so generally on the public that a consul-general has found it necessary, in the interests of his country, in a report made to the State Department, to refer to this all important financial question.

No better proof of the inadequacy of existing laws to punish offenders of this character could be found than in the fact that men who are responsible for some of the most flagrant of recent abuses of corporate trust have defied prosecution and are conspicuously in evidence as enjoying the fruits of their ill-gotten gains. Aside from the direct and dire consequences of this state of affairs, how much greater is it a blow to the moral sense of the community, on which, after all, depends the incitement to honesty in every capacity and upon which all mercantile transactions in the end must rest.

It can not be the wish of men who bring principle and character to the duties of railway management that abuses so flagrant as those of whose existence the country has had such melancholy proof should continue to exist. They must see that unless some radical change is effected the reputable will continue to suffer from the faults of the disreputable, and that the whole edifice of American credit at home and abroad will remain at the mercy of the most unscrupulous administrators of the most important class of financial trusts in the country. Honest and upright directors and officers of railways can have nothing to fear from the enforcement of a stricter legal accountability for their acts, and the members of railway boards whose every act can bear the light have everything to gain from placing the restraint of publicity upon the underhand practices and devious intrigues which have been employed by conscienceless managers to the prejudice of those commanding a larger share of public confidence. While great abuses have crept into the management of railroad properties, perhaps the greatest arise when the management is transferred into the hands of a receiver. The question then not only concerns the welfare of the thousands of investors who have a direct pecuniary interest at stake, but becomes a menace to solvent competitors whose wise and prudent management has produced satisfactory results alike to the stock and bond holders and to the public.

The bill which I have had the honor to introduce in its first section defines what railroads shall come under its provisions. This embraces only such as under existing laws are already under the supervision of the Interstate Commerce Commission.

Section 2 provides for examiners to be appointed by the Interstate Commerce Commission, and who, under the supervision of that body, shall make periodical examinations of the books of the companies, the expense of which is to be borne by the companies themselves.

The third section gives the examiners power to call for papers and, when necessary, examine witnesses. This is nothing more or less than what is at present required and has been found an exceedingly useful and beneficial safeguard in the case of national banks.

Section 4 requires companies to make quarterly reports, and prescribes in what form the reports shall be made, what points they shall cover, and that such reports shall be published in at least one newspaper at the location of the principal office of the company.

Section 5 provides that immediately upon the appointment of a receiver the official examiner must make a thorough investigation as to the causes which necessitated or justified the receivership. This examination must be completed within sixty days, and one copy thereof filed with the clerk of the court appointing the receiver, one with the Interstate Commerce Commission, and one with the United States Attorney-General.

Section 6 defines the course of procedure in case the examiner discovers any breach of trust or violation of law.

Section 7 deals with the manner in which a record shall be kept of the names and addresses of the stockholders, in order that any stockholder who feels that the trust confided in the directors has not been properly executed may have the same opportunity for reaching his fellow stockholders, for cooperation in such steps as he may find necessary, as the officers of the road have, for the purpose of procuring proxies to defeat his efforts.

Sections 8, 9, and 10 define the conditions which govern the right to vote at corporate elections, prevent voting trusts, and aim to place the election of officers in the hands of bona fide holders of stock only.

The purpose of these provisions is to correct the great abuses that have arisen through the separation of the ownership of shares from the right to vote thereon. Instances might be cited where a board of directors have been guilty of transactions which will not bear the light of day, and individual owners of stock who have had reason to believe that such abuse existed were entirely powerless to disclose the practices by which their interests have been betrayed. On the other hand, directors through brokers entrusted with proxies have borrowed stock over the period of election only for the voting privileges, and thus retained power in spite of efforts made in the interests of the stockholders. In some cases the same directors have been found to be engaged in managing the properties under their control for the benefit of other properties in which they held a larger interest. These are not imaginary conditions, concocted for the purposes of argument, but are chapters from the actual experience of the recent history of railroad management, and what greater blow can be given to confidence than to find men in the upper walks of life, men who have been selected for positions of trust by reason of their supposed honesty, integrity, and sagacity, making use of their compensation to build up rival properties in which the stockholders they are supposed to represent have no interest, but in which their own personal interest is supreme?

Section 11 prevents the appointment as receiver of any person who has been connected with the railroad in any capacity within

one year prior to its insolvency. The receiver thus appointed by the court shall hold office temporarily only until a receiver shall be designated by the bondholders.

It is obvious that the people who are legally first in interest should have the selection of the officer that is to administer their property, in whose management they have so far had nothing to say, the bondholder being heretofore merely a creditor of the corporation the conduct of which has been in the hands of the stockholders. The practice which now obtains is to place the receivership in the hands of the very officer or officers under whose management the property came to grief. If the disaster was brought about in consequence of their recklessness, dishonesty, or incapacity, it is plainly nothing short of a scandal that they should be continued in control of it. It is evidently nothing but justice of the commonest kind that the owners to whom the property reverts are the real parties in interest whose selection of the receivership should prevail. It is safe to say that more illegal and dishonest actions have been covered up beyond the power of reaching the culprits by the present procedure than by any other application of law to the affairs of railroads.

Section 12 provides a penalty for making false affidavits respecting the ownership of stocks or bonds.

The purpose of this provision is to provide specifically for the punishment of abuses which sections 8, 9, and 10 are intended to prevent.

Section 13 limits the power of the receiver and the manner in which salaries of employees and the salary of the receiver shall be fixed.

Railway experience has shown that receiverships have been prolonged far beyond what the interest of the property required, as the receiver and the men under him were drawing fat salaries without supervision or control of any authority, thus placing a premium on the perpetuation of the state of things which they were appointed to terminate.

Section 14 compels the receiver to make reports from time to time to the court which appointed him, and prevents him from paying out money on leased lines belonging to the system beyond the amount earned by such line.

It has been found, for example, that a lease has shown a very large loss in the year before the receivership, and that the payment of any rental on such a lease has been expressly prohibited by the very mortgage for the protection of which the receivership was applied for, and yet the receivers have continued to pay enormous losses out of the trust funds of such a lease, thereby causing defaults on prior liens and endangering the very existence of the property and of the mortgage which had particularly sought the protection of the court.

Section 15 provides that the receiver's accounts shall be passed upon monthly by a master in chancery, who shall have power to allow or disallow any payments made by the receiver.

As the law now stands, it seems to be questionable whether the receiver must account at all during the whole period of his incumbency, or give any information whatever except that which his own pleasure may dictate, as to the methods of administering the trust funds in his hands.

Section 16 forbids the receiver from taking any interest or part in the election of officers or directors of the company, or in any plan for reorganization.

This is dictated by the consideration that if at the final winding up of the receivership the reorganization be made by the receivers or by friendly interests the final accounting may be so completely controlled by them as to be practically a farce. It may certainly become for all practical purposes a useless ceremony, since wrongful payments may have been made to an amount which in most instances the receivers would not be able to repay, even if a judgment were obtained against them.

Section 17 makes it unlawful for a receiver, director, officer, or agent of a railroad to sell "short" the securities of the company or of any other railway company engaged in interstate transportation.

It has been altogether too common to find railway securities made the football of stock speculation by men whose first care should have been to guard them against depreciation. Railway presidents and directors have played fast and loose with their trusts by selling "short" the stocks of railroads under their control, and have deliberately aided in the wrecking of interests which it was their first and last obligation to defend and protect.

Sections 18 and 19 make it unlawful for any receiver, director, officer, or agent to obtain any interest, directly or indirectly, in any contract or agreement with his company, or to be in any way interested in any purchase from or sale to his company, unless a special meeting is called of the stockholders, to whom the directors may recommend such transaction after fully explaining and disclosing the interest of any director, officer, or agent in said transaction.

It is notorious that officers and directors of railroads have sold to their companies at enormous profit property which they had

acquired to unload on the corporation of which they were officers. Accusations have been publicly made of the systematic levy of commissions on contracts awarded and materials purchased on behalf of railroads by those intrusted with making the award and the purchase. In short, all responsibility to the real owners of railways has been lost sight of by managers who have treated their official position as a personal perquisite and have utterly ignored the restraints pertaining to trusteeship alike in law and in morals. If such practices can be corrected by legislation it seems to me that it ought to be done.

Section 20 makes it unlawful for any director, officer, or agent to purchase any stock or bonds for the company, or to sell or hypothecate any securities belonging to the company, except after authorization by the board of directors. Purchases on margin by or on behalf of any railroad are also forbidden. Part payment on purchases of stocks or bonds shall only be permitted if a date be specified when full payment shall be made, which shall not be later than one year from the date when the first payment was made. This is to prevent practices which have obtained under the sanction of existing law, by which officers of railroads have used securities belonging to the railroad as margin for private speculation, and when the venture turned out disastrously claimed that it was for the account of the company, and the company had to bear the losses. The section further makes provision so that it will not interfere with the legitimate purchase of branch lines or other property believed to be necessary for or in the interest of the company; the purpose of the bill being to prevent speculation either by a railway company's officers or in behalf of the company itself, and not to restrain its legitimate extension and development.

Section 21 defines what the designation "director or officer" means, so that a manager or a trustee, or whatever form or designation may be used to distinguish the men who manage the property, may be held to his appropriate responsibility.

Section 22 fixes the penalty incurred by any receiver, officer, or agent who violates the provisions of this act.

In answer to the allegations that stockholders and bondholders should look out for themselves and not look to the Government for legislation to manage their private affairs, it may well be urged that if the province of the Government is not to protect the weak against the strong, the confiding and less well informed against the machinations of unscrupulous officers and directors, then some of the advantages of which our civilization boasts are mere empty words without meaning.

The recent passage by this House of a bill permitting the pooling of earnings by railroads, under the supervision and control of the Interstate Commerce Commission, should lay at rest any claim that the power proposed to be exercised under provisions of this bill are not properly within the province of the National Government. If the National Government assumes the right to regulate the competition between railroads, so that they do not cut each other's throats, no one should certainly question its right to enact laws which hold officers and directors responsible for the trust confided to them, and to provide such statutory regulations as existing abuses and the impotency of existing laws with reference thereto show to be imperative.

The Currency.

SPEECH

OF

HON. JEREMIAH V. COCKRELL.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895.

On the joint resolution (H. Res. 275) authorizing the issue of \$63,116,275 of gold 3 per cent bonds.

Mr. COCKRELL said:

Mr. SPEAKER: I believe this is the last time the Fifty-third Congress will be called upon to determine an uncalled-for issue which was precipitated upon the country over two years ago by those holding United States bonds, together with all other classes of securities running for a long time, payable in the current coin of the United States.

This issue was not before the people when they determined who should fill the executive chair of this great Republic.

The Democratic party won the victory in the last Presidential campaign on the tariff issue. It was true that the standard bearer of the party did not claim to favor free coinage; in fact it was known that he opposed this measure, but he declared himself a bimetalist and was elected upon a platform which by every fair and unstrained construction meant the use of both gold and silver as the money of final redemption. No one dreamed of any-

thing else, except those who were conspiring to change the whole administration of financial affairs.

Now, it is too thoroughly and certainly known from past events, which can not be successfully denied, that speculators, bond holders, and bankers precipitated this un-called for crisis upon this country which has cost the people of this nation billions of dollars, has paralyzed every industry, filled the country with paupers, and brought upon the people of our country more want and suffering than was produced by the late war outside the mental anguish and suffering caused by the loss of life.

This was accomplished by a concerted scheme to repeal an obnoxious law which discriminated against one of the metals, a metal which has been used as money in all business transactions of this country for a hundred years, and in which every obligation of the Government might be paid; had been inserted on the face of all the Government obligations, and by implication on the face of all time contracts. The sole object of this issue being forced upon Congress was to try to destroy one-half of the money of ultimate redemption and thereby increase the purchasing power of the remaining one-half by forcing the country to a gold standard.

This was most vehemently denied and those advocating the unconditional repeal of the purchasing clause of the Sherman law declared in the most tragic manner that they were bimetallicists, and promised the country immediate relief from the terrible strain upon every industry. The law was repealed, but their predictions have not been fulfilled; the clouds of distress still obscure the financial vision. Gold left the Treasury in increased amounts. In fact, more gold left the Treasury in 1894 than for eight or ten years all told prior to that time.

The next move on the financial chessboard by the players of this mystic game of finance was to prove to Congress that it was impossible to retain \$100,000,000 of gold under existing conditions, as a redemption fund, to redeem the outstanding greenbacks. This \$100,000,000 of gold reserve and these outstanding greenbacks had been in existence for twenty years, and yet no complaint was ever heard until after the purchasing clause of the Sherman Act was repealed.

It was well known to those who were manipulating the moves on the financial chessboard that as long as the power remained to purchase silver bullion and coin even a limited amount of silver dollars, being a part of the money of the Constitution and of final redemption, a raid on the gold reserve would not accomplish their purpose. After the purchasing clause was repealed the hoarding of greenbacks and Treasury notes began, and as their object lesson had succeeded so well in accomplishing the repeal they began their raids on the gold reserve, and when the gold in the Treasury reached the seventy-million-dollar dot they began to cry "want of confidence."

The honor and credit of the nation was at stake and the gold reserve must be restored. With the greenbacks and Treasury notes they raided the gold reserve and locked it up in the vaults of banks, and these bankers were then ready to restore confidence and to maintain the honor and credit of the Government by exchanging this gold for bonds. The bonds were issued, the gold reserve was restored, and the confidence of the manipulators was restored.

The next move was to shake their own confidence, for no one else had lost confidence either in the honor of the Government or the ability to meet all its obligations in the money of the contract and that to the perfect satisfaction of the people, but in order to quiet their own fears another raid on the Treasury began; they took their hoarded notes to the Treasury a second time, drew out the same gold they had deposited, and again reduced the gold reserve in the Treasury below what they termed the danger point, and again they cried want of confidence and tried to get the people all over the country to take up the cry, and in trying to spread the contagion so alarmed the Administration that another bond issue was proposed in order to satisfy these cormorants in increasing their wealth by dealing in bonds at the expense of the taxpayers of the nation.

This was done, and as soon as the bonds were safely stored they began for a third time to raid the Treasury; and they had evidently added workers in their scheme, for there was a regular scramble among the patriots, whose confidence had been restored, to see who could draw the greatest amount of gold from the Treasury; and again it was in order to put on the sable garment of want of confidence and parade the streets as mourners over the downfall of a nation's honor and credit. And yet, strange as it may seem, this nightmare of ruin has frightened and deluded many good and patriotic men into the belief that the Government is on the verge of financial ruin.

The next move of these financiers, all clothed in mourning, was to declare that there was no relief from the disastrous consequences which surrounded the Treasury except to take up this hated and despised Treasury and greenback notes, with which they had raided the gold reserve for the third time, by issuing

\$500,000,000 in gold bonds bearing 3 per cent interest. This unreasonable and arrogant demand was acceded to by the President, who sent a message to Congress asking that power be granted to the Treasurer to issue these bonds.

It is a fact shown by the sale of the bonds that on the very day Congress was called upon to enact into law this uncalled-for measure, United States bonds, payable in coin, running for less than twelve years, were selling in the markets for 3 per cent, and yet Congress was called upon to issue gold bonds bearing 3 per cent.

Congress promptly refused to carry out this scheme of the conspirators to compel the Government to submit to their demands—the measure was defeated by a decided majority, a majority of Democrats voting against the measure.

Let it be understood up to this point it was declared the credit of the country would be ruined and the gold was still being withdrawn from the Treasury, but upon the demand being made on Congress for this bond issue, and after the defeat of the measure, gold suddenly ceased to leave the Treasury, having reached the low-water mark of \$42,240,000, and it has since that time slightly increased. The danger point was reached by the bankers themselves; they could not afford to go farther in their efforts in discriminating against their own securities, made payable in coin, as it might discredit them abroad, and they began at once to hedge against the disastrous results that might follow.

Now, to show the opinion of some of the bankers in regard to a Treasury depleted of gold, and what it means, I will quote from Mr. Henry Clews, of the firm of Henry Clews & Co., a large banking house in New York, men who have and continue to demand gold bonds. The effect of the failure of the Government, to pay gold on demand is clearly and truly portrayed by this banker in his circular of February 2, 1895.

Hear what he says:

The worst of the squall, I think, is now over. Some people have been more frightened than hurt. If the United States Treasury should by chance suspend gold payments, which is the worst that can happen, and that is not likely, even in that event the holders of legal tenders would most likely want to get out of their money and take stocks and bonds instead, as at the present prices most of the active marketable securities are about down to a solid gold basis, while the money they hold will lose its gold value, for a time at least, if the Treasury should discontinue gold payments.

The business interests of the country have gone down to a gold basis. It is so with manufactured goods of every description. It is so with iron, steel, cotton, grain, and securities also. The threat now is that the circulating money of the country is going to drop from a gold basis to a silver basis, which would be so if gold redemption of its notes were stopped by the Treasury, in which event the next turn would be for sagacious people to exchange their nonredeemable paper money into manufactured goods or raw material, such as iron, grain, and cotton; also into securities or anything else that has dropped down to a low basis of value. The feeling would set in to buy everything that looks like a bargain, which would be the forerunner of buoyant and advancing markets in all lines of business in this country.

Mr. Speaker, it seems to me that the very decided vote against the \$500,000,000 bond bill, including a majority of both Democratic and Republican Congressmen, should have satisfied Mr. Carlisle that the Fifty-third Congress would never consent to degrade its own outstanding indebtedness by making gold the only money of ultimate redemption in the interest of the creditor classes.

In view of the desperate effort to discredit the outstanding obligations of the Government, for that would be the result of the proposed legislation, during this uncalled for and, in my opinion, unwise demand made for a gold standard, the outstanding Government bonds made payable in coin have maintained a steady and uniform price, equal to that of any period of the past, in all of the markets of the world, and to-day, outside of attempted legalized legerdemain and official diplomacy, have stood the fearful strain attempted to be placed on them to discredit them in the hands of holders. Yet they maintain their accustomed value except by those who are proposing to sell them to a foreign syndicate below the market price, by private bargain with men whose very presence in the transaction cast a shadow upon the sale, at a loss of from nine to sixteen million dollars, principal and interest, to the people of the United States.

Mr. Speaker, some of us who have watched with interest each succeeding event that has transpired, and each move made by the players for a gold standard (once so vehemently denied on this floor) on the financial chessboard, are not at all surprised at this the expiring hope, once buoyant in the minds of financial plotters, that they might increase the value of their hoarded gold and give it a double purchasing power over the products of all labor. I trust that the action of this House will crush this hope and that this will be the final funeral, and that those opposing the measure will bury it so deep that it can never rise again.

The mysterious garment, confidence, has played a conspicuous part in each move, yet the credit of the Government has remained unimpaired during all of the mad, hideous cries which were calculated to destroy the confidence of our creditors in our ability to pay the small debt we owe in any money that would be acceptable to them. The written history of past events is an open book out of which we can gather information which will prove to us the power of this Government to meet all demands made upon it;

hence none who are acquainted with the financial history of our country have lost confidence in its ability to meet all its obligations and in a manner perfectly satisfactory to its creditors; none doubt this but the gold shylocks. Let us see what some of the history of the past shows. At the close of the late war the Government had outstanding demands against it for the enormous sum given below. The figures also show the amount of expenditures for all purposes up to date.

Interest-bearing debt in 1865.....	\$2,906,561,186
Bonds afterwards issued for redemption.....	195,500,000
Total.....	2,592,061,186
Bonds and interest-bearing debt outstanding now, not including those issued in aid of Pacific railroads.....	679,186,130
Paid and retired since 1865.....	1,912,895,056
Premium paid on loans and redemptions.....	119,849,886
Paid in pensions.....	1,721,394,063
Administration expenses, Pension Department estimate.....	60,000,000
Interest on public debt.....	2,468,282,731
Greenbacks retired, about.....	97,160,569
Amount paid on account of war debt.....	6,379,570,905
Other expenses paid in same period:	
War Department, for support of Army, improvement of rivers and harbors, payment of war claims, and fortifications.....	\$2,672,451,740
New department for support of Navy and building new Navy.....	746,917,248
To the Indians.....	204,242,660
Expenses of civil administration.....	2,029,032,509
Total expenses of the Government.....	5,652,674,277
Add war expenses as above.....	6,379,570,905
Grand total.....	12,032,245,282

This estimate was made by Mr. COOMBS, of New York, a solid gold-standard man, and I suppose it is approximately correct. It will be remembered that over \$6,000,000,000 of this debt was the result of the late war, when our population was less than 40,000,000, and half, or nearly so, of our people were almost paupers. Since that time our population has almost doubled, and the wealth of the country about three times what it was then, and yet under such a load of accumulated debts the country has prospered and met this vast debt with money under previous conditions and in a way satisfactory to the creditors of the Government. We are told now, with a debt of a little over a billion of dollars, in bonds, Treasury notes, and greenbacks, all told, that we are on the verge of a financial crisis such as the world has never experienced.

What a miserable subterfuge with which to alarm the country and frighten Congress into adopting the gold standard, for fear the Government will lose \$16,000,000 if Congress does not accede to the demands made by reason of a secret sale or contract entered into by those in authority to sell the credit of the country to foreign syndicates composed in part of Jewish bankers.

The representatives of the people now have it in their power by a vote to defeat this last attempt of the shylocks to put the country at their mercy by such a decided majority as will put the question at rest, for the present at least, and it is to be hoped for all time. As a Government we have placed ourselves in a most humiliating attitude, a position that should bring the blush of shame to the cheeks of every true and honest patriot.

When patriotism was the keynote that made our securities at home and abroad more desired than those of all other nations, with a ponderous debt of many billions of dollars resting upon the honor and credit of a patriotic people, there was no wrangling about the character of our money, but the moment patriotism was put aside and avarice assumed its place in the legislation of the country, that moment the greed and the spoils of trickery and traffic in the legislation of this great Republic began, in the interest of a few who were holding our securities, national and corporate, at home and abroad; they sought at once to increase their wealth by destroying half of the money of the nation under cover of protecting the credit of the Government, to give confidence.

The people are now beginning to understand this issue. The long concealed purpose has been fought under the false declaration of bimetallicism. They have deceived many good men by claims of bimetallicism; many did not fully understand the situation until the demand for the five-hundred-million-dollar gold bond issue, and this most extraordinary measure reported by the Ways and Means Committee. It is to be hoped that this House, Republicans and Democrats, will give this measure such an overwhelming defeat that it will not take up the time of this Congress any more.

The credit of this Government will not be impaired in the least if we go to a silver basis; it is not within the power of the men who are pressing a gold standard to injure the credit of this great nation, and their frantic efforts to deceive the people will fall powerless at their feet. The sovereign people of this great nation will see that its credit is not impaired either by this or any future Administration. And they will also see that the money of the people, the money of final redemption, is not destroyed at the mandate of any set of bankers at home or abroad.

There is not a man on this side of the House who would vote for any act that would cast the least degree of suspicion upon the power and ability of this Government to furnish gold when gold is needed to carry on legitimate commerce with countries that use gold exclusively; but more than half of the Democratic members are opposed to the policy or measure authorizing the Secretary of the Treasury to furnish gold for speculative purposes. We are opposed to that policy which has brought discredit and humiliation upon our management of the finances of this country by putting us as suppliants at the feet of a few foreign bankers, when it is within the power of the Secretary of the Treasury, under the law, to pay all demands upon the Treasury in either gold or silver coin.

It would, however, not be necessary to pay out one dollar in silver not wanted or desired by the creditor if those speculators were notified that no gold should go out of the Treasury to be used to discredit the nation's ability to deal honestly with its creditors. Pay gold where gold is needed to settle the balance of trade against us and for all legitimate purposes of trade and commerce. It is to be hoped that at no distant day some man will hold the important position of Secretary of the Treasury who will have the courage at least, to put it mildly, to carry out the plain letter of the law. Then this business of buncoing the Treasury will cease. Then will we cease to be the laughing stock of other nations, and not until that period arrives will prosperity return.

The Currency.

This Democratic Administration, having robbed us of our credit and our markets, is now asking for credit of Great Britain.

SPEECH

OF

HON. CHARLES CURTIS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. CURTIS of Kansas said:

Mr. CHAIRMAN: While I do not fully indorse the substitute offered by the gentleman from Maine [Mr. REED], and would not support it as an original proposition, yet it is very much better than the Cleveland-Carlisle-Springer bill. It has been offered by Mr. REED as a temporary measure to meet the conditions described by the President, if which were true Mr. REED's measure would furnish sufficient and immediate relief.

The Administration bill provides for the issue of long-time gold bonds. Mr. REED's substitute simply amends the act of January 14, 1875, by reducing the interest from 5 per cent to 3 per cent, and provides that the bonds shall be redeemable at the pleasure of the United States, in coin, after five years from their date. The contention here is between a gold bond bearing 3 per cent, having thirty years to run, and a coin bond bearing 3 per cent, having five years to run.

If the amount of the loan be considered a better understanding will be had. Mr. Cleveland and his friends contend for a loan which will take from the United States Treasury, during its existence, \$55,800,000, while Mr. REED's substitute proposes to accomplish the same purpose by only taking from the Treasury \$9,300,000, or a difference of \$46,500,000 in favor of the people as against the holders of the bonds.

If the statement of the President is true that there is a sufficient amount of revenue being received to run the Government, neither of the propositions before us ought to be considered, for the Secretary of the Treasury has the power to go into the market and exchange the money held by him in the Treasury for gold if it is needed. In other words, the Secretary can replenish the gold reserve if he has surplus money lying idle in the Treasury.

According to the bulletins issued by the Treasury Department daily, showing the receipts and expenditures of the Government, there is a daily deficit of several hundred thousand dollars, and the friends of the Administration have been compelled to admit that the issuing of bonds has been made necessary and will be continued as long as the revenues are not sufficient to pay the running expenses of the Government; while at the same time it is everywhere conceded that there is no law authorizing the issue of bonds for the purpose of maintaining the Government in its daily expenditures.

Why the President in his message and the advocates of the measure now before us should misrepresent the true condition of the Treasury and claim that they are only issuing bonds to re-

plenish the gold reserve, is too unreasonable for the most credulous to consider, and the claim is made for the sole purpose of deceiving the people. If any portion of the currency redeemable in gold could not be reissued by the Treasury Department, there might be some excuse for the President and his Secretary; but it is a well-known fact that every dollar of currency presented at the Treasury Department, which is a lien against the gold reserve, is also entitled to be reissued by the Secretary, which can be used in an exchange for gold, as it is redeemable in gold. Therefore, there can be no excuse for issuing bonds in this country in a time of peace, and the policy which forces their issue is not only unwise but un-American.

Why should the people doubt the facts as to the controversy in question if we set aside the President's statement or should waive that of his opponents? The records of the Government are the best proof possible.

The excess of expenditures over receipts February 5, 1895, was \$803,947.25. The excess of expenditures over receipts for the month was \$3,014,173.54. The excess of expenditures over receipts for this fiscal year was \$36,296,652.50. If the sale of bonds is not for the purpose of reimbursing the available fund of the Treasury, from whence is the Secretary to get money to pay these great deficits which are growing daily? No further argument is needed to settle this question.

The losses sustained by the national Treasury are sufficient to explain why the want of employment among our laboring people is everywhere present; why idleness is in our great centers of industry and want is multiplied until the resources of the noblest charity ever known in civilization are overtaxed.

You may examine the history of this country and it will be shown that in every period where the balance of trade was against the United States there was a demand for money to pay the balance which should have been paid in trade. It is only necessary to show that history repeats itself, for under the Administrations of Polk and Buchanan, both Democrats advocating tariff for revenue reform, there was not enough revenue collected to meet the current expenses of the Government, when the following loans were made necessary:

Treasury notes of 1846.....	\$7,687,800.00
Loan of 1846.....	4,999,149.45
Mexican indemnity stock.....	303,573.92
Treasury notes, 1847.....	20,122,100.00
Loan of 1847.....	28,230,350.00
Bounty land scrip.....	233,075.00
Loan of 1848.....	16,000,000.00
Texas indemnity stock.....	5,000,000.00
Treasury notes, 1857.....	55,778,900.00
Loan of 1858.....	20,000,000.00
Loan of 1860.....	7,025,000.00
Treasury notes, 1860.....	10,010,200.00

178,887,846.37

Especially attention is called to the fact that President Pierce, like President Cleveland, insisted that there was more revenue than was needed, and that a further reduction of import duties was made in 1857 as a result of his recommendation. Therefore, President Cleveland is following closely the precedents established by his Democratic predecessors.

Argument is not needed to convince the people at this time that the Democratic policy of President Cleveland has been, from the time of his inauguration, March 4, 1893, to the present, to strike down the protective policy of the Republicans and destroy the use of silver as money. The people of the United States have always believed in gold and silver money and convertible paper. This proposition does not admit of controversy, for the credit of the country demands not only a sound and uniform currency, but it is now, as it always has been in the past, dependent upon a stable coin in which it is to be redeemed. The Government should not discredit a part of its coin, and Congress should never enact a law which will discredit our outstanding obligations.

With very many others, I sincerely hope that President Cleveland's bond issue will not prevail. It is not in the interest of this Government. The London Times and other English papers are frank enough to admit that the plan of President Cleveland is a detriment to the United States and will prove of benefit to Great Britain. The Republicans of the United States are to be congratulated that no measure ever advocated by them has been heralded in the English papers as of benefit to Great Britain, our great commercial rival. Therefore the success of the Republican party has been hailed with joy by the American press and the American people, while nothing but regret has marked the spirit of the English press.

This Congress can not too severely criticize the present Administration for its dealing under cover secretly with the agents of foreign bankers. The President should be given to understand by Congress that American interests should first be considered before a great opportunity is turned into the channels of profit to our greatest foreign competitors.

The false claim of the Democratic party that the policy of the present Administration has not been in the interest of foreign

bankers and foreign producers, and that the Gorman-Wilson bill was enacted in the interest of the farmers and the producers of the United States, needs only a passing thought. I desire to call attention to the last statement of the imports and exports, in which it is found that in December, 1893, under the operation of the McKinley law, only 83 head of cattle were imported into the United States, while for the month of December, 1894, under the Wilson-Gorman law, 27,192 head were imported to compete with the product of American farmers. May this be a sufficient answer.

The Democratic claim, through the policy inaugurated, that we should find open to us the markets of the world has proved a strange deception, by which we have given away our own markets and have not found a place in which to sell our products. There is a remedy for all this, but it will never be applied by this Administration; but it is to be hoped that the Republican House, lately chosen, and a Republican Senate in the near future, with a Republican President as the Chief Executive, to be chosen in 1896, we may once more find the gold reserve intact, when questions about currency and revenue will cease to agitate the public mind and bond issues will become again incidents of the past, and we shall take up the march of prosperity by redeeming lost ground and wasted opportunities, that our people may once more be profitably employed, when there shall be fulfilled every promise made by the leaders of the Republican party of better times because of better opportunities, and when we shall again rebuild the waste places, having established confidence in the restored credit of the country and its ability to meet all obligations.

Our people remember the promises made by the leaders of the party now in power of better currency, a better market, and better times; yet inside of two years they have deranged our currency and threatened to destroy it, and times are worse than they have been for thirty-five years.

The friends of the President have had much to say about his wise financial policy, but the truth is the only thing he has done is to degrade our financial system; by his unwise and un-American policy he has changed this country from a bond-redeeming to a bond-issuing one.

The Currency.

SPEECH

OF

HON. J. R. WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. WILLIAMS of Illinois said:

Mr. CHAIRMAN: It is proposed by the pending bill to authorize the Secretary of the Treasury to issue about \$500,000,000 of 3 per cent gold bonds for the purpose of reducing and canceling all the greenbacks and Treasury notes issued under the Sherman Act of 1890. As these greenbacks and Treasury notes are retired their place is to be taken by currency issued by the national banks. I do not believe that the people I represent on this floor are in favor of retiring all our greenbacks and Treasury notes, a noninterest-bearing debt, by fastening upon the people of this country an interest-bearing debt of \$500,000,000, which may run for fifty years and on which the people may be required to pay \$750,000,000 in interest; and all this for the purpose of allowing the national banks to furnish the people with currency instead of having it furnished by the Government.

For years our greenbacks have been a favorite money with the common people, and I believe they have as much faith in their value as they will have in bank notes, which are more expensive to the people. It is true the national-bank notes are secured by the bonds of the Government which are payable in coin, while the greenbacks are payable in the same kind of coin and secured by the same Government. Besides, Mr. Chairman, it seems to me that the power to issue and control our entire volume of paper money is a great and dangerous power to place in the hands of banking corporations. These corporations are but human, necessarily selfish, and they would increase the currency when it was to their interest to do so, and contract it when their interest required it.

The power to control the amount of money to be used by the people means the power to control the price of products, for the price of products depends in part upon the amount of money among the people to effect exchanges. Gentlemen talk about taking this

money question out of politics. Sir, when you put it under the control of the national banks you are placing it right in the center of politics; you give this great power over the fortunes of our people to the banking corporations of this country, and they will not only strive to retain such power, but to enlarge it at every opportunity. They will lose sight of all other questions of government, and their great influence will be controlled by this one issue in the election of Presidents, Senators, and Representatives.

We can not afford to put ourselves at the mercy of these greedy corporations. That is one great trouble now. The great banking houses of the country are in control of our financial affairs, and while they number in their ranks some very able financiers, they are no more patriotic than other people, and necessarily study these questions from a selfish standpoint. All the plans and schemes which these bankers invent and suggest to the President and Secretary for the relief of the country are those plans which will best serve their own purpose of making money out of money.

The great influence of these banking institutions over financial legislation was very manifest in the repeal of the purchasing clause of the Sherman law. There is no doubt in my mind that they did much to bring on the embarrassing situation which forced the unconditional repeal of that act, and many of them declared at the time that the repeal of that law would restore public confidence and bring a return of prosperity to all our people; but after the repeal of the Sherman Act these banks, instead of doing what they could to restore confidence in our finances, went to work to secure the retirement of our greenbacks and Treasury notes, in order that they might have the power and the profit of furnishing the people all their currency.

It would seem that those banks, after they had fixed a limitation upon silver and Government currency, should have had sufficient confidence in our money to cooperate with the Government in restoring confidence among the people. But these bankers, encouraged by the success of their attack on silver, began to use our greenbacks and Sherman notes to draw gold from the reserve, so as to create a prejudice against the greenbacks and Sherman notes, and bring about such an embarrassing condition of the Treasury as to force Congress to retire all this paper currency of the Government, and give the banks the power to issue their own paper to take its place.

Mr. Chairman, we have not a sufficient amount of gold to maintain our present volume of paper money on a gold basis whether such currency is issued by the Government or by the banks. In order to make our paper money safe and sound it should be based upon a sufficient volume of coin, and in order to maintain a sufficient volume of coin for the redemption of our currency we must come to the use of silver for standard money as well as gold and the free coinage of both metals upon the same terms. Several nations in the old country to-day are engaged in the same scramble for gold that we are.

The trouble is there is not enough gold in the world to furnish the people a sufficient supply of coin, and to destroy the use of silver as money and confine ourselves to gold alone means such a great contraction of our money as to force the price of products much lower than what they are. This universal demand for gold, coming from so many nations at the same time, gives gold a higher value, and the higher you make gold the lower you make wheat, the scarcer you make money the cheaper you make products, for the less money you have the more products it takes to secure a dollar.

But, Mr. Chairman, why should we buy gold to redeem the Sherman notes when we have in the Treasury belonging to the Government more than enough uncoined silver to redeem all these Treasury notes, and the law under which they were issued provides that they may be redeemed with this same silver for which they were issued. What do the gold advocates propose to do with this \$180,000,000 of uncoined silver now in the Treasury, if they redeem the Sherman notes with gold? This great volume of silver belongs to the people and should be coined for their benefit, instead of allowing it to remain idle in the Treasury as dead property and taxing the people to buy gold to use in its stead.

The people are not afraid to use this silver; why not allow it to be coined into standard silver dollars and issue on them silver certificates of small denominations to circulate among the people, where they would not annoy the banks. With the Sherman notes thus disposed of we would have only our greenbacks left, amounting to about \$340,000,000. For nearly twenty years we have maintained these greenbacks at a parity with coin, and I believe we are still able to do so. Our people are just as patriotic and our Government just as solvent as any time in its history, and no member of this House or citizen of this Republic expects or desires any obligation of this Government to be paid in any other kind of money than that which is worth 100 cents on the dollar, whether valued in gold or silver coin. With the present amount of money which we have in the United States, limited as it is, and with such a demand for it in the development of our country,

there can be no real danger that a single dollar of it will ever go to a discount.

Mr. Chairman, I am further opposed to this bill for the reason that these bonds are made payable in gold. All our Government bonds are made payable in coin, gold or silver, and to-day are selling at a premium, unless it is those bearing 2 per cent interest. There would be no difficulty in floating a coin bond. I do not believe it would be wise to make this change in a long-established policy of this Government. I do not believe we can afford to make such a discrimination against our great volume of silver coin.

Whatever may be said against the further coinage of silver, certainly every patriotic citizen desires to see the parity maintained between gold and our present silver coin, amounting to about \$500,000,000, including fractional coin. For this Government to issue bonds payable in gold would be to recognize a difference between our gold and silver coin which does not exist, and this very act would tend to drive gold to a premium and silver to a discount. For whenever you make these bonds payable in gold you make it to the interest of those bondholders to force gold to a premium, and thereby increase the value of their bonds.

When the National Government once agrees to make its bonds payable in gold, States, cities, counties, towns, and individuals would soon be required to make their obligations payable in gold, and we would soon find ourselves upon a gold basis. So this is a blow at our silver coin I shall never strike. I believe in the same kind of money for the bondholder as the plow holder. I do not believe in gold for the bondholder and silver for the plow holder. Let us have the same kind of money for all classes of our people, gold and silver coin, paper money based on these two metals redeemable in either, at the option of the Government, and every dollar worth 100 cents in every part of our country. If we begin to favor a privileged class with gold such a discrimination is bound to result in forcing the two metals apart.

It is true, Mr. Chairman, that the gold advocates claim the coin obligations of the Government are payable in gold, but the law does not say so. The word coin in these bonds and notes of the Government was construed to mean gold by a Republican Administration away back in 1879, and such construction has been followed by every succeeding Administration down to the present time. That is, the law gives the Government the option to pay in gold or silver, but the Government has always given the option to the bondholder and note holder. Mr. Chairman, it is plain to everyone that it would be much more difficult for an Administration to reverse this policy now than it would have been to give the Government the option in the beginning.

It is true, Mr. Chairman, that the Treasury is in a much less solvent condition now than it was a few years ago, and I shall endeavor to show that this condition is not due to the effect of the new tariff law, but to the extravagant use of public money in the administration of our Government by the Republican party. Ever since the legislation of the Fifty-first Congress, which was Republican, went into operation our annual expenditures have been largely increased; up to that time our revenues were increasing over our expenditures.

At the beginning of Mr. Cleveland's first term the available funds in the Treasury, exclusive of the gold reserve of \$100,000,000, were \$146,679,946.85, and at the close of his first term the available funds in the Treasury, exclusive of the gold reserve of \$100,000,000, had increased to \$230,348,916.12, and yet Mr. Cleveland had paid on the public debt during his first Administration \$341,448,449.20. This shows the available funds in the Treasury during Mr. Cleveland's first term increased nearly \$84,000,000, notwithstanding the great amount paid out on the public debt.

Mr. Harrison began his term with \$230,348,916.12 of available funds in the Treasury not including the gold reserve of \$100,000,000, and at the close of his Administration the available funds in the Treasury had been reduced to \$63,450,575.18. There was paid on the public debt during Mr. Harrison's Administration as shown by the records \$258,709,727.35, this being nearly \$83,000,000 less than was paid on the public debt during the first term of Mr. Cleveland. To repeat, the available funds in the Treasury during Mr. Cleveland's first term were increased nearly \$84,000,000, while during Mr. Harrison's Administration the available funds in the Treasury were reduced nearly \$170,000,000.

This was bringing the Government toward insolvency at a very rapid gait. Again, the total expenditures of the Government from January 1, 1886, to January 1, 1889, being the last three calendar years of Mr. Cleveland's first term, amounted to \$811,446,871.82, while the total expenditures of the Government from January 1, 1890, to January 1, 1893, being the last three calendar years of Mr. Harrison's Administration, amounted to \$1,015,495,814.72. In other words, the last three years of Mr. Harrison's Administration cost the people over \$200,000,000 more than the last three years of Mr. Cleveland's first term, and yet Mr. Harrison paid much less on the public debt.

The total expenditures of the Government from January 1, 1888, to January 1, 1889, being the last calendar year of Mr. Cleveland's first term, amounted to \$275,325,068.84, while the expenditures of the Government from January 1, 1892, to January 1, 1893, being the last calendar year of Mr. Harrison's Administration, amounted to \$367,202,524.98. That is, the last calendar year of Mr. Harrison's Administration cost the people about \$92,000,000 more than the last year of Mr. Cleveland's first term.

These figures, taken from the records of the Treasury Department, clearly show what party is responsible for the present condition of the Treasury. These increased expenditures of public money began with the Reed Congress, under Mr. Harrison's Administration, and that Republican Congress not only largely increased the annual appropriations over those of any previous Congress, but it enacted legislation which fastened obligations upon the Government that will not be discharged for years to come, and which makes it impossible for the present Congress to make any substantial reduction in appropriations.

In answer to the charge so frequently made by the Republicans that our revenues are falling off on account of the new tariff law, I wish to submit a few figures taken from the statements and reports of the Secretary of the Treasury, which are not only official but perfectly reliable. The total amount collected by the Government from customs and internal revenue during the seven months ending January 31, 1895, five months of which were under the new tariff law, was \$178,221,492.36, while the total amount of revenue collected from the same source under the McKinley law during the seven months ending January 31, 1894, was only \$165,957,288.22.

That is, the Government collected over \$12,000,000 more revenue during the last seven months than was collected during a corresponding period in 1894, under the McKinley law, from the same source. Take the five months ending January 31, 1895, all of which was under the new tariff law, and we find the total revenues collected from duties on imports alone amounted to \$66,793,993.86, while the total amount collected from the same source under the McKinley law during the five months ending January 31, 1894, was only \$54,396,015.37. Next, take the month of January, 1895, under the new tariff law, we collected from duties on imports alone \$17,361,916.25, while the amount collected under the McKinley law from this same source during the month of January, 1894, was only \$11,454,803.14, making a difference of nearly \$6,000,000 in favor of the new tariff law during one month on customs alone.

So, Mr. Chairman, while this Democratic Congress reduced taxes upon many of the necessities of life, it also increased the revenues of the Government; yet, in spite of these figures from the Treasury Department, Republicans insist that the deficiency in our revenues is due to the new tariff act, while as a matter of fact, this deficiency is largely due to the great increase of public expenditures caused by the extravagant legislation of a Republican Congress. So far we have received but little tax from sugar under the new law on account of the large supply of sugar imported just before the law took effect; hence, our revenue from sugar importations will soon begin to increase.

Up to this time we have received no revenue from the income tax, but within the next few months it is estimated we will receive from \$15,000,000 to \$20,000,000 from this source and a much greater sum hereafter. So it must be plain to every fair-minded man that the Government will soon be receiving much more revenue under the new tariff law than it would have received under the McKinley law had it remained in force; and there is no question but what our revenues will exceed our expenditures just as soon as normal business is restored.

Mr. Chairman, I admit we need financial legislation, and I am sorry that we have not been able to agree upon some measure that would benefit the people. While we were discussing the repeal of the purchasing clause of the Sherman Act in August, 1893, I then insisted upon this floor that we should at that time go into a full consideration of the financial question and agree upon some measure that would give relief to the people. But the gold advocates insisted that we should repeal the Sherman law first and legislate on silver afterwards, and this kind of talk induced some silver Democrats to vote for unconditional repeal.

The purchase of silver was stopped and the gold advocates got their desire. But what did the silver Democrats get? Nothing but the veto of the seigniorage bill. So the gold advocates have received some legislative comfort during this Administration, but not one crumb of comfort has fallen to the silver Democrats during this entire Administration. Whatever concessions have been made on these questions have come from the silver men, and we have appealed in vain to that provision of the Chicago platform which declared for both gold and silver as standard money.

Now, when the people in their anxiety cry out for legislation on this question, do they expect the friends of silver to abandon their principle, forget the promises upon which they were elected, desert their cause, and join in legislation hostile to silver in order

to restore confidence in the advocates of gold? Sir, I know not what course others may take, but for me I shall never support a measure which tends to elevate our gold coin above our silver coin. For if we are to use these two coins as money successfully we must use them upon the same terms, and not crown one as master of the other.

There are some people who are so alarmed at the condition of our finances as to think any kind of legislation at this time is better than no legislation at all. But for myself I would rather stand here and oppose bad legislation than to assist in placing it upon the people in order to relieve them from imaginary fears. The fact is, the Treasury of the United States is in very good condition, if the people were only permitted to think so. But these constant cries of alarm have tended to excite the people and render the situation more serious apparently than what it really is. We have in the Treasury to-day of available funds, exclusive of the \$100,000,000 reserve, over \$80,000,000 to meet current expenditures, and our revenues increasing.

Now, as there is no possible chance for this bill to become a law, why should it be here? Why prolong this agitation? It can only aggravate the situation. If we can not have legislation let us at least have rest. Let the fears of the people subside and their attention be turned to their business affairs until this great financial issue comes directly before them for their consideration and judgment, as it must in the near future. I regret that we have not been able to increase our volume of standard money according to the Chicago platform; but no legislation friendly to silver can be enacted until the people who favor the cause of silver unite upon that issue and send to this capital a President, Senate, and House of Representatives pledged to such legislation. Sir, the contest of bimetalism against gold monometallism must pass from this Chamber to that great tribunal, the American people, where the cause of silver will be taken up with patriotic devotion and carried to a triumphant victory.

Pension Appropriation Bill.

The soldier should be placed in a position where he can go with his honorable discharge, and by the mere production of that discharge, before the proper authorities, have himself placed on the roll of honor, and defy party manipulation and partisan interference.

The soldier of my country who marched and fought in the great campaigns that saved the Union ought not to be made the football of party politics.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 14, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8092) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1896, and for other purposes—

Mr. GROSVENOR said:

Mr. CHAIRMAN: I do not intend, in the discussion of the questions involved here, to invoke any partisan or sectional spirit. It has been a long time since I, either in the House of Representatives, or on the stump, or in the press, or anywhere else, sought to revive any of the animosities of the war, and I have labored constantly, in season and out of season, to do my share to restore a united country; and, Mr. Chairman, I am happy to say that I have lived long enough to see my wishes and my prayers in a large degree answered and fulfilled.

On an occasion like this it is not necessary, for the purposes of my argument, that I shall invoke the spirit of sectionalism and partisanship; and yet I shall criticize from certain practical standpoints, the administration of the Pension Bureau; but I shall attribute the difficulties arising here more to a faulty system than to an unpatriotic wish of any man connected with the Administration.

I have long ago concluded that there is nothing in the administration of the affairs of our country more obnoxious to the higher instincts and aspirations of an American citizen than is the administration of the Pension Bureau, and I plant myself upon that ground without the purpose of criticising one party in its administration, so far as this suggestion is concerned, above another. I am opposed to the whole system. I do not believe in it. I believe that there is a vice in connection with it that is fundamental, that is organic, and that can only be gotten rid of by a complete revision, if not revolution, in the entire system of pension administration, and hence of pension legislation.

Before I proceed further upon that particular line, I propose to criticise the attitude of the Appropriations Committee in the matter especially of this appropriation bill, and I do it the more readily

and the more vigorously because a year ago I sounded the note of criticism upon the exact condition of things which we have here to-day.

My position is that in this connection, in the matter of the estimates for the pension appropriation bill, there ought to be given to the country the fullest possible knowledge of the purposes of the committee, in asking the appropriation which they have asked for here. One year ago, upon a discussion of this bill, in the first session of this Congress, I used the following language:

We have reached almost the end of an average generation of men since the war closed, and we are here to discharge a single duty, and that duty is to appropriate money enough to meet the demands upon the Treasury of the United States to be made in pursuance to law by the soldiers of the country. If I felt absolutely sure, Mr. Chairman, that the administration of the Pension Office would disburse the amount of money carried in this bill, I should feel greatly relieved in my mind as a friend of my comrades of the late war. But when I read the statement of the Commissioner and see the illogical position in which he has placed himself, I am afraid that the threats which were made at the beginning of this Administration are to be carried out; and that the "roll of honor" which you are talking about is to become, so far as your actions can affect it, a roll of infamy. I do not believe it is possible—I do not believe any man believes it is possible—that the just claims upon the Treasury can be met by the appropriations carried by this bill.

I stand here now to sound a warning note, which I will reiterate, if my life is spared, a year from now—that you in passing this bill with this inadequate appropriation will do one of two things; you will either violate your duty to the old soldier in one of the ways which I will try to point out later on, or else you will have to create an enormous deficiency to be covered by this Congress in the year which is to follow.

And right here I might as well ask what is to be done during the coming fiscal year by the Pension Bureau, with the nearly 600,000 unadjudicated pension claims pending in the Bureau of Pensions to-day. What estimate is being made by the Commissioner of Pensions in this statement, which is a part of the report of the Committee on Appropriations connected with this bill in their behalf? What is to be done with those claims? I stand here to say that a close analysis of his entire statement shows that he does not propose there shall be during the coming year any considerable number of favorable adjudications of the 600,000 pending pension claims. In no other way can this estimate be accounted for.

That was my opinion a year ago, and to-day you read it as history as well as prophecy. That bill carried an appropriation of \$150,000,000, and was a reduction from the former appropriation of the year before of \$15,000,000. To-day it is ascertained and reported that of that \$150,000,000 there will be at least \$10,000,000 which will not be disbursed during the year for which, and in which, it was made applicable to pension claims.

In other words, my fears expressed less than a year ago—for the speech was made in March, 1894—have been more than realized, for not only has the Pension Office failed to disburse the entire sum, but we have information, semi-official if not official, that there will be \$10,000,000 of that sum at least, and probably more, left unexpended; so that in a single year there is a reduction in the payments of pensions aggregating \$25,000,000 from the preceding year 1892-93.

Now it is said that the burden of proof is upon the critic of this condition to show wherein the Pension Office has fallen short of its duty in this behalf. Well, Mr. Chairman, I assume the responsibility of that attitude only up to a degree, and not fully, for I maintain that it is the duty of this committee to bring here an estimate that will inform Congress of all the facts necessary to a complete adjustment of this great question. The estimates are totally incomprehensible and unintelligible. That was the point I made a year ago, and that is the point I reiterate to-day. That is the point I asseverate with greater assurance that my criticism is just, than that which I held a year ago.

I wish to call the attention of the distinguished gentleman from Massachusetts [Mr. O'NEIL], chairman of the subcommittee having charge of this bill, to a point upon which I want an explanation, and I think it will be better for him to take time in his own time to make that explanation than to respond immediately to my suggestion.

It appears by the report of the Commissioner of Pensions, which I hold in my hand, that there are something like 600,000 pending pension claims; and of that number there are 287,209 original claims for original pensions whose claims are at this time unadjudicated and who are drawing no pensions whatever under any of the existing laws of the country. Now, I can not understand, Mr. Chairman, in the first place, how there can be, how there ought to be at least, any such number of claims unadjudicated at this time.

I am not going to point out now the dereliction of this Administration nor the superior action of the former in this very connection; but I submit it is the same, or that it is a just criticism upon the administration of a great bureau of this Government, charged with so simple a duty as that of the adjudication of pension claims, a very large proportion of which are lodged under the law of 1890, that there should be hanging up anywhere, everywhere, all put together of almost 300,000 original claims for pensions unadjudicated.

I can not understand how it is that the Pension Office can justify its conduct; and when I say the Pension Office, I mean the administration of it from the date of the passage of the law of 1890 down to the present time. It has been more than four years since the passage of that act, and the conditions incidental to the right to have a pension certificate, not a pension claim, have been that the soldier served in the Army for not less than ninety days, was honorably discharged, and is suffering under some disability in a pensionable degree.

Now, it seems to me that the Pension Office ought to have been

able—I do not stand upon the apparent conditions—I say what the Pension Office ought to have done, what the Pension Office could have done, and the Pension Office having failed to do it, we must therefore look for something other than inability, something beyond the lack of time, something other than the magnitude of the work before it. With the record of the soldier in the War Department in a branch of this administration of this Government that is always up to date, always up to time, the Record and Pension office of the War Department, what is to delay the adjudication of a pension claim? Simply the proof must be made that the soldier is suffering.

We have a small army of pension agents all over the country—I mean pension examining surgeons. They are to meet every Wednesday throughout the whole United States. Every Wednesday there are three gentlemen who get together in each county. They can make those examinations at the rate of twenty-five a day by each board. I state that of my own knowledge. They can without the slightest trouble ascertain whether the soldier has a disability in a pensionable degree. They can decide his case and give him a pension, and if he has not, they can decide his case and refuse him a pension. So that we must look somewhere other than to the magnitude of this work to see why it is that this work has not been performed.

I now come to the appropriation pending before the committee at this time, and examining the reports and estimates of the committee, I think you will see exactly where the trouble lies, and it is that feature of the administration of the Pension Bureau that I am here to criticize. It was very easy for the Pension Bureau to have told us exactly what was to be done with the \$140,000,000 carried in this bill. It was just as easy to have divided up that \$140,000,000 and distributed it under that estimate as it was to take the \$1,000,000 that is to be given to pension examiners and to the incidental expenses of the administration of the Bureau.

It is not a matter that is beyond the comprehension of man at all to say what is the necessity for this \$140,000,000, and if we could have that information out of the Pension Office and through the Committee on Appropriations, we would stand in the position of acting intelligently upon this great question; but we can not. Challenged a year ago upon this exact question, they come in with a lump sum of \$140,000,000, and I am justified in saying more than that, that they having neglected to give us the information I am justified in saying that they have refused to give us the information.

Now, let me itemize my objections. Why not tell us upon an estimate that could be made almost correct, how much of this money is it necessary to appropriate for the purpose of paying Mexican pensions?

Mr. O'NEIL of Massachusetts. Turn to page 39 of the Commissioner's report and you will find it.

Mr. GROSVENOR. Very well. That shows it is very easy. How much to the soldiers of the war of 1812?

Mr. O'NEIL of Massachusetts. The same table gives it.

Mr. GROSVENOR. The same table. Now, will the gentleman follow it along? How much of the fund is to be disbursed under the acts prior to the act of 1890? Let us have that.

Mr. O'NEIL of Massachusetts. They are all in that table—Table No. 1.

Mr. GROSVENOR. Yes; exactly. But will the gentleman tell us how much is estimated to pay the pensions accruing and to accrue of the 287,000 undisposed-of pension claims now pending in the Pension Office?

Mr. O'NEIL of Massachusetts. Yes, sir; the difference between the amount mentioned in Table No. 1 and the amount appropriated in the bill—\$10,000,000.

Mr. GROSVENOR. The amount in round numbers in the Table No. 1.

Mr. O'NEIL of Massachusetts. Not in round numbers.

Mr. GROSVENOR. The difference between the amount in the table, not in round numbers, and the amount asked for in the appropriation. Now, how much is that?

Mr. O'NEIL of Massachusetts. Ten million dollars.

Mr. GROSVENOR. Mr. Chairman, I have no disposition to criticize the gentleman's figures because they come, I assume, from an official source, but this is the first time we have ever been able to ascertain how much it was calculated by the Department would be applied to the payment of the 619,000 pending pension claims. The gentleman says it is to be \$10,000,000. That would be, perhaps, about \$14 per capita. How many of the 619,000 pending claims is it estimated will be added to the pension roll during the coming year? There is no estimate whatever.

What has been the practical operation of this procedure? How did they manage to get along with \$150,000,000 appropriated a year ago, so as to startle me, if not the country, by an assumption here that there were \$10,000,000 more appropriated than there ought to have been. Mr. Chairman, I can tell you how it has been done, and that is what I complain of. It is on that ground that I criticize; it is on that point that I am not satisfied. They have done it by the suspension, and the ultimate dropping from the pension rolls of soldiers enough to accumulate a fund to make good any possible additions to the pension rolls which they were willing to make during the long fiscal year of 1893-94.

When you ascertain that particular fact, when you ascertain that there have been almost as many dropped as have been added, then you can very easily understand how this round sum misleads the people of the country. You can very easily understand, also, why it is that the Pension Office is going so slow in the administration of its duties. You can very well understand why, from this single standpoint alone (though there is another to which I shall allude later on), 1,900 men in the State of Ohio were dropped or suspended from the pension rolls in two months of 1893, and you can very well understand how only 1,300 of them have been reinstated. What I complain of is that these figures are so indefinite that they give no information to Congress as to the generosity or the parsimony of these pension appropriations.

Why, Mr. Chairman, here are 300,000 original pending pension claims. Is there any man who doubts that at least 250,000 of those claims are just as honest as any of those that have been allowed? I place the figure away above that. I undertake to say—and I cite in support of the assertion the nonsuccess of the Bureau up to this time in discovering fraudulent claims already allowed or fraudulent claims upon which application alone has been made—I undertake to say that there are fully 275,000 of those 300,000 original pension claims which, at least under the law of 1890, are just as legal, just as meritorious, as the majority, or as the average, of those claims which have heretofore been allowed by the Pension Bureau.

Now, these claims were filed, many of them, as far back as 1890, and all of them as early as 1891. So, if there is a legal claim for a pension, under the law of 1890, the aggregate amount of it, up to this time, if allowed at \$8 a month, would be something like \$300 or \$350. That would be the average per capita of the claimants. Multiply the number in my estimate, 275,000, by \$350, and you have the amount of money that ought to be available, unless the Pension Office has inferentially given us notice that it is not going to allow those claims during the coming year, and that the same dragging policy, the same painful delay, the same unwillingness to do the fair thing, that have been incident to the administration of this Bureau, in greater or less extent, from its organization down to the present time, and which have become an abuse under the present administration, are to continue. Where is the estimate?

I am not speaking now about increases. I am not speaking about the men who have been cut down from \$12 a month to \$6 a month and whose applications are pending for an increase—more than 300,000 of them. What is to be done with them? Will the gentleman when he comes to reply—if he sees fit to recognize the necessity for a reply in the remarks I am making—will he tell us where is his estimate for the increase of the pensions of the over three hundred thousand cases that are pending in the Bureau? I think it is fair to say that there ought to be 275,000 original pensions granted upon the claims now pending in the Bureau. I think there ought to be at least 200,000 increases of the men who have been cut down under the recent rulings to \$6 a month from \$8 or \$12 a month.

Mr. PICKLER. In your estimate what would be a reasonable time for the Bureau to complete all that work?

Mr. GROSVENOR. I have already said that I can not understand why there should be any considerable delay in the action of the Bureau upon those claims under the law of 1890. And, Mr. Chairman, without going into detail, I assert without qualification that when I see a case under the law of 1890 re-referred, with a long printed catalogue of questions to be answered, years after the claim has been filed, years after the report of an examining board has been filed, and when I see a series of letters written to persons supposed to have knowledge of the cases, and when I see requisition after requisition made upon the claimant for matters that seem to me to be absolutely immaterial and unimportant, I can not but feel, in the light of this whole procedure, that there has grown up in the Pension Bureau, possibly not intentionally, a condition, a system, which tends to go backward or stand still, instead of to go forward. I insist that that is a necessity which is a fair and just one; and the statement is not so strong as I might with propriety and justice, in my humble judgment, make.

So I say that in my opinion if the gentleman from Massachusetts, with his mathematical mind, will analyze these estimates, he will be unable to show to the country that there is any fair estimate here of original allowances or the allowances of increase.

And I fear, and I think I may say with justice, that in the light of the past, I believe that these estimates are based, among other things, upon a deliberate purpose to whittle down the payments at one end of the line in order to offset the increase at the other end. So that when my comrade in Massachusetts is allowed an increase of pension or an original pension claim, I fear it is the settled policy of this Department, under the present administration, to make the payment of that pension contingent upon the taking away of the pension or the reduction of the pension of my comrade in Indiana or Illinois.

There is something singular in the correspondencies, as we say in regard to certain matters of discussion, between the reductions at one end of the line and the increases at the other. There is something startling in the fact that one seems to keep pace with the other. Now you see how easy it is to adjust that. The pulse of the appropriation is felt and counted by the Bureau every morning; and

if the beats of the pulse are growing a little too rapid by reason of the addition to the roll of a few pensioners, the pulse beats of the appropriation are reduced by the application of a remedy at the other end of the line which consists in cutting down somewhere an adequate or an equal amount of the expenditure.

Now, Mr. Chairman, I want to speak to another branch of this subject incidental to my opening remarks. I believe that the whole system of pension appropriation and administration that has for its basis the degree of suffering, the degree of disability other than the maiming and wounding of the soldier, is vicious, essentially vicious, and ought to be done away with.

Human nature is of such a character that in great political contests no agency that is available for the purpose of political manipulation will ever be lost sight of or ever be left unappropriated by political parties. I need not here reiterate what I said a year ago, that during the year 1893 the administration of the Pension Office, with or without the knowledge, with or without the connivance, with or without the consent, of the Commissioner of Pensions, did become in certain instances a political machine which was worked in the interest of party politics. And without objection, I will put into my speech, for the purpose of vindicating the reiteration of my statement, a letter or two from the chairman of the executive committee of the Democratic party of my State, in which he clearly indicates and clearly demonstrates that he was working the machinery of the Pension Office in the interests of the Democratic party.

The following is from my speech of one year ago:

I will read you two letters from the chairman of the Democratic State committee of Ohio, and you will see whether or not the soldier roll, this "roll of honor," was being tampered with in the interest of partisan politics; and if there is a gentleman on this floor who will defend conduct like this, then I have no argument to address to him. Bear in mind that 2,000 soldiers in Ohio had been stricken down, and bear in mind that one by one they were being reinstated. Bear in mind that a hot political campaign was in progress, and the election was close at hand.

Here is a copy of a letter sent to an old soldier in East Liverpool, Ohio:

OHIO STATE DEMOCRATIC COMMITTEE,
Columbus, Ohio, October 17, 1893.

DEAR SIR: On September 19 your pension was increased. This was done by a Democratic Administration. Do you approve its action? and can Republican politicians still make you believe that your vote is their property? They have, as you know, claimed the vote of every ex-soldier who obtained a pension during Republican rule. We make no such claim. You were granted an increase by a Democratic Administration because you deserved it, and not as a bribe or an act of charity.

The contest this fall is more between the farmers and working people against monopolies and trusts than between Democrats and Republicans. We ask you, as an intelligent citizen, to vote the Democratic ticket, because it is for your own best interests so to do.

Very truly yours,

J. P. SEWARD, Chairman.
WILLIAM T. WEAR, Secretary.

Read this letter carefully. "Your pension was increased." How did the Democratic committee ascertain that fact? Who told this committee, and for what purpose? When did this system begin? Who inaugurated it? "You were granted an increase by a Democratic Administration." Why was this said? And finally we ask you "to vote the Democratic ticket." This is the whole thing. Shame! Shame! It is a disgrace to the brain which concocted the miserable scheme, and I denounce the scheme as an outrage upon fairness and an insult to the old soldier.

This scheme, in spirit and largely in detail was worked from one end of Ohio to the other. I can publish a mass of facts and details which will show how this was done. That the soldiers resented all this and voted to denounce and condemn it, does not remove the stain. This fact does not change the deep disgrace of the whole wretched business.

Then I will give you another of the same kind. Here is one which was sent to pensioners at the National Home at Dayton and the State Home at Sandusky:

OHIO STATE DEMOCRATIC COMMITTEE,
Columbus, Ohio, October 17, 1893.

DEAR SIR: We have fully exposed the Republican conspiracy to capture the soldier vote by having pensions suspended, and will now ask you to allow us to aid you, if possible, in securing your reinstatement, which from information we have you are entitled to. We will write Senator BAIRD, asking him to look the matter up. You are probably one who was suspended on information furnished by some Republican sneak in your own neighborhood.

We propose to demonstrate fully to the soldiers of Ohio that this disreputable scheme will not work and that the Democratic party is really their true friend.

Very truly yours,

J. P. SEWARD, Chairman.
W. T. WEAR, Secretary.

And now, lest I may be considered unfairly critical at this point, I want to say that this manipulation of the Pension Bureau for party purposes is an incident to this whole system, which, in my judgment, can only be gotten rid of in one way. It is not confined alone to one party; it has not, I mean, been confined alone to one party; but it has been carried under the present administration to a degree that it never reached within my knowledge under any other administration. The Democratic party surely is estopped on this floor from saying that my general statement is not a true one; for they themselves labored long, and I must say with some degree of success, to show that the Bureau under Republican administration had been unjustly handled in that same direction.

Mr. O'NEIL of Massachusetts. I would like to say to the gentleman that the question of the administration of the Pension Bureau will come up more properly on the legislative bill, and that we have nothing to do here now except to make the appropriation.

Mr. GROSVENOR. Well, we may possibly give the gentleman further light on this subject at the time the legislative bill is under consideration; but it is fairly competent in a discussion upon such a bill as this—it has always been the practice of the House—to enter upon this line of remark.

Mr. O'NEIL of Massachusetts. I do not make objection.

Mr. GROSVENOR. I say it stands on record in this House that the Democratic party claimed that the Republicans have thus manipulated that Bureau; and I certainly one year ago proved beyond a reasonable doubt a similar charge against the present administration of the Bureau so far as the politics of my own State was concerned. I showed then, Mr. Chairman, that nineteen hundred and odd pensioners were dropped without notice, in plain violation, as I said then, and as I say now, of every principle of right and justice—dropped without notice, without suggestion; and I showed that thirteen hundred and odd of those men, largely if not wholly at the request of Democratic politicians and to a large extent at the request of the Democratic chairman of the Democratic committee of Ohio, were reinstated without any examination, without any evidence, and simply at the suggestion of partisans in politics, for the purpose inferentially of making them Democratic voters at the election.

I might go a little farther, Mr. Chairman, and point out some of the singular results of the recent conditions in Ohio; but inasmuch as it would seem as though the Democratic party in my State could not have had a great amount of outside influence in its behalf in the recent election, I will pass that over. It is hardly worth while to complain of the efforts of a political party in a State where in 1892 it came within a thousand votes of carrying the State, where a year later it lost the State by 81,000, and one year later by 137,000. So that the efforts which I could demonstrate it to have made in this direction comes under the rule of *de minimis* in the effect that it had upon the election. So I will say nothing further about that.

What I want to get at is that these abuses are incident to a condition that gives to a bureau headed by a partisan politician and every appointment under which is a partisan appointment—

Mr. COOMBS. What does the gentleman say about those 1,600 Republican appointees in the Bureau of Pensions?

Mr. GROSVENOR. If they were where they could do any harm they would not be there; and nobody knows it better than the gentleman from New York, who assumes to know something about everything.

The last blow is the blow that hurts. The examination of these cases does not depend upon the clerk who passes the papers up, but upon the man at the head of the division, who stands there, Democrat or Republican, as the case may be, and under the Democratic or Republican head of the Bureau, passes ultimately upon the soldier's claim.

I say that there ought to be no condition in this country whereby the wards of the nation, the recipients of the just obligations of the nation, should be compelled to assert their claims through or under a system that involves partisanship in administration or partisanship in the appointment of the boards, the heads of divisions, and chiefs of bureaus, whose duty it is to administer the law.

So, Mr. Chairman, my proposition is that the whole system ought to be changed, and it ought to be changed by the introduction of two radical principles: First, that an honorable discharge of the soldier upon the length of service, to be fixed by Congressional action—the honorable discharge, indicative of the character he bore in the great struggle in which he participated, ought to be the only evidence necessary to enable him to be placed upon the pension roll of the country; and, if that pension roll is to be a roll of honor, he should be placed in a position where he could go with his honorable discharge and by the mere production of that discharge before the proper authorities have himself placed on the roll of honor, and defy party manipulation and partisan interference.

The soldier of my country who marched and fought in the great campaigns that saved the Union ought not to be made the football of party politics; and at the end of thirty years' administration of our pension affairs no man can deny that he has been able in all of that time to escape the manipulation of party politics.

What do you think, Mr. Chairman, of the condition of a great nation like this where, on the eve of a national election, a bureau officer—the Deputy Commissioner of Pensions—suddenly makes his appearance in a close and doubtful Congressional district to explain the principles of the administration of the Pension Bureau, lecturing the people on the system of pensions? The effort, so conspicuous, it is true, had the effect of very nearly wrecking the Democratic party in a Congressional district where it ought to have had a majority of at least 4,500.

There is no escape from it but to give a service pension to every honorably discharged soldier in the country; and in order to keep clear of the depletion of the Treasury, if it is ascertained that it would have that effect, I would suggest as a further principle in pension legislation that pensions hereafter to be granted ought to be graded in the volunteer service simply upon the service rendered and not upon the rank of the recipient, and then you would get rid of the large and, in my humble judgment, unjustifiable inequality in the whole system as we have it in existence to-day. I would remove the temptation of political manipulators to manipulate the pension applications of the soldiers and the pension certificates of the soldiers by placing the whole system where they could have no part or parcel in the adjudication of the claims of the pensioners.

I would get rid of the army of office-holders now engaged in that

business; I would get rid of this million-dollar expenditure, which is the first item of this appropriation, and I would get rid of this bureau at every county seat throughout the country employing its partisan politicians, men who undertake to control the right of pension of the old soldiers, but who themselves never saw the war, never served in the army, have no affinity or sympathy, by reason of any experience themselves, with the soldiers who served in the front, and who act upon the cases presented before them in many instances simply as partisans and from a partisan standpoint.

I would get rid of that, and I would get rid of an ineffable disgrace to the American nation that would subject nearly one million of soldiers who have honest claims for pensions under the laws of the Government to the manipulation of Republican or Democratic officials in this matter. One million of voters in the country is a very large number, even in a country that votes twelve million people, distributed as the soldiers of this country are.

They are a formidable element in our politics; and to place that great number of men in a condition or position where they fall under obligation to one political party or the other, to place them in a position where they feel that they are in danger by any action of either party, is a system of coercion, and of bribery, so to speak, necessarily incident to such a condition, that is a disgrace upon the whole country; and if I am right, and that is the true condition existing, then there is no remedy, I repeat, in my humble judgment, but to place the soldier on the roll independent of his physical condition, save only the maimed, wounded, and those who are especially disabled by disease and depending alone on their honorable discharge from an honorable service.

I wish, Mr. Chairman, to indorse with enthusiastic commendation the splendid defense of the soldiers of the country made by the distinguished and eloquent gentleman from South Dakota [Mr. PICKLER] on yesterday. It was a credit to himself and an honor to the soldier. It was better done than I could possibly have done it. I congratulate him and I congratulate my comrades; and I congratulate, as well, the honorable men who fought on the other side, the men who faced death on hundreds of battlefields in this country, against honorable, chivalrous, brave, courageous, and skillful men. I congratulate them also that to-day they have the vindication that is produced by this record of the Pension Department; that the men whom they fought, and whom it is their highest honor to have met over and over again successfully on the battlefield, but ultimately in the great issue of war unsuccessfully, were not thieves, were not plunderers or frauds, but they were honorable, high-minded, public-spirited American citizens, who fought for the honor of the country and the perpetuity of the Government.

I congratulate the American people that these men have been vindicated from the unjust and unfounded charges which have been heaped upon them in the past. Why any President of the United States, who ought to be justly proud of the glory of his country, should continue, year after year, reiterating a statement that he knows the record of the country will falsify and deny, why, I repeat, he should go on, year after year, and make charges that the pension roll of this country is tainted with fraud and dishonor, in view of the facts which have been submitted to him, I can not understand; nor why certain great newspapers of the country should constantly assail the pension rolls of the country in the face of the proofs and in the face of the record which has been presented in denial of the assertions, I am unable to conceive.

It is better for us, then, Mr. Chairman, that we should take the other view of the question, and place it beyond the reach of such allegations and assertions in the future. It is a better thing for the country, better for our friends on the other side as well. They did not go to war to fight a band of praetorian guards, as someone spoke of the other day. They were not fighting a set of men who, after having brought back the old flag in glory and triumph with a reunited nation, the benefits of which are greater to them than to us to-day—they did not come back from that successful struggle and turn themselves into a set of pilferers and plunderers of the public treasury. They stand to-day the element of greatest strength in all the States in which they live. They stand the proudest gathering, the proudest segregation of the men who love their country, and who are proud of the glory and honor and integrity of that country.

One word more. No one million men in the United States engaged in any given vocation can be found with records as clean as the records of the million of my comrades. I wish we had here side by side a record of the conviction of fraudulent soldiers, men who have made fraudulent pension claims, and the means of comparing it with the record of the men who have violated the internal-revenue laws, the number of men who have smuggled goods into this country, the number of men who have violated the postal laws, the number of men who have violated some other of the laws of God and man. You would find that proudly in the midst of this great concourse of 70,000,000 there stand the brave men who fought to save the Union, who presented a phalanx that was worthy of the steel of the mighty hosts of chivalrous men who, with misguided zeal, assailed the integrity of this nation; and you will find that the glory and honor of this nation to-day rests securely upon the faith, the integrity, and the patriotism of the Union soldier.

More Money and Less Debt and Misery for the People.

SPEECH
OF
HON. HENRY A. COFFEEN,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve and to redeem and retire United States notes, and for other purposes—

Mr. COFFEEN of Wyoming said:

Mr. CHAIRMAN: I am very glad to come in now, following the polished gentleman and banker from New York [Mr. HENDRIX]. He is for the gold standard and the bank interests straight and clear. He is opposed to silver in every way. He runs from it as Shylock of old from the first moderate propositions of the court which offered a compromise proposition in the controversy about bonds and the severe terms which Shylock insisted upon in that famous scene. But he must admit at least this much, that the adoption of this amendment is equivalent to declaring the policy of silver payment, which should all the time be maintained, as we believe, and gives notice that payment will not be in gold alone, but in silver as well as gold. Therefore this amendment reaches the point desired by many in this House.

Not only so, but this amendment, if carried, will at once stop the work of the gold raiders on the Treasury. It appears to me that the Administration is greatly at fault, not to use harsher terms, when, with the law and the precedents and the interests of the country in favor of paying silver to stop this vicious raid on the Treasury, it does not exercise that same power and opportunity that the gentleman from New York himself pointed out was done by the bankers of France in behalf of the Government and the people there; that is, to refuse the gold, as he himself has said, or at least to pay 95 per cent if necessary in silver to protect the gold there. I would favor this amendment still more heartily than I do if it went one step further and said, "Pay all in silver when the gold reserve is less than one hundred millions, and when not less than one hundred millions, then pay half in silver and half in gold," or as may be most convenient to the Treasury.

I have one word further to say, hoping that I shall have time. There is coming up before us what is known as the Reed substitute. I have looked into that substitute. I fear, though, that there may be some on our side of the House who will follow that Republican measure. Our Democrats from New England and New York preferred to follow the Republican measure for the repeal of the silver-purchase clause, which originated first with Senator Sherman, and then afterwards was taken up by the Administration at the extra session. The Democratic platform and position was to repeal the entire makeshift law in the interest of both gold and silver as standard money, but Sherman said repeal the purchase clause only, and then the President said the same. What was the result when we followed the Republican doctrine in that and carried the repeal? Did it relieve the country? Not in the least. The lowest prices of products, commodities, and staples that have ever been reached have been reached since the repeal which you of the gold-bond side of this question prophesied was certain to relieve the country.

Did it relieve the Treasury? Not in the least, for a greater number of millions of dollars have been withdrawn from the Treasury for coin redemption since the repeal than were withdrawn in that same kind of redemption for the entire fifteen years preceding. In fifteen years, including the entire period of coinage of silver under the Bland law and purchase under the law of 1890, the withdrawals of gold from the Treasury were not so much as in one year since the unconditional repeal. Then the prophecies of gold-standard advocates have proven false.

Mr. CANNON of California. Will you issue the bonds half silver and half gold?

Mr. COFFEEN of Wyoming. No; I would not issue bonds at all, but if they are issued they should all be coin bonds. I am not on that question now, and I will let the gentleman take that up in his own time.

Mr. HUTCHESON. Will the gentleman allow me?

Mr. COFFEEN of Wyoming. My time is too short; I have answered it sufficiently for the present.

Mr. HUTCHESON. I wish to answer the question of the gentleman from California.

Mr. COFFEEN of Wyoming. You can secure the floor later for that. I wish to give you, as an indication of the feeling in the West, what our people think of issuing bonds; and, as applying directly against the Reed substitute, I will present the resolutions of my own State legislature in Wyoming, passing the house of representatives in our State since this now pending bill has come

forward, if we have the matter correctly reported in the public press—

RESOLUTIONS FROM WYOMING AGAINST BOND ISSUES.

And remember the majority in that legislature is Republican, and I find no one in that legislature, either Democrat or Republican, who is reported in the paper from which I quote as opposing it:

Be it resolved by the house of representatives (the senate concurring therein), That we believe that the additional issuing of bonds on the part of the National Government is a movement in the East on the part of New York bankers to force the country to a gold basis beyond a possible change, and to drive the National Government from its constitutional supervision of the currency of the country. And believing that this movement will undoubtedly entail misery on the common people of the land, we most respectfully ask that the Representatives in the National Congress from the State of Wyoming protest against the issuance of gold bonds or any other bonds which will fasten a debt upon the people for generations to come.

We further ask that the representatives of this State use all honorable means to prevent the legislation as proposed by the President's message, sent to Congress Monday, January 21, 1895, and to defeat the bill now before the Banking and Currency Committee of the House of Representatives at Washington. Be it further

Resolved, That a copy of these resolutions, suitably indorsed and engrossed, be sent to the Hon. JOSEPH M. CAREY and the Hon. C. D. CLARK, in the Senate of the United States, and the Hon. H. A. COFFEEN, in the House of Representatives.

I can most heartily carry out the wishes of the people of my State in this matter, and not only do I indorse these resolutions against issuing bonds of any kind, but I have been battling along these lines, as every member of this honorable body knows, ever since I have been in Congress.

This resolution not only squarely opposes the bill now pending, which provides for one kind of bonds, but doubly antagonizes the Reed substitute, which will receive most of the votes on that side of the House, which proposes two kinds of bonds instead of one.

I am pleased to put on record the views of the people of Wyoming, as expressed in these resolutions, so strongly opposing all bond issues.

WHY FOLLOW REPUBLICAN DOCTRINE ON MONEY QUESTIONS?

But while speaking of the Reed substitute and its two kinds of bonds and of the anxiety of the Republicans to help the President as long as he will stay with them on the gold and bond questions, I desire to examine briefly the Republican record. Why follow the Republicans longer in their mad career after the gold standard and bonds? They demonetized silver and have ever stood by that act. They started in to destroy the greenbacks and pursued that line until the Democrats procured the stoppage of their destructive policy. They changed our lawful money bonds into coin bonds in 1869 by the public-credit act. They have at all times favored the issuance of bonds and the extending to the banks a monopoly of issuing notes for circulation and of expanding and contracting the currency in their own banking interest.

All of these positions of the Republican party are wrong.

Why then shall we follow them?

How can any Democrat outside of New York and New England vote for Republican monetary measures?

At the extra session of this Congress, by some unfortunate fatality, our own Administration brought forward a repeal of the purchase clause of silver in exact accord with the suggestion of Senator JOHN SHERMAN, the demonetizer and leader of the Republican party.

And true to their doctrine and tendencies the Republicans came forward to support the unconditional repeal, and the gold-standard President, and with Eastern Democrats, so called at least, they carried that unconditional repeal bill.

What the result? Did it give us relief as promised? Not in the least.

The prophecies of the gold power failed totally in this matter as usual in all other cases.

Instead of relief for the country our cuckoo Democrats, by following the demonetizing Republicans, have brought our country to the lowest prices on record on our great and staple products.

Instead of relieving the Treasury from the gold raiders it has had precisely the opposite effect, for more gold has been raided from our Treasury, in the misconstrued gold redemption of legal-tender notes, since the repeal of the purchase clause than was taken out in the entire fifteen years preceding.

The whole force of the Republican party as a party has been to strengthen the bank and bond and gold combination.

Democrats who are true to the name and principles and teaching of the party will not follow any of the measures now pending, for they all are essentially Republican.

Now, another trick is about to be played upon Congress by which the undemocratic administration of our Treasury is likely to enter into combination with the Republican party under the leadership again of the ex-Speaker from Maine [Mr. REED] and the Senator from Ohio [JOHN SHERMAN, the demonetizer], to carry a Sherman-Reed substitute bill through this House even against the opposition of the true genuine Democracy of this Congress.

There is no danger that it can be carried without a combination between the cuckoo Democrats and the Republicans, as was done at the extra session of this Fifty-third Congress, and it is not cer-

tain that it can be done even then. Now, what are the essential points in the Reed substitute bill?

First. To leave the Treasury as now to go on indefinitely, paying out every dollar it gathers in gold to the gold raiders again in what it calls coin redemption. The Reed substitute proposes, no remedy whatever for this situation.

To sell two kinds of bonds, instead of one, is no relief to the Treasury in maintaining its gold reserve.

Nothing but the payment of silver coin in due proportion on all coin obligations will stop the raid of gold from our Treasury.

Second. It does provide for the issuance of bonds at the discretion of the Executive to carry on this endless chain process of pumping all gold out of the Treasury.

Third. It does provide for the locking up of greenbacks in the Treasury, accomplishing for the present the earnest wishes and demands of the banks, so to take the legal tenders out of the reach of the people and give a clear field for banks to issue their notes.

Fourth. It provides for the issuance of bonds of a new kind, called by cunning and diplomacy certificates of indebtedness, bearing the same per centage and of the same general character as the other bonds and the proceeds to be used in payment of current expenses.

This, too, the Republicans propose in the face of the fact that the Administration has announced through the chairman of the Ways and Means Committee that the revenues are sufficient for all current expenses and that a surplus of revenue will soon be coming into the Treasury. So we have come up to that point and purpose and find as usual that the income and monopoly classes are trying to carry against laboring humanity gold and bank and bond measures to fasten an indefinite, enlarged, and practically perpetual public debt on the country.

If there is any doubt where the two parties stand on this money question, look for a moment at the last vote just taken, where a proposition favoring silver to a greater degree has just been decided. While a majority of the Democrats voted for the measure, only five or six of the Republicans could be found to vote for the amendment, while nearly the entire party, with Mr. REED in the lead, voted against the measure.

To be sure, our New York and New England Democrats are, as usual, found voting with their Republican brethren.

We must if possible defeat all of these bond bills. Although we have been unable to get positive legislation in favor of unlimited coinage on the old ratio of 16 to 1, yet we have been able so far throughout this Congress to defeat all schemes for authorizing the issuance of bonds. If any are issued it must be under the laws as they already exist.

As to the raid against gold in the Treasury I am not concerned about it so seriously as some, for I know, as does almost every Congressman on this floor, that the Secretary of the Treasury has full power and option and law in his hands now to stop the payment of gold on coin obligations, and he should do it. Coin obligations are in no proper sense or construction of law payable in gold alone, but should be met with silver payment as well, and that will stop the gold raid. I am unalterably opposed to giving gold any further advantage.

The Currency.

SPEECH

OF

HON. EDWARD LANE.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8703) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. LANE said:

Mr. CHAIRMAN: The most important question to-day before the American people is the financial problem. What shall be the character and volume of our money are the burning questions of the hour. The Wilson bill that passed this House in 1893, repealing the silver bullion purchasing clause of the Sherman act, recognized the right of the Treasury to redeem silver dollars with gold dollars and thus placing the country on a gold basis.

We are now asked to adjust our entire fiscal scheme to a gold basis. Can it be done? Do the people of this country desire this to be done? There is no real money in the world but metallic coin—gold and silver. Perhaps it might be something else, but after the experience of four thousand years by the great financiers of the world our actual money is gold and silver coins.

The genius of man has never yet discovered a way to make good

money without the material of which it is composed possesses intrinsic value. The printing press can not make dollars. A certificate or a note may be printed by which the Government, or a bank may promise to pay dollars, but it is not money, it is simply a promise to pay money. It is true that such notes and promises perform some of the functions of money, but never of ultimate payment. Prior to the adoption of our present Constitution, in 1787, the several States coined gold and silver and emitted bills of credit, and also chartered State banks of issue, but after a fair and impartial trial the system proved a failure; and, when the Constitution was adopted, the right to coin money and emit bills of credit were granted to the General Government, and these powers were denied to the several States. It was expressly provided in the Constitution that the States should make nothing but gold and silver coin a legal tender for the payment of debts. It was also thought by many that the right to charter banks of issue by the several States was also relinquished to the General Government, but in the case of *Brisco vs. The Bank of the Commonwealth of Kentucky* (11 Peter's Reports, p. 257) the Supreme Court of the United States held otherwise.

Judge Story, however, in his dissenting opinion in this case, informs the country that when the case was first heard by the court a majority of the judges who heard the case were decidedly of opinion that a State had no authority to charter a bank of issue, and that Chief Justice Marshall shared in that opinion; but after his death and after a rehearing of the case the court reached the conclusion announced. There can be no question that the framers of the Federal Constitution, when that instrument was adopted, intended to end forever the emission of bills of credit by the States, and to depend entirely on metallic money as their medium of exchange, at least as far as the several States were concerned. Therefore, the view taken by the court in the case of *Brisco vs. The Bank of the Commonwealth of Kentucky* was a mistake, and especially so when considered in connection with the late case of *Veazie Bank vs. Fenno* (8 Wall., 533), where it is held that a tax of 10 per cent on the notes of State banks is warranted by the Constitution.

At the commencement of the war of the rebellion, in 1861, our currency consisted of gold and silver coin, and supplemented by the issue of State bank notes. Many of us remember well what a dismal failure the State bank issue proved to be as a circulating medium of exchange. We had the wild-cat and the red-dog money, and all kinds of money except good money. In 1861, 1,600 banks organized, and, operating under the wildly differing laws of the several States, issued in the aggregate at that time about \$200,000,000.

These circulating notes were far from satisfactory. Chicago bills were at a discount in New York and New York bills at a discount in Chicago, sometimes as high as 10 per cent. A conductor on a "through" train would often refuse bills at one point of the line which he received at par at another, and a person desiring to make a journey would be compelled to provide himself with various kinds of money in order to be at par at all points of his journey, but often before he reached his journey's end it would all be worthless. The report from 18 different States in 1860 show that out of 1,230 banks 140 were broken, 234 closed, and 131 worthless. The people became disgusted with that character of money, and it is very doubtful if that system will ever again be renewed in this country. During the war the General Government issued various forms of paper money as a circulating medium and attached to it the functions of legal tender for the payment of all debts, public and private.

The power of the Government under the Constitution to so issue money was denied by many, and the question was finally settled in the Supreme Court of the United States, where it was held that the Government had the power to issue money in times of peace or war, and to make it a legal tender in payment of all debts, and this right is now conceded by all the courts of the country.

And I may say in passing that when this question was before the Supreme Court of the United States it was expressly found and so expressed by some of the judges that the war of the Revolution, or of the late rebellion, could not have been carried on to a successful conclusion had it not been for the legal-tender function of our paper money at the time. Every civilized nation makes provision for legal tender in its currency, and every civilized nation uses paper money.

It is the duty of the United States to prescribe a uniform money of account and the signs and figures of its expression.

Without such money of account enforced by the Government throughout its jurisdiction justice can not be done to suitors in courts nor could receipts and expenditures be kept in public offices.

What, then, shall be our money of account? I answer, gold and silver coins supplemented with a sufficient volume of paper money.

Whatever the form of our money may be every dollar should have the same purchasing power as every other dollar, and be convertible the one into the other at the pleasure of the holder. On October 1, 1894, we had in this country—

Gold dollars.....	\$679, 728, 587
Silver dollars.....	421, 176, 408
Subsidiary coin.....	75, 054, 481
Total metallic money	675, 954, 476

Greenbacks	346,681,016
Treasury notes—Sherman act	151,609,267
Curancy certificates	56,305,000
National-bank notes	207,564,458

Total paper money 762,159,741

Of these various amounts there was in circulation among the people doing the business of the country \$1,655,038,982. This amounts to about \$23 per capita, a sum entirely inadequate to carry on the commerce of the nation. We should have at least \$35 per capita. We should coin the silver bullion in the Treasury, which would make metallic money to about \$18 per capita, and then the balance could be made up with a new issue of Government notes.

I do not care what they are called. I wish to add my testimony now and here that, in my judgment, the legal-tender notes of the Government constitute the best paper money in the world, backed, as they are, by the national wealth of \$70,000,000,000, and secured by a mortgage on over 2,500,000,000 acres of land, with the cities, railroads, and civilization thereon, and the homes of 70,000,000 of people. It is the promissory note of the nation, payable to bearer, and good at any bank counter or in any market of this country from any debtor to any creditor.

Such a circulating medium possesses more elements of safety than all other proposed systems combined. It has the entire confidence of the people, except those who wish to purchase and own Government interest-bearing bonds. I do not wish to be understood in what I have said in regard to Government notes that I in any manner indorse the present national banking system, for I do not. As that system is administered in Wall Street, I regard it as the cesspool of all financial iniquity. It has robbed the American people out of millions of dollars in the last twenty years, and it has no necessary connection with the Treasury notes. The present national banking system is based on interest-bearing bonds of the Government. The scheme is indefensible, as the Government should never issue such bonds, especially in times of peace. It is the duty of the Government under the Constitution to coin gold and silver as a currency for the people, and if this should not produce a sufficient volume of money then the Government should supplement it by a sufficient volume of paper money.

The act of coining the precious metals and issuing paper money are both an act of sovereignty; they are inseparably wedded together. No citizen of the Republic has a right under the law to do either, and such power should not be granted to a corporation. The Government only can make every dollar as good as every other dollar and convertible into each other, and thus maintain the parity of all our money. The gold reserve provided for by act of Congress, of date July 12, 1882, should be maintained by the banks. A law should be passed levying a tax of 1 per cent per annum in gold coin on the capital stock of all national banks, and this small sum would be sufficient to preserve the gold reserve in the Treasury. I am informed that no redemption of Government notes has been made at the Treasury by individuals. The gold withdrawn from the Treasury has been by the banks, and I think it is done for speculative purposes. If the law would levy a tax on the banks in gold coin, then the run on the Treasury would cease.

From the following table, furnished by the Treasurer of the United States, it will be seen that from 1879 to 1894 the total redemption amounted to \$292,609,390. The table is as follows:

United States notes and Treasury notes redeemed in gold, by calendar years.

Year.	United States notes.	Treasury notes.	Total.
1879	\$11,456,536	\$11,456,536
1880	543,800	543,800
1881	28,750	28,750
1882	115,000	115,000
1883
1884	810,000	810,000
1885	2,927,400	2,927,400
1886	9,340,507	9,340,507
1887	1,339,945	1,339,945
1888	475,181	475,181
1889	959,548	959,548
1890	338,273	338,273
1891	9,016,727	\$685,870	9,702,597
1892	15,963,813	20,296,747	36,260,560
1893	44,493,512	32,082,778	76,576,290
1894	123,941,059	17,802,944	141,744,003
Total	221,700,051	70,849,339	292,609,390

OFFICE OF THE TREASURER UNITED STATES,
January 3, 1895.

It will be further seen that for the first twelve years the redemption did not average \$5,000,000 per year, while for the last year the amount taken out was \$123,941,059, clearly showing that it was the purpose of the banks to force the Government to issue more interest-bearing bonds. The amendment to levy a tax on the banks in gold coin that I offered should be adopted.

Why should not the banks be required to pay this tax? Let us see what the banks make out of the franchises that they derive from the Government. On the 30th day of June, 1893, as seen by the report of the Comptroller of the Treasury, the loanable funds in the hands

of all the banks of the country was \$6,412,939,954. This vast sum being loaned to the people even at 5 per cent per annum the banks would make over \$300,000,000 annually; and add to this the annual interest on \$6,000,000,000 of farm mortgages and we have an additional gain to the bankers of over \$300,000,000. The total debt of this country is estimated at about \$40,000,000,000, and at 6 per cent interest per annum the people of the country pay annually to the money power about \$2,400,000,000. The American people pay more interest than any nation on the globe. I therefore submit that it would not be unreasonable to levy an annual tax on the capital stock of the banks in gold coin, to keep up the gold reserve in the Treasury.

But to return to the question at issue as proposed by the present bill. Shall Congress authorize the issue of Government interest-bearing bonds and create national banks of issue? I say no, a thousand times no. The Democratic party can not favor any such measure. If there is any proposition upon which the Democratic party has pronounced itself it is this. The Democratic party in national convention assembled, in 1840, passed the following resolution:

Resolved, That Congress has no power to charter a national bank; that we have such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power, and that above the laws and the will of the people.

Again, in 1852, the Democratic party in national convention assembled passed the following resolutions:

Ninth. Resolved, That Congress has no power to charter a national bank; that we believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country in the hands of a concentrated money power, and that above the laws and the will of the people; and that the results of Democratic legislation in this and all other financial measures upon which issues have been made between the two political parties of the country have demonstrated to candid and practical men of all parties their soundness, safety, and utility in all business pursuits.

Tenth. Resolved, That the separation of the moneys of the Government from banking institutions is indispensable to the funds of the Government and the rights of the people.

And the Democratic convention which met in 1856 readopted these planks in its platform, and from that day to this they have been the cardinal creed of the party, never changed, revoked, or annulled. It is also important to know that were the views of the founders of the Democratic party on these questions. Thomas Jefferson said on this subject:

I have ever opposed money of banks, not of those discounting for cash, but of those feasting their own paper in circulation, and thus banishing our cash. My seal against these institutions was so warm and open at the establishment of the Bank of the United States that I was derided as a maniac by the tribe of bank mongers who were seeking to filch from the public, thus swindling on barren gains. But the errors of that day can not be recalled.

The evils they have engendered are now upon us, and how are we to get out of them? Shall we build an altar to the old paper money of the Revolution which ruined individuals but saved the Republic, and burn on that all the bank charters, present and future, and their notes with them? For these are to ruin both the Republic and individuals.

Again he said:

I sincerely believe with you that banking establishments are more dangerous than standing armies, and that the principle of spending money to be paid by posterity, under the name of funding, is but swindling futurity on a larger scale.

Again he wrote to John W. Eppes, November 3, 1813:

As to the public, these companies have banished all our gold and silver medium, which before their institution we had without interest, and instead of which they have given us two hundred millions of froth and bubble on which we are to pay them heavy interest.

He wrote again as follows to Albert Gallatin:

This institution (national bank) is one of the most deadly hostility existing against the principles and form of our Constitution. Ought we then to give growth to an institution so powerful, so hostile? Now, while we are strong, it is the greatest duty we owe to our Constitution to bring this powerful enemy to a perfect subordination under its authorities. The first measure should be to reduce them to an equal footing with other banks, as to the favors of the Government.

Andrew Jackson was still more pronounced than Mr. Jefferson in his hostility to the national bank. In his message to Congress December 2, 1834 he says:

Circumstances make it my duty to call the attention of Congress to the Bank of the United States. Created for the convenience of the Government, that institution has become the scourge of the people. Its interference to postpone the payment of a portion of the national debt that it might retain the public money appropriated for that purpose to strengthen it in political contests; the extraordinary extension and contraction of its accommodations to the community; its corrupt and partisan loans; its exclusion of the public directors from a knowledge of its most important proceedings; the unlimited authority conferred upon the president to expend its funds in hiring writers and the execution of printing, and the use made of that authority; the retention of pension money and books after the selection of new agents, have, through various channels, been laid before Congress. They were substantially a confession that all the real distresses which individuals and the country had to endure for the preceding six or eight months have been needlessly produced by it, with a view of effecting, through the sufferings of the people, the legislative action of Congress.

Again, in the same message:

Events have satisfied my mind, and I think the minds of the American people, that the mischief and dangers which flow from a national bank far overbalance all its advantages. The bold effort the present bank has made to control the Government, the distresses it has produced, and the violence of which it has been the occasion in one of our cities named for its observance of law and order are but premonitions of the fate which awaits the American people should they be deluded into a perpetuation of this institution or the establishment of another like it. It is fervently to be hoped that, thus admonished, those who have heretofore

avored the establishment of a substitute for the present bank will be induced to abandon it, as it is evidently better to incur any inconvenience that may be reasonably expected than to concentrate the whole money power of the Republic in any form whatsoever or under any restrictions.

Again, in the veto message, he said:

It is to be regretted that the rich and powerful too often bend the acts of government to their selfish purposes. Distinctions in society will also exist under every just government. Equality of talents, of education, or of wealth can not be produced by human institutions. In the full enjoyment of the gifts of Heaven and the fruits of superior industry, economy, and virtue, every man is equally entitled to the protection of the law. But when the laws undertake to add to these natural advantages artificial distinctions, to grant titles, gratuities, and exclusive privileges to make the rich richer and the potent more powerful, the humble members of society, the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their Government. There are no necessary evils in government. Its evils exist only in its abuses. If it would confine itself to equal protection and, as Heaven does its rains, shower its favors alike on the high and low, the rich and the poor, it would be an unqualified blessing.

Experience should teach us wisdom. Most of the difficulties our Government now encounters, and most of the dangers which impend over our Union, have sprung from the abandonment of the legitimate objects of government, by our national legislation, and the adoption of such principles as are embodied in the act.

Many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by act of Congress. By attempting to gratify their desires we have, in the results of our legislation, arrayed section against section, interest against interest, and man against man in a fearful commotion which threatens to shake the very foundation of our Union.

It is time to pause in our career; to review our principles, and, if possible, to revive that devoted patriotism and spirit of compromise that distinguished the sages of the Revolution and the fathers of our Union. If we can not at once, in justice to interests invested under improvident legislation, make our Government what it ought to be, we can at least take a stand against all new grants of monopolies and exclusive privileges; against any prostitution of our Government to the advancement of a few at the expense of the many, and in favor of compromise and gradual reform in our code of laws and system of political economy.

Nothing further can be said. The debate, from a Democratic view, should close at this point. By what Democratic authority do gentlemen advocate the enactment of the pending bill into a law creating national banks of issue? Clearly there can be no authority found for it in the platforms of the Democratic party. Nor is there any public necessity for it now. I am quite certain that a great majority of the people of this country do not favor national banks of issue. Under the present national banking system parties desiring to start a national bank bring, say, \$100,000 in Government bonds, bearing interest from 3 to 4 per cent per annum, and leave them with the Treasury. They will get from the Treasury, free of charge, except 1 per cent tax, \$90,000 in currency, which they can take to their bank with them and loan to the people at from 8 to 10 per cent per annum, while the Government collects the interest on their bonds from the people and pays that over to the banks also, making double interest.

This is bad enough, but under the proposed banking system, parties desiring to engage in banking go to the Treasury and pay \$50,000 in treasury notes. The Treasurer will give in exchange therefor \$150,000 in bank currency, which can be loaned to the people by the bank at the present rate of interest, the Government retaining a first lien on all the assets of the bank to secure this circulation, and in this way take away from those who deposit in the bank any chance to recover their deposit if the bank should fail. In other words, the law takes the money of the bank depositor and uses it to protect the Government, and in this way takes from the depositor any chance he might have to secure his deposit in the event the bank fails. This is manifestly unjust. But the gentleman from Illinois [Mr. SPRINGER] in defending this system says that if the banks can get this cheap money they will be able to loan it to the people at a low rate of interest. What a strange statement! How little he knows of the class for whom he is legislating.

If the banks of this country could get their money as the children of Israel received their manna, free from Heaven, does any well-informed person believe that they would loan this money to the people at any lower rate of interest because of that fact. Not at all. Bankers are not in business for pleasure or for their health, but to make money, and they get all the interest they can now from the people, and would under the proposed system.

Mr. Chairman, the proposed law is not Democratic and it is indefensible. Gentlemen who are in favor of the measure might as well quit masquerading before the country as Democrats. Why should we issue interest-bearing bonds payable in fifty years? Why should we place a mortgage on a generation yet unborn? If we are true Americans we will never do it. Whatever the liabilities of the Government are should be met by the present generation. Let us, therefore, meet it like men who know our duty and the responsibility we owe to the people. This measure is but a makeshift, and certainly we have had enough of that kind of legislation. Let us go to the very root of the matter. Our present condition is largely if not entirely due to the monumental fraud of this century which resulted in the demonetization of silver. That was the blackest crime in the pages of criminal legislation. From that day to this we have had no real prosperity in this country. It is utterly impossible to adjust our financial system to a gold basis. Gentlemen might as well expect to suspend this Capitol building in mid-air as to place our financial affairs on a gold foundation. Isaiah gives the reason:

"For the bed is shorter than that a man can stretch himself on it,

and the covering narrower than that he can wrap himself in it."

There is not gold enough in the world to meet the demands of trade and commerce. We must have a greater volume of money to transact our business. The first requisite of money is quality. We should have nothing but good money. The second requisite is volume, and the third stability of value. Industry and trade are founded and rely upon stability. Every variation in the currency tends to frustrate business plans and damage labor. If money is depreciated every creditor suffers loss; if the value of money rises the debtor loses and the creditor gains. A dearth of money stops exchanges, arrests progress, and begets social confusion, disintegration, and decay.

A total absence of money would be a condition of social death, a relapse into barbarism. There can be no civilization, no commerce, without money. Money is created by the State or nation and is of two kinds, primary and token money. Primary money in all nations is metal coin having a substantial market value for human use. Token money, or fiat money, is a promise-to-pay money, and its value depends only upon the ability of the promisor to meet the promise. It is upon such money alone that the stamp of a Government can confer value, and then only according to the wealth of the promisor.

Primary money in all civilized nations has consisted of gold and silver since the time of Abraham to the present time. These metals were selected by the common consent of mankind, because they were in and of themselves property and of imperishable value. It was required that primary money should have durability and convenience. Wheat would not do, for it was too bulky and inconvenient to handle. Horses and cattle would die. Iron would rust and copper would corrode. And it was also necessary that the article of which money was made should not be too abundant, and still be in sufficient quantities to supply the wants of commerce and the demands of trade.

Silver and gold fills all the requirements of commerce more than any other metals ever discovered in God's treasure house, and the common sense of mankind adopted these as the money metals of each nation where organized government exists. We find these metals in the earth at about the ratio of 1 to 16 in weight; that is, sixteen times more silver than gold. The market value of these metals are settled by centuries of human experience. Silver and gold have each, under the laws of commerce, a use as a commodity in the arts. They have also each a use under the law as a medium of exchange as primary money. The third use common to both is as legal tender for debts under the law of a nation. Silver is most useful as a subsidiary coin, while gold is more convenient for exporting, because of its great value in a small compass.

It is admitted by most financiers that both silver and gold derive 50 per cent of their value from their money use. Money is a medium of exchange and also a measure of value. The volume and quantity of money in circulation at any given time measures the value of all property and commodities. A large volume equal in quality facilitates exchange and stimulates industries. Under its influence both production and consumption of products increase. Civilization has always advanced under the influence of sufficient money, and has been retarded when the supply becomes small. By a contraction of the money volume of the world the most colossal frauds have been perpetrated on the people.

Too few people of the United States realize the interesting fact that all articles of merchandise, and of lands and labor, and all kinds of property are necessarily valued at some fractional part of the money of this country. Take for example a nation of 100,000 people having a circulating medium of \$2,000,000, one half in gold and the other half in silver. The price of all houses, farms, bonds, and all articles of commerce, including labor, would be worth a fractional part of the \$2,000,000. If, therefore, a house was valued at \$2,000 it would be worth one thousandth part of the amount of the circulating medium of the nation.

Now, if the amount of money in the nation were suddenly doubled and the house thus become worth the one-thousandth part of \$4,000,000 instead of being worth the fractional part of \$2,000,000, the house would command \$4,000 instead of \$2,000. But suppose you should reduce the volume from \$2,000,000 to \$1,000,000, then a house that was worth \$2,000 when the volume of the money was worth \$2,000,000 would at once fall to \$1,000; it would be worth but one-thousandth part of a circulating medium that had suddenly been changed from \$2,000,000 to but \$1,000,000. A man who had borrowed \$1,000 on his house or farm when it was valued \$2,000 might lose his house or farm, as he could only sell it for \$1,000, the value of the mortgage.

By the demonetization of silver in this country in 1873 the volume of our metallic money was reduced one-half, and the result was the destruction of prices, which resulted in the panic of that year. Some of our people were well pleased with the demonetization of silver, inasmuch as holders of bonds and mortgages, and men to whom, in various ways, money was owing, would have their fortunes increased at the expense of the debtor classes and at the cost of owners of real estate and various kinds of property. The interest paid to creditors would be doubled in purchasing power.

With one dollar they could hire a man to work for them, when before the striking down of silver two dollars a day would have been paid to him. This condition of the money volume caused

industries to languish and prevented men from getting remunerative work. John Stuart Mill says:

If the whole money in circulation was doubled prices would double; if it would only increase one-fourth prices would rise one-fourth.

This is one of the most important principles connected with finance, and it explains the reason silver was demonetized in 1873.

Mr. Fauchet said in 1843:

If all the nations of Europe adopted the system of Great Britain the price of gold would be raised beyond measure and we would see produced in Europe a most lamentable result. The Government can not decree that legal tender shall be only gold in place of silver, for that would be to decree a revolution, and the most dangerous kind of all, because it would be a revolution leading to unknown results.

Mr. Wolowski said in 1868:

The suppression of silver would bring on a veritable revolution. Gold would augment in value with a rapid and constant progress which would break the faith of contracts and aggravate the situation of all debtors, including the nation. It would add at one stroke of the pen at least three milliards to the twelve milliards of the public debt.

In 1869, before the French monetary convention, he used this language:

The sum total of the precious metals is reckoned at fifty milliards, one-half gold and one-half silver. If by a stroke of the pen they suppress one of these metals in the monetary service they double the demand for the other metal to the ruin of all debtors.

Another member of the convention said:

The suppression of silver would amount to a veritable destruction of values without any compensation.

In 1873 Professor Laveleye said:

Debtors, and among them the state, have the right to pay in gold or silver, and this right can not be taken away without disturbing the relation of debtors and creditors to the extent of perhaps of one-half, or certainly one-third. To increase all debts at a blow is a measure so violent, so revolutionary, that I can not believe that the Government will propose it or that the Chambers will vote it.

James G. Blaine said:

The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly \$7,000,000,000 of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove disastrous to millions and utterly disastrous to tens of thousands.

Mr. Speaker, I could quote many more eminent financiers to the same effect, but I deem it unnecessary. The proposition is too plain to need argument. There is now in the world \$3,727,018,868 in gold and \$3,820,571,346 in silver, making in all \$7,547,590,215. This amount of standard money must buy the whole mass of salable property in the world. If you take away one half of this money then the half left must do the work of all; so you double the purchasing power of the gold if that is the money left. The rule would apply whether you take away the gold or the silver. The purchasing power of the money left is exactly doubled.

It will now command twice as much commodities as it did formerly. Stating the facts in different terms, it is clear that the value of gold has been so much advanced by the change that all the commodities are required to be measured by the quantity of standard money which half the commodities brought before silver was eliminated from the money volume. Precisely this thing has happened, and for twenty years, as gold has appreciated under the demands of expanding population and increasing business, in a period of profound peace prices have fallen, because more and more of the products of human toil have been required to purchase a fixed amount of gold. The reason why all men do not perceive that the real movement is of gold and not of commodities is that they are accustomed to regard the act of purchasing as the prerogative of money alone, whereas the farmer who parts with his wheat buys gold with his wheat just as much as the merchant buys wheat with gold.

There are millions of human beings who still firmly believe that the sun rolls around the earth because their senses justify that belief. The argument for the fixity of gold is precisely the same as that for the immovability of the earth—both seem to stand still. The delusion respecting the earth yields to instruction, but there is something almost hopeless in the tenacity which educated men cling to the other and equally absurd delusion. All that is needed to accomplish the robbery of nine-tenths of the people of the world is to change the money standard from gold and silver to gold alone.

Henry Clay was right in 1840 when he said in regard to the contraction of the money volume—

All property would be reduced in value to one-third of its present nominal amount and every debtor would in effect have to pay three times as much as he had contracted for. The pressure of foreign debts would be three times as great as it is and about \$600,000,000, which is the sum now probably due the banks from the people, would be multiplied into \$1,800,000,000.

Tested by the rule laid down by Mr. Clay, and no one can doubt its correctness, how many millions of dollars have the American people lost in the last twenty years? Let some gentleman make the figures. Our Government interest-bearing debt is over \$700,000,000, and all debts, public and private, of the American people is estimated at nearly \$40,000,000,000. What a vast sum the demonetization of silver has cost the people and given as a bonus

to the bankers and money holders—four times more than would buy all the gold in the world. In 1873 we produced 281,254,700 bushels of wheat; this brought \$1.312 per bushel, making \$366,635,166.40. In 1889 the crop was 611,780,000 bushels, at 80 cents per bushel, making \$489,424,000. Had the 611,780,000 bushels sold for \$1.312, the price in 1873, it would have brought \$802,655,360, but the wheat-growers lost by the reduction \$313,231,360, and the same loss applies to all farm products, which would make the loss many millions of dollars.

I hold in my hand the New York Tribune of a recent date, and I find the estimate given editorially that because of the depreciation of property in the United States in the last two years, the American people have lost over \$10,000,000,000.

This paper says that the Agricultural Department reports a loss of \$663,000,000 on the value of animals on farms since January, 1893, and a like loss on stock not on farms would be \$154,000,000. Wheat has fallen from 80 cents per bushel in New York to 56 cents, a loss of 30 per cent; cotton, from 9.12 to 5.62 cents, a loss of 38 per cent; pork, from 19.50 to 11.25 per barrel, a loss of 42 per cent.

Farms and live stock together have declined in value \$2,145,000,000. The gold bug says, however, that the decline in prices is due to overproduction, and not to the appreciation of gold. This can not be true, for there is no decline in prices in countries where silver is used exclusively.

An ounce of silver to-day in any country will purchase as much wheat, corn, or oats, or any other product, except gold, as it would twenty years ago. It can not be true for another reason. The price of land has decreased as well as other property. Who has created more land in the last twenty years? Has there been an overproduction of land since silver was demonetized? Is there not as many acres in cultivation now, according to population, as there was twenty years ago? No; all values have decreased in the last twenty years. It may be true that a piece of land here and there from local causes has advanced in price, or that a certain farm product may sell for a reasonable price, all things considered, but as a rule prices have declined, and are still declining, and will decline while the world is trying to do its business on a gold basis.

I am reliably informed by a gentleman from the South that many valuable plantations in that part of the country will not be cultivated this year, for at the present low prices the crops will not pay the cost of production, although the wages of labor is very low there. The gold standard is the decadence of agriculture. Not that the staple products of the earth are not as beneficent to mankind as they ever were, but they are not salable when measured by gold alone. What is the effect now? It requires two bushels of wheat to purchase a gold dollar, when one bushel would procure a gold dollar some years ago. It requires two horses now to obtain the same quantity of gold that one horse would in the past, and this is also true of all farm products. It is not so much because the price of products have fallen, as it is that the measure of commodities, "gold," has appreciated.

Why then say that gold is the only "honest money" in the world, that it is the best money, and that a silver dollar is not an honest dollar. Why should we call gold money the best money when we know that it is destroying our trade and commerce, ruining our farmers and mechanics, and driving labor of all kinds into idleness and poverty. But why call gold money at all. It does not circulate among the people and is no part of the money of this country. It performs no useful function whatever.

Who but the banks or some parties in California ever see a gold piece? I venture the assertion that if you ask every person you meet in the ordinary walks of life if they have any gold coin in their pockets, nine hundred and ninety-nine persons out of every thousand will answer no. Every well-informed person knows that the silver money of the world has performed more than nine-tenths of the ordinary business of the globe, and that it has uniformly been the money of the common people. The best dollar for every man is the dollar that he can get for his labor and products, and as gold coin never has and does not now circulate among the people it is sheer nonsense to talk about gold as a circulating medium. There is not sufficient gold in the world for that purpose.

But, Mr. Chairman, this is not all. The advocates of the gold standard further insist that we must destroy or retire the \$346,681,016 greenbacks and the \$151,609,267 Treasury notes now in circulation in this country in order to protect the gold reserve. Will the people of this country indorse such legislation? I think not. Why should this money be retired or destroyed? The advocate of gold says this money is used to take gold out of the Treasury, and for that reason should be destroyed and replaced by State or national bank paper. I solemnly protest against such a change. We should have no irredeemable paper money in this country. But gentlemen say the banks would redeem their own notes.

They might or might not do so. It is certain that the people of this country want no bank oligarchy. This should be a Government of law and not of banks. The question of the redemption of our paper money should not be left to the banks, but should be settled by law; and there can be no better place for redemption than at the Treasury of the United States. The present volume of Treasury notes and greenbacks should not be retired, but rather greatly enlarged. I venture the assertion, without the fear of successful

contradiction, that this currency is the best paper money in the world.

All this talk about this Government not being able to sustain its credit without the assistance of the banks is vile hypocrisy and cant. We are the greatest wealth-producing people in the world. Our farmers produce annually over \$2,500,000,000 worth of farm products, and our shops and factories produce yearly over \$9,000,000,000 worth of manufactured goods. Our gold mines produce \$35,000,000,000, and our silver mines from \$50,000,000,000 to \$65,000,000,000, annually, without mentioning our other mineral wealth.

The Government can and will pay every dollar it owes, and in the very kind of money mentioned in the contract. And more than that, the Government can keep all her money on a parity. There is no occasion now, nor has there been for the last thirty years, for this Government to issue a single interest-bearing bond payable either in currency, coin, or gold. I assert further, without the fear of successful contradiction, that the civil war could have been fought to a successful conclusion without issuing a single interest-bearing bond, and the \$2,000,000,000 paid to the banks and syndicates on these bonds was one of the most gigantic robberies ever consummated on earth.

The Government had the power to issue as much money as it needed and make it a legal tender for the payment of all debts, public and private, but a foul conspiracy was entered into by the great bankers that they would not permit this money to pass through their banks without the payment to them of this vast sum of money. These patriotic bankers loaned the Government no money, but simply "loaned their credit" to the Government and for this simple accommodation these pirates exacted as blood money \$2,000,000,000, and if it was not paid to them they were willing to scuttle the ship of state and see the liberties of a free people perish from the face of the earth forever. And now Congress is again asked by the same patriotic banks to execute to them \$500,000,000 interest-bearing bonds, payable in thirty years, not in current money, not in coin, but principal and interest to be payable in gold.

We are told the Government has entered into a contract privately with these bankers, and that if Congress does not authorize such a loan at 3 per cent interest per annum then the Government will execute the bonds at 3½ per cent interest under existing law, and thereby the people will lose, as we are told, \$16,000,000,000. But no person has told us what the gold would cost us in thirty years from now to pay off these bonds. If gold appreciates in the next thirty years as it has in the last twenty years it would be impossible to tell, but certainly it would be very many millions.

Confronted with this condition, what is the duty of Congress? All the Government interest-bearing obligations now outstanding, nearly \$700,000,000, are payable in coin. It is proposed to make the new bonds payable in gold alone. If this should be done is it not apparent at once that this would be a change in the policy of the Government heretofore pursued? And it would at once necessitate a refunding of all our bonds now outstanding and make them payable in gold also. Is a Democratic Congress prepared to commit this great iniquity, to increase by many more millions the public debt of the nation and thus to rivet the galling yoke of the banks more tightly on the necks of the people?

Mr. Chairman, speaking only for myself I solemnly declare I will never support such a measure. I am a Democrat, and I can not forget the prophetic utterance of the father of Democracy, Thomas Jefferson, when he said:

I sincerely believe that banking institutions are more dangerous to liberty than standing armies.

I will not barter away the liberty of my countrymen at the behest of the bankers. I know there are many members in this House who call themselves Democrats who are willing to vote for gold bonds, and also vote to create national banks of issue, but, loving the history, doctrine, and traditions of the Democratic party as I do, I can not vote for such propositions.

For more than twenty years in all my public utterances on the hustings I have denounced the present national-bank system as a robbery of the people, as being class legislation and paternalism, and also founded on the principle of double interest. It is a low estimate to say that the annual robbery of the people by this banking system has been at least \$18,000,000,000. I have also denounced with all the earnestness that I could command during all these years the great crime committed by the Republican party when that party refunded the public debt into bonds payable in "coin" from bonds payable in any lawful money as they were payable. That whole transaction is supposed to have cost the American people at least \$600,000,000. Whatever of injury this country has sustained up to this time in regard to the issue of interest-bearing bonds is due to the Republican party, for the Democratic party has passed no law that authorizes the issue of any outstanding bonds. The Democratic party does not believe in the bond system, at least in times of peace, and in no sense is this the proper remedy for existing evils.

Mr. Chairman, in order to meet the emergencies of this hour and secure relief for the people, we must turn to the Constitution. If there is any crucial test of Democratic principles it must be found in the Constitution. A man who does not believe in the Constitu-

tion can not be a Democrat. As Democrats we should return to the teachings of the fathers, and render obedience to the Constitution. The Constitution declares that Congress shall have power—

To coin money, regulate the value thereof, and of foreign coin.

And the Constitution further declares that—

No State shall * * * coin money; * * * make anything but gold and silver coin a tender in payment of debts.

The power to coin money is expressed in short, clear, concise, and unmistakable language. Congress has no discretion about it. Congress can raise no question of expediency, no question of national policy, no question whether we shall have a bimetallic currency or a gold currency. Daniel Webster, the greatest constitutional lawyer of this country, said:

Gold and silver at rates fixed by the Congress constitutes the legal standard of value in this country, and neither Congress nor any State has authority to establish any other standard or to displace that standard.

James G. Blaine said:

I believe gold and silver to be the money of the Constitution; indeed, the money of the American people, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either should not be money. Congress has, therefore, in my judgment, no power to demonetize either.

Mr. Chairman, the Constitution strips the States of all power over the currency of the country, except to declare gold and silver coin, without distinction, a legal tender; but Congress must coin the money and regulate its value. In that respect the law of Congress is supreme, and may establish any ratio between gold and silver. The coinage of silver is a constitutional right of the people, and I am surprised beyond expression why a Democrat should not be willing to enforce the Constitution.

Is there a word in the Constitution that Congress shall not coin silver until we have an international agreement with the crowned heads of Europe? If so, where do you find it? What supreme homage we pay to royalty! If this is Democratic, I renounce and disavow it. The nations of the earth have nothing to do with our form of government or money. There is no such thing in the world as international money. Beyond the great oceans our money is simply a commodity. Our gold and silver coins in other countries are simply articles of merchandise, not money. The trade and commerce between nations are carried on by exchange of goods for goods, merchandise for merchandise, and our gold in Lombard street is not counted, but weighed.

We produce sufficient gold in this country to discharge any balance of trade that may be due from our people to the people of other countries, and we can spare the gold for that purpose. But we can not afford to permit England or any other nation to strike down one-half of our money, thus reducing the value of our property one-half. Gold and silver coin were measures of value in this country up to 1873. When one-half the quantity is abandoned as a money metal and as a measure of value, the other half appreciates in value, and thereby destruction comes to the value of all other property, including the wages of labor. This brings insolvency to debtors and ruin to business enterprises.

Mr. Chairman, the mission of the Democratic party is to right this great wrong committed by the Republican party and to restore silver to its constitutional right as a money metal. I hoped that during this session of Congress that would be done, but I fear now it will not. Let the responsibility rest where it belongs.

Some of us have done all we could as constitutional Democrats to effect a reunion of gold and silver coins as they were united and used prior to 1873, but other so-called Democrats, at the behest of the great banks, have failed to do their constitutional duty and have fallen down and worshiped the golden calf and voted with the Republican party, and thereby defeated any silver legislation.

Congress will soon adjourn, and this great question will again be referred to the people. The fight for free silver will go on and the people will not allow the bankers to rob them by their gold standard. Right in the end will prevail.

Truth crushed to earth will rise again:
The eternal years of God are hers.

I have no doubt but that in the end silver will be restored to its historic place as a medium of exchange, and it will retain its place equally with gold to the end of time. Both alike are the money of the world and the supports of advancing civilization, and such they are likely to be as long as our planet is populated.

It is the duty of America, the greatest nation of the earth, to take the lead in this great work of restoring the free coinage of silver. We produce more gold and many times more silver than any nation on earth, and why not reap the rich fruitage of these twin blessings of God to man? By so doing we could greatly enlarge the value of our metallic coins, the money of ultimate payment, and on this expanded coin foundation we could with safety issue a sufficient volume of paper money to stop the alarming decline in the value of all property and the stagnation in every branch of business. With a sufficient volume of money manufacturing establishments would soon be in active operation and labor would be furnished to millions of honest men now engaged in trampwork.

The tears of the helpless widow would be dried up, because she would have the wherewith to feed and clothe her orphan children. The people could pay their debts, and those who are out of debt are out of danger. With such a volume of money this country would

again blossom as the rose. We learn from the Scriptures that when Solomon was King of Israel he made silver and gold at Jerusalem as plenteous as stones, and that the value of Solomon's Temple and its contents was over \$77,000,000,000 in our money. This was the golden era of the children of Israel, every student of history is acquainted with their decline and fall.

When Rome from her seven hills ruled the world that people had at their command, as history informs us, \$1,800,000,000 of coined money, the greater part being in silver. After this their volume of money was contracted to \$200,000,000, and with the contraction population dwindled, commerce, arts, wealth, and freedom all disappeared, and the people were reduced by poverty to serfdom and slavery.

Mr. Chairman, where are all the other nations of ancient times, with their fabulous wealth and overflowing treasuries? They have all perished from the earth, and the first symptom of their decadence was a contraction of the volume of their metallic money, that being the lifeblood of all nations. All national success and business prosperity go side by side with an increasing volume of money, and national death and business stagnation follow in the wake of a decreasing currency. At the birth of this great nation gold and silver were wedded together by the fathers of the Republic as our money, and side by side in harmonious and honorable companionship they reigned supreme as our representative of value and medium of exchange until silver was dethroned by the Republican party. And now the enthronement of silver to its rightful place as a money metal is the superlative duty of the Democratic party. [Applause.]

Free Ships.

"Mr. Speaker, when this proposition was formerly before the House it came up under very different circumstances from those which now exist. I then occupied the same position which I propose to occupy now. I then took ground in favor of the citizens of the United States being permitted to purchase foreign ships, and in favor of permitting vessels sailing under foreign flags to be registered under our flag. And I say to these gentlemen now, to the gentleman from Pennsylvania [Mr. Kelley] and to the shipbuilders of this country, that if they allow their notions of high protection to run riot in this matter, so that we shall not permit our citizens to purchase foreign vessels in time of war for the benefit of our naval service and our commerce, so that we shall bind down our citizens under this idea of protection to American ship-building, not to purchase vessels from abroad; I say that by adopting this course they are pursuing a policy that is holding the knife to the throat of the commercial interests of this Nation."—John A. Logan.

SPEECH OF HON. GEO. W. FITHIAN, OF ILLINOIS, IN THE HOUSE OF REPRESENTATIVES.

Friday, February 22, 1895.

The House having under consideration the bill (S. 2783) to postpone the enforcement of the Act of August 19, 1890, entitled "An act to adopt regulations for preventing collisions at sea"—

Mr. FITHIAN said:

Mr. SPEAKER: I do not care to say anything except to protest against the bad faith of Great Britain in refusing to let the act of August 19, 1890, go into effect on the 1st of March, 1895, as originally agreed upon. If this act is not passed, human life will be endangered, and I therefore favored reporting this bill from the Committee on Merchant Marine and Fisheries, and now favor its passage, but if Congress does not soon enact legislation to restore our merchant marine and regain our lost carrying trade, we will have no American ships to be governed by international rules and regulations.

On the 30th of October, 1893, at the first session of this Congress, the Committee on Merchant Marine and Fisheries directed me to report to the House the following bill providing for free ships:

That from and after the first day of January, eighteen hundred and ninety-four, any citizen or citizens of the United States may purchase the whole of any steam or sail vessel, no matter where said vessel may have been built, whether within the United States or in a foreign country, or whether said vessel may have been owned in whole or in part by an alien or aliens; and said vessel shall be registered free of duty as to her hull, spars, appliances, outfit, and equipment (including boilers, engines, and machinery, if a steam vessel) as a vessel of the United States by the collector in any port of entry of the United States to whom application for such registry may be made by said citizen or citizens, in the same manner as though said vessel had been built in the United States: *Provided*, That any vessel so purchased and registered shall not be used or allowed to engage in the coastwise trade of the United States.

It is no fault of any member of the majority of the committee that this bill has not been considered by the House and passed.

The Committee on Merchant Marine and Fisheries in the Fifty-first Congress, in reporting a bill to pay bounties to American-built ships, truthfully set forth the condition of our merchant marine. It said that—

It is a fact well known to Congress, the country, and the world at large that thirty-five years ago, and even as far back as eighty and ninety years ago, the merchant marine of the United States was one of our leading interests, a great source of our prosperity, and the strong right arm of national power. And we regret to say that it is no less notorious now that our shipping in the foreign trade has sunk almost out of sight. As an interest it is as low as it once was high; as a source of employment or of gain it is of little account; as an arm of the national power it has withered away. Our foreign carrying trade, enormously great, is almost entirely passive for want of merchants and underwriters, ships and seamen of our own. Our people have been driven from their rightful pursuits of the sea and from an active carrying trade in the products of their industry ashore. In the change that has come over our navigation and commerce what our citizens have lost our nation has lost; what aliens have gained foreign nations have gained.

To comprehend fully the national interest in thus increasing export values and decreasing import cost, by the use of shipping of our own, we will suppose that our marine in foreign trade, for the last ten years, could have done 75 or 80 per cent of the export and import carrying. Of foreign commerce, by sea, there was an annual average of \$1,525,838,656, which was \$26.85 per capita, a very much greater trade than in any ten-year period before the war. From the best calculations that have been made, it appears that the average price for freighting ocean commerce may be fixed approximately at 15 per cent for exports and 10 per cent for imports, averaging 12.5 per cent of the value for both carried annually. At this rate the total ocean transportation would amount to \$190,726,736. Our marine doing 75 per cent of this would earn and save \$143,047,317; doing 50 per cent of it would make \$95,364,878. Instead of this, however, our shipping has carried an average of only 15 per cent, earning and saving us only \$28,600,463. It results that under the first supposition there has been lost annually for the past ten years \$114,437,844, and under the second hypothesis, \$96,755,418, from the country's wealth.

If all the nations with whom we deal by sea had vessels of their own to share the transportation, the most that could be asked of us would be an equal part of it. That would give us half the carriage. But so many maritime nations have few, if any, vessels, it results that our equitable share of transportation is about 75 per cent of our foreign trade. This estimate does not include the passenger traffic nor postal service.

It is easily understood that the commercial loss from foreign vessels monopolizing almost all our ocean carriage is not local nor individual, but national. It is of national interest to increase our export valuation by adding ocean carriage to production, and to lessen our import liability by using our own marine. It is of national concern to have a favorable balance of trade abroad. Foreign transportation creates a foreign debt. For each of the past ten years we have made and paid a debt of \$162,110,293 for the carriage of merchandise alone. The annual average value of exports by American vessels for the past ten years was \$88,475,029. If therefore took all our fleet in the foreign trade twenty-two months to carry productions enough to discharge the debt for foreign transportation for a single year.

With sufficient shipping of our own, we would have a credit instead of a debt abroad. We would have controlled our own trade instead of having foreign nations control it for us. We would have greatly increased our exports by being our own merchants and carriers. It is through the earnings and savings of her great and adequate marine that England regulates and controls her commerce and secures a balance of account against the world. Take away the equipage of British transportation, and the "ruler of the sea" would soon sink into its depths. It is the work of her shipping that enables her every year to import four or five hundred million dollars more than she exports. She has seized so much of our trade and transportation, that she more than pays, with the work of her ships, for all the grain and beef she buys of the United States.

The shipping problem is, therefore, very plainly, in both its military and commercial aspects, one of profound national interest. It is for Congress to solve it. Under the original policy of the Government our people, in their different pursuits of the sea, solved it for the nation. That policy having been changed, and the demonstration having been satisfactorily made, that, under the policy substituted, our people can not maintain a marine, it becomes necessary for the Government to aid them in so doing. The question is, How shall this be done?

That this is the condition of our merchant marine and our foreign carrying trade no one will dispute, but the contention arises as to the best means of rehabilitating our merchant marine and regaining our foreign carrying trade. The Republican method is, as was proposed in the bill in the Fifty-first Congress, to pay a bounty for navigating ships. The subsidizing of ships has frequently been resorted to in this as well as other countries, and in every instance it has proven a failure. It is not a new and untried experiment, and even if the principle was sound, it would be unwise to resort to what past experience has demonstrated to be an utter failure.

In this connection I deem it appropriate to quote from several eminent statesmen who have spoken in Congress upon this question. Mr. Benjamin Butler said:

I am opposed diametrically, with all my might, with all my judgment, with all my strength, to the idea of subsidizing any line whatever. The only time when this Government attempted to subsidize a line of steamers, the great Collins Line, we not only lost our money, but ruined those whom we undertook to aid.

Mr. Chandler said:

It is desirable to own iron ships, very desirable, and I hope to see the day when we shall have our old supremacy in shipping; but it never will be done in the world by subsidies. It is not the subsidized lines of Great Britain that pay the largest returns. . . . You will never restore your flag to the ocean by subsidies, I care not how great you may make them; you may increase your subsidies to \$10,000,000 a year and you will not restore your flag.

Mr. Morrill said:

Is it practicable to recall our shipping? I think it is, and by the simplest process. Not a dollar of subsidies. Give us cheap materials and we will do it. Give us the ground on which we stand, so that we shall have our materials just as cheap as they can be afforded elsewhere, and then all these shipyards and all that skilled labor will be at work at once, and you will find that we shall restore the balance of the shipping interests on the ocean that now stands against us.

Senator Sherman, in a speech advocating free ships, said:

Since we can not build these vessels within 20 or 30 per cent of the cost in England, why not admit them? Why not admit them duty free, raise the American flag upon them, put American officers upon their decks, and have American lines instead of British lines? Why, sir, if that bill should pass, authorizing foreign ships when owned by American citizens to be used for the present, for three years under the American flag, one-half of the lines between New York and England would be American lines in sixty days.

Senator Edmunds declared that "it was as much unconstitutional and wrong to grant these subsidies to Americans as to give them to foreigners."

Hon. JOSEPH G. CANNON, member of the present Congress, on the 28th of February, 1879, during a debate on the subsidy question, said:

Now, what is this proposition? Oh, it is to give John Roach \$3,000,000 as a practical gratuity and to charge that as a tax on the cotton, and provisions, and tobacco, and wheat, and grain, and breadstuffs, and oil, that we produce. What for? To enable somebody to sell something that he has made, which it cost \$1.43 to make here, while it costs only \$1 to make it in Europe, and both manufacturers have to go to the same market, namely, Brazil. Why, gentlemen, if you had a business agent who proposed to do your private business in that way you would put him into a lunatic asylum or swear that he was a thief or an idiot and discharge him.

Commencing in the year 1847 down to the present time (1879) act after act has been passed for a similar purpose (postal subsidies). I hold in my hand the official statements of the Secretary of the Navy and the Postmaster-General, which show payments of subsidies of the amount, in round numbers, of \$14,500,000 to steamship lines during the period from the year 1848 to 1868. I hold in my hand a statement that shows subsidies to the amount of \$7,000,000, in round numbers, since that time, making over \$21,000,000 that have been paid out of the Treasury for the purpose of establishing steamship lines—\$7,000,000 would buy all the steamships engaged in commerce that sail under the American flag on every ocean in the world—and more than that, the subsidizing of these steamship lines, from the Collins Line in 1852 up to the present time, has bankrupted every prominent man that has favored it.

Hon. John A. Logan, who ably represented Illinois in both the House and Senate, said:

Mr. Speaker, when this proposition was formerly before the House it came up under very different circumstances from those which now exist. I then occupied the same position which I propose to occupy now. I then took ground in favor of the citizens of the United States being permitted to purchase foreign ships, and in favor of permitting vessels sailing under foreign flags to be registered under our flag. And I say to these gentlemen now, to the gentleman from Pennsylvania [Mr. Kelley] and to the shipbuilders of this country, that if they allow their notions of high protection to run riot in this matter, so that we shall not permit our citizens to purchase foreign vessels in time of war for the benefit of our naval service and our commerce, so that we shall bind down our citizens under this idea of protection to American shipbuilding, not to purchase vessels from abroad; I say that by adopting this course, they are pursuing a policy that is holding the knife to the throat of the commercial interests of this nation.

We have been told time and again upon the floor of this House that the success of Great Britain on the high seas is entirely due to the enormous sums of money paid to subsidize her merchant marine. Whenever this statement has been made in my hearing I have challenged its author to produce facts in support of this assertion, and never yet has that challenge been answered. I ask now the gentlemen from Maine, from Pennsylvania, or from California, if they can tell me how great a proportion of the tonnage of Great Britain receives compensation in any form whatever from the British exchequer? Barely 3 per cent! Great Britain pays scant two hundred or two hundred and fifty thousand dollars to cruisers liable to be called into the government service in case of an emergency, and beyond this her only "subsidy" is paid in the form of mail compensation. And that mail compensation, I may say right here, is made at rates one-half, one-third, less than the postal subsidy act of the Fifty-first Congress authorized to be paid for the transportation of mails on American steamers.

Not only does Great Britain not subsidize her merchant marine now, but what is more, she never did, barring the early years when steam navigation on the ocean was almost an untried experiment, and the possibility of keeping up a regular mail service between England and her remote colonies was so uncertain that private interests were reluctant to undertake the task without Government support. I shall not go into the details of the early establishment, nearly half a century ago, of the Cunard Line, the Peninsular and Oriental and other British mail lines. That subject has been fully covered by a gentleman whose scholarship and impartiality entitle his words to the respect and credence of every intelligent American—I refer to the Hon. Arthur T. Hadley, of Yale College, part of whose article on subsidies in the *Cyclopædia of Political Science* from which I quote the following:

England's foreign and colonial relations were such as to force her Government to take the lead in the matter of steamship subsidies; and it did so with great promptness. It was not until 1838 that the practical importance of ocean steam navigation was made to appear. Proposals for a line of Atlantic mail steamers were at once invited, and in 1839 the contract was awarded to Samuel Cunard, whose bid was the most favorable. The original contract was for 3 ships, at an annual compensation of \$55,000; it was soon modified to 4 ships, at \$81,000. This contract was extended and modified to the advantage of the company in 1846, 1854, and 1858; it is only within the last fifteen years that it has been greatly reduced. In 1840 a contract for 14 ships, at \$340,000, was made with the Royal Mail Steam Packet Company, for the carriage of the mails to the West Indies and southern United States.

This company afterwards extended its field of operations to South America. In 1846 the Peninsular and Oriental Company, which had for some years a small mail contract, engaged to run seven mail steamers to India for \$190,000; and this company gradually extended its engagements with the Government, so that for a series of years it has received more than \$400,000, and often \$500,000, annually. The contracts with these three companies have been by far the most important; of the rest, only those with the Pacific Steam Navigation Company and with the Union Steamship Company to Africa need be mentioned. Under contracts like these, England expended in forty years nearly \$43,000,000 sterling. The expense is now gradually decreasing, but still amounts annually to some \$700,000 sterling. These payments are so often cited as an example for America to follow that we must consider carefully how far they were actually of the nature of bounties for the encouragement of the shipping interest.

The early contracts with Mr. Cunard were unquestionably of this nature. Ocean steam navigation was then an experiment; and Great Britain's colonial relations made it a political necessity for her to try the experiment first. Her

statesmen were forced to take the burden of risks which no private individual could prudently bear; hence, the apparent disproportion of the payments to the cost of the steamships. Nor is there good reason to doubt the candor of the Commons committee, who, in 1846, reported, in answer to some complaints on this head, that the service was better performed by that company for the price than it would be by any other. But twelve years later, when the business was thoroughly established, the conservatism of the admiralty allowed the Cunard contract to be renewed at a figure which was then quite in the nature of a bounty and was felt by the post-office to be burdensome and unfair. There was somewhat the same spirit shown in dealing with the Royal Mail Company, especially in renewing their contract in 1868, when, for certain reasons, the business was not thrown open to public competition, as had been the case in all other instances since 1860.

The question is a complicated one, but it is impossible to read the correspondence of the authorities with a rival line, and particularly a report for the Government by Mr. Sondamore (Parl. papers, 1867-68, xli), without feeling that there was an anxiety not merely to have the service well done, but to keep in good condition the line which had done it in the past. The company whose case is oftenest cited as an example of what is done by Government subsidy is the Peninsular and Oriental, but here there is much less ground for so doing than in the two former cases. The company owed its origin and early development to private enterprise; so far from being favored by Government contract it often seemed as if partiality was shown against it; and when it was finally recognized as the only agency competent to perform certain necessary parts of the mail service the contracts were awarded grudgingly at a sum which was considered scarcely an equivalent for the extra liabilities and expense incurred.

The facts which have given rise to the public impression are the enormous aggregate sum paid to the company, the renewal of one of its contracts some years before its expiration on terms which seemed especially advantageous, and, above all, the guarantee, for some years in force, of a 6 per cent dividend on the capital stock of the company. The enormous aggregate pay is explained by the enormous aggregate service. The contract renewal in 1870 was really sought by the authorities to obviate some difficulties under the old contract, which gave them far more trouble than they did the company. The guaranteed dividend requires a word of explanation. In 1867 the company was disinclined to take the Government contract, believing that the pay offered would not compensate the service required. The authorities were equally persuaded that it would. As no other company would undertake the work, the matter was compromised; the company taking the contract with the proviso that if they should, under its terms, be unable to pay a 6 per cent dividend (not 8 per cent, as has been frequently stated), the Government should make good the deficiency. Experience proved the company's original estimate a correct one.

How the matter was regarded by the Government is illustrated by the following extract from Mr. Sondamore's report (Parl. papers, 1867-68, xli, 131, incl. 3): "It would seem that in dealing with ocean services the post-office has only two questions to consider: First, what is the nature of the service required; and, second, what is the proper price to pay for it. In the case of communication with the east, Parliament has openly declared in favor of a more frequent and equally regular and rapid communication; the post-office has ascertained that only one company will undertake the maintenance of that communication, and I think I may also claim to say that it has ascertained, with a reasonably close approximation to accuracy, the proper price to pay for it, for the proper price must in every such case be that which, taken together with the revenue from traffic, will cover the working expenses and give a moderate dividend on capital. It is impossible to obtain good service on other terms. The question can not be dealt with on commercial principles, because the conditions of the postal service compel the contractors to disregard commercial principles. . . . For the sake of keeping up such communication with the east as the nation requires, they must set commercial principles at defiance; and, cost what it may, the nation must either pay them what they lose thereby or forego the communication." (See also Rep. of Com. on Affairs of Oriental Steamship Company, 1867, ix.)

Of England's mail contract system it may be fairly said: (1) That its aims are political and not commercial. It is a necessity for England to have constant communication with her colonies, and she has spent large sums for this object. It is almost equally important for her to have an efficient naval reserve and transport service, and she has made her mail contracts one among several means toward this end. (2) That the incidental commercial advantage to the subsidized companies has not been generally great, except at a very early period of the system. This is evinced by the fact that rival unsubsidized lines have been equally successful, and that the largest contracts have been on terms which made them a matter of indifference to the party receiving them.

Speaking of the French system, Professor Hadley says:

The French Government encouraged the Mediterranean steamship service from the first, and in the years 1861-1865 extended its operations to the support of lines to North and South America, India, and China. The annual amount recently paid under these contracts has been more than four and one-half million dollars. These efforts met with some degree of success; but the attempt by the law of January, 1881, still further to increase the French carrying trade by bounties on shipbuilding, sometimes as high as 60 francs per ton, and by a navigation bounty with a maximum of 150 francs per ton per thousand miles, did not produce the desired results. Of other nations, Italy, in 1880, spent more than three million dollars on steamship subsidies; Brazil, one million seven hundred thousand; Japan, half a million; Belgium, in 1878, spent over a quarter of a million; Austria, a mileage rate with a maximum of about three hundred thousand dollars; Russia a moderate fixed sum and a mileage rate in addition. The subsidies of Portugal and Holland are small; those of Germany and Denmark apply only to Baltic steamers. The most successful ocean steamship lines of the Continent, those of Hamburg and Bremen, receive no pay from the Government other than the very moderate postage rates.

Early in 1865 a contract was made with the Pacific Mail Steamship Company for a monthly mail service to China in vessels of 3,000 tons at an annual payment of \$500,000. No further lines were subsidized, in spite of the well-known report of the Lyne committee in 1870, favoring an extension of this policy. But in 1872 an additional subsidy of \$500,000 was offered the Pacific Mail for the establishment of a second service per month, this time in vessels of 4,000 tons. But the Pacific Mail was unfortunate in every way. Before the subsidy contract of 1865 it had been a sound and well-managed concern; since that time it had been the plaything of speculators. It lost nine vessels in as many years. Foreign shippers had become dissatisfied with its rates and methods. The shares had fallen from above par to below 40. Nor did the supplementary contract bring the expected relief.

The French law, which went into effect January 29, 1881, giving a bounty both to the navigation and construction of French vessels, proved unsatisfactory and failed to accomplish the results expected by its authors. The law expired January 29, 1891, and a renewal of the law was demanded by its advocates as a means to check the downward course of the French tonnage. It seems apparent that subsidies to ships, to be of any avail, must be permanent and con-

tinuing forever. Mr. Cramp, who is a shipbuilder and a strong advocate of subsidies, in speaking of the French law before this committee in the Fifty-first Congress, said:

Experience has shown to the French that their system was too short-lived to produce complete results. The result is agitation for a renewal or extension of the term of the law.

So that if subsidies are to be invoked as the remedy for our decaying merchant marine the people must be taxed forever; our merchant marine must be an annual charge upon the Government and supported like paupers in almshouses.

We must be taxed forever to keep the patient alive and never effect a cure. The French marine journal *La Yacht*, after a lengthy review of the effect of the French law, brimming with statistical facts, says:

By these statistics we ascertain that France alone, among the great nations, sees its merchant marine decreasing in importance.

I feel that it is unnecessary to comment any further upon the folly of attempting to restore our merchant marine and carrying trade by Government bounties, except to answer the false assertions that are made by the opponents of free ships and the advocates of subsidies that the present wonderful achievements of the merchant marine of Great Britain is due to payment of subsidies by that Government. This claim is not founded on fact. Great Britain pays certain lines for carrying the mails the same as we pay the railway lines for carrying our mails. These mail contracts are let at public letting to the lowest responsible bidders and are not restricted to British lines alone. These mail contracts are generally exacting in their terms. Deductions are made for overtime, and penalties for nonperformance are provided for in the contracts. These postal payments or subsidies have been gradually decreasing since 1868. Consul-General New, in his report dated London, September 3, 1889, said:

The British Government does not grant subsidies, in the general sense of the term, to any steamship company, but the post-office authorities make contracts for the conveyance of mails to the different parts of the world with steamship companies having steamers sailing to those ports.

The sailing fleet of Great Britain, which is the largest in the world, does not receive a single penny in the way of bounty, subsidy, mail pay, or in any other way from the British Government. The lines between New York and Great Britain that receive postal subsidies from the British Government are insignificant when compared with the regular lines of British steamers between New York and Great Britain which do not receive either postal subsidy or admiralty subvention. Besides the regular lines, there is a large number of tramp steamers that form a respectable fleet by themselves sailing between our ports and the ports of Great Britain that receive no aid from the British Government. It is a fact indisputable that the British lines that receive no Government aid are as prosperous as those that do.

Not only has Great Britain not built up her merchant marine by subsidies, but I challenge any gentleman on this floor to name a nation which has resorted to the subsidy method successfully, unless coupled with a law similar to the bill reported by the Committee on Merchant Marine and Fisheries. It is true that France during the last fourteen years has paid out upward of \$2,000,000 annually in the form of navigation and construction bounties, and has paid between \$2,000,000 and \$3,000,000 a year for the carrying of her ocean mails, but the tonnage of France to-day is barely equal to what it was thirty-five years ago, and is no larger than it was when the subsidy policy was inaugurated in 1881. In 1881 the total tonnage of France was 914,341 tons; in 1892 the total tonnage was 906,650, and had France refused to allow to her citizens the privilege that this Congress is refusing to allow to citizens of the United States the tonnage of France would have shown a positive decrease. In the nine years, from 1882 to 1890, France bought abroad and brought under her own flag, 289,000 tons, while during the same period her domestic construction was only 295,000 tons. If we turn to Germany we shall find that her subsidized lines constitute barely 4 per cent of her tonnage, and that, while her total construction at home for the ten years ending January 1, 1893, amounted to 514,000 tons, at the same time she bought abroad and placed under her national emblem 323,000 tons.

Italy has also been cited as a nation, the maritime growth of which is due to the subsidy policy. Italy since 1885 has spent in the neighborhood of eight millions of dollars on a system of navigation and construction bounties similar to that of France, yet four-fifths of the Italian steam tonnage to-day was built abroad, and but for the addition of that tonnage to her merchant fleets, Italy would stand to-day in the same position as ourselves, a nation bound to keep the peace, yet with a navy top-heavy by comparison with its merchant marine. No nation on the face of the earth, to repeat, owes any measure of the success it has obtained on the seas to the policy of subsidies. The people of no nation on the earth would tolerate for any considerable number of years the enormous taxation of other interests necessary to carry the subsidy policy to the point of success. Those nations which offer subsidies for the express purpose of encouraging domestic shipbuilding, at the same time give their citizens the alternative, if they see fit to embrace it, to purchase ships where they can be bought upon the same terms as those

upon which their competitors in foreign trade buy them. Even were the United States to adopt the policy of subsidies it must sooner or later be forced to accept a measure similar to the one which I have vainly asked this House to consider. Such has been the experience of other nations—such must be the experience of our own; and so long as we refuse to recognize this fact, just so long must we be content with a place at the foot of the list of great powers on the ocean.

We have been told that the old registry law for vessels in foreign trade is a measure of "protection for American labor," and that the only question involved in this bill is, to quote the most eminent builder in this country of naval vessels and subsidized mail steamers, "a matter of wages." I should be pleased to have any gentleman on the floor of this House, or any other gentleman, explain to me how by any possibility the registry law, so far as vessels in the foreign trade are concerned—and this bill affects none others—how the registry law can by any possibility afford the slightest measure of protection to the American shipbuilder or his employees. The free ship bill has been called a bill to admit the "finished product" into the United States. I should like to know what obstacle now stands in the way of the admission of the "finished product" to any port and every part of the United States. The steamers of the Cunard Line, of the North German Lloyd Line, and of the French Line enter the port of New York on precisely the same terms as the sailing vessels of the Hon. Arthur Sewall, of Maine. The "finished product," whatever flag it bears, is absolutely free to-day under the registry law, and no practical means has been suggested by which it can be otherwise. The wages of American labor in American shipyards are not protected to the extent of one cent by the law which our friends on the other side so tenaciously cling. The effort to convince men to the contrary is not an intelligent effort. When it is made by men with a fair understanding of plain facts right on the surface, before any man who will stand on the wharves of Boston and New York and see the freedom of our coasts to the vessels of every flag, then it is not an honest effort.

Another claim is made by subsidy advocates that Great Britain encourages her merchant marine by a system of admiralty subventions. This system dates from 1878-1888. This claim might deceive some if it were not for the fact that Great Britain's merchant marine was in a most prosperous condition before the period of admiralty subventions. It can not, therefore, be truthfully asserted that such payments are made for the encouragement of British shipping. These payments are made on the condition that the ships should be so constructed as to permit the carriage of heavy guns and be made otherwise available as war cruisers, and, thus modified, be held at the disposal of the British Government at all times for purchase or hire at the option of the admiralty. Vessels thus constructed are less useful in their employment in the passenger and freight service, and the cost of the vessel is thereby increased, and the payment is only just compensation for such losses to their owners. This subvention is now paid to only ten ships, belonging to four different lines.

Shipbuilding is not alone all the important industry involved in this question. It is desirable to build ships, but the ocean carrying trade is also of vast importance. The shipbuilders who are the chief subsidy advocates are not so much concerned about our carrying trade as they are in maintaining our present manifestly unwise restrictive navigation laws. They want shipbuilding protected, and want the Government to keep ships sailing upon the ocean by a system of bounties, with little concern about the amount of commerce carried in the subsidized bottoms. In the days of wooden ships we built ships in the United States cheaper than they could be built in England. Had England then pursued the policy that we have pursued since iron and steel ships supplanted wooden ships we would soon have surpassed England in the carrying trade of the world. In 1849 England, seeing the disadvantage that her merchants were put to, repealed her navigation laws, but not until after a long and stubborn fight against the repeal of the law by British shipbuilders.

In 1855 the iron ships came into use. England then could build iron ships cheaper than we could. We ought then to have done what England did in 1849. We ought to have repealed our restrictive navigation laws and allowed our merchants to buy ships where they could buy them the cheapest, and perhaps would have done so had it not been for the opposition of the American shipbuilders. The repeal of the English navigation laws did not destroy the shipbuilding industry of that country, as was predicted by the British shipbuilders, but shipbuilding continued to prosper without check or hindrance after the repeal of the law by the British Parliament, and to-day Great Britain is the great shipbuilding country of the world. Our shipbuilders claim that the cost of materials has been so much higher in this country that they could not compete with British shipbuilders, and that if they had free raw material they could overcome any difference in the cost of labor.

Mr. John Roach, in 1869, before the House committee to investigate the cause of the decline of our shipping interests, said:

America has lost her commerce, and what has she obtained in exchange for it? Simply the right of a few men to charge \$9 per ton in gold on the importation of pig iron. Pig iron is the basis of all other metals connected with the making and repairing of ships. There has been a revolution in shipbuilding, and iron is the

material from which they are now built. The high cost of iron produced by the tariff upon it is one of the principal difficulties our commerce has to contend with. I did not come here to ask a bounty. I came here to tell you that while all other articles of American produce are protected to a great extent there is no protection for American ships. If Congress will take off all the duties from American iron, reducing it to the price of foreign iron, then we are prepared to compete with foreign shipbuilders. The labor question is misstated; we are prepared to meet that difficulty, and to ask no further legislation on the subject.

Mr. Charles H. Cramp, in reply to a question by Mr. Morrill, as to the average rate of duty of materials entering into the construction of ships, said:

About 40 per cent, and if our shipbuilders could be relieved from that they could compete successfully with foreign builders. The difference in the cost of labor would be overcome by the superiority of American mechanics. Wooden ships will no longer be built, since iron ships are superior in every respect.

Our present tariff law provides—

That all lumber, timber, hemp, manila, wire rope, and iron and steel rods, bars, spikes, nails, plates, tees, angles, beams, and bolts, and copper, and composition metal which may be necessary for the construction and equipment of vessels built in the United States, for foreign account and ownership or for the purpose of being employed in the foreign trade, including the trade between the Atlantic and Pacific ports of the United States, after the passage of this act, may be imported in bond, under such regulations as the Secretary of the Treasury may prescribe, and upon proof that such materials have been used for such purpose, no duties shall be paid thereon. But vessels receiving the benefit of this section shall not be allowed to engage in the coastwise trade of the United States more than two months in any one year, except upon the payment to the United States of the duties on which a rebate is herein allowed: *Provided*, That vessels built in the United States for foreign account and ownership shall not be allowed to engage in the coastwise trade of the United States.

With free raw material shipbuilders should redeem their pledges to compete successfully with foreign builders. If the present bill becomes a law they will have the opportunity, and I entertain no doubt that they will not only compete with, but will soon surpass foreign shipbuilders.

The effect of our present laws has been to drive the American flag off the ocean. Lines that are essentially American lines are sailing the ocean under the British and other foreign flags. Ninety per cent of the stock of some of these foreign lines is owned by citizens of the United States. They sail their ships under foreign flags and seek foreign registry because our laws refuse them American registry and do not permit them to enter our ports under the Stars and Stripes. Hon. John M. Forbes, of Boston, an old merchant engaged in the China tea trade, said before this committee in the Fifty-first Congress:

I am ready to answer any question that comes within the scope of my very limited experience in modern ships, but should like to sum up my position in the respectful request that you will allow me and other American merchants the protection of the Stars and Stripes over such ships, wherever built, as we think necessary to carry on our foreign trade successfully. We don't ask for charity in the way of subsidies, but simply for the protection of our flag in doing what, by treaty or by friendship, you have long allowed every Englishman, Dutchman, Frenchman, or Sandwich Islander to do. The laws of trade are immutable, and so long as our people set them at defiance in this particular the American shipowner and merchant must be contented with a very insignificant position, while I am perfectly sure that any impartial coroner's jury, sitting upon the remains of our foreign shipping interests to-day, would bring in a verdict of "protected to death."

I am a firm believer in resurrection, and when the financial quacks and political mechanists have tried their hand in applying the stimulus of jobs, bounties, and subsidies, and have given up the hopeless task, I am sure that competition and free trade in ships, and the material and supplies for their use, will in due time restore not only our flag to the seas, and the foreign trade which naturally follows it to our citizens, but also the activity to our shipyards which is now a matter of tradition to the young and of memory among the old men. I know that anybody else except an American can bring a ship over here, and that is the privilege that I ask and is the basis of what I ask. It is a discrimination against the American shipowner, and I ask that that be removed and that I be allowed to carry the American flag. I can go to the English laws and I can give some Englishman a commission, and can put the ship under the British flag. It seems to me very hard that an American should be driven out of the trade by restrictions that do not apply to the inhabitants of any other country. I do not ask any privileges in the coast trade, but that I can get my ship and carry on competition in every other country.

Our present navigation laws denying registration, as vessels of the United States, to all vessels except such as are built in the United States, were enacted December 31, 1792. The object was to give protection to the shipbuilding interest of the United States. Then the ships of the world were made of wood and propelled by sail, and could be built in the United States much cheaper than in any other country in the world. This idea of protecting shipbuilding was borrowed from England, the same restrictions having remained on the English statutes until repealed in 1849. This unwise policy has now been abandoned by all the maritime nations of the world except the United States. We remain where we started over one hundred years ago. We seem to have lost sight of everything except the idea that by pursuing this unenlightened policy we were protecting our shipbuilding interest, and the effect has been to lose our ocean carrying trade, and of placing it in foreign hands without benefiting our shipbuilders.

In 1856 the values of the imports and exports coming into and leaving our ports on foreign vessels amounted to \$159,336,576, while the values of the imports and exports carried on American vessels were \$482,268,274, the per cent carried on American vessels being 75.2. In 1866 the values of the imports and exports carried on our vessels had shrunk to \$325,711,861, while the imports and exports carried on foreign vessels had increased to \$685,226,691, the per cent carried on American vessels being 32.2. In 1876 the values of the imports and exports carried on American vessels were \$311,076,171,

while the values of the imports and exports carried on foreign vessels were \$813,354,987, the per cent carried on American vessels being 27.7. In 1886 the values of the imports and exports carried on American vessels were \$197,349,503, while the values of the imports and exports carried on foreign vessels were \$1,073,911,113, the per cent carried on American vessels being 15.5. For the fiscal year 1893 the values of the imports and exports carried on American vessels were \$197,765,507, while the values of the imports and exports carried on foreign vessels were \$1,428,316,586, the per cent carried on American vessels being 11.5. By these figures it will be seen that our foreign carrying trade practically amounts to nothing, and at the present rate of decrease it will only be a few years until we lose it all.

The object of our navigation laws in refusing American registry to foreign-built ships as a means of encouraging shipbuilding, has been a signal failure. Its effect has been to put nearly all of our ocean carrying trade into foreign hands. It has given to foreign shipowners almost complete control of our foreign carrying trade. And although the object was to build up American shipbuilding, no ships of any consequence are built in the United States for the foreign carrying trade, while we have surrendered, practically, to our British rivals, all of the foreign carrying trade. This nation should consider the plain question whether as a nation we will completely and forever abandon the seas. If our rivals upon the ocean had been permitted to devise and direct the policy which the United States Government should adopt, no better policy could have been devised than the one we have pursued, to surrender every interest we have in the foreign carrying trade of the world.

When the tonnage of the world was largely constructed of timber the forests of our country gave us the advantage. We had the materials of which ships were built at our doors. Then we had shipbuilding, shipwrights, seamen, and ships. If England ever pursued the policy of paying subsidies to build up shipping it was in those days, as it was then she paid the largest sums to her shipowners, yet we passed her, both in shipping and in the carrying trade. England discovered her disadvantage in shipbuilding with us, and instead of increasing subsidies, she did what we long since should have done, repealed her navigation laws.

THE REPEAL OF THE BRITISH NAVIGATION LAWS.

The contest in the British Parliament for the repeal of the British navigation laws was opposed in the interest of the British shipbuilders, and the debates in the British Parliament against the repeal advanced the same reasons that our friends in the United States now advance against the repeal of our own antiquated navigation laws. When I read the speeches of Mr. Herries, the Marquis of Granby, Lord Stanley, Mr. Robinson, and other distinguished members of Parliament against the repeal of the British navigation laws, it reminds me of the efforts of the friends of the Cramps in the Fifty-first Congress, advocating Mr. Farquhar's bill giving bounties to shipowners. And the petitions and remonstrances that were sent to the British Parliament were not unlike the appeals that are made by the few selfish shipbuilders of our country, who have been haunting the doors of this Capitol for the last forty years, begging that they be given subsidies out of the Government Treasury.

I beg the patience of the House to read brief extracts from the debates in the British Parliament on the repeal of the British navigation laws, as reported in Hansard's Parliamentary Debates.

Mr. Labouchere, speaking for the repeal of the navigation laws, said:

Without going into the details of these questions, I may remind the House that the main alteration which I proposed last session was to entitle a foreign-built ship to a British register, if British owned and British manned, a proposal which would go to break down the monopoly at present existing in the shipbuilding trade in the United Kingdom. Now, without anticipating discussion upon this point, I must say that subsequent reflection has tended more and more to deepen the conviction which I entertained and expressed last session that that important trade—that trade which I value as deeply as anyone—the trade of shipbuilding in England and her dependencies—has nothing to fear from the change which I now propose. (Hans. Par. Deb. 102, 689, and 690.)

Speaking of the results to be accomplished by the bill for the repeal, the same gentleman said:

But the more I have considered this question, the more I am satisfied that some measures, which, while they encourage trade, abolish useless restrictions, must infallibly increase the maritime strength, and tend to the greater security and power of this country.

Mr. Hume, replying to Mr. Brummond, stated:

But what was it, he would ask, which gave wages and labor to the industrious classes? Why, it must be the increased means of employment. The right honorable gentleman, the member from Stamford (Mr. Herries), admitted that there was no place in the world so well calculated to be the depot of the world as England; and what, he (Mr. Hume) would ask, had prevented her from being so, so much as the restrictive laws on our commerce and navigation? Did they want proof that instead of capital being employed in labor here, it had gone elsewhere? Why, the right honorable gentleman had told the House that the employment of capital was so restricted by the operation of the navigation laws that they were obliged to employ the capital of Englishmen to carry on trade elsewhere. What caused that capital to go away? It was the restrictive operation of the navigation laws. The capital, his right honorable friend said, was employed in building ships in Sweden, and Russia, and elsewhere; but were not Russians and others part owners? The right honorable gentleman truly said that from the restricted means of building ships in this country—and that was owing to the navigation laws—our merchant shipowners in this country were compelled to obtain a cheaper conveyance for their goods elsewhere. Now, so far from that being the case, as stated by the right honorable gentleman, every one of his arguments went to dis-

prove what he stated. What we wanted was, that the English merchant should be allowed to carry goods in an English ship as cheaply as in the bottoms of any other country. He (Mr. Hume) and his right honorable friend (Mr. Herries) had been long engaged in arguing upon this subject; they had grown gray in discussing it; yet his right honorable friend seemed to stand still, and to abide by all the obsolete doctrines which twenty times had been refuted in that House. The industry of this country had been shackled by monopolies; and the removal of every monopoly, whatever it might be, must tend to its advancement. England, which was blessed with such vast resources of capital and labor to employ, had nevertheless been most unfortunately forced to expatriate her capital in American, Prussian, and other ships, because these laws were in existence. His right honorable friend had read an extract from a speech of Mr. Huskisson, but did he not know that but for the navigation laws the American navigation would not have been half what it was now? He hailed the proposition of Her Majesty's Government as one of the means of hereafter reducing the impediments to the employment of capital, the improvement of labor, and the keeping up of wages of those who were engaged in this country. (Han. Par. Deb., 162, 713, and 714.)

Here Mr. Hume refers to conditions that exist in the United States to-day. American citizens engaged in shipping have been compelled, because of our restrictive navigation laws, to purchase foreign-built vessels and sail them under foreign flags, being denied the right under our laws to place the American flag upon their own property. This was the case with the *New York* and *Paris*, that belonged to the Inman Line and sailed the ocean as British vessels, although 90 per cent of the stock of said vessels was owned by American citizens. The vessels were under subvention to the British Admiralty until granted American registry by act of Congress.

Mr. Hume, referring to a statement made by Mr. Herries in debate that France had yielded nothing to Great Britain in removing her restrictive navigation laws, said:

But let him look to the state of the navy of that country. France has decreased that arm of power during the last five years, and that decrease was likely to be continued. The fact was that wherever the blot of monopoly and restriction existed an injury was done to the great interests of the nation if competition could not be brought to bear against them. From that cause France was suffering, and if she did not yield she was likely to suffer still further in her commercial navy. Their conduct was not an example to follow, but a lesson to avoid. (Han. Par. Deb., 102, 714, and 715.)

Mr. Ricardo, in replying to objections made by British shipowners to throw open the coasting trade, said:

It would be far better to say to the shipowners, "Depend upon yourselves; depend upon your energies as Englishmen; depend upon the resources of this country and the wealth which commands the resources of the world, and do not trust to acts of Parliament. It would be better to send forth our ships free as the winds which filled their sails, with liberty to go where they would and come from where it suited them, than to start them from our ports encumbered with the eighth and ninth Victoria." (Han. Par. Deb., 102, 720.)

Mr. Mitchell, in reviewing the decline of the merchant navies of Spain, France, and Holland, under more restrictive navigation laws than England then had, said:

In these as well as other countries, the more restrictive the navigation and other commercial laws were, the more injurious had they proved to those nations which had adopted them.

Mr. Williams, speaking for the bill, stated that—

He trusted that the proposition of the right honorable gentleman (Mr. Labouchere) would pass into law, because he was convinced it would be the means of giving increased employment to the people, and consequently of improving the condition of the laborer.

Mr. J. O'Connell, an Irish member, said:

He was proud to think that Irish members had assisted in securing the repeal of the corn laws; and though they had since been deserted by the English advocates of free trade, he trusted they would still vote for similar measures. The loss of life would have been infinitely greater in his own country if the navigation laws had not been suspended; and he believed that his countrymen would be benefited by that cheapening of the cost of food which must arise from the lowering of freights. On these grounds, and on the great principle that all monopoly was an evil, he should, as an Irish member, record his vote for the removal of all commercial restrictions, and more particularly for the repeal of the navigation laws. (Han. Par. Deb., 102, 740.)

Mr. Wilson, speaking in reference to competition, said:

With respect to competition, with whom was it that the British shipowner was not now competing? They were competing with every country, even according to the policy of the navigation laws themselves, independently of any consideration as to reciprocity treaties. The British shipowner was brought into direct competition with the American shipowner, and in his own market, where he had all the benefits derived from local connections, part ownerships, and other advantages, none of which the British shipowner possessed in the American ports. The shipowner of this country had to leave Liverpool or the other ports with a comparatively light freight, and upon their arrival in the American ports, they had to compete with the Americans, and bring home cotton for the same price as they would charge. They had to compete with the Prussian ships in the Prussian markets, with Spanish ships in the markets of Cuba. In fact, in every country, according to the policy of the navigation laws, without the least degree owing to any new-fangled notions of free trade, the British shipowners had to compete with other countries, and that too under the most unfavorable circumstances, and when the competition was likely to be the strongest. (Han. Par. Deb., 103, 492.)

This is the condition of this country to-day. American shipowners must compete with every other nation of the world. To enable them to carry on that competition successfully they must have the privilege of buying their ships as cheaply as the merchants of other nations.

Sir J. Graham said:

Now, I always understood that the real origin of these laws was to be traced to that old mercantile system which I thought had been long ago exploded and rejected—a system which consisted of a commercial struggle between nations as to which should attract to itself the largest portion of the precious metals, and which regarded the means of arriving at that end to be this—that a gain by each nation could only be obtained by an equivalent loss on the part of all the others.

That, I conceive, to have been the mercantile system which has long been exploded, but which I must say I see symptoms on the part of some to endeavor to revive and restore to practice even in this our day. (Han. Par. Deb., 600, vol. 104.)

Further on in the same speech he said:

At a later period, in 1791, Sir Matthew Docker, whose opinions should be received with the greater caution because he is opposed to the navigation laws—this writer says that the object of the navigation laws was to increase the number of our seamen, and to add to our shipping, but that they had produced an opposite effect—that they had diminished the number of our seamen, and diminished the tonnage of our shipping; and he goes on to say that this was done at the same time that enhanced freights entailed a needless and heavy burden upon the community. Then comes an authority upon whom great reliance is placed in these matters—I mean the authority of Adam Smith. Speaking also from memory, and not giving his exact words, I think that Adam Smith says that the navigation laws are inimical to commerce and to that prosperity which commerce generates. He says, it is the interest of a nation always to buy as cheaply as possible, and sell as dearly as possible. By an odd coincidence this is the very passage in which he lays down the canon of trade, which the protectionists so much despise, of buying in the cheapest and selling in the dearest market. And, for that purpose, he goes on to say, it is desirable to have the greatest number of sellers in the market, because, having the greatest number of sellers, you can secure the greatest number of buyers. He goes on to admit that the effect of the navigation laws is to diminish the number of sellers and the number of buyers, and that under this system we sell cheaper and buy dearer than we should under a perfect system of free trade. (Han. Par. Deb., 104, 681, 682.)

Further on Mr. Graham said:

But the real question is this: Will the repeal of the navigation laws injure that commercial marine which is the mainstay of the royal navy? If I could bring myself to entertain such a belief, I should not vote for this bill; but, entertaining no fear on that point, I have made up my mind to give my support to the bill in its present shape. The honorable gentleman, the member for the county of Oxford, in debating this matter on a former occasion, laid down two general principles, to which I fully assent. He said that our commerce was the foundation of our marine, and he went on to show that ships do not create commerce, but follow it. Nothing is more true; and the question will then present itself, in what shape can we, with the greatest certainty, increase our commerce, and thereby our marine. I may be asked what will be the effects of the repeal of these laws. I believe the first effect will be to lower freights; next that it will tend to the increase of our exports and imports; that will stimulate trade and consumption, and stimulated trade and increased consumption will inevitably lead to an increase in the number of our seamen and of our ships. (Han. Par. Deb., 104, 685.)

The Duke of Argyll said:

Did he entertain the belief on which the evil prophecies of noble lords opposite were founded, he should be infinitely less proud of England, less proud of her past history, less hopeful of her future destiny. But he entertained no such opinion. They were all proud of the victories their countrymen had won on the fields, and especially on the seas, of battle; but he believed they might be prouder still in the conviction that they could gain a victory which was nobler yet, because a victory on which all other victories must ultimately depend—that they could enter the lists and win the prize in the peaceful race of industry. (Han. Par. Deb. 104, 1382-83.)

The following are quotations from the speeches of gentlemen who spoke against the repeal in the British Parliament. I recognize in them the familiar wails of our own subsidy beggars.

Mr. Herries, who was a leader of the debate against the repeal of the English navigation laws, said:

On what ground was it likely that any man would embark his capital in British shipbuilding, if he found he could work out the same objects with a foreign-built ship as with a British-built vessel, and if he knew that with a foreign ship he would not have to sustain those disadvantages of navigation and crew which were still to be attached to British-built ships? What was there, then, to prevent the enterprise of the British capitalist (that spirit of enterprise which pervaded every quarter of the globe) from transferring his capital from that which was the least advantageous investment to that which was the most advantageous, and to employ the foreign ship and crew as the cheaper instrument, in lieu of the British as the more costly one, for the purposes of his trade? He asked whether it could reasonably be expected that the mere spirit of patriotism would induce the capitalist to give the preference to British ships and British artisans under these circumstances. It was putting patriotism to too great a trial. (Han. Par. Deb. 103, 711.)

How similar are these utterances to the speeches made by my friend, Mr. DINGLEY, and others who oppose the repeal of our navigation laws, and who believe in granting Government subsidies as a means of building up our merchant marine. If my friend Governor DINGLEY was dead, and I heard these words repeated, without knowing from whence they came, I would at once conclude that his ghost had returned to earth and he was speaking.

Mr. Money Wigram, a British shipbuilder, who had spoken against the bill before the select committee of the House of Lords, threatened Parliament with the withdrawal of British shipbuilders to New York if the repeal bill was passed, and these are his words:

Take protection away and I will go to New York.

This threat was referred to by Mr. Herries in debate, and the words approvingly quoted.

Mr. Drummond said:

I think it right to state that this question, divested of official jargon, in plain, honest English, is simply this, that it is the latest of a series of measures incubated by the Manchester school, the end and object of which is to discharge all British laborers, and to employ, for the future, foreign laborers. Need I go through the details? It is unnecessary. You have said you will admit foreign timber instead of English timber; you have said you will admit foreign timber sawyers instead of English timber sawyers; you have said you will admit foreign shipwrights instead of English shipwrights; indeed, I may go through the whole catalogue of labor, and your policy will apply to all. (Han. Par. Deb. 103, 713, 713.)

Mr. Robinson declared that—

He fully agreed in the short and pithy speech of the honorable member for Surrey (Mr. Drummond), that all these free trade questions, which have been brought before the House in succession, tended to the discouragement of labor and the depreciation of wages, and would ultimately pauperize the country. (Han. Par. Deb., 103, 733.)

Mr. Robinson further states:

He found, from statistical account, that at this moment the tonnage of the United States was 3,100,000 tons, while that of this country (Great Britain), including its colonies, was 3,800,000 tons. The difference was, therefore, only 700,000 tons, and if they were allowed to trade direct between our colonies and the mother country and to have the intercolonial trade thrown open, without any restriction, he [Mr. Robinson] warned the House that the marine superiority of Great Britain would gradually diminish, whilst the United States would enjoy the benefits of a trade to which they never had any claim whatever, and for which they could give us no compensation.

The Marquis of Granby observed that—

The honorable member for Bridport [Mr. Mitchell] had stated that the trade with Cuba was now almost entirely in the hands of British shipowners; the inference intended to be drawn being, apparently, that British shipping could, without any protection, be able to compete with foreign. If this measure passed, the Americans would enter into the trade with Cuba in such a manner that this country would soon be deprived of it. Another fallacy of that honorable member [Mr. Mitchell] was that the consumer would derive great benefit from the repeal of the navigation laws. The consumer might be benefited by the reduction of freight in the case of heavy articles, as, for example, that of timber; but he appealed to the House and to the honorable gentleman himself whether a reduction in the case of sugar to the extent of the sixteenth part of a penny per pound would confer any benefit on the consumer. He would not then enter into the general question, reserving his remarks for a future occasion. He would only, then, declare his entire concurrence in the opinion of his right honorable colleague [Mr. Herries], that the naval superiority of this country depended upon the maintenance of the navigation laws.

Mr. Herries, on the second reading of the bill, presented petitions from the leading cities of Great Britain, and referred especially to the following petition from Liverpool, signed by 24,700 persons:

That your petitioners view with the greatest alarm the progress of a measure by which it is proposed to take away from this country the advantages it has so long and so successfully enjoyed, and by which such great results have been produced; and (as they believe unwisely) to invite foreign nations to share those advantages with us—nations utterly unable, even if willing, to confer upon us an equivalent in return. That one self-evident result would be the substitution (to a great extent) of foreign for British and colonial shipping, the employment of the labor and capital of other countries in lieu of our own, and the creation of new relations between foreign nations and our own colonies, thus weakening the ties which bind the latter to the mother country, and diminishing British power and influence throughout the world. But above all these, your petitioners would most earnestly implore your honorable House to look at the consequences of this measure as regards the British navy. Dependent as this is for the supply of the best seamen upon the mercantile marine, can it be supposed that it will maintain its present power when that supply is withdrawn, as it inevitably will be, by the diminution of merchant shipping? And with a navy badly manned and inefficient, how, in the event of war, your petitioners would respectfully ask, will our remaining trade be protected, our colonies continued to us, or even our national existence secured? (Han. Par. Deb., 103, 466.)

The Marquis of Granby, on the question of the British shipowner being able to compete with the American shipowner, said:

The question we have to consider is, whether the British shipowner can or can not compete with the foreigner. If it is capable of demonstration that he can not compete, I do not think that this House would be acting right, because it has adopted the principle of free trade in other cases, to adopt it in this particular instance also. It is very easy to understand, and very easy, I think, to demonstrate to this House, on the evidence which has been taken before the Lords committee, that the British shipowner can not compete with the foreigner; and the proof of it is, that everything in this country is very much dearer than in foreign lands—the wages he has to pay are much higher, and his materials he has to purchase at a much greater cost than the foreigner. The consequence is, that ships built in England, even those built in Sunderland, where the cost of construction is much smaller than at any other British ports, are much more expensive than those of any foreign country whatsoever. I will not trouble the House with the details I intended to refer to, because it is universally admitted that the ships built in England are much dearer than the ships built abroad. But, sir, I can not refrain from alluding to the price of American ships, because the honorable gentleman who spoke last referred in a special manner to the ships built in that country. I find that Mr. Minter, in his evidence before the committee of the House of Lords, said that the price of American ships was £14 a ton, and that the price of English ships, class A1, averages from £24 to £26 per ton. You will thus perceive that it is evident English ships can not compete with American.

Again, if we look to the British tonnage employed in the trade with our colonies and compare it with the American tonnage, we shall find that the American tonnage to our colonies increased from 1825 to 1846 by 1,635,822 tons. Nevertheless, in the face of these facts, the honorable gentleman, the member for Westbury, says we shall be able to compete with the American tonnage. It is impossible we can do so. The capabilities of America and the extent of her resources forbid us to entertain any such anticipation.

The navigation laws were repealed by the British Parliament, and notwithstanding the high price of ships in England and the low price that then prevailed in America, the British shipowners did compete with the American and to-day are the masters of the seas.

The Marquis of Granby, in the course of his argument, read from Mr. Mackay's book, *The Western World*, to show what the resources of America are. Mr. Mackay wrote:

Her resources, in almost every point of view, are infinitely greater than any that we possess. Look at her forests, her fertile valleys, and vast alluvial plains. Look at the variety of her productions, including most of those that are tropical, and all that are yielded by the temperate zone, and look at her mines teeming with coal, iron, lead, copper, and, as has just been discovered, with silver and gold. Look again at her enormous territory, and at the advantages she possesses for turning all her resources into account, in her magnificent system of lakes and rivers, in her extensive seacoast; in her numerous and excellent harbors, and in her geographical position, presenting, as she does, a double front to the Old World, or holding out, as it were, one hand to Asia and the other to Europe. But such resources and advantages are only valuable when properly turned to account. It is only by their being so that they will become formidable to us. We have only to look to the race possessing them to decide whether they are likely to be turned to account or not. The Americans are Englishmen exaggerated, if anything, as regards enterprise. This is not to be wondered at, as they have, as a people, more incentive than we have to enterprise. Of this we may rest assured, that the most

will be made of the resources and advantages at their disposal. This is all that has made us great. We have turned our coal and our iron, and our other resources to account, and the world has by turns wondered at and envied the result.

The American stock of coal and of iron is more than thirty times as great as ours, and more than twelve times as great as that of all Europe. Their other resources are in the same proportion, as compared with ours. And if our resources, turned to good account, have made us what we are, what will be the fabric of material greatness which will yet spring from the ample development of resources thirty times as great? If the industry of from twenty to thirty millions of people, with limited means, have raised England to her present pinnacle of greatness and glory, what will the industry of 150,000,000 yet effect in America, when brought to bear upon resources almost illimitable?

It is the consideration that America will yet exhibit in magnificent proportions all that has tended to make England great, that leads one irresistibly, however reluctantly, to the conclusion that the power of England must yet succumb to that of her offspring. There is, however, this consolation left us, that the predominant influence in the world will still be in the hands of our own race. That influence will not pass to a different race, but simply to a different scene of action. It has been England's fate, during her bright career, to plant new states which will inherit her power and her influence after her. On the continent of North America, on many points on the coast of South America, at the southern extremity of Africa, throughout wide Australia, in New Zealand, in Van Diemen's Land, and the Indian Archipelago, the Anglo-Saxon race will prevail, and the Anglo-Saxon language will be spoken, long after England's glories have become historic and traditional. These different communities, flourishing remote from each other, will all be animated by a kindred spirit, and will cherish a common sentiment of attachment to their common parent, who will long exercise a moral influence over them, after her political power has been eclipsed.

Not that England will not always be able to maintain her position in Europe. The powers which are destined to overshadow her are springing up elsewhere, and are of her own planting. Of these the American Republic, or Republics, as the case may be, will politically and commercially take the lead, when England, having fulfilled her glorious mission, shall have abdicated her supremacy, and the sceptre of empire shall have passed from her forever.

I do not believe that if we protect the industry of this country, that if we retain our navigation laws in their present integrity, this country need succumb to America or to any other country on the face of the earth. But it is an argument often used that the energy, the enterprise, and the industry of our shipowners and of Englishmen generally is so great that they can compete with any nation in the universe. I readily admit the industry and enterprise of the British people; but I am not ready on that account to expose them to a competition against which I am convinced they can not successfully struggle.

To show the means that were employed to frighten members of Parliament into voting against the repeal of the British navigation laws, I read the following from the speech of the Marquis of Granby:

I was speaking to a gentleman this morning, who informed me that he was about to charter two English ships for Jamaica, but in consequence of his belief that you were going to repeal the navigation laws—a presumption on his part which was based on the correspondence which has taken place between the Government of this country and those of foreign nations—he chartered instead two Danish ships at a reduced rate of 7s. 6d. per ton. What evidence could be stronger or more practical than that? Is it not evident that these cheap Danish, Russian, and American ships will and must displace our own? A shipowner carrying on extensive transactions in Liverpool, and who also gave evidence before the committee, informed me the other day that he was going to build another ship, but that he delayed doing so until he knew whether it was indeed in contemplation to repeal the navigation laws, for, if so, he was resolved to have his ship built in America. That, I think, is another significant fact, and one which sufficiently indicates what we may expect in the event of the navigation laws being repealed. (Han. Par. Deb., 103, 511.)

On the question of wages depriving artisans of employment the Marquis said:

In considering this question in all its bearings, I hope the House will not forget the number of artisans that will be thrown out of employment by the repeal of the navigation laws. You can not deny this fact, because one of your main arguments in support of the repeal of the navigation laws is that the British shipbuilder has now a combination by which he keeps his rate of wages at 6s. per day, but which scale you are now anxious to deprive him of. Sir, I can predict that the noble lord at the head of the Government, who is not now in his place, will at some future day, when he is about to ruin some other class (if, indeed, any will remain to be ruined), come down and say, "In former years there was a class of men in this country who depended for their livelihood upon building British ships; that class has been destroyed by competition with foreign countries. These men were happy and industrious; they received 6s. per day for their labor; but in consequence of the competition to which they were exposed, they were deprived of their employment. Great distress existed among them at first, but some of them have betaken themselves to other occupations, and others have emigrated." (Han. Par. Deb., 103, 513.)

Further on in debate the Marquis of Granby said:

Those who advocated a repeal of the navigation laws were therefore bound to show that such a change would not be injurious to our mercantile marine. But the repeal of the navigation laws would not only aim a direct blow at our naval superiority, but it would necessitate the introduction of other measures—it would lead to a repeal of the apprenticeship system and the allowing of foreign ships to be registered in this country. The inconsistency of the Government plan was generally acknowledged. The fact is, the Government are oscillating between their desires to carry out the principles of free trade, between the injustice they are inflicting on British shipowners and their desire to maintain the naval superiority of this country. The result is, that they have introduced a measure not only unjust in principle and dangerous to our naval supremacy, but one which, at the same time, shows their want of confidence in the truth of their principles. (Han. Par. Deb., 103, 518.)

And the Marquis, in conclusion, said:

Oh, that I had the power to dispel the delusions with which we are now assailed! Oh, that I had the power to stir up that patriotism and that love of country which should animate every breast! for if I had such power, I should have no fear as to the result; for, despite of the confidence now entertained by Her Majesty's Government, and despite those inconsiderate communications, and, I may say, the unconstitutional communications made by them to foreign governments—despite all those advantages, still I think I should see the gallant vessel that is now struggling with the storm sail triumphantly above the waves that threatened to overwhelm her. Sir, I have no fear for the result of this great question. Despite of all disadvantages, if Englishmen are but true to themselves and their country, we shall be able to weather through the storm that impends over us, we shall be able to retain the command over that glorious element which is our natural protector, and which is the connecting link between this country and the countries dependent upon us abroad; and for years to come, notwithstanding the prophecy of Mr. Mackay, the flag of England will float triumphantly through every sea.

Mr. Henley, opposing the bill, said:

But if, for the sake of the cuckoo cry of free trade in one thing, and free trade in another, Government allowed their present course, he would ask, Was this a good time to try such a dangerous and doubtful experiment?

To say the least, in a time of transition, when everything had been cheapened by a new system, at the very commencement of this system, no matter from what cause, it was evident we had not multiplied our transactions though we had lessened our prices. While the system was in an imperfect state, and when they could not allege that any impediment had been offered by want of sufficient shipping, was it wise to attack an interest with a large capital embarked in it, and having the important question of our naval superiority involved in it, when there existed no real necessity for taking such a step? If the country were polled, every man, he was sure, would cheerfully pay the hardly appreciable advance in prices rather than run the tremendous risk of a failure in this experiment. No one had attempted to deny that obstruction was here, and inconvenience here; but when you came to balance the possible risk with the possible gain, he was quite sure no one would be disposed to run that risk which he, for one, feared must take place if the present measure were carried. (Han. Par. Deb. 103, 533.)

Mr. Herries, in the debate on the third reading of the bill, denounced it and said it should be entitled—

A bill to abolish all the laws now in force for the encouragement of British shipping and navigation, and to make further provision for the discouragement thereof. (Han. Par. Deb. 104, 623.)

Time, the great agent of truth, has established the utter uselessness of the British navigation laws and the wisdom of their repeal, and the American people should profit by the lesson the repeal of the British navigation laws has taught.

Further on Mr. Herries declared that if they (the advocates of repeal)

were determined to persevere with this measure, and it should unfortunately pass into a law, he felt satisfied that the Government, and those who aided them in this destructive course, would become the subjects of universal indignation at home and the laughing stock of the enemies and rivals of Great Britain abroad. (Han. Par. Deb. 104, 632.)

Mr. Robinson, speaking against the bill, said:

Want of employment and low wages he considered to be two of the greatest evils with which the Government had to contend, and he was not disposed to add to those evils by giving his support to this measure, which must end in transferring a great portion of the shipbuilding of this country to other countries, and reducing the wages of the artisans employed in our dockyards. There were many hundreds of thousands of people employed in connection with the building, equipment, and repair of vessels in this country, and although he, for one, was not disposed to say that, even if this measure should pass into a law, shipbuilding would altogether cease in this country, yet he would venture to say that which no man could deny, namely, that the necessary consequence of the passing of this measure must be materially to lessen the number of ships built in this country, and of course to abridge the employment connected with that interest. Well, then, looking at the other branch of the question—our naval supremacy—he conceived it to be the duty of the legislature to maintain that supremacy inviolate, as upon it depended the independence of this country. (Han. Par. Deb., 104, 634-35.)

Mr. Disraeli, in opposition to the bill, said:

The noble lord goes about looking for a great question for the session, and finds amongst his free-trade allies some crude jejune theory. He claps it to his bosom and incontinentally adopts it as his own. A great interest is attacked, a great agitation is set on foot, and then he comes forward like a great statesman to appease it. He unsettles an interest, and then he settles the question by destroying the interest. Sir, that is the whole policy of the Whig party. To-night they have obtained an illustrious ally in the person of a right honorable gentleman, who tells us we have to decide between reaction and progress. But progress where? Progress to Paradise, or progress to the devil? People don't want to hear any longer of these undefined, windy phrases of "progress;" they want to know where you are progressing to. What are you at? What do you mean to do? What are you about? (Han. Par. Deb., 104, 608.)

Lord Brougham, opposing the bill, said:

"Be liberal to others," said the noble Marquis, "and trust to their returning your liberality." I gravely doubt it; at all events, I had rather, with Mr. Huskisson, delay giving everything up to them until I saw they were disposed to make us somewhat of a like return. He expects the Americans, for instance, to reciprocate. There is another phrase familiar to them of late years, and which they are more likely to use—they will probably repudiate, not reciprocate; reject your ultra-liberal policy, and not imitate it. (Han. Par. Deb., 104, 1342-43.)

And that is what the American people did do. They refused to reciprocate and rejected the policy adopted by England, and because of that refusal to imitate the example of Great Britain in throwing open her commerce to the world, including her coastwise trade, the United States has suffered until to-day our merchant marine has sunk into insignificance, while England has gained the supremacy of the seas.

The Earl of Ellenborough, also speaking against the bill, said:

I know well that the several parts of this great Empire, faithfully banded together, making mutual sacrifices for mutual security, may forever stand against the world; and, under our old Constitutional Government, may enjoy a larger portion of prosperity, and a larger portion of real liberty, than can be attained in any republican state, but if partial interests are allowed to outweigh the general interests of the Empire, if public avarice be allowed to absorb every public virtue, and the acquisition of present temporary profit be made the sole subject of our legislation, we shall fall, as others have fallen before us, by neglecting the means by which we rose to greatness, and we shall fall unmourned, unhonored, and despised. (Han. Par. Deb., 104, 1392.)

It is with the greatest pleasure that I quote the following from the Portland (Maine) Daily Eastern Argus, in regard to the action of the board of trade at that place, the home of the distinguished gentleman, Mr. REED, in voting down a resolution similar to one passed by the Maine legislature against free ships. The Argus says:

At the meeting of the board of trade yesterday afternoon resolutions protest-

ing against the passage of the Fithian free ship bill, now pending in Congress, were defeated. Evidently our board of trade takes a broader and more comprehensive view of the situation than did our State legislature, which a few days ago passed resolutions of a similar nature. Ex-Mayor John W. Deering at the meeting yesterday made a strong argument against the adoption of the resolutions, and it undoubtedly had great weight. A full report of Captain Deering's remarks will be found on another page of this paper. They should be carefully read by everybody interested in our merchant marine.

Mr. Deering, who made the motion to indefinitely postpone the resolution against free ships, made the following speech which I here insert in my remarks:

MR. PRESIDENT AND GENTLEMEN OF THE BOARD OF TRADE: I move that the resolution be indefinitely postponed, and I will give my reasons for the motion. It is the most important question, in my judgment, that there is at the present time before the American people, especially to American shipowners, and, it will not be too much to say, in the interests of American shipbuilders.

I want to go back, if you will listen to me with patience, and give you my experience in the matter. In 1856 I had the honor, and I consider it the greatest honor I ever had conferred upon me, to command an American ship under the American flag and her name has since become historical, the *Kearsarge*, but not the historic one. Consequently, I believe I am as patriotic upon these questions as any American, I do not care where he belongs nor who he is.

In August, 1856, the telegraphic cable was laid and it happened to be my lot in that ship to fall in with the squadron where they were rendezvousing to join the ends together and bring the cable to this country. At that time a gentleman who (now a resident of Portland) was my second officer, assured me that the cable would change the business of the world, and so it has. At that time had begun the adoption of the iron and steel ships and the building of the iron and steel tramps propelled by steam.

There is another little history connected with this matter. At the time I commenced to go to sea, or just before, the American clipper ship had become first known and it emanated from the brains of an American. It was a distinct departure from the old-fashioned ships built previous to that date. At that time England was building ships which cost about £12 a ton, and we were building ships that cost about \$60 a ton—both nations being equal in that respect in the race for the commerce of the world or the carrying trade. But owing to our superior ships—superior for speed and buoyancy, especially in the deep-water carrying trade for California and Australia, we were fast absorbing and taking from the English their carrying trade. Our ships were obtaining higher rates of freight than English ships could obtain. In the cotton ports the American ships received the preference and a higher rate of freight over the English. Consequently the British Parliament seeing that they were fast losing the carrying trade of the world, that the Americans were fast superseding them, called a meeting of Parliament especially upon this question and to find out what was to be done to preserve that trade to the English ships. The result was that the British Parliament appointed a committee to ascertain what the matter was. That committee was composed not of shipbuilders, not of members of Parliament that had shipbuilding constituencies behind them, but it was made up of the best merchants there were in England. They reported to Parliament that they must annul these very same laws that is asked of our Congress to-day to annul. It has been said in one of the meetings in this State that these laws are as old as Washington. They are older than that; they go back to the time of Cromwell. Well, that committee reported to Parliament that it was more necessary for England to own ships than it was to build them. The result of the report was that Parliament did in 1849 precisely what the American Congress is asked to do to-day—to wipe out those laws which prevented England from purchasing ships in foreign countries.

I want to say in this connection that the United States of America is the only nation on this footstool but what gives her citizens the right to buy a ship and put it under the flag of the nation to which she belongs.

Well, what was the result? We were building ships from Eastport to New York. The English bought our ships and soon they were seen everywhere under the British flag. The committee was right. The scheme was successful and England retained her commercial supremacy. That was not all. The ships had to come back to Great Britain to be repaired. The English and Scotch shipbuilder was enabled to see the superiority of our models and thus adopt them. Then they commenced to build iron and steel vessels on the same model that they had taken from us; with iron and steel they built ships of greater speed and more buoyancy and with such lasting virtues that some of them are alive to-day, while your wooden ships are all gone. That is from 1855 to 1860, when the British commenced to build the tramp steamer which, more than anything else, has wiped the American ship from the face of the ocean. We could not build them on account of the extreme cost, and so the wooden ship of that day has gone out of existence.

At the time I came to Portland in 1866 I had given up the sea. My principal reason for doing so was this: I always liked the profession, I enjoyed it, my ship was my home—one for eight years—but I gave it up because I believed that the end of the deep-water commerce was near at hand. The result has proved that I was right.

I came to Portland, and there was not a deep water going ship built in Portland, and very few in Kennebunkport, but what I built a portion of. The money I put into those vessels was not a successful business venture. I literally threw away one-half of the interest on the money and all the insurance. I was interested in 18 large ships which gives me, I think, some knowledge and right to speak on this question.

If, in 1857, these laws had been wiped out the American people to-day would have been the equal of Great Britain on the ocean. We should have enjoyed a commercial supremacy to-day, as far as the carrying trade is concerned, that would have been fully equal to England, and possibly a large number of ships that come into Portland with the British flag flying would be under the American flag.

Now, what has been the result? We can not build them and we can not buy them. Had these iron ships and iron tramps been bought by Americans they would have had to undergo repairs in a very short time; that would have necessitated their coming back to this country. Here our shipbuilders would have taken the models and molds from them and in a very few years we should have been building, from Eastport to the South, iron and steel ships to be used in the deep water carrying trade. I do not believe there is any question about it whatever; our shipbuilding industries would have been revived.

I remember when the bill was brought before Congress by our Representative, Hon. John Lynch. About the only man beside myself that advocated free ships, was the first president of the board of trade, as good a merchant as ever was produced in New England, John B. Brown. He was frightened, and saw what was coming, and he told me at that time there was no other way in the world to establish the shipping and carrying trade except by purchasing iron and steel vessels.

Now, what I say about shipbuilding we have seen illustrated in Germany, France, and Italy. A few years ago not one of these nations could have built an iron and steel ship. To-day Germany is building and turning out finer ships than England, and cheaper ones. So that I say if we had been allowed to purchase these ships we would have had a merchant marine to-day that would have been employing thousands of Americans, and we must all agree that it is a very desirable matter to have American officers in command of our vessels, and

as many Americans in the fore-castle as possible so that they may eventually become officers and masters.

So we come down to the present time. What is the result? These laws do not prevent the purchase of iron and steel ships or tramp steamers, but the American who buys them or invests his money in them is obliged to put them under the protection of another flag. Right here in your own first district, within three years, has been bought a steel ship, a magnificent vessel of 2,200 tons, every dollar of her owned in the first district, and that ship is obliged to be sailed under the English flag. Only the other day one of our first-class shipmasters went from here to Boston to take command of an elegant steel bark of 1,100 tons or more, every dollar of which is owned in Boston, and which vessel is under the Hawaiian flag.

Now, I cut out of a newspaper, on the very day that this meeting was called for the consideration of this matter, an article which seems to me so applicable to what I am talking of that I will read it.

Mr. Deering read from the American Journal of Commerce an article showing the number of ships under foreign flags, owned by Americans, that sailed out of the port of New York last year, carrying a total of 9,676,000 bushels of grain.

Now, I just want to show the selfishness—to call it by no harsher name—of the shipbuilders in regard to this matter. You can all see how Mr. Cramp, in building these two ships which are to be placed on the line with the *New York*, and *Paris*, which were transferred from the English flag to the American flag was enabled to obtain these contracts, notwithstanding these ships cost 30 per cent more than they can build the same ships for on the other side of the water. Congress passed a bill giving a subsidy of \$4 a mile for the outward passage of these ships owned by that company for carrying the mails to Southampton. Why did they go to Southampton? Because it is farther, and they make twelve trips a year, which gives them over \$144,000 a vessel. There are four ships, making a subsidy of more than \$500,000 a year, and for how many years we do not know. At the same time, that very company goes to Great Britain and contracts for two freight steamers to be built, of a larger capacity than anything that floats.

I want to compare that subsidy with what these ships received before from Great Britain. The real truth of the case is that these ships like the *Majestic*, *Teutonic*, *New York*, *Paris*, and ships of that character were built under the admiralty plans; that is, they sacrificed the carrying capacity to speed. They built them with the machinery all under the water line; they obliged them to build them so. If I am correctly informed, the two ships that are being built will not have the machinery below the water line. But Great Britain made a bargain with them that these vessels should be built in that way, and agreed to pay them \$48,000 a year. Our Government is paying the same vessels \$12,000 a passage out, or \$144,000 a year, each one of them. That is the manner in which they propose to increase the quantity of American shipping for the carrying trade. The only good I can see in it whatever is that, as far as the ships go, we shall have American masters and officers, and perhaps men to help navigate the vessels.

There is another thing about this matter. It is an acknowledged fact that we can not build these steamers; they don't allow us to build them. It may be that they would not be profitable, that the time has gone past, but we do know that the immense fleet of British vessels has been built up with the profits that commenced with tramp steamers.

Now, if this bill which proposes to admit ships built in foreign countries to American registry is passed, these ships that are carrying grain out of New York—the finest ships that float—a large number of them will be transferred immediately to the American flag, and the result will be that they will be commanded and officered by Americans, and the bill requires that one-quarter part of the seamen shall be Americans.

Now, if that is the case, are we not to obtain great aid by allowing the transfer of these ships in the case of war. With these ships you do not care so much about sailors, but you have got to have blacksmiths and engineers. I believe, as I said at the commencement, that this is the most important question before the American people to-day, and I do not want to see the members of the Portland Board of Trade stultify themselves and their organization by endorsing these resolutions which you are asked to endorse here to-day.

Some time ago a statement of the wages paid in British yards and in Philadelphia was published over the name of Mr. Charles H. Cramp, the eminent shipbuilder. If, by that statement, Mr. Cramp wished the public to draw the inference that the registry law for vessels in the foreign trade was the cause of the relatively higher wages paid in Philadelphia than on the Clyde, then that statement was absolutely misleading. We in Congress who vote every year large sums of money for the construction of war vessels, in which cost is only a minor consideration, well understand that the registry law has not the slightest bearing on the work done or wages paid in Philadelphia. We in Congress who voted for or against the postal subsidy act, and for or against the bill to admit the *Paris* and *New York* to American registry—a free ship bill for the benefit of two establishments—well understand that the registry law has nothing to do with the work done or wages paid in a second large share of the undertakings of this great Philadelphia yard. Finally, those who are familiar with the construction in this yard for a period of years past well understand that the remaining vessels built there have been built either for the coasting trade absolutely or for the coasting and foreign trade combined.

Throughout its long existence the registry law, I venture to assert, never sent one American shipowner into an American shipyard to buy a vessel for the foreign trade; it never gave one day's employment to one American workingman. It never will send an American purchaser to an American yard, and it never can give one dollar's worth of wages to an American workingman. In the early days of its enactment we were building in this country cheaper and better vessels than were built on the face of the globe, and American shipyards were crowded with American buyers and with American workingmen for that reason. It is possible that some time in the future the wonderful development of our steel industries may again create like conditions, when we can build cheaper vessels and better vessels than can elsewhere be built. When that time comes American purchasers and the shipowners of the world will come to this country for their vessels, not because the registry law sends them here, but in obedience to a plain business law. So long as ships can be built more cheaply elsewhere than they can be built in the United States, those Americans who wish to own vessels for foreign trade will go to the cheapest market, and the registry law

does not, and never can, prevent them. Without going into details in this matter, which may be found in the report of the Bureau of Navigation, it is easily within bounds to say that for the last six or seven years Americans have bought abroad and navigated under foreign flags in the foreign trade a considerably greater number of steamships than they have bought at home. From the very nature of the case the registry law, so far as vessels in the foreign trade are concerned, has no bearing upon wages, and its repeal can have no bearing upon wages.

In the language of the report of the majority of this committee in the Fifty-first Congress on the Farquhar subsidy bill—

We have bound our limbs and cramped our energies by acts and treaties that bind no longer any nation but our own.

It is time that the chains should be broken, the fetters removed, and our cramped energies allowed to expand.

APPENDICES.

Value of imports and exports carried in United States and in foreign vessels from 1821 to 1893.

Fiscal years.	Imports.		
	In cars and other land vehicles.	In American vessels.	In foreign vessels.
1821		\$58,025,896	\$4,550,825
1822		76,984,331	6,257,210
1823		71,511,541	6,067,726
1824		75,265,053	5,283,954
1825		91,902,512	4,437,563
1826		80,778,120	4,196,357
1827		74,965,496	4,518,572
1828		81,951,319	6,558,505
1829		69,325,552	5,166,975
1830		66,035,739	4,481,181

NOTES.—1. The amounts carried in cars and other land vehicles were not separately stated prior to July 1, 1870. 2. Exports are stated in mixed gold and currency values from 1862 to 1870, inclusive.

TREASURY DEPARTMENT,
OFFICE OF THE AUDITOR OF THE TREASURY
FOR THE POST-OFFICE DEPARTMENT,
Washington, D. C., October 25, 1893.

SIR: At the request of the chief clerk of the Post-Office Department I have the honor to make the following statement showing the cost of ocean mail service for the fiscal years ended June 30, 1891, 1892, and 1893:

Fiscal year.	Amount paid on actual weight of mail conveyed.	Amount paid under subsidy contracts.	Total amount paid for ocean mail service.
1891	\$629,446.79		\$629,446.79
1892	687,164.01	\$120,675.00	807,839.01
1893	599,303.59	498,563.66	1,097,867.25
Total	1,915,914.39	619,238.66	2,535,153.05

Respectfully,
JNO. B. BRAWLEY, Auditor.
Hon. GEORGE W. FITHIAN, House of Representatives.
Vessels of the United States in the foreign trade.

TREASURY DEPARTMENT, BUREAU OF STATISTICS,
Washington, D. C., October 23, 1893.

DEAR SIR: I send you herewith a diagram intended to show the progress of the decline in the percentage of our foreign commerce carried in American vessels. It is based upon the table that appears in the annual volume of Commerce and Navigation, but I think appeals more readily to the eye than the table does to the mind. I also send you a comparative statement intended to show the relative growth of our foreign trade, as expressed by values and the proportions carried in American vessels. I cover five years—1859, 1870, 1880, 1890, and 1893. It is prepared on mathematical principles—that is, the extent of each square bearing a fixed relation to the value of the trade represented. Here, again, I think such a statement is more easily apprehended by the average intelligence than a mere comparison of figures. You are at liberty to make such use of this material as you see fit.

Yours, respectfully,

WORTHINGTON C. FORD,
Chief of Bureau.Hon. GEO. W. FITHIAN, M. C.,
House of Representatives.

Diagram showing per cent of foreign trade of United States carried in American vessels, 1859-1893.

WORTHINGTON C. FORD.

NAVY DEPARTMENT,
OFFICE OF NAVAL INTELLIGENCE,
Washington, October 11, 1893.

SIR: In response to your request of October 3 to the honorable Secretary of the Navy, I take pleasure in forwarding you the inclosed information in regard to the amounts paid by the British Government in subventions to the different steamship lines with which it has entered into admiralty contracts from the beginning of the system up to the end of the last fiscal year of that Government.

I beg to draw your attention to the fact that the subventions stated in the columns are in addition to the amounts received by these companies under mail contracts. The admiralty subvention for right of preemption of vessels in time of war are given separately, as they represent the amounts of money received by the steamship companies; the other columns, showing admiralty expenses for fitting supports and platforms for armament, show the money expended by the admiralty for preparing the ships for the reception of guns, etc., either by the Government or private firms, and these figures, therefore, do not represent any pecuniary benefit to the steamship companies.

Very respectfully,

F. SINGER,
Chief Intelligence Officer.

Hon. GEORGE W. FITHIAN,
Chairman of the Committee on Merchant Marins and Fisheries,
House of Representatives, Washington.

[Memorandum concerning the British admiralty subventions.]

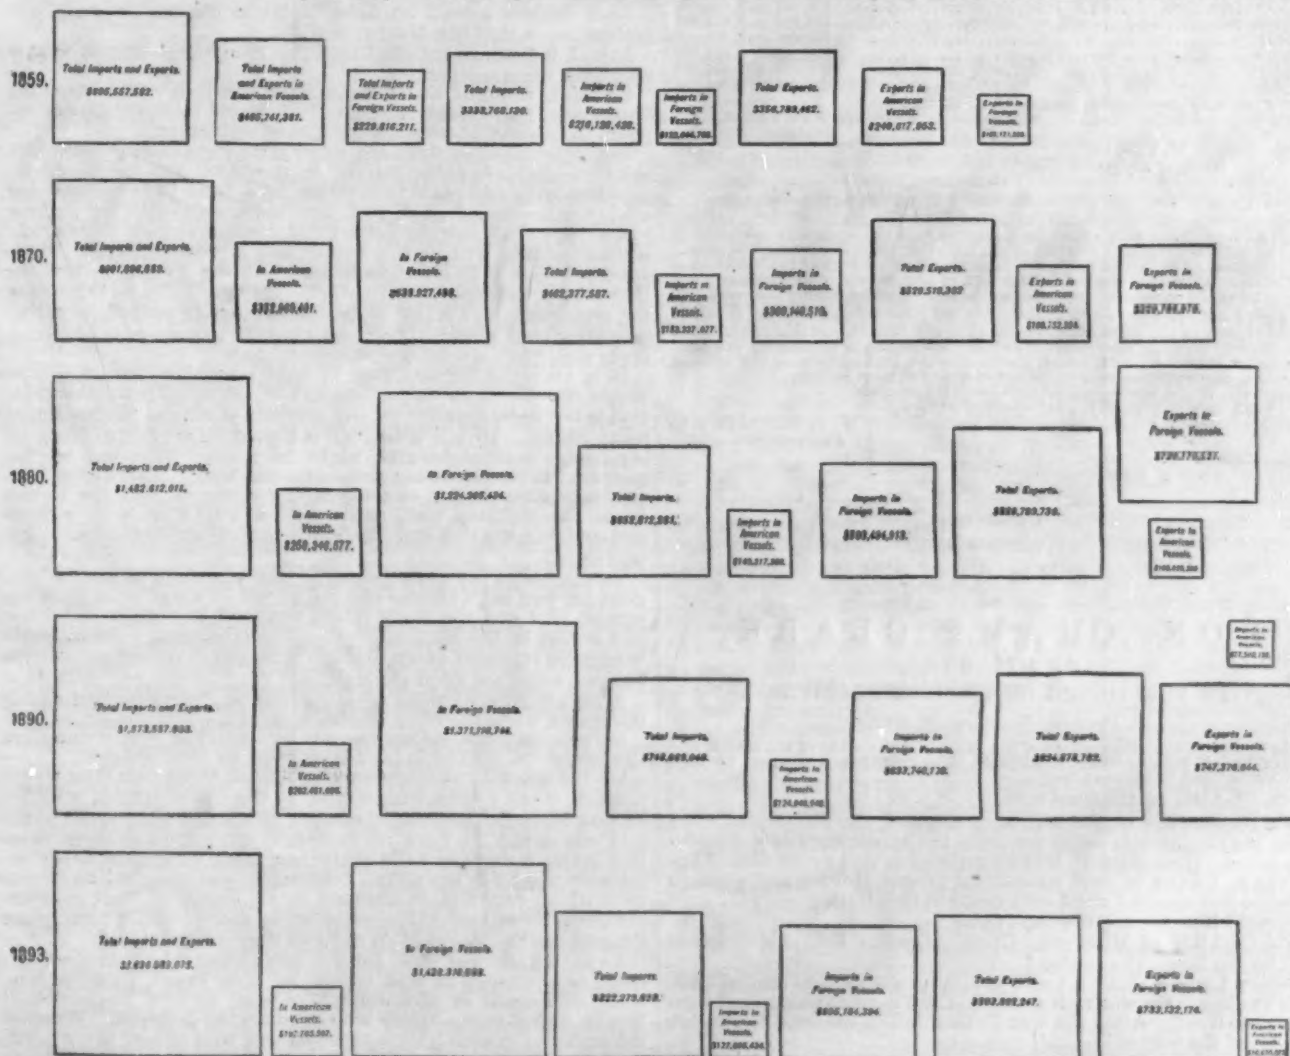

Amounts paid to different steamship lines.

Line.	Year.	Admiralty subventions for right of pre-emption.	Admiralty expenditures for fitting supports and platforms for armament.
Cunard.....	1887-88	\$48,343.81	\$24,259.50
	1888-89	82,871.63	
	1889-90	82,866.76	

Amounts paid to different steamship lines—Continued.

Line.	Year.	Admiralty subventions for right of pre-emption.	Admiralty expenditures for fitting supports and platforms for armament.
Cunard	1890-91	\$82,866.76	
	1891-92	90,918.58	
		390,867.54	\$34,259.50
Peninsula and Oriental.....	1887-88		36,637.38
	1888-89	25,850.85	3,829.94
	1889-90	51,706.56	
	1890-91	51,706.56	
	1891-92	51,706.56	
		180,970.53	39,467.32
Inman	1888-89		7,299.75
	1889-90		8,029.72
	1891-92	84,312.11	
		84,312.11	15,329.47
White Star.....	1889-90	17,075.13	13,467.21
	1890-91	53,341.71	
	1891-92	71,342.80	
		142,859.73	13,467.21
Canadian Pacific.....	1891-92	24,337.37	

The fiscal year ending March 31, 1892, is the latest one for which the actual expenditures for admiralty subventions can be stated.

In 1859 and 1870 merchandise imported or exported in cars or other land vehicles was included in general totals. In 1880, 1890, and 1893, no account is made of such merchandise—about \$42,000,000 on either side—too small to affect result.

WORTHINGTON C. FORD.

The navy appropriations for the fiscal year ending March 31, 1893, make provision for the payment of the following amounts in the case of the steamship lines here specified:

Cunard.....	\$65,729.38
Peninsula and Oriental.....	60,318.26
Inman.....	46,835.84
White Star.....	71,340.45
Canadian Pacific.....	35,586.28
(Value: £1=\$4.8665.)	

OFFICE OF THE POSTMASTER-GENERAL,
Washington, D. C., April 7, 1892.

SIR: I have the honor to acknowledge the receipt of your letter of the 5th instant, requesting me to furnish you with a "statement showing the expenditures on account of the post-office packet service, from the year 1868-69 to the present time, or to the last fiscal year, of the British post-office for the conveyance of the mails."

In reply, I have to inform you that the annual expenditures of the British post-office department, on account of the "post-office packet service," were published for the first time in the report of the postmaster-general of Great Britain for the fiscal year ended March 31, 1871; so that it is not practicable to furnish you with the desired information for the years preceding the fiscal year ended March 31, 1871; but since that time the amounts reported by the British postmaster-general as expended annually on that account are reported as follows, viz:

For the fiscal year ended March 31—	
1871.....	£1,009,912 = \$4,914,231
1872.....	No report.
1873.....	1,013,694 = 4,932,635
1874.....	1,028,108 = 5,002,773
1875.....	879,256 = 4,278,459
1876.....	701,567 = 3,413,825
1877.....	741,962 = 3,610,387
1878.....	652,362 = 3,174,393
1879.....	649,330 = 3,159,641
1880.....	636,356 = 3,096,508
1881.....	604,834 = 2,943,122
1882.....	592,705 = 2,884,102
1883.....	607,384 = 2,955,530
1884.....	594,831 = 2,894,447
1885.....	608,766 = 2,962,226
1886.....	538,567 = 2,620,607
1887.....	596,323 = 2,901,707
1888.....	588,403 = 2,863,168
1889.....	516,153 = 2,511,600
1890.....	691,015 = 3,362,478
1891.....	697,539 = 3,394,224

I am, very respectfully, your obedient servant,

JNO. WANAMAKER,
Postmaster-General.

Hon. GEORGE W. FITHIAN,
House of Representatives.

OFFICE OF THE POSTMASTER-GENERAL,
Washington, D. C., October 28, 1895.

SIR: In compliance with your verbal request that the statement contained in letter of this Department No. 101433 of the 7th of April, 1892, showing the annual expenditures of the British post-office department on account of the "post-office packet service" during the years from 1871 to 1891, inclusive, be completed by a statement of the annual expenditures on the same account during the years 1892 and 1893, I have to inform you that the desired information is derived from the annual reports of the postmaster-general of Great Britain, and that the latest of these reports that has been received at this Department is the one for the fiscal year ended March 31, 1892, which shows that the expenditure on the account referred to for that fiscal year amounted to £732,626, or \$3,564,958.

Letter No. 101433, above referred to is herewith returned.

I am, very respectfully, your obedient servant,

W. S. BISSELL,
Postmaster-General.

Hon. GEORGE W. FITHIAN,
House of Representatives.

Pensions.

REMARKS

OF

HON. CHAMP CLARK,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 11, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 1135) granting a pension to Mrs. Katharine Todd Crittenden—

Mr. CLARK of Missouri said.

Mr. CHAIRMAN: In these closing days of the Fifty-third Congress the Democratic party presents the appearance of a dissolving view. [Laughter.] But its principles will never die. [Applause.] I want to state something to this House; and perhaps it is the last speech I shall ever make in this Hall.

Several MEMBERS. We hope not.

Mr. CLARK of Missouri. Upon reflection I do not think it will be my last. [Laughter.]

When I was a child I knew a crusty old soldier named Captain Pankey. He was rich and one of the most cross-grained men that ever lived. After the war he took it into his head to run for justice of the peace.

As he was totally without judicial temperament and did not need the office his friends were greatly astonished. At last one of them plucked up courage enough to ask him why he desired it. The grim and grizzled warrior replied, "Because, by the Lord

Harry, sir, I want an opportunity to express my opinion!" [Laughter.]

For the same reason that Captain Pankey ran for justice of the peace I am making this speech. I want an opportunity to express my opinion [laughter] on the pension question, and while I am at it I will state the Democratic position on that subject—which is my position—and which is also the just, the common-sense, the patriotic position.

For the distinguished gentleman from Virginia [Mr. JONES] personally I have the highest regard; but there are 25 or 30, perhaps 50, of his Democratic brethren in this House who went down to defeat in the "melancholy days of November" [laughter] by reason of the speeches of himself and two or three other extreme Democrats here. [Great laughter.] And it creates a great weariness in one's system to hear that unceasing flow of oratory. [Laughter.]

The gentlemen who fight all pensions do not voice the Democratic sentiment of the country. Democrats are not opposed to all pensions. They are opposed to fraudulent pensions. The Democratic and patriotic position is this:

Every man who still suffers from wounds inflicted or from incurable disease contracted in the service of his country deserves a pension. The widows and orphans of men who died for their country are entitled to pensions. None others are. This applies not only to the civil war, but to all other wars.

In a country which is opposed to a large standing army and which depends on volunteer soldiers to do its fighting, it is absolutely necessary to have an honest, generous system of pensions. Otherwise men will not leave their homes, their wives, their little children, and their dependent parents to go to war.

On these principles the great body of Democrats, North and South, are fully agreed.

They are also agreed on fighting bogus claims. Nobody will go further on that line than myself.

I think it nothing but fair to say that many Republicans occupy about the same position.

Certainly it ought to be stated that the bulk of the Southern Democrats, particularly the old Confederate soldiers, are not opposed to reasonable pensions for honest claimants.

But unfortunately there are a few extremists among the Southern Democratic Representatives on this floor who constantly injure the party and place Democrats in a false light by opposing all pension claims—good, bad, and indifferent—and by making violent speeches, thereby doing great damage to their Democratic colleagues who live in the border and Northern States. There are only a few such Democrats here, but the trouble is that the Republican orators and newspapers represent them as expressing the sentiments and policy of Democrats for the purpose of riding into place and power. To these extremists conservative Democrats say, "We are done with you!"

It is all right for any man to fight a pension claim which he deems fraudulent or unworthy; but to tie up all pension legislation is not to be justified on any grounds of reason, patriotism, or party policy. To kill a bad bill is a good thing, but to block all legislation here night after night by raising the point of "no quorum" is like stabbing people in the back. Those of us who represent districts full of soldiers of the war of 1812, the Indian wars, the Mexican war, and the civil war, with their widows and orphans, are sick and tired of these obstructive tactics. [Applause.]

To discharge my duty generally, but especially to secure pensions for two old widows—one the widow of a soldier of both the war of 1812 and the Black Hawk war, and the other the widow of a soldier of the Mexican war—old women, poor women, feeble women—I attended every Friday night session for eleven months before I could get them through.

After all, fighting these pensions bills here means only stopping the spigot while the bung is wide open at the Pension Office.

On pension matters Congress sits as a court of equity to relieve the hardships worked in particular cases by general laws.

On the other hand there are Republican extremists who would pension every soldier who served in the Union armies, whether he was wounded, contracted disease, or smelled gunpowder in the late war or not. I have no sympathy with them or their ideas. But between them and the gentleman from Virginia and his co-laborers there lies the sound, reasonable, and tenable line of conduct which ought to be pursued by all lovers of their country. Between these two extremes sensible and patriotic men plant themselves, proposing to do right as they see the right.

As to this claim of Gen. John A. McClelland, he is as much entitled to a pension as Mrs. Grant, as Mrs. Frank Blair, as Mrs. John A. Logan, as Mrs. John M. Corse, as Mrs. Nathaniel P. Banks, and as many others who are drawing pensions. Whether the policy of granting such pensions was wise or not, is not pertinent to this discussion. General McClelland was a soldier in three wars—in the Black Hawk, Mexican, and civil wars. He is 69 years old and is in destitute circumstances. I submit that if pensions are to be granted to other officers and their widows, the

line ought not to be drawn at this brave old Democrat's claim. He can not in the very nature of things enjoy his pension long. I have seen General McClelland. I saw him preside over that magnificent convention in the City of St. Louis which nominated Samuel J. Tilden, who was elected President of the United States and who was swindled out of that great office through the cowardice of men in this House and in the other end of the Capitol.

The gentleman from Indiana [Mr. WAUGH] said something about General McClelland's being relieved of command by General Grant in front of Vicksburg. That proves nothing. A great many officers—brave, true, and capable—were relieved of command, sometimes greatly to the detriment of the service. General Grant himself, after the victories of Forts Henry and Donaldson, was superseded by Halleck. General Sherman was relieved of command and denounced as a lunatic because he declared it would require 200,000 Union soldiers to hold Kentucky. It did take more than that number, and Sherman lived to march down to the sea—the most spectacular if not the most dangerous march since Xenophon's Anabasis. General McClelland was relieved after Antietam. Meade was practically superseded in command after Gettysburg. When Thomas was fighting the battles of Franklin and Nashville, General Logan was on his way South with an order in his pocket directing him to take the place of that great soldier. Joseph E. Johnston was relieved to make way for John B. Hood.

Perhaps the trouble with McClelland was that he was a volunteer soldier.

One of the difficulties of the war was that on the Southern side Jefferson Davis, with all his great qualities, was the prince of martinets. On the other, Edwin M. Stanton, though a civilian, was as much of a martinet. Both seemed to think that a man could not be a great soldier unless he had been trained at West Point. Between them volunteer officers had a poor chance to rise to high command.

Perhaps if McClelland had had a fair show he would have proved that he was as great a soldier as Grant. Who knows?

In saying that I would not detract in the estimation of a hair from the fame of General Grant.

At any rate, General McClelland offered himself as a sacrifice on the altar of his country in three wars. "Greater love hath no man than this, that a man lay down his life for his friends."

Military genius is a very uncertain quantity. One of the most successful soldiers that ever lived apparently had little faith in it. One day at a dinner party a lady asked the Duke of Wellington to describe the battle of Waterloo. The conqueror of Napoleon replied: "We pounded the French. The French pounded us. We outpounded them." [Laughter.] Grant was the only man in the Federal Army who ever had any true conception of what the war really was. [Laughter.] His idea was to swap off about five Federal soldiers and a thousand Federal dollars against one soldier and one dollar in the Confederacy, and pound them out of existence. That he was correct in his theory there can be no question. That he succeeded is a matter of history. That he relieved McClelland is true. But that does not prove that McClelland was not a brave soldier.

THE AMERICAN VOLUNTEER SOLDIER.

I speak for the generation which was too young to participate in our great civil war. I will tell you how we regard it. We look upon it as the bloodiest and most heroic chapter in the annals of the human race. The brave men who fought in that titanic struggle on both sides like heroes for what they thought was right we are proud to claim as countrymen.

When I reflect upon the civil wars in England, my judgment is with the stern Roundheads who charged with the mighty Oliver at Naseby, Marston Moor, and Dunbar, shouting "God with us!" But my sentimentality is stirred by reading of the chivalric deeds of the gallant knights who rallied round the silken banner of Prince Rupert and the King.

He is a strange American who does not admire the heroic men who through three days of awful carnage stood faithfully by George H. Thomas, "the Rock of Chickamauga." He is a stranger American yet whose heart does not beat faster as he reads of Pickett's splendid charge and how he led the flower of the Virginia youth to crimson glory up the slippery slopes of Gettysburg.

I pity the man who can find nothing good in the colossal character of Abraham Lincoln, and the man who discovers nothing to admire in the glorious career of Robert E. Lee, who was fit to have sat at the head of King Arthur's Round Table.

The American volunteer is the finest soldier that ever went to battle—I do not care which uniform he wore.

They were American soldiers all. As such I hail them; as such I will teach my children to cherish them.

The noble men who perished in that fratricidal contest, both Federal and Confederate, died for what they conceived to be their duty; for no man is willing to sacrifice his life for what he thinks is wrong.

Of such as they Theodore O'Hara, Kentucky's soldier-poet, hath beautifully said:

On Fame's eternal camping ground
Their silent tents are spread;
And Glory guards with solemn round
The bivouac of the dead.

[Applause.]

Finance and Currency.

SPEECH

OF

HON. T. J. HUDSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1895.

On the bill (H. R. 5795) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. HUDSON said:

Mr. SPEAKER: By way of introduction to my remarks on this occasion, I desire to quote from Victor Hugo's introduction to his story of Jean Valjean:

As long as there shall exist, as a consequence of laws and customs, a social damnation artificially creating hells in the midst of civilization, and complicating the destiny which is divine with a fatality that is human; as long as the three problems of the age—the degradation of man by the proletariat, the ruin of women by hunger, the atrophy of the child by night—are not solved; as long as in certain regions social asphyxia shall be possible; in other terms, and from a still more extended point of view, as long as there shall be on the earth ignorance and wretchedness, books of the nature of this one can not be useless.

Mr. Speaker, I have read patiently the opinions of various bankers and theoretical financiers called before the Committee on Banking and Currency, including the Secretary of the Treasury and the Comptroller of the Currency. All criticize the present condition—consequently the national-bank law—sharply. Nearly all of them oppose the further issue of money—Treasury notes or greenbacks—by the Government. Most oppose the further coinage of silver, and all agree that our financial condition is unfortunate if not dangerous. No two of these doctors agree as to the remedy. The pending bill has changed so often that it has been almost impossible to keep up with its ever-changing provisions. It is vividly evident that the authors of the bill are groping in an unknown field. It is equally evident that the bankers who have been consulted and who have voluntarily written concerning the situation and remedies are floundering in a quagmire.

Able gentlemen have talked on this floor. The distinguished gentleman from New York City, himself wealthy and the representative of bankers, has waked the echoes with his eloquence and wit, but has suggested no new remedy. The painstaking and always instructive ex-governor of Maine has elaborated, but offers no remedy. All want no more silver, because Europe does not want it. They all want our credit maintained abroad; they all practically agree on a gold standard; and yet all are compelled to admit that its maintenance for a much longer period is wholly impracticable and if continued must lead to inevitable bankruptcy. Yet they all say with thrilling resonance and lofty bearing that our credit must be maintained by standing by a gold basis. Yet no one is so dull as to believe or contend that there is gold enough in the world to put the whole commercial world on a gold basis. Then why should we, the leading silver nation of the world and one of the leading debtor nations, take so active an interest in pushing the gold standard and attempting an impossibility, bankrupting ourselves in an effort to maintain a gold storehouse where gold speculators can always come for a fresh supply of gold?

If I understand the gentlemen from Maine and New York correctly, the only remedy they offer is the same cry that we heard when the repeal of the so-called "Sherman silver-purchasing clause" was before the country—"a restoration of confidence;" and, if I have read the bankers correctly, that is the sum of their contention. Most of these gentlemen made the same argument when we were considering the repeal of the silver-purchasing act. A majority of Congress yielded to their persuasive eloquence and the repeal was had, but our financial trouble did not abate a particle. What these gentlemen are contending for is that we shall restore "confidence" so we may borrow from Europe. Their remedy is to borrow. Yet it is the disease we most suffer from; it is the foundation of all our troubles; it is the sole cause of the drain of gold.

CREDITORS' DEMANDS.

It was our creditors who demanded the demonetization of silver; who secured the strengthening-credit act; who demanded the re-

sumption act; who demanded the retirement of noninterest-bearing money or currency and the issue of interest bonds; who demanded the national-bank law; who demanded the change of the form of debt from one that was payable in paper, such as the soldier and producer got for services and food during the war, to a coin debt, and from a coin debt, which meant payment in gold or silver, to a gold debt. It was the same class who demanded and still demand a gold reserve of \$100,000,000 for holders and presenters of greenbacks; who secured the Secretary of the Treasury to adopt the precedent, which has been religiously followed, of paying both greenbacks and Treasury notes with gold.

It was our creditors who forced the repeal of the silver-purchasing act, that demanded the issue of bonds last year to replenish the golden fountain at which they alone drank, that demand that the Government shall go out of "moneycoining," shall stop competition with capital and relegate the currency question to rich corporations and a few speculators in confidence, with the Government to stand godfather to this stupendous monopoly plan. It is our creditors that coin the catching, shallow-sounding words: "Maintain your credit at all hazards; what matters the effect upon the toiling millions who never see gold and frequently need bread and clothing." Yes, gentlemen, your remedy is to restore "confidence." Get in shape to plunge deeper into debt, so that those who come after us must repudiate or reorganize, as our railroad friends term it.

Gentlemen, you can not be serious when you advise restoring "confidence" for the purpose of borrowing abroad. As honest legislators and statesmen, you can not afford to advise the American people to adopt such a plan. Then why talk so much about the restoration of "confidence." No true American has lost confidence in this Government, but we have all lost confidence in the power of this Government to maintain a gold standard and prosperity at the same time.

Let us dispose of foreign creditors. If we have, as Mr. COCKRAN suggests, a "plethora of money" let those who have it buy our foreign-held securities. Do not give them more profitable home bonds, which the people must pay with interest; let them invest in our standing securities which it is claimed that our financial stress is reducing the price of; let prices go down; let securities get on a level with wages and products. Debts should come down in exact proportion with products and wages. Do not howl "repudiation" now. I say "howl" because it has become fashionable in some quarters to howl when any proposition is made which seeks to do justice by placing debtor and creditor on equal terms. Let us pay every debt we owe on strictly equitable principles, dealing in a broad, in a wise and just manner.

WHAT IS GOOD FAITH?

While maintaining the highest good faith with our foreign creditors, let us first look to our internal interests, the interests and wants of our home people. I have no use for the Government which looks after the interests of foreigners before it looks after the welfare of the people governed, the people who make it. Let us look first to the wants of the American laborers, treating all alike, considering the interests of all alike; let us build up a prosperous, happy people. Let us legislate for the home of the American. Let us so secure the hearts and build up the intelligence and comfort of our people that all the world shall say look at America, the greatest, the freest, and the best Government on earth, that the angels shall sing anew "Peace on earth and good will to men." To do this we need only to return to the use of both gold and silver for coin; by restoring free coinage of silver and issuing all needed paper money by the General Government and bring the circulating medium up to the needs of the people, to be determined by the people, not by incompetent and irresponsible speculators. Let this Congress do its duty as patriots and not dodge or evade like partisans.

POLITICIANS ARE NOT STATESMEN.

We have many politicians and few statesmen; many learned men and few wise; many shrewd and few honest; many sycophants and but few who have the courage of their convictions.

An independent thinker in popular parlance—is a "crank." A man who honestly labors for the betterment of mankind is a demagogue; a freak; one who dares lift his voice for the poor, the down-trodden, the helpless, is a "nobody" trying to work himself into notoriety.

The popular so-called statesmen of to-day, the men who are puffed and praised by the supple tools of the press and by loud-mouthed, little-brained, and heartless stump orators, are the rich, or men who fawn upon the rich, the attorneys, agents, and tools of combines and monopolies. Able, of course, they are; money commands talent, plausible certainly. Their position, their pay, depends upon their ability to ridicule, to belittle, and deceive.

PARTY PREJUDICE.

Prejudice is a most fruitful soil; old party, blind sentiment, sectional hatred, are the seeds always sown by our modern old-party leaders. To them success, political ascendancy, is every-

thing. The real interests of the masses are absolutely nothing save as an incident of prolongation of power and place.

I disclaim any pretense of superior learning or wisdom; I do claim, however, an honest wish and intent to stand up for the laboring and producing people, for the suffering and needy, and declare myself now as ever ready to join hands with any party that will bring forward measures looking to that end. It is impossible to defend injustice for a long period in a free government, no matter how many honorable names may be connected with it, or how much of an outcry of honesty of purpose may be raised to support it. The apparently successful defenders of robbery have always appealed to prejudice, to ridicule, and, last but not least, to sound.

Logic and honest reasoning are never appealed to by those who seek to mislead. The American people are rapidly arriving at that degree of intelligence which lifts them above the lead of a demagogue. They are day by day learning that the metropolitan press is not fair or reliable—with a few honorable exceptions. The elementary principles of free governments are "The greatest benefit to the greatest number."

The deductions I arrive at from this statement are that all laws should protect the weak and expand their comforts and enlarge their intelligence. If we give a special privilege to a class, it is a self-evident fact that someone must be taxed to pay for the privilege. If we give a special advantage to capital, we do it at the expense of labor; if our Government confers gifts, riches, on a few, intelligence expects the masses of the people to pay for it. All payments are primarily drawn from labor; therefore labor must pay for all special privileges.

These are self-evident truths.

EQUALITY.

I want to place the Government, the entire people, beyond the control of banks and money speculators. I want the people to say how much and what kind of money they want. I want the people of this Government to be independent—absolutely independent of syndicates and combines. I want the bankers and borrowers to stand on the same legal floor. I want it made impossible for any combination or set of men to put up or put down the price of money, to contract or expand the circulation. I want uniform prices, I want uniform interest, a staple condition and that condition healthy and upward. I want money enough put in circulation to give every man and woman in this broad land employment at good liberal wages. I want to abolish tramps by placing every community in the position to say to the man or woman who asks for food, "Here is work for you at good wages—earn your bread." Everyone knows that enough money fairly distributed will bring such a condition.

GOOD MONEY.

The most idolatrous partisan on this floor or elsewhere in this Union will, without the slightest hesitation, admit that the only unqualified good money is the money which has this Government behind it. Greenbacks would be on a par with gold to-day had the resumption act never been passed or one dollar of them been retired or destroyed, and would have been so any time after 1870 had the exception clause been stricken out.

National-bank money was good and acceptable as money because the Government stood behind it. The national banker was taken into partnership with the Government and given a special privilege. What for—for the benefit of the people? Oh, no, national-bank currency never was better than greenbacks. The national-bank system was the child of the money speculators—created for their special benefit. It converted our noninterest-bearing greenbacks into an inferior currency based upon interest-bearing bonds. Is there a sane man to-day so dull as to really believe that the change helped the American people? Impossible. The national-bank act retired the greenbacks, which cost the people nothing, and gave the blackbacks instead, at a cost to the American people of every dollar of interest which has been paid on bonds deposited for the security of national-bank issue, which I am informed amounts in the aggregate to about \$2,582,104,225, which the American people have unjustly paid to a favored few. And now it is conceded on every hand that this expensive system is a failure and can not stand, but must with all its golden gilding be allowed to tumble and decay.

This good Santa Claus Government of ours has been wonderfully generous to a few who could hang their stockings on the national-bank law "Christmas tree." But, like all other Santa Claus gifts, someone must pay for this bounty, and in this instance, as in nearly all others, it is the toilers, the producers.

I want legislation that will emancipate the toilers and producers from these unjust burdens, from this unequal race. I want this Government, the people, to issue, coin, and create their own money; to say when we have enough and have not. Do you tell me the people can not be trusted and that Congress can not be trusted? Then you attack free government and repudiate the Constitution. The people either do or do not rule in this coun-

try; they must be trusted or denied equality. I am for the Constitution, for the people. Do you tell us that a few bankers, a few speculators, and capitalists understand this question better than the people?

I deny it, and I call attention to the fact that at the hearing before the Banking Committee no two bankers or false "political economists" agreed upon a scheme or plan. The lights and shades of that investigation are more bewildering than the colors of a woodland in October. The fact is, the so-called economists know nothing except what would be to their benefit. The people have no place in their calculation except at the pay counter. Do you tell me that these men are more honest, more reliable than the people, than Congress? We beg your pardon. For a quarter of a century we have been told that while the national-bank system was expensive it was the best on earth; it was the bankers' own system. Now it is a confessed failure. Have not these same bankers made constant drafts on our gold reserves, compelling the issue of more interest-bearing bonds for the people to pay? Have they ever raided Congress for the purpose of urging consideration of the question of how to lighten the people's burdens? Many meetings can be recounted at which the consideration of their own special benefit was discussed, which infallibly means a tax on labor. Have they not in every panic, the last of which they precipitated, fought like wild beasts for the advantage, carrying down to ruin not only the weaker bankers but millions of toilers?

Are they more honest than railroad corporations, railroad presidents and managers? The latter come to this Congress, which we are told can not be trusted, and ask for legislation against their own avowed rascality and underhand tricks. This House passed the "pooling bill," which I am forced to confess is some evidence that Congress can not be trusted to resist the demands of corporations.

PHILOSOPHY OF MONEY.

Money material which has a commodity value equal or nearly equal to its money value must of necessity be sensitive, cowardly, and unreliable; always most so when most needed. During financial troubles, business depression, internal disturbances, or war, domestic or foreign, it will hide, run away, disappear through hundreds of channels and agencies, and at such times the country must of necessity find a substitute, which entails great loss and produces dissatisfaction among the people. This is always a source of danger to a people in a great struggle, which should be avoided, and times of peace and aggregate prosperity are the opportunities of statesmen and patriots to prepare for such ever-recurring incidents and disasters.

MONEY SHOULD BE BASED ON WEALTH AND PATRIOTISM.

The money circulation of the country should be based upon the wealth, patriotism, and stability of the Government, and should be sufficient to meet the necessities of the whole population. I grant you it might be enlarged too much, so that an overflow would result. There is, however, not so much danger of an overflow as there is of scarcity—drought. The people of the world have suffered a thousand times for want of a measure of exchange to where they have suffered once because of too much and too cheap a medium.

There is no other way of determining how much money shall be issued and of what substance money shall be made except by an act of Congress. Congress alone must fix the legal-tender quality of the thing to be called money. All other currency, be it gold, silver, paper, or what not, is simply currency by courtesy and subject to the whims and caprices of ever-changing circumstances and the omnivorous rapacity of human greed. The Constitution of the United States provides that Congress shall coin money and regulate the value thereof. It also provides that no State shall make anything legal tender except gold and silver, and it is plainly by inference left to Congress to determine what shall be legal tender without limiting the power of Congress as to the material out of which the legal-tender money shall be coined or made. We are not left groping in the dark as to the meaning of the Constitution upon this point, as the Supreme Court of the United States has definitely and completely settled that question, and a re-thrash of the old straw, "that Congress has no such power," would be worse than idleness.

STANDING BY OUR CONTRACTS.

Should a Government do better than it contracted? If so, how much better? Should it leave that question to be determined by its creditors? If the Government changed the nature of its contracts, so as to greatly increase the burdens of the masses, and by so doing benefit only its creditors, and private creditors, when the fact was made apparent to the world, to even the ignorant and stupid, should not the Government in justice to the masses hasten to retrace its unjust steps, hasten to undo the wrong?

England adopted a gold standard because as conditions then existed in Europe and England silver was at a premium and gold at a discount; hence silver was leaving England and gold coming

in. Gold was plentiful and silver scarce. When France adopted the silver standard, she did so because at the ratio of 15½ gold was scarce and silver became plentiful.

They each from pure business motives, selfish if you like, adopted the standard that best suited their purposes and the interest of their people. Not so with the United States. We adopted a standard to please our foreign creditors to the detriment of our home people. We take the metal which we produce the least of, we slap our silver miners in the face, we say to them: "Go your way; we prefer the company of the foreign security holder, we propose to legislate for the foreigner and his agents. This is an American Government for revenue for jobbers, but when it comes to keeping faith it is a foreign government." It stalks right over the supplicating American workman, his wife and children, over the prostrate debtor; crushes, destroys, wipes out millions of homes to maintain a credit abroad that it has no need of, that deserted it in its hour of need and ever will. It does this to build up a false Utopian credit—a gold credit converting our foreign obligations into gold obligations, when in fact not one dollar in a thousand was loaned in gold.

It has all been done by Congress and our supple Treasurer. At whose bidding—that of our people? No; of our creditors and their paid agents. I protest against this monstrous injustice in the name of an outraged people; I protest against it in the name of humanity; I protest against it in the name of the men who took up arms in civil war on both sides of Mason and Dixon's line; I protest against it in the name of the noble women, who, like the good Samaritan of old, cared for and nursed the sick and wounded, on either side, regardless of their sympathies; I protest that they should have to pay double and treble burdens, which has been so mercilessly and basely saddled upon them. I protest, sir, in the name of the generations to come, of the millions whose tiny feet have not yet touched the sands of time.

CAN PRESENT CONDITIONS CONTINUE?

Let my cultured friends walk a mile from this Capitol building, on the banks of the Anacostia and the old canal, between the Navy-Yard and Arsenal, and look upon the humanity which dwells there. It will do you and them good. Behold the filth, squalor, poverty, and misery of that neighborhood, mostly colored, I grant you, still humanity. Has Congress, has the Government been run in the interest of those people; are their rights or interest considered? Think you that you have done your whole duty by these people when you freed them? Oh, no; you only began a grand work, the first step. If you stop here, do you expect these people to become good, loyal, patriotic citizens? Why, what do they owe this Government? The right to exist? No; they owe that to the Almighty. Why should they love the flag? Why should they revere this Congress, the lawmaking power of the land? We are accustomed to look at Uncle Sam as a very dear relative who devotes his energies to looking after our needs and interest; devoting his whole time and power for the people. Are we right? Or is it a fiction that we teach our children which they must unlearn in after years?

There are 100,000 people in this city, the capital city of this nation (oh, how proud we are both of this city and nation), merely vegetating, grinding out a miserable existence, honestly when they can, through crime when they must. Do you think of them when you legislate? Have their wants weight here? Have the woes of half-starved mothers and gaunt, half-famished, half-clad children voices here? Have such people any power or lot in this splendid Government? Have any of them been sent for by the Committee on Banking and Currency? Has the Committee on Ways and Means given them a hearing? If not, why not? Has their class been mentioned in either committee. Certainly no reference has been made to it in any of the published hearings. Do you expect this condition to go on forever? Can you hope for it? Can these people wish it? Are they of no importance, not worthy of consideration? No age or people or nation can foster misery, ignorance, and want—the fruitful parents of crime—without paying the penalty. These people's wrongs smell to heaven, and a fearful day of reckoning must come as surely as the night follows the day.

Methinks I hear some veneered statesman or some echoing, flippant writer say, "It is not the business of this Government to furnish brains." Opponents of the free-school system have worn that parenthetical smartness threadbare. It is not the business of this Government to furnish air, water, land, blood, and brains, but it is the business of the Government to see that the supply is kept pure, that neither is poisoned, corrupted, or injured, and that conditions that surround each and all are equally favorable, and the best for the masses. If we do not furnish means of education ignorance will prevail. If we do not see to it that there is sufficient money, millions must go unemployed—the unemployed poor must beg, starve, or become criminal and vicious, and we are the cause and must answer to God and man. Go read that masterpiece of human philosophy, that greatest of all written dramas,

"Les Miserables," by Victor Hugo, and learn a broader humanity. Walk forth into the sunshine of its grandeur, a new creature ready for the lesson of the Divine teacher, "Love thy neighbor as thyself," and "Whatsoever ye would that others should do unto you, do you even so to them."

RESTORE THE COINAGE LAWS.

Restore the coinage laws in operation before 1873, give us the white metal, the silver our miners in the West dig out of the earth, which is eagerly sought by the agriculturist and laborer, who in turn provide themselves with the comforts of life. Silver has never been repudiated, save by the bankers, who desired to kill it as a money metal. They can not control silver money if we have free coinage, but they can control when we have only gold as standard money.

Commerce has set the mark of selfishness, the signet of all enslaving power, upon a shining ore, and called it gold.—*Shelley*.

A treatise on political economy by the great French economist, Count Destutt de Tracy, published at Georgetown, D. C., in 1818, so profoundly impressed Thomas Jefferson that he made a translation from the French to the English, and in submitting it to his publisher in a letter dated Monticello, October 25, 1818, says, in part:

The merit of this work will, I hope, place it in the hands of every reader in our country. By diffusing sound principles of political economy it will protect the public industry from the parasite institutions now consuming it and lead us to that just and regular distribution of the public burdens from which we have sometimes strayed. It goes forth, therefore, with my hearty prayers that while the Review of Montesquien by the same author is made with us the elementary book of instruction in the principles of civil government, so the present work may be in the particular branch of political economy.

THOMAS JEFFERSON.

In this treatise M. Destutt de Tracy says:

This short explanation of the nature of money shows us, first, that there can only be one metal which can really be money, that is to say, to the value of which we refer all other values, for in every calculation there can be but one kind of unit which serves as a basis. This is silver, because it is this which is best adapted to the greatest number of subdivisions, of which there is need in exchanges. Gold is too rare, the other metals too common.

At this early period in our history the founders of our form of government foresaw the evil effects of a contraction of the currency. We want a dollar that will not appreciate in value to the detriment of labor in production; neither do we want a debased currency.

M. Destutt de Tracy further says:

It is true, however, that it is the interest of society in general that the interest on money should be low. First, because all rents paid by industrious men to capitalists are so far funds taken from the laborious class for the profit of the idle. Secondly, because when these rents are high they absorb so large a part of the profits of industrious enterprises that many become impossible. Thirdly, because the higher these rents are the greater the number of those who live without doing anything.

The position I take is that the nation's finances must be so manipulated as to free the people from great profits derived from loaning money, as under our present form of government, and what profit there is resulting from money creating should accrue to the General Government.

I do not fully agree with M. Destutt de Tracy that it is absolutely necessary to make silver the standard. Arguments have been made by very able gold advocates, as well as silver advocates, in favor of making a single standard of each of these metals; but equally able men have argued with remarkable logic and effect that a dual standard could be maintained. We are maintaining a limited dual standard now in the United States. They are maintaining a double standard now in France. Fact is always stronger and more conclusive than theory.

Montesquien, in his Spirit of Laws, says:

Money is the price of merchandise or manufactures. But how shall we fix this price; or in other words, by what piece of money is everything to be represented? If we compare the mass of gold and silver in the whole world with the quantity of merchandise therein contained, it is certain that every commodity or merchandise in particular may be compared to a certain portion of the entire mass of gold and silver. As the total of the one is the total of the other, so part of the one will be to part of the other. Let us suppose that there is only one commodity or merchandise in the world, or only one to be purchased, and that this is divisible like money; a part of this merchandise will answer to a part of the mass of gold and silver; the half of the total of the one to the half of the total of the other; the tenth, the hundredth, the thousandth part of the one to the tenth, the hundredth, the thousandth part of the other. But as that which constitutes property among mankind is not all at once in trade, and as the metals or money which are the sign of property are not all in trade at the same time, the price is fixed in the compound ratio of the total of things with the total of signs, and that of the total of things in trade with the total of signs in trade also, and as the things which are not in trade to-day may be in trade to-morrow and the signs not now in trade may enter into trade at the same time, the establishment of the price of things fundamentally depends on the proportion of the total of things to the total of signs.

I quote from this eminent student and writer because he is regarded by the learned of all countries as one of the master minds of the period in which he lived and because the principles hereinbefore stated by him clearly establish the principles I am contending for, that the Populist and people are contending for, "benefits to be derived by a larger circulating medium." I have another reason for quoting M. Destutt de Tracy and Montesquien. It is

common for the advocates of the gold standard to hunt up some old author on the subject who arrives at the same conclusions they have adopted. Horace White, in his statements made before the Committee on Banking and Currency, called to his assistance a comparatively unknown statesman as a witness in support of his (White's) theories. I have called my witness herein mentioned for the purpose of showing that men better known and men recognized as having much higher standing advise exactly in opposition to the authority quoted by Mr. White. I could also quote from ancient history and philosophers. I will call as witness an eminent Greek philosopher, Apollonius Tyaneus, translated into the English in 1680 by Charles Blount. In the work of Tyaneus entitled "Philostratus," presumed to have originally been written 2,000 years ago, we find this remarkable passage:

The third and last thing which produces a famine and scarcity of victuals is many times the ill government, wherein monopolies are suffered by which means some few rich men engross all; the rest are left to perish for want. Wherefore, above all things, care should be taken that the treasures, moneys, and manufactures of the Kingdom be not gathered into a few hands, for otherwise the state may have a great stock and yet starve; for money, like muck, is not good except it be spread. Now, this is done by suppressing, or at least keeping a straight hand over the devouring trades of usury, engrossing great pasturages, and the like.

Let us change a few terms used by the ancient Greek philosopher and we have a parallel condition in the United States to-day. That is, let us in addition to the word "monopolies" use "combinations, syndicates, and national banks," and in addition to the word "manufactures" add "jobbers and stockbrokers," and in lieu of the words "usury and pasturages" use "corporations and trusts."

TRUE STATESMANSHIP.

What a miserable and contemptible statesmanship that would make only the final payment or redemption money of a commodity that is wholly inadequate to supply the rapidly increasing business demands of the world, particularly in time of financial distress; make money of a commodity that is not only limited, but of a commodity that runs and hides when want appears or even financial unrest; that never kept faith with any people in the hour of trouble; that never at any time in the history of man formulated or sustained a bill of rights; a commodity that has ever, at all times and without exception to the rule, stood by the chariot wheels of tyranny and decorated the brow of the oppressors of humanity. Why not found our money on the nation's property and the loyalty of our citizenship? If other people do not like our money we will stay at home and do business among ourselves. When trouble comes every holder of a dollar of our money must protect that dollar by standing by the Government which makes it a dollar.

Some learned doctors say that they want an elastic currency, one that adjusts itself to our trade wants; do not want any "Populist nonsense of \$50 per capita." Will these stellar statesmen please tell a plain, earth-dwelling people what they mean by an elastic currency? Gold will not do; it is not elastic, and has always failed us in the hour of need. Who is to say what this currency shall consist of or when it should be issued? Who is this business world, or interest, mentioned so often and so glibly both here and by the press? Where is it located, and who its authorized managers; who its sponsors or bondsmen? Is it bounded by honesty and fair dealing; is it of divine or constitutional creation? Populists, like Jefferson, are so crazy and foolish as to believe that every producer constitutes a part of the business world; aye, the better part. Yes, we believe the people constitute the business world and that Congress should reflect the voice of the people, and not the voice of the few bankers, who wholly and widely disagree. The people of the United States want free coinage of silver, and have always wanted it; but were tricked out of it. The people of the United States want constitutional money, money by law of Congress. The Western and Southern farmer knows much better what he wants than any banker, and, with all due respect to the banker, is a much more important factor in the business world.

Why consult only the lender and not the borrower? Do the lenders constitute a majority? Can you have lenders without borrowers? Which class is likely to need legislation or protection? Are we seeking the greatest good of the greatest number or the greatest good to the wealthy few? If you answer as some cheap wit, "That the interest of borrower and lender are one," I say let us consult only the borrower. For the last thirty years the lenders alone have been consulted.

THE ROOT OF THE DISEASE.

Unfortunately this is essentially a jobbing age. The best human efforts are put forth for gain, for wealth, for individual preferment not in the interest of the masses? Why permit the fountain to remain polluted, poisoned; why not remove the cause of tramps, of distress, of crime and pauperism? Why administer antidotes which only give temporary relief; why not eradicate the disease? The American people to-day are suffering untold misery, drifting toward the rocks of inevitable bankruptcy for want of a broad-gauged, honest, and manly statesmanship at Washington. Twenty

years have passed without one single star appearing in the political firmament with sufficient ability to lead aright.

There are thousands hacking at the branches of evil to one who is striking at the root.—*Thoreau*.

We have year after year been told by the leaders of one party what "weaklings and scoundrels the other party produced." We have been told in every campaign what a glorious history the Republican and Democratic parties each had; and each of these parties has been tried by the American people, but without relief. Every currency measure that has passed the American Congress for twenty years, aye, for twenty-eight years, or since the war, has proved a failure, or at least only a temporary relief. The people are not consulted, only a few. The people never asked for the national bank, the demonetization of silver, nor could either of the measures have been passed if submitted to the people. The Republican party never could have maintained its power but for its eternal appeal to Northern prejudice. The Democrats never could have held the South but for hatred of the Yankee and opposition to the negro.

The Populist party, pushing aside the prejudices of the past, recalling mistakes only by way of object lessons, demands forward, progressive steps, such as will lift up the great majority, and thereby complete the grand governmental structure founded by the fathers.

There are but three classes of men—the retrograde, the stationary, and the progressive.—*Lavater*.

I have already called attention to the fact that the only remedy suggested by the bankers and supporters of this bill is to so increase our credit that we can borrow more. We are charged justly with borrowing too much; with building too rapidly under present financial conditions and theories, and yet we are told our only remedy is to borrow more.

TAKING STOCK.

Mr. Speaker, I trust it will not be considered a breach of good manners, nor yet a cranky hallucination, to invite this House and country to take stock at the beginning of 1895. How much are we in debt, not the indebtedness alone of the Government, but of the whole people; every form and kind of debt that bears interest or demands a dividend? If we are paying or if our outstanding obligations call for more interest, dividends, tax than we are producing or creating at present prices, the strain can not be endured. It requires no superior intelligence to see at once that we are drifting toward inevitable bankruptcy. Something must give way, a halt must be called; a radical remedy should be applied at once. No remedy can be effective until the extent of the trouble is known.

The following table shows the debt of the nation partially classified:

Total steam railway debt.....	\$6,000,000,000
Total stock issued (railroad).....	5,000,000,000
Total.....	11,000,000,000
Making, in round figures.....	11,000,000,000
The stock issued counts as a debt, because it demands dividends.	
Street railroads of the country.....	200,000,000
Telephone companies.....	5,000,000
Water, electric power, and gas (estimated).....	200,000,000
Other quasi public corporations.....	11,000,000
Total.....	11,416,000,000
New York Financial Review of 1890 estimates the indebtedness of the merchants at.....	5,000,000,000
Individual families.....	400,000,000
Life insurance in force.....	3,500,000,000
Benevolent associations and fraternal orders.....	6,000,000,000
Total.....	26,316,000,000
Private corporations and individuals.	
Real-estate mortgages.....	6,000,000,000
Crop liens (estimated).....	350,000,000
Chattel mortgages (estimated).....	300,000,000
National bank loans and overdrafts.....	1,986,058,280
Other banks loans and overdrafts.....	1,172,918,415
Other private debts about.....	1,101,023,265
Total.....	37,316,000,000
Public debt.	
United States (estimated).....	1,000,000,000
States.....	228,997,389
Counties.....	145,043,045
Municipalities (estimated).....	1,000,000,000
School districts (estimated).....	40,000,000
Making a grand total of.....	80,730,040,434

These statistics have all been gathered from official tables except where estimates are made, and where estimates are made have been taken from high authority upon these questions. In support of the figures I have gathered I add a table furnished by the distinguished financier and statesman, Hon. Joseph H. Walker, of Massachusetts. This table was submitted by him on March 23,

1892, in his discussion on the "Free coinage of silver" at that date:

Census of 1890: Assets of the country, real and personal property.....	\$25,000,000,000
Secretary of Treasury:	
Gold and silver coin.....	1,500,000,000
Total.....	26,500,000,000
National debt less cash in Treasury.....	832,000,000
Census of 1890:	
State debt less sinking fund.....	223,000,000
County debt less sinking fund.....	142,000,000
Town and city debt less sinking fund.....	470,000,000
Porter: School district debt.....	38,000,000
Poor's Manual, railroad indebtedness:	
Funded debt.....	5,106,000,000
Unfunded debt.....	376,000,000
Current debt.....	271,000,000
New York Financial Review, 1890:	
Miscellaneous stocks and bonds.....	1,882,000,000
Farm mortgages.....	1,000,000,000
Town and city homes.....	1,500,000,000
Town and city property (not homes).....	3,500,000,000
Estimated debts of merchants.....	5,000,000,000
Debts of individuals and families.....	400,000,000
Comptroller of the Currency:	
Deposits in mutual savings banks.....	1,402,000,000
Deposits in stock savings banks.....	252,000,000
Deposits in private savings banks.....	95,000,000
Deposits in loan and trust companies.....	368,000,000
National banks.....	1,588,000,000
State banks.....	657,000,000
New York Daily Commercial Bulletin:	
Annual fire insurance losses, \$125,000,000; life of policy, three years.....	375,000,000
Marine insurance.....	50,000,000
Life insurance in force.....	3,543,000,000
Industrial business insurance.....	313,000,000
Benevolent associations and fraternal orders.....	6,000,000,000
Interindebtedness in the country.....	32,988,000,000

Of this total indebtedness there can be but little doubt that \$10,000,000,000 is held abroad commanding tribute from the American people. I estimate that our aggregate indebtedness demands at least 5 per cent per annum. At that rate there is paid in interest alone by the people of the United States \$2,388,802,426. This amount, too, is wrung from a people who are suffering incalculable loss year after year by falling prices. It is true the figures are appalling, equally certain that they are true.

'Tis true, 'tis pity;
And pity 'tis 'tis true.

What have we to offset this burden? Where is the money to come from? Our narrow policy has limited our foreign trade except in such things as we must buy abroad, most of which we now pay cash for. So that General Hepburn well said the other day, "No well-informed man can believe that the balance of trade is in our favor." So that to be honest we might as well wipe the balance of trade theory out of the calculation. Then, what have we to pay this annual burden with?

Our foreign debt is estimated at \$10,000,000,000, which at 6 per cent makes \$600,000,000 tribute per annum, or at 4 per cent, if you think 6 per cent too high, we have \$400,000,000 annually. How do you propose to raise this, and how decrease it? I want a fair, honest answer to this question. The American people want a straightforward answer. It will not satisfy honest inquirers for you to answer by calling names. The cry of Anarchist-crank, wild-eyed, long-haired, hayseed Populist is neither honest nor logical, and is resorted to only by bigots and fools.

My learned doctors, we come to you with a plain mathematical problem, and we want no evasion, no quibbling, no turning and twisting. We demand a straightforward answer. If you can not answer stand aside and let those who have consulted the people and have their interests at heart try it.

Free silver will give us directly \$100,000,000 annually for a number of years to come, that added to our gold products makes \$132,000,000 annually. This \$100,000,000 annually added to our currency, debt-paying money, would so stimulate industry that all would find employment, and the burden, which is extensive, of maintaining a large nonproducing population would at once be lifted from our shoulders. It would further increase our farm, mine, and manufactured products, so as to give us a fair balance of foreign trade in our favor. It would enable our home people to buy our foreign-held securities, so that our internal exchanges of home commodities would lighten our home burdens and enable the debtors to pay their debts to the bankers and stockdealers, so that our stockdealers and bankers can buy in at a fair business profit our foreign-held stocks and securities. A permanent season of prosperity could reasonably be expected and a gradual contraction of debts brought about.

If any man has any better plan to offer let him bring it forward. Do not try longer to deceive the people by saying that the "Republican party is the party of development of patriots;" that story has been repeated so often that some babes and office-seekers actually seem to believe it. Do not my Democratic friends say that Jackson and Jefferson were Democrats, and that you are in favor of

returning to the principles taught by these men, while you in fact drift toward the very shoals you point out as dangerous. No bank or bankers will engage in the banking business unless it is profitable, and no one expects them to do it for accommodation or for pleasure. If the business is profitable, why not do the business in the name of the people and save the profit to the people?

I have read all the proposed plans, and the one that strikes me as most just and reasonable, and which I propose to submit to this House as a substitute for the pending measure, is substantially taken from the plan submitted by Banker St. John, a modification and enlargement of the Bland silver bill, a composite of the growth of the best and most unselfish thought of the age.

The measure I propose is as follows:

A bill (H. R. 8495) to restore the bimetallic coinage system of the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That upon the terms and conditions and charges prescribed by law for the like deposits of gold, owners of silver not too base for the operations of the mint may deposit the same, in amounts of not less value than \$100, at any mint of the United States and receive therefor silver dollars containing each 412½ grains troy of standard silver.

SEC. 2. That the standard silver dollars of the United States are hereby required to be received for all dues to the United States, and are made receivable and payable for all dues and debts, public and private, within the United States.

SEC. 3. That depositors of gold and depositors of silver, as aforesaid, at any mint of the United States, shall receive therefor on their request, instead of the coin to which they shall be entitled, coin certificates of the United States, which shall be redeemed on demand in coin: *Provided, always,* That certificates for deposit of silver shall not exceed \$10 in denomination. And depositors of gold coin and of silver coin, other than subsidiary coins, at the Treasury or any subtreasury of the United States, in sums of not less than \$50, may receive the herein-provided coin certificates therefor. And no gold certificates and no silver certificates and no Treasury notes authorized by act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," shall hereafter be issued.

SEC. 4. That the herein-provided coin certificates shall be redeemed in gold or silver coin, at the convenience of the United States; and the Secretary of the Treasury is hereby authorized, in his discretion, to redeem the same on request in gold or silver standard bars, at the like convenience of the United States.

SEC. 5. That the Secretary of the Treasury is hereby required to reserve on hand, in coin and standard bars at their coin value, an aggregate sum of gold and silver equal to the aggregate sum of the herein-provided certificates outstanding, except as hereinafter provided.

SEC. 6. That the Secretary of the Treasury is hereby authorized, in his discretion and under regulations which he may prescribe, to direct the Treasurer of the United States, from time to time, to receive, at the Treasury or any subtreasury of the United States, interest-bearing bonds of the United States, duly hypothecated to the Treasurer, and issue therefor safe amounts of the herein-provided coin certificates as loans at interest. The rate of interest to be required on such loans of coin certificates shall be in every case the same as the rate of interest payable by the United States on the bonds hypothecated therefor: *Provided, always,* That the aggregate sum of coin certificates issued for deposits of interest-bearing bonds of the United States shall not reduce the aggregate sum of coin and standard bars reserved for the redemption of coin certificates below 60 per cent of the aggregate sum of all coin certificates outstanding.

SEC. 7. That the coin certificates provided for in this act shall be received for all dues to the United States, and shall be receivable and payable for all dues and debts, public and private, except where preexisting debts expressly provide otherwise.

SEC. 8. That it shall be the duty of the Secretary of the Treasury of the United States to so carry out the provisions of this act as to diffuse the circulation of silver and coin notes as to keep them in general circulation, and prevent the use of the same as a vehicle with which to draw gold out of the Treasury of the United States.

SEC. 9. That all silver bullion now held in the Treasury of the United States in excess of outstanding silver certificates at coin value, commonly denominated the seigniorage, shall, by direction of the Secretary of the Treasury, be coined and used in payment of current expenses of the Government.

Mr. Speaker, this bill explains itself. Is it not expected that something should be done by this Congress to relieve the present strain and distress of the country? In my humble judgment this bill will go further in that direction than any other proposed measure—certainly further than the bill proposed by the Secretary of the Treasury, or any proposed substitute therefor heretofore offered. The attention of this Congress and American people is invited to the consideration of two diametrically opposed propositions. One is, "Demanding a gold standard, and that the Government of the United States should be deprived of the money-creating function, and further insists that the currency of the country should be farmed out to a few bankers;" the other, "Demanding that we return to the bimetallic coinage system and the creation of all money by the Government of the United States; all of which shall be full legal-tender money."

I confess to a radical leaning toward the latter school, as my discussion indicates. Some of my greenback friends will take issue with me because I have not gone far enough in the proposed bill. Had I power to secure the legislation that this country needs I might have well proposed even a broader measure than is contained in the bill introduced by me. It will not do for a man occupying the position of a lawmaker for 70,000,000 of people to stand upon a pedestal too far removed from public sentiment and wishes of the country. Having regard for my obligation as a Representative in Congress, I introduce this measure, trusting that it is conservative enough and clear enough to be understood and appreciated by every loyal American citizen. Our friends in the West and South who want to go further must remember that our friends in the East are opposed to going as far as this bill proposes.

Mr. Speaker, I have called attention to the difference between England and France on one side and the United States on the other with reference to the adoption of metal standard for money. The first two adopted that metal which they could most easily obtain the largest quantity of at the lowest figures. The United States adopted the metal which she produces the least of and which must cost her the most. The following table shows the increase of silver and the decrease of gold for the eight years preceding the demonetization of silver:

Year.	Gold.	Silver.
1866	\$53,500,000	\$10,000,000
1867	51,725,000	13,500,000
1868	48,000,000	12,000,000
1869	49,500,000	12,000,000
1870	50,000,000	16,000,000
1871	43,500,000	23,000,000
1872	36,000,000	28,750,000
1873	36,000,000	35,750,000

The following table shows the decrease in gold and the increase in silver following the adoption of a gold standard by the Secretary of the Treasury from the year 1876 to 1885, inclusive:

Year.	Gold.	Silver.
1876	\$20,900,000	\$38,800,000
1877	46,900,000	39,800,000
1878	51,200,000	45,200,000
1879	38,900,000	40,800,000
1880	36,000,000	36,200,000
1881	34,700,000	43,000,000
1882	32,500,000	46,800,000
1883	30,000,000	46,200,000
1884	30,800,000	48,800,000
1885	31,800,000	51,000,000

I am constrained to say that it is fair to conclude, yes, a logical deduction, that the national-bank law, the resumption act, and the \$100,000,000 gold-reserve acts were each and all but part of a plan to strike down the greenbacks; to destroy by indirect methods money that was popular with the people; a money that did not cost the people a dollar interest, a money that would save bonds, save interest; a money that no one doubts. It would not do to go before the people and say we mean to destroy the greenbacks; that announcement would kill the party that made it. The last step was to make them a vehicle to draw gold at will from the United States Treasury, and then compel the Government to issue bonds for the purchase of gold; so that the American people rather than have the greenbacks used as an excuse for the issuing of interest-bearing bonds would consent to their destruction and yield their convictions, that money made by the Government was the best and safest money, and finally consenting to the Government going out of the money-creating business and relegating that function and duty of the Government to the banks.

It will be noticed that all the bankers oppose silver, as I have stated, except one noble exception (Mr. St. John); that they all oppose State banks that would, though vicious, make the State less dependent on the concentrated and combined capital of our great cities; that would allow State legislatures to pass laws favoring the States, which experience has established as unreliable and baneful, but, in my judgment, vastly preferable to the bankers and Treasurer's plans. If I am called upon to vote as between the plan suggested here and the State-bank system, I shall not hesitate to vote for the "wild-cat banks." Because that will enable each State to provide for its own banking system and destroy the dangerous and tyrannical schemes of combined capital.

I have already referred to the fact that this Government now occupies the most dangerous and anomalous position of any Government on earth in its mad effort to maintain a gold standard, and in proof of what I say, I want to call attention to the speech delivered on the floor of this House on January 8 by Mr. HENDRIX of New York, himself a national banker and gold advocate:

I believe that it is a reasonably fair statement of fact, that with large revenues, an ample reserve, and a generally healthy financial condition, that through a very long period a strong, resourceful Government like this can maintain, without any question at all, a very large body of its own simple promises to pay in the currency of the country. The best proof that it can do it is that it has done it.

Now, can any government hope to escape bankruptcy which has out two such gold carriers as the United States note and the Treasury note? Mr. Chairman, we have got the freest gold deposit in this country that there is on the face of the earth. When anybody anywhere wants gold, the easiest place to get it is the Treasury of the United States. The Bank of England shelters the Government of Great Britain, the Bank of France shelters the Government of France, the Reichs Bank of Germany shelters the Government of Germany, the Imperial Bank of Japan shelters the Government of Japan, but we expose our gold supply to the demands of the whole world.

If Rothschild wants to contribute gold to enable Austria-Hungary to go upon a gold basis, he makes a bid to the Reichs Bank at such a rate for American eagles. A cable cipher comes across the ocean and an offer is made for American eagles at such a price, interest to be paid from the date of shipment. There may be only a quarter or a half per cent in the transaction, but on a large

transaction a quarter or a half per cent, as any business man knows, is a very valuable thing. Business to the amount of millions is done on the basis of one-eighth or one-sixteenth, and therefore business men are not only willing but glad to get an opportunity to make one-quarter per cent. All they have to do to get our gold is to collect our Treasury notes and greenbacks, go down to the Treasury and hand them in in denominations of \$1 or \$10,000 and fill a cart backed up to the door. The gold of the United States finds its way into the bowels of a steamer waiting, with steam up, ready to cross the Atlantic, and the exporter receives interest from the moment the gold is put on board ship.

The Bank of France puts a price on American eagles in the same way. Now, how does the thing work when we want to get gold? If you go to the Bank of France and ask to have a note of that bank cashed, if it is of small amount and you are an American traveler they will be very glad indeed to hand over the counter the few napoleons which you require, but if you send in a large amount of notes and ask for gold they will simply tell you that the rules of the Bank of France forbid them to give you more than 5 per cent of the amount in gold, and they will pay you the rest in silver. If you are a merchant and must have gold, they will say to you, "Our price for American eagles is so much; if you desire to pay that price we shall be very glad to sell them to you." The Bank of France and the Bank of Germany both become great bullion dealers under that system, while the Treasury of the United States, a great free-handed country, shovels it out to anybody who comes along with a demand note.

The distinguished gentleman states these facts as an argument tending to favor the establishment of banks similar to the Bank of England and France, etc. While I agree with him as to the facts stated, I disagree with him as to the deductions to be drawn. That he has stated the facts no one, I presume, for a moment will deny; hence I am certainly entitled to pardon for the strong language used concerning the present financial system, and after this statement of facts I hope that none of the distinguished advocates of the gold standard and consequent opponents of the "free coinage of silver" will with such lofty swelling mien, such as has been witnessed in this House, declare that our "foreign credit must be maintained." Our foreign credit is maintained by paying our debts in a common sense way; by using material at our hands with which to pay it. The people of the United States will, as soon as they learn the truth, relegate to the everlasting sleep of oblivion the men and parties who have frittered away their rights and cost them so much.

Mr. Speaker, commenting on that portion of Mr. Hendrix's speech which I have referred to, the Springfield, Mass., Republican, a very ably edited paper, and one which is to be commended for its brave and independent position, among other things, says:

It appears to be unnecessary for the Bank of France to redeem its notes entirely, or in anything like a reasonable percentage, in gold on demand, to maintain the parity of the two metals. Jones and Stewart and other silver men have often urged this point and demanded that the United States Government at least refuse to redeem the greenback and Treasury notes entirely in gold, but pay out, say, 50 per cent in gold and the rest in silver. Probably if the Government had adopted such a rule fourteen years ago, or seven or five years ago, when popular confidence was not disturbed and the Treasury was in a strong position, it might now adhere to the rule without trouble and with such inconvenience to the exporters of the metal at New York as to compel the banks there to supply some of the gold for export. But it would, of course, be quite another matter to put such a rule in force when the Treasury is so weak in its reserves and distrust has been awakened. The illiberal and short-sighted course of the New York banks, however, may force the Government in the end to adopt so risky a plan as an alternative to the immediate danger of the entire disappearance of the Treasury gold.

The Republican is right to this extent at least, that if the continued heavy draft on the gold in the Treasury by the New York bankers is not checked there will be a general uprising in this country demanding of the Secretary of the Treasury that he shall adopt the course pursued by the Bank of France, that of paying our debt and redeeming greenbacks and Treasury notes in gold or silver, as the law permits. I had occasion during the extraordinary session of Congress, when the Sherman purchasing clause was before us for repeal, to say upon this floor "that the panic then existing was a bankers' panic; that the bankers had purposely brought it about, with the view of forcing the repeal of the law requiring the Secretary of the Treasury to purchase and coin silver." No one at this time can be found who would hazard his reputation by denying the truthfulness of the statements that I then made.

As I have already observed in this discussion, it is equally true that the run upon the Treasury by the New York banks, drawing out the gold reserve, is a conspiracy having for its end the retirement of the greenbacks and Treasury notes. It is a stupendous piece of scoundrelism, which will recoil on the heads and business interests of the men engaged in it. Their conduct is utterly heartless, wholly unpatriotic, bottomed upon sordid greed and pusillanimous avarice, indefensible except upon the theory that the Treasury of the United States is a proper subject of looting and robbery, and that only Populists and hayseeds are simple enough to object. No wonder, Mr. Speaker, that these wholesale robbers object to Populists; no wonder that they object to the Secretary of the Treasury consulting or listening to farmers, mechanics, laborers, or producers. I believe as sincerely as I believe in this Government that it would not have been necessary for the Treasurer of the United States to sell a bond but for the deliberate villainy of the men who have caused gold to be drawn out of the Treasury in pursuance of a cold-blooded purpose which I have already described.

If I am right it will be seen that these conspirators have already cost the Government of the United States at least a hundred million of dollars, and if the process is submitted to will cost it many hundreds of millions. It will, however, Mr. Speaker, in my judgment, lead to one good result; that is to say, it will compel the Government of the United States to pay its obligations in whatever money it may legally use. During the discussion of the Sherman law it was insisted by the gold advocates that France, England, and Germany were all on a gold basis. Now, it is confessed by my friend from New York [Mr. HENDRIX], himself a national banker, that France and England, in maintaining a parity between gold and silver, pays in that metal which best suits the convenience of the bank, and that no one can go to either of the treasuries of these two great nations and procure any more gold than the treasury sees fit to pay.

With all these facts confronting us the United States Government presents the spectacle of a great babbling booby, whining over its inability to do what no other Government is pretending to do, pay out gold to every comer, straining its credit, saddling an unjust debt upon the American people with nearly five hundred millions of silver bullion in its vaults ready to be coined into legal, debt-paying dollars. The policy is an imbecile policy, unworthy of a proud, intelligent, and independent people, and is perhaps the most pronounced illustration of the stupendous jobbery of the age and of the blind credulity of the people to be found upon the face of the earth. If the American people had not submitted almost patiently to this excessive bleeding process for years past, a prophecy that such a thing would take place in the near future would be laughed at as the silly chattering of a drooling idiot. During the Revolutionary war, Lord Tarleton, in command of the British then in the Carolinas, committed a great many outrages upon the friends of the American Revolution. Francis Marion, a well-known patriot general, said of those outrages, "They are the foolish and mistaken blunders of the agents of a tyrant, and but hasten the separation of people and crown." It is to be hoped that the organized acts of the New York bankers which I have enumerated will hasten the day when all power to control the currency or money of this country will be forever taken out of their hands.

I have not used strong language with the view of disparaging individual bankers, but for the purpose of justly characterizing their combined iniquities.

If this assault upon the Treasury continues much longer every independent newspaper in the land will be forced by their conscience and public opinion to denounce the dishonesty of the bankers drawing out the gold and the folly of the Treasurer in paying it out. And when they begin the language I am using will be regarded as mild and conservative. Mr. Speaker, I make no pretense of superior foresight, but it seems to me that only the blind (I mean the morally blind) could fail to see the inevitable catastrophe.

I have already taken occasion to say that the banks, while attempting to dictate the financial policy of the Government, are combined together to draw gold out of the Treasury, lest it should be thought that I was dealing in reckless statement, unjust toward the banks. I clipped from the New York World a few days since the following pertinent inquiries: "What do the banks mean by their excessive hoarding of gold? Those in the New York clearing-house system alone hold more than \$81,000,000 in gold, for which they have no use. Why do they not turn it into the Treasury in exchange for legal-tender notes? Why do they not pay it out to merchants who have customs duties to meet, so that it may replenish the Government reserve? Are they seriously expecting gold to go to a premium? Are they and the banks all over the country in a combine to compel repeated bond issues for their speculative profit?"

The questions which I have just quoted are most pertinent. To such an extreme have the banks carried their assaults upon the Treasury that a great metropolitan newspaper, published in the midst of these speculators in public credit, feels called upon to rebuke them. Can it be possible that, in the face of all the accumulated evidence of the last two years, any ordinarily intelligent human being can be found who doubts the alleged conspiracy?

These bankers understand one principle in political economy, and that is, that the source of power lies in the ability to control the public purse. Any system which creates, extends, or enlarges debts necessarily stands opposed to self-government. This principle is easily understood. Self-government has always been opposed by money power, by those who hold bonds and notes, by those who have extensive holdings of any kind of property. Those who advocate and maintain self-government should always, at all times and under all circumstances, do all they can to prevent large or extensive indebtedness, and to that end our people should maintain a complete and jealous guard over all public expenditures. It has well been said that money is the vital principal of the body politic, that the public Treasury is the soul of the state, that control over public expenses means control over public affairs.

The people should therefore scan with great severity the acts of a public servant or servants, and should demand at his or their hands an open, complete, and full statement of his public accounts, and no great enterprise should be entered upon in the way of public expenditures without first being submitted to the people, and the people should never act upon such questions until they have been given plenty of time and opportunity to investigate the reasons for such enterprises—expenditures. If Congress or the President of the United States or any arm of the Government may with impunity enter into any secret arrangement or negotiation, or at their own will extend an old debt or create a new one, the constitutional idea of free government—a government of the people—is strained, endangered.

Let me give a few illustrations. Silver was demonetized in 1873 without the fact being known by General Grant, then President of the United States, and a large majority of the Senators and Members of Congress, and without the slightest suspicion upon the part of the great body of the American people that such a thing was being done, and the injury to the laboring people of the United States growing out of that transaction is so stupendous that the bare contemplation of it is appalling, and no language can be found to fitly describe it.

Again, the power given the Executive of the United States, through the Treasury, to issue bonds was a secret and unknown power, so far as the people of the United States were concerned, and has already resulted in great injury, and doubtless will in the future bring disaster to this country.

The willful conduct of the Secretaries of the Treasury in adopting the secret rule of paying our coin debts in gold has not only caused great financial disaster to this country, but has done more to break down the confidence of the American people in the integrity of our rulers than all the defaults and embezzlements of all the public officers of the States and nation, and has cost this Government unnumbered millions of dollars, and doubtless will cost our people other unnumbered millions. All the acts which I have enumerated have not only been irresponsible to the true source of power, but have been such acts as the promoters well knew at the time of their adoption could not have secured a respectable vote of the people of any Commonwealth in this Union, much less a majority.

The natural results of the extensive indebtedness of this Government, the several States and municipalities, together with the personal indebtedness of our people, is to produce two classes, the major class being composed of those who pay tax and interest to support the debt in its various forms, together with the constantly accruing interest thereon; the other class being composed of those who receive the interest and tax paid by the first-named class. Let it be remembered that industrial leisure rendered possible by extensive ownership in lands, houses, bonds, and other fixed investments has in all ages of the world had a tendency to create a spirit of overbearing intolerance, while those who must toil and save and suffer as the result of heavy tax and interest, if intelligent, have ever been dissatisfied, unrestful, and disposed to demand that their burdens be lightened and the opportunities and comforts of life be equalized. This thought, this demand, this wish and hope for equality, is the polar principle of free government, and the man who does not possess it is already a slave and needs not bonds to make him the meanest of his race. Lord Bacon over three hundred years ago declared that the gnawing and corroding effect of interest was more damaging to labor than all other vicious elements of social and political government. In lighter vein, but none the less true, is the following:

THE SONG OF INTEREST.

[Not by Tennyson.]

I steal the lawns and grassy plats,
Foreclose the hazel covers;
I mortgage the forget-me-nots,
That grow for happy lovers.

By every road I hurry down,
My grasp on all the ridges,
On every farm, in every town,
With bonds on all the bridges.

And by the almshouse sure I flow
To join the brimming river;
For men may come and men may go,
But I go on forever.

My step is on the stony ways,
I cry "per cent" in trebles,
And then I grasp the ships in bays,
As erst the sheep or pebbles.

I wind about and in and out,
With here a youngster sailing,
With here and there a gray-beard man,
And oft a widow's wailing.

I draw them all along and flow,
To join the brimming river;
For men may come and men may go,
But I go on forever.

Mr. Speaker, this bill is very far-reaching in its proposition. It means the destruction of the greenbacks, of Treasury notes, and

of silver. It means gold as the money of ultimate payment; it means a surrender of every particle of American manhood and independence; it means the destruction of American manufactures, of the American farmer, and the laborers of this country; it means want of bread and clothing in half of our American homes; it proposes to take away the money of the plain people and compel them to obtain employment on a dear-money basis, which means a cheap-labor basis; it means the total destruction of our silver-mining interest in the United States, which carries with it a great many other industries. This bill could not find a sympathetic response in the bosom of a solitary toiler or producer in this great nation.

The plain people of the United States believe in greenbacks. They preserved this Union when gold and silver had deserted us. The plain, everyday people believe in the greenbacks as they believe in the silver dollar. Paper money backed by the Government, like the greenbacks, is the best money that can possibly be put in circulation if properly limited and guarded. It can always be issued in sufficient quantities to answer the necessities and interests of the masses, is more convenient than any other money, and can not be speculated in. Next to paper money issued by the Government comes silver, as it goes much more extensively into common use than gold.

It will be observed that in 1873, when we were heavily indebted as a nation, the product of gold was decreasing, while silver was rapidly increasing, as was our population and need of money.

The United States would suffer more than any other nation, with the possible exception of Mexico, by the universal adoption of gold as the standard money of the world.

We are the leading silver-producing country.

We owe more than any other nation.

By the adoption of a gold standard we compel the American producers to grow wheat, corn, cotton, beef, pork—in fact, all our export commodities, all the articles which we even up our foreign trade balance with—at gold or dear money cost, and sell in competition with silver-using nations like India, thereby furnishing a cheap commodity from our mines with which to destroy the American farmer.

When you destroy him you strike down every laboring man in the nation.

It is impossible to do injustice to a large class of laborers without affecting seriously all other classes of laborers. Labor must stand or fall together. Let no set of men for one instant solace themselves with the delusion that they are perched on a Gibraltar of safety while their brethren are swallowed up by oppression, discrimination, and greed. Be warned! When those beneath you are brutalized, degraded, and impoverished they will in turn become the instrument of the money power, and will be used to swell the tide which will wash you from your precarious fortress and hurl you into the maelstrom of dependence, servility, and want.

Some ignorant, thoughtless people proclaim against the Populists as dangerous schemers, wild-eyed and fanciful dreamers.

Populism means peopleism, means humanity, progress. Victor Hugo, commenting on Waterloo, says:

The fact is, the revolution can never really be conquered, and, being providential and absolutely fatal, it constantly reappears. * * * If you wish to understand what revolution is, call it progress.

Oppression presents itself in many forms. It is ever, however, accompanied by the votaries of wealth, by those who seek to live in luxury and idleness off of the sweat of other people's brows. If the primal law of creation contemplates equality such a condition as I have mentioned is an insult to the Almighty and must inevitably meet its doom. The date of its exit can only be determined by the growth of intelligence and virtue.

Though the mills of God grind slowly, yet they grind exceeding small;
Though with patience He stands waiting, with exactness grinds He all.
—(Quarrels.)

Humanity stands before wealth, power, pomp. Christian statesmanship places humanity before all things else. A great philosopher of Rome, in the early days of her decline, said to a pompous ruler who sought to buy the philosopher's influence, "Gold hath Caesar's image, but man has Gods."

If by the demonetization of silver, or by circumscribing its money use, or if by the contraction of our greenback currency, Congress and the Executive have made it more difficult for an American laborer to secure work or pay an honest debt, we have not kept faith with that laborer, we have not kept faith with his over-worked wife, his prattling infants, suffering for clothing, for bread, wanting an education; this nation has been guilty of dishonor, of base treachery toward that man, his wife and children. If the President of the United States would give more time to the consideration of the needs of the American people, if he would send a message to Congress, suggesting some method by which unemployed labor could be taken from the byways and highways, and put to work at healthy wages; if he would blow a blast upon his huntsman's bugle, favoring legislation on behalf of our prostrate industries and internal needs, he would do much more

to save the nation's honor and credit than he has done in his repeated wails in behalf of foreign creditors and a single gold standard.

And he would do much more to command and endear himself to the American people.

In my judgment the best thought and energy of this Congress should be taxed to its utmost, as well as that of the Executive, in promoting the interests of the great mass of the plain, everyday people of this Government.

As a part of my remarks, Mr. Speaker, I propose to print what is known as the "Homo" letters, which first appeared in the National Intelligencer, a newspaper published in Washington, commencing about the end of Madison's Administration. These letters are believed by those who are best informed as to their authorship to have been written by Thomas Jefferson. They might well have been written by him, and, while they are not published as a part of his work, they are so much like Jefferson's independent, vigorous style, that I deem them worthy of a place in the current literature of the day, and, though written in 1816-17, they are abreast of the present time.

It is claimed by some who are opposed to the authorship by Jefferson that Jefferson could not have written them, because in one of the letters signed "Homo" is found the declaration "I am not a lawyer;" but those who have followed the life of Jefferson know that immediately after the Revolution he became so immersed in state affairs that he made no pretense at practicing law, and for the last thirty years of his life was in no sense a lawyer, and might well have said that he was not a lawyer. The following letter from an accomplished scholar and gentleman well known in Washington is important, as strongly tending to prove that Jefferson wrote the letter:

WASHINGTON, D. C., February 26, 1895.

T. J. HUDSON:

Yours inquiring about the authorship of the Homo letters, which appeared in the National Intelligencer in the early part of the century, I can only answer by hearsay. I entered the office of the National Intelligencer in 1841, and my knowledge of those letters comes only as a legend. I have understood they were published as the letters of "Junius" (Junius) were, anonymously; but the authorship was attributed to Mr. Jefferson, and you will find allusion to them in the editorials of that paper, and I think quotations from them as coming from Mr. Jefferson.

I am unable to give any information as to the dates of such editorials, but I presume they would be about 1840 to 1844, during the political campaign of Clay and the trouble between the Whigs in Congress and John Tyler.

Yours, respectfully,

JOHN F. COYLE.

HOMO'S LETTERS ON A NATIONAL CURRENCY, DECEMBER, 1816.

LETTER 1.—To the Citizens of the United States.

We all feel the evils of the existing variety of bank notes from chartered banks, and therefore are clamorous for specie, because we advert only to one benefit resulting from it, viz: An annihilation of ruinous exchanges or discounts on notes. But is specie at our command? Is it not an article of commerce? Is it not exported when the balance of trade is against us? Does it not disappear when war ensues? Are you not now paying taxes for the sale of Government stock at a great depreciation, because specie has vanished, and there was not a sufficiency of currency wherewith to purchase stock? When specie diminishes do not banks curtail discounts to call in their notes, and thus aggravate difficulties arising from scarcity of money? Have not banks the power of raising the value of property by an increased issue of paper, and can they not also lower it by diminishing the quantity of paper? Can they not suddenly reject a merchant's or a manufacturer's note, and drive him into the squeezing grasp of the usurer? What is the plea for fluctuations but the reduced quantity of specie possessed by banks?

In cities and in the country have we not all witnessed sacrifices of property and the ruin of thousands by bank curtailments? Can banks prevent unfavorable seasons? Can banks regulate the balance of trade? Can they suppress insurrections and avert war? Do they not commence with a deception when they promise to pay in specie? Does not their profit depend upon the substitution of notes for dollars? Can they benefit if they keep much specie to fulfill their engagements? Is not specie a summer friend, who appears when you do not want him, and who is nowhere to be found in times of need? Have you not seen your armies on the point of mutinying for want of pay? Have you taken a retrospect of difficulties which paralyzed the efforts of Government, and of dangers which appalled the souls of patriots? Must not these scenes occur again when specie shall vanish? Do you not mistake effect for cause; and, because specie appears in prosperous times, imagine therefore that specie creates prosperity? Can the United States Bank pay in specie when insurrections or wars may occur in the course of events? Could the Bank of England avoid the suspension of specie payments? Is not the present period of tranquillity best adapted to establish some permanent system? Have we not many facts to instruct us, and ought we not to provide against a recurrence of past embarrassments?

Has the Bank of the United States the power of commencing specie payments with only the first installment of \$1,500,000, to be divided amongst four or five branches? Are not those who paid the first installment now selling their scrip at a great profit? Will it not be brought up in England, as a by-law is passed to pay the interest in England? Will not this country become tributary for an annual payment of dividends, and will not the losses of the country be in proportion to the greatness of the bank profits? If the Secretary of the Treasury had last year issued Treasury notes not bearing interest, as Mr. Calhoun proposed, would not the interest of 6 or 7 per cent on about five millions have been saved? Would not this have built a university? Is not a Treasury note without interest better for a currency than if it bore interest? Do not men get rid of that which does not bear interest in payment of duties, of postage, and for land, whilst that which bears high interest is locked up?

I have here put a number of questions. If they are answered, truth will be elicited by discussion. If they are received in silence, I will suppose that the affirmative is granted, and may hereafter submit to you a representation of the dangers you have run as beacons to avoid subsequent hairbreadth escapes; and I may also lay before you the outlines of a simple, feasible plan:

1. To avoid a superfluity or deficiency of currency.
2. To do away existing evils from exchange or discounts on bank notes.
3. To prevent embarrassments and losses to the nation on any future war.

4. To destroy, in a great degree, the capricious curtailment of banks and the usury now so severely felt by those who have even the best pledges to give.

5. To counteract the political influence and dangerous power of banks.

6. To give an annual profit to a vast amount, and continually increasing with augmenting population, for the Congress to expend on roads, canals, bridges, schools, etc.

7. And lastly, to cement the Union.

HOMO.

LETTER 2.—January, 1817.

I have made the subjoined rough estimate of capitals in the United States (which augment so rapidly that any small exaggeration even is of little consequence) that you may consider how much the value of your properties depends upon the quantity of currency, and how trifling the amount of the circulating medium is, when compared with the amount of property of which it promotes the interchange.

As health depends upon the blood in the human frame, so does the prosperity of a country depend upon the currency. Violent fluctuations in the quantity of either are equally prejudicial.

The universally admitted axiom, that an article is cheap or dear, according to the quantity for sale, and the number of purchasers, ought to be constantly remembered by financiers. Every day we witness its truth, at home and abroad, in important consequences, which give serious admonitions.

Thus, when a nation has only a specie currency, property falls when the precious metals diminish, by exportation or concealment, and the fall is proved by Lord Lauderdale, and other writers on political economy, to be always much greater than in proportion to the deficiency of an article below its usual supply. Such being the invariable operation of an immutable law beyond the control of man, think how every property holder must suffer when specie diminishes (which erroneous legislators mistakenly term the basis of national currency, although daily changing in quantity, and anything but a basis), for banks always curtail their paper as the precious metals diminish, and thus double the scarcity; nay, when a little of the specie they hold goes out, they often call in three times the amount in bank notes. It would occupy too much of your attention were I to introduce instances of ruin to thousands by bank curtailments, and of losses and dangers to the nation from the same measure. You have only to take a retrospect of the last war to shudder at dangers escaped, and to be anxious for a permanent system to prevent their recurrence.

I have promised to submit to you a simple remedy against fluctuation of currency, and it shall be the subject of a subsequent letter.

Thus it is ascertained that about one-fourth of the bank capital of all the United States had only \$7,430,350 bills in circulation; this would, on an average, make less than thirty millions for all. If all the banks had given in their accounts, the Philadelphia statement would correspond nearly with the whole, because Philadelphia, being a large commercial town, can keep more notes in circulation than country banks. This would make the amount in circulation less than forty millions. The Bank of Columbia emitted more notes than others to aid Government, which are rapidly returning for Treasury notes and stock.

Estimate of the capitals of the people of the United States.

Slaves, 1,500,000, valued at \$250 each	\$375,000,000
Houses for 7,500,000 whites, at five to a house, and each house averaged at \$1,000	1,500,000,000
Furniture for 1,500,000 houses, at \$200	300,000,000
Lots of houses in cities and 100 acres of ground to each landholder, at \$10 per acre	1,500,000,000
Horses, cattle, and sheep	100,000,000
Implements of husbandry, carriages, wagons, carts, etc.	50,000,000
Mills, distilleries, warehouses, wharves, brewhouses, barns, shops, goods of iron, salt, leather, flax, wool, etc.	500,000,000
Flour, barley, rice, oats, potatoes, fruit, corn, cotton, hay, etc., for 2,000,000 persons for one year's consumption, at 20 cents per diem each, including food for horses, etc.	400,000,000
Four hundred millions of acres belonging to the public, at \$2	800,000,000
	5,132,000,000

In the above estimate I have not inserted bank, road, and canal stocks or mines, or produce for exportation. Suppose that my estimate be a little exaggerated, and that the bank notes exceed forty millions, both of which I can not admit, yet even then how trifling is the amount of the currency of a nation to its whole capital, although the former claims attention principally because of its daily use and its numerous effects, from superfluity or scarcity, whilst the latter is rarely adverted to.

Some persons, whose opinion had great influence, stated last year that the bank notes in circulation amounted to two hundred millions, and attributed exchange or discount on notes to a superabundant currency, whereas it was solely attributable to the numerous chartered paper mints, whose paper currency was without any fixed value, as they neither gave Government's stock nor specie, and thereby depreciated the credit of their own issues.

Here is the source of all our inconveniences, losses, and complaints.

HOMO.

LETTER 3.—1817.

Before I submit to you the proposed decideratum, I must request your attention to the important subject of interest.

Sir Joshua Child, a writer of the first authority on economics, terms low interest the soul of commerce.

The banks and individuals who are creditors receive annually about fifteen or twenty millions of dollars for interest on loans and debts; suppose one-sixth of this sum could be saved to the industrious and the unfortunate, would it not be a great relief? And if this view be extended for a century, when the population of the country shall be tenfold, can any one refrain from deliberating upon the important consequences?

I have already estimated the existing property of the country at \$5,000,000,000, constantly increasing. Would not this rise as interest falls? The following words of the enlightened author on the Wealth of Nations supersede all arguments for me: "The ordinary price of land depends everywhere upon the ordinary market rate of interest. When interest was 10 per cent land was sold for ten or twelve years' purchase; as interest sunk to 6, 5, and 4 per cent the price of land rose to twenty, twenty five, and thirty years' purchase."

The public possesses 400,000,000 acres. Consider how much higher it would sell and how much more would be sold if there were a sufficiency of a circulating medium. Consider also what improvements would be made if interest were low; for not such a happy circumstance a tendency to induce capitalists to undertake roads, canals, and bridges, promising to give a profit greater than low interest?

Are not those who usefully employ money burdened with enormous interest for the benefit of those who are devoid of enterprise and are the least useful members of society?

Is it not desirable in a republican government to discourage the oppressive

power of immoderate wealth accumulating in the hands of a few by usurious interest?

Do we not already perceive the monied interest, as it is termed, influencing State governments, and polluting every source of republicanism?

Can we walk out without seeing pawnbrokers' and exchange brokers' shops in every principal street?

Can we read the newspapers without seeing applications for banks, or some debate about charters, prohibitions, bonuses, etc.?

What are prohibitory laws but counteractions of that spirit of competition which the All Wise and All Good has implanted in the breasts of men, to prevent extortion by monopolizers?

What is a bonus given for but an exclusive privilege? Who pays the bonus and 8 or 10 per cent but you, the people? Who supports expensive establishments but you? If banks be multiplied can they keep more notes out than the wants of the public require?

Has not Adam Smith shown, and does not experience prove, that more caution is necessary in the issue of paper, and fewer evils arise from failures where there are several banks than only one or two?

Can partiality or animosity exercise their baneful influences so much when there are several banks as only one or two?

Must not the Government, by limiting the number of banks, and by fixing the rate of interest, counteract its reduction by competition?

Is not the legal interest different in several States? Does not the want of uniformity evince that there is not a fixed principle adopted?

Let me now solicit attention to your losses, when Government is obliged to borrow during war.

The British Government, though tottering under a debt of four thousand millions of dollars, could borrow one hundred and forty millions per annum at 5 per cent whilst you, with resources untouched, borrowed at 8 per cent. If Great Britain had borrowed on these ruinous terms, could she have triumphed over her enemies, or could the nation have borne an addition of 3 per cent interest, amounting to \$120,000,000 per annum?

Could you, fellow-citizens, have continued a protracted war if you begged loans on the terms you did for a few years longer? What was the cause but the different quantities of the circulating medium of the two countries? In England the mammoth bank had one hundred and forty millions of notes in circulation, and a thousand country banks had as much more, to a population of 13,000,000. In this country the currency amounted to about forty millions only to a population of 8,000,000.

Had the Government issued small Treasury notes millions would have been saved. But I will not now enter into details. I have only given this all-important topic of interest to your consideration that you may duly appreciate the consequences. The highest praise has been given to financiers in Europe who reduced interest, but in this country we perceive interest raised even during peace.

I know that the best intentions prevail, and I therefore venture to give sentiments which, I hope, will elucidate what has been termed in Congress the modern Elousinean mystery.

HOMO.

LETTER 4.—1817.

I trust that my reasoning has proved that water might as well be called a pedestal or foundation for superstructure, as bullion the basis of a currency.* Lycurgus's law, that ponderous masses of iron should be coin, was enacted to prevent the introduction of what he deemed the irritamenta malorum for his nation, and therefore he acted right, though he reasoned erroneously; but those who are in favor of an article of commerce for a permanent circulating medium are as prejudiced as those who persecuted Galileo because he denied that the earth stood still and ventured to exclaim in his dungeon, "I may perish, yet the earth will, notwithstanding your power, revolve." The bullionists are constantly talking of fluctuation, a metaphor from water, and yet they insist upon it as a basis. The press teems with pamphlets on appreciation and depreciation between paper and bullion. What a jargon! What strange inconsistency! What wonderful obscurity for the nineteenth century!

It is related of Newton that an apple falling upon him, as he reclined under its tree, caused that thoughtful attention which produced his doctrine of gravitation, whereby he determined the laws and forces by which the revolutions of the planets are governed.

At this winter season I will not request my reader to walk abroad for contemplation—no apples fall; wheels are stopped by ice, and the flowing of streams suspended. I will ask him, therefore, into my parlor, and at a warm fire show him a game at loo. Is not one of the party chosen to hold the stakes? Does he not give out counters, corn, coffee, or beans, at a nominal value? Are not these received and paid away, to the great accommodation of all, until any one wishes to redeem his stake by returning the currency? What are bank notes but counters? The important question is, what ought to be the stake? And, without hesitation I answer, income-yielding property. It is the interest, or annual income of currency, which should be the criterion of its intrinsic worth. Land is worth what income it immediately realizes, or what is expected hereafter from it. Next to land the surest income-yielding property is Government stock, and that has the exclusive advantage of being portable and easily subdivided, with a certain ascertained income. The whole property of the nation, also, is pledged for the punctual payment of the interest.

Now, suppose the Government were to appoint a board of three, to make a currency and to receive stakes, with income-yielding stocks or estates, and to publish that anyone shall have these representatives on depositing 6 or 8 per cent stocks, etc. What would follow? Would not many prefer these loans to bank loans, as they would not be liable to curtailment, or sudden demands for repayment. Suppose so many preferred this mode of acquiring a currency that they obtained rather too great a quantity, and that interest fell below the rate of the income-yielding stakes, would not applications cease? Might not the original borrowers obtain loans on lower terms, and with that loan currency redeem their stocks? Would not this return of currency diminish the quantity in circulation and bring it to the par value, alias the rate of interest received on government stock? When specie came

*The precious metals, being admired for their color and weight, became valuable as ornaments. Afterwards, when the art of melting and of purifying them was discovered, they became articles of barter. At length sovereigns coined them of various sizes, to guarantee their different weights and purities, and also gave them distinct values under various denominations. The receipt of them in all payments of revenue at the rates prescribed gave them an abstract standard value, under different names under different Governments. Thus the abstract value has continued permanent in countries, whilst the mercantile value varies like every other article, according to plenty and scarcity, balance of trade, etc. As it is not in the power of man to alter the law of Providence, that all articles must rise and fall according to demand, and as Governments can not regulate the abundance or evanescence of any commodity, wisdom dictates that rulers should make a currency which is not an article of exportation and which can be regulated to prevent great fluctuations. If this postulate be granted, the only question to be decided is, whether the plan suggested will fulfill the great desideratum so much sought for.

into the country and was not wanted for exportation, would not the precious metals be kept and the currency returned?

This, however, is an ideal circumstance, for man will consume, and when he has a surplus of anything will send it abroad to gratify real or artificial wants. When specie should vanish would not individuals apply again to the stake-holding board for substitutes? This plan appears so simple and feasible that the bullionists will, I fear, resemble the hypochondriac who imagined his nose too large for the door, and still believe that there are insurmountable difficulties. Let, therefore, the Government make an experiment to the limited amount of five or ten millions of dollars during this happy period of tranquillity. Will not this national currency answer for all payments of customs duties, postage, and land, and be preferred to specie, being more transferable and more portable?

Lord Stanhope laid it down as a principle that "a sound sterling being the abstract value of every object of consumption, that value ought to be independent of the valuable quantity of gold and silver, the representative signs which may be found in circulation."

It will be asked whether the banks will not object to this national currency. I answer that they honestly can not, and that they really dare not; but I am convinced they would cheerfully avail themselves of it, as the Government does them a kindness and facilitates the object of their institution. It says to them, "The justice of your reasoning is admitted that the absence of specie occasions a physical impossibility to produce it instantly, and that all attempts to retain it by coercion are futile; therefore, this substitute is created, and if you have good income-yielding securities, which every solid bank should or can possess, you can obtain the national currency, which will be received back, and your stakes returned; but, if, after this, you will neither pay fairly in specie or national currency, you must be declared bankrupt."

That the Government had last year an intention to establish a uniform national currency is evident from that clause in the charter of the United States Bank wherein it is expressly stipulated that their notes shall be receivable in all payments to Government until the Government shall otherwise provide. Why, also, is a committee now appointed to consider a uniform national currency if Congress did not contemplate some permanent circulating medium—that great desideratum?

This board which I propose will not have any political power, as it can not refuse good stakes, and will not have the right to curtail or call in. It will not have the trouble to meet every week to examine into men's circumstances and to discount notes and to answer checks, etc.

HOMO.

LETTER 5.—1817.

Last year the arguments of advocates of the bank were that specie being paid in by the subscribers the bank could pay in specie. Now, the directors do not compel themselves and friends to pay in specie, the charter notwithstanding. If the bank had ten or twenty millions of dollars in specie they might soon be removed, if exchange be against the country. One man with \$30,000 might soon break the bank. He would sell the \$30,000 specie for \$22,000 notes; and again with these notes draw out \$22,000 specie, and so on till the vaults replied to his demand with hollow sound.

That the framers of the bank foresaw periods when the bank could not pay in specie was evinced by their inserting a clause to authorize the president to suspend specie payments, which was stricken out. Great Britain had at one time £27,000,000 in gold, and yet it all vanished. The bank stockholders know that when specie diminishes they must curtail discounts, and cause complaints and losses, till the public will clamor for a suspension of specie payments, and then the managers of this great engine may do as they please. Government 3 percents fell in England to 48 by bank curtailments, and rose afterwards to 75 by an increased issue of bank notes. In a similar situation the United States Bank might raise or lower property as it pleased.

The president and directors will be, no doubt, always all honorable men, without any bias in favor of themselves or others; but it will not be always in their power to retain specie, that basis always fluctuating, and I am apprehensive that most of the United States Bank stock will be held abroad, as Government stock can be bought there at about 93, to fill up the purchased scrip, and then foreign stockholders will receive the dividend of 8 per cent or more which we the people must pay. And is it come to this? But let me proceed with my essay.

I have not fulfilled my promise to submit to you the outlines of a plan. 1. To avoid a superfluity or deficiency of currency, as self-interest has it always in its power to obtain a supply when the circulating medium is scarce, and to diminish the quantity by redeeming stock, when in the least superabundant; thus, the rate of the interest obtainable by individuals possessing the national currency will regulate the necessary quantity.

2. To do away existing evils from exchange or discounts on bank notes; for, if every bank is obliged to pay in specie or national currency, any man with either can disburse them at par, from the province of Maine to Georgia.

3. To prevent embarrassments and losses to the nation on any future war. This I have evinced by showing that the depreciation of Government stocks is occasioned by a scarcity of currency.

4. To destroy, in a great degree, the capricious curtailments by banks, etc. and usury, now so severely felt by those who have even the best security to give. The national board can not call in its notes, for it does not fallaciously make a currency the basis of a currency. Those who are the advocates for this currency basis, or financial paradox, must explain what I should laugh at as a metaphorical absurdity, if the productive classes of the community were not too often ruined by it. To me it appears a will-o'-the-wisp polar star, and on the faithless phantom flies to lead us to our doom.

5. To counteract the political influence and dangerous power of banks, for a full detail of whose antirepublican power I must refer to Cobbett's letter to Mr. Dallas, which ought to be published in every newspaper.

I am now brought to my last promise of an annual profit to a vast amount for Congress to expend on roads, bridges, canals, universities, hospitals, etc. You will have read in a variety of publications that the Bank of England had at one time £30,000,000, or about \$140,000,000, in circulation, of notes, on which, of course, it gained 5 per cent. But let us deduct forty millions, and suppose \$100,000,000 required as a circulating medium for a population of 14,000,000. This, at 5 per cent, would yield five millions annually. Now consider that our population will in a century exceed that of Great Britain tenfold—but I will deduct 14,000,000, and suppose it 100,000,000—will not the currency required amount to nearly one thousand millions of dollars, and the interest on it be \$50,000,000 per annum?

I have given this rough statement that you may be struck with the magnitude of the object I present to you. Diminish the amount as much as you fairly can and even then you will dwell upon the subject with a deliberation you can not prevent. One fact will at least corroborate what I have suggested, viz, that the Bank of England had £30,000,000, or nearly \$100,000,000, surplus in nineteen years, after paying bonuses and dividing 7 per cent per annum, which was two-fifths more than legal interest. I will not here allude to the United States Bank, to which I may hereafter devote an essay.

Let me now request you to consider that the borrowers pay interest equally for specie or a national currency. For the former some goods or stocks have been given which, if converted into active capital, would yield

interest. There is, however, this important difference, the specie is purchased from abroad, but the national currency at home.

It may be here urged that specie has an intrinsic value. I admit it, and have no objection to its being brought in as an article of commerce; but I wish it not to be forcibly detained. I say, let it be exported to bring back articles yielding a profit of 50 per cent. I only deprecate its being made the currency of a nation because it leaves governments in the lurch. Adam Smith has sagaciously observed that "the substitution of paper currency, in the room of gold and silver money, replaces a very expensive instrument of commerce with one much less costly. Circulation comes to be carried on by a new wheel, costs less both to erect and maintain than the old one. By paper, gold and silver can be spared, and can be sent abroad to exchange for foreign goods, and it becomes a new fund to increase the capital of the country."

In my estimate of profits to the nation I have not inserted the amount of duties paid on goods imported from India, for specie exported.

I will suppose for a moment, what I think impossible, that the legislators of this country persevere in the present bonus-chartering prohibiting-specie-bank-note system, and that it be continued till the population amounts to fifty millions, and till a war ensues. What will then be the situation of the Government? What will then be the influence of banks? But why anticipate, you will say, greater evils than we already suffer?

My seventh position, that a national currency will cement the Union, is, I trust, so self-evident that I need not expatiate upon it.

I will not enter into details respecting a particular colored paper for the national currency, nor recommend mixed metal coins, from a dollar downward, etc., for small change. I indulge the hope, also, that some bullionist will reply to my questions, and enable me to supply what may be deficient, and illustrate what may be obscure. I request, however, to be excused contrasting the proposed national-currency plan with the present United States bank plan.

The board appointed by Congress makes the currency and sells it for stocks and income-yielding securities. The board can not call the currency in, and none of it will be returned unless it fall in value so as to yield less interest on purchases than the original stake or pledge of stock, etc.

The bank sends stock to purchase specie abroad, and then gives notes or tickets, with the right to draw the specie out again, and these notes or tickets are often to an amount five times more than the specie.

A superstitious man may keep a small coin in his pocket to drive away the devil, poverty, but a bank can not even do this, for it is compelled by charter to pay away to the last farthing, and then we are paid with demonstrations of physical impossibility. If in this case we complain of deception we are smilingly or sneeringly told that the Government knew when they granted charters to banking associations that specie payments were not intended, unless when specie was not wanted; else wherefore did they make bank notes? A committee on a national currency is, I suppose, now sitting, and no doubt it is maturing some simple, practicable, permanent system. It is a consummation devoutly to be wished.

Oh, beware, my fellow-citizens, of stockjobbers or banking associations, who have an interest as distinct from that of the community as that of drones from that of bees. Oh, beware, ye legislators, how you create a moneyed aristocracy, as dangerous to government as Pretorian bands in Rome, or Janissaries in Turkey. Let me repeat that I behold this country as the asylum of the afflicted, the sanctuary of the oppressed, on which the eyes of philanthropists are everywhere fixed with affection and anxiety. Moral feelings, common interests, and general principles unite as a band of brothers. Whatever appertains to the general welfare should emanate from the General Government. This is the spirit of our Constitution—this is the central axis upon which the Union must revolve, and any important deviation must make all return to chaos. If I am assailed for this interference I shall reply, *Homo sum et nihil humani a me alienum puto.*

HOMO.

NOTE.—It is proved by history that sovereigns formerly borrowed at 45 per cent when specie was the only currency. Now, the value of paper is determined by the rate of interest it will bring; and the rate of interest depends upon the quantity of notes in circulation. If a government gave currency in exchange for stock, at a given interest, is it not plain that the value of the currency must be regulated thereby? Who will venture to say that a specie basis, alias currency, alias will-o'-the-wisp, alias here to-day and gone to-morrow, alias keep me not, ought to be the currency of a great nation, on which existence depends, as human life does on blood. I say existence; for, if armies can not be paid, they must become plunderers, mutineers, and foes, instead of defenders.

LETTER C.—1817.

I often hear an extraordinary argument used, that the Government ought not to bring forward a plain beneficial system for a national currency, because the people are ignorant and prejudiced. This doctrine, if carried to its full length, would suppress all improvement; nay, might make us go retrograde and study to darken by promoting error, rather than to enlighten by exhibiting truths.

I can not believe that the people will call a currency purchased by them, for which the stock is always ready to be returned, continental money or assignats; the former is not issued by the Government without any restraint, and at a period when the ultimate payment of the latter depended upon the success of a revolution. The former can be converted, at all times, into stock, and its issue is limited by the demand of individuals. During the revolution Government forced the latter in payment for everything; but by this plan individuals purchase the former for their accommodation and give income-yielding property for it.

I can not conceive that the people will not make any difference between a hedge stake and a beefsteak merely because they both are stakes; nor can I imagine them so ignorant as to think bonds, mortgages, title deeds, notes of hand, etc., equally alike because they are all on paper.

I appeal to the common sense, the self-interest, and the republicanism of the people; but being conscious that the weight of established names for financial knowledge is sometimes beneficial in confirming opinions of men who are unwilling to judge for themselves, I will now subjoin the sentiments of influential characters who had foresight and fortitude to suggest what experience has confirmed.

Lord Sinclair, in his third volume, page 234, says: "The advantages of paper circulation are hardly to be estimated. In every country where commerce flourishes it is necessary to have a considerable quantity of some common medium of traffic. If paper does not exist, gold and silver must be made use of. If the paper circulation of Great Britain is equal to £30,000,000, had it not existed we must have exported goods to that amount to have brought in specie; and consequently we must have been thirty millions poorer than we are at present. It is true we should have had the gold and silver, but even that would have been perpetually diminishing by use; and thirty millions of paper, without any possible loss by wearing or otherwise, and with great convenience as to transportation, etc., answers exactly the same commercial uses and saves the annual interest that would have been lost, which, at 5 per cent, amounts to one million and a half sterling."

"The circulation of paper has already been carried to a considerable extent by means of exchequer bills, banks, and bankers' notes; but a still greater quantity is required, and an addition of either coin or paper would be of real service to the community, as above thirty millions per annum must now be annually paid for the interests of the national debt and for other national expenses. If one-third of that sum were issued in notes of from one to five pounds each, receivable in payment for taxes, it would be productive of the happiest effects, not only accommodating individuals and promoting the improvement of the country, but also adding, at the rate of half a million sterling, to the public resources."

Arthur Young, in showing the influence of a paper circulation when specie diminished, makes the following important statement:

"The average of bills for inclosing waste lands and commons, passed in Parliament for seven years, from 1769 to 1775, was 58. The average for the next fourteen years, during the American war, was only 33, but in the seven years from 1790 to 1796 the average was 82; but in the following seven years, ending with 1803, the stoppage of the cash payments at the bank not only dissipated the accumulated succors of the year 1797, but animated every exertion, and gave an average of the seven years of 83. The average from 1804 to 1811, inclusive, eight years, was 92. If this does not prove the conversion of paper into beef and mutton, butter, cheese, and corn, I shall be at a loss to know how gold itself ever experienced a clearer conversion from useless metal into these most necessary of all commodities. I have long been convinced that the success of the national agriculture, and even the subsistence of the people, have materially depended on the paper circulation of the kingdom, and that greatly lessening it, under the erroneous idea of its being excessive, would strongly tend to ruin the farmers and starve the people."

Adm. A. Smith says "That a prince who should enact that a certain proportion of his taxes should be paid in paper money of a certain kind, if he was careful to keep the quantity of it always somewhat below what could be easily employed in this manner, the demand for it might be such as even to make it bear a premium, or sell for somewhat more in the market than the quantity of gold and silver for which it was issued."

When the clamor was last year against rags, were not borrowers paying 1 and 2 per cent for them on account of scarcity? Was it not said that there was plenty of specie in the country; and do we not find the mammoth bank sending ten millions, or one-third of its capital, in stock, to purchase specie from abroad?

Do we not learn that the second specie installment is not to be paid in the precious metal, although Congress passed the bank law, relying upon the prospect of promised halcyon days by specie payments.

The great error of chancellors of the exchequer, of Secretaries of the Treasury, and of chairmen of Committees on Ways and Means has been that they depreciated the Government credit by rejecting their own paper in payments and by elevating that of individuals, making, by this preference, a part superior to the whole. Owing to a mistake of this kind I have seen Government securities bearing 12 per cent interest at 25 per cent discount, and when it was corrected the same securities rose to par. What have banks to offer to the public when they suspend specie payments but Government stocks? And how far have any security but individuals' notes.

I will suppose that the Government gave their national currency for income, yielding pledges at 5 per cent—would not everyone then apply to Government in preference to sixty days' loan at higher interest? And would not interest gradually fall to this standard? Can there be anything more desirable for an agricultural, manufacturing, commercial, industrious Republic?

I have not ventured to submit to you what is the result of some reading, and of much deliberation; and surely there is not a subject more deserving your consideration at this opportune crisis. Some bullionists will, I hope, endeavor to refute me. Collision will elicit light, and if I am in error I shall be pleased at being exposed. I am an enemy to fallacies, and shall rejoice at being made wise, even at my own expense.

I am not accustomed to intrude frequently, but on this occasion I was unable to resist an impulse or dictate of duty to do good and a desire to behold manufactures revive and the merchants retrieved, and to see Government defraying in useful, heart-cheering improvements that profit arising from a national currency, which moneyed associates would expend in ostentatious luxuries and demoralizing sensualities.

HOMO.

LETTER D.—1817.

Being unwilling to make my essays too numerous, I had determined not to expatiate upon my seventh suggestion, that a uniform national currency would cement the Union, but on reconsideration so many important consequences present themselves under this head that I can not without a culpable omission neglect adverting to it.

By the Constitution of the United States it is declared in the eighth section that Congress shall have the power to coin money, and regulate the value thereof; and in the tenth section it is ordered, "that no State shall coin money, emit bills of credit, or make anything but gold and silver coin a tender in payment of debts." Is it not herein evident that in Congress alone is vested the power of making a national currency? Let me ask whether the State governments by establishing State banks and by chartering other banks in which they hold shares, and to which they appoint directors, do not virtually violate the Constitution? Is it not an acknowledged axiom in law, *qui facit per alios facit per se*; in other words, he who authorizes another to act, commits himself what is done. If, therefore, the State governments are prohibited to emit paper themselves, neither can they legally empower others to do so.

Now, let us examine whether by authorizing banks to issue notes the State governments do not to all intents and purposes emit paper. The old State notes promised on the face of them to pay in specie—so do bank notes. The States did not fulfill their engagements—neither do banks. The names are different—so are those of Satan and Diabolus, but *mutato nomine cadem est res*. I am not a lawyer and can not therefore make distinctions without a difference and therefore decide that the State governments have exceeded their defined powers, or rather that they have infringed the Constitution as well by granting charters as by prohibiting two or more partners from issuing promissory notes.

I will suppose that the Mississippi Territory be formed into one State, and that the governor, etc., be desirous of a separation from the United States, what engine can be more powerful than a State bank for such a purpose, which had been some time in operation and had established its dangerous influence, combined with that of ambitious popular leaders? Is this a chimera? Is it an imaginary apprehension? Ancient history records the baneful effects of party spirit. Modern miseries have exhibited the overwhelming infatuation of geographical jealousies and animosities, and solemn warnings

* If the balance of trade be not in favor of this country, will not this specie be exported? Will not this be like carrying water from the ocean to pour into the river to flow out again? When natural causes bring specie into the country then, and then only, will scarcity cease. The Bank of England could not make specie payments, and the United States bank can not till specie flows in by a favorable exchange. Thus we never can be indebted to a bank for specie payments. Banks are, avowedly, only paper mints.

have been given in the farewell admonitions of our Washington. Shall all these be unheeded? Shall the lessons of experience be despised?

Even without the anticipation of such a lamentable occurrence, must not the Government, which at present has very large sums of various banks locked up, from inability to dispose of them, but with a heavy loss, find it very embarrassing hereafter to collect internal taxes when the population is much increased and State banks multiplied? May not serious evils be experienced at a critical period?

I will now suppose that a foreign power be determined upon war with the United States, or that an irreconcilable difference makes war inevitable, will not the sovereign's minister of finance, if he has abilities, send over to us several millions worth in goods and withdraw our specie, that merchants may be rendered bankrupt, that all property may fall in value, and that the stock of the General Government may be depreciated? Surely the evils of diminished specie, gradually experienced during the last war, without any foreign acceleration, ought now to be provided against.

I will now suppose the proposed plan adopted, and that the General Government, foreseeing hostilities, makes purchases and contracts for articles to be paid for in Government stocks or in Treasury notes, bearing interest; will not the possessors of these convert them into national notes and thus increase the currency when most wanted, instead of its being diminished, as it must be, if the present specie basis mode be persevered in? Did not contractors during the last war sell their Treasury notes to banks at a discount for notes which were also at a discount on the frontier? On whom did these losses fall but upon the nation, as the contractors raised their prices accordingly? But let me avoid retrospection.

It may appear extraordinary that the people of Great Britain have caused an emission of Bank of England notes to the amount of \$10 per head; but if it be considered that notes are not merely kept in pockets, but in tills of shopkeepers, in desks of individuals, and deposited in banks to a vast amount, and held by Government's officers, the recorded fact will not be doubted.

I will now show how the population increases in this country.

Say that the white population is at present	7,000,000
In twenty-three years	14,000,000
In forty-six years	28,000,000
In sixty-nine years	56,000,000
In ninety-two years	112,000,000

The average population will be 56,000,000, and if these require \$10 each, the amount of currency must amount to \$560,000,000; and 5 per cent on that sum would realize annually twenty-eight millions, from which sum expenses must be deducted. That the dispersion of so much currency would make the holders of it anxious to preserve the Union, even from interested motives, is too self-evident to require illustration.

Unless I am under some delusion, I have now proved that the General Government can save millions during any future hostilities that it may gain, during the peace and war, above twenty millions annually on an average during a century; that it may diminish usury and may preserve the industrious classes from destructive fluctuations in the value of the currency, and that useful improvements of incalculable benefit to all parts of the Union may be constantly introduced.

The great advantages I hold out may to some be questionable, yet who can object to the experiment being tried, for what harm can possibly arise from Governments making a national currency which will be received in all payments? They say "we offer for sale this currency; those who find it their interest to give Government stocks and income-yielding securities may receive it in exchange, and when they choose may return it and receive their pledges, stakes, or securities back again."

I solicit objections. I will not affect to apologize for claiming attention to such important objects. The crisis is favorable, and I feel no anxiety respecting the result of the proposed experiment.

HOMO.

LETTER 8.—1817.

It is imagined by some that the State banks will be adverse to a national currency, but I am convinced they will be pleased with it, as they are not blind to their own interest. They must have specie or United States bank notes to meet their own notes. Now, if they could obtain a national currency they would be much relieved from apprehensions about the mammoth bank, for if it run upon them they could pay in national currency, and the mammoth bank would be less inclined to press them when they would receive the national substitutes for specie thus judiciously and equitably created by the Government to prevent hostilities and embarrassments from rivalship.

Wishing to avail myself of the opinions of others, I have consulted persons well informed on financial subjects, and they corroborated my sentiments that a national currency would be a conciliator. I had not prior to this taken into consideration the interest of minor banks, but am now satisfied that they must be benefited by having an independent reservoir to supply their wants when specie diminishes, and the mammoth bank is necessitated to replenish the vacuum in its own vaults by drains from other banks. Is it not evident that the banks would aid individuals with more confidence and be less compelled to curtail discounts if they could at any time obtain a national currency? This is experienced in the Patriotic Bank, which only promises to pay in Government stocks, as the directors have only to part with some of their stock (of which they have a supply over and above their capital), should they be run upon, and thus a stoppage, to the great injury of the bank itself, of its note holders, and of all buyers and sellers, can not occur unless the bank managers are guilty of overtrading, etc.

The deposits of a bank are its great sources of profit, and these are most considerable when there is a sufficiency of the circulating medium. Many private bankers in Europe make their fortunes merely by deposits, without issuing notes. Small unchartered banks in our large towns and cities, with economical establishments, would be very useful, and in my opinion prohibitions are as impolitic as they are unconstitutional. The great *sine qua non* to prevent the evils of sudden curtailments by the evanescence of specie is a national currency which can not diminish when an increase is required, and thereby compel the banks to curtail and aggravate evils from scarcity, by which the banks reduce their profits and experience serious losses by ruining their customers. The community and banks have one common interest, and both must rejoice at the creation of a national currency to avert the baneful political influence of a mammoth bank, so fully depicted in the following letter from Cobbett to the late Secretary of the Treasury:

"LONDON, January 13, 1816.

"To Mr. Secretary DALLAS:

"SIR: I have read with great care and uncommon interest your proposition to Congress, under date of 6th December, 1815, for the establishment of a national bank; and as a part of the reasons which you urge in support of that proposition appear to be founded on the experience of a similar institution in England, I can not refrain from endeavoring to show you what some of these effects really have been, and what is at present the situation of this country, owing, in a great measure, to the existence of a great banking establishment closely connected with the Government.

"It is the evil of a national bank, as experienced by us, to which I particu-

larly wish to draw your attention. You profess, and I dare say very sincerely, so to frame this establishment in America that it shall be independent of the Government. It is next to impossible, indeed, that you, or any of the persons in whose hands the Government is, should have a desire to make a bank what our bank has long been; but while there is a possibility of its becoming, in any hands or at any time, anything resembling this bank, it must be a matter of serious dread to every friend of America that such an establishment is likely to take place. Sir, it is as a bank of discount that this establishment exercises the most pernicious influence. The directors, who are a chosen divan, regulate these discounts, and in so doing decide in some sort upon the rise or fall, the making or the ruin, of all men in trade, and indeed of most other men, except such as have no capital at all.

"The amount of these discounts at any given time is supposed to be about £6,000,000, as they are never for more than two months. Here is a sum of thirty-six millions lent every year to individuals. The bills for discounts are sent in; the directors consent or not, without any reason assigned. Now, sir, consider the magnitude of the sum discounted. It is little short of half a million dollars a day, Sundays excepted. It is perfectly well known to you that in state of such things almost every man in trade is under the necessity of having a regular supply from discounting. If he be excluded from his fair share here he can not trade with the same advantage as other men trade. If he be in the practice of discounting, and if his discounts be cut off, he can not go on; he stops payment and is frequently ruined forever, even while he possesses property which, with the fair chances of time, would not only enable him to pay his debts but to proceed in prosperity.

"I beseech you, then, sir, to look seriously at the extent of the dangerous power of these bank directors. You must see that they hold in their hands the pecuniary fate of a very large part of the community, and that they have it in their power, every day of their lives, to destroy the credit of many men, and to plunge their families into shame and misery. If I am asked for their motives to act like these, to pursue such partiality, to make themselves the instruments in committing such detestable injustice and cruelty, need I point out to you that they have been and must be constantly actuated by the strongest political prejudices? The fact is, however, that the Bank of England, by means of its power of granting or withholding discounts, has been, and is one of the most potent instruments of political corruption, on the one hand, and of political vengeance on the other hand.

"I myself could name twenty men who stood very high in trade and credit who have been totally ruined, reduced almost to mere beggary, by the stoppage of their discounts at the bank, without any other cause than that of their having taken an open part in opposition to the acts of the Government. This is so notorious that men are not ashamed to avow when solicited to come forward in petitioning or remonstrating that it would be their ruin with the bank—men who burn with indignation at the insults offered to the public. Men who talk in their private circles in the same way that I am talking to the Americans dare not open their lips in public, dare not put their hands to a petition against any act or intended act of the Government; and this is so well and so universally understood, their doings are regarded as so certain a course of ruin, that no man expects them to expose themselves to such calamity. Can your mind picture to itself a more potent and at the same time a more disgraceful instrument of political corruption and subjugation?

"I will now unfold to you, as a serious warning, the miseries which an ill-advised attempt to resume specie payments in Great Britain occasioned.

"Mr. Weston, in the House of Commons, to prove the distress of farmers and manufacturers, read certain documents, which he said were collected with great precision: 'From Norfolk, which he considered might represent the averaged districts of the Kingdom, he had received information there was an increase of sheriff's writs to the number of 1,607, and that executions on goods had arisen from 96 to 147. In the county of Worcester the number of writs and executions in February, 1815, was 640. In the same month in the following year 800. There were, he understood, at present 186 parishes in that county under process for arrears of taxes. In Sussex, out of 32 parishes, of which 100 consisted, there were 23 under process of exchequer.'

"I have already quoted much to illustrate my positions, yet I can not refrain from inserting the judicious observations of a writer in the Gentleman's Magazine, as they will, I hope, make a serious impression.

"High prices, however, might have been sustained in a degree but for the large importations from France, and but for the improvident attempt of the bank directors to restrict the issue of the circulating medium at the instant when taxes were increasing, and when the foreign policy of the Government called for a large extended and progressively increasing circulation. Thus, in the face of an enormous loan of thirty-six millions sterling, of a public expenditure of ten millions per month, the makers of our public money have judged it reasonable to abridge the circulation. They had found it necessary for sixteen years to augment the issues at the rate of a million and a half per annum, but in the year when the taxes and calls of Government become greater than ever, when peace had reopened the ports of the world to our commerce, and when agriculture was struggling against high rents, grinding taxes, and foreign importations, they have diminished their issues from thirty-one millions to twenty-eight millions.

"The Bank of England, too, in regard to the thousand country banks, is like the sun to the planet and satellites of the solar system. Every motion of a yard moves each planet a mile, and every motion of the Bank of England disturbs the motions of its thousand satellites in a similar manner. If, therefore, the banks who pay Bank of England notes have been obliged to withdraw perhaps five times the amount; and thus, eighteen millions have been withdrawn from circulation, when, in truth, eighteen millions more were wanted."

"If the single Bank of England has such influence, then what control the bank of the United States may have over the destiny of individuals, nay, of the nation, which appoints officers to so many branches, with salaries, and directors with such power, and which can increase and decrease the currency at will, yet the evanescence of specie can not be prevented by the bank; therefore, my humble efforts to introduce a remedy against that evil will, I trust, be acceptable. The period is favorable, and venient occurrere morbo is a statesman's axiom. Let it be remembered that the Congress does not issue the proposed national currency and that the board can only sell it. The purchase and return of it is by the Government's receiving it in all payments; and the rate of interest it will produce will be decided by the quantity purchased by individuals, who will calculate the cost of labor, materials, etc., expended on their undertakings and will not purchase it when labor is too high and it can not be profitably used.

"Adam Smith has stated that the price of labor determines the price of productions, but this rule has so many exceptions that it can not be acknowledged. In India, during a famine, when provisions are excessively dear, men will work for a mere subsistence, and children are given to slavery by parents whose affection makes any sacrifice for their children's preservation. In a besieged town a rat or pint of water may sell for a dollar. The high price of provisions in modern times may be attributed to the increase of towns by manufacturers, standing armies, State creditors, taxgatherers, etc. Consumers multiply in old countries more rapidly than agriculturists. Currency, by enabling persons to employ labor, proves thereby a stimulus to industry, and by enabling them to purchase promotes also consumption; in this point of view therefore it becomes an important object. Currency also, by enabling enterprising citizens to erect factories and to establish machin-

ery, is of the greatest benefit, for home manufactures, as they are called, are produced by these means without food, fuel, raiment, fire, candles, servants, etc., so that 5,000,000 of hands may create what would otherwise require 30,000,000.

"Before I conclude let me ask bullionists and the declaimers about the depreciation of Bank of England notes how they will reconcile with their doctrine the two facts which have occurred in Great Britain:

"First. On the 3d of July, 1813, a guinea, at the current price of gold, was worth £1 7s. 8½d. At this period the amount of Bank of England notes in circulation was £23,314,890. On the same day, in the year 1814, a guinea was only in value £1 2s. 4½d, although the Bank of England notes had increased to £23,552,900. Here is a fall in bullion of about 25 per cent, whilst paper money had increased nearly as much in quantity.

"Second. Dollars are now at 4s. 2d, while bank notes have their par or abstract value, 4s. 6d, in all payments.

"I own no inclination to adduce more arguments, but reason whispers that if what I have already urged be unavailing, I should misspend my time; so I obey her dictates and am done.

"HOMO."

P. S.—In making a currency below a dollar, three objects ought to be adverted to, viz: To avoid counterfeiting, melting down, and exportation. Let mixed metals compose the small coins; they can not be washed over; it will be expensive to make them, and it will be expensive to separate the metals, so that it will not be profitable to melt them down. There should be much more work upon the coin, and this will render it disadvantageous to fabricate counterfeits; thus the metallic medium will continue in the country, and losses by sweating and melting down will be saved, and the inconvenience of rags, by corporations, postmasters, associations, etc., so much complained of, will be done away.

Railway Mail Service.

SPEECH

OF

HON. WILLIAM F. VILAS,
OF WISCONSIN,

IN THE SENATE OF THE UNITED STATES,

Wednesday, February 13, 1895.

The Senate having under consideration the bill (H. R. 8272) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1896—

Mr. VILAS said:

Mr. PRESIDENT: At some time during the debate on this bill I wish to submit some observations in regard to it and some figures which I caused to be prepared in the Post-Office Department, in order to present them to the Senate, and perhaps to attract attention hereafter, if it be of no avail now, so that by and by something may be done to change the method of compensation to railroad companies for carrying the mails.

It happened that when I was in the employment of the Government in another situation some years ago I was brought to study the mail service and give attention to the way in which appropriations for the postal service were expended, trying to ascertain why it is that a great express business like carrying the mails, in which the Government has a monopoly that in private hands would be highly profitable, should be, in the Government's hands, the subject of so much annual loss.

I may say that as a general result of the inquiries I made I came to the conclusion that the mail service owes its pecuniary misfortunes to the want of proper legislation. To-day that service is being conducted at a loss, under present laws, of about \$10,000,000 or \$11,000,000 a year. I have no doubt whatever that a good business man would undertake, and give sufficient bonds to justify his undertaking, to conduct that mail service for the next five years for the United States without charging a dollar of annual deficiency. But it would be upon condition that he should be able to make the laws, or to govern the service without being forced into the predicament in which the Postmaster-General is continually placed. He would be able to render that service at a profit to himself, and he would do it increasing and improving the mail service year by year.

The main difficulty with the service is twofold—that the laws compel the Postmaster-General to carry much of the mails at a great loss, and also to pay for much of the mail transportation a price far beyond what any business man in conducting the same business would find himself obliged to disburse. Take, for instance, what is known in our laws as second-class matter. By gradual reduction the rate finally came to stand as it does now. The law took effect on the 1st of October, 1885, the first year during which I was in service in the Post-Office Department, providing for one cent a pound as the rate for carrying second-class matter, whether a short distance or a long one, one cent a pound from the city of New York to the city of San Francisco, across the continent. There was naturally a disposition to take advantage of that reduction on the part of every body who could by any means bring himself within the classification.

So, although the carriage of newspapers within the county of publication is free, which may be a convenience or even benefaction to the people, and although the carriage at the pound rate of newspapers and periodicals properly so called might be excused upon the theory of the dissemination of intelligence, yet in point of fact

it had come to this, according to the best opinion in the postal service while I was connected with it (and I so stated in the report of 1887 now on the table before me), that for the carriage of second-class matter substantially one-third of the entire annual expenditure of the Post-Office Department is sustained, while it yields in return but about one-fortieth of the revenue.

Our postal service now costs nearly \$80,000,000 a year. It costs some \$26,000,000 or \$27,000,000 a year to carry second-class matter. I venture to say, although I have not the figures before me, that second-class matter hardly yields \$3,000,000 in revenue. That is one illustration.

Now, take as another the railroad transportation service, to which our attention is particularly directed in this discussion. We appropriate for the railroad transportation alone in the bill now about to be enacted within about \$300,000 of \$30,000,000 a year. The observation is very safe that by proper regulation and business management of the service that amount should be reduced nearly one-third. From \$5,000,000 to \$10,000,000 I consider a very safe estimate. So if those two items of the postal service alone were put upon a fair and just foundation, instead of the people, heavy laden as they are, being obliged to spend from \$10,000,000 to \$12,000,000 a year to make up its deficiency, there would be even a surplus.

In the report of the Department for the year 1887 these ideas were set out and the attention of Congress was sought to be attracted to them in the hope that something might eventually result. Last year when the post-office appropriation bill was under discussion I again called the attention of the Senate to the cost of railroad transportation; and having given some figures in regard to it, the distinguished Senator from Ohio [Mr. SHERMAN] said, Why do you not bring in a bill for the purpose of enabling relief? I have accordingly, to meet that suggestion, brought in an amendment to be proposed to the post-office appropriation bill.

Now, the Senator from New Hampshire [Mr. CHANDLER] this morning says that an amendment to the appropriation bill is not the proper way, if I understood him, to consider the subject; that it might be very well if we could take it up in some other way upon some bill and consider it at large and meet all the condition necessary. I agree to the general idea; but in fact it is either to do this thing upon some appropriation bill, or it is to see the evil perpetuated year after year with no redress and no relief.

Mr. CULLOM. Would it interrupt the Senator if I should ask him a question?

Mr. VILAS. It would not, sir. I yield with pleasure.

Mr. CULLOM. The honorable Senator now addressing the Senate is chairman of the Committee on the Post-Offices and Post-Roads of the Senate. I submit to him in all fairness and candor whether in his judgment it is not better that that Senator in charge of the Committee on Post-Offices and Post-Roads should give his attention to an investigation of this whole question, with a view of reporting a general bill at the beginning of the next Congress, so that we may legislate intelligently upon the question?

The PRESIDING OFFICER (Mr. PASCO in the chair). The hour of 2 o'clock having arrived, it is the duty of the Chair to lay before the Senate the unfinished business, the title of which will be stated.

The SECRETARY. A bill (H. R. 4609) to establish a uniform system of bankruptcy.

Mr. BLACKBURN. I ask consent of the Senate that the unfinished business just stated from the desk may, without prejudice, be temporarily laid aside, and that the Senate continue the consideration of the Post-Office appropriation bill.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Kentucky? The Chair hears none, and it is so ordered.

Mr. VILAS. Mr. President, I had it in purpose to have undertaken what the Senator from Illinois asks earlier during this Congress. I do not care to ask now for any vacation authority, for the name applied to that is not very agreeable; but every Senator knows that it was hopeless during either of the last two sessions of this Congress to bring in any measure of this kind.

Mr. CULLOM. The coast will be clear next December.

Mr. VILAS. I hope it may be; but I suppose, perhaps, somebody else will have charge of the subject.

I want to make another answer also to the Senator from Illinois, and to call the attention of the Senate to the difficulties of the situation. This is no new suggestion. In 1874 the Senate authorized a committee to take this whole subject under inquiry, and that committee made a report of some value, but resulting in no legislation. Again, the act of July 12, 1876, created a commission for the purpose of examining the subject of the transportation of mails by railroad companies. That commission was to report to Congress at the commencement of its next session such rules and regulations for such transportation and rates of compensation therefor as shall in their opinion be just and expedient, and enable the Department to fulfill the required and necessary service for the public.

That commission was not able to do its work in a satisfactory manner within the period named, and the time was extended by the act of March 3 of the following year. Failing to agree in their conclusions after that examination, a minority as well as majority report was submitted, and nothing resulted of value to the public.

Again, there was a commission of officers of the Department appointed in 1883, and they submitted a project for a law to Congress. It amounted to nothing; Congress took no step in reference to it.

Now, I will call the attention of the Senate as briefly as I may be permitted to the exact point of the amendment which I propose, the reasons for its adoption, and to what I think may be some of the benefits which will follow. I ask that this amendment may be read from the desk. It is designed to take the place of the amendment of the committee, but I suppose, under the rules adopted for procedure on this bill, it can not be offered as an amendment now.

The PRESIDING OFFICER. The amendment will be read for information.

The SECRETARY. In lieu of the committee's amendment it is proposed to insert:

And the Postmaster-General is hereby authorized and directed, instead of leasing from time to time as the conditions of the service will permit, to procure by purchase the necessary post-office cars required by the service on any and all lines, and thereafter to cause the same to be provided with all needful supplies, to be kept in good order and repair, and to be drawn and operated upon any railroad which shall, under his direction, be engaged in mail transportation, and for such operation to pay the rates now provided by law for mail transportation by railroads; and every company, corporation, receiver, or other person operating any railroad which is a mail route of the United States shall transport such cars accordingly upon and in connection with all such of its regular trains as the Postmaster-General shall direct; and the Postmaster-General may, in his discretion, make purchase of such post-office cars directly from any owner thereof without advertisement, or may contract for the construction of the same; and may also make contracts for the supply, cleaning, and repair of such cars with any company, corporation, or persons, or may make other provision therefor; for which purpose he may use any part of the foregoing sum or such further sum as may be found necessary, not exceeding five hundred thousand dollars.

Mr. VILAS. Mr. President, I first call attention to the methods of compensation of railroad companies under existing law. Section 4002 of the Revised Statutes provides:

SEC. 4002. The Postmaster-General is authorized and directed to readjust the compensation hereafter to be paid for the transportation of mails on railroad routes upon the conditions and at the rates hereinafter mentioned.

Mr. BATE. What is the date of that act?

Mr. VILAS. It is a provision incorporated in the Revised Statutes from the act of 1873. It continues:

First. That the mails shall be conveyed with due frequency and speed—

I ask the particular attention of Senators to this—

and that sufficient and suitable room, fixtures, and furniture in a car or apartment properly lighted and warmed, shall be provided for route agents to accompany and distribute the mails.

Second. That the pay per mile per annum shall not exceed the following rates, namely: On routes carrying their whole length an average weight of mails per day of 200 pounds, \$50; 500 pounds, \$75; 1,000 pounds, \$100; 1,500 pounds, \$125; 2,000 pounds, \$150; 3,500 pounds, \$175; 5,000 pounds, \$200; and \$25 dollars additional for every additional 2,000 pounds, the average weight to be ascertained, in every case, by the actual weighing of the mails for such a number of successive working days, not less than thirty, at such times, after June 30, 1873, and not less frequently than once in every four years, and the result to be stated and verified in such form and manner as the Postmaster-General may direct.

These governing weights are to be ascertained by daily weighing the mails during a period of thirty days every four years. Now, I particularly ask the attention of the Senator from Illinois to the fact that the law which fixed that rate of compensation provided that the railroad companies should carry the route agents.

Mr. CULLOM. Of course.

Mr. VILAS. And yet the Senator from Illinois argued the other day, as a reason why the railroad companies should be paid extravagant prices for the use of their postal cars, that they had to carry the route agents.

Mr. CULLOM. The Senator, I hope, will not misrepresent my position. I am sure he will not do so intentionally.

Mr. VILAS. Certainly not.

Mr. CULLOM. I made no argument in favor of extraordinary or extravagant prices for carrying the mails. What I said was that one of the elements which entered into the question of rates for carrying the postal cars over the country, making traveling post-offices of them, was the fact that the law required that the railway postal clerks should be transported, that they were regarded as passengers, and that the common carrier or railroad was liable for damages for injury to them as passengers, etc. So there is no disagreement between the Senator and me as to what the law is. I am not, however, arguing for extravagant prices under any circumstances.

Mr. VILAS. I did not intend to intimate that the Senator from Illinois would argue for extravagant prices in any other sense than, as I think I shall presently show, that the payment of the prices for postal cars are unnecessarily extravagant.

Mr. CULLOM. Does not the Senator agree, if the railroads of the country transport six or seven thousand of these men during the year on postal cars, that that ought to be taken into account in fixing the prices for the transportation of the mails in those cars?

Mr. VILAS. I shall make my answer to that proposition a little clearer if I wait for a few minutes until I call attention to another matter. I only want now to call attention to the fact that the statute which fixed the compensation for the transportation by railroads of mails by weight requires the railroad company to furnish the cars properly lighted and warmed and to carry the route agents to accom-

pany and distribute the mails. So the whole question of the compensation to the railroad companies for the carrying of the route agents is embraced in this general statute for the transportation of the mails, which also requires the railroad companies to provide the cars.

Now, let me observe another thing. The rate of compensation fixed in this statute has been twice reduced by Congress. By the act of July 12, 1876, it was reduced ten per cent, and by the act of June 17, 1878, another reduction of five per cent was made. Now, on the subject of the postal cars, the statute says:

SEC. 4004. Additional pay may be allowed for every line comprising a daily trip each way of railway post-office cars, at a rate not exceeding \$25 per mile per annum for cars 40 feet in length; and \$35 per mile per annum for 45-foot cars; and \$40 per mile per annum for 50-foot cars; and \$50 per mile per annum for 55 to 60-foot cars.

It will be observed that this pay for post-office cars is superadded by the statute to the entire pay for the transportation of the mails by railroads, for which alone it requires them to furnish cars warmed and lighted and to carry the route agents.

I admit, as the Senator from Illinois suggested, that it is one of the elements of consideration in fixing the rate to be paid the railroad companies that they carry route agents; and also that the companies are liable for injuries happening to the agents upon the same principles which govern the case of injuries to passengers; but if the Senator from Illinois would once take a ride in the postal cars with the postal clerks he would recognize that it is a far different thing from passenger transportation to perform the work they do, and suffer the discomforts which they endure. The railroad companies give no passenger carriage to the postal clerks or route agents.

Let the Senator from Illinois, however, remember another thing also. Every other species of freight which requires the accompaniment of human service is by the railroad companies permitted to be so provided. If live stock are to be carried on through freight trains, some man is permitted to go with the animals to take care of them. So dangerous or perishable freight which requires attention en route is accompanied by a man to look after it.

Let me observe another thing; that the rate of compensation fixed in the statute which I first read is sufficiently large to compensate the railroad companies for transporting the mails and the cars they furnish for it at a better rate of compensation than any other freight they carry, substantially, I think, without exception. If there be any exception it is perhaps in the case of the precious metals or some rare objects of that kind. Generally the statement is perfectly safe that the mails are the best paying freight of the railroads, pound for pound and service for service, and that without separate postal car compensation.

Let us see what is the postal car compensation. After we have fixed terms to the railroad companies in general by this statute, which requires them to furnish cars, we have added for the benefit of some this special provision. What does it do? Such of the railroad companies as have large mail carriage may obtain the advantage of this annual rent for the use of the post-office cars they furnish, but such of the railroad companies as have not the large carriage (and can not therefore furnish the post-office cars, because the Postmaster-General will not accept the use of them) will get no such rent; and yet, strangely enough, the very railroad companies which are doing the best in the mail carriage for the United States are the companies which are carrying the great share of the mails. Those companies which are deriving great benefits from the mail service of the United States are by this statute permitted to have rent for their cars, while those which do a comparatively unprofitable service, by reason of its being smaller, have no compensation at all for the car space furnished. This causes trouble; it causes controversy with the Department continually and vexation and annoyance.

Let me illustrate. The Senator from New Hampshire [Mr. CHANDLER] wanted to know whether at any time the Postmaster-General during the former Administration of Mr. Cleveland reduced the railway pay by reason of the discretion allowed by law. Mr. President, I found that in the postal service there were paid to a considerable number of railroad companies, the greater share of them in New England, New York, and the eastern line of States, which did not carry a sufficient quantity of mail to entitle them to post-office cars, regular annual rates of rent for room in cars set apart for the use of the service, without a line of law warranting or authorizing it, and I took the liberty of executing the law and cut off more than \$80,000 a year so paid to the railroad companies under those circumstances. I had for a result that one of the railroads—the Old Colony Railroad Company in Massachusetts—refused to carry the mails for a time.

Mr. HAWLEY. Will the Senator permit me to ask him whether, when he was Postmaster-General, he did not have abundant discretion to correct that evil? He says that he did correct it. I want to know how the legislation proposed here is going to make any change in that particular matter?

Mr. VILAS. I was simply specifying one case of action taken. Let me mention another. The statute with respect to railroad compensation by weight fixes the maximum limits and the successive

gradation in the steps of compensation. In the Post-Office Department, during that time, an effort was made to change the practice of allowing maximum pay in each grade. The troubles of which I have just spoken have grown up during a good many years, and so, on the other hand, the practice was as well fixed in the Department as anything could possibly be, of paying to every railroad company the maximum rate of compensation fixed for its class. There was an especial reason for doing that in the case of the smaller roads.

In one aspect of it there was an especial justice about it, because they got so much smaller advantage by the service. But it was argued that the Postmaster-General had no right to alter a practice that Congress had recognized as fixed under its law by repeated appropriations based upon the estimates, computed on the theory that the compensation should be paid at the maximum rate. However, the attempt was made, and in part executed, to reduce that compensation so far as possible, and the discretion, which the law seemed to require the Postmaster-General to exercise, was attempted by gradual steps to be exercised, and in a number of instances the gradation was effected. But necessarily it would require a long time to adjust all, besides being very difficult; and I understand that since they have gone back to the old practice.

Mr. HAWLEY. I understand that now the railroad companies claim—and the claim is granted—that they are entitled to pay by the scale provided in the statute. The Post-Office Department is not obliged to give them that compensation; it can make it as much cheaper as it pleases; the Department has absolute discretion. It is proposed by this amendment to the bill to take away the maximum limit which is provided in the statute, and it is thought that the Postmaster-General can do the business much more cheaply if there is no power to limit him, if he is allowed to pay twice what he pays now—he may not want to do it, but he can—and that it will enable him to do the business more cheaply. That is the logic of this amendment.

Mr. VILAS. The distinguished Senator from Connecticut is speaking about one thing, and I am speaking about another. I am speaking about the amendment I intend to propose. But let me say to the Senator from Connecticut that the amendment of which he speaks has been altered, so that it is no longer subject to the criticism he is making upon it.

Mr. HAWLEY. If the Senator will pardon me, I notice that the essential thing has not been touched. It is proposed to put \$3,205,000 in the hands of the Postmaster-General to use absolutely at his discretion, and the fact that you adopt a clause repealing the statute practically ends it. That has nothing to do with the question.

Mr. VILAS. I am not speaking of that.

Mr. HAWLEY. The law is practically repealed by that statute giving to the Postmaster-General unlimited and unrestrained discretion.

Mr. VILAS. I am not debating that amendment, for I wish to substitute mine for it. I am opposed to it as it stands if I can accomplish something better.

Mr. PLATT. May I ask the Senator a question?

Mr. VILAS. Certainly.

Mr. PLATT. Does this \$3,205,000 which this item carries refer only to railway postal cars?

Mr. VILAS. That is all.

Mr. PLATT. It does not refer to the carriage by weight nor to the cars which have sections fitted up in them?

Mr. VILAS. No, sir.

Mr. PLATT. It is all for postal cars?

Mr. VILAS. It is all for post-office cars.

Mr. PLATT. Yes.

Mr. VILAS. And the car, in order to be within the terms of the law, must be of the minimum length of 40 feet and not over 60 feet.

Just a word further in answer to the Senator from Connecticut [Mr. HAWLEY], who asks, Why should not the Postmaster-General reduce the rates? Let me observe that the Postmaster-General has submitted here an estimate to this Congress of the amount necessary to be appropriated in order to pay every line of post-office cars during the next fiscal year the maximum rates according to the scale provided in the statute, and a sufficient additional amount for the probable extension of the post-office car service in that way. Now, if Congress appropriates it with what force can the Postmaster-General withstand the demand of the railroad companies, when they say, "here is the money appropriated for this very route estimated by you to Congress, your estimate approved, and the money put in your hands to pay it?"

Mr. HAWLEY. Mr. President, I am astonished to hear an ex-Postmaster-General talk in that way. He knows that he exercised the discretion; he knows that that statute is not a command—in no sense is it a command—to pay that precise sum of money. It is the duty of the Postmaster-General to have the service performed as much more cheaply as he possibly can, provided it is well done, and he would be unfaithful to his trust and deserving of public censure if he did not do it. It is the flimsiest pretense to claim that he is bound by that calculation in the statute.

Mr. VILAS. I wish the distinguished Senator from Connecticut, and the more because of his great abilities, could occupy that position for a while, and try to carry on the mail service under a law

giving him no power to compel the transportation by the railroads of the United States while he took away the compensation which his predecessors in office had been paying since the statute was enacted, and which Congress appropriated for the purpose.

Mr. HAWLEY. If the Senator will pardon me again, they propose to continue doing that exact thing. This bill does not propose to change that law. It only gives a wider discretion, and therefore there is a wider field over which the contractor can chase the Postmaster-General.

Mr. VILAS. The distinguished Senator from Connecticut speaks in that observation to the amendment which mine antagonizes. I am saying that so long as the statute remains, and so long as Congress continues to appropriate the full amount upon estimates based upon the full amount, the Postmaster-General will be sure to find himself in a position where he can hardly exercise the discretion which originally, perhaps, may have been intended to have been given to him.

Mr. HAWLEY. The Senator from Wisconsin himself did that.

Mr. VILAS. When I was Postmaster-General I did in some cases exercise it so far as it was possible, but you can not reduce the compensation over established routes except by law. It is practically impossible to be done. If Congress, abdicating their proper function, insists upon continually casting words of discretion upon an executive officer, while at the same time they make the appropriation at the maximum rate, they can not expect, and never will receive, any satisfactory exercise of discretion on his part by which the compensation is cut down. It is unreasonable to put any such burden upon an executive officer with all he has to endure; and the result can not be other than what it ever has been.

Mr. ALDRICH. Will the Senator from Wisconsin allow me?

Mr. VILAS. Certainly.

Mr. ALDRICH. I understand the Senator from Wisconsin to say that it is impossible for any Postmaster-General to pay anything less than the maximum sum provided by law.

Mr. VILAS. Oh, no.

Mr. ALDRICH. Then I misunderstood the Senator from Wisconsin.

Mr. VILAS. I shall have to restate what I said. I say this: Take a single instance. Upon a single line of railroad a certain number of cars of a certain character have been established for years and the company has been paid a regular rate of compensation. The Postmaster-General estimates to Congress for the payment of that amount to the railroad company for the next fiscal year. Congress makes the appropriation. That Postmaster-General can not but feel himself bound to follow the example set by his predecessors and approved by the repeated and renewed appropriations of Congress. He would be undertaking more than any man would feel that he had the right to undertake to overthrow all the judgment of his predecessors in office, fortified and supported by the judgment of Congress in the appropriation. It is unreasonable, I say, to expect that that will ever be done. But, let me add, that in the case of new service, in the case of service where the compensation has not become so fixed, it may be possible to make some changes and to exercise this discretion. To some extent I undertook to exercise it, but with great controversy, quarrel, and difficulty, I am bound to say.

Mr. ALDRICH. As I understand the Senator in the statement which he now makes, the Postmaster-General is precluded by his own action from exercising that discretion in regard to the rate of pay; that he makes an estimate which he sends to Congress, and then he feels bound to carry out the estimate which he himself has made. I suggest that possibly a Postmaster-General, if he thought the prices were too high, might reduce the estimate in the first instance, and exercise the discretion there and not cut himself off from exercising, in the public's interest, a wise discretion, which the Senator from Wisconsin thinks ought to be exercised.

Mr. VILAS. If I am to debate this question upon verbal distinctions and qualifications of the sort suggested by the Senator from Rhode Island the discussion would be protracted to very great length and would be of no profit whatever. Every man familiar with the operations of the Government knows that a Postmaster-General would be wanting in his duty if he did not submit in his estimates the expectation that the rates theretofore paid for similar service would be continued by Congress, at least enabling Congress to make the appropriation in accordance with the estimates.

Mr. MCPHERSON. May I ask the Senator from Wisconsin a question?

Mr. VILAS. With great pleasure.

Mr. MCPHERSON. I should like to ask the Senator how he proposes to manage the post-office carrying business after the Government has purchased the cars?

Mr. VILAS. I have not yet reached that point. If the Senator will give me a few moments I will soon explain that to him.

Mr. President, after having shown, as I have, that the entire post-office car compensation is superfluous beyond what the statute in relation to the transportation of the mails provides, that it is given to those companies which by reason of their enjoyment of a greater share of the service, a most profitable share, ought rather to furnish the car space than the others, that is not given to the weaker com-

panies, then I wish to draw attention to the rate which is paid every year for the rent. But it occurs to me that before I do that I should call the attention of the Senate to the very great number of railroad routes in the country upon which there is no post-office car service.

If Senators will take the last report of the Postmaster-General and look on page 184 and the following pages, they will find extending over more than 120 pages a table of the routes upon which the mail is carried by railroads, and in columns along the table they will find the routes upon which the post-office cars are drawn. They will see that there are comparatively but few of these routes which enjoy the benefit of this extra compensation.

Mr. PLATT. For the purpose of information I should like to ask a question. I have been trying to ascertain by consulting the statutes whether the two reductions of 10 per cent and 5 per cent applied to the rates paid for the postal railway cars or simply to the amount paid for transportation according to weight?

Mr. VILAS. They applied only to the amount paid for transportation by weight.

Mr. PLATT. That is what I thought.

Mr. VILAS. I intended to call attention to that fact because the Senator from New Hampshire [Mr. CHANDLER] seemed to be in some misunderstanding in his remark that the Senator from Kentucky [Mr. BLACKBURN] now proposes to superadd a third reduction of 10 per cent. The proposed reduction now offered by the Senator from Kentucky would apply to the compensation for post-office cars only, whereas the two reductions heretofore made applied to the compensation by weight only, and not to the post-office cars.

Mr. CHANDLER. Then may I ask the Senator from Wisconsin whether the rates fixed by the Revised Statutes are now the maximum rates for postal-car service?

Mr. VILAS. Yes, sir; they are.

I will next ask the Senate to observe how much we pay annually for the rent of these cars. I caused a very careful inquiry to be made in the year 1887 by officials of the Department who were expert in railroad matters, and in all the circumstances of railroad operation. At that time the railway post-office cars of the country had not reached the stage of improvement which they have now reached, although nearly so. The old cars, originally constructed, many of them having been in service a great number of years, were still then in service. Many of them were old, of course, and of poorer design than those which have since been built, for in that branch of the service, as in every other, improvement is continually taking place.

At that time my inquiries resulted in information which showed that there were 432 post-office cars in the United States, of which but 342 were in ordinary use and 90 in reserve on different lines; that the highest-priced car then built could be constructed for \$4,600; that the average cost would be highly estimated at \$3,500. So the entire cost, the total value of every post-office car in the United States would be not more than \$1,600,000. It was ascertained that \$60 a month per car was entirely sufficient on the average for cleaning, heating, lighting, supplies of oil, ice, dusts, scrub brushes, soap, lamp-fixtures, pails, and all other minor articles of daily use, with all necessary repairs, all necessary labor for their care. Thus the total cost of the cars in the service, and the entire cost of operating all of them for a year was but \$1,846,240. Yet Congress appropriated upon that report \$2,000,000 for the rent of post-office cars during the following year.

Mr. PLATT. Was the appropriation made simply for the rent of post-office cars?

Mr. VILAS. It was for compensation for the use of post-office cars.

Mr. PLATT. But the Senator from Wisconsin does not include the hauling of them.

Mr. VILAS. The Senator from Connecticut perhaps did not hear that the statute provides for that in the compensation by weight, and also for the cars themselves, for lighting them, carrying the route agents and performing the whole service, and that this is in addition to that compensation.

Mr. ALLISON. May I ask the Senator from Wisconsin whether the section relating to the use of postal cars was not a part of the same law that fixed the compensation of which he now speaks? In other words, was it not a total adjustment of the method of reaching compensation for the transportation of mails? It was all one law and all one statute, and so intended to be, as I understand.

Mr. VILAS. I have not in mind now the dates of the laws fixing the transportation for mails, but my remembrance is that the law fixing the transportation for mails by weight existed before the law for additional compensation for post-office cars; and that the latter was one of the superadditions sometimes put on our laws without sufficient consideration; but now both those laws are found in the Revised Statutes, and therefore they appear as if they were in the same statute and perhaps might appear to have been enacted at the same time. I think by reference to them the Senator will be able to ascertain. Section 4004 is the statute in regard to post-office cars, and section 4002 is in respect to compensation by weight.

Mr. ALLISON. I will say to the Senator from Wisconsin that my recollection is that this is all part of the same law. We can ascer-

tain the fact; and I think it is a matter of some importance in this connection.

Mr. VILAS. I appreciate that there is certain importance in it, and the Senator may be correct in regard to it. I will not undertake to say that he is not.

Mr. ALLISON. Sections 4004 and 4002 are part of the same statute, as shown by the margin on the Revised Statutes.

Mr. VILAS. That is true, but that statute was itself a revision of previous laws. It was the act of March 3, 1873, and the Senator knows very well that was not the first provision making compensation to railroads.

Mr. ALLISON. But I call the attention of the Senator to the fact that the act of March 3, 1873, made provision for the transportation of mails, first, by the provision carried into section 4002 and, secondly, by the provision carried into section 4004, so that those two sections of law taken together, as I understand it, formed the method whereby the Postmaster-General should fix the compensation for the transportation of mails. That is the point I make as respects the matter.

Mr. VILAS. I appreciate the point perfectly. I think still that the Senator is in some error as to the history of it, if the act of March 3, 1873, was a revision of laws that had been previously passed.

Mr. ALLISON. If the Senator will allow me one word more, my recollection is that the statute was passed after a report made by a commission of experts who took into consideration the question of weight, space, and speed, and in order to include those three elements in the transportation of the mails the three provisions that are now found as part of the Revised Statutes were enacted. Therefore it was not a pulling over of an old statute, but a statute intended to cover the whole subject of the transportation of mails. That is at least my recollection about it.

Mr. VILAS. The Senator from Iowa may be correct, and I should not undertake to dispute with him a recollection of so ancient a matter; but I will take occasion to examine and find out. It is a singular thing, if this statute was so enacted in response to a commission, that the very next year after it was enacted the Senate directed its own committee to make a new inquiry, as it did in 1874.

But it does not make any substantial difference whether those statutes were enacted together or not. I should like to have the attention of the Senator from Iowa to this point. No matter whether they were enacted at the same time or not, the injustice of giving this particular extra compensation to those railroads that enjoy the very best advantage of the postal service, is none the less obvious, for it is only the railroads that have the larger slice of the public service, so to speak, that are enabled to put on post-office cars at all. They get the lion's share of the compensation paid by the Post-Office Department.

Now, in order to show how much we are paying still under the idea of rent for the post-office cars, let me call attention to figures furnished me by the Superintendent of the Railway Mail Service at the present time, Captain White, a gentleman of very considerable experience who has been for many years in that service. He was chief of a division, with headquarters at Chicago, during the time I was Postmaster-General, and had been for many years before. He gives me these facts:

The total number of cars now owned by railroads for post-office car service in the United States is 740.

The number of cars in ordinary use is 560, leaving the number in reserve 180.

Of these 740, the number of cars 40 feet in length and under 50 is 174; the number 50 feet in length and under 60 is 251; the number 60 feet in length is 315.

The cost of the cars ranges from \$3,200 up to \$4,500, and the last car that was built, having a number of modern improvements, including steam heat, compressed gas, with the vestibule feature added, upon which there is a patent, cost \$5,250. He gives me the average cost of the cars now furnished at about \$3,500 per car, making a total for 740 cars of \$2,590,000.

Now, he gives as the result of careful inquiry on his part in railroad circles certain figures of operating expense—they are railroad figures not his own, and are very high figures it seems to me—in which the average cost per car per annum for light by compressed gas is \$276 a year. The average cost per annum for lighting 560 cars at that rate would be \$154,560.

The average cost per car per annum for heating is \$365. There can be no possible question about the extravagance of that estimate.

Mr. HAWLEY. How much?

Mr. VILAS. Three hundred and sixty-five dollars a year for heating cars, when heat is only necessary during a few months in the year.

Mr. HAWLEY. I think if the Senator will count up what he is paying out for his own house these days he can come pretty near it.

Mr. VILAS. That is quite a different thing; a postal car has but one room.

The aggregate cost for heating per annum of 560 cars at that rate would be \$204,400.

The average cost per car per annum for repairs is \$350, and that is

a high estimate. The aggregate cost per annum for repairing 740 cars at that figure is \$259,000.

The average cost per car per annum for cleaning is \$365. The average cost of these 500 cars at that rate is \$204,400, making the annual cost of maintaining the 740 cars, the heat, light, cleaning, and repairs, as against all accidents and necessities, \$822,360.

Mr. HAWLEY. Will the Senator from Wisconsin pardon me? Mr. VILAS. Certainly.

Mr. HAWLEY. Does the Senator count there the service of the brakeman, the conductor, the engineer, the fireman, and the hands at all railway stations, and does he make any allowance whatever for the bondholders and stockholders, and for speed?

Mr. VILAS. I have already called attention to the fact that the statute of the United States providing for compensation by weight requires the cars to be run with all due diligence and speed, to be properly lighted and warmed to carry the route agents who accompany the train and distribute the mails, and all for the weight compensation paid; and that this is a sheer addition. Now, without repeating the figures again, I will call attention to the fact that the addition of annual rent is enough to maintain those cars every year four times over.

Mr. HAWLEY. If the Senator will pardon me again—he is very good about yielding—I criticize his figure “four times over.”

Mr. VILAS. Let us see. It costs annually \$822,000, by these high estimates, while we are appropriating \$3,205,000; which is pretty near four times.

Mr. HAWLEY. Let me make my little point.

Mr. VILAS. Certainly.

Mr. HAWLEY. I hold that the citizens of the United States generally, the freight payers and passengers, pay fully as large a proportion as the Government does. The gross receipts of the railroad system of an ordinary year, in ordinary times, are very far more than enough to renew the whole rolling stock in one year. That must be the case, because they have a great many things to pay for besides the original cost of the rolling stock and the cost of running the road. There will occur to the Senator in a moment innumerable instances of fixed charges outside of these. The roads have to get enough out of the general public and out of the United States to pay not only for the cost of the cars, but for the hundred other things that are tabulated in the annual returns.

Mr. VILAS. Everybody must understand that.

Mr. HAWLEY. I thought the Senator did not make use of his knowledge. I did not doubt the extent of his knowledge.

Mr. VILAS. But let me ask the Senator from Connecticut if he does not think that that was somewhat understood when the rate of compensation by weight was fixed?

Mr. HAWLEY. No.

Mr. VILAS. I think it was, especially as Congress, when it fixed the rate of compensation by weight, required all this to be done. What I am showing is simply that this is a mere superaddition to the rate of compensation which Congress fixed as sufficient for the cars, lighting, heating, keeping clean, and repairing and running them as they ought to be run, with due diligence and speed.

Mr. HAWLEY. Pardon me again. If that be true he was a very bad Postmaster-General who applied that construction.

Mr. VILAS. All practically have pursued it. But, Mr. President, how much more culpable than the Postmaster-General is Congress when he continually reports to Congress the facts and gets no aid and support in his efforts to correct the evil?

Mr. ALDRICH. I should like to ask the Senator from Wisconsin a question for information.

Mr. VILAS. Certainly.

Mr. ALDRICH. The Senator from Wisconsin is, I understand, chairman of the Senate Committee on Post-Offices and Post-Roads, and has been for some time. He has been for a number of years a member of that committee.

Mr. VILAS. I have been on the committee only during the present Congress.

Mr. ALDRICH. Has the Senator, on that committee, ever prepared and reported a bill to change the condition of affairs which he suggests?

Mr. VILAS. If the Senator from Rhode Island would only have remained in his seat it would not have been necessary to have again answered a mere ad captandum suggestion, which has already been made in the Senate and fully discussed. I ask the Senator from Rhode Island if he remembers a good time during the extra session of 1893 or during the discussion of the tariff bill in the last session of Congress to take up this subject for consideration? I did bring it to the attention of the Senate at the last session, when the post-office appropriation bill was under consideration, and, as I said this morning, the Senator from Ohio [Mr. SHERMAN] then suggested that the subject should be brought again to the attention of the Senate.

Mr. ALDRICH. I do not remember that the Senator from Wisconsin indulged in discussion at any great length upon the tariff bill or any of the other bills which he has suggested. It seems to me that his time, and the time of his committee, was not so thoroughly occupied during that period but that if this was a matter of such great importance they might have prepared a measure which would have saved the Government some money.

Mr. VILAS. The Senator from Wisconsin, like a great many others who wanted to see something done, was obliged to help make a quorum here to listen to the Senator from Rhode Island dissipate the public time.

Let me give the rest of the figures furnished by Superintendent White. They show the average cost of maintaining cars in use per car per annum to be \$1,356; which I believe much beyond the fact. But, on that basis, the annual cost of maintaining the cars in use was \$759,360. He adds to the cost of maintaining the 740 cars now furnished the maintenance of 50 additional cars which may become necessary during the fiscal year ending June 30, 1896, which makes the total outside cost of maintenance for the fiscal year ending June 30, 1896, to be \$890,160.

The appropriation for the next fiscal year was \$3,105,000 as the bill came from the House of Representatives, and it is proposed now to increase it to \$3,205,000. Deducting from this all the cost of maintaining and operating those 790 cars, \$890,160, and we have \$2,314,840 left out of the appropriation proposed to be made, which sum is to be thus turned over to the railroad companies for the use of cars that cost but two or three hundred thousand dollars more, at most, in addition to their full pay for carrying the mails by the same scale of compensation all others receive.

Now, Mr. President, say what we will in regard to the rate of compensation to railroads, as to what shall enter into the reckoning and what not, I claim that a statute which provides for paying to these railroads which enjoy the best of the mail service the full value, or nearly the full value every year of their cars, in addition to the cost of operating them, while others in much greater number are compensated only by the weight scale of pay is unjust and unfair, as well as wrong to the people.

Mr. HAWLEY. Will the Senator pardon me again? It seems rude, but this conversational form is not a bad method of debate.

Mr. VILAS. I am not trying to do more than present these figures to the Senate with necessary inferences.

Mr. HAWLEY. I understand the Senator to say that we have been going on in a wasteful and extravagant way in this matter. Yet we have certain restraints, certain laws, beyond which a Postmaster-General can not go, and railroad companies can not demand anything. I understand the pending amendment to intimate that the business of the Government will be very much bettered indeed if every restraint be removed and the Postmaster-General be left free. Suppose in this bill, instead of mentioning any sums of money or referring to Title XLVI, No. 10, we say that the Postmaster-General is hereby directed and instructed to take charge of the carriage of all the mails of the United States under the best terms he can negotiate. That is the only way to escape the effect of the limitations. Now, if the Senator will pardon me, the Senator from Kentucky seemed to resent the idea that any Postmaster-General could abuse a discretion given here; but that same argument would support absolute despotism. The Czar will answer: You do not suppose I would abuse it, do you?

Mr. VILAS. The proper thing to do, if you repose such a discretion as that in the Postmaster-General, is to invest him with a certain despotic power—power to compel the railroads to carry the mails for a just compensation.

Mr. HAWLEY. And bring in his bill.

Mr. VILAS. If a Postmaster-General of the business ability of the present head of the Department, or with the business ability of the heads of the express companies in this country, could have that authority granted him he could save from five to ten million dollars a year in expenditures for carriage of the mails on railroads.

Mr. HAWLEY. Then let us put up the office of Postmaster-General to the lowest bidder and see who will run it for the least sum of money.

Mr. VILAS. If the Senator from Connecticut thinks that is a good way to do it and will offer an amendment to the Constitution of the United States for that purpose he will probably arrive at the judgment of mankind on the question.

Mr. HAWLEY. But not on an appropriation bill.

Mr. CAREY. I wish to ask the Senator from Wisconsin a question. We are very much interested in the West in maintaining our mail service. Our mails are carried very largely on land-grant railroads which do not receive as much by one-fifth as the other roads for carrying the mails. Now, including the compensation which they receive for the postal cars, does the Senator consider that the railroads are receiving too much for the transportation of the mails?

Mr. VILAS. Some of them receive a great deal too much and some, possibly, too little, though less likely. I do not know how it is in the particular case of land-grant roads. It must be borne in mind that the land-grant roads took a share of their compensation in advance when the land grant was given.

Mr. CAREY. However, their mail pay to-day, so far as our rapid service is concerned, is determined entirely by weight and the small compensation the roads obtain for hauling the postal cars.

Mr. VILAS. They are paid just as all the rest, save one-fifth allowed for their land grant.

Mr. CAREY. As I said yesterday, we obtain all our fast mails in the West by weight, and that is obtained by diverting mail from other parallel lines of railroads to one or two mail lines. By that means we obtain our fast-mail service. Now, if it was divided or

attempted to be divided between two railroads we would not have any fast-mail service, because there are no two railroads, as I understand, running across the continent that would carry the mail on the basis of half of the present weight and what is allowed for postal cars. It is very important to us that our fast-mail service should be maintained in the West, and we labor under the disadvantage that we happen to have land-grant railroads.

Mr. VILAS. I do not discover that there is anything in the suggestion of the Senator from Wyoming that requires any answer. The importance of the fast-mail service to that part of the country and to all active business pursuing parts of our country everyone admits. This question does not enter into that consideration at all.

Mr. CAREY. It does if it reduces the compensation of railroads.

Mr. VILAS. So it was said. That was one of the troubles that fell upon me when I happened to occupy that Department. It was said that they would not carry the mails if I enforced the law which requires a reduction of one-fifth of the land grant roads. Notwithstanding, the law was enforced, and they carried the mails. We can make the law so that it shall be just and right, and that the roads will have a full and fair compensation. I am making no sort of attack upon railroads or taking ground against a fair compensation. They ought to have it. Those which do a large service should receive compensation in proportion to the service rendered. But the thing we have that I am attacking is entirely unjust, unfair, unequal, and bears with heaviest inequality upon the smaller roads.

Mr. CAREY. Do I understand the Senator's amendment to simply mean that the Government is to furnish all the cars, all the appliances of the cars, the heating and lighting, and not pay the roads any extra compensation above that which is received on the—

Mr. VILAS. The Senator from Wyoming is anticipating what I should long since have reached and passed but for the various interruptions I have met in explanation of the ground we have gone over. I wish to finish with the figures which show what we are paying.

The Superintendent of the Railway Mail Service adds to his figures the cost of maintenance and the value of the cars to be purchased, the cost of 50 additional cars at \$4,000 each; and he then estimates that the cost to the Department for the first year after the

law became effective would be \$3,680,160, which would be \$475,160 in excess of the amount now proposed to be appropriated. But at the end of the year the United States would own the cars instead of the railroads. It is now proposed to pay them within \$275,000 as much as this would require to transfer the ownership to the United States. Under the present system, after the United States has paid their cost, by the end of the year the railroad owns them; and year after year this is to be repeated.

Now, let me show by some figures how this works out in particular cases: Take the case of the Pennsylvania Railroad between New York, Pittsburgh, Cincinnati, St. Louis, and Chicago. There is a route running from New York to Pittsburgh and then branching west of Pittsburgh to the other three cities named. On those lines the United States paid last year to the Pennsylvania Railroad Company and its dependencies the sum of \$2,039,918.18 for the transportation of the mails upon the weight scale. In addition, for the use of 69 post-office cars, of 60 feet in length, the United States paid \$515,628.50, much more than it would have cost to have built the cars and operated them during the year.

Now, take the service by the New York Central Road from New York City by way of Buffalo to Chicago, over the Lake Shore and Michigan Southern—one direct road from New York to Chicago. It costs \$2,079,741.24 for the weight compensation, and, in addition, for 50 cars 60 feet in length, \$425,660, when the cost of those 50 cars, at \$4,000 a car, their full value undoubtedly, would be but \$200,000. We really paid more than twice the value of those 50 cars in addition to the payment of about \$2,080,000 for compensation by weight for carrying the mails.

We paid the Pennsylvania Company about \$7,473 per car, including all in reserve, and the New York Company \$8,513; both rendering like service. If this is a just system, why the difference?

I will ask leave to print in the Record, in connection with my remarks, the table I have here, which illustrates some of the larger payments, and shall now take no more time on that branch of the subject. Whoever will examine into it will find universal inequality, unfairness, and wastefulness as well.

The VICE-PRESIDENT. Without objection the tables referred to will be printed in the RECORD.

The tables are as follows:

Cost for transportation and railway post-office cars on the routes mentioned below.

Termini.	Route number.	Railroad.	Length of line.	Equipment.		Annual pay for space.	Annual pay for weight of mails.

† Included in Pittsburg and St. Louis.

Mr. VILAS. Mr. President, the Senator from Wyoming [Mr. CAREY] and perhaps others have asked what we propose for the transportation mail service of the United States. This amendment proposes no revolution; it does not undertake at once to entirely overthrow the present conditions and substitute new; it simply puts in the Postmaster-General's hands power to begin the new order of things, and, step by step, as he can make convenient arrangements, to purchase the postal cars now in service, dealing with the railroad companies as justice requires when they own the cars, and contracting for the construction of cars when he requires new ones.

The Postmaster-General, with the appropriation now made for the rent of these cars, can by the end of the year secure for the Government the ownership of substantially all the post-office cars in the United States; he can secure ownership of a good many more than the 560 postal cars in ordinary use, and have no larger appropriation made than is now turned over to the railroad companies for rent.

Mr. CAREY. The Senator does not propose to allow any additional compensation whatever for the hauling of these cars?

Mr. VILAS. We shall continue to pay the railroad companies the full compensation by weight for drawing our own cars, which we shall light, heat, repair, and care for, which the law requires to be paid for drawing cars to be furnished, heated, lighted, and transported by them. Thus the Government will take off from the railroad companies the whole cost of the car, the cost of lighting, heating, repairing, cleaning, every charge except their hauling, and still continue to pay them the full compensation by weight for transportation. Is not that more than just to the railroads, when others render all the service for the same rate of pay? And what can better show the wrong of the present system, when the year's appropriation, properly applied, can so transform it? Of course, it ought not so to continue, but in the end a better mode be substituted.

Mr. CAREY. The Senator certainly knows that, because of the manner in which the postal cars are fitted up, very much of the space is taken from the car, so that the cars can not possibly be loaded to the extent that the ordinary cars are.

Mr. VILAS. A railway post-office car can be loaded pretty heavily; but what unfavorable difference does it make to the railroad company that the car it is to draw is light? Only the difference in respect to this, that they could perhaps get more weight pay by having heavier weights in the car, but they can get no more weight pay than there is of mail to be carried on the road.

Mr. CAREY. I have no doubt the Senator is very familiar with the interior of the postal cars, as I am, for I have occasionally ridden in them myself, and I think that at least half of the space of the ordinary railway postal car is taken up by the fixtures in the car.

Mr. VILAS. There is no doubt that considerable space is taken up by the fixtures, but the Senator is perfectly aware of the fact that those fixtures are filled with mail, and thus only can the mail be carried. It is the same with all the companies, whether they furnish full post-office cars, or only sufficient space in cars for the mail transported.

Mr. CAREY. But there is an immense amount of mail carried in bulk.

Mr. VILAS. The mail in bulk is in the car also, and there is a particular place for it.

Mr. CAREY. There is an item which has not been alluded to at all by the Senator. In looking up the figures, I find the Government is not to-day paying for the transportation of the route agents, who are carried every day in the post-office cars, the ordinary fare we all pay in riding over the railroads.

Mr. VILAS. I have already spoken to the point of compensation for the route agents. The statute which provides for the compensation by weight, requires the railroad companies to carry these agents as a part of the service to be performed for that compensation.

Mr. CAREY. If the Senator will look at the statute he will find that the Postmaster-General is authorized to allow certain additional compensation on the condition that the railroad companies perform a certain service which is prescribed in the very section which it is proposed to repeal, section 4004 of the Revised Statutes.

Mr. VILAS. That section allows extra compensation for the post-office cars.

Mr. CAREY. That allows compensation in addition to the other. It was intended that the railroad companies should have additional compensation if they would carry a certain style or kind of car.

Mr. VILAS. Precisely. That is just what I am complaining of, that they are allowed the extra compensation when the statute which provides their compensation by weight requires them to furnish the cars.

Mr. PLATT. Before the Senator concludes his argument I should like to call his attention to the fact that twice, if I am not mistaken, we have put in an appropriation bill, and, I suppose at the solicitation of the Postmaster-General, a provision that if a railroad company would not furnish postal cars on the demand of the Postmaster-General, their weight compensation should be reduced 10 per cent. In other words, the Postmaster-General thought it was so essential

to have these railway postal cars that Congress enacted a penalty upon the railroad companies if they did not furnish such cars.

Mr. VILAS. If the Senator had personal experience in the Post-Office Department in dealing with these railroad companies, he would appreciate how very troublesome it is to make all the arrangements necessary for the transportation of the mails all over the United States and on various and different lines of road, aggregating some 175,000 miles in length.

Mr. PLATT. I can imagine what it must be.

Mr. VILAS. The Post-Office Department of the United States employs carriage on as many miles of railway, or very nearly as many—I can not give the exact figures now—as all the rest of the globe beside; and in the management of all those different lines and the disposition of the questions which arise respecting them, the Postmaster-General and his assistant have a severe task put upon their hands. Controversies have arisen, I think induced by the chances offered to rapacity, which led to the enactments referred to.

Mr. McPHERSON. Will the Senator from Wisconsin allow me to ask him a question?

Mr. VILAS. Certainly.

Mr. McPHERSON. Is it not a matter worthy of consideration, that, inasmuch as compensation is allowed by weight, we should take into consideration the question that the postal cars being fitted up, as they are, for the purpose of distributing the mails along the route, afford practically no capacity for more than 5,000 pounds of freight; the car must run over the whole length of the route; and really the compensation received for the transportation will only be upon that portion of the mail weighed and carried. Therefore, it seems to me that the cost of the car and the cost of the maintenance of the car are very small items compared with the hauling of the car with the small amount of mail which it necessarily holds.

The Senator will observe, as no doubt he has observed, that the cars must be very strong and must be very heavy, because no lightly constructed car could be permitted in a rapidly moving train where all the other cars were very heavy and very strong, for, in case of collision or disaster of any kind, such a car would go to pieces. Necessarily the postal cars must conform to the other cars in a rapidly moving train. The boxes and facilities for distribution along the route in a postal car are such that the weight-carrying capacity of a single car is very limited.

I presume the Senator, in his investigation of this matter while Postmaster-General has obtained information which will enable him to give some light upon that subject.

Mr. VILAS. Let me ask the Senator from New Jersey if he does not recognize that every one of the conditions he enumerates attaches to a car in a train with an apartment 30 feet long? A great proportion of the mail transportation of the country, and the mail distribution on cars, is made in apartments in cars varying from ten to thirty feet in length, set apart for the postal clerks. Does not every one of the conditions which he mentions attach to such cars?

Mr. McPHERSON. If the Senator can give me information to satisfy my mind exactly about it, I should be obliged to him. Can the Senator give me the amount of the daily average mail carried, say, between Philadelphia and Chicago, on a postal car?

Mr. VILAS. If the Senator will take the trouble to turn to the table which I will hand him—

Mr. McPHERSON. I did not know but that it was entirely within the recollection of the Senator. I do not ask him to take the trouble to hunt up the information.

Mr. VILAS. I have not the information in mind at this moment.

Mr. McPHERSON. No matter what the weight of mail may be which is carried by each train, by each particular car, supposing it to be 5,000 pounds each day, the car must run, say, from Philadelphia to Chicago. The Senator says that as to the Pennsylvania Railroad Company there were 2,000,000 pounds transported. If, for instance, on the New York Central road the daily outgo of mail was only the small amount of 5,000 pounds, the trip must be made and the car must be run over the entire line.

Mr. VILAS. The Senator perhaps mistakes the rule of compensation. It does not make any difference to the railroad company in respect to its compensation, after the rate has been fixed, whether one pound or a thousand pounds is carried. The weight is fixed by the weighing for 30 continuous days at an average season of the year.

Mr. McPHERSON. I understand that.

Mr. VILAS. And then the average being fixed, the rate is so much per mile per annum.

Mr. McPHERSON. But what I am trying to get at is the amount that is paid the railroad companies per mile upon that mail carriage.

Mr. VILAS. Take 5,000 pounds, and the railroad company would receive \$171 per mile per annum for the entire length of the road. I want to ask the Senator if he does not think that is paying enough?

Mr. McPHERSON. Yes; I think so.

Mr. VILAS. That is the weight compensation I am talking about; the other is this extra, superfluous, and unnecessary compensation, as I think.

Take the case of a railroad drawing a baggage car or an express car

with an apartment for the mail 30 feet long, all these conditions would apply to that; and yet it is not possible for them to have a cent of extra compensation for the car they have furnished. It is only when it is entirely an independent car that it jumps into the privilege of being paid for its use its full cost annually.

Mr. GEORGE. I should like to ask the Senator a question, if he will yield for that purpose.

Mr. VILAS. With pleasure.

Mr. GEORGE. Does the Senator wish to be understood as stating that on the New York Central Railroad the Government pays for the use of its postal cars in one year twice as much as the cost of the postal cars?

Mr. VILAS. Yes. For the use of fifty 60-foot cars, which perform the mail service between New York and Chicago on the line of the New York Central and the Lake Shore and Michigan Southern roads, the Government paid last year \$425,680. Those cars, at an average of \$4,500 apiece—and it would be entirely safe to say they do not cost more than \$4,000 apiece—would amount to \$225,000. That is a little more than half the whole amount. And that was in addition to the payment to the railroad company of \$2,079,741.24 for transporting the mails on that route.

Mr. GEORGE. If the Senator will allow me to ask him another question, is he able to state what is the average business life of one of those cars?

Mr. VILAS. It will last, with proper repairs, from twenty to twenty-five years, unless, of course, misfortune befalls it. I believe there are cars in the service to-day which have been run more than twenty years.

Mr. GEORGE. So that, in fact, if I understand the Senator, we pay annually twice as much for the use of one of those cars as it would cost if we built the car, and it would last twenty or twenty-five years?

Mr. VILAS. I would not assert that the average life of the post-office cars would extend to twenty years. It would be safe to say fifteen years, I think, but upon that subject I am not so surely informed as perhaps other Senators may be.

Mr. ALDRICH. Can the Senator from Wisconsin inform the Senate what are the relative earnings of postal cars and passenger cars upon the railroads of the United States per car per annum?

Mr. VILAS. I am unable to answer the Senator from Rhode Island.

Mr. ALDRICH. It strikes me that it is a very pertinent inquiry. If the Senator undertakes to say the railroad companies are earning too much on postal cars, he should be able to say whether they are earning more or less than they do upon the other cars which are hauled upon the same train.

Mr. VILAS. I can not speak from an absolute knowledge on that subject, but I am very confident that the post-office cars yield a far better return than the other cars owned by the railroad companies, car for car; it must be surely so, when the expense of the car is taken into consideration, for a passenger car costs very much more originally to build and much more to maintain than a postal car.

Mr. ALLISON. Will the Senator from Wisconsin allow me to interrupt him?

Mr. VILAS. Certainly.

Mr. ALLISON. I am induced to make this interruption by the inquiry made by the Senator from Mississippi [Mr. GEORGE] and the answer made to it by the Senator from Wisconsin.

The Senator from Wisconsin argues this case as though we were paying for the rent of cars, which, I think, can not be found as the true rule of compensation derived from the statute. I called the attention of the Senator awhile ago to the fact that this use of postal cars by section 4004 of the Revised Statutes was a part of the compensation and a part of the law. Now, I want to refresh the memory of the Senator from Wisconsin as well as my own by showing that in the original provision of 1873 this compensation for the use of postal cars is blended into, and is a part of, the provision respecting compensation; that it was segregated by the revisers in the Revised Statutes, and that when we come to the original question of compensation, the authority to the Postmaster-General to provide for the use of postal cars is as much a part of the compensation as is the weight of the mail.

In the Statutes at Large—I think this is important, and I shall be glad to have the Senator answer my suggestion in regard to it—on page 558, of the 17th volume, I find that the question of the compensation for carrying the mails is provided for in a single clause of the post-office appropriation act of March 3, 1873, and it was then taken from a bill which had been pending in that Congress to revise the pay and compensation to railway companies. It repealed a statute, to be found on page 316, whereby the Postmaster-General was authorized to enter into contracts for carrying the mail with railway companies without advertising for bids therefor:

The Postmaster-General may allow any railroad company with whom he may contract for the carrying of the United States mail, and who furnish railway post-office cars for the transportation of the mail, such additional compensation beyond that now allowed by law as he may think fit, not exceeding, however, fifty per centum of the said rates.

This law, passed in 1873 and now embraced in the Revised Statutes, is a single provision, taken together, providing the compensation to railways.

Mr. McPHERSON. Will the Senator allow me to ask him a question?

Mr. ALLISON. Yes, sir.

Mr. McPHERSON. Does the revision of the Revised Statutes change the construction of the law as it formerly existed in any sense?

Mr. ALLISON. In no sense, although it is now claimed by the Senator from Wisconsin, and he bases his whole argument upon the fact, that section 4002 provides for the compensation for the transportation of mails, whereas section 4002 provides for no such thing, except in connection with section 4004, sections 4004 and 4002 being a part and parcel of a single provision in the law of 1873.

To show how much it was supposed these postal cars might cost the railway companies, it was provided in 1872, one year before, that the railway companies might have additional compensation, as section 4004 now provides, except that that compensation should not exceed 50 per centum of the total compensation paid to railway companies hitherto. Postal cars were entirely new in 1872. I am sorry to disturb the Senator from Wisconsin so long as I have, but I think that this construction of these statutes together constitutes the gravamen of this whole question; and that if this is one single question of compensation, the argument of the Senator from Wisconsin wholly falls, because he is treating the compensation for these postal cars as simply the rental of a car at so much a year, and that that does not enter into and become a part of the compensation of the railway companies. Therefore, in 1872, it was provided that this compensation should not exceed 50 per centum. The postal car arrangement has grown and grown from 1870 to 1895, and if, as I said the other day, we are to rearrange the compensation for the transportation of mails, it ought to be done upon some careful and full investigation leading up to a just arrangement relative to it, and not be injected into a post-office appropriation bill in the expiring hours of a Congress.

That is my objection to this provision. I make this objection with force and confidence, inasmuch as I find that the able Postmaster-General now administering the postal affairs of this Government, in no report of his, in no letter which he has sent to this body, has found fault with the present compensation of the railway companies, although he has it in his power to take away half or all of this compensation if he believes, as the Senator from Wisconsin believes, that, taken as a whole, their compensation is too much. On the contrary, the Postmaster-General in his report states distinctly that the excess of cost of transportation of the mails arises chiefly if not wholly from the fact that there was included in them printed matter, called second-class matter, which costs the Government annually \$16,000,000.

I wish to impress upon the Senator from Wisconsin, who is the chairman of the Committee on Post-Offices and Post-Roads, that instead of dealing with leather and prunella in the question of the compensation of railways, saving thereby a hundred or two hundred or three hundred thousand dollars, he and his committee and the Senate should deal with a question of much larger proportion, which, as the report of the Postmaster-General shows, results in a cost of \$16,000,000 that ought not to be charged to the Post-Office Department.

I wish the Senator from Wisconsin to show me and to show the Senate that this is a rental of cars and not a part of the compensation that is paid the railways, which I regard as conclusive of the whole question. If it is a part of the compensation, why not deal with the whole question, instead of dealing with this single question as to the use of postal cars? As the Senator has shown here, the New York Central Railroad uses cars 60 feet in length, which are transported at the rate of more than 50 miles an hour from New York City to Chicago.

It can not be said, it seems to me, that the company transporting a car in less than nineteen or twenty hours from that great seaport to the great city on the lakes is to have only as a part of its compensation the rental of so many dollars per mile for the use of the car. It can not be said, it seems to me, that in the original proposition, which provides merely for the weight of mail and the speed of trains, that that only and not this constitutes a part of the compensation for transportation. So I call the attention of the Senator from Wisconsin to these statutes, which were drawn into and became a part of the Revised Statutes afterwards.

Mr. VILAS. The Senator from Iowa [Mr. ALLISON] is making a merely technical point. I think he is wrong now in part in the proposition he makes, not in the detail as he states it but in the substance of it, and I can show it to him from the acts which he has read. The Senator from Iowa will observe that in the act of March 3, 1873, which was the annual post-office appropriation act, there was a provision first, for the rate of compensation which the Postmaster-General might thereafter allow to railroads in general. There was also a provision that—

In case any railroad company now furnishing railway post-office cars—

I ask the Senator's attention to that language.

Mr. ALLISON. I have the statute and am looking at it with the greatest care.

Mr. VILAS—

now furnishing railway post-office cars shall refuse to furnish such cars, such

company shall not be entitled to any increase of compensation under any provision of this act.

It was in the year 1864, if I am not in mistake, that Mr. Armstrong first devised and put into effect the distribution of the mails upon post-office cars.

Then the company furnished the cars and fitted them up for the rates of pay they had been theretofore receiving. The pay fixed by law before for the transportation by railroads had been regularly appropriated, as the Senator from Iowa will see if he will turn to the act of 1872, the next preceding appropriation act, in which it is seen that there was for inland mail transportation \$13,024,763 appropriated. For pay of route agents \$938,005 was appropriated. They were the same as are called postal clerks now, except they did not distribute piece by piece on the cars. For pay of railway post-office clerks \$950,000 was appropriated. They separated the post-office clerks at that time from the route agents. Now all are properly known by the name of railway postal clerks. So the Senator from Iowa will observe that in the year preceding, and if he will follow back the various appropriation acts he will see the same thing, the compensation for the inland mail transportation by railroads was regularly appropriated and compensation was made under the laws previously enacted for that purpose.

Now, it happened that the railroads had furnished post-office cars prior to that time, but there was a refusal growing out of disagreement as to pay for mail carriage on the part of some of the roads to furnish the cars, whereby it became necessary to take some compelling action; and at the same time that action was taken, this provision in superaddition to the laws previously in force was allowed for the use of postal cars.

Mr. ALLISON. The Senator from Wisconsin fails to take into account the section of the statute from which I read, being a statute consolidating the post-office laws, passed in 1872, whereby the Postmaster-General was authorized to pay additional compensation to railroads which hauled or transported mail in railway post-office cars. It was provided, however, that that compensation should not exceed 50 per cent. So when this law was put upon the statute books in 1873 there was a statute which authorized the Postmaster-General to pay 50 per cent. It is true that this clause which the Senator has read does say:

In case any railroad company now furnishing railway post-office cars shall refuse to provide such cars, such company shall not be entitled to any increase of compensation under any provision of this act—

Not under the prior provision, but under any or all of the provisions of that act.

Mr. VILAS. The provision is repealed in that same section.

Mr. ALLISON. This is the act of 1872; I mean the prior provision which the Senator now construes to authorize the compensation of railroads.

Mr. VILAS. It does not seem to me that the point which the Senator from Iowa makes on this subject, granting him to be entirely correct in the history, is at all an answer to what I have been saying. It is the fact still that there is a regular compensation by weight to railroads; that in consequence of the railroads insisting upon extra pay for it, Congress did superadd to the rates of mail compensation by weight this provision for the use of post-office cars. But the one rate by weight is uniform and governs all railroads and pays all. It requires every railroad to furnish cars and to light, heat, and haul them. The difference between the two cases is precisely the same, whether they are in one statute or separated into two. That does not matter; nor does it matter that they were enacted together.

How can the Senator from Iowa say that a railroad company is properly compensated which is required to furnish an apartment 30 feet long, heat, light, keep it in repair, clean it every day, draw it, operate it, carry the clerk, and receive only the weight compensation, when another that is furnishing a car 40 feet long receives \$25 per mile per year in excess?

Mr. ALLISON. My answer to the Senator is that that is what may be regarded as the minimum compensation.

Mr. VILAS. It is the maximum compensation by the law itself.

Mr. ALLISON. That is the compensation. The Postmaster-General is authorized in addition to do that which is provided for in section 4004. If he does not choose to do it he can wholly omit to do it. There is no compulsion upon the Postmaster-General under that statute to pay to any railway the additional compensation provided in it, unless he thinks it is just compensation for the transportation of the mails. That is my answer to it. Therefore section 4004 of the Revised Statutes is as much a part of the law as to the general cost of transportation as is section 4002. That is the point I make, and it seems to me to be perfectly clear.

Mr. CULLOM. Will the Senator from Wisconsin allow me to make a suggestion by reading a provision of the statute? It may be of service to the Senator in his remarks. I find in the act passed in 1879 the following provision:

That hereafter, in making his estimates for railway mail service, the Postmaster-General shall separate the estimate for postal-car service from the general estimates; and in case any increase or diminution of service by postal cars shall be made by him, the reasons therefor shall be given in his annual report next succeeding such increase or diminution.

The Postmaster-General under that provision makes estimates

and separates the payment for postal cars from the cost of carrying mail by weight.

Mr. ALLISON. Prior to that time he did not.

Mr. CULLOM. I think prior to that he did not. Now, the Senator from Wisconsin will find on the next page of this volume another section. I read these sections, if the Senator will allow me, to show what seems to be the folly of the Senate undertaking to fix this matter by statute without investigation. For instance:

That the Postmaster-General shall request all railroad companies transporting the mails to furnish, under seal, such data relating to the operating, receipts, and expenditures of such roads as may, in his judgment, be deemed necessary to enable him to ascertain the cost of mail transportation and the proper compensation to be paid for the same. And he shall, in his annual report to Congress, make such recommendations, founded on the information obtained under this section, as shall, in his opinion, be just and equitable.

I read that for the purpose of giving me an opportunity to say that we are here now trying to change the law affecting all these interests without any report from the Postmaster-General or anyone else as to the merits of the subject.

Mr. VILAS. If the Senator from Illinois had happened to be present at the meeting of the subcommittee which took place during his absence, as was explained by the Senator from Kentucky [Mr. BLACKBURN] yesterday or the day before, he would have heard from the Postmaster-General on this subject.

Mr. CULLOM. I submit to the Senator whether he thinks it is a proper report by the Postmaster-General that he shall come before a subcommittee and give his views upon this subject, not to be taken down, not to be seen by the members of the United States Senate, but simply given to the subcommittee, and they to come in and say that the Postmaster-General is in favor of some provision of this kind?

Mr. VILAS. He came before the subcommittee at the request of the committee.

Mr. CULLOM. I do not wish to be understood as questioning the action of the Postmaster-General. I have just as much faith in that officer as I have in any Cabinet officer or any man who has been at the head of the Post-Office Department, for that matter, for many years past; but I submit that Congress ought to know more about the facts in connection with this matter and the reasons therefor than simply a verbal statement by the Postmaster-General to a subcommittee.

Mr. VILAS. How much is necessary to inform any Senator before he is willing to take anything from these railroad companies I can not undertake to say, but there is absolutely sufficient to satisfy my judgment in the information furnished by the Superintendent of the Railway Mail Service, of which I have already spoken, and in the examination reported to Congress many years ago on this subject.

So far as the point of the Senator from Iowa [Mr. ALLISON] is concerned, I wish to make a further observation.

Mr. HOAR. Before the Senator—

Mr. VILAS. I can not yield just at this moment. I will yield presently. The Senator from Iowa only seems to think that there is a distinction to be taken in this law because the provision for the rent or use of the post-office cars is found in the same appropriation act that made provision for the weight compensation. But, as I said, the addition of compensation for the car service was put upon the law because of the railroad companies refusing to carry the mails. It may be said, too, that at that time it was a new service. Therefore it was tentative, and in a certain sense provisional with the Postmaster-General. It has grown up now; we understand the service very much better; and it is perfectly easy to deal with it in such a way as to save to the United States what belongs fairly to the people to be saved. Now the Senator from Massachusetts wishes to ask a question.

Mr. HOAR. I wish to ask the Senator if he is prepared to affirm and does affirm that there will be no diminution of public convenience, either in the matter of frequency or speed or efficiency of the Railway Mail Service after this passes?

Mr. VILAS. I feel perfectly prepared to affirm that the Postmaster-General would administer the authority given him by Congress, if this amendment were adopted, in such a way as gradually to bring about the necessary change, to effect a great deal better service than we have now; and I am supported in that opinion by the ablest and brightest among the railway postal clerks.

Mr. HOAR. That was not precisely my question. What is a great deal better service is not precisely equivalent. I wish to know whether in the opinion of the Senator there will be no diminution. I have not investigated this matter myself, but I know that the business men without regard to politics, having no sort of interest in any railroad or anything else, solely interested in the promptness, rapidity, and efficiency of the mail service between Boston and the great points in Florida and in Mobile and Savannah, look with great anxiety upon this proposition as a proposition likely to deprive them of what they value very highly indeed, to wit, a very rapid, efficient, punctual, constant, and convenient car service for the purposes of their business. That apprehension is felt along that line and has been felt repeatedly when these attempts to change the existing condition of things have been made. That is the point of this discussion to me.

Mr. VILAS. I should judge that the Senator from Massachusetts was thinking of the amendment which is proposed to withdraw the special facilities appropriation, not the amendment about the postal-car service.

Mr. HOAR. I am speaking of both as belonging to one system.

Mr. VILAS. I am not undertaking to speak for anyone but myself, of course, but I can assure the Senator that I have not the least idea that there would be a particle of interruption of the mail or that there would be the least difficulty in administering this provision. It authorizes the Postmaster-General to exercise his discretion in the manner and the way which the law provides. It does not command an instant revolution. It does not make it necessary to change upon any route until he has made such arrangements as that the change can be effected without the least inconvenience to the public. And I have no idea that there would be the least inconvenience.

The Senator from Iowa made another observation. He spoke of its being unjust to talk about the extra compensation paid for the fifty cars between New York and Chicago, and launched out into some general description of the magnificent mail service between New York and Chicago. The mail service nobody wants to cripple. It ought to be improved and increased in efficiency and value all the time. But what is left to us is to deal with the rate of compensation if we are paying an exorbitant and unnecessary price. Let the Senator figure the cost of what is paid for those fifty cars between New York and Chicago. Under these rates of compensation each one of those fifty cars receives above \$50,000 a year; over \$40,000 a year in weight pay and the rest for the use of the cars, the fifty cars receiving over two and a half millions.

Mr. MCPHERSON. That is on a particular line?

Mr. VILAS. That is the cost of the service between New York and Chicago on the New York Central road. Each car that was owned yielded to that road over \$50,000.

Mr. MCPHERSON. I should like to ask the Senator a question for information. I understand that these cars are run in special trains, four and five cars upon a train, and that they carry no passengers and no freight. In reality it is a special train running at a special rate of speed. I want to know if the compensation for car service were cut off, whether, in the Senator's opinion, these railroads would run the trains at this speed for any less compensation, or whether they could afford to run them for less compensation than they receive?

Mr. VILAS. I think that they both could afford to run for less, and that they would run for less if they were required to do so. It is obvious they will give up nothing without a struggle.

What I complain of in regard to this law of compensation is its gross inequality and injustice. I am pointing out but a single case of one road receiving over \$50,000 per year per car. Does the Senator think that the railroads of the United States would not be willing to run special trains drawing only cars like the postal cars at \$50,000 a car a year, or at \$40,000, or at \$20,000 a year? Of course they would. They would be glad to do it.

But there is a great difference in the various times and in trains. It may even be that the compensation of this special fast train should not be reduced. I am not undertaking to attack any particular train. I am simply saying that if we put in the hands of the Postmaster-General authority to deal with this subject unhampered by law great public benefits may result.

But it is said that this is socialism; that for the United States to own the cars is a piece of business which we ought not to engage in. I shall not now delay to argue that. Let any Senator reflect for a moment upon the way in which the great meat dealers of Chicago, the renderers of cattle, swine, and sheep in Chicago ship their meats in this country. Every one of those great establishments owns its own cars. In every city of the United States, if you look in the yards of the prominent railways, you will find Swift's meat express or Armour's cars. They send them everywhere. They control the trade, in part, by means of their system of cars.

Does any Senator here suppose that they pay the railway companies, which transport vastly more cars for them than even the post-office cars number, if not to the same number of miles, any such extravagant prices for hauling their cars? Not at all. The business could not be conducted in that manner. They have their rates of wheelage. They have certain rules by which cars are paid according to the number of miles they are drawn. At least I am informed that is the method of compensation.

If the United States would take into its own hands the ownership of its cars the Government would be able to make arrangements with the railroads on far better terms, with more profit to the United States, more suitably to the conditions under which business is done, than the business is now carried on, and with better service in every way.

Mr. President, I do not wish to occupy time on this subject. I have already by reason of the numerous interruptions and repetitions of questions spent a great deal more time than I intended. I have desired to call attention to the fact that a change of method would be a great advantage to the public. I do not expect, nobody is sanguine enough, I presume, to suppose that a measure of this

kind can receive acceptance at once. I have only sought to challenge the attention of the Senate, and, if possible, of others, to the very great inequality in the method of compensation, and what seems to me the best way of improving the service. It has been the subject of continual study for twenty years. Nobody has yet devised any successful plan. Something must be wrought out or else we shall continue as in the past to pay vastly excessive rates. Hitherto Congress has been able to do no more than merely to cut off a per cent, and now it is proposed by the committee to cut off 10 per cent of the compensation for railway post-office cars. That ought to be done if no more is to be done; but if that is to be done the appropriation should be reduced by \$325,000—I believe that is the amount—and the Postmaster-General should be directed to reduce the compensation by 10 per cent. That would be something at least for the people in return for the inquiry we have made on this subject.

One further observation and I will not detain the Senate longer. It has been said that this plan is of a socialistic tendency; that it is contrary to the principles of the Constitution; that the United States ought not to own railroads. Mr. President, the United States do not propose to own railroads, nor does the amendment that I suggest intimate that the Government should do anything more in respect to this vast business which it has undertaken to control than any intelligent business man would do with his own in the same circumstances. The United States owns its own mail bags.

The United States has of late years been buying a great many horses and wagons, because in the distribution and collection of mails in the cities it is found to be convenient to own horses and wagons. The United States has recently also come to the business of owning cars, its Fish Commission having purchased some cars for the distribution of fish. Is there any reason why the United States may not as well buy cars for the benefit of its mail service as for any other purpose?

Mr. President, I hope Senators will recognize the fact that the long time I have held the floor in discussion of this matter has not been chargeable wholly to me.

Interstate-Commerce Law.

SPEECH

OF

HON. THOMAS J. GEARY,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 8, 1894.

The House having under consideration the bill (H. R. 7273) to amend an act entitled "An act to regulate commerce," approved February 4, 1887—

Mr. GEARY said:

Mr. SPEAKER: If the purpose of the pending bill to amend the interstate-commerce act was, as represented by those who oppose it on this floor, principally to enlarge the powers and increase the charges of the railway corporations of the country, or to relieve them for their sole benefit from the restrictions placed upon them by the existing interstate-commerce act, I am satisfied that the bill never would have been reported to this House by the Committee on Interstate Commerce. But the experience of the past seven years has taught all who have inquired into the working of that law that, while preventing the creation of monopolies among the railway corporations, it has encouraged and fostered another series of corporate monopolies more injurious in their effects, just as destructive to the rights of the people of the United States as the railway monopolies sought to be prevented by the interstate-commerce law, and it is to prevent the continuance and extension of these newly formed monopolies that all persons who have become conversant with the working of the interstate-commerce law have asked for its amendment, in order that these new powers may be brought under governmental control.

No one can believe for a moment that a man like Mr. Morrison, one of the Interstate Commerce Commissioners, would voluntarily advocate the repeal of the prohibition of pooling unless he found good reasons for it in a desire to promote the public good; yet in his speech delivered before the convention at Philadelphia, and quoted by the gentleman from Florida [Mr. COOPER] in his remarks delivered here some days ago, Mr. Morrison says, "I am in favor of permitting pooling." But Mr. Morrison couples that with the expression of a desire that the control of that pooling shall be intrusted to the Interstate Commission. No member of that Commission has at any time opposed the repeal of that provision in the present law which prohibits pooling by railway corporations.

During the years since that law went into operation it has been discovered that, by reason of secret combinations entered into

between the railroad companies and the great shippers of the land, by which favored rates were given to those shippers, the latter were permitted to rear up great monopolies destructive of the rights of the smaller men seeking to compete with them in their respective lines of business and permitting monopolies to control the necessities essential to the life of the people. The Armour Company, the Standard Oil Company, the sugar trust, and kindred corporations of similar magnitude, doing an enormous business with the railroads, have been permitted to take advantage of their positions, and by conferring all their traffic upon one railway company have obtained better rates than were granted to their humbler neighbors. These rebates were agreed on secretly by the parties and could not be established in prosecutions under the existing law.

Mr. DUNN. Will the gentleman permit a question?

Mr. GEARY. Certainly.

Mr. DUNN. Do you think that the Government of the United States should be made an instrument to compel Mr. Armour to divide his shipments between two or more railroads?

Mr. GEARY. No; but I think the Government of the United States has no right to permit Mr. Armour to obtain advantages over his neighbors by continuing a law which gives him, by reason of his large business, that power.

Mr. DUNN. Well, do you believe that the Government of the United States has a right to interfere in the private business of any man or any corporation—to aggrandize a corporation or an individual at the expense of the public?

Mr. GEARY. Why not leave off the last part of your question and make it more general. Let me ask the gentleman, Do you believe the Government of the United States has any right to interfere with the private affairs of any man or corporation?

Mr. DUNN. No, sir.

Mr. GEARY. Then your logical position would be in favor of repealing the entire interstate-commerce act?

Now, let me recur to an illustration on this question which was given the other day by the gentleman from Iowa [Mr. HENDERSON]. He pointed out to us the fact that by reason of the advantage of transportation rates given by the railway companies large buyers in Chicago are enabled at every point throughout the State of Iowa where a man offers his little lot of cattle for sale to dictate to him such terms that he must either accept them or else withdraw from business, because of the advantage which the larger dealers obtain by reason of their peculiar arrangements with the company over all other shippers along that line. So that the effect of the prohibition of pooling by the roads is not to limit the creation of monopolies but to extend their operations into almost all the walks of life and to affect or regulate the price of everything needed for consumption by the people.

Because of the desire to break up this monopoly, more dangerous and more oppressive than that of the railway, this committee, at the request of boards of trade and chambers of commerce, who have learned by experience that the antipooling clause under the existing law is no benefit to them, has brought in this measure calculated to correct existing defects in the law.

My friend from Tennessee [Mr. COX] has been asking almost every gentleman who has spoken whether the effect of permitting pooling by the railroads is not to raise railroad rates. Why, sir, that is not the effect at all. The matter of rates need have no relationship to the existence of a pooling clause in this bill. The earnings of the companies would be increased, and yet the rate to the public need not be changed. The increased profit to the companies would be in their retaining the large rebates they pay the favored shippers under the present system. Under the operations of this law the railroad companies would be independent of the trusts and could refuse the secret rebate without loss.

Pooling under the provisions of this measure need not advance a single rate upon a single article carried by any of the parties to the pooling contract. The effect of permitting the pool is to establish stability of rates; to make a certain and continuous rate, not a varying rate changing with the whim of every railroad man; a constant rate, applying justly to the business of all people; a rate having such permanency and uniformity as to be recognized by all men as more beneficial at all times than varying rates.

The greatest danger that the prevention of pooling has brought upon the small traders of the land has been by reason of the reckless "cuts" in freight rates precipitated by railroad companies—not for the purpose of benefiting the public, but for the ultimate purpose, as the result of the warfare, of destroying one of the competitors and creating a railway monopoly in its place.

Take the great mass of small traders throughout the land, who make their purchases monthly or quarterly or from season to season, for the supply of the little localities where they do business. These purchases are made upon the standard rates. Suddenly, without notice, a rate war is precipitated; and the price of every article upon the merchant's shelves declines in value because of the reduced cost of transporting such articles to the places

of distribution. Thus the small merchant is placed at the mercy of the larger dealer in his neighborhood, who in laying in a full year's supply of goods can take advantage of the lowered rates and meet his smaller business competitors in an unfair competition by reason of the advantage resulting from reduced railroad rates.

Because of this demoralization extending all over the country, affecting every little trader, the business interests of the land demand that a measure which permits this interruption of rates shall be taken from the statutes. Because of the desire to prevent the recurrence of evils such as I have described the committee has reported this bill. Now, it is said that the effect of this bill is that we do not vest absolute power in the railway commission. It is urged that this entire matter ought to be submitted to their judgment, and that no right of appeal to the ordinary tribunals of the land should be permitted.

Sir, what is there about railroad property that justifies it being branded with outlawry, and its owners denied the same right of appeal to the courts of the country which is conferred upon all other people with reference to all other kinds of property? What is there in the nature of railroad property which justifies an American Congress in saying, "We will create a peculiar and special rule for the litigation of rights affecting such property; we will create a peculiar tribunal for the ascertainment of the measures of relief which may be needed in reference to such property; we will deny in this particular class of cases the ordinary recourse to the courts, which we guarantee to the meanest criminal in the land."

What particular merit can there be in a railroad commission—no matter who may appoint its members, no matter how the commission may be constituted—that we should confer on such a commission practically the attribute of infallibility by withdrawing their judgments or decisions from review by the courts of the land? Some persons talk about this railway commission as though it were some great instrumentality possessing almost the powers of Divinity—unable to do wrong—a tribunal whose judgment should not be challenged or called in question anywhere.

Sir, if you can not trust litigation of railway questions to the Federal courts, the judges of which are appointed by the President of the United States, how can you afford to intrust such questions to another tribunal created by the same instrumentality, open in the matter of their appointment to the same objection, possessing no peculiar fitness usually before the time of their selection for their work? Why, in the one case and with one class of appointees, declare that their decisions must be accepted as infallible, while in the other case we stand here and criticize and denounce? I am not willing to confer on any commission, no matter how constituted, the right to tell any man how he shall use his property and under what rules and regulations he may manage it, and without the right to review that decision lodged somewhere.

But, Mr. Speaker, this bill does not enlarge the jurisdiction of the court at all. This bill in no wise alters the existing jurisdiction of the United States courts in relation to the Interstate Commerce Commission. Under the law as we now have it every rule of that body affecting fares and freight, railroad regulations, and the accommodations that must be offered to the public may be reviewed in the courts, finally reaching the Supreme Court, and receive there the final judgment of approval or condemnation.

This bill confers on the Railroad Commission identically the same powers it now exercises. The pooling contract must be filed with them; they have twenty days in which to examine the merits of the contract and make their decision whether it shall stand as the law or not. If, in the language of the act, the pooling contract is reasonable and just, then the Commission shall approve; but if the contract is unreasonable and unfair, then the Commission may reject it. In all other questions submitted to that Commission and passed on by them the very same test is always applied. If the matter is the regulation of a rate of fare the Commission may pass on its reasonableness, and if the decision is distasteful to the corporation it has the right of appeal to the courts. This in no wise alters, changes, or enlarges the jurisdiction of the Federal courts in the matter of the cases subject to the control of the Railway Commission.

The gentleman from Florida [Mr. COOPER] in his speech the other day laid down a rule which surely can not be true when he said that the courts of the United States, on appeal from the decision of the Commission, in reference to a pooling contract, would have no alternative but to reverse the decision of the Commission. He says they will file with the Commission nothing but the naked agreement constituting the pool, and that the Commission will enter judgment either approving or disapproving such contract, and that on appeal to the Supreme Court that court, with no more record before it than that, would be in duty bound to reverse the judgment of the Commission, if the contract on its face appeared reasonable.

I submit to him and to every other lawyer in this House that

the position can not be correct. If the record as made up by the Commission and forwarded to the circuit court contained nothing but the naked contract that "we, the respective companies, hereby agree to pool on certain divisions all freight for certain points," and then that nothing else went into the record reviewed by the court but the judgment of the Commission that the contract was unreasonable, no appellate court in the land would reverse that judgment with no other or better transcript before it than that, because all of the intendments in the appellate court must be in favor of the regularity of the proceedings in the court below, and all presumption must be that the Board which Congress has intrusted with discretion has wisely, properly, and justly exercised it, and not that they have violated the law.

But before there could be a reversal of judgment by the appellate court there would have to be something else sent up with the transcript explaining its provisions, amplifying its language, and making certain and definite its full meaning and bearing on railroad rates and freights. My friend, Mr. COOPER, seems to be unmindful of the provisions of the existing law and of the sections which we leave untouched in this amendment when he makes the statement that the Interstate Commerce Commission is without power to ascertain what agreement may exist between the railroad companies entering into the pool. Section 12 of the existing law, which is not changed by the provisions of this bill, provides:

SEC. 12. That the Commission hereby created shall have authority to inquire into the management of the business of all common carriers subject to the provisions of this act, and shall keep itself informed as to the manner and method in which the same is conducted, and shall have the right to obtain from such common carriers full and complete information necessary to enable the Commission to perform the duties and carry out the objects for which it was created.

And again, section 6, not changed by this law, provides:

Every common carrier subject to the provisions of this act shall file with the Commission hereinafter provided for copies of its schedules of rates, fares, and charges which have been established and published in compliance with the requirements of this section, and shall promptly notify said Commission of all changes made in the same. Every such common carrier shall also file with said Commission copies of all contracts, agreements, or arrangements with other common carriers in relation to any traffic affected by the provisions of this act to which it may be a party.

Under these two sections of the existing law, contrary to the statement of the gentleman from Florida, when the agreement to divide freight between points is presented, the Commission has authority without any additional legislation to demand that all of the contracts, embracing all of the terms of the agreement, shall be filed with them for their inspection.

They have the right to inform themselves by any means as to what the full effect and bearing of that contract will be upon the interests to be affected by it. There can be no raise in rates on any railroad affected by this pool unless the Interstate Commerce Commission gives its indorsement to the raise of rates. So that the fear that some people entertain that in the passage of this bill we are conferring absolute liberty upon the railroad company to establish whatever rates it pleases, free from inspection or control of the Commission, is entirely unfounded.

Mr. MALLORY. Let me call your attention to this language:

Every such contract, agreement, or arrangement (hereinafter termed contract) shall be in writing and filed with the Commission created by this act, and shall become lawful and enforceable between the parties thereto at the expiration of twenty days from the filing thereof, unless the Commission shall in the meantime, and upon inspection thereof, make an order disapproving the same.

They are limited there to an inspection of the contract.

Mr. GEARY. No; you must take the two sections and construe them together. You must take this amendment and construe it with the existing sections of the law. Section 12 says that in order to perform their duties they must make inquiries as to all the business of the corporation. They must require the filing with them of all contracts of every nature and kind entered into between the railway companies, parties to the pooling arrangements. This language, "by an inspection thereof," does not mean that they are precluded from supplying themselves or advising themselves or being influenced by the information already in their possession, or which they have authority to gather by reason of the other provisions of that bill. Now, as to rates, no rate on any road affected by the pool can be advanced one cent without the approval of the Commission.

There is no power conferred by this act which releases the railway companies in the establishment of rates from the control of the Commission. Further along in that same section of the existing law it is provided:

No advance shall be made in joint rates, fares, and charges, shown by the joint tariff, except after ten days' notice to the Commission, which shall plainly state the changes proposed to be made in the schedule then in force, and the time when the increased fares and charges will go into effect.

Now, when they file their agreement for the pool, if it is con-

templated to then enlarge the rates to be charged for traffic over the pooling roads, they must file simultaneously with that their proposed schedules of rates, that the Commission may inspect and examine them. But before that change, that advance or alteration can be made, the Commission must enter its judgment that the proposed rate is a reasonable and just one, and one that users of that road should pay. Where lies the danger, then, in conferring the right to pool on a railway corporation if we reserve as we do here absolute control over the rates to be charged by the corporations entering into the pooling contract?

I believe that every order of that Commission should be reviewable by the courts of the United States. I am not willing to confer on any tribunal in the first instance final authority to make laws or rules for the control or government of the property of anybody. Men speak of this Commission as something to be held up and regarded as superior to all other kindred tribunals. I do not believe that any man can serve upon the Interstate Commerce Commission for a year or two without becoming so biased against railway companies as to be unfit to sit as a juror in a case affecting their rights. By this act it is made the duty of a Commissioner to become a quasi prosecutor. He must inform himself at all times of their doings. Either on his motion or at the instigation of some other, he is compelled to institute criminal proceedings against a corporation or its employees.

In prosecuting these through the courts of the land he naturally acquires the prejudices of the position that he occupies, and entertains hostile notions against the people against whom his efforts must be at all times directed. No man occupying that position should be made final arbiter of the rights of the railway company over which he is compelled to exercise this kind of control.

But in pooling, more especially than anywhere else, there is another reason for conferring on the courts the right to review the action of the Commission. We permit the pooling contract to be made. Corporations enter into it. The warfare between them ceases. A certainty of reasonable return waits upon the consummation of the pool. Men, relapsing into a state of peace where they have been heretofore in war, expecting the returns of a peaceful prosecution of their business, insured by the continuance of that pool, invest their money in improvements of the road, in the enlargement of its facilities and in better means of accommodating the public who may use it. Other people throughout the land, recognizing the permanency of that investment, during the period of the pool at least, invest their money in this particular kind of property. Suddenly, without notice, sometimes it may be without reason, the Commission, on its own motion, influenced by the whim of someone, orders the pool canceled, and all those investments destroyed or much impaired in value. We are told now, this time in the world's history, that we should permit no right of review in any tribunal to the people who would be damaged and injured by this practical confiscation and destruction of their investments effected by the act of the Commission.

There can come no harm if we permit a review so long as that commission acts in a reasonable, just, and proper manner. I have not lost that confidence in the Federal courts that makes some men seemingly believe they have ceased to be impartial in deciding questions arising between the people and corporations. If I believed what some men seem to believe, that you can not trust the Federal courts to adjudicate between the people and corporations, then I would demand the impeachment of the judges believed to be corrupt rather than denounce the entire judicial system of the United States.

But, Mr. Speaker, because I may be dissatisfied with a decision of the court, because it does not meet my views and agree with my opinion in the case, that gives me no right to question the integrity of every man upon the Federal bench of the United States. I would rather trust the courts as now constituted to arbitrate between man and man, or man and corporation, than a commission created without previous learning or education or without any special fitness for its work.

This bill is not perfect. We do not claim it to be. Neither is the existing law perfect. But after a year of conflict in committee between divergent and hostile views, this bill has been prepared for the purpose of effecting a correction of the evils which had grown up under existing law. Let it go into operation. Let us try the efficacy of this work. Let us by experience learn what, if any, changes should be made, as we had to learn in the case of the existing law. Then, if experience demonstrates the incorrectness of the law, let us make a new correction. I think, in the interest of the consumers all over the land, in the interest of every small trader who is compelled to use the railroad system for the transportation of the goods he buys, in the interest of that stability which is essential to the life of trade in order to maintain a fair and reasonable rate, securing a fair return to all, this bill ought to pass in the form in which it came from the committee.

Protection to American Industries.

"In hoc signo vinces."

SPEECH

OF

HON. CHARLES H. GROSVENOR,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. GROSVENOR said:

Mr. CHAIRMAN: It has occurred to me to state a few of the reasons very briefly why I can not support the pending measure, and I do it with a good deal of reluctance, in view of the fact that there is such a loud clamor throughout the country at this time that something shall be done to protect the solvency of the Treasury Department and to uphold the credit of the Government. Appeals are being made to us every day from sources of the highest respectability, imploring us to abandon all party and partisan considerations and to vote for the Administration measure upon the theory, which somehow or other is abroad in the land, that Mr. Cleveland has announced a policy that is better than nothing.

The fallacy of such a proposition is best appreciated in the light of the fact that Mr. Cleveland, if we are to charge him up with the responsibility of the various bills which have come before Congress, and the various propositions in the form of amendments thereto which have emanated from the Committee on Banking and Currency, has changed his mind often and radically, even since the first proposition was brought here.

The original Carlisle measure has not to-day one advocate or apologist; not even the distinguished Secretary of the Treasury himself. Through all the modifications and mutations which have presented themselves here uncertainty and utter lack of consecutive ideas has been manifested from first to last.

It is not, therefore, very strange that the representatives of the people, with some knowledge of these matters, some consecutive opinions of their own, have hesitated to readjust themselves to every gyrations of opinion which is manifested to us in the Executive suggestions. But I want to make a further suggestion: Who assailed the credit of this Government first?

Who spread far and wide the idea that our currency system was fatally defective? During the campaign which resulted in the overthrow of the Democratic majority in this House there was no question of currency discussed anywhere. Our Populistic friends may have talked about free silver and unlimited greenback issues, and all that; but there was no important consideration given to any question of the currency. We had been getting along well enough for a third of a century under this system of ours. It had never failed in an emergency. The repeal of the purchasing clause of the Sherman Act was only a concession by the Republicans to the fad of the Administration.

The people of the country were warned that the repeal of that law could benefit nobody, could change nothing, would have not the slightest effect upon the business of the country. I have never doubted that the Administration called the Fifty-third Congress together and submitted the question of the repeal of the Sherman Act for the deliberate purpose of avoiding the effect of the overwhelming victory of 1893. It could not have been believed by Mr. Cleveland or anybody else that the repeal of the Sherman Act would bring prosperity, for it had not been the enactment of the Sherman law that caused the disaster, and everybody knew it who had intelligence enough to read and write.

So, when the repeal of the Sherman Act utterly failed of any such effect the next movement was, on the reassembling of the Fifty-third Congress in December last, to turn aside the eyes of the people of the country from the overthrow of the Democratic party at the election and fix the eyes of the country upon what was denominated "currency reform." From that day to this every possible effort has been made by the Democratic party in Congress, in the press, and through the commercial bodies of the country to impress upon the people of the country that there was something terribly wrong with our currency.

Mr. Speaker, I do not believe that there is. I denounce the statement. It has not any truth behind it. There is nothing wrong with our currency, and certain amendments to the national bank-

ing law, which can be written on a single sheet of note paper, and enacted into law, would cure the whole trouble.

But you are met here now by a simple proposition which has been offered as a substitute by the gentleman from Maine, Mr. REED, which embodies, in my judgment, a complete and perfect remedy for all the ills which you claim exist. The only trouble existing to-day in the matter of our Treasury is caused by a paucity of revenue and a plethora of lack of confidence; and that lack of confidence is all due—absolutely all due—to the assaults made by the Administration itself upon the integrity of the country.

Erase from the history of the past few months the bulletins from the White House and the scattering, desultory, and contradictory statements from the Treasury Department, and there would be no lack of confidence. It is all done as a shield to the Democratic party for the future. You propose to fight the battles of the future upon the same question of currency and coinage, and you do it for the purpose of evading the only issue that is a live and practical one. And you can not make that battle, for you can not get together on any proposition. It is idle for you to talk about a national contest upon currency reform. You will have to reform yourselves first, and your reformation is an impossibility.

But there is one thing that you are agreed about. You are agreed that in arranging the battle of 1896 for the Republican party you will demand that there shall be eliminated all reference to the tariff question. You met the Republican party within a year on that question, and you do not want to see them any more. And so the shibboleth of your battle, the battle cry upon which you expect to rally your hosts, and incidentally the hosts of the Republican party, is "McKinleyism is dead."

A gentleman of spontaneous notoriety in the Democratic party, after having voted to retain the McKinley law upon the statute books, after having voted and filibustered for days and weeks against the repeal of the McKinley law, and after having voted for its retention on the statute books, went into a little contest in which the tariff question figured high above all other questions. And he, with a degree of versatility which falters in the face of no emergency, adjusted himself to the Gorman-Wilson enactment, and without explaining why he voted to retain the McKinley law on the statute books proceeded to excoriate the McKinley law as the fruitful source of all our troubles. He burned incense at the altar of anti-McKinleyism and pro-Wilsonism. He humiliated himself to an extent that old Nebuchadnezzar would have repudiated him as beneath his dignity. Referring to his own record in the support of the McKinley law in opposition to the Gorman bill, he placed his hand upon his mouth and his mouth in the dust; and in describing himself he cried out to the New York voters, "Unclean! Unclean!" "Oh, be merciful to me, a sinner!"

He came out of the controversy most utterly and overwhelmingly and indescribably repudiated. No man living in all the past of American politics ever had administered to him such a fall as was there, my countrymen. But he emerged from the wreck and ruin, and after inhaling the Southern breezes amid the pine forests of Florida for a few weeks he opened his mouth and shouted, "McKinleyism is dead;" and he has kept it up ever since.

A few nights ago, in the city of New York, in a great speech which he had prepared with infinite pains and signal ability, he declared that, whatever else occurred and whatever else was taught by the past, and whatever else could be depended on in the future, McKinleyism is dead. And so come Tray, Blanche, and Sweetheart from all directions, shouting "McKinleyism is dead." "We went to war," say the Democrats, "with McKinleyism, and we had a fair fight. We put up the beauties of the Gorman-Wilson bill in opposition to the McKinley law. We tried the experiment of comparison, and we got the worst of it. One hundred majority in the last House was transformed to 145 on the other side. The Senate changed hands like a kaleidoscope; but we still say and shout that 'McKinleyism is dead.'"

The parrot which had emerged from the contest with the monkey merely gave vent to his feelings by the declaration, "We have had a h—l of a time." But our Democratic friends have improved upon that. They say, "Here we are; 105 of us, where heretofore there were 214. But we killed the thing which killed us. 'The snake it was which died.'"

And so it appears, Mr. Speaker, that the catastrophe to the Democratic party which occurred in the election of 1894 has operated only imperfectly to teach that party wisdom and forbearance; but there is wonderful skill and enormous ingenuity in the make-up of the Democratic party. There is no other party in the United States now, nor was there ever a party, that could outlive the overwhelming rebuke of 1894 excepting only the Democratic party.

It has qualities of evasion and adroitness in discounting defeat and turning aside rebuke that no other political party in this country ever had before; nor do I think a party will ever exist in the future which will be the equal in this regard of the Democratic party of to-day. It was great wisdom and great shrewdness in the Democratic party when overthrown in November last

to attempt to get some sort of foundation out of the wreck to stand upon. If it admitted the inevitable logic of the disaster and did not succeed in turning aside that logic it was forever and inevitably overthrown; and so the highest art of the Democratic party has been brought to bear to readjust the issues and to explain away the results of 1894.

It was remarkable that the audacity of the Democratic party should have dared to suggest the expedient to which they have resorted. The very strength of the effort lies in the unqualified audacity thereof. Overwhelmed from ocean to ocean upon an issue of their own choosing, an issue about which there could be no question, the Democratic party of the country has turned around and declared that the whole contest in the United States is about something else, and they say (and that is the declaration of the party now from one end of the country to the other): "We have been overwhelmingly defeated; we can not deny that. A majority of nearly 100 in the House of Representatives has been suddenly transformed in a single election to a majority of more than 140 the other way; but the result is a repudiation of the McKinley law. We went to battle upon an issue which we ourselves made, and we were swept as no other political party in the whole history of American politics was ever swept before; but our enemies were defeated at the same time and on the same question."

Let us state this question now fairly: The Republican party in the Fifty-first Congress passed the McKinley law. It passed it in pursuance of the platform of 1888, the solemn declaration of the Republican party. The language of that platform is in the words following, to wit:

We are uncompromisingly in favor of the American system of protection; we protest against its destruction as proposed by the President and his party. They serve the interests of Europe; we will support the interests of America. We accept the issue, and confidently appeal to the people for their judgment. The protective system must be maintained. Its abandonment has always been followed by general disaster to all interests except those of the usurer and the sheriff. We denounce the Mills bill as destructive to the general business, the labor, and the farming interests of the country, and we heartily indorse the consistent and patriotic action of the Republican representatives in Congress in opposing its passage.

We condemn the proposition of the Democratic party to place wool on the free list, and we insist that the duties thereon shall be adjusted and maintained so as to furnish full and adequate protection to that industry.

There was nobody who misunderstood that platform. There was not any other issue in the campaign of 1888 than this that amounted to a serious matter of consideration. Political orators discussed other questions as ornamental features of their speeches. They ornamented and decorated their oratorical effusions with discussions of other questions. But the real question, as everybody knows, was the question of the tariff, and the issue was fought out upon this platform, and there was nobody who stood more enthusiastically upon this platform than did the Hon. Benjamin Harrison, of Indiana. He was the candidate of the Republican party, and he shouted in favor of this platform. He did not modify it; he did not explain it away; he did not agologize for it; and the victory was won in November on it, and the party in the Fifty-first Congress followed it—followed the dictates of the party declaration at Chicago.

Nobody said in that Congress that we were going beyond Republican principles and Republican declarations. The House of Representatives passed the bill on the 21st of May, 1890; the Committee on Ways and Means had been made by Hon. THOMAS B. REED of Maine, the Speaker of the House of Representatives, than whom there is not a clearer, more intelligent, or more thoroughly competent exponent of Republican principles living. He never made any declaration of opposition to the McKinley law, and from that day to this has never dissented from the action of the Republican party in that Congress. The members of that committee were selected by him, and they represented the best elements of the Republican party of the United States of America.

They were not organized upon factional lines or sectional lines. They were out and out Republicans, clear-headed and intelligent; and they submitted their work to the House of Representatives, and it was indorsed; and after a long study in the Senate, with such men as ALLISON and SHERMAN and ALDRICH and others, it was passed in the Senate, and the amendments of the Senate were concurred in by the House, and it became the work not of McKinley, not of REED, not of ALDRICH, not of ALLISON, but the work of the Republican party of the United States of America. There was not a clear-headed, intelligent Republican in the United States who was not in favor of the McKinley bill of 1890 as it passed both branches of Congress.

The men who to-day go talking about having told you so are talking in the air. There were differences of opinion during the progress of the construction and passage of the bill. There was one important difference of opinion growing out of the third section of the bill. One wing of the party, one set of gentlemen, believed that the reciprocity clause ought to be framed upon the provision that there should be free trade in the commodities of the reciprocating countries, and that the President should be au-

thorized, in the line of treaties, or the refusal of reciprocal concessions, to attach duties to the products of those countries. There was a grave doubt of the constitutionality of this procedure. The other wing of the party or the other division of sentiment advocated the provision that was put into the third section, that the duty should be put on and remitted under reciprocal arrangements by proclamation of the President. It was a simple question of whether the President should be authorized by law to levy and assess duties, or whether he should be simply authorized to remit duties already levied by Congress.

The law went into effect. It is not necessary now to discuss whether or not the vote of 1890 and the vote of 1892 were intelligent, wise, and thoroughly considered expressions of the sentiment of the American people. It is enough for my purpose to show that there was no disclaimer. Point, my Democratic friend, to the time and place when and where a leader of the Republican party in the United States, in the contest of 1890 or in the contest of 1892, ever once said that the McKinley bill was not in accord with Republican sentiment in the United States. There may have been here and there a newspaper that said it; for we have an occasional great organ in remote States which is free trade and revenue tariff and all sorts of tariff for eleven months in the year and which then wabbles around and supports the Republican idea of protection one month in the year.

But tell me where a convention of a Republican State in the United States, in the great contest of 1890 or of 1892, apologized for the McKinley law. Mr. Harrison, the candidate of the Republican party in that unfortunate year, did not hesitate to indorse the McKinley law without qualification; and Mr. Blaine, who is so often quoted by the Democrats now that he is dead, now that they can no longer abuse him and traduce him, and crucify him politically, and charge him with every species of outrage that can be framed into the English language, indorsed the McKinley law in the enthusiastic language of that magnetic and magnificent leader as no man else ever did indorse the McKinley law.

That is where we stood, Mr. Speaker, when the campaign of 1892 broke upon us. We stood like brave men standing by the right, standing by principle, standing as a rock in the ocean, defying everybody, defying criticism, defying the Democratic party without and critics within, if there had been any, but there was none.

The campaign of 1892 was fought upon the following platform of principles announced at Minneapolis by the unanimous report of the committee on platform and by the unanimous indorsement of that mighty convention:

We reaffirm the American doctrine of protection. We call attention to its growth abroad. We maintain that the prosperous condition of our country is largely due to the wise revenue legislation of the last Republican Congress. We believe that all articles which can not be produced in the United States, except luxuries, should be admitted free of duty, and that on all imports coming into competition with the products of American labor there should be levied duties equal to the difference between wages abroad and at home.

We assert that the prices of manufactured articles of general consumption have been reduced under the operations of the tariff act of 1890.

We denounce the efforts of the Democratic majority of the House of Representatives to destroy our tariff laws piecemeal, as manifested by their attacks upon wool, lead, and lead ores, the chief product of a number of States, and we ask the people for their judgment thereon.

We point to the success of the Republican policy of reciprocity under which our export trade has vastly increased, and new and enlarged markets have been opened for the products of our farms and workshops. We remind the people of the bitter opposition of the Democratic party to this practical business measure, and claim that, executed by a Republican Administration, our present laws will eventually give us control of the trade of the world.

It will be seen by an analysis of this tariff plank that not only was the general principle of protection indorsed without qualification, but the great convention at Minneapolis pointed with pride to the operation of the McKinley law, both as to its effect upon manufactures and its effect upon wages, and in an especial manner its effect upon our export trade. Not only so, but it assailed the Democratic party for its criticism of the schedules of the McKinley law:

We denounce the efforts of the Democratic majority of the House of Representatives to destroy our tariff laws by piecemeal, as manifested by their attacks upon wool, lead, and lead ores, the chief products of a number of States; and we ask the people for their judgment thereon.

There was not any mistake about that. We stood by the whole McKinley Act—more than it is necessary to do now.

Mr. Speaker, I warn my Democratic brethren that post-bellum declarations will not avail them anything. It is not worth while for the I-told-you-so fellows to go around now and talk about what they have always believed and always understood. They never believed anything but that the McKinley bill was right, and they never understood anything but that that was the party declaration; and they never said anything, and the man does not live who protested; the man does not live who, in 1890 or 1892, occupying a prominent and distinguished position in the Republican party, said, "There are some things in the McKinley law that I do not exactly indorse."

Of course there were matters of detail that we differed about; there is always that. Of course we were not unanimous upon the

schedules when the bill passed Congress; that is impossible to contemplate or imagine. Nothing of the kind ever happened in the history of tariff legislation. But upon the great principle of protection I stand here to say to my Democratic friends, you are fighting a straw man of your own creation. There was no Republican who opposed the McKinley law upon principle. Now and then one in the House of Representatives or the Senate fluttered and blustered and for reasons of his own may have made some declamations, may have made some orations, may have dealt in oratory, but they all voted and they all stood in and they all indorsed and they were all together.

Then what followed? Two defeats. That of 1890 came too soon upon us, without any opportunity to defend. Every measure of this character must have its day, its full day, its long day, its elaborate day, in the court of public opinion, and this one did not have its day. It was enacted in the early days of October and the vote was cast in November; and the tricks and misrepresentation and the misunderstandings of our people were something absolutely amazing. And then 1892; and, as our great champion and distinguished leader has well said in the North American Review, the Democratic party in the campaign of 1892 got the benefit of its bad character.

It had a reputation and character in the United States for not telling the truth, for making representations before the election that they did not carry out after the election, and so when it declared in favor of substantial free trade nobody believed it; did not believe there was any danger that they would do it, and so they won. They won on their bad character; they won on the reputation they had for telling untruths; they got the ear of the public and carried the public with them upon the assumption that they would not tell the truth and did not tell the truth, and would not do what they said they would do. And then came the election of 1892 and the signal defeat to the Republican party, and then what?

Then came a most remarkable result. It was not forty-eight hours from the time Mr. Cleveland was elected until this disaster, which has now swept like a simoon over the country and laid fortunes low and beggared hundreds of thousands of men and made millions of men and women and children hungry and drove them to despair and desperation, had begun to come. The great steel works in Pennsylvania cut its wages 10 per cent within forty-eight hours of the election of Cleveland. They did not give the Democratic party the benefit of its bad character. The managers of that institution believed the Democratic party would tell the truth; they believed that they were going to do exactly what they said they were going to do, and from that day to this disaster has swept over this country.

It is not worth while to discuss this question. It is not worth while to spend breath, Mr. Speaker. Printers' ink is worth something; white paper is worth something; time is worth something. There is no use to discuss the question of what has devastated the interests of the country. On the day that Grover Cleveland was elected in 1892 there was not an unemployed man in the United States who wanted to work, and they were all working at fair wages. There was not an unemployed coal miner; there was not an unemployed operative of a manufacturing industry; there was not an idle man upon the farms; there was not an idle man in the shops of the United States; they were all working—not working for very high wages, but fair remuneration. The trouble came. What caused it?

Why, Mr. Speaker, that is a matter *res adjudicata*. We went to the country in 1894 and asked the country to say what caused it. The Democratic party came here into Congress, passed the Wilson bill in the House and the Gorman-Brice bill in the Senate, the one absolutely destructive of all the industries of the country, fraught with indescribable and irresistible ruin to every industrial institution on the continent; the other a modification with, as it has been said, protection in spots, protection to certain industries, protection to sugar, protection to rice, some protection to coal and iron, protection here and protection there, free trade here and ruin there. The people of the country had a long twelve-months session of this Congress, which began on the 7th day of August, before they voted. The submission was intelligent, the submission was without qualification. The submission was a submission that everybody understood.

We went into the election of 1894 condemning the Democratic party for its course on the tariff question. We went into the campaign of that year charging that the hard times of 1893 and 1894 were the result of the declaration of the Democratic party that it would repeal and destroy protection in this country. That was the only issue. Who made any other issue? Tell me when it was and where it was that upon any considerable scope of country anybody on behalf of the Republican party made any other issue than that. Where was it, when was it, who was it, what did he say? We assailed the Democratic party for its record in the Fifty-third Congress. We assailed it for the destruction of the McKinley law; not for the destruction of its schedules; not because it

had repealed the tariff on clothes or hosiery; not that. But because it had aimed a blow at the great principle of protection to American industry; because it had refused to maintain the barriers which the Republican party had erected between the labor of foreign countries and the labor of this country.

That was what it was; that was the issue, and it was not any other issue. Now, what did we win on, my Democratic friends? What did we win on in this battle from which you emerged shouting that McKinleyism was dead? We won on the public opinion as to which was right, the McKinley law of 1890, or the Wilson-Gorman law of 1894. That is what we won on, that is what we went to battle about.

Why, Mr. Speaker, is there any other issue that can sweep this country like a simoon from San Francisco to Calais? There were controversies in Colorado about free silver, there were controversies in the new States all along the line about free silver, there was a difference of opinion between Republicans in Indiana and Nebraska and Iowa and New York and New England, but upon the issues of the campaign of 1894 they all voted together.

The first gun of the campaign was in Oregon, a State more or less in favor of and largely tending toward free silver. That was the first gun of the battle. It resounded from ocean to ocean, and its echoes were met and the reverberation was sent backward across the continent and over the mountain tops from Vermont and Maine; and the same unparalleled results piled up mountain high, and those grand men who helped to frame the committee and frame the McKinley bill, and who supported it without qualification upon the floor of Congress, were sent back to the Fifty-fourth Congress by unparalleled majorities. And then what happened? Why, the election came and it was like a simoon; it was like a cyclone and it was everywhere; it uprooted everything; it tore down everything; it spoke in tones of thunder from the Atlantic to the Pacific. Every other issue was swept out of the way. Colorado came piling up its magnificent majority side by side with Massachusetts and Connecticut, New Jersey and West Virginia, Tennessee and Kentucky, Missouri and Nebraska—all of them—all alike.

There came over the telegraph wires on ante-election dates to the press of the country that Minnesota was wavering, that Wisconsin was in doubt, that Michigan was uncertain and Iowa was in peril, and districts of Ohio and districts of Indiana were in doubt; but when the result came every Representative from Michigan, every Representative from Wisconsin, the solid vote of Iowa, the solid vote of Indiana, almost the solid vote of Illinois, only two lacking in Ohio, practically the solid vote of Pennsylvania, all of New Jersey, all of Connecticut, all of Rhode Island, all of Massachusetts but one, all of New York but five—all Republicans, all standing upon the platform, the single great, controlling, overpowering plank, which was Republican protection to American industry.

That was the battle, Mr. Speaker. What is the use of a Democrat coming here upon the floor of Congress and talking about McKinleyism being dead? Dead! Dead in the embodiment of 245 Republican Representatives to stand upon this floor in the next Congress, all elected upon the platform of Republican protection; all elected without a protest against a single schedule of the McKinley bill. Who thought about schedules, who talked in the campaign of 1894 about the tariff upon clothes and the rate upon calico? Who spoke anywhere about the rates of the McKinley law as compared with the rates of the schedules of the Wilson bill? Who talked about it? Nobody charged with any duty, nobody authorized by any political party or any political organization. The whole burden of our campaign was that the Democratic party is seeking to overthrow just and adequate protection to American industry. We are for that principle; they are against it. That was the shibboleth, and in *hoc signo vinces!*

The talk about changing the issue upon which the Republicans are to fight the battle of 1896, and deserting protection, comes from two sources only. The Democratic leaders want it to a man. They realize that it was the tariff which defeated them both this year and last, and that will inevitably defeat them again. They are anxious for the change which some alleged Republican organs are foolish enough to suggest.

If they can only induce the Republicans to fight the campaign of 1896 on the money question, if there is any such question at issue between the two great parties, or on any other issue except the tariff, they might stand some chance of winning. They have no hope whatever of carrying the country on the tariff.

The other class who talk about the necessity of a new issue are the few Republicans who, in the excess of their eagerness for some particular Presidential candidate, fear his chances for a nomination will not be improved by giving too great prominence to the idea of protection to our home industries—one of the great fundamental principles of the Republican party. They do not want the protective idea prominent because they see that with the tariff as the issue their favorite candidate for the Presidency might not be uppermost. I can not see what the gentlemen who talk about

conservative protection mean. Protection is either protection which protects or it is no protection at all. You can not qualify, modify, or amend it. This is the simple logic of the matter as understood by the plain people everywhere.

What is conservative protection? Do they mean by that the Gorman-Brice-Wilson law which the country repudiated so overwhelmingly at the recent election? Surely that law might be classed as conservative protection, as I understand the term, when it does protect at all. If we are to accept that then we must stand on the defensive, for we will be compelled to fight the campaign of 1896 on the ground which the Democrats have chosen and already occupy. If we are not to accept that law as conservative protection, then will some member of Congress kindly express in a bill introduced at the present session of Congress or the next exactly what is meant, and give the whole country a sample of this particular kind of protection.

It seems to me that the men who talk about the impracticability of making a national campaign on the protection issue have not read political history well or properly comprehended its most important lessons. They ignore the fact that the law of 1890 was the most just and reasonable tariff law ever enacted by any party at any period since the organization of the Government and was happily adjusted to the conditions then existing. It enforced the principle of protection more vigorously and fully than ever before, and was repeatedly indorsed by Republican conventions as the best embodiment of the protective principle ever put on our statute books.

It will be remembered that Mr. Blaine at first complained that the bill did not recognize and enforce the doctrine of reciprocity, but it should also be recalled in that direction that he subsequently declared in a letter to Mr. Joseph H. Manley, of his State, in 1892, that "the wisdom of the McKinley tariff had been amply vindicated by experience." He declared that it was found to have worked admirably, and that within the last year it had produced a greater volume of business, internal and external, export and import, than the United States ever transacted before.

Notwithstanding the character and extent of the opposition to it—said Mr. Blaine—

agriculture is remunerative, manufactures are prosperous, and commerce more flourishing than at any previous time, thus vindicating the McKinley tariff by an impressive and undeniable series of facts.

Thus it will be seen that the men who so glibly condemn the law of 1890 now forget the great gain in trade it brought to us. It not only sustained the protective principle most effectively, but at the same time it gave to this country the largest foreign trade and the largest free list of noncompeting foreign products it has ever known. What more do these gentlemen want? Does any true Republican claim that the McKinley law, so called, did not embody Republican principle, or sentiment, as expressed at the last Republican national convention previous to its enactment, or that it was not applicable to the times when enacted? The men who now declare Republican protection extreme, and who loudly proclaim that the party must take a middle course, whatever makeshift that may signify, are the same men who talked that way in 1890, 1891, 1892, 1893, and again this year. If the great doctrine of protection should point to one Republican leader more than another, that is indeed a poor reason for abandoning the principle so close to the hearts of the American people, upon which it is everywhere conceded that we won our unprecedented victories in November.

The Republican national convention in 1896 will fix the platform of the party. Wise men will not hasten to anticipate its action or usurp its functions. It is well to observe that platforms are not made to fit the candidate, but the candidate is chosen to fit the platform. The Republican party will not furl its victorious banners, and the Presidential candidate of the party will not be taken from that small class of Republicans who favor compromising one of the great principles of its party creed. There has been no interview in the public prints for a long time which impressed the Republicans of the country more favorably than the recent expression of Congressman BOUTELLE of Maine. To my mind he has done the party a great service in stating its position on the tariff so clearly and forcibly.

I can not better occupy space on this matter than to publish the interview of the distinguished, able, and experienced gentleman in full:

CONGRESSMAN BOUTELLE'S TIMELY PROTEST.

I have no patience—

Continued Mr. BOUTELLE—

with any Republicans who permit themselves to be made catspaws by the Democratic and Mugwump newspapers that are laboring to belittle and break the force of the great protection victory of 1891 by intimations that the Republican party has in some way weakened or retrograded from its former stand upon the tariff question. It is an old trick of the Democracy to invent a phrase or catchword which they seek to make odious by iteration, and then use it as a bugaboo with which to scare timid and feather-brained Republicans. "Bleeding Kansas," "bloody shirt," and "force bill" are examples, and just now, after the awful thrashing administered by the people, they are

desperately shouting against "McKinleyism," and claiming that it shared in their defeat.

The transparent trick is to ask some unsuspicious Republican whether our party "will reenact the McKinley law," and if he answers that future conditions may indicate some possible change of rate in some item of some schedule the Democratic paper instantly reports said Republican as having declared that "McKinleyism is dead," and that the party will never think of restoring it. Of course the obvious purpose is to get the impression abroad that the Republicans have repented of or repudiated the tariff legislation of 1890 as too pronounced in the line of protection, and that the result of the recent elections has caused the Republicans to become conservative as to the importance of preserving our home markets and encouraging our own industries.

The falsehood of this pretense is shown by every fact of the recent campaign. Never before in political history was there a contest in which the main issue was made so overshadowing or its triumph so pronounced as in the elections of this year, when the principles of protection to American industry received the most overwhelming indorsement ever given by the American people; and it was not only a victory for the principle, but a complete triumph for the system of Republican protection enacted in 1890 as against the assault made upon it by the Wilson-Brice-Gorman monstrosity enacted by the Democrats.

The attempt to impart a prejudice against the tariff legislation of 1890 by characterizing it as "McKinleyism" and representing it as something indefensible is an insult to the Republican Congress that gave to the country two years ago what was incomparably the wisest, most thoroughly systematized, most carefully considered, and most beneficial tariff legislation ever framed. It represented not simply McKinleyism, but Aldrichism, Reedism, and Republicanism. None of the leaders of the Republican party were then anxious to assign to the distinguished chairman of the Committee on Ways and Means all the responsibility for all the glory of that great achievement of legislation in the most difficult of all fields. It was recognized with its splendidly beneficent features, and its unavoidable but minor imperfections, as the work upon which the Republican party would appeal for the support of the people; and, while misrepresentation defeated us at the elections held before its effects were apparent, the voters of the United States had this year, with unparalleled emphasis, denounced the warfare made upon it, and commanded a return to the principles and systems that gave the United States in 1892 the highest degree of prosperity ever attained by any people.

The battle was fought squarely on the issue between the fruits of the Republican legislation of 1890 and the paralysis and disaster that followed the Democratic tariff-smashing assault upon that legislation. The result of the battle, from Maine to Iowa, from Connecticut to the new States and Territories of the far West, has been so emphatic a verdict in favor of protection that no political party will ever dare to put a free-trade plank in its platform, or ask the people to open the American market for the products of the cheap labor of foreign lands.

Instead of retreating, the great army of protection has advanced its standards and lifted them higher than ever before. The demand for the preservation of the American market for the products of our own industry, and for such protection as will guarantee to American workmen the greatest practicable diversification of employments, and the highest possible wages consistent with the general welfare of the whole people, has been uttered at the polls this year in stentorian tones, and any man or set of men in any party who disregard or seek to misinterpret that mandate will fail to muster a corporal's guard of supporters among the intelligent and patriotic citizens who form the future hope and safeguard of the Republic.

In conclusion, Mr. Chairman, the defeat of the Republican party in 1890 and 1892 has been over and over again successfully explained, and it has been demonstrated to the satisfaction of every intelligent man as follows:

First. The McKinley law operated as an enormous impetus to the growth, prosperity, and profitability of the manufacturing industries of the country. It enlarged the scope, it increased the profit, it brought enormous sums of money to this country, and gave a grand forward impetus to our industrial system.

Second. It increased wages in many of the branches of labor. It lowered wages in none. It gave employment to all the labor of the United States, and made profitable the investments of United States capital.

Third. It caused a magnificent increase in our foreign trade, opened up through the reciprocity features alone a great scope of country in which we had had no traffic, and gave us a profitable trade—all of which has been cut off by the repeal of the McKinley law.

Fourth. It did not enhance the cost of living to the American laborer or the American citizen, and on the contrary, at the close of the operations of the McKinley law, the commodities that enter into the life of the family, and the support of the laborer and those dependent on him were lower than ever before in the United States.

So that it had operated to benefit all classes of people in the United States, and was rapidly promoting our foreign commerce to an extent almost unheard of.

Fifth. The repeal of the McKinley law and the substitution of the Wilson-Gorman law produced uncertainty and stagnation first, ruin and devastation afterwards. It turned hundreds of thousands of American laborers entirely out of employment. It caused a reduction of wages of many others. It cut off our foreign trade, and limited us to supply the wants of our own people. The repeal of reciprocity closed the avenues of profitable commerce to our merchants abroad. It brought distress and finally hunger. It brought dismay and finally despair. And, in conclusion, the course of wisdom, the path of common sense, are plainly before the people of the United States. The situation calls loudly upon us to retrace our steps, and by an intelligent tariff law, framed upon the conditions as they shall exist when the legislation is enacted, restore a system of protective tariff, and in so doing restore prosperity to the people of the United States.

The Currency.

SPEECH

OF

HON. WILLIAM ARTHUR M'KEIGHAN,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) authorizing the Secretary of the Treasury to issue bonds to maintain the gold reserve, and to redeem and retire United States notes, and for other purposes—

Mr. M'KEIGHAN said:

Mr. CHAIRMAN: The proposition to retire the greenback currency and the silver Treasury notes and to substitute interest-bearing bonds in their stead is the proposition now under consideration by this body. The provision contained in the bill that no legal tenders shall be retired until a like amount of national-bank bills have been issued in their stead is well calculated to deceive some of the members of this House, as well as a goodly number of the people of the country. I desire to call attention to the fact that there is nothing in this bill to prevent the national banks from retiring their currency to any extent they see fit, as soon as they have accomplished their purpose, viz, the retirement and cancellation of about \$500,000,000 of the best paper money that the people of this country have ever had in use.

I do not care to call in question the motives of the advocates of this measure, but with them I desire to take flat and emphatic issue. A short time ago on the floor of this House I called attention to the so-called credit-strengthening act of 1869; to the act of 1870, known as the funding act; to the act of 1873 dropping the coinage of the silver dollar, and to the repeal of the purchase clause of the Sherman Act at a time when the people of the country were driven by the whip and spur of the Administration. I have listened with patient attention to the arguments presented on this floor in favor of so-called "honest money" and for the payment of our national obligations in what they choose to call "best money."

I listened with careful attention to my friend from Pennsylvania [Mr. BROSIUS] in his defense of the act of 1869, the plighting of the faith of the nation to the payment of all the obligations of the Government in coin. When I asked the gentleman the question if it were not true that the then existing obligations of the Government that were payable in lawful money were not negotiated at a higher rate of interest because they were so payable he frankly admitted that they were.

Here, then, is the position of the gentleman from Pennsylvania, as I understand him. That after the Government had met the holders of these bonds and at the higgling of the market had sold its bonds, payable in lawful money, and bearing 7.3 per cent interest, to compensate the holders thereof for said payment in lawful money, that it was then the duty of the Government in the name of the national faith and national honor, to pay the said 7.30 bonds in coin. I do not agree with the gentleman from Pennsylvania in this position, for if it is correct every soldier and sailor who served in the Army and Navy should receive full compensation for the difference in the price of coin and paper at the date of every payment made to the Army and Navy. And I do not remember hearing this proposition made by any of the advocates of so-called "honest money."

I am not able to bring myself to believe that the rights of the bond-holding classes or those who live on fixed incomes should be more sacred than the rights of those who furnish the Government supplies or those who have risked their lives in the weary camps or on the trampled plains of war. The gentleman from Pennsylvania may be able to justify his position if he considers only the former class. But, Mr. Chairman, if he calmly considers all that is involved in this proposition, if he considers the equities in all the time contracts that he now seeks to make payable in the dearest money known to the civilized world, or if he would pause long enough to reflect on the present deplorable condition of the great mass of our people who must toil or starve, I feel that his remarks would be less ornate and that they would contain more staple.

The Supreme Court of the United States, in one of the legal-tender decisions, has said "the obligation of a contract to pay money is an obligation not to pay specifically defined money, but to pay that that the law recognizes as money when the payment is to be made." I have not the time at my disposal to point out the follies of past financial legislation at any length, and will content myself by calling the attention of my Republican friends on this floor to the fact that it has been the fixed policy of the Repub-

lican party ever since 1860 to legislate for organized wealth, and in my judgment against the interests of the great mass of our people.

It is my conviction that the present Secretary of the Treasury never would have dared to issue bonds, never would have dared to propose the retirement of the legal tenders had he not been urged on by wealthy investors who by reason of past triumphs have become bold and arrogant. For more than thirty years they have thronged the halls of the House and Senate. They have raised the hypocritical cry of national honor, national faith, national credit, and "honest money."

With these deceitful words on their lips, and in their hearts the miser's greed for gold, they have paused not to consider, and they do not now pause to consider the rights and interests of the great mass of the people whose families sit around a hearth of dying embers with the gaunt wolf of hunger snarling at the door. Their representatives on this floor to-day tell us that this is a business question, and they tell us of the resolutions passed by banking associations and chambers of commerce. It is, indeed, a business question, and it should be dealt with by the agents of the American people with the same honesty and fidelity that we would expect from the agents of private firms and individuals.

The bill as it is reported from the committee has arraigned as a criminal, before this body, the money which saved the life of the nation at a time when gold had been hid away by men whose only idea of patriotism was a business idea. While thousands marched to death as to a banquet, these patriotic capitalists stayed at home and speculated out of the nation's disaster. The men who held this so-called "best money" did not propose to let the Government or the people have the use of it without paying an enormous premium.

They robbed the Government and the people then and called it business; they are doing the same thing now and they call it business. The difference between the proposition that comes to us from the Committee on Banking and Currency and the one offered as a substitute by the gentleman from Maine [Mr. REED] is simply this: That the President boldly and plainly recommended the retirement of all the legal-tender and silver Treasury notes issued under the provisions of the Sherman law and the substitution of interest-bearing bonds in their stead. The committee, acting on the suggestions offered by the President, have reported this bill, which arraigns as a criminal before this House and the country the people's money.

It is now on trial, and if the committee can succeed in passing this bill this form of currency will be condemned and executed. The gentleman from Maine proposes to gather from the hard earnings of the people enough of money to create a surplus in the Treasury, so that when the legal tenders are presented for redemption they are to be locked in the vaults of the Treasury as prisoners. The bill of the committee would destroy this currency, while the substitute proposed by the gentleman from Maine would prevent its circulation among the people and leave the national banks the opportunity to supply all the paper money of the country.

It is time that we pause here and consider the inconsistency of the men who are to-day advocating on this floor the destruction of the only money that is redeemable in coin, much less gold coin. When the gentleman from Massachusetts [Mr. WALKER] proposes to pass a law to compel the national banks to redeem their bills in coin, their advocates on this floor are strenuous in their opposition to it.

Suppose that this bill were to become a law and the legal tenders and silver Treasury notes were retired and canceled. Our condition would then be this: Having discredited silver, stopped its coinage, thus making gold the money of final redemption, the people would not have a dollar of legal-tender money with which to pay their debts without buying gold from those who hold it. This is the plan urged upon this Congress by men who profess to believe in a redeemable currency. Their idea of a redeemable currency seems to be to destroy the redeemable currency of the country and to substitute the bills of national banks in its stead. "Consistency, thou art a jewel."

Those who advocate a single gold standard and the retirement of the legal tenders are all the time warning us of the danger of a gold premium. I call the attention of this House to the fact that those who live on fixed incomes have in the past and are now enjoying the benefits of a gold premium in the increased purchasing power of their money; while the consequent low prices of commodities have paralyzed the productive industries of the country. The banks of this country hold in their vaults at the present time \$200,000,000 in gold. A gold premium of even 5 per cent would bring into their coffers a handsome profit in dollars that they have never earned. If their position on this question were correct I would be free to admit that the Treasury Department was in a very grave situation, but their position is not a correct one.

There is no legal or moral obligation on the part of the Government to redeem the silver Treasury notes in gold. Every dollar of legal tender or silver Treasury notes presented at the Treasury

Department are redeemable in either gold or silver coin at the option of the Government. There never was any law passed by Congress providing for their redemption in gold coin. It is true that it has been the policy of the Treasury Department to redeem all its obligations in gold. This has encouraged the advocates of monometallism to make these raids on the Treasury in order to force the issue of bonds. The Secretary of the Treasury may redeem the Government obligations in either gold or silver coin at his option, and if that option were used to protect the Treasury and the people of this country the raid on the Treasury would cease at once.

The advocates of this measure tell us that they propose to borrow a large amount of this gold abroad. Do they not know that the English people hold enough of our securities, and can put enough of them on sale in our own market to take from us all the gold that we would borrow and all that we have at present besides the product of our gold mines for years to come. The only escape from the perils that now threaten our people is for the Secretary of the Treasury to obey the law as it is, not only in letter but in spirit, and for Congress to undo the unwise legislation of the past by restoring silver to the position which it had occupied for all the years before 1873. We have heard much during this discussion about the policy of the Government. I insist that it is the duty of the Treasury Department, as well as of this Administration, to execute the law as they find it.

Congress, representing the people, is the only body authorized to declare the policy of the Government, and no President of the United States or Secretary of the Treasury should be allowed to pursue any policy that would nullify the laws of this country. A few words with regard to the predictions made by the advocates of a single gold standard at the beginning of the extra session of the Fifty-third Congress. Just before the extra session certain parties conspired to make a run on the gold reserve. Their object was evidently the repeal of the purchase clause of the Sherman law. They were then presenting the silver Treasury notes and demanding gold in order to create the impression in the public mind that the coinage of silver must be stopped.

Gentlemen on this floor well remember that the whip and spur of the Administration was used to procure the said repeal. Many honest men were led to believe that as soon as the purchase clause of the Sherman law was repealed that some legislation friendly to silver would be enacted. They have had a rude awakening and discover that these same parties are now raiding the Treasury with legal tenders in order to force their retirement. All the promises that prosperity would come with the repeal of the Sherman law have failed of fulfillment. The country has gone from bad to worse. The value of gold has gone higher and higher, while the value of property has sunk lower and lower. Notwithstanding these facts their advocates on this floor are here with a fresh crop of promises for a fresh crop of fools.

I am glad that the money power have at last thrown off the mask and declared their purpose. This question has been forced to the front and must be settled and settled right before prosperity will come to our people. Before it is settled there must and will be a new alignment of parties. The two great parties of the country are hopelessly divided among themselves, and I predict that the next national campaign will be one in which the great mass of our people will demand some remedial legislation and enforce their demands at the ballot box.

The centralizing tendency of organized wealth threatens the subversion of the Government. Political leaders actuated by the sole desire to seize and hold the emoluments of office crowd themselves into national conventions and make platforms for the sole purpose of deceiving the people, and having gained power they basely surrender to the greed of the creditor class and forget the great mass of the common people, whose patriotism established and preserved the Government and whose skill and industry have made us great among the nations of the earth.

Perhaps for the last time on this floor I again appeal to you of the majority and you of the minority to consider the present condition of the industrial interests of this country. Listen to the murmur of discontent that comes up from every State from the ranks of those who earn their bread in the sweat of their brow. If we wish this Government to continue to lead the world in the onward march we must zealously guard and protect the rights of the humblest citizen as well as those of the foreign and domestic creditor. This is my conception of the duty of this body; aye, it is my idea of national honor.

The present Congress is rapidly drawing to a close, soon it will have passed into the history of the country, and I would that in these parting hours the members of this body could rise above the passions and prejudices of party and, actuated by true patriotism, rescue the country from its present perilous position.

This Congress has had a great opportunity to bring the sunlight of prosperity and happiness to tens of thousands of homes that now rest under the shadow of debts that they can never hope to discharge if the policy of monometallism is to be continued. I

am not vain enough to believe that I am different from many others on this floor in that I love this country. My ambition is to make it stronger and better. If we expect the great mass of the American people to support, protect, and defend the Government, the Government must protect them in all their rights.

If we continue to legislate for the few and against the many the people will turn their backs on a Government that has turned its back on them. The masses of the American people stand to-day, as they have always stood, ready and willing to make any and all sacrifices, ready and willing to meet and bear all necessary hardships. Yes, ready and willing to do and dare and die in defense of a Government whose laws are just and justly administered. But, Mr. Chairman, we can not afford to close our eyes to the fact that among the great mass of idle men the feeling of discontent is being intensified. Thousands of men ready and willing to work are being fed by charity. The growing need for charitable institutions is apparent on every hand.

Reverse the present financial policy, give the American people justice, and there will be less need for charity. If we fail to do this, the nation that is to-day the light of the world may end its light in darkness and bloodshed. Surely every patriotic heart will respond to the call of duty in the fulfillment of the sacred obligations that we owe to those who sent us here. This can only be done by the enactment of laws giving to all our people the chance to earn a full recompense for honest toil.

It has been the ambition of my life to live and see the time when just and righteous laws would rule, and when millions would be spent to enlighten the world where millions are now spent for swords, bayonets, cannon, and battle ships to kill and destroy thousands of God's creatures in order that a favored few may wear the mantle of wealth and ride roughshod over the rights of the many. Let us build more schools and fewer forts. Let us lead the world in that grand policy inaugurated by Him who taught us that we are "our brother's keeper." This policy will make us a prosperous and happy people. It is the only true path to national greatness. Shall we abandon this great highway of national honor, national prosperity, and national greatness for the one pointed out to us by those who seek to—

Reap where they have not sown
And gather where they have not strewn?

The Gold Bond Contract.

'Twill be recorded for a precedent,
And many an error, by the same example,
Will rush into the State. It can not be.
[The Merchant of Venice.]

SPEECH

OF

HON. WILLIAM J. BRYAN,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895.

The House having under consideration the joint resolution (H. Res. 273) authorizing the issue of \$65,116,275 of gold 3 per cent bonds—

Mr. BRYAN said:

Mr. SPEAKER: This resolution embodies two purposes. It proposes to ratify the contract made by the Executive by authorizing the substitution of gold bonds to the amount of \$65,116,275, bearing interest at a rate not exceeding 3 per cent, and payable not more than thirty years after date, in accordance with the request made in the President's message, and it also provides that greenbacks and Treasury notes redeemed with the gold purchased with these bonds shall not be reissued.

I desire to call the attention of the House to the fact that the latter provision is intended to lock up in the Treasury \$65,000,000 of legal-tender paper without making any provision whatever to supply the place of that currency. If we vote for this proposition, we vote to retire that much money without filling the void.

Mr. WARNER. Will the gentleman allow me to ask him a question?

Mr. BRYAN. I hope I shall not be interrupted.

Mr. WARNER. Does not the gold fill the void? [Cries of "No!"]

Mr. BRYAN. Mr. Speaker, the House knows that when I have time I never object to questions, and it is only because of my limited time to-day that I ask gentlemen not to interrupt me. In answer to the question, however, I would say that unless the greenbacks and Treasury notes are reissued they will accumulate and a few more bond issues will retire all of them and deprive the country of that much of its circulating medium. For all practical purposes it is equivalent to a cancellation of this money and will offer a constant temptation to those who oppose greenbacks to draw out the

gold and force further issues of bonds for the purpose of getting this kind of money out of the way.

But the main question presented by this resolution is whether we shall ratify the contract made by the Executive and issue gold bonds in order to save about a half million a year in interest. The supporters of this resolution urge us to consider it as a business proposition and I shall discuss it as a business proposition. One gentleman has suggested that Democrats ought not to criticize the Administration. I want it understood that, so far as I am concerned, when I took the oath of office as a member of Congress, there was no mental reservation that I would not speak out against an outrage committed against my constituents, even when committed by the President of the United States. [Loud applause.]

The President of the United States is only a man. We intrust the administration of government to men, and when we do so, we know that they are liable to err. When men are in public office we expect them to make mistakes—even so exalted an official as the President is liable to make mistakes. And if the President does make a mistake, what should Congress do? Ought it to blindly approve his mistake, or do we owe it to the people of the United States, and even to the President himself, to correct the mistake so that it will not be made again? But some gentlemen say that the Democratic party should stand by the President. What has he done for the party since the last election to earn its gratitude? I want to suggest to my Democratic friends that the party owes no great debt of gratitude to its President. What gratitude should we feel? The gratitude which a confiding ward feels toward his guardian without bond who has squandered a rich estate. What gratitude should we feel? The gratitude which a passenger feels toward the trainman who has opened a switch and precipitated a wreck. What has he done for the party? He has attempted to inoculate it with Republican virus, and blood poisoning has set in. [Laughter and applause.]

What is the duty of the Democratic party? If it still loves its President, it is its duty, as I understand it, to prove that it has at least one attribute of divinity left by chastening him whom it loveth. [Laughter and applause.]

Mr. Speaker, I do not intend to question the motives of the officials who are responsible for this contract. We might criticize the conduct of the President in excluding all other advisers and consulting only with the magnates of Wall street; and we might even suggest that he could no more expect to escape unharmed from such associations than one could expect to escape asphyxiation if he locked himself up in a room and turned on the gas—but without questioning the motive of the President, I say, we have a right to express our judgment as to whether the discretion vested in the President has been wisely exercised. We are told that this is not only a business proposition but a very insignificant question—just a little matter of saving half a million a year, that is all.

Mr. Speaker, I desire to ask these gentlemen who are always coming here with these "business propositions," why it is that no advocate of the gold standard dares to stand before the American people and unfold the full plan of the gold conspiracy. Why is it that our opponents keep bringing up one proposition at a time and saying, "An emergency is upon us; let us adopt this proposition at once and leave the final settlement of the money question until some other time?" Why is it that we never reach a time when these gentlemen are willing to consider the greatest of all the questions which are demanding settlement at the hands of the American people? Save \$16,000,000 in thirty years? Why, sirs, this is a bigger question than \$16,000,000.

Will you set a price upon human life? Will you weigh in the balance the misery of the people? What is the value of civilization to the human race—because the settlement of this "little question" may enormously affect the welfare of mankind. [Applause.] And yet, gentlemen talk about its being a matter of small consequence, a little question, the mere saving of half a million dollars a year. Save the people \$16,000,000 in thirty years—twenty-five cents apiece—by this resolution and \$16,000,000,000 will not measure the damage which may result to them in a third of that time.

What is this contract? I am glad that it has been made public. It is a contract made by the Executive of a great nation with the representatives of foreign money lenders. It is a contract made with men who are desirous of changing the financial policy of this country. They recognize by their actions that the United States has the right to pay coin obligations in either gold or silver and they come to us with the insolent proposition, "we will give you \$16,000,000, paying a proportionate amount each year, if the United States will change its financial policy to suit us." Never before has such a bribe been offered to our people by a foreign syndicate, and we ought to so act that such a bribe will never be offered again. By this contract we not only negotiate with foreigners for a change in our financial policy but give them an option on future loans. They are to have the option on all bonds which may be issued before the first of next October.

What would be the effect of such a condition? Do you suppose that anybody else will care to bid when it is known that these men have the refusal of all bonds at any price? It makes a popular loan impossible. If these men alone bid for the next issue they can

insist upon a condition that they shall have an option on a still further issue of bonds. Shall we bind ourselves to these men perpetually? I shall not raise the question, because I am not prepared to discuss it from a legal standpoint, whether the President has a right to sell an option on bonds which may be hereafter issued, but, sirs, I will say that, if he has the right, I believe he has made an inexcusable use of the discretion vested in him. We can not afford to put ourselves in the hands of the Rothschilds, who hold mortgages on most of the thrones of Europe.

The press dispatches stated that the French steamer, *La Gascogne*, when she came into port a few days ago, had three red lanterns on her foremast, signifying: "Get out of the way, I can not control my course." The President may be persuaded that this country has reached a point where it can not control its own course and must supplicate foreign financiers to protect our treasury, but he mistakes the sentiment of the American people if he thinks that they share with him in this alarm. The United States is able to take care of itself. It can preserve its credit and protect its people without purchasing at a high price the "financial influence" or the "legitimate efforts" of banking corporations, foreign or domestic.

I call attention also to the fact that these bonds may be made payable in thirty years. The contract does not call for thirty-year bonds; it says that "any bonds of the United States," payable in gold, and drawing 3 per cent interest, may be substituted in the place of the coin bonds. But there seems to be a fear that the bond buyers may insist that the spirit of the contract would compel the issue of thirty-year bonds. In describing this contract, Mr. Speaker, I find in "The Merchant of Venice" language more expressive than any I can command. That language fits the contract which we are asked to ratify, and is as follows:

SHYLOCK.

This kindness will I show:
Go with me to a notary, seal me there
Your single bond, and, in a merry sport,
If you repay me not on such a day,
In such a place, such sum or sums as are
Express'd in the condition, let the forfeit
Be nominated for an equal pound
Of your fair flesh, to be cut off and taken
In what part of your body pleaseth me.

ANTONIO. Yes, Shylock, I will seal unto this bond.

Mr. BOWEN. Who wrote that; Shakespeare or Bacon? [Laughter.]

Mr. BRYAN. I shall leave Mr. Donnelly and Mr. Ingersoll to settle the question of authorship. But, Mr. Speaker, it was decided that Shylock's bond, while it called for a pound of flesh, did not include any blood. The difference between the construction placed upon that bond and the construction which this House is asked to place upon the contract before us is, that we are asked to make the construction so liberal as to include the blood with the flesh. We have a right, according to the terms of the contract, to substitute a short-time bond, and yet the resolution permits the Secretary to issue a thirty-year bond.

This House is not prepared to give its sanction to a policy which contemplates a permanent public debt, but the rule adopted allows no opportunity for an amendment limiting the bonds to five or ten years. If we give the Secretary of the Treasury authority to issue a thirty-year bond, he is powerless to resist the demands of the bond purchasers, because the contract is made; ten days only are given for the exercise of the option; he can not negotiate with anybody else; he can not offer bonds to anybody else; he is in their hands; he must make a thirty-year bond if they ask it—and who doubts that they will ask it?

There is another objection to this contract. It provides for the private sale of coin bonds, running thirty years, at \$1.04½ which ought to be worth \$1.19 in the open market, and which could have been sold at public auction for \$1.15 without the least effort.

Why this sacrifice of the interest of the United States? The Government's credit was not in danger; the bonds of the United States were selling in the market every day at a regular premium. The same kind of bonds, having only twelve years to run, were selling at over \$1.12. What excuse was there for selling a thirty-year bond for \$1.04½? What defense can be made for this gift of something like seven millions and a half dollars to the bond syndicate? We are told that we can avoid the sale of coin bonds at \$1.04½ by authorizing 3 per cent gold bonds. What a privilege! Why, it is less than three months since ten-year coin bonds were sold by the President at a premium which reduced the rate of interest to less than 3 per cent.

Has the credit of the country fallen so much in three months that a thirty-year 3 per cent gold bond is worth less now than a ten-year 3 per cent coin bond was then? Nothing has occurred within three months, except the President's messages, to injure the credit of the country. If the President is correct in assuming that the financial world places a higher estimate upon gold bonds than upon coin bonds, why did he not secure a higher price for gold bonds? Did not purchasers know three months ago that coin bonds could be paid in silver? They certainly did, and yet they were willing to loan money on those bonds for a short time at a lower

rate of interest than Messrs. Morgan and Rothschild now offer to loan on long-time gold bonds.

But why are gold bonds demanded? Gentlemen say that all our bonds are in fact payable in gold now. They either are payable in gold or they are not. If they are, then this legislation is not needed; if they are not, then the proposed legislation is a radical and violent change of policy. We insist that outstanding bonds are payable in gold or silver and that the United States has the right to choose the coin. The men who contracted for coin bonds understood this, and insisted upon a higher rate of interest on the ground that they might be paid in silver. By what authority, then, does the President declare in his message: "Of course there should never be a doubt in any quarter as to the redemption in gold of the bonds of the Government which are made payable in coin." Is he not aware of the fact that the debtor always has the choice of the coin, where only coin is mentioned? Is he not aware of the adoption of the Matthews resolution in 1878? That resolution expressly declared the right of the Government to pay its bonds in either gold or silver. The resolution reads as follows:

That all the bonds of the United States issued or authorized to be issued under the said act of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coin as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditors.

That policy has never been changed by law, but the resolution before us makes a departure from the settled policy of the Government and provides for a bond payable specifically in gold. Do members realize the influence which would be exerted upon the public generally by the adoption of this resolution? The gentleman from Florida [Mr. COOPER] told us that his city recently issued gold bonds and we know that pressure is being brought to bear on other cities and on individuals to induce them to enter into gold contracts. If the Government discredits silver by making these bonds payable in gold only, it will set an example which will go far toward compelling all borrowers to promise payment in gold. As gold contracts increase in number the demand for gold will increase.

What a farce for men to talk about maintaining the parity between the metals by means of legislation which directly tends to destroy the parity and drive gold to a premium! The legislation proposed will either pledge the Government to redeem all bonds in gold or it will discredit bonds already in existence. The probability is that the adoption of this resolution would be followed immediately by a demand from the holders of other bonds that they be put upon the same gold footing. I say probably; I may say that such a course is certain. No sooner had the President asked for authority to issue gold bonds than his faithful lieutenant in the Senate, Mr. Hill, offered a resolution pledging the Government to redeem all bonds in gold if gold goes to a premium. This remarkable resolution reads as follows:

Resolved (If the House of Representatives concur), That it is the sense of Congress that the true policy of the Government requires that its efforts should be steadily directed to the establishment of a safe system of bimetalism, wherein gold and silver may be maintained at a parity, and every dollar coined may be the equal in value and power of every other dollar coined or issued by the United States; but if our efforts to establish or maintain such bimetalism shall not be wholly successful, and if for any reason our silver coin shall not hereafter be at parity with gold coin and the equal thereof in value and power in the market and in the payment of debts, then it is hereby declared that the bonds of the United States now or hereafter issued which by their terms are payable in coin, shall nevertheless, be paid in standard gold dollars, it being the policy of the United States that its creditors shall at all times be paid in the best money in use.

This would not only pledge the Government to the payment of previous issues in gold but would relieve the recent purchasers from the loss which they guarded against by an extortionate interest and yet leave them to enjoy the fruits of their extortion. Thus does one vicious proposition tread upon the heels of another. Mr. Hill's plan is even worse than the President's, for under the plan of the latter, the bondholder would bear whatever loss might arise if gold should happen to fall below silver, but Mr. Hill's plan burdens the Government with all the risk and guarantees to the bondholder all the chance of gain. Not only is Mr. Hill's plan directly antagonistic to the principle of bimetalism, but it offers a reward to the creditor if he can destroy the parity between the metals, whereas the creditor is interested in maintaining the parity when the option lies with the Government.

It is alarming to note the aggressiveness of the creditor classes, and humiliating to think that Congress should be asked to comply with their wishes regardless of consequences. The first effect of this movement in the direction of gold contracts would be to reduce the amount of our primary money and to build our entire credit system upon a narrow base of gold. Think of making an indebtedness, public and private, of \$13,000,000,000, payable in gold, with only \$600,000,000 of gold in the country, and that an estimate!

The Government estimate of gold coin in the United States on the 1st of January, 1895, was about \$600,000,000, and of that sum only about \$214,000,000 was visible. About \$100,000,000 was in the Treasury of the United States, and \$114,000,000 was held by national banks. Beyond that, no one knows the whereabouts of any large amount of this gold. We know that no large amount of gold is in circulation among the people, or in hiding, and yet, with only \$214,000,000 of visible gold, the United States is expected to conduct

a safe business on a gold basis. To make the attempt is to invite a panic—nay, more, it is to guarantee disaster.

And yet, Mr. Speaker, if the immediate effect is bad, the ultimate effect of the proposed policy is infinitely worse. Every act of legislation discriminating against silver gives an impetus to the movement in favor of a gold standard and makes the restoration of bimetalism more difficult. No one act could, in my judgment, do more to obstruct the reestablishment of free bimetallic coinage as it existed prior to 1873 than the act which the President is attempting to force upon Congress. Are the gentlemen who are urging it deceived as to its purpose and necessary effect when they speak of it as an insignificant matter, or do they presume upon the credulity of their hearers? Believing that it is a long step in the direction of universal gold monometallism, and believing that universal gold monometallism would bring to this country continuous and increasing financial distress beyond the power of language to exaggerate, we protest against the passage of this resolution. If we love our country and are interested in its welfare, no sacrifice on our part should be too great, if necessary to prevent the adoption of such a policy by this, the foremost nation upon the earth.

While the question immediately before us is whether we shall authorize the issue of gold bonds, I ask you to consider for a moment whether we need to issue bonds of any kind. Bonds have been issued to replenish the gold reserve, and the gold reserve has been drawn out because the holders of greenbacks and Treasury notes have been allowed to designate the coin of redemption. In other words, the option which belongs to the Government has been surrendered to the holders of the notes, and this has been done, not by legislative enactment, but by an administrative policy. If the withdrawal of gold could be stopped no bonds would be necessary. It becomes important, therefore, to know whether the Government has a legal right to protect itself from gold grabbing by redeeming greenbacks and Treasury notes in silver when silver is more convenient. On the 21st of January, 1895, Secretary Carlisle made a statement before the House Committee on Appropriations, and I quote the following question and answer from a printed report of his testimony:

MR. SIBLEY. I would like to ask you (perhaps not entirely connected with the matter under discussion) what objection there could be to having the option of redeeming either in silver or gold lie with the Treasury instead of the note holder? SECRETARY CARLISLE. If that policy had been adopted at the beginning of resumption—and I am not saying this for the purpose of criticizing the action of any of my predecessors, or anybody else—but if the policy of reserving to the Government, at the beginning of resumption, the option of redeeming in gold or silver all its paper presented, I believe it would have worked beneficially, and there would have been no trouble growing out of it, but the Secretaries of the Treasury from the beginning of resumption have pursued a policy of redeeming in gold or silver, at the option of the holder of the paper, and if any Secretary had afterwards attempted to change that policy and force silver upon a man who wanted gold, or gold upon a man who wanted silver, and especially if he had made that attempt at such a critical period as we have had in the last two years, my judgment is, it would have been very disastrous. There is a vast difference between establishing a policy at the beginning, and reversing a policy after it has been long established, and, especially, after the situation has been changed.

This is sufficient proof that the Secretary of the Treasury has the legal right to redeem greenbacks and Treasury notes in silver, but is restrained by the fear that, a different precedent having been established, an exercise of the legal right at this time would be "very disastrous."

Senator Sherman in March, 1878, in testimony given before a Senate committee, also recognized the right of the Government to redeem greenbacks with silver. I quote from his testimony:

SENATOR BAYARD. You speak of resumption upon a bimetallic basis being easier. Do you make that proposition irrespective of the readjustment of the relative values of the two metals as we have declared them?

SENATOR SHERMAN. I think so. Our more right to pay in silver would deter a great many people from presenting notes for redemption who would readily do so if they could get the lighter and more portable coin in exchange. Besides gold coin can be exported, while silver coin could not be exported, because its market value is less than its coin value.

SENATOR BAYARD. By the 1st of July next or the 1st of January next you have eighteen or twenty millions of silver dollars which are in circulation and payable for duties, and how long do you suppose this short supply of silver and your control of it by your coinage will keep it equivalent to gold—when one is worth 10 cents less than the other?

SENATOR SHERMAN. Just so long as it can be used for anything that gold is used for. It will be worth in this country the par of gold until it becomes so abundant and bulky that people will become tired of carrying it about; but in our country that can be avoided by depositing it for coin certificates.

No law has ever been passed surrendering the Government's right to redeem in silver; and it is as valuable now as it was just after the passage of the Bland law of 1876, which restored silver as a part of our standard money. The testimony above quoted was given by Senator Sherman, then Secretary of the Treasury, soon after the passage of the Bland act and before the resumption of specie payment.

Now, notwithstanding the fact that the Government has a legal right to redeem in silver and thus protect the people from the gold hoarders and gold exporters, the President continues to pay in gold even when gold must be purchased by an issue of bonds, and we can not authorize the issue of any bonds for the purpose of buying gold, without indorsing the policy which permits the drain of gold and thus gives an excuse for a bond issue. So far, the surrender to the note holder of the right to designate the coin of payment is purely an act of the Executive and has never received legislative approval.

If it is said that the President will issue bonds anyhow and that

we ought, therefore, to authorize a bond drawing a lower rate of interest, I reply that until we can restrain the President from further increasing our bonded indebtedness and compel him to protect the Government by redeeming in silver when that is more convenient, we can better afford to allow him to bear the responsibility alone than, by approving his course, pledge the Government to a continuation of his policy. If the Secretary thinks that it would now be disastrous to depart from a precedent established by a former Secretary of the Treasury, how much more difficult it would be to change the policy after once indorsing it by an act of Congress.

So long as the note holder has the option, bonds may be issued over and over again without avail. Gold will be withdrawn either directly or indirectly for the purpose of buying bonds, and an issue of bonds compelled again, whenever bond buyers have a surplus of money awaiting investment. This experiment has been tried, but, instead of convincing the President of the futility of bond issues, it has simply led him to try a new experiment. By purchasing gold in Europe he may enlarge the circle around which the gold must pass, but he will not change the operation or protect the Government. The only remedy is the restoration of the bimetallic principle and the exercise of the option to redeem greenbacks and Treasury notes in silver whenever silver is more convenient, or whenever such a course is necessary to prevent a run upon the Treasury. To delay the remedy is to prolong our embarrassment; to authorize bonds of any kind is to rivet upon the country the policy which has brought our present troubles upon us; to authorize bonds payable specifically in gold is to invite new difficulties and to establish a still more dangerous precedent.

I am glad to hear some of our Republican friends denounce this gold-bond proposition, but are they not in effect condemning a Republican policy? The gold bond is the legitimate result of the policy inaugurated and continued by Republican administrations. It was a Republican administration which first surrendered to the note holder the option to demand gold in redemption of greenbacks and Treasury notes, and it was rumored that President Harrison was preparing to issue bonds to buy gold just before his term expired. The substitute for the Springer bill, that is, the substitute offered by the gentleman from Maine [Mr. REED], authorized the issue of coin bonds to buy gold, and yet the Republicans, almost without exception, voted for that substitute.

I offered an amendment to the Reed substitute, an amendment which reaffirmed the Mathews resolution declaring all coin bonds payable in gold or silver, and yet less than twenty (I think only thirteen) Republicans voted for my amendment. The great majority of the Republicans thus declared that coin bonds are gold bonds in fact. If coin bonds are really gold bonds, there is less reason for agitation about the use of the word gold in the bond. We, who believe that greenbacks and Treasury notes are redeemable in either gold or silver at the option of the Government—we, who believe in the right of the Government to redeem its coin bonds in either gold or silver—we, I say, can object to gold bonds as a violent change in our monetary policy, but those who insist that greenbacks, Treasury notes, and coin bonds are all payable in gold on demand have far less reason to criticize the President.

I repeat, the President is simply carrying a Republican policy to its logical conclusion. If the Republicans are in earnest in their opposition to gold bonds let them come with us and help to make all bonds unnecessary by restoring the bimetallic principle and exercising the option vested in the Government to redeem coin obligations in either gold or silver. The Government is helpless so long as it refuses to exercise this option.

Mr. DUNN. Don't you want to make it more helpless?

Mr. BRYAN. No, sir; I do not propose to make it more helpless. I propose the only policy which will help the Government. I propose the only policy which will stop the leak in the Treasury. I only ask that the Treasury Department shall be administered in behalf of the American people, and not in behalf of the Rothschilds and other foreign bankers. [Applause on the Democratic side.]

But, Mr. Speaker, I desire, in conclusion, to call the attention of our Eastern brethren to the fact that this controversy can be no longer delayed. The issue has come and it must be met. On these financial questions we find that the Democrats of the East and the Republicans of the East lock arms and proceed to carry out their policies, regardless of the interests and the wishes of the rest of the country. If they form this union, offensive and defensive, they must expect that the rest of the people of the country will drop party lines, if necessary, and unite to preserve their homes and their welfare. [Applause.]

If this is sectionalism, the East has set the example. The demand of our Eastern brethren, both Republicans and Democrats, is for a steadily appreciating monetary standard. They are creditors; they hold our bonds and our mortgages, and, as the dollars increase in purchasing power, our debts increase and the holders of our bonds and mortgages gather in an unearned increment. They are seeking to reap where they did not sow; they are seeking to collect that to which they are not entitled; they favor spoliation under the forms of law. The necessary result of their policy is the building up of a plutocracy which will make servants of the rest of the people.

This effort has gone on steadily, and, for the most part, stealthily,

during the past twenty years, and this gold bond proposition is but another step in the direction of financial bondage. But I warn them that no slavery was ever perpetual. It has often been attempted, it has even been successfully attempted for a time, but the shackles are always broken at last. Bondage is ephemeral, freedom is eternal. "Weeping may endure for a night, but joy cometh in the morning." [Applause.]

The time will come when the unjust demands and the oppressive exactions of our Eastern brethren will compel the South and West to unite in the restoration of an honest dollar—a dollar which will defraud neither debtor nor creditor, a dollar based upon two metals, "the gold and silver coinage of the Constitution." "Thomas Jefferson still survives" and his principles will yet triumph. He taught equality before the law; he taught that all citizens are equally entitled to the consideration of government; he taught that it is the highest duty of government to protect each citizen from injury at the hands of any other citizen. We seek to apply his principles to-day to this great question; we seek to protect the debtor from the greed of the creditor; we seek to protect society from the avarice of the capitalist. We believe that in the restoration of bimetallicism we shall secure the reestablishment of equity and restore prosperity to our country. [Prolonged applause.]

APPENDIX. CONTRACT.

This agreement entered into this 8th day of February, 1895, between the Secretary of the Treasury of the United States, of the first part, and Messrs. August Belmont & Co., of New York, on behalf of Messrs. N. M. Rothschild & Sons, of London, England, and themselves, and Messrs. J. P. Morgan & Co., of New York, on behalf of Messrs. J. S. Morgan & Co., of London, and themselves, parties of the second part.

Witnesseth: Whereas it is provided by the Revised Statutes of the United States (section 3700) that the Secretary of the Treasury may purchase coin with any of the bonds or notes of the United States authorized by law at such rates and upon such terms as he may deem most advantageous to the public interests; and the Secretary of the Treasury now deems that an emergency exists in which the public interests require that, as hereinafter provided, coin shall be purchased with the bonds of the United States, of the description hereinafter mentioned, authorized to be issued under the act entitled "An act to provide for the resumption of specie payments," approved January 14, 1875, being bonds of the United States described in act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt."

Now, therefore, the said parties of the second part hereby agree to sell and deliver to the United States 8,500,000 ounces of standard gold coin of the United States, at the rate of \$17.8041 per ounce, payable in United States 4 per cent thirty-year coupon or registered bonds, said bonds to be dated February 1, 1895, and payable at the pleasure of the United States after thirty years from date, issued under the acts of Congress of July 14, 1870, January 20, 1871, and January 14, 1875, bearing interest at the rate of 4 per cent per annum, payable quarterly.

First. Such purchase and sale of gold coin being made on the following conditions:

1. At least one-half of all coin deliverable hereunder shall be obtained in and shipped from Europe, but the shipments shall not be required to exceed 300,000 ounces per month, unless the parties of the second part shall consent thereto.

2. All deliveries shall be made at any of the subtreasuries or at any other legal depository of the United States.

3. All gold coins delivered shall be received on the basis of 25.8 grains of standard gold per dollar, if within limit of tolerance.

4. Bonds delivered under this contract are to be delivered free of accrued interest, which is to be assumed and paid by the parties of the second part at the time of their delivery to them.

Second. Should the Secretary of the Treasury desire to offer or sell any bonds of the United States on or before the 1st day of October, 1895, he shall first offer the same to the parties of the second part; but thereafter he shall be free from every such obligation to the parties of the second part.

Third. The Secretary of the Treasury hereby reserves the right, within ten days from the date hereof, in case he shall receive authority from Congress therefor, to substitute any bonds of the United States, bearing 8 per cent interest, of which the principal and interest shall be specifically payable in United States gold coin of the present weight and fineness for the bonds herein alluded to; such 8 per cent bonds to be accepted by the parties of the second part at par, i. e., at \$18.00000 per ounce of standard gold.

Fourth. No bonds shall be delivered to the parties of the second part, or either of them, except in payment for coin from time to time received hereunder; whereupon the Secretary of the Treasury of the United States shall and will (silver the bonds as herein provided, at such places as shall be designated by the parties of the second part. Any expense of delivery out of the United States shall be assumed and paid by the parties of the second part.

Fifth. In consideration of the purchase of such coin, the parties of the second part, and their associates hereunder, assume and will bear all the expense and inevitable loss of bringing gold from Europe hereunder; and, as far as lies in their power, will exert all financial influence and will make all legitimate efforts to protect the Treasury of the United States against the withdrawal of gold pending the complete performance of this contract.

In witness whereof the parties hereto have hereunto set their hands in five parts this 8th day of February, 1895.

J. G. CARLISLE.

Secretary of the Treasury.

AUGUST BELMONT & CO.,

On behalf of Messrs. N. M. Rothschild & Sons, London, and themselves.

J. P. MORGAN & CO.,

On behalf of Messrs. J. S. Morgan & Co., London, and themselves.

Attest:

W. E. CURTIS.

FRANCIS LYNDIE STEINSON.

VIEWS OF THE MINORITY.

(On H. Res. 275.)

Owing to the limited time allowed for preparing a report (it being necessary to file the report within a few hours after the bill was agreed upon) the undersigned dissenting members of the committee are precluded from presenting their views with that elaboration which the importance of the subject would otherwise justify; but they beg to state briefly the most important reason which leads them to disapprove of the measure recommended by the majority of the committee.

First. The issue of bonds of any kind is only needed to replenish the gold reserve; and the gold reserve only needs replenishing because the Secretary of the Treasury redeems United States notes and Treasury notes in the kind of coins selected by the note holder. The note holder has no legal right to choose the coin in which the obligation shall be redeemed, but has been permitted to exercise that right by a policy inaugurated by the Treasury Department at or soon after the date of the resumption of specie payment. The opinion of the Secretary of the Treasury, Mr. Carlisle, recently given, is clear upon this point. On the 21st of January, 1895, a statement was made before the House Committee on Appropriations by Secretary Carlisle, in a printed report of which will be found the following question and answer:

"Mr. SIBLEY. I would like to ask you (perhaps not entirely connected with the matter under discussion) what objection there could be to having the option of redeeming either in silver or gold lie with the Treasury instead of the note holder?"

"Secretary CARLISLE. If that policy had been adopted at the beginning of resumption—and I am not saying this for the purpose of criticizing the action of any of my predecessors, or anybody else—but if the policy of reserving to the Government, at the beginning of resumption, the option of redeeming in gold or silver all its paper presented, I believe it would have worked beneficially, and there would have been no trouble growing out of it; but the Secretaries of the Treasury from the beginning of resumption have pursued a policy of redeeming in gold or silver at the option of the holder of the paper, and if any Secretary had afterwards attempted to change that policy and force silver upon a man who wanted gold, or gold upon a man who wanted silver, and especially if he had made that attempt at such a critical period as we have had in the last two years, my judgment is, it would have been very disastrous. There is a vast difference between establishing a policy at the beginning, and reversing a policy after it has been long established, and especially after the situation has been changed."

No one contends that the executive department of the Government can bind the Government or pledge its faith and credit by the adoption of such a policy. To so hold would be to assert that the Executive can make and repeal laws without the concurrence of the Senate and House of Representatives. Believing that the Secretary of the Treasury has now by law the right to redeem legal-tender notes by the payment of either gold or silver coin, whichever is most convenient for the Government; and believing that the exercise of this discretion by the Secretary of the Treasury is absolutely necessary to protect the Government from organized and unorganized raids upon the coin reserve, we are not willing to indorse, directly or by implication, the administrative policy which has precipitated the present financial conditions. Neither are we willing, by authorizing bonds for the purchase of gold, to pledge the Government to a policy which discriminates against silver as a standard money and recognizes gold as the only money of ultimate redemption. So long as the note holder is allowed to choose the coin in which he is to be paid, so long will it be futile to attempt to maintain a gold reserve.

Recent experience shows that gold secured by the issue of bonds is at once drawn out by those who are interested in having more bonds issued, and thus the public debt is increased to the detriment of the taxpayer and for the benefit only of those who desire a safe investment for surplus funds. We do not believe that any real advantage will be gained by securing the gold abroad.

It is urged that a change of policy at this time will cause embarrassment. If that be true the blame must be borne by those who first inaugurated the policy and by those who have adhered to it in spite of the clear intent and letter of the law. We have only to consider whether it is wiser to resume an exercise of rights preserved by existing laws or to aggravate our present difficulties by delaying relief and entering upon new experiments. We have no hesitation in declaring it as our conviction that there is no remedy, permanent in character or promising in results, except an immediate exercise by the Secretary of the Treasury of the right to redeem United States notes and Treasury notes in standard silver coin whenever it is more convenient for the Government to do so, and we further believe that the greatest dangers which can possibly attend such a course are infinitely less than the evils which are certain to follow an adherence to the present policy.

Second. If we were willing to authorize the issue of bonds at this time to purchase gold, we would still be opposed to bonds payable specifically in gold, because an issue of such bonds would either pledge the Government to the redemption of all obligations in gold or make a discrimination against coin obligations now outstanding. There is no question that the issue of gold bonds now would at once be followed by a demand for an act making existing bonds payable in gold, and it would be urged that it would be disastrous to depart from the policy of gold bonds when once inaugurated, just as it is now urged that it will be disastrous for the Government to resume a discretion which has been temporarily surrendered to the note holder.

It is impossible to overestimate the evil influence which would be exerted by the issue of gold bonds by the Government, because such action would naturally and necessarily encourage if not actually compel the issue of gold bonds by all public and private corporations and the making of gold contracts by individuals generally. Such an increased strain upon gold would manifest itself in a further rise in the purchasing power of the dollar and in a further and distressing addition to the load of debt now borne by the people.

Third. If we were in favor of an issue of gold bonds we would still be opposed to the issue of bonds running for thirty years. According to the terms of the contract the bond purchasers agree to accept 3 per cent gold bonds without mentioning the date of payment, but it can not be doubted that the purchasers will insist upon a thirty-year bond if discretion is given to the Secretary of the Treasury to issue such a bond.

Fourth. If we were willing to authorize the issue of thirty-year gold bonds we would still be opposed to recognizing or ratifying a contract as harsh in its terms and as imperious in its demands as the contract insisted upon by the bond purchasers.

Fifth. If we were willing to approve of such a contract under ordinary circumstances we would still be opposed to approving it when made by a sovereign government with foreign financiers under circumstances which suggest a desire upon the part of the subjects of another country to purchase a change in the financial policy of this nation for a sum stated.

These are some of the reasons which lead us to withhold our support from the measure recommended by a majority of the committee, and they are, in our judgment, sufficient to justify our dissent. If further reasons were necessary they might be found in the fact that the contract provides for the sale of coin bonds at about 104, which would sell in the market at about 110; in the fact that the contract agrees to sell thirty-year gold bonds, drawing 3 per cent interest, for less than the Government three months ago sold twelve-year coin bonds, and in the additional fact that foreign investors are by the contract given a preference over American investors in the purchase of any bonds which may be issued before next October, and are also given a preference now over the American investors who but a short time ago stood ready to purchase more bonds than were then offered.

WILLIAM J. BRYAN.
JUSTIN B. WHITING.

Mr. McMILLIN and Mr. WHEELER of Alabama, while dissenting from the majority of the committee, reserve an expression of their views until they have an opportunity to present them more at length upon the floor of the House.

The Currency.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8706) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire gold notes, and for other purposes—

Mr. STOCKDALE said:

Mr. CHAIRMAN: The object in striking out this section, it seems to me, ought to be explained. This section 5 is in itself meaningless in comparison with the present law. It says—

That after the 1st day of July, 1895, all duties on imports shall be paid in gold coin only.

That is all right; but the next amendment provides—

That demands other than duties on imports accruing or becoming due to the United States shall be paid in gold and silver coin, etc.

Now, what does that mean?

Mr. LIVINGSTON. Or Treasury notes—

Mr. STOCKDALE. It does not say gold or silver; it says in gold and silver.

Mr. LIVINGSTON. But the object is manifestly that it may be paid in gold or silver coin, Treasury notes, and so on.

Mr. WILLIAMS of Mississippi. That is what it intends, but it does not so specify.

Mr. STOCKDALE. That word "and," if that is the intention, should be stricken out and "or" inserted; so as to read "gold or silver coin," and so on.

The bill at least ought to have something respectable in it. It ought to be good in grammatical construction at least, because if it is not that it is nothing. [Laughter.]

It certainly is no part of a monetary system; the best that can be said of it is, it is a desperate expedient.

The gentleman from Pennsylvania made the true point on the bill, and the only argument that went to the merits and root of this question, a few moments ago, when he objected to an amendment because it curtailed the profits of the banks. Unwittingly the object of the bill was let out. Its object is to encourage banking. It has come to this plainly, in the United States, that the business of banking is regarded as an industry that must be fostered and protected, an industry far superior, in the opinion of many legislators, to any other in the country. The bill is, in my judgment, offered for the purpose of fostering United States banks, and the effect will be to encourage good profits to the United States bankers at the expense of the people.

One of the most vicious evils that has corrupted legislation in this country is the influence the handlers of money exert over the enactments of Congress effecting the currency of the country. Money is created by the Government for the use of the people in business transactions and that alone, and so sacred is it held to that use that heavy penalties are inflicted for the counterfeiting or mutilating it or in any way interfering with it. Money is intended by the Government solely for circulation, and whoever hoards it and keeps it out of circulation to that extent thwarts the beneficent objects of the Government and commits a crime against the people, who have the right to have it circulate.

The Government is, in good faith to its people, bound to issue and keep issued an amount of money ample for the use of trade. When it fails in that it falls in its duty to its citizens, and when it allows the money to be hoarded by its citizens or corporations and taken out of circulation for the purpose of reducing the volume of money below the needs of the people, the Government becomes derelict in its duty the same as though it failed to issue enough at the outset. And when the Government issues only enough money for use, and then not only allows it to be taken out of circulation to depress prices, but enacts legislation to aid people to do that, it becomes not only criminal, but basely criminal.

I am sorry to know that my friend from Tennessee [Mr. PATTERSON] has changed his opinions and given in his adhesion to the gold standard, and given his great ability to a cause he once vigorously opposed. As to his declaration that he believed in ten years the South would be with him, Mr. Chairman, the Southern people will never indorse the doctrine of a single gold standard—that is Republican doctrine. I hope that within less than ten years the gentleman from Tennessee will be with the people of the South. Mohammed must go to the mountain, and I am sorry to be compelled to say that we have to look to the gentleman from Maine [Mr. REED], whom we have regarded heretofore as rather tyrannical in his methods and policies for conservatism, and certainly

his proposition is more conservative than this bill, and a better bill than the one we are asked to support, and if he will accept the Bryan amendment may pass the House.

But this bill now under discussion is to my mind intolerable, in view of the history of the last twenty years and especially of the last two years. The conspiracy that culminated in the demonetization of silver in 1873—surreptitiously and basely accomplished, and it has been openly charged in both Houses of Congress that it was corruptly done—was the beginning of a scheme that has extended far beyond, no doubt, any conception of its authors. The contest for and against the coinage of silver has been fierce and bitter all that time and is still on the lists for combat. Disastrous effects followed, and the thousand millions that the holders of bonds and currency made out of it lost the people of this country at least ten times that amount in losses consequent upon that action. The American people were indignant at such betrayal of their interests and their confidence and demanded the restoration of the legal-tender power to silver.

After a long and bitter contest of five years silver was made legal tender again, but the coinage was confined to two millions, with a possibility of four millions, per month; but free coinage as practiced by our fathers was left in defeat. Again the people rallied to the rescue and were on the eve of success, free coinage almost in their grasp; again those consummate schemers began to compass the defeat of silver coinage, with the prince of schemers at their head, and the Sherman law of 1890 was the result.

Many silver men were caught by it, believing that the authors and promoters were in good faith; but when the then Secretary of the Treasury abdicated the high function which the Congress had intrusted to his keeping and allowed the note holders to exercise their discretion and demand gold when the law gave the Secretary the discretion, and expected him to exercise it in the interests of the people instead of the gold owners only, and pay in silver when he did not have gold; and we have the high authority of the present Secretary that had that course been inaugurated at the beginning no trouble would exist now.

The whole country became alarmed at the financial condition in 1893, and to remedy it the President convened Congress in August of that year.

In his message to the extra session he announced in forcible and graphic terms the causes that moved him to call Congress in extraordinary session in these words:

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With piteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demand of frightened depositors.

And as I said on a former occasion in this House:

And he might have added that the food and staple producers of this country are well nigh in despair at the prospect of selling below cost the fruits of their farms on account of the mismanaged finances; our vessels reefing sails and banking fires in our ports, and the great fleets that come from every clime to bear away our surplus production seeking other seas, and a suspicion engendered among the people that the financial system of the country is either radically defective or dishonestly managed.

This wondrous race, always so self-reliant, stands awe-stricken in presence of the situation—a mighty nation on the eve of financial convulsion, prosperity withering as in the simoom's breath, and values shriveling up. The people who had \$2,000,000,000 and still have over \$1,800,000,000 on deposit can not get it; the producers whose sole sale for crops ask in consternation, "What engine of destruction is abroad causing this havoc? What Nemesis broods over the land that business shall stand still in dread? What Upas roots permeate the soil that agriculture shall be stifled? What convention of ills is it that the great business men of America retreat from, and the Administration can not cope with, but at the nation's earnest demand hastily convenes Congress to lead the forlorn hope against it?"

Sixty-five millions of people wait with bated breath for the answer. And their ears will soon be astonished to hear the voice of the assembled wisdom of the greatest nation of the world after fourteen mortal days of discussion and consideration issuing from the halls of the nation's Capitol, that all these stupendous disasters are due to the Sherman law. The inquiry will follow, "What were its weapons and its mode of destruction?" There is one response, and only one, and in that all the gold monometallists concur, and rest their case upon it, to wit: "The Sherman law has destroyed confidence by driving gold out of the country."

That "tom tom" was sounded from all the house tops and served its purpose. To-day those who believed in that fiasco are ashamed of it. Those who urged it to influence the timid are complacent at the success of the ruse.

I spoke further on August 21, 1893, in opposing the repeal of the purchasing clause of the Sherman Act, and give this extract from my remarks then:

The banks are all gathering every dollar they can rake and scrape and putting out none, making money scarcer all the time, putting it more and more out of the power of those who have borrowed depositors' money to pay it back. Money owners who have large sums of money to invest are holding it waiting for property to go to bottom prices—waiting until people are compelled to sell at 50 cents on the dollar. We are advised by these gentlemen to take a recess after the Sherman law shall be repealed. Certainly, destroy silver coinage, reduce property to still lower prices, and then, like obedient servants, go home and leave the panic on the farmers, until speculators can buy their wheat at 40 and 50 cents a bushel and then come back and make

good times for the speculators to sell it in. Perhaps it may last long enough to enable them to get the cotton crop at 5 or 6 cents per pound.

The President's message puts it briefly but strongly when it says:

"At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding, or may even find profit in the fluctuation of values."

The harvest is not yet quite ripe enough for the speculators and the capitalists. When the scarcity of money shall have reduced prices so that the capitalists can own the securities and property upon which they have advanced half the value, and speculators can buy at their own offers, then the sickle will be put in and the harvest gathered.

Mr. Speaker, the first part of that prediction has been fulfilled, I am sorry to say. The speculators have been able—aided, as I believe, by that act of Congress—to get the wheat crop from the farmer at 40 to 50 cents per bushel, and the cotton is at 5 cents and less to the planter.

The second prediction, that "we would then come back and make times better," has not been realized. We did come back, but made times worse, by the veto of the seigniorage bill and the announcement that no silver coinage and no increase in the currency could be had.

I stated then that the repeal of the Sherman law would make times worse. These gentlemen, who were then wise in their own estimation, and who are responsible for the present condition, were complacent, and assured us, in a fatherly way, that all would soon be well as they went about whispering, "That—Sherman law did it."

Times certainly have become worse, to a degree that no man dreamed could occur. The clamor of ruined people has awakened them to life again, and in desperation they have formulated and presented for our approval this bill.

It no doubt is palatable to the gold-standard men, who announce with triumph and defiance that we are on a single gold standard now, but it can not be otherwise than nauseous to the great producing masses of this country.

It proposes to make perpetual existence of the United States banks to enlarge their powers over the currency. It proposes a syndicate of national banks, and puts it in their power to contract and expand the currency at will, as it may contribute to their own aggrandizement. It gives the Secretary of the Treasury unlimited power to issue bonds.

It contemplates the retirement of the greenbacks and Sherman notes, to be replaced by United States bank currency, and attempts to again deceive the silver men by a provision to enlarge the silver-certificate circulation, a pretense that silver men have no faith in. It degrades the 2 per cent bonds with the evident effect, whether designed or not, to reduce their value, the only bonds that bear as low an interest as 2 per cent, and therefore ought to be more favored. Perhaps this provision excepting them from the banking privilege is intended as a punishment to those gentlemen who were patriotic enough to take those bonds at such small interest and thereby spoil the speculation in United States bonds at higher rates, and it seems to have become, in the estimation of the great moneyed interests of this country, a badge of idiocy to act patriotically when money can be made by acting otherwise.

The gentleman from New York [Mr. HENDRIX], a great banker, says that when the French Government gets in trouble the Bank of France comes to the relief of the Government. When the English Government gets in trouble the Bank of England comes to the rescue, and the same in Germany. Why did he not say what the United States banks do when the Government of the United States gets in trouble? I will tell you. The truth would have compelled him to say that when the United States Government got in trouble the United States banks combined to make the trouble worse and to embarrass the Government so as to drive the best possible bargain with it, and therefore he was discreetly silent as to that.

The bill provides for a first lien on all the assets of a failing bank in favor of other banks who may be creditors. This is simply a trap for the unwary depositors. They may deposit money in such a bank and the bank will loan out the deposits and get securities for such loans. If the bank fails, instead of giving the depositors a first lien on the assets for which his money was loaned this bill gives those assets to other banks. The whole scheme is in the interest of banks and bondholders and those who may become bondholders in the future, and against the people. It does seem to me, in the face of the terrible condition of our people, to force the country to a gold standard, contract the currency, and make times harder is a reckless, heartless proceeding that no patriotic legislators can afford to inflict upon the nation. It is hard to believe that this is an honest scheme.

When I had the honor to submit some remarks in this House, August 21, 1893, on the silver question, I had read from the Clerk's desk extracts from speeches made by Hon. John G. Carlisle and Hon. James G. Blaine upon that great issue. I will append them here and let the country judge for itself whether the crime denounced by Mr. Carlisle has been committed and whether widespread disaster has followed the establishment of a single gold standard, and whether the destruction of silver as money and the establishment of gold as the sole unit of value has had a ruinous

effect on all forms of property. Except those investments which have a fixed return, it enormously enhanced their value, as predicted by Mr. Blaine.

The extracts are as follows:

HON. J. G. CARLISLE.

I know the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.

According to my views on the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the same moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

HON. JAMES G. BLAINE.

On the much-vexed and long-mooted question of a bimetallic or monometallic standard, my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in and throughout the commercial world. The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly \$7,000,000,000 of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands.

I believe that gold and silver coin to be the money of the Constitution, indeed the money of the American people anterior to the Constitution, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has, therefore, in my judgment, no power to demonetize either any more than to demonetize both. If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of having it resumed. If it has been restricted, I am in favor of having it enlarged.

Adelaide Morris.

SPEECH
OF
HON. CHARLES D. HAINES,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,
Friday, March 1, 1895.

The House having under consideration sundry pension bills, and objection being made to the consideration of a bill (S. 2519) to place the name of Adelaide Morris upon the pension roll—

Mr. HAINES said:

Mr. SPEAKER: It is to be most seriously regretted that the rules of the House are not broad and liberal enough to permit the consideration at any time of such a meritorious measure as this bill. Objection has been made by the gentleman from Indiana [Mr. MARTIN], the chairman of the Committee on Invalid Pensions. The gentleman from Indiana makes the point of order that the bill has never been referred to any committee of this House. While that is true, the bill has by a unanimous vote passed the Committee on Pensions of the Senate, and an hour ago passed the Senate, has been engrossed, and is now upon the Speaker's table.

The gentleman from Virginia [Mr. MEREDITH] also objects to the present consideration of this bill, and I think I am safe in stating upon no other grounds than that he is overanxious to bring up a pension bill of his own and is fearful that the House will adjourn before his name is reached.

The bill as it has just passed the Senate reads:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws, the name of Adelaide Morris, widow of the late Arthur Morris, formerly captain of the Fourth United States Artillery, at the rate of \$25 per month, which rate of \$25 per month shall be in lieu of the pension she is now receiving.

This bill was introduced in the Senate on the 8th of January, 1895, by the Senator from Delaware [Mr. GRAY], and the report made from the Senate Committee on Pensions by the Senator from New Hampshire [Mr. GALLINGER] on the 22d of the following month. The Senate Committee recommended an amendment to the bill reducing the rate of pension from \$50 to \$25 per month.

The rank of the husband of this widow was that of captain and brevet-major, and in my opinion the original amount was none too small. My attention was first called to this bill on Thursday last, and after careful consideration I find it a case of especial merit. If it is not considered now there is no prospect whatever of its receiving attention during this Congress, which has now but a few hours remaining.

Mr. Speaker, this bill seeks to increase the pension of Adelaide Morris from \$17 to \$25 per month. Mrs. Morris is the widow of Arthur Morris, formerly captain of the Fourth United States Artillery, and a more faithful, fearless, loyal, and brave soldier never served his country; a man who at the age of 19 distinguished himself to such an extent for skill and bravery as a soldier that he received for his gallantry the brevet rank of captain. His widow now, who shared with him the fortunes and misfortunes of war, is comparatively destitute. His twenty-five years of faithful, arduous, and meritorious service in the Regular Army of the United States entitles his widow to this small pittance that is asked of this Congress in this bill.

Now, Mr. Speaker, objections to the present consideration of this bill should be withdrawn and this pension granted.

At 18 years of age Captain Morris was made Lieutenant of a battery, and on September 17, 1862, at the battle of Antietam, his battery was engaged in that fearful contest which during that contest lost its captain (Hazard) and one-half of his men. It was at this time that Lieutenant Morris distinguished himself as a soldier and hero, and for his gallantry in this engagement was made a captain before he was 19 years of age. During all his military career, as his record shows, there was no feat too perilous, no task too difficult, no danger too great for Lieutenant Morris to undertake, and in every instance he would unhesitatingly volunteer his services in the face of imminent danger. Such was his character.

In the action at Charlestown, W. Va., Lieutenant Morris volunteered for the desperate struggle that was there encountered. In this engagement Lieutenant Morris narrowly escaped with his life, being struck by a spent ball, the mark of which he carried to his grave. Gen. Winfield S. Hancock was in command, and on the field of battle personally congratulated him for his bravery.

Mr. Speaker, the congratulations of General Hancock showed in what esteem this soldier was regarded by his superior officers, and Lieutenant Morris could have retired after that mark of esteem and gone into history honored and beloved by his countrymen for his bravery and devotion to duty.

But, Mr. Speaker, I propose to go further into the military record of this brave soldier. From November, 1863, to August, 1865, Lieutenant Morris was on staff duty at Fort McHenry, Baltimore, Md. In 1865-1867 he was on duty at the following posts: Fort Brown, Tex.; Reynolds Barracks, Washington, D. C.; Fort Washington, Va.; Fort McHenry, Baltimore, Md.; and in 1869 on recruiting duty in New York City.

Lieutenant Morris was transferred in 1869 to Fort Riley, Kans. While there he was sent with Light Battery B, Fourth Artillery, serving as cavalry in the Salmon River Indian campaign, and was on scouting duty during the summer of 1870. From Fort Riley Lieutenant Morris was again ordered to Fort McHenry, Md., and remained there from 1871 to 1872. From May, 1872, to June, 1873, Lieutenant Morris served at the artillery school at Fort Monroe, Va. In June, 1873, he was transferred to the Pacific Coast, and was stationed, successively, at Alcatraz Island, Black Point (San Francisco Harbor), Fort Canby, Oreg.; Sitka, Alaska; again at Fort Canby, Oreg., and again at Alcatraz Island.

Besides serving at these different posts while on the Pacific Coast, Captain Morris took a very active part in the Modoc campaign in the winter of 1873 and in the Nez Percé campaign in 1877. In the latter campaign he was engaged in the battle of the Clearwater, Idaho, July 11 and 12, under Gen. O. O. Howard. In the reports of this battle made by General Howard Captain Morris is mentioned in the following terms:

Capt. Arthur Morris, Fourth Artillery: This officer had command of his company in the final charge on the Indian position at the battle of the Clearwater on the 12th of July. He behaved most gallantly, keeping himself in advance of the line of his company, leading and urging his men forward. Throughout the campaign he was always energetic and cheerful in the discharge of his duties.

At that time no brevets were allowed for Indian service, but May 2, 1890, after the act allowing such brevets was passed, General Howard included Captain Morris in his recommendations, as follows:

Capt. Arthur Morris, Fourth Artillery: For gallant service in action against the hostile Nez Percé Indians during the battle of the Clearwater, Idaho, July 11 and 12, 1877, particularly the final charge, I recommend the brevet of major.

During Captain Morris's service on the Pacific Coast he was one of many officers who suffered severely from the great depreciation in currency, the officers receiving their monthly pay from the Government in greenbacks when everything at that time was on a gold basis throughout California.

Lieutenant Morris received his promotion as captain, Fourth

United States Artillery, on January 10, 1877, while stationed at Sitka, Alaska.

When his regiment was ordered East, in 1881, Captain Morris was first stationed at Fort Warren, Mass., where he remained until September, 1882. He was then ordered to Fort Adams, Newport, R. I., and remained there until his retirement, October 5, 1887.

It was during active service, while lieutenant, he was attacked by rheumatism, from which he severely suffered during the remainder of his life. His physicians unqualifiedly attribute it to the disease from which he died, September 26, 1892.

On October 5, 1887, Major Morris retired from the Army, and to the time of his death, September 26, 1892, was continuously ill and under very heavy expense on account of his illness, during which time he was unable to contribute to the support of his family.

On account of the original disease having shown itself while Major Morris was first lieutenant, his widow has only been allowed the pension of a first lieutenant, viz, \$17 per month, although he held the rank of captain and brevet major at the time of his death. I appeal to gentlemen here to act the part of statesmen, and withdraw their objections to this bill, and thereby do a simple act of justice to this destitute and worthy widow of a gallant and brave soldier.

The Comparison—Republican Record Against Democratic Record.

SPEECH

OF

HON. CHARLES H. GROSVENOR,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 23, 1895.

On the bill (H. R. 8802) making appropriation to supply deficiencies in the appropriations for the fiscal year ending June 30, 1895, and for prior years, and for other purposes—

Mr. GROSVENOR said:

Mr. CHAIRMAN: It was not a wise interruption which I have just experienced at the hands of the distinguished gentleman from Illinois [Mr. SPRINGER], chairman of the Committee on Banking and Currency. He has put to me an interrogatory that raises the question of comparison between the administration of the Treasury Department under Mr. Secretary Sherman, who presided over that Department of the Government from March, 1877, until March, 1881, and whose administration covered the period of the resumption of specie payments. It would have been wise in the distinguished gentleman from Illinois to have permitted silence to cast oblivion, if possible, over the record of the current administration, and above all to have allowed himself and his party immunity from any reference to the administration of John Sherman.

Mr. Chairman, I do not indulge in meaningless words of praise or flattery, and my language and my praise of Senator SHERMAN would do that gentleman no good; for to-day, in the estimation of his countrymen and of the wise, clear-headed, and intelligent statesmen of all the world, the administration of the Treasury Department under John Sherman was the highest demonstration of splendid financial ability ever exhibited by any living man in any period of time.

We had passed through a long, dreary, bloody, and expensive war. The people of the South were alienated from the people of the North, and the people of the North were alienated from the people of the South. There was an enormous public debt of the United States. The history of other nations was practically uniform in the matter of paying the national debt under such circumstances. The debt of the Revolution, created to make us a nation, had never been paid, and it was on everybody's tongue in 1865 and forward that in the end the national debt would have to be abandoned and not paid. I could fill pages of quotations from newspapers and public men, declaring that the debt could never be paid. The business of the country was prostrated because of the return to industrial pursuits of 2,000,000 men in the North and the South, and no sufficient market for their product. The difference between coin and paper had been growing steadily wider and wider, greater and greater, until a gold dollar was worth in paper currency 298 at one time.

How to redeem all this paper money and to bring the obligations of the Government up to par, restore public confidence, and thereby to stimulate business, and hold out hope to the people, was a task so gigantic that the stoutest hearts faltered and failed.

At the darkest hour in this darkest night John Sherman came to the head of the Treasury Department. The resumption act had been passed. He had supported it earnestly, and felt when he came to the Treasury that he was almost under personal bonds to bring about resumption and establish the credit of the country. It was more than an ordinary duty, for he had largely produced the conditions that made it necessary that he should succeed.

The passage of the resumption act had been resisted when it was pending in Congress by all sorts of opposition—opposition of the men who did not want resumption at all. But the more dangerous opposition was that of the men who did not believe that specie resumption could be brought about. And when the Secretary began to prepare for resumption the enemies of resumption began to seek to overthrow the act itself. They passed a bill in the House of Representatives, supported by both Democrats and Republicans, to repeal the resumption act. Three Republicans from Ohio voted for it. The Democrats, with a degree of hostility that was indescribable, thought they saw an opportunity for party advantage, and clamored for the blood of the resumption act. It was one of the most unpatriotic acts of the Democratic party, and demonstrated its unfitness for public confidence, that when the law had been passed, and the time was rapidly approaching, the Democratic party sought to play upon the prejudices of the people, and make party capital by taking a position which, if successful, would have absolutely ruined the country. And it was at a time like this that John Sherman began his work.

He was sustained by the majority of his party, and by a will power that has never faltered in the discharge of a public duty. He was sustained by the President, Rutherford B. Hayes, who gave his entire approbation to the administration of Mr. Sherman. He did not interfere to make contracts for Mr. Sherman, and he never interfered at all in any way, except to give advice upon request of the distinguished Secretary.

I now come to a period of time in our financial history of great and critical interest. It was at a point of time, April, 1878, when the House of Representatives had repealed the resumption act; and on the 1st day of April of that memorable year Mr. Sherman appeared before the committee of the House of Representatives of which Hon. A. H. Buckner was chairman, and made certain statements; and among others he answered an interrogatory asking him for the then condition of the Treasury, and he gave the condition of the Treasury of the 28th of February, 1878, in the following statement:

Secretary SHERMAN. I can give you a statement up to the 28th of February, 1878. I am not able now to give you the statement for the month of March, but can do it to-morrow or next day, and I will probably attach it to my answer. This, however, is the general result of the statement. We have at the Treasury, the different subtreasuries, assay offices, and depositories:

In gold coin.....	\$118,351,709
In gold bullion.....	7,937,300
In subsidiary silver coin.....	5,675,494
And in silver bullion.....	2,855,577

Following this statement Mr. Sherman gave the actual amount of bonds sold under the resumption act and under the refunding acts of his administration, as follows:

UNDER THE RESUMPTION ACT.	
5 per cent bonds of 1881.....	\$17,404,350
4½ per cent bonds of 1891.....	15,000,000
4 per cent bonds of 1907.....	25,000,000
Total.....	57,404,350

The bonds issued on account of refunding are as follows:

5 per cent bonds of 1881.....	\$490,000,000
4½ per cent bonds of 1891.....	185,000,000
4 per cent bonds of 1907.....	55,000,000
Total.....	730,000,000

Which last sum added to the \$57,404,350 on account of resumption makes the total \$787,404,350.

I ought to say that the proceeds of all the bonds that were sold under the refunding act were applied to the payment of an equal amount of 5-20 bonds bearing 5 per cent interest.

The CHAIRMAN. These bonds were sold at par, were they not?

Secretary SHERMAN. Yes, sir; par in coin. We paid out of the Treasury one-half of 1 per cent for commissions and expenses.

It will be seen that at that early day one-half of 1 per cent was deemed a sufficient profit for a financial syndicate to make out of a Government loan. Ten millions at a clip in these days is not considered unreasonable.

Following this statement, Mr. Sherman gave in answer to an interrogatory the account of liabilities of the Government at that date, as follows:

Coin interest paid during fiscal year 1877.....	\$22,883,431.27
Amount applied to the sinking fund during fiscal year 1877.....	447,500.00
Amount paid for diplomatic service during fiscal year 1877.....	735,286.06
Amount paid for foreign naval service during fiscal year 1877.....	2,224,124.49
Amount of custom refunds during fiscal year 1877.....	5,247,930.65
Amount expended for refunding national debt, paying and redeeming bullion, etc., during fiscal year 1877.....	901,227.30
Total.....	102,400,000.77

At that early day Secretary Sherman, in answer to four questions by Mr. Chittenden, of the committee, made some statements which were prophetic at that time and have become historic at this time. The questions and answers are as follows:

Mr. CHITTENDEN. I have prepared four questions in the interest of those whom I represent, to which I should like to have your answer.

First. With silver dollars and silver certificates full legal tender for all debts, including the customs and the public debt, is not gold practically demoralized; and how will you renew your supplies or prevent its exclusive use as merchandise in foreign commerce?

Second. Is there no danger that the national banks, in taking care of themselves, will hoard greenbacks enough to exhaust your gold reserves when the day for resumption comes?

Third. Is it not probable that before you have coined 100,000,000 of the new silver dollars, with greater activity in foreign trade, they will be exported at their bullion value to settle trade balances, and with what effect upon the price of silver bullion?

Fourth. Does not your success in resuming coin payments with our so-called double standard depend absolutely upon an advance in the price of silver bullion in London to about 50 pence sterling per ounce?

I have not spoken with any member of the committee in framing these questions. They were framed at my own table, and I am influenced only by my correspondence and by questions asked of me by those whom I represent.

Secretary SHERMAN. I would a great deal rather in this connection give the committee the facts and let the committee draw its own inferences than attempt to give my own opinions. But I have no objections to answering any of those questions. I think that a certain amount of silver dollars issued will not have the effect which Mr. Chittenden thinks. I believe that we can maintain at par in gold a certain amount of silver dollars; precisely what amount I would not like to say, because that is a question of opinion. But I have the idea that we can maintain at par in gold no less than \$50,000,000; perhaps more—say from \$50,000,000 to \$100,000,000; but whenever those silver dollars become so abundant and so burdensome that the people would not have them and would not take them, and that they would not circulate, then, undoubtedly, they would sink to the value of the bullion in them. That is my opinion, but I do not think it wise for either this committee or myself to discuss this question much, because the silver bill is a law, and whatever we may think of its effects, the public mind will not be satisfied until that law is fairly tried.

The effect of the silver bill is not going to be very rapid, nor will the fall in silver be anything like so rapid as is probably feared, and long before the silver dollar can sink to the value of silver bullion, Congress will undoubtedly correct the law if it were to have that effect. If, on the other hand, it should have the effect, which is anticipated, of raising the mass of silver up to the standard of gold, then Mr. Chittenden need not be afraid. Therefore, I say that I do not think I ought to give my opinion further on that subject. I have not changed my mind about the silver bill, although the newspapers say that I have. I think that (as a matter of policy) the silver bill, which makes silver available to pay bonds issued by the United States either before or after the refunding or resumption acts, is not good policy. I have stated that over and over again publicly, and I do not deny it. But the silver bill is the law. We are not infallible. It can not operate quickly in that way, and therefore we had better give it the full benefit of an experiment, in the certainty that, if Congress finds that it has the effect which is now anticipated, Congress can at any moment stop the issue of silver dollars. I think that that is as far as I ought to answer these questions.

Mr. CHITTENDEN. It is not my object to embarrass the Secretary in any way in these questions.

The CHAIRMAN. The Secretary is of the opinion that "Sufficient to the day is the evil thereof;" that we will take care of the present, and let the future take care of itself.

Secretary SHERMAN. If you allow me, I can now, in connection with your question in regard to my opinion as to the practicability of resumption, and especially in regard to an interview published in the newspapers between Mr. Ewing and the bankers in New York, give you my opinion. I have read that interview with a great deal of attention, because I know many of the gentlemen who took part in it.

The CHAIRMAN. It is proper for me on the part of the committee to say that it was not intended that that interview should be made public; but the report of it was surreptitiously obtained in some way.

Secretary SHERMAN. I do not think there was the slightest objection to publishing it.

The CHAIRMAN. Only probably on account of confidential relations.

Mr. EWING. We told those gentlemen at the conference that we had our secretary for the purpose of taking down their statements, not with a view to publishing them, but merely for the information of the committee, and the committee feels exceedingly annoyed about the publication, because it seems like a violation of that understanding; but the paper was surreptitiously obtained, and the committee does not feel at fault about it.

Mr. CHITTENDEN. Special pains were taken at New York to exclude newspaper reporters.

Secretary SHERMAN. It is pretty hard to exclude newspaper reporters; but I think it was right enough to have that conference published. It presents the opinions of very intelligent gentlemen whose business it is to be familiar with the subject, and their opinions are entitled to full weight. I can only give you my general reply to them.

My reply would be about this: These gentlemen assume three propositions: First, that we can not sell enough 4 per cent bonds to prepare for resumption; second, that the national banks can throw upon the Government the burden of resumption of bank notes as well as of United States notes; third, that resumption requires the resumption and cancellation, without power of reissue, of United States notes below \$300,000,000. To these I answer that I believe that, with such auxiliary legislation as is pending in both Houses, we can sell enough 4 per cent bonds to prepare for resumption; but if I am mistaken in this, we can sell either 4½ or 5 per cent bonds, which they admit will command gold, silver, and bank notes, to maintain resumption. Some of these gentlemen have proposed to me that if I sell them 4½ per cent bonds at par in coin they will guarantee enough coin for resumption; and I have had some better offers from other banks and bankers, so that on this point it is only a question of rate of interest on bonds.

When it becomes clear that money can not be had for 4 per cent it is time enough to pay 4½. The silver bill has crippled my power to sell 4 per cent bonds, but a wise savings bill, that will enable me to deal directly with the people, would go far to repair this. Upon the second point: It may as well be understood that the national banks can not throw upon the Government the burden of redeeming their notes. The attempt would be suicide. They are bound to redeem their notes on demand at the Treasury with United States notes or coin, and to maintain in their vaults very large reserves of United States notes. Any effort of theirs to force the redemption of their reserves of United States notes in coin would at once cause the Government to withdraw all Government deposits from them, to present all bank notes

held or received by the Government for redemption, and, if need be, to exchange United States notes for bank notes.

Such a struggle as these gentlemen contemplate would end in their losing their power to issue circulating notes at all. Their talk about forming a line to break the Government is not discreet and is not dangerous. I am more concerned about what you will do than about what they will do. The United States Government already holds a larger cash reserve for the redemption of its notes in proportion to demand liabilities than any bank represented by these gentlemen, and it has power to increase it. Our certificates of deposit—the most dangerous form of liabilities—are secured dollar for dollar, by coin or United States notes actually in hand, while the banks owe over \$600,000,000 to depositors, the great body of which is represented by notes and bills discounted. The only demand liability we owe not covered by actual cash on hand is United States notes, and of these \$70,000,000 are in our vaults, and \$70,000,000 more the banks are bound to retain in their reserves.

With a coin reserve of \$100,000,000 to \$150,000,000 the redemption of \$300,000,000 of United States notes would be easy, and that reserve could not be diminished to any considerable extent by the banks, or any combination of banks, without a continuous draft upon the banks to make it good. We can rely upon the intelligent self-interest of the banks to prevent such a struggle. Nothing could provoke it more quickly than threats by bank officers, and if such a struggle comes the Government, with its reserve, with ample revenue, and the power to sell bonds, can easily maintain resumption without fear of a line of bank cashiers anxious to break the Treasury or to force high rates of interest.

On the last point: The power to reissue is plainly given by section 3579, Revised Statutes, and is not cut off any more by the notes coming into the Treasury in exchange for coin than in payment of a tax. Even if the Supreme Court hold them as no longer a full legal tender, they are as much so as a bank note. If the choice must be made between the two, the common interest would decide in favor of the United States note. I believe they both ought to circulate and both be at par with coin. But nothing is so discouraging in the progress of resumption as for national banks to shrink from their share of the burden, or to make threats such as are stated by some of these gentlemen, and nothing is so injurious to the banking system, or will precipitate its overthrow more certainly, than a popular conviction that the banks are endeavoring to embarrass the Government in maintaining resumption.

The great question in that investigation was the question whether or not it was possible to resume specie payments; and of the gentlemen composing that committee no one was more confident than Mr. Sherman was mistaken and could not resume than was Gen. Thomas Ewing, of Ohio, Mr. Sherman's relative. That gentleman had made his campaign for Congress on the very issue, and had stoutly asserted that if the resumption of specie payments were attempted a rush would be made on the subtreasury at New York of such extent that mob violence would break down the doors of the subtreasury, and the Regular Army would have to be called for. But when Mr. Sherman in this interview had finally pointed out that if he could get \$50,000,000 in gold coin by January 1, 1879, he could resume specie payments, Mr. Ewing put the following question:

Where do you expect to get the additional fifty millions of gold by January 1, 1879?

Secretary SHERMAN. You must see that for me to state too closely what I propose to do might prevent me from doing what I expect to do, and therefore I will answer your question just as far as I think you will say I ought to go. I answer, mainly from the sale of bonds. Indeed, in the present condition of the revenue we can not expect much help from surplus revenue, except so far as that surplus revenue may be applied to the payment of greenbacks and to the redemption of fractional currency in aid of the sinking fund. To that extent I think we can rely upon revenue enough to retire the United States notes redeemed under the resumption act; so that I would say that we can get the \$50,000,000 of gold additional by the sale of bonds. As to the kind of bonds that I would sell, and as to how I would sell them, etc., I ought not to say anything on that subject at present, because you ought to allow me, as an executive officer, in the exercise of a very delicate discretion, free power to act as I think right at the moment, holding me responsible for my action afterwards. As to what bonds I will sell, or where I will sell them, or how I will sell them, as that is a discretionary power left with the Secretary, I ought not to decide that now, but to decide it as the case arises.

Mr. EWING. I understood you to say in your interview with the Senate committee that you would have to rely upon the natural currents of trade to bring gold from abroad; that is, that there can not be a large sale of bonds for coin abroad. Is it on a foreign sale that you are relying?

Secretary SHERMAN. Not at all, but on a sale at home. Perhaps I might as well say that if I can get two-thirds of this year's supply of gold and silver it will amount to a good deal more than \$50,000,000, so that I do not have to go abroad for gold. If we can keep our own gold and silver from going abroad it is more than I want.

The CHAIRMAN. For this \$50,000,000 additional I suppose you rely to some extent on the coinage of silver?

Secretary SHERMAN. To some extent; silver and gold we consider the same under the law.

Mr. EWING. Do you expect to pay out the silver dollar coined by you for current expenses, or only for coin liabilities, or to hoard it for resumption?

Secretary SHERMAN. I expect to pay it out now only in exchange for gold coin or for silver bullion. I am perfectly free to answer the question fully, because on that point, after consulting with many members of both Houses, I have made up my mind what the law requires me to do. I propose to issue all the silver dollars that are demanded in exchange for gold coin. That has been going on to some extent; how far I can not tell. Then I propose to use the silver in payment for silver bullion, which I can deal par in gold. I then propose to buy all the rest of the silver bullion which I need under the law with silver coin. As a matter of course, in the current course of business some of that silver coin will go into circulation; how much I do not know. The more the better for us. But most of it, I take it, will be transferred to the Treasury for silver certificates (that seems to be the idea of the bill), and those silver certificates will come into the Treasury in payment of duties, and in that way, practically, the silver will belong to the Government again.

Until silver is so abundant that it becomes the acknowledged basis of coin transactions, we can not pay out that silver for the ordinary expenses of the Government, because we have not enough to pay all the expenditures in silver; and if the silver is maintained at par with gold, and if the United States notes are below par with gold we can not discriminate in favor of any class of creditors; we would therefore have to hold silver at par with gold until we either have enough to pay everything with it or until the legal-tender notes are practically at par with gold and silver. That is a matter over which I have no more control than any other citizen. The silver dollars

being receivable for duties—the law allowing them to be converted into certificates which are receivable for customs—I must receive them; and I could not prevent it if I tried, the silver from coming into the Treasury, either for silver certificates or payment of duties. As to when I shall commence paying them out for the current expenditures of the Government or in payment of the interest or principal of the debt I can not tell, because that would depend upon the equality of the three kinds of currency—gold, silver, and paper. I do not know whether I make myself understood, but that is the general idea I have in mind. As a matter of course, it being a great discretionary power which you have invested in the office of Secretary of the Treasury, while I hold the office I will be careful to exercise that power so as to carry out in good faith the law as Congress has passed it, and that law, I think, contemplates that gold, silver, and paper shall be all brought on an equivalence.

In order to make the situation to which I propose to proceed entirely apparent I want to reproduce here the contract under which Mr. Secretary Morrill was selling the bonds of the Government prior to the Administration of Mr. Cleveland. The contract is dated August 24, 1876, and is between the Secretary of the Treasury (Hon. Lot M. Morrill) and Messrs. N. M. Rothschild & Sons and others.

It will appear that at that early day, following so soon the close of the great war, with an exhausted Treasury and an unsettled credit, much greater care was taken by the Secretary of the Treasury to protect the Government than has become customary in more recent years.

The contract is as follows:

This agreement, entered into this 24th day of August, in the year of our Lord 1876, between the Secretary of the Treasury of the United States of America, of the first part, and Messrs. August Belmont & Co., of New York, in behalf of Messrs. N. M. Rothschild & Sons, of London, England, and associates, and Messrs. J. & W. Seligman & Co., of New York, for themselves and associates, and Messrs. Drexel, Morgan & Co., on behalf of Messrs. J. S. Morgan & Co., of London, England, and Messrs. Morton, Bliss & Co., of New York, representing the First National Bank of the City of New York, the American Exchange National Bank of New York, the Merchants' National Bank of New York, the Third National Bank of New York, Messrs. Kuhn, Loeb & Co., of New York, the Bank of New York National Banking Association, and Messrs. Morton, Rose & Co., of London, and themselves, of the second part:

Witnesseth, That the said Messrs. August Belmont & Co., of New York, on behalf of Messrs. N. M. Rothschild & Sons and associates, hereby agree to purchase from the Secretary of the Treasury sixteen million five hundred thousand dollars (\$16,500,000) of the United States bonds known as the 4 per cent funded loan of 1891, issued under the acts of July 14, 1870, and January 20, 1871; and that Messrs. J. & W. Seligman & Co., for themselves and their associates, hereby agree to purchase from the Secretary of the Treasury six million seven hundred and fifty thousand dollars (\$6,750,000) of the bonds hereinbefore described; and that Messrs. Drexel, Morgan & Co., on behalf of Messrs. J. S. Morgan & Co., of London, England, hereby agree to purchase from the Secretary of the Treasury six million seven hundred and fifty thousand dollars (\$6,750,000) of the bonds hereinbefore described; and that Messrs. Morton, Bliss & Co., of New York, representing the First National Bank of the City of New York, to the extent of four million dollars (\$4,000,000); the American Exchange National Bank of New York, to the extent of one million and fifty thousand dollars (\$1,050,000); the Merchants' National Bank of New York, to the extent of six hundred thousand dollars (\$600,000); the Third National Bank of the City of New York, to the extent of seven hundred and fifty thousand dollars (\$750,000); Messrs. Kuhn, Loeb & Co., of New York, to the extent of one million and fifty thousand dollars (\$1,050,000); the Bank of New York National Banking Association, to the extent of three hundred thousand dollars (\$300,000); Messrs. Morton, Rose & Co., of London, to the extent of one million one hundred and twenty-five thousand dollars (\$1,125,000), and Messrs. Morton, Bliss & Co., of New York, to the extent of one million one hundred and twenty-five thousand dollars (\$1,125,000), hereby agree, to the extent severally for each as above stated, to purchase from the Secretary of the Treasury ten million dollars (\$10,000,000) in the aggregate of the bonds hereinbefore described, making a total aggregate of forty million dollars (\$40,000,000), upon the terms and conditions following, to wit:

First. Of the said aggregate amount, not less than ten million dollars (\$10,000,000) are hereby subscribed for, the subscription to take effect on the 1st day of September, 1876, and the remaining amount, namely, thirty million dollars (\$30,000,000), may be divided at the pleasure of the parties of the second part into several successive subscriptions of not less than five million dollars (\$5,000,000) each, to be made prior to the 4th day of March, 1877.

Second. The parties of the second part shall have the exclusive right to subscribe, in the same proportion to each of the subscribers, for the remainder, namely, two hundred and sixty million dollars (\$260,000,000), or any portion of said loan authorized to be issued by the acts of Congress aforesaid, by giving notice thereof to the Secretary of the Treasury on or before the 30th day of June, 1877; but the party of the first part reserves the right to terminate this contract at any time after March 4, 1877, by giving ten days' notice thereof to the parties of the second part.

Third. That the Secretary of the Treasury shall, when subscriptions are made by the said parties of the second part, issue calls with even date with said subscriptions for the redemption of an equivalent amount of 6 per cent 5-20 bonds of the United States, as provided by said act of July 14, 1870.

Fourth. The parties of the second part agree to pay for said 4 per cent bonds par and interest accrued to the date of application for delivery of said bonds, in gold coin, matured United States gold-coin coupons, or any of the 6 per cent 5-20 bonds called for redemption, or in United States gold certificates of deposit issued under the act of March 3, 1863, with the understanding that payment to the extent of the amount of any call shall be made within the time during which such call shall mature: *Provided*, That, if the parties of the second part shall elect so to do, they may have the privilege of making any of said subscriptions payable specifically in uncalled 6 per cent 5-20 bonds of the United States, in which case the Secretary of the Treasury may, to the extent of such payments, omit the calls mentioned in condition No. 3.

Fifth. The parties of the second part shall receive in coin a commission of one-half of 1 per cent on all bonds taken by them, as allowed by the act of July 14, 1870, and shall assume and defray all expenses which may be incurred in sending bonds to London upon their request, or by transmitting bonds, coupons, or coin from there to the Treasury Department at Washington, including all cost of making exchange of bonds, and shall also be charged with the preparation and issuing of the bonds.

Sixth. No bonds shall be delivered to the parties of the second part, or either of them, until payment shall have been made in full therefor in accordance with the terms of this contract.

Seventh. During the continuance of this contract any sales of bonds or

dered by the Secretary of the Treasury, by authority of law, except those that it may become necessary to sell to pay judgments of the Court of Commissioners of Alabama Claims, shall be made through the parties of the second part, who shall be allowed thereon a commission of 1 per cent in gold coin. And it is provided that the amount of bonds so ordered shall not exceed in the aggregate \$25,000,000, unless by mutual agreement of the parties.

LOT M. MORRILL,

Secretary of the Treasury.

AUG. BELMONT & CO.,

On behalf of N. M. ROTHSCHILD & SONS, London.

J. & W. SELIGMAN & CO.,

On behalf of SELIGMAN BROTHERS,

DREXEL, MORGAN & CO.,

On behalf of J. S. MORGAN & CO., of London.

MORTON, BLISS & CO.,

For themselves and associates, as named above.

Mr. Sherman, coming into office, on the 6th day of April, 1877, addressed the following letter to the Messrs. Rothschild, in London:

TREASURY DEPARTMENT,
Washington, D. C., April 6, 1877.

GENTLEMEN: I received your friendly cable message of the 10th ultimo, and return my thanks and hearty good wishes.

I am very solicitous to promote the funding of our 6 per cent bonds as rapidly as practicable, and feel indebted to you for the aid you have given in placing the 4 per cent bonds.

I propose no change at present; but it is my desire, if practicable, to withdraw the 4 per cent bonds from the market and substitute in their place the 4 per cent bonds authorized by the funding act.

These bonds, as you know, are a very desirable investment, running thirty years from the date of issue, with every guard and security that has been given to any bond of the United States, and we think as safe and desirable as the securities of any other nation. It is probably the bond into which all the debt of the United States will in time be converted. I hope you and your associates will be able to engage with me to place this bond on the market when \$300,000,000 of the 4 per cent bonds have been sold.

The public policy of the United States to resume specie payments on or before the 1st of January, 1879, is fully established by the law and by public opinion. It may be that the surplus revenue will be sufficient to enable me to carry out this policy without the sale of bonds. I am authorized by the resumption act to sell 5, 4, or 4 per cent bonds to prepare for resumption, and it may be desirable to sell through the syndicate, under that act, a limited amount of bonds, not exceeding, I hope, \$30,000,000 a year. I do not wish in the execution of this duty to disturb the exchanges between Europe and this country. For this purpose I desire to sell only the 4 per cent bonds, and must sell at par in coin, but could receive in payment coin coupons maturing within a limited time. I invite from you and your associates such suggestions and offers as you may think proper to make for the purchase of such bonds.

The operations of the syndicate have become so important that I have deemed it proper to ask Mr. Charles F. Conant, late Assistant Secretary of the Treasury, to take charge of the business in London in connection with the gentlemen already there. He is well informed as to our laws, and I trust his services may be of advantage to the Government and agreeable to you.

I will give my personal attention to this business and will receive with pleasure any suggestions from you that will promote our common object.

Very truly,

JOHN SHERMAN, Secretary.

Messrs. N. M. ROTHSCHILD & SONS,
London, England.

The time came, on the 28th of April, when the syndicate, under that contract, were ready to waive some of their rights; and the wily Secretary very readily construed that action into opening the door for the improvement of the conditions of the contract on behalf of the Government. But in the meantime an important legal question had arisen, which has projected itself all along the line from that day to this; and in answer to a question by Mr. Sherman addressed to the Attorney-General, that officer sent the following letter to the Secretary of the Treasury:

DEPARTMENT OF JUSTICE, Washington, April 26, 1877.

SIR: In answer to your letter of the 21st instant requesting my opinion upon the following question, growing out of the refunding act of July 14, 1870, to wit: "Can I stipulate in the body of the 4 per cent bonds about to be issued that they shall be redeemable in coin of the present value; that is, the standard value at the date of their issue, or must it be the date of the law?" I have the honor to reply:

The act provides for the issue of bonds "redeemable in coin of the present standard value." The word "present" undoubtedly refers as a matter of date to the time when the act was passed and not to the time when the bonds were thereafter issued. It contemplated that a long period would elapse before it would finally be carried into effect, and that changes in the coinage of the country might occur during that period. Whatever changes in the coinage should occur these bonds were, however, to be redeemable in coin of the standard value as it existed at the date of the act. By this provision the holder was guarded against any depreciation that might take place in the value of the coin, and the Government would not be compelled to pay the additional value should the coinage be appreciated. All the bonds issued under the act were to stand alike, no matter what was the date when such bonds were issued. Each was to be redeemable in coin which was included in the authorized coinage of the country at the date referred to, it being of the standard value as it then existed. Since the law was passed no change has taken place in the standard value of the coin. It is understood that there has been a certain change in the coinage of the country, and that silver dollars have now ceased to exist practically as coin.

It has been further provided by the statute of February 12, 1873 (Rev. Stat., secs. 3585, 3586), that "the silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding \$5 in any one payment." Notwithstanding this practical change in the coinage of the country and the passage of this act in regard to legal tender, the form of the bond to be issued by you should not be changed so far as the mode in which it is to be redeemed is concerned. It was not intended that this should be varied according to the changes which might be made in the coinage, because a definite rule was given by reference to the coin of a particular date. That which will pay the bonds heretofore issued under this act will pay the bonds which you may hereafter issue. It can not be authoritatively said that the words "payable in coin" or "payable in gold" are equivalent to the words used by the statute. Even if this leaves open for discussion the question whether bonds issued under this act are or are not redeemable in silver coin

of the character and standard which existed July 14, 1870, it is not a doubt which it is in your power to remedy by the use of words in the bond other than those which this statute provides.

While I comprehend the difficulty suggested in your letter and the convenience that there might be in removing any question upon this matter, I am therefore of opinion that it would not be safe to issue the bonds except as redeemable in coin of the standard value of July 14, 1870.

Very respectfully, your obedient servant,

CHARLES DEVENS, Attorney-General.

Hon. JOHN SHERMAN,
Secretary of the Treasury.

Going forward to the modification of the contract, on the 28th of April Mr. Sherman wrote to Mr. Belmont as follows:

TREASURY DEPARTMENT,
Washington, April 28, 1877.

DEAR SIR: I have received to-day a cable telegram advising me that Messrs. Rothschilds consent to the sale of 4 per cent bonds for resumption purposes through the syndicate without the commission allowed in the contract. This modification of the contract perhaps had better be reduced to writing, signed by you for the syndicate, and sent to me for my signature; but regarding the matter as agreed upon, you are authorized through the syndicate to sell \$2,000,000 of 4 per cent bonds at par in coin and place the proceeds in the subtreasury at New York. I would like it done, if practicable, on Monday, so as to show in the public debt statement, but do not regard this as vital if there is any difficulty in the sale.

As soon as this is done I shall, in my own way, state to the public the object of the sale as an indication of the policy I intend to pursue under the resumption act.

It may be that I will sell a portion of the gold for currency, and may hereafter arrange to receive a portion of the proceeds of these bonds in currency; but upon that point I intend to take advice as to my legal powers in the matter and as to the policy proposed.

As to the other points in the telegram I will confer with you.

Very truly, yours,

JOHN SHERMAN, Secretary.

Hon. AUGUST BELMONT, New York.

And also to Mr. L. P. Morton, since Vice-President of the United States:

TREASURY DEPARTMENT,
Washington, May 1, 1877.

MY DEAR SIR: Your note was received this morning.

I may possibly be in New York about the middle of May, but the time is so uncertain now that I could not make an engagement, but will advise you before going.

I am happy to hear that the syndicate arrangement has been modified to meet your wishes. I supposed that it was understood on all hands that the war in Europe was the cause of the falling off in our loan, though I think it would have been wise policy in the syndicate to have boldly made a call a week or two ago in advance of sales, and I think they might do so now. Still I have not felt like pressing a call or interfering with their arrangements, for, after all, the 4 per cent loan is the loan which we ought to seek to place upon the market, and which I hope the syndicate will be able to do by the 1st of July.

Very truly, yours,

JOHN SHERMAN.

L. P. MORTON, Esq.,
New York.

The contract with Mr. Morrill having been practically put an end to on the 16th of May, 1877, Messrs. L. Von Hoffmann & Co. wrote to the Secretary, evidently with a view to the future movements of the Treasury Department, as follows:

NEW YORK, May 16, 1877.

SIR: We take the liberty to address you for the purpose of ascertaining whether we may make you a firm offer for a round amount of United States 4 per cent fifteen-year bonds, say ten to twenty millions, deliverable at your pleasure, or, if agreeable, at the rate of at least five millions per month.

We have been informed that the sale of five millions of the above bonds to the syndicate a few days ago was made for resumption purposes, and in case you should desire to increase such sales we would be pleased to receive your permission to submit to you our firm bid.

Our telegraphic advices from London quote United States bonds higher and in better demand, and we have no doubt that in case you would be pleased to accept our offer for an amount of the 4 per cent bonds at about par, we could sell the bonds at a satisfactory profit in the European markets.

We shall be pleased to be favored with your reply, and are, sir,

Your most obedient servants,

L. VON HOFFMANN & CO.

The honorable SECRETARY OF THE TREASURY,
Washington, D. C.

And later on the same firm on May 31 again wrote to Mr. Sherman upon the same subject.

It will be seen by this correspondence, although imperfectly given here, that the credit of the Government was constantly rising. The 4 per cent bonds, which were being used for refunding purposes, were so desirable in the market that the Secretary thought he saw an opportunity to sell 4 per cent bonds for resumption purposes. Following is the letter of Von Hoffmann & Co.:

NEW YORK, May 31, 1877.

SIR: We have the honor to confirm our respects of the 28th instant. Our advices from London continue favorable for United States bonds. The 4 per cent bonds have advanced to 102.94 ex-coupon. London quotations, which confirms us in the belief that the syndicate will soon request you to issue another call, and will soon have disposed of two hundred millions of the 4 per cent bonds.

When this amount should have been reached, we understand that you intend to cancel the contract with the syndicate and to offer the 4 per cent thirty-year bonds.

By your favor of the 17th instant you were pleased to invite our attention to it and to express a desire that we should aid you in this important operation.

Until the contract with the present syndicate has been canceled, we have reasons to believe that you probably would prefer not to enter into negotiations for the new 4 per cent thirty-year bonds.

This is, however, only an assumption of ours, and we therefore take the liberty to inquire whether you would have the kindness to inform us as soon as you are prepared to receive our propositions for the operation in question.

We have written to our London friends very lengthily on the subject. Our letters should be in their possession in a few days, and we could then telegraph more fully and intelligently, particularly if we were in receipt of your esteemed favor inviting our firm propositions.

The writer would also be pleased to call on you any day and hour you may wish to appoint.

Awaiting the favor of your reply, we are, sir,
Your most obedient servants,

L. VON HOFFMANN & CO.

Hon. JOHN SHERMAN,
Secretary of the United States Treasury, Washington, D. C.

Without at once responding to that letter, Mr. Secretary Sherman, under date of May 31, wrote to his agent in London as follows:

TREASURY DEPARTMENT, Washington, May 31, 1877.

DEAR MR. CONANT: Your letter of the 19th is received. Since its date matters here have changed greatly for the better, and I have made two calls for ten millions each.

There is a strong, steady demand for our bonds, and I have now no fear but the two hundred millions four-and-a-halves will be exhausted before the 1st of July, when they will be withdrawn. The prospect of placing the 4 per cent bonds, commencing July 1, is very good. I have submitted to the syndicate a proposition in substance requiring them to take twenty-five millions 4 per cents during July and August, of which five millions will be for resumption purposes, with a stipulation that if they take fifty millions additional in September and October the contract will be extended to January 1, 1878, five millions a month to be applied for resumption purposes. I do not propose to vary essentially from the proposition. I have another offer almost as good from other parties, but I hope to combine these two offers into a modified syndicate, and, if possible, reserve the right to sell bonds at par, in coin or 6-20 bonds, to persons who apply directly to me for exchange, giving, however, the syndicate the half per cent commission. We will considerably reduce the cost of the bonds, I think, to one-tenth of 1 per cent, so that the contracting parties will have a reasonably fair commission. I am already assured of many sales of the bonds whenever offered, without the aid of the syndicate, so that I consider myself strong enough to undertake the placing the bonds even without their aid, if they will not agree to reasonable terms. If I can secure the active, hearty cooperation of all the parties who wish to engage in selling the bonds, and they will be content with a reasonable profit, the operation of funding can go on so rapidly that they ought to be satisfied with the profit they will make.

I have not overlooked the possibility that some movement of coin will be made to meet called bonds in Europe in excess of bonds sold there, but hope to perfect arrangements by which I will secure American bullion to meet this demand without stopping accumulations of coin in the Treasury.

The prospects here are favorable for a good crop in all the States of the Mississippi Valley, but there will probably be a bad crop in California.

What we must do is push the loan so that it will be an established success before the meeting of Congress. If you can succeed in inspiring the Rothschilds to aid this purpose I am sure of success. My proposition has been sent to them, and I was advised would be answered by telegram about this time; but by the 15th I hope to have the arrangements completed.

If upon receipt of this letter there is anything of striking interest affecting the loan you may cable me.

All well in the Department. Matters are going along quietly and steadily.
Very truly, yours,

JOHN SHERMAN.

Hon. CHAS. F. CONANT, London.

This letter is worthy of study and careful consideration by the amateur financiers of the present day.

The effect of all this was soon manifest. On the 9th day of June Mr. Conant, the agent of the Treasury Department in London, wrote the following very interesting letter to the Secretary:

LONDON, ENGLAND, June 9, 1877.

DEAR MR. SECRETARY: I had the honor on yesterday to send a cable to you to the effect that the Messrs. Rothschilds had cabled Belmont & Co. in regard to the forty-ninth call. I have been urging them for more than a week to make the call; but upon being informed that you had invited the contracting parties at home to meet you to-day for consultation respecting the negotiation of the 4 per cent bonds, the parties here said that the matter of the call might as well be left for consideration on that occasion.

I imagine that the only point of difference in making a new contract will be in the amount to be taken by the firm. I think they will take twenty or twenty-five millions if you desire it. The placing of two hundred million of 4 bonds within one year was not expected at the time the contract was made. These bonds are held in large blocks here, and very largely by bankers, and will in all probability, if there should be a demand for money, be redistributed; and the parties think that if they should come upon the market in that way they might interfere with the 4 per cent bonds. The Messrs. Rothschilds talk more encouragingly about the 4 per cent bonds than they did when I first arrived here; but they are not as sanguine of success as the other members here are, which I think is owing to the rather gloomy view they take of political affairs and the war.

The sale of fifty million of the 4 per cent bonds will make the market for them; and when that is accomplished I think the balance will go off just as well as a 4 per cent loan would.

The markets are almost daily growing better for refunding operations. It is now thought here that shipments of gold from New York will stop.

It is stated that the amount of gold now on the way here from Australia is upwards of \$6,500,000.

General Hillhouse, assistant treasurer at New York, can obtain for you, if you should desire to have it, as he has done for me several times, a comparative statement by months of the export and import of gold at the port of New York.

The Indian Government has advertised for offers for a 4 per cent loan of about \$10,500,000, which it is likely will be taken by the banks here. I have been privately informed that Germany may put a loan upon the market for railway purposes in Prussia.

I inclose a newspaper clipping containing an article on the "Resumption of Specie Payment by France," which you may have seen; but if not, I think you will find it worth reading. The annual interest charge on the funded debt of France is about \$145,570,000. Nearly one-half of this debt bears interest at the rate of 5 per cent.

The floating and unfunded debt is quite large. I send herewith copy of a report made to Parliament by the select committee on the depreciation of silver.

There has been an increase in bullion in the Bank of England during the past week of £215,814, and in circulation £79,765. The Imperial Bank of France

has gained £486,000 in bullion during the week, while the Imperial Bank of Germany has lost £250,000 in bullion.

The newspapers have recently had a great deal to say about American credit, referring to corporate securities. A great amount of money has been lost here through visionary enterprises in America, those papers say. The State of Virginia owes an old debt here. All this, however, does not affect our national credit.

I have the honor to be, with great respect, your obedient servant.

CHAS. F. CONANT.

Hon. JOHN SHERMAN,

Secretary of the Treasury, Washington, D. C.

And then came the memorable contract, the basis upon which the money was received for resumption purposes:

CONTRACT OF JUNE 9, 1877.

This agreement, entered into this 9th day of June, 1877, between the Secretary of the Treasury of the United States, of the first part, and Messrs. August Belmont & Co., of New York, on behalf of Messrs. N. M. Rothschild & Sons, of London, England, and associates and themselves; Messrs. Drexel, Morgan & Co., of New York, on behalf of Messrs. J. S. Morgan & Co., of London, and themselves; Messrs. J. & W. Seligman & Co., of New York, on behalf of Messrs. Seligman Brothers, of London, and themselves; Messrs. Morton, Bliss & Co., of New York, on behalf of Messrs. Morton, Rose & Co., of London, and themselves, and the First National Bank of the city of New York—

Witnesseth: That the said Messrs. August Belmont & Co., on behalf of Messrs. N. M. Rothschild & Sons and associates and themselves, hereby agree to purchase from the Secretary of the Treasury \$10,312,500 of the bonds known as the 4 per cent consols of the United States, issued under the acts of July 14, 1870, January 20, 1871, and January 14, 1875, and that Messrs. Drexel, Morgan & Co., on behalf of Messrs. J. S. Morgan & Co. and themselves, agree to purchase \$4,062,500 of said bonds, and that Messrs. J. & W. Seligman & Co., on behalf of Messrs. Seligman Brothers and themselves, agree to purchase \$4,062,500 of said bonds, and that Morton, Bliss & Co., on behalf of Messrs. Morton, Rose & Co. and themselves, agree to purchase \$4,062,500 of said bonds, and that the First National Bank of the city of New York agree to purchase \$2,500,000 of said bonds, making a total aggregate of \$25,000,000 of said bonds on the terms and conditions following:

First. Of the said aggregate amount not more than \$5,000,000 shall be sold for resumption purposes, the remaining \$20,000,000 to be sold for funding purposes, and subscribed for by the parties of the second part during the months of July and August, 1877.

Second. The parties of the second part shall have the exclusive right to subscribe in the same proportion to each of the subscribers for the remainder of the 4 per cent consols of the United States or any portion of said consols authorized to be issued by the acts of Congress aforesaid, by giving notice thereof to the Secretary of the Treasury on or before the 30th day of June, 1878; but the party of the first part reserves the right to terminate this contract at any time after the 31st day of December, 1877, by giving ten days' notice thereof to the parties of the second part.

Third. That the Secretary of the Treasury shall not sell for resumption purposes exceeding five millions per month during the continuance of this contract except by mutual agreement of the parties hereto. When subscriptions are made for other than resumption purposes by the parties of the second part, the party of the first part shall issue calls of even date with said subscriptions for the redemption of an equal amount of 6 per cent 5-20 bonds of the United States, as provided for in said act of July 13, 1870.

Fourth. The parties of the second part agree to pay for said 4 per cent bonds par and interest accrued to the date of application for delivery of said bonds in gold coin, matured United States gold coin coupons, or any of the 6 per cent 5-20 bonds called for redemption, or in United States gold certificates of deposit issued under the act of March 3, 1863, with the understanding that payment to the extent of the amount of any call shall be made within the time during which such call shall mature: *Provided*, That if the parties of the second part shall elect so to do, they may have the privilege of making any of said subscriptions payable specifically in uncalled 6 per cent 5-20 bonds of the United States, in which case the Secretary of the Treasury may to the extent of such payments omit the calls mentioned in condition No. 3.

Fifth. The parties of the second part shall receive in coin a commission of one-half of 1 per cent on all bonds taken by them as allowed by the act of July 14, 1870, and shall assume and defray all expenses which may be incurred in sending bonds to London or elsewhere upon their request, or by transmitting bonds, coupons, or coin to the Treasury Department at Washington, including all cost of making the exchange of bonds, and shall also be charged with the cost of the preparation and issuing of the bonds.

Sixth. No bonds shall be delivered to the parties of the second part, or either of them, until payment shall have been made in full therefor in accordance with the terms of this contract.

Seventh. During the continuance of this contract any sales of bonds ordered by the Secretary of the Treasury by authority of law shall be made through the parties of the second part, who shall be allowed thereon a commission similar in amount and subject to the same deductions as prescribed in the fifth clause of this contract.

Eighth. It is also agreed that the parties of the second part shall offer to the people of the United States at par and accrued interest in coin the 4 per cent registered consols and 4 per cent coupon consols of the denominations of \$50 and \$100 embraced in this contract for a period of thirty days from the public notice of such subscriptions and in such cities and upon such notice as the Secretary of the Treasury may prescribe prior to the opening of the lists, and further, to offer to the subscribers the option of paying in installments extending through three months.

JOHN SHERMAN,

Secretary of the Treasury.

AUGUST BELMONT & CO.,

On behalf of N. M. ROTHSCHILD & SONS, of London,

And associates and themselves.

DREXEL MORGAN & CO.,

On behalf of J. S. MORGAN & CO., of London,

And themselves.

J. & W. SELIGMAN & CO.,

On behalf of SELIGMAN BROTHERS and themselves.

MORTON, BLISS & CO.,

On behalf of MORTON, ROSE & CO., of London,

And themselves.

THE FIRST NATIONAL BANK

OF THE CITY OF NEW YORK.

By H. C. FAHNESTOCK.

Witnesses as to all:

R. C. MCCORMICK.

E. J. BABCOCK.

Compare this contract with the contract recently made by our Treasury Department, and we have an exhibition of great financiering skill at one time and most imperfect skill at another time.

The contrast is painful, and it is the more painful because at the date of the first contract, June 9, 1877, we were only twelve years away from one of the most destructive wars of modern times, and there was great and serious doubt in the minds of our people and of the people of the world whether or not the credit of the Government would ever be restored. Resumption of specie payments was deemed a chimera of the imagination; and yet this contract was made, and I point out the salient difference between this and the unfortunate contract recently made.

In the first place the precise amount of bonds was stipulated, and all the terms and conditions upon which they were to be issued were definitely and distinctly made known; and the uses to which these bonds were to be put, or rather the proceeds therefrom, were also definitely written in the contract. A portion was to be used for resumption purposes and a portion for funding purposes. But one of the strongest contrasts is in the following two conditions: In the Sherman contract the party of the first part reserves the right to terminate this contract at any time after the 31st day of December, 1877, by giving ten days' notice thereof to the parties of the second part.

In the contract under consideration, recently made, not only does the Secretary bind this Government to the delivery of the whole \$82,000,000, but binds this Government to accept the demands of this same syndicate for conclusive bids for all other bonds that may be offered by the United States until the 1st of next October, at whatever anybody else will offer for them. In that case, if the Secretary saw that the Government could do better than to carry out its contract he contracted, to be allowed to put an end to the contract. It would be a great thing for the United States Government to-day if it could be allowed to put an end to this foreign syndicate contract. If it had that authority to-day the people of the United States would subscribe for this loan at 3 per cent in "coin" bonds. That everybody knows, for the offers ran up into fabulous sums for this same loan at the reduced rate of interest.

But our Secretary has placed it beyond his power, and this contract must be executed if it takes the pound of flesh to do it.

But again: Under that contract the syndicate was not permitted to buy any of the 4 per cent bonds until they had been offered for a period of thirty days by public notice in such places and under such conditions as the Secretary of the Treasury might prescribe, to the people of the United States for their subscriptions. In other words, mindful of the interest of the people of the United States, the Secretary of the Treasury said: "I must have money; I must have this money; I must have it in amounts and at times herein specified; but I will give to the people of my own country the first opportunity to subscribe to this loan; and before you shall have one bond you shall offer the entire people of the United States the opportunity to take that bond; and if they desire them they shall have all the bonds."

And furthermore he stipulated that they might subscribe for the bonds and pay for them in three installments, so as to make it easy for the people of the country to subscribe for these bonds. In the present case the people of the United States are deprived of all knowledge of the loan, except such as they may obtain through the syndicate. They are given no opportunity to subscribe, and the foreign subscriber takes the entire issue, and does it out in quantities to suit himself, excepting to such people of the United States as may have the favor of the syndicate in their behalf.

Some days following this contract Mr. Belmont wrote to Mr. Sherman looking forward, apparently, with a prophetic eye to what has happened since. Under date of June 14, in his letter of that date, we find the following:

We see with pleasure that you anticipate a favorable result from the popular subscriptions, and we trust that your anticipations may be fully realized.

Carrying out the stipulations of their contract, the syndicate published throughout the United States the following advertisement:

Under the authority of a contract with the Secretary of the Treasury, the undersigned hereby give notice that from this date until July 16, at 3 p. m., they will receive subscriptions for the 4 per cent funded loan of the United States in denominations as stated below, at par and accrued interest in gold coin.

The bonds are redeemable after thirty years from July 1, 1877, and carry interest from that date, payable quarterly, and are exempt from the payment of taxes or duties to the United States, as well as from taxation in any form by or under State, municipal, or local authority.

The interest on the registered stock will be paid by check, issued by the Treasurer of the United States to the order of the holder, and mailed to his address. The check is payable on presentation, properly indorsed, at the offices of the Treasurer and assistant treasurers of the United States.

The subscriptions will be for coupon bonds of \$50 and \$100, and registered stock in denominations of \$50, \$100, \$500, \$1,000, \$5,000, and \$10,000.

The bonds, both coupon and registered, will be ready for delivery July 2, 1877.

Forms of application will be furnished by the Treasurer at Washington, the assistant treasurers at Baltimore, Boston, Chicago, Cincinnati, New Orleans, New York, Philadelphia, St. Louis, and San Francisco, and by the national banks and bankers generally. The applications must specify the amount and denominations required, and for registered stock the full name and post-office address of the person to whom the bonds shall be made payable.

Two per cent of the purchase money must accompany the subscription. The remainder may be paid, at the pleasure of the purchaser, either at the

time of the subscription or at any time prior to October 16, 1877, with interest added at 4 per cent to date of payment.

The payments may be made in gold coin to the Treasurer of the United States at Washington, or assistant treasurers at Baltimore, Boston, Chicago, Cincinnati, New Orleans, and St. Louis, and to the assistant treasurer at San Francisco, with exchange on New York, or to either of the undersigned.

To promote the convenience of subscribers, the undersigned will also receive, in lieu of coin, United States notes or drafts on New York, at their coin value on the day of receipt in the city of New York.

One of the most important letters in this wonderfully interesting series of letters is a letter written by the Secretary of the Treasury, Mr. Sherman, under date of June 16, which expresses the opinion of the Secretary upon the grave questions which have since agitated the public mind. Mr. French, one of the Assistant Secretaries of the Treasury, had written an opinion on this subject, but the great head of the Treasury did not see fit to issue an official letter at that time, construing the laws of the United States. But he gave an opinion, which has been the law of the United States Treasury from that day to this, eighteen years. And it ought to have been sufficient without the attempted introduction into a bond of the United States Government of the word "gold." It was a better security to the bondholder than the "gold" bond itself, which would have created a reaction in the minds of the American people that would have shocked the credit of the United States.

The letter is as follows:

TREASURY DEPARTMENT, Washington, June 16, 1877.

DEAR SIR: Your private note, the letter of your firm, and one from Messrs. Seligman & Co., asking me to make a public statement over my own signature, similar to that of Mr. French, are received. I have given to this important suggestion the most serious consideration, and have come to the firm conclusion that such an act on my part would be inexpedient and defeat the very object you have in view. As a purely executive officer I have no power to pass upon the question mooted. My attempt to do so would at once unite all those who are seized with this mania and those who oppose executive encroachment upon legislative power. It would create excitement, personal and political animosities would mingle with it, and it would tend more than anything else to defeat the success of the loan. I am quite sure this would be the result.

As to whether Congress or the people would ever undertake to pay either principal or interest of the bonded debt, and especially the bonds sold since 1873, in silver, I have a firm conviction that the question will never seriously be raised. These bonds will be paid, principal and interest, in gold coin. The people of the United States have always been extremely sensitive as to the public credit. They never have, for the sake of an apparent profit, yielded any question involving the public honor.

The great satisfaction that will arise from the funding of the loan at a low rate of interest, together with their strong sense of public honor and public faith, will always secure the payment of these bonds, principal and interest, in coin.

Parties or factions may for a time raise and contest questions, but they are but bubbles and will pass away, and like all other questions involving the public credit will be rightfully settled in due time by Congress and the people.

Nothing would so tend to disturb this result as unauthorized "theses" or dogmas by an executive officer upon a question purely legislative or judicial. Indeed, it may be that too much has already been said about this matter by both the President and myself, and I assure you that you will have no occasion to be disturbed by anything truthfully reported of either of us hereafter. The better way is to move right along, making your own statements, and if at any time I see a proper occasion for a strong expression of my opinion I will give it.

Please show this to Mr. Seligman and such of your associates as you deem proper as an answer to all.

Very truly, yours,

JOHN SHERMAN.

HON. AUGUST BELMONT, New York.

Here, now, is a little correspondence which thunders upon the men who attempted to change our entire system by a declaration in one bond that necessarily must have impaired the value of all other bonds.

On the 2d day of November, 1877, the Hon. George F. Edmunds, a Senator from the State of Vermont, addressed the following letter to the Secretary of the Treasury:

UNITED STATES SENATE CHAMBER,
Washington, November 2, 1877.

DEAR SIR: Can you tell me whether there are any, and if so what, United States bonds that are payable on their face by express statement in gold coin as distinguished from coin merely?

Yours, truly,

GEO. F. EDMUNDS.

In answer to Senator Edmunds's letter the Secretary of the Treasury wrote the following letter, which ought at this day to be placarded upon every bulletin board in every chamber of commerce and every board of trade in the United States:

TREASURY DEPARTMENT, November 2, 1877.

SIR: In reply to your note of to-day I have to advise you that no United States bonds are payable in gold coin by express statement on their face. Since the passage of the act of March, 1869, bonds follow the language of that act, and are payable in coin of the standard of the date of the resumption act; that is, "in coin of the present standard value."

Very respectfully,

JOHN SHERMAN, Secretary.

HON. GEORGE F. EDMUNDS,
United States Senate.

Now, turning aside for a moment from the historical features of this remarkable period, what has happened from that day, November 2, 1877, to justify the demand of a foreign syndicate coming into this country and demanding that we shall change the record of this quarter of a century, almost, and place the word "gold" in our bond, when it had been omitted by all the Secretaries of the Treasury, all the acts of Congress, and by the construction thereon put by all these officers? It would have been a blow at every outstanding security that would have prostrated the credit of this country at home. We had gone through the period of war; we had gone through the period of resumption; we have traveled along this pathway for a quarter of a century, prospering to a large extent, with our bonds payable in coin.

Without any reason being given to the public, without any discussion before the public, without any of the learning of the skilled and wise men of the country brought to our aid, we are suddenly called upon out of the mysteries of the night, out of the impenetrable gloom of private contract and private conspiracy and private organization, to place in our bonds a new term, a new condition, without study as to its effect, without knowledge as to its purposes; and because the men of this House of Representatives refuse to do it, small-fry financiers snap at the heels of Congressmen, talk about reading them out of their party, threaten that "they will hear something drop when they come home," and talk as though the credit of the Government had in some way been assailed; and Democratic politicians in the great cities of the Western States gather together around festal boards, and the longer they feed the more eloquent they get as to the "patriotic duty" of men in this connection.

Within a year in the State of Ohio the Democratic party ran a State ticket, and incidentally 21 candidates for Congress, upon a State platform demanding free and unlimited coinage of silver. And it is within my personal knowledge that gentlemen of the highest character, of elaborate education, and enormous wealth stood upon the platforms of the hustings and advocated the election of that ticket—advocated the ratification of that platform, subscribed their money in large amounts to the success of that ticket, and are to-day traveling about the country, entering the portals of newspaper offices, sitting at the mahogany furniture of clubs and places, and toasting each other, and delivering elaborate, learned speeches denouncing Republican Congressmen for voting against the "gold bond," and insisting that the honor of the Government was pledged to that performance, and that all who did not fall into it are knaves and political hypocrites. This shows the effect of "ward politics" upon great men.

These gentlemen believe they are consistent. In November they put up their money for the triumph of a free and unlimited coinage platform. In February following they denounce everybody who is willing and determined to stand by the record and history of the country.

There is another view of this matter which places the action of the former Secretary of the Treasury in pleasing contrast to the American people with the action of the current Secretary of the Treasury. In the present instance, as we all know, secrecy was observed. No one knew of the existence of this contract until it was suddenly sprung upon the Ways and Means Committee by notice from the Treasury Department that the contract had been actually made. When Mr. Secretary Sherman concluded that he would enter upon the business of raising money for resumption he made known to all the financial men of the country his purpose, and gave notice where he would be, and when, and what his object would be. The following correspondence is decidedly interesting:

[Mr. Sherman to Messrs. Belmont & Co.]

TREASURY DEPARTMENT, April 5, 1878.

GENTLEMEN: It is my purpose to be in New York at 4 o'clock on Monday afternoon, and I would like, if practicable, to meet the members of the old syndicate at the Fifth Avenue Hotel that evening at any hour convenient to them to confer as to the best mode of obtaining \$50,000,000 gold coin or bullion prior to January 1, 1879, for resumption purposes, and to receive from the associates, or any of them, or from new parties, offers for any of the description of bonds I am authorized to sell for that purpose.

I propose to accumulate this coin in either the Treasury, the assay offices, or the public depositories throughout the United States that will comply with the conditions of section 5153, Revised Statutes.

I will send a similar letter to this to the First National Bank, and have to request that you will give notice to the other members of the old syndicate, and, with their consent, to any others you desire to participate in the interview.

Very respectfully,

JOHN SHERMAN, Secretary.

MESSRS. AUGUST BELMONT & CO., New York.

[Mr. Sherman to Assistant Treasurer United States, New York.]

TREASURY DEPARTMENT, April 5, 1878.

SIR: You will please inform Messrs. H. F. Vail, president National Bank of Commerce; J. D. Vermilye, president Merchants' National Bank; George S. Coe, president American Exchange National Bank; H. B. Sherman, Mechanics' National Bank, and James Buell, president Importers and Traders' National Bank, that I desire an interview with them at any hour on Tuesday next, at your office, or at such other places as they may prefer, in respect to the purchase for the Treasury for resumption of, say, \$50,000,000 gold coin or

bullion, to be delivered monthly and before the 1st of January next, either at your office or at the designated depositories of the United States, under section 5153 Revised Statutes, and also, if practicable, to secure from them a bid for either of the three classes of bonds described in the refunding act to an amount sufficient to purchase the coin stated. These gentlemen are respectfully requested to select such others connected with national banks as they may agree upon to join in the interview.

Very respectfully,

Gen. THOMAS HILLHOUSE,
Assistant Treasurer United States, New York.

[Mr. Sherman to First National Bank, New York.]

TREASURY DEPARTMENT, April 5, 1878.

SIR: It is my purpose to be in New York at 4 o'clock on Monday afternoon, and I would like, if practicable, to meet the members of the old syndicate at the Fifth Avenue Hotel that evening at any hour convenient to them to confer as to the best mode of obtaining \$50,000,000 gold coin, or bullion prior to January 1, 1879, for resumption purposes, and to receive from the associates, or any of them, or from new parties, offers for any of the description of bonds I am authorized to sell for that purpose. I propose to accumulate this coin in either the Treasury, the assay offices, or the public depositories throughout the United States that will comply with the conditions of section 5153, Revised Statutes.

I have to-day sent a similar letter to this to Messrs. August Belmont & Co., and requested them to notify the other members of the old syndicate, and to invite such other persons to participate in the interview as the associates may desire.

Very respectfully,

H. C. FAHNESTOCK, Esq.,
First National Bank, New York.

[Messrs. Kuhn, Loeb & Co. to Mr. Sherman.]

NEW YORK, April 5, 1878.

SIR: We are prepared to make a very large subscription to the 4 per cent loan if you will agree to leave the proceeds of the bonds so subscribed for on deposit until December 31 in the national banks against the usual security to the Government.

As you doubtless desire to hoard coin for resumption purposes, our proposition will, we trust, be satisfactory to you, and we would thank you for an immediate reply.

Very respectfully,

Hon. JOHN SHERMAN,
Secretary of the Treasury, Washington, D. C.

[Assistant treasurer United States, New York, to Mr. Sherman.]
[Telegram.]

NEW YORK, April 6, 1878.

Hon. JOHN SHERMAN,
Secretary of the Treasury, Washington, D. C.

Your letter of yesterday received. Can I state or read contents to parties named therein?

THOS. HILLHOUSE,
Assistant Treasurer United States.

[Mr. Sherman to assistant treasurer United States, New York.]
[Telegram.]

TREASURY DEPARTMENT, Washington, April 6, 1878.

Gen. THOMAS HILLHOUSE,
Assistant Treasurer United States, New York.

You can read contents to parties named, but give no copy at present.
JOHN SHERMAN, Secretary.

[Mr. Sherman to Messrs. Kuhn, Loeb & Co.]

TREASURY DEPARTMENT, April 6, 1878.

GENTLEMEN: Your letter of the 5th instant, advising me that you are prepared to make a very large subscription to the 4 per cent loan upon certain terms, has been received.

In reply I have to state that I shall be at the Fifth Avenue Hotel, in New York, early next week, and shall be glad to confer with yourselves and associates on this subject. A letter addressed to me on Monday at the above-mentioned hotel will reach me.

Very respectfully,

Messrs. KUHN, LOEB & CO.,
31 Nassau Street, New York.

[Assistant treasurer United States, New York, to Mr. Sherman.]
OFFICE OF THE UNITED STATES ASSISTANT TREASURER.

New York, April 7, 1878.

DEAR SIR: I have seen all the gentlemen mentioned in your letter of yesterday (except Mr. Buell, who will be notified), and have just telegraphed: "Meeting arranged for Tuesday at 1 o'clock p. m." I suggested my office as the place, but the Bank of Commerce was preferred, as less likely to attract public attention. Judging from the expressions of the gentlemen with whom I conversed I think they are disposed to give their cordial cooperation in carrying out the important measures you have in contemplation.

Very respectfully, yours,

THOS. HILLHOUSE,
Assistant Treasurer United States.

The Hon. JOHN SHERMAN, Secretary.

Memorandum of interview, Monday, April 8, 1878, at 5 p. m., at the Fifth Avenue Hotel, New York, between Hon. John Sherman, Secretary of the Treasury, and the members of the old syndicate, Messrs. Belmont, Seligman, Bliss, Fabri, and Fahnestock.

There were also present with the Secretary Hon. Charles Devens, Attorney-General; John Jay Knox, Comptroller of the Currency; Hon. Charles F. Conant, Daniel Baker, and E. J. Babcock.

The Secretary stated that the object of his visit to New York and of his request for an interview with the associates was to obtain \$50,000,000 coin for resumption purposes, and he would like to sell 4 per cent bonds to that amount.

Mr. Belmont did not think the 4 per cent bonds could be sold at present,

and the associates all concurred in the opinion that they would prefer making a proposition for the four-and-a-halves, although they were not prepared to make any definite offer. The Secretary said he would like to get 106 for the four-and-a-halves, but the associates said they would not consider that at all; they would communicate with the Rothschilds and others, and might possibly be able to offer 101; they would come to some conclusion by the next day.

The meeting adjourned to Wednesday, at 4 o'clock.

Memorandum of an interview, Tuesday, April 9, 1878, at 1 p. m., at the National Bank of Commerce, between Hon. John Sherman, Secretary of the Treasury, and the presidents of the national banks: Mr. Vail, Commerce; Mr. Vermilye, Merchants; Mr. Coe, Merchants' Exchange; Mr. Sherman, Mechanics; Mr. Buell, Importers and Traders; Mr. Moses Taylor, City; Mr. F. D. Tappan, Gallatin; Mr. G. G. Williams, Chemical; Mr. F. A. Palmer, Broadway; Mr. George I. Seney, Metropolitan; Mr. P. C. Calhoun, Fourth National.

The Secretary was accompanied by Hon. Charles Devens, Attorney-General; Hon. John Jay Knox, Comptroller of the Currency; Gen. Thomas Hillhouse, Assistant Treasurer; Daniel Baker, and E. J. Babcock.

Mr. Vail said that this meeting was called at the request of the Secretary of the Treasury; that the gentlemen present had no information as to the object of the meeting, and had no opportunity for consultation; that the Secretary would explain more fully what he desired.

The Secretary said that he proposed to resume specie payments on the 1st of January next in accordance with law, and that for this purpose he wished to get \$50,000,000 of gold, and to accumulate this amount would, if possible, sell 4 per cent bonds.

Mr. Vermilye and Mr. Coe spoke at some length to the effect that they were in full accord with the Secretary on the subject of resuming specie payments, and they were willing to cooperate in any way to bring it about. They said that although they had not consulted with the other gentlemen present, they had no doubt they were all agreed upon this subject. They thought, however, it would be utterly useless to attempt to sell 4 per cent bonds, and that as far as such bonds were concerned there need be no more said.

The Secretary said this being so, he would like to have some propositions for four-and-a-halves.

Mr. Coe said that no definite proposition could be made without further consultation among themselves; that they were willing to assist to the extent of their power to obtain resumption; that they would place themselves at the service of the Secretary in any way he might wish without compensation. He said that he thought an arrangement could be made by which the national banks could be made the Secretary's agents in the sale of bonds. He thought the banks might take the \$50,000,000 of 4 per cent bonds, to be paid for by the 1st of January, the Government to receive whatever the banks could get for the bonds.

The Secretary invited the gentlemen to confer among themselves, and, if practicable, make him some definite proposition in the morning.

The meeting adjourned until 11 o'clock Wednesday, April 10.

Memorandum of interview, Tuesday, April 9, at 4 o'clock, at the Fifth Avenue Hotel, between Hon. John Sherman, Secretary of the Treasury, and the members of the old syndicate.

The Secretary was accompanied by Hon. Charles Devens, Attorney-General; Daniel Baker, and E. J. Babcock.

Mr. Belmont read a cable from the Rothschilds offering 101 for \$100,000,000 4 per cent bonds, \$50,000,000 for resumption and \$50,000,000 for refunding purposes.

The Secretary said he was not prepared to accept, but would give a definite answer the next day.

Adjourned to meet Wednesday, at 12 o'clock, at the subtreasury.

WEDNESDAY, April 10.

The Secretary met Mr. Vail of the National Bank of Commerce, and Mr. Vermilye of the Merchants' National Bank, at 11 o'clock, at the subtreasury.

Mr. Vail and Mr. Vermilye submitted a memorandum that if the Secretary would indicate his willingness to receive a proposition for the negotiation of \$50,000,000 4 per cent bonds at par in gold they would recommend the national banks to unite in making it.

Proposition inclosed, marked A.

The Secretary then asked Mr. Vail and Mr. Vermilye whether, if a proposition was made to him by bankers of acknowledged credit and responsibility of 101 for 4 per cent bonds payable in installments and with the usual option, in their opinion it was his duty to accept it.

They both said decidedly, yes; that such an arrangement would be far more advantageous than the acceptance of their proposition, as, if they took the bonds, it might impair to some extent their power to render the usual facilities to their commercial customers.

WEDNESDAY, April 10.

The Secretary met the members of the old syndicate at the subtreasury at 12 o'clock.

There were present with the Secretary Gen. Thomas Hillhouse, assistant treasurer; Hon. Charles F. Conant, Daniel Baker, and E. J. Babcock.

The Secretary said that he would sell only \$50,000,000 4 per cent bonds; that these must be paid for in gold coin for resumption purposes; that he would sell them for 101, allowing one-half of 1 per cent commission, the syndicate to pay all expenses; but before signing the contract wished to communicate with the President.

These terms were accepted by the syndicate upon condition that their associates in London would consent, they reserving the right to cable to London for such consent; and the meeting adjourned until 1.30 o'clock, when the Secretary having received a telegram from the President, the details of the contract were then discussed, and signature was delayed for an answer to the cable of the syndicate.

APRIL 11.

At 12 o'clock the parties met at the subtreasury, and Mr. Lucko, of Belmont & Co., informed the Secretary that the English parties had authorized them to close the contract, and it was executed.

A.—Proposition submitted April 10, 1878, by Messrs. Vail and Vermilye in behalf of national banks.

If the Secretary will intimate his willingness to receive a proposition from the national banks in New York, Boston, Philadelphia, and Baltimore for the negotiation of fifty millions 4 per cent bonds at par in gold for resumption purposes, we will recommend our associates to unite in making it, with the belief on our part that it can be accomplished as suggested. This special loan to be the only bonds of this character offered, unless the same parties have the option of any further sums required.

[Mr. Sherman to the President.]

NEW YORK, April 9, 1878.

DEAR MR. PRESIDENT: General Devens and I have conferred with a committee of presidents of the national banks, and also twice with the members of the old syndicate.

We have presented as strongly as we know how the 4 per cent bonds, and

have offered them on favorable conditions as to mode of payment, but all the parties decline to entertain a proposition as to the 4 per cent bonds. The silver bill, the uncertainty of the money market here and in Europe, they insist, put out of the question the sale of these bonds in sums sufficient to answer our purposes.

We were met by the bank presidents with what I considered rather a chilly reception. They would make no definite offer for even 4 per cent bonds, and their chief spokesman had but little to say except in opposition to the silver bill. I urged them to make an offer for the 4 per cent bonds and to cooperate with the Treasury in measures for resumption, but they said they could not do so without consultation with the Philadelphia and Boston banks and with their several boards of directors; nor would they give us any encouragement for any offer higher than par, with a stipulation that the coin should be deposited temporarily with them.

After consulting with Rothschild, Belmont has now made us a definite proposition of 101 for \$100,000,000 4 per cent bonds. This, if accepted, places resumption beyond peradventure, and will provide \$50,000,000 for refunding purposes. Although this is below what I regarded as the minimum rate when I conversed with you, and is somewhat below actual quotations for these bonds in the market, yet, considering the uncertainties of the future, I am strongly tempted to accept their offer.

General Devens has been present at all these consultations and interviews, and is fully advised of my views.

I should like instructions by 11.30 to-morrow, as I have agreed to give a definite answer by 12 o'clock.

I could, perhaps, prolong the negotiations, but will act promptly upon hearing from you. My inclination was to invite proposals by public advertisement, as we conferred about, but the great fear is that such proposals may not bring as favorable an offer as we now have, especially for such large sums, and may lead to the withdrawal of the offer.

Very respectfully,

JOHN SHERMAN, *Secretary.*

[Messrs. Kuhn, Loeb & Co. to Mr. Sherman.]

NEW YORK, April 10, 1878.

SIR: Having now fully conferred with our friends, we beg to submit to you the following proposition, viz:

We will subscribe for equal amounts of the 4 percents and of the 4 1/2 percents, and for an amount sufficient to cover the sum required by you for resumption purposes, say for a total of fifty millions bonds.

The subscription made to be paid for now, but the proceeds of same to be deposited by you with certain national banks in this city, which deposits are to be returned to the Treasury as follows, viz:

Twenty-five per cent on November 30, a. c.; 25 per cent on December 15, a. c.; 50 per cent on December 31, a. c.

No other 4 per cent bonds to be sold by the Treasury during the year, but this subscription not to interfere with the popular subscriptions to the 4 per cent loan now going on at the Treasury Department.

While we would request you to consider this proposition as informal, we feel satisfied, if you will indicate to us your readiness to act upon the same, that we can within a few days make a definite proposition as above.

We think we will be able to harmonize in our syndicate all interests and we feel confident we can induce the leading national banks to join us in our subscription.

Hoping to hear from you at your earliest convenience, we remain, honorable sir,

Yours, very respectfully,

Hon. JOHN SHERMAN,
Secretary of the United States Treasury, Present.

[Mr. Sherman to the President.]

[Telegram.]

NEW YORK, April 10, 1878.

The PRESIDENT, Washington, D. C.:

Ultimatum one hundred one and half less one-half of 1 per cent commission for fifty millions; they to pay expense of loan. Shall I accept? Answer immediately, care General Hillhouse, assistant treasurer.

JOHN SHERMAN, *Secretary.*

[The President to Mr. Sherman.]

[Telegram.]

EXECUTIVE MANSION, April 10, 1878.

The SECRETARY OF THE TREASURY,
(Care Gen. Thomas Hillhouse, New York City):

You are authorized to act according to your judgment of the public interest on proposition described in letter of yesterday. My inclination is favorable to acceptance.

R. B. HAYES.

The difference between that sort of a proceeding, made in the open daylight, with the whole financial world looking on and listening, without a door being closed, or any injunction of secrecy, is in pleasing contrast with a contract made in the dark, without the knowledge of any human being except the parties thereto, and which is only brought to the knowledge of the people by its production in the room of the Committee on Ways and Means, with a solemn injunction placed upon that committee that no mention should be made of the terms of the contract, and which finally reaches daylight after a demand has been made upon it by the introduction into the Senate of the United States of a resolution of inquiry, and the threat of one in the House of Representatives. In the one case all possible effort was made to secure competition; in the other all possible effort, apparently, was made, whether purposely or otherwise I know not and do not charge, that there should be no competition. And in the one case the pay of the syndicate was one-half of 1 per cent, and in the other case the profit of the syndicate was \$10,000,000.

And now, Mr. Chairman, having pointed out some of the more conspicuous and salient differences between the administration of a Democratic Secretary of the Treasury in 1895, when a third of a century of recuperation had been adding to our national strength, and the administration of John Sherman, when the country lay

prostrate under a burden of debt and turmoil, I commend the record to the candid consideration of the distinguished gentleman from Illinois, Mr. SPRINGER; and in his retirement, which for personal reasons many of us greatly regret, I suggest that he devote some portion of his time to a frank and candid consideration of the difference between Republican and Democratic wisdom in this behalf.

Arbitration.

There is no more danger of the abandonment of arbitration after a fair trial than there is of our going from the court of justice back to the wager of battle.

SPEECH

OF

HON. WILLIAM J. BRYAN,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 26, 1895.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 8556) concerning carriers engaged in interstate commerce and their employees—

Mr. BRYAN said:

Mr. CHAIRMAN: I shall vote for the pending measure, not because I believe it entirely free from faults, but because I am in favor of the principle of arbitration and am willing to support any proposition which looks toward the equitable adjustment of disputes between capital and labor. Popular government is built upon the theory that the people are able to make and execute all the laws necessary for their own government. Not only are the people capable of self-government, but each generation is competent to judge of its own necessities and to suit to its own peculiar needs the form of government and the law. When new conditions arise new laws become necessary to meet and provide for such new conditions. Arbitration is needed to-day because of the change which has taken place in the industrial world within the last century. One hundred years ago the employer did business on a small scale and was intimately acquainted with each of his employees. He knew their names, their financial condition, and the circumstances which surrounded each.

This intimate acquaintance created a mutual sympathy, which was sufficient to soften and regulate their business relations; but steam, electricity and inventive genius have wrought an entire change in our industrial system. Instead of the small employer we now have the large corporation; instead of a few employees working immediately under their employer we find a hired superintendent fixing the wages, regulating the hours of work, and virtually holding in his hand the means of subsistence of hundreds, thousands, and sometimes tens of thousands of working men. It is impossible for the superintendent to know the employees except as their names appear upon the pay roll, and it is impossible for the employees to know the employer except as "the boss." Under these circumstances mutual sympathy is impossible, and that regulating force being removed society must by law supply another regulating force.

The growing antagonism between capital and labor is not strange. The power which the employer possesses to regulate wages is enormous, and the temptation to use that power for pecuniary profit regardless of the equities of the case is strong, in fact, almost irresistible. We must expect that human beings possessing great power over their fellows will abuse that power unless restrained by law. Jefferson never spoke more truly than when he said that one of the important duties of Government is to prevent men from injuring one another. It is natural, too, that employees, recognizing their inability to alone cope with their employers, resort to organization, that the individual's power of resistance may be multiplied by numbers. It is natural, also, that the organization and the employer should regard each other with more or less of suspicion and that contests should arise between them.

Every contest between an employer and a large number of employees involves a considerable amount of money in the aggregate, and hence each side is anxious to win. The employer in times of business depression can always find those who are willing to take the place of strikers on almost any terms, because coerced by their own wants and by the needs of their families. Capital can wait, but man can not put off until to-morrow the satisfying of his hunger, nor can he turn a deaf ear to the pleadings of wife and child. The strikers, feeling that their cause is just, and knowing that defeat means possible privation, can not view with unconcern the willingness of others to take

their places. While they themselves are generally restrained from offering injury to persons or property by respect for law and also by the knowledge that lawlessness always forfeits the public sympathy to which they must appeal, irresponsible characters are always present to take advantage of the excitement and confusion attendant upon a strike and commit acts which justify the employer in appealing to the authorities for protection.

These are the conditions, the natural conditions, I say, which have grown up, and we may expect these conditions to become more and more serious unless a remedy is applied at once. What should be done? Should we say to the employer, "Society will protect you in your effort to regulate the hours of labor and the wages of your employees regardless of consequences"? We can not say that without surrendering to the employer the power to fix the social, financial, and moral status of his workmen, for they all depend largely upon the conditions under which they labor. Should we, on the other hand, say to the employees, "Society will protect you in any effort you desire to make to regulate wages and hours of labor"? We can not say that without surrendering the property of the employer to the employee. It is not necessary for society to go to either extreme, nor can society allow either employer or employee to be the sole judge of conditions. Society has rights superior to both employer and employee, and must protect itself against the consequences which would follow from unreasonableness upon the part of either.

Society can not afford to allow the employer and the employee to fight out their differences even if they both desire to do so, and certainly neither desires to do so. Courts of justice are established to settle disputes, to construe contracts, and to award damages. Commissions are established to fix transportation rates and for various other purposes. Courts and commissions are simply arbitration boards instituted by society for its own protection and for the economical adjustment of personal difficulties. This bill seeks to extend the principle of arbitration to disputes between common carriers and their employees in regard to wages, hours of labor, and conditions of employment. I am in hearty sympathy with the purpose of the bill and shall gladly support it.

As I said, it is not a perfect measure, but it is too much to expect perfection in any kind of legislation, much less in legislation upon a new subject. We shall be able to correct some defects, doubtless, while the bill is under discussion, and defects which manifest themselves when the law goes into effect can be remedied as they become apparent. It is important that we make the start and make it at once. There is no more danger of the abandonment of arbitration after a fair trial than there is of our going from the court of justice back to the wager of battle. Arbitration is in the line of progress, and, like the adoption of the Australian ballot, is an indication, if not proof positive, that civilization is advancing, and that each new generation pitches its camp on higher ground.

Mexican War Pensions.

SPEECH

OF

HON. CHARLES L. MOSES,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 18, 1895.

The House having under consideration the bill (H. R. 7414) granting increase of pension to survivors of the Mexican and Indian wars, and to their widows—

Mr. MOSES said:

Mr. SPEAKER: This bill was unanimously reported by the Committee on Pensions during the last session. It proposes to increase the pensions of all Mexican and Indian war pensioners from \$8 to \$12 per month. The gentleman from California [Mr. CAMINETTI] and other members have appeared before the committee and urged the report of this bill. During the last session of the Fifty-second Congress the Mexican war act was amended so that any veteran of that war drawing a pension of \$8 per month can, if he will swear that he is a pauper, draw a pension of \$12 per month. Under that act about one-third, or probably more, of the Mexican veterans draw a pension of \$12. Why require these old veterans to take the pauper's oath? All of them are too old to work and nine-tenths are poor. Many of them would starve before they would submit to such humiliation. All other service pensions have been at \$12 per month.

I believe it is the opinion of all parties that these pensions should be equalized and all of them placed upon the same footing; that it is unfair to require these men to put on record the fact that they are paupers in order to draw the same pension that all other service pensioners of the country have drawn.

Mr. DOCKERY. What amount does the bill carry?

Mr. MOSES. I have the report here. All told there are now about 27,000 who would be affected by this bill—27,000 pensioners. We have also reported in favor of including pensioners of the Indian wars, and have them put on the same footing, giving them a pension of \$12 a month instead of \$8.

Mr. CANNON of Illinois. It increase the appropriation \$1,300,000.

Mr. MOSES. I will state that the averaged age of the beneficiaries of this law is now 75 years; and the increase will be only for a short time on account of the percentage of mortality of people of this age. If we expect to give these men the same pensions that have been given to other soldiers we must do it now, because they are rapidly passing away.

Mr. DOCKERY. What will the increase in the expenditures be under the operation of the bill?

Mr. MOSES. It will not exceed one million, because many will draw the \$12 under the pauper act.

Mr. CANNON of Illinois. I want to ask the gentleman a question for information. I find in the Commissioner's report that it will be \$1,309,632 increase for Mexican veterans and those who were engaged in the Indian wars.

Mr. MOSES. That was the estimate made a year ago. The figures are not so large as he gave them then. A great many have already been put on the roll at \$12 a month, and many more have died.

Mr. O'NEIL of Massachusetts. Will the gentleman allow me to ask him a question?

Mr. MOSES. Certainly.

Mr. O'NEIL of Massachusetts. Under the law at present on the statute books the Mexican veteran gets \$8 a month, and if he states that it is not enough to keep him in the necessities of life the pension is increased to \$12 a month.

Mr. MOSES. That is right. He must show that he is a fit subject for the "poor house." The regulations are very rigid.

Mr. HEPBURN. Mr. Speaker, I rise to a question of order. It is impossible to hear what gentlemen say.

The SPEAKER. The House will be in order.

Mr. SMITH of Illinois and Mr. TALBERT of South Carolina rose.

The SPEAKER. To whom does the gentleman yield?

Mr. MOSES. I yield to the gentleman from Illinois for a question.

Mr. SMITH of Illinois. I desire to ask the gentleman a question for information. As I understand, the Mexican soldiers who are drawing pensions under the act of 1893, those who are drawing service pension, will all be entitled to this increase to \$12 a month which was provided under that act.

Mr. MOSES. They all come in at the rate of \$12 a month.

Mr. SMITH of Illinois. They come in under this bill regardless of whether they are suffering from disability, and they receive this service pension.

Mr. MOSES. They do not draw any pension for disability. I have a bill on the Calendar giving the same pension for disability to those soldiers as are given to the Union soldiers of the last war. A soldier who lost a leg in Mexico gets only \$8 per month. There has been a general demand that our legislation ought to be general.

Now, there are 500 private bills before the Committee on Pensions asking for increase, but it is the opinion of the committee that all should be treated alike and they have reported this general bill, and I trust those gentlemen who are opposed to special bills will support this measure.

Mr. TALBERT of South Carolina. I suppose the limit is from 1842 to 1852. It is only soldiers engaged in wars between those years you put under this law giving \$12 a month.

Mr. MOSES. The bill does not extend the time at all. It applies to pensioners under the Mexican act of 1887, and the Indian war act of July 27, 1892.

Mr. HERMANN. I would like to ask the gentleman a question. I want to know if he would have any objection to including in his bill an amendment that would include the survivors of the Cayuse Indian war, which occurred in 1847 and 1848, on the Pacific Coast, in the States of Oregon and Washington? There are but 147 of these survivors, and it was one of the most bitterly contested Indian wars in the history of the country. These men were struggling for the benefit of American soil, and it seems to me an unjust discrimination not to include them, but to report a bill for the benefit of one class.

Mr. MOSES. The gentleman knows that under this mode of procedure the bill can not be amended. I am perfectly willing that the bill providing for the survivors of the Indian war to which the gentleman has referred shall be passed. The committee is ready to report it unanimously; and I am in favor of those bills, and of the adoption of a general law covering this subject. Of course we can not include that as an amendment to this bill. This I am sure is satisfactory to my friend from Oregon.

Mr. HERMANN. I do not wish to militate against the passage of this bill.

Mr. BARTLETT. I would like to ask the gentleman to state

what additional burden will be imposed upon the taxpayers of the country by the passage of this bill?

Mr. MOSES. To make the increase from eight to twelve dollars a month to these pensioners will incur an expense of about one million per annum.

Mr. BARTLETT. That is one million more of burden on the taxpayers.

Mr. MOSES. I am glad that the gentleman from New York is solicitous for the overburdened taxpayers. I will say that the beneficiaries of this bill belong to that class who have always borne the burdens of the country and who have received but scant recognition in return. This appropriation goes largely to a section that contributes ten times as much to the pension burden as it receives from it.

War Claims.

SPEECH OF

HON. FRANK E. BELTZHOVER,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 4, 1895.

The House having under consideration the bill (H. R. 286) to authorize the payment of damages sustained by the State of Pennsylvania from Union and Confederate troops during the late war, as adjudicated and liquidated by the State of Pennsylvania under the provisions of an act of the general assembly—

Mr. BELTZHOVER said:

Mr. SPEAKER: The bill now under consideration is designed to provide for the payment of claims for private property appropriated by the Government for public use during the war of the rebellion. The facts upon which the various claims covered by the bill rest must perhaps be considered separately, but the general propositions of law governing the determination of such claims can perhaps be best considered together.

The principle upon which governments are bound to pay for the property of their citizens appropriated to the public use in war is clearly settled in the law of nations, and has been recognized by all publicists, moralists, and jurists ever since the days of the civil law. Whether the government acts under the right of eminent domain or from necessity and outside of all constitutional provision, the claims of the sufferers have been universally recognized by the legislative authorities of all civilized nations.

Grotius says:

We must observe this, that the king may in two ways deprive his subjects of their right, either by way of punishment, or by virtue of his eminent power. But if he do so in the last way it must be for some public advantage, and then the subject ought to receive, if possible, a just satisfaction for the loss he suffers out of the common stock. (Grotius, b. 2, ch. 14, sec. 7.)

The state has an eminent right of property over the goods of the subjects, so that the state or those that represent it may make use of them, and even destroy and alienate them, not only on extreme necessity, but for the public, to which we must add that the state is obliged to repair the damages suffered by any subject on that account out of the public stock. Neither shall the state be absolved from this obligation, though for the present not able to satisfy it; but whenever the state is in a capacity, this suspended obligation shall resume its force. (Grotius, b. 3, ch. 20, sec. 7.)

Vattel says:

Is the state bound to indemnify individuals for the damage they have sustained in war? Said damages are of two kinds—those by the state itself or the sovereign, and those done by the enemy. Of the first kind some are done deliberately and by way of precaution, as when a field, a house, or garden belonging to a private person is taken for the purpose of erecting on the spot a tower, a rampart, or any other piece of fortification; or where his standing corn or storehouses are destroyed to prevent their being of use to the enemy. Such damages are to be made good to the individual, who should bear only his quota of the loss. (Vattel, 403.)

Whiting, in his War Powers, in which he lays down the law governing the subject in this country and particularly during our late war, says:

When individuals are called upon to give up what is their own for the advantage of the community justice requires that they should be fairly compensated for it. Otherwise public burdens would be shared unequally.

Public use does not require that the property taken shall be actually used. It may be disused, removed, or destroyed, and destruction of private property may be the best public use it can be put to. Suppose a bridge owned by a private corporation to be so located as to endanger our forts upon the banks of a river. To demolish that bridge for military purposes would be to appropriate it to public use. (Whiting, pages 16, 17.)

These authorities can be multiplied indefinitely to the same effect. The only excuse which has ever been recognized for not paying such claims is the inability of the Government, and no modern nation has ever yet availed itself of this.

England, Germany, and France have always paid their citizens for private property taken and used in war, and this Government has followed the same rule from its origin down to a very recent period.

The war of the Revolution was fought before there was any constitutional provision against taking private property for public use without making compensation. The troops for that war were

furnished by the States, and Congress was not therefore under a direct obligation to make provision for payment for property so taken during that war, but in 1784 adopted a resolution providing:

That it be referred to the several States, at their own expense, to grant such relief to their citizens who may have been injured as aforesaid as they may think requisite, and if it shall hereafter appear reasonable that the United States should make any allowance to any particular State which may be burdened beyond others that the allowance ought to be determined by Congress.

In pursuance of this resolution, when Mary Brower and others appealed to Congress in 1818 for the payment for property destroyed by the American Navy on Long Island on the advance of the British in 1776, the Committee on Revolutionary Claims denied the petition, not on the ground that compensation should not be made, but on the ground that the claimants should have appealed to the State of New York. Notwithstanding this resolution, on the recommendation of Mr. Hamilton, Secretary of the Treasury, Congress, in 1784, passed an act for the relief of the Wilmington Academy for damages occasioned by the occupation of the United States troops.

It is to be observed that the impoverished condition of the Government after the War of the Revolution might justly have entitled Congress to plead the inability of the Government to pay under the exception which is provided in the law of nations.

There is, however, no semblance of such a spirit exhibited anywhere in the action of the founders of the Government in dealing with the question. On the contrary they implanted in the fundamental law of the young Republic in the last clause of the fifth amendment to the Constitution the provision, "Nor shall private property be taken for public use without just compensation."

What is public use? When there is a public necessity for the property, as for quarters, subsistence, or the preservation or protection of an army, the officer in command may, if in his judgment it is necessary, seize and use buildings and other property for his command; and in case of danger he may order them destroyed for the protection of his troops or to prevent them falling into the hands of the enemy. In either event the public has had the use and benefit of the property, and the owner is entitled to indemnity.

In the language of Mr. Whiting, supra:

Public use does not require that the property taken shall be actually used. It may be disused, removed, or destroyed, and destruction of private property may be the best public use it can be put to.

In conformity with this view of the obligations of the Government to its citizens, Congress, after the war of 1812, provided by a general law, the act of April 9, 1816, and by more than a hundred special acts for the payment of property appropriated, damaged, and destroyed, not only by the United States troops, but by those of the enemy, covering practically all the losses suffered by our people during that war.

The general law of April 9, 1816, entitled "An act to authorize the payment for property lost, captured, or destroyed by the enemy, while in the military service of the United States, and for other purposes" (3 Stat., page 261), provides:

Section 1 of said act provided for payment for horses lost in battle or otherwise while in the military service in the war of 1812.

Section 2 directed payment for horses lost by the owner being dismounted or separated from the same.

Section 3 directed payment for all horses, mules, oxen, wagons, carts, boats, sleighs, or harness which was lost, captured, or destroyed by the enemy while such property was in the military service of the United States by impressment or contract.

Section 4 directed payment for arms and accouterments lost or destroyed.

Section 5 provided that where any property had been impressed or taken by public authority for the subsistence of the Army and was destroyed, lost, or consumed, the owner should be paid the value thereof.

Section 6 provided—

"That any person who, in the time aforesaid, has sustained damage by the destruction of his or her house or buildings by the enemy while the same was occupied as a military deposit, under the authority of an officer or agent of the United States, shall be allowed and paid the amount of such damage: Provided, It shall appear that such occupation was the cause of its destruction."

Said act provided for the appointment of a commissioner to settle and adjust these claims under such rules and regulations as the President should prescribe.

Richard Bland Lee was appointed the commissioner, and by reference to American State Papers, Volume Claims, pages 490 to 496, will be found the rules and regulations prescribed by the President for the guidance of the commissioner.

The report there shows that the commissioner had, from July 1 to December 17, 1816, adjusted 850 claims upon which he awarded \$229,693.15.

The commissioner stated in his report that the rules adopted by the President and himself had also been adopted by Congress in the passage of several private acts, in April, 1816, and, among others, acts for paying William Flood for a house burned by the British; to pay Clinton County, N. Y., for a court-house burned by order of General Macomb; and to pay Hamilton County, Ohio, for the court-house burned while occupied by troops of the United States.

On February 20, 1818, the commissioner, through the Secretary of War, made a report showing what amount had been paid on

claims under the ninth section, but this report does not appear to have been printed in the American State Papers.

The act of April 18, 1818, transferred all unadjusted claims to the Third Auditor and directed that he should settle and adjust them in accordance with the rules and regulations prescribed for the commissioner by the President under the act of 1816. (3 Stat. at L., page 466.)

Subsequently Congress referred many claims that had not been filed within the limitations of the act of 1816 to the Third Auditor to be settled upon the rules mentioned.

A full discussion of this act will be found in the annals of the Fourteenth Congress, second session, 1816-17, House proceedings, pages 245, 299, 462, 1028, 1035, 1040, 1051, 1211, also debates, pages 282-426; Senate proceedings, pages 2065, 2067, 2078, 2089, 2096, and 2106. Mr. Calhoun contended that the Government was not liable for losses inflicted by the public enemy, and Mr. Clay held that the Government ought to pay its citizens all their losses incurred in the public defense.

In the debate (see Annals of Fourteenth Congress, second session, pages 382 and 424) Mr. Clay said:

What was that principle? It was this: That when the Government seizes the property of a private individual and converts it to the uses of the community and the property is in consequence thereof destroyed, there exists an obligation on the community to indemnify the particular individual who has suffered. That being the principle, could there be any member of the House who would say it was wrong? The public seizes my house, converts it into a garrison, and the enemy destroys it; is not the public on every principle of justice bound to indemnify me for the loss? Unquestionably. (Page 382.)

Later in the debate he says further:

The general principle which he had before laid down and now meant to sustain was that in regard to property within the jurisdiction of a State, if it falls in its highest obligation to protect that property, the State is bound to make indemnity to the sufferer if from the nature of the government and without too great a dilapidation in its means it can do it without any great injury to society.

The losses should have been sustained on land in a way of voluntary declaration necessary or unavoidable and not exceeding in aggregate amount the ability of the country easily to pay. Society, he argued, was a compact between those who compose it by which they agree that contributions for the common defense shall be equal, and that there ought to exist an obligation by which those losses should be equally apportioned to which individuals were for a common object exposed. (Page 426.)

The same rule has been held to be the law by the highest courts of the United States.

In the case of *Mitchell vs. Harmony* (13 Howard, 115) this subject was fully and ably treated. The court says:

There are occasions in which private property may be lawfully taken or destroyed to prevent it falling into the hands of the public enemy; also, where a military officer charged with a particular duty may impress private property or take it for public use. Unquestionably in such cases the Government is bound to make full compensation to the owner. (Page 131.)

The Government, in further expression of its policy of compensation for such losses, provided by the act of February 4, 1853, establishing the Court of Claims, that it should have jurisdiction over:

All claims founded upon any law of Congress, or upon any regulation of any Executive Department, or upon any contract, express or implied, with the Government of the United States, and all claims which may be referred to it by either House of Congress.

This act fully recognized the validity of all such claims for private property taken and appropriated by the Government for public use in the widest sense of that word, and provided a tribunal for their trial. In *Filor vs. United States* (9 Wallace, 45), Judge Field says:

The term "appropriations" is of the broadest import. It includes all taking and use of property by the Army or Navy in the course of the war not authorized by contract with the Government. The use may be permanent or temporary, and it may result in the destruction of or mere injury to the property. If the right to the property or to its use is not obtained by valid contract with the Government the taking or use of it is an appropriation within the meaning of the act of Congress.

In the case of *Grant vs. The United States* it was clearly held that when the property of a citizen was destroyed by the order of a military officer to prevent it from falling into the hands of the enemy the Government was bound by law to pay the owner the value thereof. The act of March 3, 1863, still further extended the rights of claimants, and provided for their speedy determination.

Subsequently to the decision in the *Grant* case, Congress passed the act of July 4, 1864, restricting the jurisdiction of the Court of Claims by declaring that the jurisdiction of said court shall not extend to or include any claim against the United States growing out of the destruction or appropriation of or damage to property by the Army or Navy, or any part of the Army or Navy, engaged in the suppression of the rebellion from the commencement thereof until the close. (13 Stat., 381.)

This act did not pretend to controvert the correctness of the court decisions nor to declare the Government was not liable for such claims. It merely suspended the jurisdiction of the court over cases that arose during that war. It still has jurisdiction over all cases that have or may arise since the close of the war. The right of indemnity exists for those arising during the war, but the remedy has been changed by taking it from the courts and referring to Congress.

The debate in the House and Senate during the consideration of

the act of July 4, 1864, shows plainly that it was the critical situation of the Government in the most exigent period of the war of the rebellion which impelled Congress to pass the law. Up to that time the Government had always recognized the rights of its citizens whose property was taken for public use to have compensation. By the provisions of the Federal Constitution, by the acts of Congress after the war of 1812, by the act establishing the Court of Claims and fixing its jurisdiction, and by the act of March 3, 1863, the Government was committed in the most unmistakable manner to the payment of such claims. The most distinguished lawyers of the Senate and House, advocating the act of 1864 taking away the jurisdiction of the Court of Claims over claims "for the destruction, appropriation, or damage" to private property by the Army and Navy, recognized such claims, and that they had up to that time been obligations of the Government, but placed the temporary suspension of such claims entirely upon the absolute necessity for such action.

On July 4, 1864, the situation of the Government rendered it impossible to provide compensation for the losses which its citizens had suffered and would probably continue to suffer in the prosecution of the war for the salvation of the nation. The Treasury was empty; a debt of many millions hung over the Government; more than a million of soldiers and sailors were under arms to be fed and clothed and equipped and paid; gold was at a premium of 240 and the credit of the nation correspondingly depressed, and a crisis had been reached when it became imperatively necessary to pay nothing but the absolute and inexorable expenses of war. The *salus populi* had become the *suprema lex*, the sovereign was no longer able to do more than take care of the safety of the nation, and all other obligations had to be postponed till the nation might be able to pay.

The following are extracts from the debate in the House on the act of July 4, 1864 (page 164, Congressional Globe, first session Thirty-eighth Congress, Tuesday, January 12, 1864):

Mr. STEVENS. It is a very important question. I am not sure but that persons are legitimately entitled to be paid for the losses sustained by them in consequence of the acts of our own military authorities during the war, and should be allowed to bring their claims before the Court of Claims as well as if they were claims arising under contracts. I think that this is a very harsh measure toward those who suffer by the acts of our own troops. As to claims for losses inflicted by the enemy, I know very well that they are not to be thought of. But in regard to the acts done by our own troops, by order of our own military officers, I see no reason why claims for compensation should be deferred or why jurisdiction of them should be taken from the Court of Claims. * * *

Now, suppose that it is necessary for the Government of the United States to take property for the object of the Army; suppose that the Army batters down and destroys houses which are in the way of military operations, and turns families out of doors; if I understand the gentleman from Iowa, all such questions are to be reserved to some indefinite period in the future. Instead of allowing claims to go before the Court of Claims, and the claimants to take the chance of securing appropriations to pay them by Congress, they are to be put off, for anything that we know, to the death of the parties who are entitled to justice. I can not recognize anything of that kind.

Mr. WILSON. But the question here is whether the House will leave this whole matter, involving hundreds of millions of dollars, to the Court of Claims that the Government may now be forced to adjustment and settlement, or whether we will wait until we can determine some general system by which justice may be done to the claimants who should be paid by the Government. For the purpose of reserving these questions until Congress can devise some scheme for the adjustment of all that should be adjusted, the committee have directed me to report this bill.

Mr. SCHENCK. I hold that all these claims sounding in contract, all these instances where property, material, subsistence, has been actually taken, and where the Government has had the benefit of it, ought to be paid for. Under the rules of the court they will be paid for only to loyal claimants. But they ought to be paid for. I do not hold that it is safe for us to attempt to go any further. I know that there is a vast number of cases that will arise hereafter under claims against the Government for damages done by our Army in its progress. There will be claims for fences burned, for farms tramped over, for crops destroyed, for cattle escaped by reason of fences being let down, for houses occupied, and for innumerable other matters of that general class. I am not in favor of anything being done by this Congress in regard to that large class of cases, except to provide some proper tribunal which shall perpetuate the testimony, in order that hereafter, when claims are presented, there may be some probability of those claims not being excessive or extraordinary.

Page 911:

Mr. WILSON (reading from letter of William Whiting, Solicitor of War Department, who says): "And what is singular, every claimant purports on affidavits to be a loyal citizen, even when in some cases it is very well known to the Department that the party really interested in the claim is actively engaged in rebellion at the time the claim is presented."

"Rebel printing offices have been gutted out, secession houses have been burned, arms and munitions of war have been seized, vessels have been used, seized, or captured by our forces, railroads have been taken for military use, their rolling stock has been worn out, tracks have been destroyed, bridges burned or blown up, and every form of devastation and destruction has been inflicted on the enemy's property by our armies."

"From all these injuries, the inevitable result of warlike operations, claims arise against the Government from some persons claiming to be loyal, even though residing in the districts at war with us. Whenever the armies move they scatter broadcast the prolific seed which will ripen into claims against the Government."

"Sometimes the amount of annual rent demanded for a piece of real estate is equal to half or the whole of its value."

"If it were now understood that they were allowed and promptly settled in the War Department and paid by the Treasury, I do not believe that we could carry on the war three months, for want of money or credit."

Thirty thousand dollars out of the \$37,193.75 claimed is asked as compensation for negroes who ran away from the estate. And this is but one of many claims of this character being pressed on the attention of the court. Unless we take this matter into our own hands, and withhold jurisdiction of these cases from the Court of Claims, we will find, as the Solicitor of the War De-

partment states, that hundreds of millions of dollars will be required to satisfy these claims. It may be that many of these claims should be paid, but we can not pay them now. They must wait. They must pass along with the events of this war, and be adjudicated and paid when we can more fully consider them and provide for their payment.

I submit to the House whether we can at this time provide for the satisfaction of these claims, leaving out of consideration the question as to whether the citizen has a right to demand satisfaction at the hands of the Government.

Mr. STEVENS. Will the gentleman let me ask him a question?

Mr. WILSON. Certainly.

Mr. STEVENS. Do I understand him to say that the damages sustained by individuals from the Government itself, by the order of its generals, do not furnish a just claim against the United States?

Mr. WILSON. I should like to ask the gentleman from Pennsylvania to inform the House, if it were not for the Court of Claims how any citizen could sue the Government? If it were not for that, how could any suit be brought against the Government?

Mr. STEVENS. When damage was caused by the Government, that no remedy was granted did not affect the right of the citizen, for that exists all the time until satisfied.

Mr. WILSON. I speak of the legal right of citizens to demand legal satisfaction. I say it never did exist since the first time it was declared that the King could do no wrong.

We must not forget, sir, that the existence of the Government is of much more importance to all of the citizens than the immediate payment of any claims of any portion of the people of the country. It is not just, it is not right that these claims should be pressed upon the Government for adjustment and payment which will deprive us of the means of carrying on the war by the payment of the Army and the other necessary expenses of the Government. It is impossible that we should do it.

There can be no mistake as to the extent to which the ablest leaders in Congress in 1864 believed the jurisdiction of the Court of Claims went in regard to such claims against the Government. The act which was passed recognized the liberal provisions which had been made by the sovereign power, and resumed for that sovereign the right which it had originally possessed of providing or refusing to provide for the payment of such claims.

The act of 1864 did not change or deny the obligation of the sovereign for such claims, but only suspended the control of the tribunal which had been instituted for their determination. All such claims remained as just and equitable and binding on the Government as ever, and the duty to pay them revived in all its vigor as soon as the condition which excused their postponement had passed away. Unless, therefore, the policy of the Government on this subject has been changed or abrogated the claims which were cognizable under the act of 1855 by the Court of Claims are just obligations of the Government now and appeal to the conscience and sense of justice of Congress.

It is proper to further observe that in view of these facts the act of 1864 did not place the stores and supply claims which now come to us on any higher plane than all other claims for property taken by the Government for public use. The act simply cut off all claims from judicial consideration, and recognizing that the country was in the midst of a war which exacted all its energies and silenced all other interests, sent those for the immediate use of the Army to the Quartermaster-General, whose functions are a part of the military establishment of the Government. The status of such claims made them cognizable, they being supplies for the Army. But with the termination of the war and the expiration of the limitations put by the law upon such claims, all that remained fell back, like all other claims for the property of private citizens taken by the Government, for the consideration of Congress. They now stand as all other claims—no higher, no lower—when properly proved.

It is respectfully submitted, therefore, that when the war had closed and the Government was restored to its pristine power and to the ability to pay easily all its just debts, the obligation to pay such debts was revived, and under the law of nations and the Constitution of the Republic and the uniform practice of Congress, such debts included the actual value of all property of indisputably loyal citizens appropriated, damaged, or destroyed by the Government in the prosecution of the war for the preservation of the Government.

No intelligent lawyer will contend that this obligation is one enforceable in the courts of any country without the consent of the legislative power expressed in a statute. The adage that "the king can do no wrong" applies to all governments, and it must ever be one of the prerogatives of the supreme and sovereign power in a state, as well as a republic as a despotism, to do as it pleases, even to the extent of doing gross injustice. The provision in the Constitution that private property shall not be taken for public use without making just compensation is a mere naked declaration of the equitable principle laid down by all publicists and moralists and embodied in their views of the rules which should govern nations.

The obligation to pay such claims is one which Congress has always recognized as an appeal to its conscience and judgment, and acted accordingly until very recently.

In 1867 an act was passed by Congress to pay Mr. Arms \$9,500 for his house, which was destroyed in Fairfax County, Va., by military orders to prevent its use as a cover for attack by the enemy and also as a point of observation.

In 1873 the Senate passed by more than a two-thirds vote, and the House without a division, an act for the payment of \$27,000

to J. Milton Best for the destruction of his house at Paducah, Ky., by the United States troops. The bill was vetoed by President Grant under the advice of Attorney-General Akerman, but the judgment of Congress was sustained by a vast array of precedents and by overwhelming votes in both Houses, where the same bill had been repeatedly reported favorably.

In 1880 an act was passed to pay Mr. Warren, of Texas, \$15,867 for damages sustained by him in the capture and destruction of his property by Indians.

In 1893 an act was passed paying William and Mary College, in Virginia, \$65,000 for the destruction of its buildings by the troops of the United States during the war.

The tribunal, therefore, to which all such claims as are embraced in the bill now before the House have always been addressed has never by a solitary act refused to pay them. The leaders in Congress in 1864 expressly stated that the suspension of the jurisdiction of the Court of Claims over such cases was only temporary and after the war would be restored or some other tribunal established for their consideration, or that Congress itself would examine them and provide for the payment of whatever might be found justly due. The question is one solely for Congress, and it ought to be met in a straightforward and manly and honest way. There is no longer any earthly excuse for dallying or delaying. The claimants have been tempted with the hope of payment for just thirty years, and it is time that as big an institution as the United States Government ought to pay its debts or have the courage to boldly and defiantly repudiate them.

There never was a subject presented for the consideration of Congress which has been turned aside and neglected by such gross and unfounded exaggerations. The whole amount of claims growing out of the rebellion ever paid by the Government, including Quartermaster-General, Commissary-General, Southern Claims Commission, and special acts of Congress, does not exceed \$20,000,000. The whole amount of claims not now barred which could by any possibility be allowed by any honest court or by Congress if it would take the time and have the patience to hear would not exceed \$10,000,000 more, exclusive of cotton claims, which stand on a different basis.

Why, therefore, when you are proposing and likely to make a gift of \$180,000,000 to soulless corporations such as the Pacific railroads; when you are seriously discussing the donation of \$100,000,000 to the Nicaragua Canal; when scores of other appropriations running into millions are being made from year to year, why will this great sovereign, the embodiment of the supreme power of the richest and greatest Government the world has ever seen, not "show an equitable regard for the sufferers" whose property it has taken and when "the situation of our affairs will admit it?" In the language of Vattel, "There are debts which are considered as sacred by the man who knows his duty, although they do not afford any ground for an action against him."

APPENDIX.

Acts to pay for houses and buildings belonging to private citizens damaged or destroyed by orders of officers or agents of the Government, and also for those damaged or destroyed by the enemy in time of war, as will appear in volume 6, Statutes at Large:

Act of April 16, 1890, to pay the Rhode Island College for the use and injuries to buildings by United States troops from December 10, 1776, to April 20, 1780. (Page 40.)

Act of February 2, 1815, to pay William Robinson and nine others for damage done to their property by United States troops. (Page 146.)

Act of February 27, 1815, to pay Jacob Shinnick and four others for the destruction of ropewalks and other property therein deposited, at Baltimore, by United States authorities. (Page 150.)

Act of February 27, 1815, to pay William H. Washington for a house at the Potomac bridge destroyed by order of a United States officer, 1814. (Page 151.)

Act of March 3, 1815, to pay the Eastern Branch Bridge Company for damage done to the bridge by order of the Navy Department, 1814. (Page 152.)

Act of March 3, 1815, to pay the Anacostis Bridge Company for the destruction of their bridge, by order of the military, in 1814. (Page 153.)

Act of March 3, 1815, to pay Thomas Sprigg for the destruction of his hempen yarn in the ropewalks near Baltimore, by order of General Foreman. (Page 153.)

Act of March 3, 1815, to pay mechanics and others employed at the Washington Navy-Yard for the destruction of their property burnt by the British in 1814. (Page 155.)

Act of March 3, 1815, to pay James Savage and twenty others for the destruction of their houses and property at Plattsburg, N. Y., in 1814, by order of General Macomb. (Page 155.)

Act of April 24, 1816, to pay William Flood for property destroyed by the British at New Orleans in 1815. (Page 163.)

Act of April 26, 1816, to pay Clinton County, N. Y., for a court-house destroyed by order of General Macomb in 1814. (Page 164.)

Act of April 26, 1816, to pay Hamilton County, Ohio, for the destruction by fire of the court-house while occupied by United States troops. (See 3 Stat. at L., page 306.)

Act of April 26, 1816, to pay the Washington Bridge Company for injury to their bridge, by order of United States officers, in 1814. (Page 163.)

Act of April 27, 1816, to pay Samuel Manac for his property destroyed by hostile Creeks in late war. (Page 171.)

Act of April 27, 1816, to pay the estate of John Ross for the occupation of his farm and destruction of his buildings by United States troops at Point Petre, Ga., war of 1812. (Page 173.)

Act of March 1, 1817, to pay the estate of Ignace C. Delino and others for their property destroyed near New Orleans by order of General Jackson. (Page 168.)

Act of March 3, 1817, to pay Madame Montrial for injury to her property, by order of General Jackson. (Page 187.)

Act of March 3, 1817, to pay Peter Casland for the destruction of his sawmill and other property, by order of General Morgan. (Page 188.)

Act of March 3, 1817, to pay the friendly Creek Indians \$85,000 for their property destroyed by hostile Creeks in war of 1812. (Page 191.)

Act of March 3, 1817, to pay Joseph L. Green for damage done to his house at Plattsburg, N. Y., in 1814, by order of General Macomb. (Page 193.)

Act of March 3, 1817, to pay Caleb Nicholls for damage done to his house and store, by order of General Macomb, at Plattsburg, N. Y., in 1814. (Page 194.)

Act of March 3, 1817, to pay James H. Boisgervais for the destruction of his sawmill and property, near New Orleans, by order of Gen. David B. Morgan. (Page 195.)

Act of March 3, 1817, to pay William Oliver for the destruction of his house, by order of the officer who commanded at Fort Wayne, in 1812. (Page 196.)

Act of April 11, 1818, to pay Sarah Dewees and others \$8,000 for property taken for public use in war. (Page 207.)

Act of April 18, 1818, to pay Thomas Miller and Stephen Baker, of New York City, \$3,500 for the value of a house burned in Greenwich, N. Y., while rented and occupied by United States troops. (Page 209.)

Act of April 20, 1818, to pay Samuel F. Hooker, of Sacketts Harbor, N. Y., for property taken for public use, and for a house and barn destroyed by the enemy at Cape St. Vincent. (Page 211.)

Act of January 19, 1819, to pay Mottram Ball, of Northumberland County, Va., \$1,400 for the destruction of his buildings on old Court-House Point. (Page 217.)

Act of February 16, 1819, to pay Daniel Reuner and N. H. Heath \$19,808.60 for cordage, spun yarn, and hemp burned in their ropewalk, in August, 1814. (Page 221.)

Act of March 3, 1819, to pay Michael Hogan, of Utica, N. Y., \$1,100 for damage done to his house by United States troops. (Page 231.)

Act of December 20, 1820, to pay Elias Parks, of Oswego, N. Y., for goods destroyed by the British in 1814. (Page 254.)

Act of March 2, 1821, to pay Rosalie P. Dealonde \$2,227 for damage done to her house and plantation by United States troops, near New Orleans, in 1814. (Page 258.)

Act of March 2, 1821, to pay John Rodriguez \$1,857 for injuries to his buildings and plantation while occupied by United States troops in 1814, near New Orleans. (Page 259.)

Act of March 2, 1821, to pay Francis B. Languille \$2,250 for injury to his buildings while occupied by United States troops in 1814, near New Orleans. (Page 259.)

Act of March 2, 1821, to pay Alexander Milne \$2,500 for the destruction of buildings and other property by the United States troops at New Orleans in 1814. (Page 259.)

Act of March 2, 1821, to pay Lewis H. Guerlain, of Louisiana, \$480 for injury to his plantation and buildings by United States troops in 1814. (Page 259.)

Act of March 2, 1821, to pay Joseph McNeil \$700 for injuries sustained during the invasion of the British of New Orleans in 1814. (Page 259.)

Act of March 2, 1821, to pay Bartholomew Duverge, of New Orleans, \$2,100 for use and destruction of property by United States troops in 1814. (Page 260.)

Act of March 2, 1821, to pay Pierre Dennis de la Roudie \$5,770.50 for injury to his plantation and buildings while occupied by United States troops in 1814, near New Orleans. (Page 260.)

Act of April 17, 1822, to pay John Anderson, of Michigan, \$1,300 for his house destroyed by fire in 1813 while occupied by United States troops without his consent. (Page 264.)

Act of May 1, 1822, to pay James May \$1,800, and the legal representatives of William Macomb \$2,900, both of Detroit, for injuries done to their farms by United States troops during the war of 1812. (Page 266.)

Act of May 7, 1822, to pay William Henderson \$2,765 for property destroyed by the British, at Mundays Point, Va., war 1812. (Page 268.)

Act of May 7, 1822, to pay Edward McCarty's estate \$2,940 for property destroyed during the invasion of Louisiana in 1814. (Page 270.)

Act of May 7, 1822, to pay the legal representatives of Joseph Hodgson, of Washington, D. C., for the value of a dwelling house destroyed by fire in 1800, while rented and occupied by the Secretary of War. (Page 273.)

Act of May 7, 1822, to pay Solomon Provost, of Louisiana, \$1,966 for losses by British invasion in 1814. (Page 273.)

Act of May 7, 1822, to pay Thomas Shields, of Louisiana, \$1,663.10 for property burned by order of Lieutenant Jones, United States Navy, at Bay St. Louis, in 1814. (Page 274.)

Act of May 7, 1822, to pay Matthew McNair, of Michigan, \$3,000 for a boat destroyed by order of the commanding officer at French Mills, Mich. (Page 276.)

Act of May 7, 1822, to pay John Pellet, of Louisiana, \$3,844 for the destruction of his buildings and other property during the invasion of 1814. (Page 277.)

Act of March 8, 1823, to pay Edward Evat \$1,338.81 for his house burnt while occupied by United States troops. (Page 281.)

Act of March 3, 1823, to pay Eleanor Lawrence \$1,070 for damages to her farm on Long Island, N. Y., by occupation of United States troops in 1813. (Page 282.)

Act of March 3, 1823, to pay Samuel Walker \$175, Joseph L. Dutton \$450, John Martin and others \$175, for injuries done to their lands near Marcus Hook, on the Delaware River, in 1814, by erecting defensive works thereon. (Page 284.)

Act of May 17, 1824, to pay the estate of Samuel Mims \$1,800 for buildings destroyed by hostile Indians at Fort Misus, Ohio, in 1813. (Page 300.)

Act of May 17, 1824, to pay William T. Nimmo \$500 for the destruction of a house in Princess Anne County, Va., by the British in 1813. (Page 300.)

Act of May 17, 1824, to pay David Cooper \$90 for an unfinished house pulled down and converted into a barrack. (Page 301.)

Act of May 18, 1824, to pay Lemuel Arms \$150 for the destruction of a building at Sacketts Harbor, N. Y., by United States troops in January, 1814. (Page 304.)

Act of May 25, 1824, to pay Alexander McNair, of Missouri, \$2,000 for his house burnt near Fort Massack, while occupied by United States troops. (Page 314.)

Act of March 3, 1825, to pay Joseph Doset and Antoine Bourgond \$400 for destruction of their property at River Raisin, Mich., in 1812, by order of Col. John Anderson. (Page 323.)

Act of March 3, 1825, to pay Sarah Shillito \$960 for her house destroyed in 1813, while occupied by United States troops. (Page 325.)

Act of March 3, 1825, to pay the legal representatives of John Guest for a frame house and brick office burnt by the British at Havre de Grace in 1813. (Page 400.)

Act of January 30, 1830, to pay Joel Byington \$282.16 for damage done to his house and barn by United States troops. (Page 403.)

Act of February 11, 1830, to pay Joseph Dixon \$50 for damage to his lot on Dixons Point, Maine, by taking soil therefrom to erect fortifications. (Page 404.)

Act of February 11, 1830, to pay the churchwardens of Elizabeth City, Va.,

\$130.50 for recasting a bell broken during the war of 1812 while used as an alarm by the commanding officer at that place. (Page 404.)

Act of February 11, 1830, to pay Peter Ford \$133 for oxen lost on retreat from River Raisin. (Page 405.)

Act of April 7, 1830, to pay Jean Baptiste Centure \$2,000 for house, store, stable, and other buildings at Frenchtown, Mich., destroyed by the British and Indians in 1813 while occupied by the United States troops. (Page 411.)

Act of April 7, 1830, to pay John Rodriguez \$883 for injury to his plantation by erecting earthworks thereon. (Page 412.)

Act of April 7, 1830, to pay Hubert La Croix, of Michigan, for the destruction of his house at Frenchtown, in 1813, by the British and Indians. (Page 412.)

Act of May 20, 1830, to pay the heirs of the widow Dupre \$8,965 for the destruction and damage of her buildings near New Orleans, by the United States military forces under General Jackson in 1815. (Page 438.)

Act of May 31, 1830, to pay Jean Baptiste Jerome for a barn burned by order of an American officer at Frenchtown, Mich., to prevent its use as a cover for the British and Indians in 1813. (Page 448.)

Act of May 31, 1830, to pay Gabriel Godfrey for the destruction of his barn and other property by order of an American officer at Frenchtown, Mich., to prevent its use as a cover by the British and Indians in 1813. (Page 450.)

Act of March 3, 1831, to pay Benjamin S. Smoot, of Alabama, \$1,000 for a house destroyed by order of a United States officer to prevent its being a shelter for the British in their attack upon Fort Bowyer 1814. (Page 468.)

Act of May 2, 1832, to pay Pericia Tupper \$450 for a barn destroyed by the British near Buffalo, N. Y., in the war of 1812. (Page 478.)

Act of July 14, 1832, to pay Silvia Posner for a house and other buildings burned in the war of 1812 while occupied by United States troops. (Page 513.)

Act of July 14, 1832, to pay Samuel May, of Buffalo, N. Y., \$3,150 for the destruction of two warehouses by the British in 1813. (Page 518.)

Act of July, 1832, to pay John Brunson for the value of a house and store destroyed by the British at Buffalo, N. Y. (Page 518.)

Act of July 14, 1832, to pay estate of Edward Barry \$568.35 for property destroyed in the burning of the Washington Navy-Yard by the British in 1814. (Page 520.)

Act of July 14, 1832, to pay Augustine Taney for buildings burned by the British near Baltimore, Md., in 1814. (Page 525.)

Act of July 14, 1832, to pay Henry Waller for buildings burned by the British on the eastern shore of Maryland in 1814. (Page 525.)

Act of February 9, 1833, to pay Gabriel Godfrey and Jean Baptiste Beaugrand \$1,030 for a barn, storehouse, and stable burned by the British and Indians at Frenchtown, Mich., in 1813. (Page 534.)

Act of March 2, 1833, to pay the estate of George Hodge \$324.18 for property destroyed in the burning of the Washington Navy-Yard by the British in 1814. (Page 545.)

Act of March 2, 1833, to pay Joshua P. Frothingham \$1,500 for a building burned at Charlestown, Mass., in 1776, by order of General Putnam. (Page 546.)

Act of June 30, 1834, to pay Henry Sewall and Robert Sewall, of St. Marys County, Md., \$10,000 for the property destroyed by the British. (Page 585.)

Act of June 30, 1834, to pay the estate of John Rose \$2,500 for property burned by the British at Washington Navy-Yard. (Page 594.)

Act of March 3, 1835, to pay estate of Aaron Smith, of Champlain, N. Y., \$30 for the destruction of his property by United States troops. (Page 617.)

Act of March 3, 1835, to pay John I. Avery \$300 for occupation of his land and erecting earthworks thereon. (Page 618.)

Act of February 17, 1836, directing payment to James Tilford for property destroyed upon the principles of the acts of April 9, 1818, and March 3, 1817, to pay for property destroyed by the enemy. (Page 622.)

Act of February 17, 1836, to pay to William Baker \$25.30 for the use and damage done to his property at Sacketts Harbor, in 1813, by United States troops. (Page 623.)

Act of February 17, 1836, to pay Jacob B. Gilbert \$800 for a house destroyed by the British on Niagara frontier. (Page 625.)

Act of February 17, 1836, to pay the estate of Thomas Beacham, of Northumberland County, Va., \$600 for a barn burned by the British, war of 1812. (Page 626.)

Act of June 23, 1836, to pay Charles M. Frazier, of St. Leonards, Md., for a house burned by the British in 1814. (Page 642.)

Act of July 1, 1836, to pay the heirs of William Forbes \$2,100 for houses burned by the British at Kinsale, Va., war of 1812. (Page 660.)

Act of July 1, 1836, to pay estate of Michael Fenwick \$5,000 for a dwelling house destroyed by the British, while occupied by United States troops; and to adjust and settle claims for other houses burned by the British. (Page 661.)

Act of July 2, 1836, to pay estate of Nathaniel Canada for a tollhouse and bridge across Niantic River, Connecticut, burned by the British in 1814. (Page 668.)

Act of July 2, 1836, to pay Charles J. Catlett for tobacco destroyed by the British and American troops, in warehouses at Baltimore, Md., in 1814. (Page 673.)

Act of March 3, 1837, to pay David Kilborn, of Oswego, N. Y., \$2,500 for property destroyed, war of 1812. (Page 690.)

Act of February 22, 1838, to pay estate of John McCarty \$1,000 for a house burned by the British at Farnham, Va., in 1814. (Page 703.)

Act of March 7, 1838, to ascertain value of property of Frances Gardener, destroyed by order of the commanding officer at Fort Brooks, Fla. (Page 705.)

Act of March 19, 1838, to pay estate of Benjamin H. Mackall for houses destroyed by the British in 1814 in Maryland. (Page 707.)

Act of March 23, 1838, to pay James I. Pattison, of Calvert County, Md., \$1,200 for house and other property destroyed by the British in 1814. (Page 708.)

Act of April 6, 1838, to pay William Endus \$2,000 for a house burned by the British at Soda, N. Y., in 1813. (Page 710.)

Act of April 20, 1838, to pay Calvert County, Md., \$3,000 for court-house burned by the British in 1814. (Page 711.)

Act of July 7, 1838, to pay Richard Frisby, of Kent County, Md., \$2,000 for property destroyed by the British in 1814. (Page 743.)

Act of March 3, 1839, to pay estate of Michael Fenwick \$7,000 for houses burned by the British in Washington, D. C. (Page 739.)

Act of July 27, 1842, to pay Archibald McCallum of Rouses Point, N. Y., \$960 for a house burned in 1839 while occupied by United States troops. (Page 844.)

Act of August 1, 1842, to pay Sylvester Phelps, and the heirs of Charles Landon, \$2,100 for a house burned at South Hero, Vt., war of 1812, while occupied by United States troops. (Page 848.)

Act of August 28, 1842, in pay John King \$900 for a dwelling house burned by the British in Richmond County, Va., war of 1812. (Page 865.)

Act of August 28, 1842, to pay James Tongue \$1,877.78, John Scrivener \$3,840, and estate of William Hodson \$3,968.30 for buildings destroyed by the British, October, 1814. (Page 866.)

Act of March 1, 1843, to pay William G. Sanders \$900 for a house burned at Fort Brooks, Fla., in 1836, by order of Captain Belton, United States Army, to prevent it being used as a cover by the enemy.

Act of March 3, 1843, to pay Charles Waldron \$1,179.61 for buildings and other property destroyed at Micanopy, Fla., in 1836, by order of the commanding officer, to prevent its falling into the hands of the enemy. (Page 901.)

Appropriations.

SPEECH

OF

HON. D. B. HENDERSON.

OF IOWA,

IN THE SENATE OF THE UNITED STATES,

Monday, March 4, 1895.

The House having under consideration the subject of appropriations—

Mr. HENDERSON of Iowa said:

Mr. SPEAKER: My connection with the Committee on Appropriations commenced with the Forty-ninth Congress, and since that time Samuel J. Randall, J. G. CANNON, W. S. HOLMAN, and JOSEPH D. SAYERS have been chairmen of the committee. All of these gentlemen have been noted for their special championship of economy in appropriations. Judge HOLMAN largely made his reputation as an economist, and enjoyed, I believe, the appellation of "the watchdog of the Treasury." I believe that all of these chairmen have been faithful, untiring, and able in their efforts to keep down the appropriations of the Government to its actual necessities. Some of them have even gone, I think, to an unwise extent in some directions in their efforts to keep down the appropriations of the Government. Let us see what the results of their work have been, and consider the total appropriations of each of the Congresses, commencing with the Forty-ninth:

Total appropriations by the Forty-ninth Congress, 1887 and 1888	\$746,342,495.51
Total appropriations by the Fiftieth Congress, 1889 and 1890	817,963,859.80
Total appropriations by the Fifty-first Congress, 1891 and 1892	988,417,183.34
Total appropriations by the Fifty-second Congress, 1893 and 1894	1,027,104,547.92
Total appropriations by the Fifty-third Congress, 1895 and 1896	990,338,601.04

The foregoing figures have been made by the clerks of the two committees on appropriations of the House and Senate for the respective years indicated, and are not in any way in controversy. Elaborate explanations have been made by both political parties touching these appropriations, but the amounts of the appropriations are not in dispute. It will be seen that thus far we have had but one "billion-dollar Congress," namely, the Fifty-second. The Fifty-first Congress came so near to that figure that the present chairman of the Committee on Appropriations, Hon. JOSEPH D. SAYERS, was pleased to call it "the billion-dollar Congress," notwithstanding the well-known fact that the Fifty-first Congress appropriated \$70,154,846 more than its predecessor, the Fiftieth Congress, for pensions to the Union soldiers, and notwithstanding the further fact that its predecessor, the Fiftieth Congress, made deficiencies amounting to \$38,617,448.96, which the Fifty-first Congress had to provide for.

It now transpires that my honorable friend, Governor SAYERS (and I have already conceded his ability, energy, and I also concede his uncompromising integrity), with all of his efforts at economy, fighting every inch of ground with other committees reporting appropriations, has seen his bills go to the President carrying \$1,921,507.70 more than was carried by the appropriation bills of the Fifty-first Congress, and that, too, in the face of the straitened conditions of the Treasury, which acted as a restraint upon all of the appropriating committees, and operated upon the mind of every member of Congress to keep down the appropriations—a condition which did not exist during the life of the Fifty-first Congress. When we further consider that the appropriation bills that have just been passed carry provisions authorizing contracts to be made involving future appropriations amounting to \$31,686,764 we find his appropriation bills provide for \$23,608,371.70 more than the appropriations by the Fifty-first Congress.

By noting the gradual growth of our appropriation bills, and taking into account the facts just stated, the country must realize the gross injustice of the criticisms made on the Fifty-first Congress, and must awaken to the fact that we have a great and growing country, and that the question is not so much, "What is the amount of the appropriations?" as it is, "Are these appropriations needed?"

I do not present these facts with a view to criticising the work of the Congress just expiring touching appropriations, but to show how far honorable men will go in trying to mislead the people and build up their own party by unjust criticism at the expense of others.

In estimating the work of the Fifty-third Congress in respect to appropriations it is entirely proper to add to the total appropriations the authorized contracts (for they constitute a mortgage

upon the future); and when these are considered, amounting, as above stated, to \$21,686,764, they bring the grand total of the Fifty-third Congress up to \$1,012,025,455.04.

AUTHORIZED CONTRACTS.

The items involved in the foregoing sum are as follows:

50 12-inch mortars	\$325,000
Public buildings	5,260,000
Light-houses	210,000
Revenue cutter, Pacific coast	125,000
Denver mint building	400,000
Rock Island bridge	390,000
Sewers, District of Columbia	261,764
Two new battle ships, six gunboats, and three torpedo boats	9,905,000
Armament for above (about)	4,810,000
Total	21,686,764

APPROPRIATIONS MADE IMMEDIATELY AVAILABLE.

Another feature of the appropriations just made should be noted. While they are for the fiscal year commencing July 1, 1895, and should be expended within that fiscal year, yet the present Congress has made available, to be spent at once, or as fast as possible, the following:

Increase of the Navy	\$4,000,000
Street and road work, District of Columbia	207,000
River and harbor work	11,592,115
Total	15,799,115

All of this will draw from the resources of the country before the beginning of the fiscal year for which these appropriations are made, and this nearly sixteen millions and nearly twenty-two millions of authorized contracts will prove heavy burdens for the incoming Congress, and make very difficult its work in making provision for the necessities of the country for the period that it must provide for.

INCREASE OF OFFICES.

In addition to all of this the Fifty-third Congress has increased the Navy 1,000 enlisted men and added 313 officers and employees to carry out the internal-revenue provision of the Wilson tariff law. So soon as the war was over the Republican party began to reduce the number of officials, removed the direct burdens from our own people, and cut out by the roots the annoyance attending the workings of the internal-revenue laws, especially those which pried into the private affairs of our citizens. The policy of the Fifty-third Congress has reversed all this, and the re-creation of an army of officials and detectives to explore the workings of our own people has been reorganized.

PENSIONS.

The appropriations for pensions in the Fifty-second Congress amounted to	\$335,092,756.85
The pension appropriations by the Fifty-third Congress amounted to	292,963,140.00
A decrease in pension appropriations of	42,129,616.85

Here is where the present Administration and the Fifty-third Congress has been successful in paying some attention to the reduction of our revenues and the terribly straitened condition of the Federal Treasury. Everything else has been generously provided for, swelling the appropriations, giving liberal contracts extending into the future, making appropriations immediately available, but when it comes to pensions a reduction is made of \$42,000,000, made possible by an oppressive system carried on by this Administration, which has brought a reign of terror into the ranks of the crippled soldiers of the Union, their widows and children.

If the pension work had been kept up since March 4, 1893, by this Administration as it had been previously done by President Harrison, the appropriations would have amounted to \$1,054,155,071.89, or the heaviest appropriations ever made by the American Congress. They have barely escaped, in the appropriations actually made, without reference to authorized contracts, touching the billion limit by cutting down the pension appropriation \$42,000,000. It appears from the statement of expenditures given out by the Treasury Department that the payment for pensions for 1893 was \$159,357,537.87; the amount expended for 1894 was \$141,177,284.96, being a reduction in one year of \$18,180,272.91; and the slaughter of the soldiers' pensions still goes cruelly on.

I can not but thus comment upon a policy which in times of great financial stringency is liberal in appropriations, and contracts for appropriations, and making millions of dollars available before the beginning of the fiscal year for which we are appropriating, and at the same time cuts down the appropriations for the defenders of our country \$42,129,616.85.

AMOUNT PAID FOR BOUNTY ON SUGAR.

It is contended that the appropriation made of \$5,238,000 for sugar bounty should be considered in making allowance for the large appropriations for the next fiscal year. My reply to this is, "Why was it done?" The Democratic party made the law that cut off this bounty to protect the sugar industries of the country at the same time that they removed protection from our laboring men and our farmers and every great American industry. This Congress has thought proper to pay this vast bounty to a Southern interest that has suffered, while giving no remedy to others who have suffered from the provisions of the cruel tariff law which this Congress has enacted.

But the \$5,000,000 is not a sufficient explanation, as will be seen when we consider the amount paid for bounty during the fiscal year 1894, which amounted to \$12,100,208.89, being seven millions, in round numbers, more than the amount included in the present appropriation bills.

COMPLETE SUMMARY OF THE APPROPRIATIONS OF THE FIFTY-THIRD CONGRESS.

The amount given above as the appropriations by the Fifty-third Congress was \$990,338,691.04; but since these tables were arranged the Government has negotiated a loan for \$62,315,000, drawing 4 per cent, which would increase the permanent annual appropriations \$2,492,600. This amount is not included in the permanent appropriations forming a basis for a total of the Fifty-third Congress. The permanent appropriation, as given, is \$113,073,956.32. To this should be added the \$2,492,600, the annual interest charged on the last loan negotiated, which would bring the permanent annual appropriations to \$115,566,556.32, and increase the appropriations of the Fifty-third Congress that amount, making the total \$992,831,291.04.

For details of appropriations for the Fifty-second and Fifty-third Congresses see Exhibit A, following my remarks.

INSUFFICIENT APPROPRIATIONS.

In several matters the appropriations are insufficient, and deficiencies will be absolutely forced upon the next Congress. For the United States courts there is appropriated at least \$2,500,000 less than is needed, and the appropriations for the Government Printing Office are \$500,000 less than needed. Then there is no provision made in the pension appropriations for the increase of all pensions below \$6 up to \$6. This alone will cost not less than \$1,500,000, which is not at all provided for. Here is a total of \$4,500,000, which we know must be met by the next Congress because the present Congress has not given a sufficient amount.

If this Congress had done its duty, and added that amount, it would have brought the total appropriations up to \$997,331,291.04.

THE UNITED STATES SENATE.

I can not pass from the question of appropriations without a reference to the old song that was so constantly sung in the House about the increases made in appropriations "by a Republican Senate." The Senate is no longer Republican, but is absolutely in the hands of the Democracy, and that body, at this session of this Congress, increased the House bills \$19,170,136.04. I doubt if anything in the history of the Government has equaled the increases made by the Senate at this session of Congress. It would be in order for our friends in the House to say something about the increases "by the House of Lords."

RECAPITULATION.

A fair statement, therefore, and a conservative one, as to the appropriations by this Congress would put it as follows:

Actual appropriations	\$990,338,691.04
Increase, annual interest charge not included in above	2,492,600.00
Insufficient appropriations for United States courts, Government Printing Office, and new pension provision	4,500,000.00
Authorized contracts	21,686,764.00
Total	1,019,018,055.04

THE FIFTY-THIRD CONGRESS AND THE PRESENT ADMINISTRATION.

What have they done to commend themselves to the confidence or gratitude of the American people?

I believe that all parties throughout the entire country will agree that never in the history of the Government has an Administration and a Congress so utterly failed to meet the requirements, the expectations, and the necessities of the American people as has this Administration and the Congress that dies to-day.

This Congress will retire from the field of action with the hearty approval of everybody.

THE TARIFF.

The Wilson tariff law has proved disastrous to every interest in this country. It destroyed our revenues to such an extent that

during the fiscal year ending June 30, 1894, our expenditures exceeded our revenues \$69,803,260.58, as confessed by the Administration in its official reports. It transferred the burdens of Federal taxation from the shoulders of importers and foreigners desiring to enjoy our rich markets largely to the shoulders of our own people, inaugurating an internal system of taxation which the past did not justify excepting in time of war. Our suffering people do not need to be told what it has cost us in the absolute paralysis of business which resulted from the passage of that pernicious law. The history of that legislation is written on the tables of the poor and in all the homes of the people.

PUBLIC DEBT.

While President Harrison from March 1, 1889, to March 1, 1893, secured a net reduction of the public debt of \$236,527,666.10, this Administration has issued new ten-year 5 per cent bonds amounting to \$100,000,000, and \$62,315,000 thirty-year gold bonds drawing 4 per cent interest. This increases the annual interest charged upon the Government \$7,472,600, and in times of peace, with a country abundantly able to raise revenue to pay off our debt, has put a new mortgage upon our people amounting to \$162,315,000.

We can not pass this theme without noting the startling character of the transactions connected with the sale of the \$62,315,000 of gold bonds. We are told by the Treasury Department that they sold for a little below 5 per cent premium. We know, however, that such bonds at the time were worth at least 19½ per cent premium. Giving credit for 5 per cent there was 14½ per cent which this Government threw away or gave as a bonus to someone, an actual gift of \$9,015,675 taken from the pockets of the people and given to a moneyed syndicate, and in doing this discriminating against all our other bonded debt and thus injuring our public credit far more than any temporary benefit that can possibly come from the transaction.

ELECTION LAWS.

About the only thing done by this Congress in addition to passing its obnoxious tariff law was the prompt repeal of the Federal election laws, removing the last vestige of protection to the Federal ballot in this country. And remember it was not the abused Lodge bill that was repealed (for that had never been enacted), but the simple legislation which existed when this Congress met, wholly free from oppression and looking only to the purity of elections for President, Vice-President, and members of Congress, was wholly swept away.

ARBITRATION.

Much has been said by the Democratic party of its friendship for arbitration. Just five days before this Congress dies an arbitration bill was given a special rule for consideration in the House, and it was passed, when it was absolutely certain that every hour would be needed by the Senate to pass the appropriation bills, and that the enactment into law of an arbitration bill was simply an impossibility. It was like labor asking for bread and receiving a stone. It was an insult to the intelligence of our people. Here was a Congress having three sessions, two regular and one extra one, with plenty of time upon its hands, and doing literally nothing, yet it could not give to this question sufficient time to have it considered and passed by both Houses.

THE FINANCES.

No record of any Congress has been so disastrous and full of such complete failure as has been the proceedings of this Congress in trying to secure financial legislation. A special session was called by the President for the sole purpose of repealing the purchasing clause of the Sherman Act of 1890. We were told that with the repeal of that clause good times would be restored, and the terrible condition into which the country had been thrown would be removed. For one, I did not expect it, and in my discussion of the financial proposition I said that I doubted its having any good effect so long as the threat was maintained against the protective policy of the country.

We were assured that if we would help to repeal the purchasing clause of the Sherman Act that when we reassembled for the long session some general legislation would be had for the increase of our circulation and for the recognition of both silver and gold. That clause was repealed, and absolutely nothing has been done to increase the circulation of the currency, and no good results have followed the repeal. Every promise of the President and his party in respect to that repeal has failed of fulfillment, and every attempt to secure any legislation for the reorganization of our financial system was an utter failure, and the propositions were so absurd that they deserved failure.

FOREIGN RELATIONS.

In the midst of our distress, of the suspension of business, of the throwing of hundreds of thousands of laboring men out of employment, of increasing the public debt, increasing appropriations, running expenditures far in excess of revenues, we have been mortified beyond words for description by a weak, cowardly, un-

American foreign policy that has not failed to bring the blush of shame to the face of every true American citizen, whether Republican or Democrat.

As we review the work of this Administration and of this Congress, we can not but feel that the voice of the people, as heard

at the polls in November last, will continue to be heard until a party inspired with American ideas, imbued with the love of American interests, will be restored to power, and bring back to our people the good times to which they have been accustomed and which they deserve.

EXHIBIT A.—Comparative statement of appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, fiscal years 1891 to 1896, inclusive.

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.	
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.
Agricultural	\$1,790,100.00	\$3,028,153.50	\$3,223,905.50	\$3,223,500.00	\$3,223,623.06	\$3,303,750.00
Army	24,206,471.79	24,613,529.19	24,306,439.82	24,225,639.78	23,592,884.82	23,232,008.00
Diplomatic and consular	1,710,815.00	1,656,925.00	1,604,045.00	1,557,445.00	1,563,918.70	1,575,073.94
District of Columbia	5,769,544.15	5,597,125.17	5,317,973.27	5,413,223.91	5,545,678.57	5,745,643.25

Total Fifty-first, Fifty-second, and Fifty-third Congresses	\$988,417,183.94		\$1,067,104,547.92		\$990,328,691.04	

* Deficiencies included as follows: 1891, on account of 1890, \$25,321,907.25; 1892, on account of 1891, \$29,335,598.34; 1893, on account of 1892, \$7,674,832; 1894, on account of 1893, \$14,149,724.85.

† This is the amount originally submitted to Congresses by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriation.

‡ To this should be added \$2,492,000 annual interest charge on the \$62,315,000 gold-bond loan.

§ With the annual interest charge added for the gold-bond loan the total is \$992,831,291.04.

The Late Senator Stockbridge.

REMARKS OF HON. D. D. AITKEN, OF MICHIGAN, IN THE HOUSE OF REPRESENTATIVES, Thursday, February 21, 1895.

The House, having under consideration the resolutions paying tribute to the Hon. Francis B. Stockbridge, late a Senator from the State of Michigan—

Mr. AITKEN said:

Mr. SPEAKER: The official records which originate in the proceedings on brief occasions like this, when a pause is made for a time to render honor to the distinguished dead of the Republic, have come to make up what may indeed be called a voluminous mass of memorial literature. If all these records of loving words and tender tribute, dating back to the formative period of the country and probably now scattered through many places at the seat of Government, could be gathered into one depository, one classified aggregation of regretful volumes, there would be formed a national library of sorrow around which the greatest interest might center—a Plutarchian collection in which, including the lives of chiefs of the State as well as of those who have in humbler capacity been useful to their country, would be found curious facts in biographical data, recorded triumphs won by determination over strange and peculiarly unfavorable combinations of adverse circumstances, loving tributes on characteristics which have won human affection as well as admiration, stirring eulogies on shining deeds which inspire to patriotism.

Seldom, however, in the whole long list of occasions preceding this which have given rise to this mass of memorial literature, have those attractive, those ever-fascinating human qualities—implicit loyalty to friends, warm-hearted generosity, and manly sturdiness—deserved more truly, more justly the tribute of discriminating praise than to-day. These are the qualities which I as a boy at the fireside heard attributed to the dead Colonel Stockbridge. That which as a boy I knew but in imperfection I came to know with the more perfect knowledge of personal association and positive conviction as a man.

These are the qualities of which I would more especially speak as I add to other and probably more adequate estimates of his character and services these few poor words which, as a friend, I can not refrain from speaking while the consideration of resolu-

tions in his memory remains the pending business before the House.

The detailed secret history of political events of the greatest magnitude and significance in the State he represented would show, Mr. Speaker, that Senator Stockbridge's loyalty to his friends extended even to the point of his own self-sacrifice, and no man in political life can do more, in honor, than to sacrifice for his friends his own prospects for the very highest preferment, and throw away the opportunity which is rarely again ever presented. Fortunately, in the Senator's case, the opportunity supposed to be forever lost came in lapse of time and he was the recipient of the most flattering evidence of favor within the power of his people to bestow. It is, perhaps, known to but few that the declination of golden opportunity in the original instance was due to a refusal to assume a position in which a subsequent suspicion, even, of disloyalty to a friend might attach to his actions. In the reciprocal operation of the affections one of the most eloquent evidences of his own careful observance of the claims of friendship was the great personal following which he possessed, bound to him by bonds of steel, in his own State, and which, in its long list of devoted friends and acquaintances personally and intimately known to him, was perhaps the largest possessed by any man in Michigan at the time of his death.

His helpfulness to others shows the generosity of his character even more strikingly than do the benevolences and endowments to deserving institutions which exist as monuments to his memory among his former constituents. His interest in young men of merit and industry was great, and in very many cities of his State are successful citizens who to-day credit much of what they have attained to his advice and to other aid of a more practical and substantial character. The number of instances in which he has been quietly but effectively helpful to others who had to contend with unfavorable surroundings in beginning their life work will never be known.

Among instances within my own personal knowledge, is one which was brought to my attention as late as during the present week and which produced a deep and lasting impression because of the unusual and heretofore unsuspected circumstances connected with the incident. Its narrator describes the bluff colonel's entrance into a law office in the city of Grand Rapids some years ago. There, as it chanced, he found alone a forlorn young student of whose situation, sharing precociously in the burdens of his straitened parents' condition, a pathetic little picture was drawn. The office boy wept, while the colonel, although not unsympathetic, laughed. When the story of his parents' distress had after a time been drawn from the lad, the colonel afforded the encouragement of hearty, stimulating words. He did more on

leaving. Without a hint or suggestion from the lad to prompt such a course, he slipped into the hands of his new-found chance acquaintance that which tearful, wondering eyes presently discerned as the still more substantial encouragement of a \$300 check, a fortune for one of the boy's age.

The ambitious law student who was the recipient of this most unexpected but most kindly assistance long ago demonstrated the soundness of the donor's judgment by attaining through industry a station in life in which the repayment of the extraordinary loan became possible. To-day, as the Congressman-elect from the second city of Michigan, this former office boy looks back on this act of exceptional character as a bright something in one of the most critical periods of his life's history and one from which results of the greatest importance proceeded.

Trifling as this incident, briefly narrated in this place, far from the scene of its occurrence, may seem in some of its details, I have not forbore to make reference to it as a specific instance illustrating, as mere generalization could not, traits of manliness and generosity which have caused thousands of hearts to warm toward that winning personality which has gone from the midst of those who mourn his departure. Aside from these more engaging qualities of amiability, he was a man of great force of character, with an energy and industry of his own which could but have made him and did make him a more than ordinarily successful American. Although he did not have the advantages of a liberal scholastic education, all who knew him will concede to him liberality of views. Those intimately associated with him found, too, a refinement of taste in art and literature which others might not have suspected, and outside of the State metropolis he was undoubtedly the most liberal patron of art in Michigan, his home being filled with art treasures from the brush and chisel of famous artists.

He was born in the most northerly of the five New England States, and passed his manhood in the State with the most northerly extent of the five created by the famous ordinance of 1787. The contribution which the present Congress will make to the voluminous in memoriam literature of the past of which I have spoken will be a lamentably large one. In this further contribution, soon to be made, let Senator Stockbridge be put down as one who had the typical merits of men of the Northland and was a man to tie to in his lifetime.

Pensions.

SPEECH

OF

HON. GEORGE W. COOPER,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES.

Monday, December 18, 1893.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 4763) making appropriations to supply further urgent deficiencies in the appropriations for the fiscal year ending June 30, 1894, and for prior years, and for other purposes—

Mr. COOPER of Indiana said:

Mr. CHAIRMAN: Having determined to cast my vote for the appropriation to provide for these special examiners, I desire to avail myself of the privilege of putting in the RECORD the reasons that control my action, and also of correcting, if I am able to do so, some erroneous impressions which I think prevail with reference to the purpose here sought.

The gentleman who has just taken his seat [Mr. DINGLEY] has made, as I conceive, a very fair and dispassionate statement of the question, except, as it seems to me, that he has fallen into error with reference to the purpose for which the Commissioner desires to have this appropriation and to continue this class of investigation.

There seems to be a purpose to somehow connect this request for these special examinations with the construction placed upon the law of June 27, 1890, and the consequent dropping of pensioners from the rolls as a result of the change in the construction of that law by the present officer. I wish to state, Mr. Chairman, that this proposition has not the slightest connection whatever with the other. The pensioners dropped from the rolls by the methods and in the manner mentioned by the gentleman who has just taken his seat were not dropped in pursuance of a special examination. There was no special examination in any of those cases. They were dropped because there was no law which authorized their retention upon the roll.

This is not a new field of discussion. I wish to call to the attention of the House the decisions of the Department of the Interior in appealed cases from the Pension Office, which I hold in my hand.

Secretary Noble, as far back as August 3, 1892, placed the same construction upon the law of June 27, 1890, that is now held by the Bureau. I think that decision is in more explicit language and is more clearly and forcibly stated than any of the decisions upon the subject. I beg the indulgence of the House while I read one or two paragraphs from that decision. On page 18, volume 6, of the decisions referred to I find the following:

The appellant overlooks one of the conditions essential to the allowance of pension under the act of June 27, 1890. The old law provides for everyone "disabled" while in the military or naval service of the United States and in the line of duty, no matter how slight the disability may be.

The act of June 27, 1890, on the other hand, relieves applicants from the necessity of proving that their disabilities originated in the service, but limits its benefits to such as are suffering from any mental or physical disability of a permanent character which incapacitates them for manual labor in such a degree as to render them unable to earn a support.

Any disease or injury which constitutes a hindrance in the performance of manual labor, or in any respect lessens one's ability or power to labor, or causes such labor to be attended with pain or inconvenience, may properly be called a "disability." But it is manifest that there may be a disability for manual labor which shall yet not cause inability to earn a support. For example, the loss of a part of one finger may render a man slightly less expert in the use of some tool, without in any material degree lessening his ability to earn a livelihood. A varicocele, or small hernia, may cause him some inconvenience and pain at times, but not sufficient to cause him to quit work or to diminish his wage-earning capacity. He is entitled to pension for such disabilities under the old law, but not under the new.

Now, that decision gave no express direction in terms to the Bureau of Pensions and no attention was paid to it. I do not say that it was ignored by the Bureau on account of the approaching Presidential election; but it is true that the Commissioner failed to comply with and continued to disregard it. Subsequently, after the election in January, 1893, Secretary Noble rendered a further decision in the well-known Weike case; and in this case he expressly directed that the office obey and follow out the interpretation given to the law by the Secretary. I quote from page 194 of this decision, which was rendered in January under the former Administration:

It is directed that the views herein expressed be observed in future adjudications of claims under the act of June 27, 1890.

And, then again, in another case, that of Patrick Carroll, on February 1, the same interpretation was put upon that law. So there are three explicit, clear, and strong interpretations of this law made by the preceding Administration, before the present Commissioner or the present Administration, in any branch of it, came into office, all of which are in the line followed by the present Administration.

I was not fortunate enough to be present in the House on Saturday, when this discussion began; and I am very sorry I did not hear what was said by the gentleman in charge of the bill on the other side of the House, because I have heard some statements imputed to him which I think are clearly erroneous, and I wish to call his attention to them. I looked at the RECORD to see if his speech was printed, but I found that it is withheld for revision. I refer to the gentleman from Illinois [Mr. CANNON]. I find, however, that the gentleman is quoted in the Philadelphia Press of yesterday as having said this:

But in May, 1893, with William Lochren, Commissioner of Pensions, Hoke Smith, Secretary of the Interior, and Grover Cleveland, President of the United States, the Pension Office made haste to revoke this order No. 164, thus cutting off about 400,000 pensioners, and had thus committed an act which was akin to a crime.

I will now yield to the gentleman to state whether that is correct.

Mr. CANNON of Illinois. There is only one error in that matter. Instead of saying that, that it had cut off that number, I said that it had resulted in "placing in jeopardy" the claims that had been allowed under the act of 1890.

Mr. COOPER of Indiana. Well, Mr. Chairman, that makes a very material difference. I am glad that the gentleman puts himself so much further within the pales of truth, or so much within the reach of truth, as compared with the statement in the newspaper.

Mr. CANNON of Illinois. I will also say to my friend that none of the speeches delivered on Saturday are in the RECORD. Mine will be to-morrow morning; and I have stated to him substantially what I did say. I am not responsible for what appeared in the newspaper.

Mr. COOPER of Indiana. Then I understand the gentleman to say that there are 300,000 or 400,000 claims jeopardized.

Mr. CANNON of Illinois. In round numbers.

Mr. COOPER of Indiana. The facts about that, Mr. Chairman, I am able to state, as I have just procured them from the Pension Office, and the figures that I give are good up to last Saturday evening. The total number of cases suspended up to and covering December 16, 1893, were 2,488; of these there were resumed 357, reduced 529, and there were dropped, instead of 400,000, and I accepting the gentleman's correction of the newspaper statement, there were dropped 673. And I wish to add in this same connection [Mr. CANNON of Illinois rose]—I will yield to the gentleman in one moment—that they were not dropped by reason of the operation of the special examination division, but dropped by reason of a construction which all the Departments of the Gov-

ernment of this Administration and the other having any relation to the subject whatever have said to be clearly the law prevailing.

Mr. CANNON of Illinois. Now, if the gentleman will allow me. If he will read the report of the committee he will find that the Commissioner of Pensions stated that he had a force of 50 men at work on the claims that had been allowed under the act of June 27, 1890; that they had examined between 30,000 and 40,000 cases, and he then goes on and states how many had been arbitrarily suspended and how far they had gone; so that when I made my remark I said that under this construction that had been placed on the act of June 27, 1890, this number I had mentioned had been placed in jeopardy.

Mr. COOPER of Indiana. I do not question the sincerity of the gentleman, but I must be permitted to say that we who have had any opportunity to investigate the working of the Pension Bureau know that no large percentage of the claims under the law of June 27, 1890, could be affected.

There certainly must be a very small number. The gentleman can see there would be nothing like 400,000 of such people.

Now, I must not be detained longer on this branch of the subject. I wish to correct a misapprehension that went abroad on account of the statement of the gentleman, because he understands that the Bureau had placed so many claims in jeopardy, while he says that he did not use the language imputed to him by the newspaper, that 400,000 cases had been dropped. I agree with the distinguished gentleman from Massachusetts that the circulation of such a report would go very far to upset the confidence of the people in the patriotism of the Administration. It is unjust to the pensioner, it is cruel in the extreme, that such charges should be sent to the country to terrorize the pensioner, and it is unworthy a member of Congress that such efforts should be made to control his political convictions.

There is another misapprehension, and I say it in all kindness to the gentleman; and the distinguished gentleman from Maine [Mr. DINGLEY] has fallen into the same error.

I understood the gentleman to make some criticism upon the work of the Bureau at present upon the ground that it is not issuing as many certificates per month as were issued under the former Administration. That is not fair when you consider the circumstances. In the first place, as to the time for comparison under the former Administration, I can say truthfully that the entire force of the office, with rare exceptions, was devoted to the consideration of cases under the law of June 27, 1890, and that claims under the old law were not considered unless you could get them made special by showing that the claimant had become a subject of charity. The former Commissioner put practically the whole force upon cases arising under the law of June 27, 1890, and gentlemen will see, when I call attention to it, that those are short cases, for in about 75 per cent of them the claims were already made out under the old law.

Under the law of June 27, 1890, all that was necessary for the claimant to show was his present disability; it was not necessary to trace it back to his army service. Those claims could be passed with great rapidity, and in many instances all that was necessary for the attorney was to put on file a request that the case be considered as under the law of June 27, 1890, and it was allowed at once. Many thousands of those cases could be allowed in the same time that would be required for the consideration of a few cases under the old law, cases requiring careful examination extending back to the incurrence of the disability in the line of service. So, when you draw your comparisons between the present Administration and the former one, you should consider not only the quantity or volume of the work, but its kind and quality. If there is any difference between the two administrations it is this: The old administration gave its efforts entirely to the consideration of claims on behalf of people who had not incurred their disabilities in the line of service, while this Administration is undertaking to give some attention to the old soldiers whose disabilities were incurred in the service.

Mr. CANNON of Illinois. Will the gentleman allow me to interrupt him there, for he has fallen into an error?

Mr. COOPER of Indiana. I will yield to the gentleman.

Mr. CANNON of Illinois. This same statement from the Pension Office shows that for the seven months from May to December, 1893, under this administration, there were far less, thousands less, of the old law claims adjudicated than were adjudicated in 1892 in the same period.

Mr. COOPER of Indiana. I understand that, Mr. Chairman. The gentleman is correct as to the fact. I have not the exact figures, but while his statement is correct generally, the disparity is not so great as he has intimated. But this is true of those old war claims, that they have been deferred for three or four years by reason of the partial conduct of the previous administration, and they are necessarily cases involving a very great deal of work, whereas if they had been considered at the proper time, and in the proper order, they would have been reached and could have been expedited and disposed of much more readily.

[Here the hammer fell.]

Beware of Obnoxious Taxation!

SPEECH

OF

HON. RICHARD BARTHOLDT,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1895,

On the bill (H. R. 8705) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire United States notes, and for other purposes.

Mr. BARTHOLDT said:

Mr. SPEAKER: Representing as I do the largest beer-producing district in the country, it is natural that I should take the liveliest interest in the proposition made by the gentleman from Mississippi [Mr. MONEY] in a bill now pending before the Committee on Ways and Means, and providing for an increase of 100 per cent of the tax on beer. When I discuss the proposition, however, I do so not to champion any special interest, but to defend the people against the effects of a measure which I shall show to be subversive of their rights, interests, morals, and health, and which, if enacted into law, will, besides, utterly fail of its purpose. I hope to have the indulgence and attention of the House for the purpose of enabling me to prove these assertions. I think I can do so to the satisfaction of every fair-minded man.

The proposition referred to is to increase the internal tax on beer from \$1 to \$3 per barrel. Its advocates on the Democratic side do not deny that they dislike the job, but insist that it has to be performed, and they appeal to our patriotism to help them, because, in their judgment, patriotism demands it in view of the condition of the Treasury. This, I must confess, calls for a sample of patriotism entirely new to me. Then the knights of old were right when they waylaid the merchant and called it patriotism, because they needed his goods and his money. It is the kind of patriotism which prompted England to impose the tea tax and caused her to lose the American colonies and which cost Louis XVI his head. If I had my choice, however, I would call it by another name. In my humble way, I imagined patriotism to mean self-sacrifice for the country's good, but now the advocates of this tax teach us that it means something entirely different, that it means the sacrifice of somebody else's interests, the confiscation of somebody else's property.

In their eyes patriotism impels them to do something the propriety, justice, and wisdom of which they themselves doubt, and lest our country may be blessed with this kind of patriotism I beg to recall to the minds of the members at this time the well-known dictum of Thomas Jefferson, "Never come to the conclusion that, under certain circumstances, it may be best to do something dishonorable." This truism of the great statesman and philosopher is applicable here, because to knowingly do an injustice is dishonorable.

What makes the purposes of these modern patriots so unjust and obnoxious is that they do not strike the rich man, who could stand it, but the poor, who can not. For whatever may be said for or against beer, it is, in our country at least, the poor man's drink. These gentlemen are not after the bottle in the cellar of the wealthy, because its price will perhaps not be enhanced, nor after the glass on the counter, because its cost can not well be increased, but they propose to tax the tin kettle out of the hand of the workman. This may be the tendency of the time, but it is neither Republican nor Democratic. It may be policy, but the history of the world teaches that it is bad policy.

It is true that the Government has nothing but what it receives from the people, and it is also true that the very existence of Government involves the right for it to say how much it is to receive and from whom. But let us remember that an injudicious exercise of that right has dethroned ministries, shattered empires, and swept crowns from the face of the earth. You can find it on all pages of the world's history, written in indelible ink, that you can rather take dollars of a man's liberty than actual copper cents out of his pocket.

What is beer? While it is true that the Germans have brought it over the ocean, with their Christmas tree, their songs, and good nature—nearly as early, by the way, as the landing of the Pilgrim Fathers—yet it has long ceased to be the drink exclusively of our German adopted citizens and their descendants; it is to-day the American national drink, and as such it has done more for the cause of true temperance, it is claimed, than all the prohibition apostles combined.

I speak plainly, Mr. Speaker, because plain language seems necessary in this emergency. As a beverage it has fulfilled a temperance mission, because it has successfully, inch by inch, combated for the ground with the whisky fiend, and when you examine the

figures you will find it has conquered. As the consumption of beer has grown that of whisky has diminished. In deference to my friends from Kentucky I will not attempt to describe what the consequences would have been but for the introduction of beer into this country; and what this mild and wholesome beverage has added to the quiet enjoyment of life, the sociability, happiness and contentment of the masses, I will also refrain from depicting, leaving the task of completing this beautiful picture to the skillful hands of the humanitarians and saviors of society.

But that this advantage, incalculable in its physical and moral magnitude, will be lost to us by taxing one-third of the present beer consumption out of existence; that the inevitable rise in the price of beer will cause a corresponding decline in its consumption and will consequently cause a vacuum, to be filled by whisky, and the very cheapest and worst grades at that; of this there can be no reasonable doubt. I shall try to demonstrate this truth more conclusively later on in my discussion of the subject.

Let us look for a moment at the practical side of the question. Granted that all these arguments leave the Treasury empty and that we are running behind about \$5,000,000 every month, the main question, after all, laying aside all considerations of propriety and justice, is this: Will this increased tax accomplish its purpose? Will it yield the necessary revenue? I say emphatically no! How simple the calculation of the promoters is! The beer tax now yields about \$30,000,000 annually; consequently, if doubled, it will yield just \$60,000,000. Why, it is the egg of Columbus. But I may be permitted to say that if Columbus could suspect Treasury experts of being responsible for this calculation he would feel sorry to-day for having discovered America.

I do not believe, let me say in justice to these experts, that they ever made such a calculation. They know too well that to artificially and voluntarily enhance the price or market value of an article means to restrict its use, to reduce its consumption almost in proportion to the increase of price, the same as if you by a reduction of customs duties really diminish the cost of an article the revenues from it may remain the same because of the increased importation and consumption. This, I trust, needs no further illustration. It is true even as to the absolute necessities of life, but particularly so as to beer, because of the prevailing methods of the sale of this article.

What is it that is swelling the volume of its production to such enormous proportions? Is it the sale by bottles or glasses? No; it is the sale in tin cans, pails, and buckets in which the laboring man gets his beer for his meals and for a sociable chat with his family after his day's work is done. In this manner he gets three times the quantity that he would obtain by standing at the bar. This may not be profitable for the retailer, but competition forces him to submit to this custom, and it has been calculated that two-thirds of the total production of beer in this country is being disposed of and sold in this way.

Does anyone for a moment imagine that this method of sale would or could continue under this increased tax? Not for a day. The retailer would be forced to stop it for reasons of self-preservation. And what would be the consequence? His sales would be diminished fully one-half of what is now being sold this way, and the general production would be decreased fully one-third. Where will, then, be your thirty millions increase of revenue? I venture the prediction that by doubling the tax we will not increase our income more than \$10,000,000, perhaps not more than \$5,000,000.

There are those who will vote for the pending proposition just because of its tendency to lessen consumption. They imagine to thereby promote the cause of temperance. How much they are mistaken I have already intimated. By voting that way they will, in fact, promote intemperance in a twofold way. They will drive many of those who now, because of the better measure, prefer to take their refreshments home, back into the saloons, and you will legislate the whisky bottle into the pockets of others who need a stimulant and yet want to stay at home. Now, I would rather see a man carry a whisky bottle than a revolver, but preferable to both alternatives is a nickel in his pocket for a bucket of wholesome beer.

Every friend of true temperance—by which I mean moderation, not intolerant prohibition which seeks to accomplish the impossible thing of correcting the people's habits by laws and police clubs, and which is fortunately dead in this the only country where it was ever tried—every friend of true temperance and moderation, I say, will conceive it to be his duty, and, if we be such, it is our duty, in a struggle between milder and stronger drinks to take sides in favor of the milder ones. If I can not wipe out intemperance with one fell swoop, I content myself with promoting sobriety by substituting the harmless for the harmful drinks. But by striking at beer you do the very reverse.

You hold the arm of the brewer and place a club into the hand of the distiller; you arrest the march of the American people to a higher plane of sobriety, and go on record as promoters of intoxication. Can the Congress afford to face the moral sentiment of the American people with such a proposition? Can we, as

members of the highest legislative body of the land, afford to rudely interfere with and retard the process of evolution toward higher forms of civilization, which forms are developing, without legislative interference, because of the innate good in man and his manifest destiny? Can we allow the lesson to go out to our American youth that the House of Representatives itself has decreed that when dollars and cents are at stake for the Government, sobriety and morals are not "in it" with Congress?

While you ponder over these questions I want to call your attention to the fact that all distillers and rectifiers, all wholesale and retail whisky sellers are in favor of this increased tax. Members who have read their circulars are, I believe, fully aware of this fact. Why do they favor the increase? Well, human nature is the same everywhere. It is selfish to the core. These interests know they will profit by it, and their attitude fully bears out what I have just now tried to demonstrate. It may be said that this Congress has also increased the tax on whisky. This is true, but while that increase amounted to but 20 per cent you propose to raise the tax on beer 100 per cent. It is also true that such a tax can be collected easily and without extra cost to the Government, but is not this the case with every internal-revenue tax? Or shall the brewers be punished for honestly paying their tax on every barrel brewed, and because there is no case on record of a brewer ever attempting to defraud the Government?

From my standpoint, and by that I mean from the point of view of a Republican, from principle even the one-dollar tax ought to be repealed. It is a war tax, and was imposed at a time of the greatest emergency, in the nation's darkest hours. Although the price of beer was then double of what it is now, the tax has not only been kept up, but kept the same, and the brewers have loyally and ungrudgingly submitted to it ever since and made no attempt to shake it off, even at the time when an annual surplus of a hundred millions caused an American President sleepless nights.

In my judgment beer is to-day not more of a luxury than coffee, tea, and sugar. We can get along without it, true, but we can do without tea and coffee and sugar just as well, and mankind has done without them. Beer, being made out of barley and hops, is an article of food. It is justly called "liquid bread" and is looked upon as such by the millions who drink it. Consequently there is no more justification to tax it than to tax coffee or tea or sugar or ice cream, and if it has to be done, as a result of tariff tinkering, there is no reason why an equal tax should not be placed upon all of them.

The true Republican doctrine is to levy from imports competing with our manufactures, and then from real luxuries just sufficient revenues to run the Government, while articles of food, necessities of life, should be as free from internal taxation as the air we breathe and the water we drink. The income tax was opposed on this side of the House and by many Democrats as unnecessary and unjust, but while the income tax falls on shoulders that can bear it, the increase of the beer tax falls upon those who can not. Therefore the latter is much more iniquitous than the former.

This leads me up to the question which is always important and foremost when problems of taxation are being considered, namely, the question, who pays the increased tax? There is no doubt but that all will suffer from it, the producer (employer and employed) as well as the consumer. But the main burden will fall on the consumer, just as an increase of property taxes is borne by the tenants. While the landlord goes into his pocket and lays down the money, yet he makes the tenant reimburse him by putting it on the rent. So in the case of the brewer, who is in reality merely a subcollector for Uncle Sam. He makes the outlay, but is bound to charge the tax to the retailer, because under present circumstances he simply can not afford to pay it out of his own pocket.

There might have been periods in the history of this great industry, to-day one of the greatest in the country, when the brewer's profits were large enough to bear such a tax, but these days have vanished with increasing competition, which forced the price down from \$12 to as low as \$5 a barrel. To-day it is a matter of current report that the English capital invested in American breweries yields no dividends, and there is no reason to assume that non-syndicate breweries do much better. The reason is that the price of the product has gone down, while the cost of labor and of collection have remained the same, and the losses, larger in this business than in any other, have vastly increased.

So the brewer of to-day, if he wants to conduct a paying business, will be forced to raise the price of beer to the retailer, and the latter would in turn be forced to get his money back from the consumer. But the consumer may have to bear even more than what this increased tax may add to the retail price. His health may be endangered by a poor article which unscrupulous manufacturers may put upon the market as a consequence of this new exaction on the part of the Government. While I do not fear such a result in St. Louis, where the best beer on this continent is brewed, because our great brewers, like Adolphus Busch, William J. Lemp,

etc., are too proud of their world-wide reputation, yet newspapers of other cities have intimated that they fear such a result in their localities.

Another very serious aspect of the matter was pointed out in an article upon which my eyes accidentally fell the other day. It ran as follows:

It is probably true that the brewer would have to bear the increase at first, and that would at least close 2,000 of the breweries of the country, leaving only a few hundred. These would then see their advantage in combination, and we should have another gigantic trust, a trust forced upon its founders by unjust and oppressive taxation.

The article then goes on to explain why naturally a rise of the price would soon follow, and then it reads:

When the workingman some day learns that his modest luxury has been taxed to such an extent that he can not have the liberal measure he now receives for his nickel and that, possibly, the quality has been lowered in addition, then you have reached the real consumer. And he will know that a great trust, forced upon the brewers by the Government against their will, but as heartless as all other trusts, monopolizes the production of beer and is doing this.

Here you have in concise language the reasons why both the producers and consumers will be injured and oppressed by this increased burden. And this is not all. Decreased production means less employment for labor, and in my district alone hundreds of men, now steadily employed at good wages, would have to pay for this increased taxation by losing their work. You may tell them that patriotism requires them to give up the chance of earning their daily bread, but it will be rather difficult to make them believe in this kind of patriotism. Some gentlemen on this floor have asked me the question why the brewers should object, if the consumers, and not they, pay the tax. How easily this is answered! They object, as every manufacturer and business man would, if we attempted to reduce his output and lessen the volume of his business by the machinery of the law. The business of the brewers and the sale of their product is already so heavily taxed by the States and municipalities that the limit of where it will be taxed out of existence is almost reached. It helps to maintain State and municipal governments in a measure vastly exceeding the amounts derived from all other sources of revenue, save real estate. Put additional burdens upon it and you may wipe it out entirely. This result may be wished for by many, but if Congress desires to gratify the wishes of these good people there is another more manly and more honorable way to do so, and that is to directly prohibit the business by Federal statute, or rather a constitutional amendment.

Now a word or two to my Republican friends. I have heard it said on this side of the Chamber that we could with impunity help a Democratic Congress to make an obnoxious law, because the responsibility will fall upon the head of the party in power. I for one do not believe in this theory. I believe in judging every question according to its merits and to vote in pursuance with the judgment thus formed. My ideal of a legislator is he who tries to the best of his ability to serve the people first, because by doing so he serves his party best. It has also been suggested that if the present Democratic Congress puts this additional tax on, the next Republican Congress will have the extreme pleasure of taking it off. This, I submit, is in itself a concession that the tax is wrong and that votes can be gained by the repeal of it. This is following the example of the man who set fire to his house and then helped to put it out. It is a dangerous experiment, in which whatever party is responsible for it may badly burn its fingers; and I also remind my party friends of the fact that if relatively as many Republicans should vote for this tax as Democrats it will be an impossibility to put the blame on the party in power. The people have begun to think for themselves, and in this age of newspapers and printer's ink they can not easily be deceived.

Speaking of practical politics, I should mention the fact that of the 101 daily and 800 weekly German-American newspapers not a single one is to my knowledge favorable to the proposition in question, or even willing to excuse or forgive the party which would enact it into law. They all condemn it in severest terms, and I could quote from them to the extent of volumes to show that this question, if Congress seriously proceeds to discuss and settle it, will be a most important factor in the next Presidential campaign. Our German-American fellow-citizens are, as is well known, not only intelligent but rather independent voters. They have very largely contributed to the great Republican triumph of last November; but because of their independence it is very easy to alienate them. I am free to predict that if this Democratic Congress saddles this additional tax upon the people against the opposition of the Republicans, the Democratic party will lose their votes for good, while the same fate awaits us if we should make such a mistake in the next Congress. It will be looked upon as a blow at the common people, their innocent pleasures and modest luxuries, and as an assault upon that liberalism which permeates our institutions and makes them so dear to the American people. When an increase of the tax on ale and beer, only a slight one, was threatened in England, the people

immediately lost sight of all other issues and a storm broke loose which unrooted a cabinet and which could not be allayed until the obnoxious proposition was withdrawn. May our political parties profit by this experience, and heed this timely warning!

If additional revenue is needed, tax the luxuries of the wealthy or revise the tariff in accordance with the needs of the Government! [Applause.]

The Pacific Railroads.

SPEECH

OF

HON. CHARLES J. BOATNER,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 31, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean," etc.—

Mr. BOATNER said:

Mr. CHAIRMAN: The conspicuous feature which has characterized every measure presented to the Congress of the United States or the settlement of the Pacific railroads question and for the settlement of the obligations of those roads to the Government has been that all of them have provided for the abandonment of the proceedings directed to be instituted against the officers and directors of those roads by the act of 1873, for the enforcement of the rights of the Government against them, and the measure which is now under consideration is no exception to the rule. I beg to call attention at this time to the fact that in 1873 the disclosure of the colossal frauds and violations of trust that had been practiced by the officers and directors of these railroads resulted in a unanimous report to this House by a special committee, raised for the purpose of investigating the matter, recommending the expulsion of two of its most honored members because they had been debauched by the emissaries of these companies. The public sentiment then aroused was so overwhelming as to sweep out of public life and destroy a great many public men who had been connected with those frauds, and resulted in the enactment of a statute by the Congress sitting in 1873, directing the Attorney-General of the United States to institute actions against all parties who had been concerned in those transactions, for the recovery, for the use of the Government, of the amounts which they had surreptitiously obtained from the companies they had represented.

There was promptly instituted in the circuit court in the State of Connecticut a bill in equity by the Attorney-General, seeking to carry out the purposes of Congress in the enactment of that law, and that suit resulted in 1878 in a decision of the Supreme Court of the United States, on a demurrer by the defendant, which admitted for the purposes of the demurrer the truth of all the facts alleged. That suit resulted in a decision by the Supreme Court that the action could not be maintained, simply because it was premature, simply because at that time the United States had no legal standing in court to assert its rights which had not yet matured. The court said in effect: "The United States made its contract with the railroad companies, and by the terms of that contract the rights and obligations of the companies are fixed. It is not contended but that the companies are complying with the terms of the law requiring payments into the Treasury of the United States; it is not contended but that they are complying with the provisions of the law establishing the corporation, and of subsequent legislation; and this court can not anticipate that, at the maturity of the bonds which the Government has issued in their aid, the roads will default in the principal and interest, which will become due at the same time." And, Mr. Chairman, for the sole reason—for that sole reason—that the right of action of the United States to assert its claim against the directors and officers of those companies, and to bring back into the treasury of the companies money and property which would then be subject to the Government's mortgage, had not yet matured, the court sustained the demurrer and dismissed the bill.

And now, Mr. Chairman, when the time has arrived, or when it is admitted that it will soon arrive, when the bonds are to fall due, now that it is confessed that the United States will in a short time have the standing in court which the Supreme Court, in 28 United States Reports, said would authorize them to institute these actions, it is deliberately proposed to abandon all the rights of the United States by postponing the maturity of these obligations for fifty years. And that, sir, is the milk in the cocoanut in

this bill and in all of these bills. The object is to enable those who have had control of the organization and management of these companies and the construction of these roads to escape their liabilities to the companies, and through those companies to the United States, for an amount more than sufficient to discharge the entire first-mortgage lien operating upon them, and to leave the roads subject to the lien of the United States.

Now, I would like for some gentleman who is supporting this bill to suggest why that should be done. I would like some gentleman to give us some reason, sound in law, sound in morals, sound in a sense of responsibility to the people, why the frauds committed by the directors and managers of the Union Pacific Railroad by which they have taken from the treasury of the company more than sufficient money to pay its first-mortgage bonds to-day—I would like to hear some reason why those men should be allowed to escape with their colossal fortunes, why these people should be allowed, they, their heirs, and successors, should be left as the moneyed princes of this land, in the possession and enjoyment of princely fortunes obtained by confessed fraud on the rights of the Government.

Mr. RAY. Does not the prosecution by the Government of its rights and remedies against this railroad company and its officers, involve the ownership of the road by the Government?

A MEMBER. What has that got to do with the question?

Mr. RAY. I want to understand the position of the gentleman on that point.

Mr. BOATNER. I am very glad indeed that the gentleman has asked the question; and I will state now that instead of treating such inquiries as interruptions, I shall be glad when any gentleman on the floor may interrupt me to ask me any question upon which he desires I shall explain myself more at length.

The question which my friend from New York asks I recognize as a perfectly practical question; and I assure him that I would prefer to see the indebtedness of the United States wiped out rather than see this Government enter upon the ownership of railway property. [Applause.] I believe that the public interest requires that railway property shall be left in the hands of individuals, subject to Government supervision. I should be as far from taking that step in the direction of socialism—Government ownership of railroads—as my friend from New York. But I can not see that the enforcement by the United States of its rights against these companies, their officers and directors, would lead to Government ownership of the roads. To guard against that, however, I have prepared a substitute, which is printed in to-day's RECORD, from which he will see that I have devised a plan by which we shall entirely escape any danger of that sort. I propose that we amend the original act of incorporation (which we have a right to do) by requiring that these companies shall as a penalty for default on the interest of these first-mortgage bonds and as a penalty for default upon the principal of any subsidy bond when due, forfeit their charters, which shall thereupon immediately vest in the United States for the use and benefit of all lawful creditors and of all concerned; and that the Secretary of the Treasury shall thereupon take possession of these roads, that the President of the United States shall appoint a railway commission to be composed of three or five members—I am entirely indifferent as to the number—who shall succeed to all the rights and responsibilities of the defunct corporations, and who shall immediately proceed to take an account of the stock issued in defiance of law, of the contracts made by the directors with themselves in the name of third parties or of corporations, and of the profits unlawfully thereby acquired, in other words, to make an official investigation of all the frauds covered by the Credit Mobilier report and certified to by your railway commission, which was appointed as late as 1887, and when they have made such investigation and obtained the necessary data upon which to institute judicial proceedings, to institute suits in the name of the United States against all the parties involved for the recovery of whatever may be due to those companies; and when the suits shall have been determined they are to report that fact to the Secretary of the Treasury.

These suits are to be given the right of way in all the courts of the United States; are made preferred cases, and ample facilities are given for conducting them as speedily as possible; all recoveries made to be reported to the Secretary of the Treasury, and when assets in hand shall have been properly applied the railway property to be sold to pay the balance which may be found due to the Government and any other lawful claims entitled to payment out of the proceeds.

The substitute which I shall offer further promises that the road when thus sold may be paid for by its purchasers in their first-mortgage bonds bearing 3 per cent interest and running fifty years, if these should be the best terms upon which the Secretary of the Treasury can dispose of the property. Now, I submit that is a perfectly practicable, perfectly feasible, and perfectly rational way of dealing with this important question, and that by no other

proceeding can we protect the rights of the Government and at the same time assert its authority against the people who have defrauded these companies to the extent I have stated.

Mr. GEARY. One question, if the gentleman pleases. If the relation between the Government and the railroad company with reference to this debt is to be only the relation of debtor and creditor, must not the Government first exhaust all remedies against the corporation and ascertain the existence of a deficiency before it has the right to require anything from the stockholders of the company?

Mr. BOATNER. That would be the method of remedy to be pursued by an ordinary creditor. But the gentleman from California ought to recollect that the Supreme Court of the United States has declared in the case of the United States against the Union Pacific Railway Company that the United States occupies with respect to these companies the dual relation of sovereign and creditor. He ought to recollect, and I beg to remind him, that in Congress resides the power to enact the supreme law of the land, and that we have a perfect right to enact remedial legislation which will reach the end desired. And my friend will remember that the Supreme Court held in the case to which I have referred, that while the directors of this railway company might be trustees of the company, they were not at that time the trustees of the United States and could not be held to accountability as such until the rights of the United States as *cresui que trust arise*.

Mr. WEADOCK. Will the gentleman yield to me for a question?

Mr. BOATNER. Continuing my reply to the gentleman from California let me say that when by an act of forfeiture the United States succeeds to and becomes possessed of the assets of a defunct corporation, then the officers and directors are subject to accountability to the *cresui que trust*, which will then be the Federal Government. And further, while my friend will say that it is impossible to reach the property, he is familiar, I am satisfied, with the rule of equity that in such a matter where a judgment has been obtained against the trustee the court will proceed to ascertain the investment of the trust fund, and these immense fortunes, built up out of the avails of a trust fund diverted from its proper and legitimate uses, will be subject to execution to satisfy any judgment rendered by a decree against the trustee.

Mr. GEARY. Just there—

Mr. BOATNER. Allow me to proceed. And another thing my friend forgets is that in such cases the onus of proof is on the trustee, that the fiduciary charged with the expenditure of a fund must, when called upon by his principal, account for it; and we have the evidence of the land grants, we have the evidence of their proceeds, we have the evidence of the proceeds of the subsidy bonds, and we have the evidence of the first-mortgage bonds, and it is for the court then to ascertain how they disposed of such funds and how they were diverted from their proper channel.

Mr. GEARY. Now will the gentleman allow me a question?

Mr. BOATNER. In a moment.

Mr. GEARY (continuing). The gentleman understands what my position is; that I am right in line with that argument—

Mr. BOATNER. I can not yield to the gentleman now. I understand his position to be this: That because, in his judgment, the suits will be ineffective he is in favor of abandoning them.

Mr. GEARY. Oh, no; that is not the question at all—

Mr. BOATNER (continuing). I differ with the gentleman from California in that respect. I do not believe that they will be ineffective, but if I did so believe I would let the responsibility for the failure rest on the courts, where it properly belongs, and not on the legislative department of the Government.

The railway commission appointed in 1877 declared that the decision of the Supreme Court in 98 United States Reports was a public calamity. I heartily agree with them. They postponed the enforcement of the unquestioned rights of the Government and the people of this country from 1878 until 1896. But now, sir, if these efforts are to be fruitless—I do not think they will be—I desire an honest effort to be made on the part of the law officers of the Government to enforce its rights against these companies, and as I said before, in the event of a failure, if there shall be a failure, to put the responsibility upon the shoulders of the judicial department of the Government, where it properly belongs, and not upon the legislative.

But my friend from Pennsylvania [Mr. REILLY], the chairman of this committee, and the gentleman who will follow him [Mr. WEADOCK] will argue that the provisions of the bill fully protect the Government rights.

SEC. 14. That the said companies accepting the provisions of this act, and each of said companies, shall, whenever requested in writing by the Department of Justice of the United States, and so long as the United States shall be the holder and owner of any of the bonds authorized by this act, cause any actions at law or suits in equity, or other proceedings, to be instituted and prosecuted in the name of said company or companies against any person who is, or has been, a director, officer, agent, or employee of the said company, for the purpose of enforcing any cause of action whatever arising, or which may hereafter arise, out of any alleged violation of duty, misappre-

privation of assets, or any other act or transaction whatsoever, in respect of which the said Department of Justice shall allege that it desires such action, suit, or other proceeding to be instituted and prosecuted. All such actions, suits, and proceedings shall be conducted by the Attorney-General of the United States, etc.

Now, sir, that section of the bill might deceive unprofessional people, but I can not understand how any lawyer would for a moment be turned aside from the object contemplated by this legislation by the insertion of such language as that. I criticize it mildly when I say it is a delusion. I will not call it a snare, because I believe that my friends, when they incorporated it in the bill, were honestly impressed with the idea that it would serve the desired purpose. But a moment's reflection will show the committee that the moment these companies accept the provisions of this act they will then be exactly in the same position they were in in 1878, or rather in 1873, when the Supreme Court held that the right of action on the part of the United States did not exist to call these people to accountability. The prematureness of the action would be more pronounced now than it was then, because the United States would be extending these bonds fifty years after their maturity instead of their extension from 1878 to 1896, as was the effect of the decision at that time.

Mr. STRAUS. Will the gentleman allow me to ask him a question?

Mr. BOATNER. Certainly.

Mr. STRAUS. The gentleman has already said that Congress has power to enact laws to reach these people. Now, can not Congress enact a law by which all the rights of the Government to reach these people will not be forfeited by the acceptance of the provisions of this bill?

Mr. BOATNER. No, sir. It is legally impossible, because the Senate and the House combined can not impair to any extent a right which has accrued. We may provide remedial legislation to enforce rights which were existing at the time and which exist now, but we can not impair any right which has accrued.

Now, the moment that we extend our debt fifty years, then we will lose standing. We have got nothing to say until the company defaults on some obligation which it would incur under the provisions of this act.

But gentlemen who will maintain the affirmative side of this proposition will say that this does not direct that the suit be brought in the name of the United States, but merely imposes a condition upon the incorporation, that the incorporation shall institute the suit and protect itself against the consequences of the frauds of its preceding officers and directors. We may direct the company to institute the suits. We may make it mandatory upon the officers that they shall do so and shall prosecute the suits, but we can not by Congressional legislation destroy the defenses which these directors and officers have against that corporation as a corporation. We can not do away with the statute of limitations which has intervened in their behalf. We can not take from them the plea of acquiescence and of indorsement of these acts by the directors and officers of these companies, elected by their stockholders; and so the suits directed to be brought by that provision of the act would be a mere delusion and a snare. It would be impossible, in my judgment, to overcome these defenses.

And then, Mr. Chairman, suppose the recoveries were had. Suppose this money was to be paid into the coffers of the treasury of these companies. We would have no lien upon it and no recourse upon it. We might pour into the treasury of the company \$100,000,000 and it would simply be subject to distribution among the same directors and stockholders who had contributed it. As the property of a corporation, we would have neither the power or the right to control the use of it. And so, sir, the insertion of this provision in this statute is worse than a delusion and a snare, because it is utterly hollow and utterly worthless.

Mr. HUTCHESON. Will the gentleman allow me to ask him a question?

Mr. BOATNER. Yes.

Mr. HUTCHESON. I have not perused the bill, and I suppose nobody who is not connected with the committee has a very clear understanding of it. I wish to ask whether this bill would be a novation of the contract? Do they not have to carry out the provision to pay the \$40,000,000?

Mr. BOATNER. The question which my friend from Texas asks me involves a discussion of this bill, which I will now proceed to.

Mr. MAGUIRE. Let me make a suggestion here. Is not the reason that you say the Government can not make a compromise with the companies while maintaining its right of action against the fraudulent directors because the United States Supreme Court declared their obligation, though founded in fraud, to be collateral to the company's obligation?

Mr. BOATNER. Why, of course. The Supreme Court of the United States decided that whatever obligation of restitution lay upon the directors and these officers of these companies, it was through the companies, the incorporations themselves, and that the United States as a creditor of the company could not enforce

a right of the company so long as the companies were not in default, in compliance with the terms of their contract with the United States; in other words, that so long as the companies were conforming to the provisions of the original act with respect to the sinking-fund requirement, so long as they were transporting Government troops and munitions of war, and sending dispatches and all that, that the United States had no standing in court to bring an action for the benefit of the company. The court says, substantially, if we maintain this action, and if we permit these recoveries to be made as the company is resisting the suit, it is to be supposed that it would immediately enter satisfaction of judgment, and if the money was covered into their treasury it would have the power immediately to redistribute it to the very people who would have paid it.

Now, coming to the provisions of this bill, the second section of this act provides:

When the said companies, or either of them, shall provide as hereinafter required for the payment of the first-mortgage bonds issued by any of said companies which now have priority over the lien of the United States, the bonds of such company secured by a mortgage upon all its franchises and property as hereinafter authorized, shall be received as collateral security for the amount of its indebtedness to the United States, so as aforesaid ascertained.

Now, what are the requirements "as hereinafter required"? What does that refer to? If you look to section 3, in the latter part of it, you will see that—

All other securities and cash in said fund shall be applied in extinguishing, in such manner as shall be approved by the Secretary of the Treasury, any portion of the remainder of the bonds secured by said first mortgages; but said sinking fund shall not be so applied or available under the provisions of this act until said company shall have made provision satisfactory to the Secretary of the Treasury for the payment at or prior to the maturity thereof of all of said bonds secured by said first mortgage and the discharge of such mortgage.

So that it appears from the very language of the act upon the "acceptance and compliance with the provisions of this act" they may tender to the Secretary of the Treasury mortgage bonds to be received as collateral security; and then, when they have made arrangements satisfactory to the Secretary of the Treasury for the payment of these first-mortgage bonds, why the Secretary of the Treasury is to apply the sinking fund; not that the first mortgage is to be paid, but that provision satisfactory to the Secretary for the payment shall be made. But how are they to make this arrangement, and what arrangements are to be made? What shall they consist in, and in what manner are they to accept of the provisions of this act? That is all left, Mr. Chairman, to the imagination of the House. The House is to infer that the Secretary of the Treasury will make a satisfactory arrangement to secure the payment of a bonded indebtedness which will require \$20,000,000 on the part of the Union Pacific in addition to the amount to its credit in the sinking fund. Certainly I say that in any bill that should pass this House, the Secretary of the Treasury should be informed by its provisions what arrangement the Congress or the Government expects him to make. No such responsibility and no such power should be vested in any executive officer; and you might find that an arrangement satisfactory to the Secretary of the Treasury was such that from a legal standpoint the United States would have surrendered the entire amount of the sinking fund, and would have received as a collateral fifty-year bonds which would be a second-mortgage security on the subsidized lines.

Mr. REILLY. Does not the gentleman understand that section of the bill to distinctly, unequivocally, and emphatically provide that before the Secretary of the Treasury shall be authorized to use and apply the sinking fund he must be satisfied that all the first mortgage is discharged?

Mr. SNODGRASS. In his discretion.

Mr. REILLY. Read the language of the bill.

Mr. BOATNER. He must be satisfied. There must be—

provision satisfactory to the Secretary of the Treasury for the payment at or prior to the maturity thereof of all the said bonds secured by said first mortgage and the discharge of such mortgage.

Mr. REILLY. Now, let me call the attention of my friend—

Mr. BOATNER. Let me finish my sentence. There is coming due of these first-mortgage bonds of the Union Pacific some \$27,233,512. There mature on the 1st of February, 1896, \$4,320,000, and \$3,840,000 on January 1, 1897; \$15,919,512 in January, 1898; \$3,157,000 on January 1, 1899; and for the Kansas Pacific the maturities on the same date are \$640,000 on November 1, 1895; \$1,440,000 January 1, 1896; \$2,800,000 January 1, 1897; \$1,423,000 January 1, 1898; \$33,539,512 securities, the payment of which, in four or five years from now, is to be left entirely to the discretion of an executive officer.

Mr. REILLY. Oh, no.

Mr. BOATNER. Why, you can not get away from the language of the bill. It is too plain to be misunderstood, and I have asked the gentleman, as chairman of the committee, how is this payment to be made, what provision is to be satisfactory to the Secretary of the Treasury for the payment of these bonds "at or before maturity," and my friend has never been able to give me any satisfactory answer to that question.

Mr. REILLY. Well, I do not want to interrupt the gentleman, but I undertook, as far as my humble ability would permit me to do so, to satisfy the House in my remarks yesterday, and also in conversation with the gentleman, that the conditions of the bill are express and explicit that the Secretary of the Treasury can not use a dollar of the sinking fund until the extinction of this mortgage, or until the company has satisfied him they are able to do so, nor can he accept one of the bonds that are to be given in this mortgage until the first mortgage is canceled and destroyed.

Mr. BOATNER. Therein is where my friend is mistaken.

Mr. REILLY. That is my opinion, however; and I think the gentleman from Louisiana is mistaken.

Mr. BOATNER. Therein I think the gentleman from Pennsylvania is mistaken as to the provisions of this bill. In my judgment they would permit the bonds to be executed and the application of the sinking fund postponed until provision satisfactory to the Secretary of the Treasury was made for the redemption of the first mortgage.

Mr. REILLY. I entirely differ with the gentleman; and the entire difference between the gentleman and myself is this: That I am willing to trust to an executive officer of this Government the responsibility, and to have confidence enough in him to believe that he will execute a law of this Congress.

Mr. BOATNER. Of course there is a difference of opinion between the chairman of the committee and myself as to the legal construction of this language. But we have the experience of twenty-five years in dealing with these companies. We know that they are represented by the very best legal talent of the United States. We know that the road to the Federal bench has been by way of the railway offices, and we know that in their litigations with the Government, with the exception of the suit growing out of the Thurman Act, the companies have been successful. And, Mr. Chairman, I imagine that the friends of these railroad companies would not have been willing for this bill to be reported here and supported as it is (and they are all supporting it) if there had not been such a possible construction of its provisions as would give the companies the relief which they expect to obtain by it. And that relief is, first, that the directors and officers are all going to be exonerated; next, that the Government indebtedness is to be extended for fifty years, and next, that as these first mortgages become due they will utilize the sinking funds to pay them until the sinking funds are exhausted, and that when those funds are exhausted they will pay or not pay as suits their convenience, and go on, or have a reorganization, as may be for their interest at the time. I do not charge that my friend from Pennsylvania [Mr. REILLY] understands this bill as I do, but, sir, my best judgment as a lawyer is that just such a course of proceeding on the part of the companies would be entirely practicable under the provisions of this loosely drawn bill.

There is another point to which I wish to call attention before I take my seat, and that is that the gentlemen who have been representing the Union Pacific Railway Company came to our committee and submitted a list of amendments which they said were absolutely essential to enable them to reorganize the Union Pacific Company under the provisions of this bill. These essentials were that the interest on the bonds should be reduced to 2 per cent, that there should be eliminated from the mortgage which is proposed to be given all the collateral lines and all the stocks and bonds held in the collateral lines, and that the Government mortgage should be restricted to the main line. They also stated that a foreclosure of the mortgages upon this property would be absolutely essential, because the companies were so loaded down with floating obligations, resulting from traffic contracts, resulting from guaranties of the interest on the bonds and dividends on the stocks of other lines, that they were utterly and totally insolvent, and that no money could be raised on their stock or on their credit until this floating indebtedness was wiped out by foreclosure.

Mr. HOOKER of Mississippi. To what extent were those suggested amendments embodied in the bill? How many of them?

Mr. BOATNER. None at all.

Mr. HOOKER of Mississippi. Exactly.

Mr. BOATNER. But I will say to the gentleman from Mississippi that the very men who told us that they would not take advantage of this bill and who insisted on these amendments have been here lobbying for the passage of the bill, in the confident expectation, as they express it, of having it shaped up as they want it in the Senate and having all these matters arranged in conference.

In other words, the House is merely to be made a sort of chopping block to chop out in the rough legislation to be sent to the other branch of Congress, where these gentlemen can have such amendments put upon it as they desire and have it brought back here and carried through this House on the report of a conference committee.

Mr. Chairman, I will not consume the time of this committee by going into the transactions of these companies to any very great extent. I desire, however, to call attention to a few of them.

The Railway Commission appointed in 1887, under the act approved March 3 of that year, say, on page 49 of their report:

The explanation of the constant and restless discussion and inquiry which have for many years pervaded Congress, the press, and, it may be said, the whole people of this country, in relation to these Pacific companies, is certainly due to the fact that there exists a settled conviction that by the application of ingeniously contrived devices in the construction and operation of these railways the bounty of the Government, intended for the support, development, and insurance of the financial strength of these corporations, has been slowly but surely filtered into the pockets of a few favored officers and managers, who have not scrupled to use their powers as directors and trustees for their own personal advantages.

This Commission finds it impossible to state its views of the object of the Government in making the munificent grant of lands and the great aid of its credit in better language than that contained in the report of the Wilson committee to the House of Representatives, made on the 29th of February, 1873.

They quote the language of that report, holding that these parties were trustees of the Government and of the roads, and that they were accountable to the people of the United States for the faithful discharge of their duties.

I find on page 51 of this same report, made by two gentlemen, one of whom is here to-day advocating the passage of this bill—I find in this report, made by Mr. Anderson and his associate on that committee, the statement that there was a total profit of \$42,825,328.34 on the construction of the Union Pacific road from Omaha to Ogden. They say:

The actual cost of construction under these three contracts was substantially equivalent to the proceeds of the first-mortgage bonds of the company and of the Government bonds, as shown by the following table.

And they give the table.

I find, sir, that that company, with a full knowledge of the fact that it would be unable to meet its obligations to the Government, paid out, up to the 1st of January, 1880, \$11,943,125. I find that the construction company of the Central Pacific—giving only one item—

Mr. COOPER of Wisconsin. May I interrupt the gentleman with a suggestion, which is that these profits of \$40,000,000 which were made on a thousand miles of road, were all paid by the directors of the company to themselves.

Mr. BOATNER. I was coming to that. I will not take time to look up in this report the various amounts which were received by the constructors of these railroads, but they are enormous. In every case the directors voted the contracts and the compensation to companies which belonged to themselves. In other words, they, as directors of the companies, made contracts with themselves as contractors, and as directors they appropriated and delivered the funds of the companies to themselves as creditors.

Mr. TERRY. Is it not true that the defaulting companies mentioned in the pending bill diverted fraudulently a large part of the traffic and transportation that they would naturally have received to other railroads, thereby diminishing their net earnings out of which the Government was entitled to 5 per cent or other per cent provided for it by law?

Mr. BOATNER. That is undoubtedly true.

Mr. TERRY. And in view of that fact, would not the Government have a right to pursue those other companies by bill in equity on account of what they received in that way?

Mr. BOATNER. I hardly think so, unless they were parties to the fraud.

Mr. TERRY. It occurs to me that the United States would have that right on this principle: It has been held, for instance, that where a landlord has a lien upon the tenant's cotton or corn and the tenant sells it to a man who buys it with a knowledge of the lien, then the landlord can maintain a bill in equity against the purchaser for the proceeds. Now, one of the rules of law is that a statute of the United States is notice to everybody, so that these railroad companies must be presumed to have known that the Government was entitled to its 5 per cent of the net earnings, which in this way were fraudulently diverted.

Mr. BOATNER. Not 5 per cent; 25 per cent. Mr. Chairman, it is hardly necessary for me to enter into a discussion of that question.

Mr. TERRY. I asked the question on this point because I wanted to know whether the gentleman's proposed substitute would reserve the right of the Government to that kind of a remedy—the right to sue these other companies.

Mr. BOATNER. Certainly, my substitute reserves all rights of the Government. It directs the Pacific railroad commissioners, when appointed, to institute all suits which can be instituted, growing out of the frauds and peculations in the construction and management of the roads.

Mr. TERRY. I think those other companies are certainly liable to the Government.

Mr. BOATNER. Now, Mr. Chairman, I want to say that if the settlement proposed by this bill were going to put money into the Treasury—if the bill proposed a liquidation of the indebtedness of these companies so that the Treasury would be benefited—I might be willing to support the proposition, or at least I would not be so violently opposed to it as I am to this measure. But the

bill not only does not propose to put any money into the Treasury, but, on the contrary, that the United States shall pay all the subsidy bonds outstanding, amounting to some \$64,000,000, to take the entire amount of the sinking fund and apply to payment of the first mortgages, and that the Government shall receive within fifty years reimbursement of obligations issued thirty years ago, and on which it has been paying interest ever since at the rate of 6 per cent per annum, this arrangement to carry with it an absolute discharge, in my opinion, of every person who has been concerned in the frauds in the management of this property.

Mr. KYLE. Is it the gentleman's opinion that the Government, if it desired to do so, could appropriate this sinking fund to any other purpose than the liquidation of the first-mortgage bonds?

Mr. BOATNER. I am very glad indeed that my friend has asked me that question; because it shows that the proposition here is for the Government to give away the advantage of the position which it occupies with respect to that very subject-matter. By the act of 1887 the Secretary of the Treasury is directed to pay out of the sinking fund all first-mortgage bonds as they mature whenever in his judgment it is necessary to protect the interests of the Government.

I call the attention of my friend to another fact—that so soon as the United States shall have discharged its first mortgage out of the sinking fund and by such additional legislation as may be necessary, the Government not only gets its first mortgage to secure its subsidy bonds upon the aided portion of the line, but under the provisions of the act of 1878 the Government lien extends to the entire line, and when the first mortgage shall have been wiped out the United States will stand as first-mortgage creditor of the entire line.

Mr. KYLE. Does not my friend think that this bill appropriates this sinking fund exactly as it would be disposed of under existing law?

Mr. BOATNER. It does, with this difference: That under existing law the moment the Government has appropriated the sinking fund for this purpose the bonds thus acquired are practically discharged and the Government loan strengthened to that extent, whereas under the terms of the bill the payment of the Government indebtedness is postponed for fifty years, and we get no benefit.

Mr. KYLE. Is it a fact that this debt under the pending bill is postponed for fifty years? Is it not the fact that within six months after the acceptance of the terms of this bill these companies must begin not only to pay the interest but to discharge the principal of their indebtedness?

Mr. BOATNER. Yes—

Mr. KYLE (continuing). And therefore the postponement was not for fifty years, as he first suggested?

Mr. BOATNER. The gentleman is perfectly correct in that, so far as the bill before the House is concerned. But I have been making the suggestion on account of what I know to be certain influences which will amount to a complete change in the provision of the bill in another body. I know that the understanding was that the provisions here are to be stricken out and a provision inserted, probably not in this House, but in some other body extending these bonds fifty years. The gentleman has been informed not once, but several times, by the promoters of the bill that such a concession would have to be made.

Mr. KYLE. Does not my friend think it right, if such be the fact, to deal with the bill in a proper way in this House to reach the purpose we have in view and not to take it into consideration in connection with what may be done by some other branch of the Government? We can not possibly anticipate what will be done in the Senate or elsewhere. We must base our action as legislators on what we ourselves believe to be the best interests of the Government.

Mr. BOATNER. The bill provides that for a period of ten years, commencing on the 1st day of July, 1895, each of these companies "shall pay to the Secretary of the Treasury of the United States in addition to the interest which shall then be due on its indebtedness, one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided." The bill does, therefore, propose that there shall be a payment of a percentage each year, to be applied to the payment of the lowest numbered bonds.

Mr. BRETZ. Beginning when?

Mr. BOATNER. On the 1st day of July, 1895.

Mr. WASHINGTON. Will my friend from Louisiana permit me to ask him a question?

Mr. BOATNER. Certainly.

Mr. WASHINGTON. I would like to ask if the committee's bill is adopted and the first mortgage wiped out, the Government mortgage being a second mortgage, will the gentleman please explain what kind of a mortgage we would then have? Would it be a first mortgage, or would it be in the nature of a kind of blanket mortgage on all of the roads, or would it be any security whatever?

Mr. BOATNER. The original lien of the Government carried by the act of 1863 is continued in force—

Mr. COOMBS. As far as the aided roads are concerned.

Mr. BOATNER. As far as the aided roads are concerned. But we would have in addition to this a first mortgage, or collateral bond, as collateral security which purports to carry a mortgage on the same line on which we have now a first mortgage, and would also embrace a first mortgage on portions of the line where it is contended that we have not now a first mortgage.

Mr. STOCKDALE. But is it not true as a matter of fact that the collateral lines, that is these other roads, are already mortgaged to their full value?

Mr. BOATNER. Of course.

Mr. SNODGRASS. I was just going to suggest, with the consent of the gentleman from Louisiana, that it was in proof before the committee that these additional lines of road were all mortgaged to more than their full value; and therefore this would add nothing whatever of additional security to the Government.

Mr. BOATNER. Now, Mr. Chairman, concluding my remarks—

Mr. WASHINGTON. If it will not interfere with the gentleman I would like to have an answer or an explanation of the point suggested in my question.

Mr. BOATNER. I was just coming to that, because I do not desire to take any more time than necessary. I must conclude in justice to other members of the committee.

Pursuing my reply therein, and replying to the question of the gentleman from Tennessee, I would say that the United States would not then acquire any better position with reference to these roads than it now substantially occupies, because it will surrender of the property of the companies the sinking fund, which I think amounts to \$18,000,000.

Mr. KYLE. If the gentleman will permit me, the total sinking fund is, of the Central Pacific \$5,330,000, and the Union Pacific \$13,665,000, in round numbers.

Mr. BOATNER. Making about \$18,000,000 in all, that the Government would surrender—

Mr. BRECKINRIDGE. If it will not interrupt the gentleman—

Mr. BOATNER. Certainly not.

Mr. BRECKINRIDGE. I would like to ask how much is still due to the nonaided lines under the decision of the Supreme Court for carrying the mails?

Mr. BOATNER. Some \$2,000,000.

Mr. BRECKINRIDGE. Now, has the gentleman come to any conclusion as to whether there is any opportunity or right on the part of the Government to credit the debt of the Government with that withheld railroad postal money?

Mr. BOATNER. The Supreme Court of the United States decided that we had no such right.

Mr. BRECKINRIDGE. Not now; but if they make default of the principal of the debt, can it be used to be applied to the obligation incurred by the roads to the Government?

Mr. REILLY. If the gentleman from Louisiana will allow me just at that point, I would like to make myself understood in connection with that fund.

The committee reporting the measure have taken that fact into consideration, and the provisions of the bill will require the Union Pacific Company to raise about \$20,000,000 in addition to the money now to their credit in the sinking fund to wipe out their mortgage. The Central Pacific will have to raise about \$15,000,000, which amount, in connection with the sinking fund, will extinguish their indebtedness, and the committee took into consideration the amounts due the Government for transportation service on the nonaided lines as a resource they could rely upon to enable them to raise the money required to carry out the provisions of this act.

Mr. BOATNER. Mr. Chairman, as to whether these companies would, in the event this bill becomes a law, allow that as a credit would depend entirely upon their voluntary action. So far as the Central Pacific is concerned, I have been advised that it would not be so allowed; so that fact can not be taken as an element in the settlement.

Now, Mr. Chairman, with regard to the plan which I will propose to the House, I want to say that it does not contemplate in the remotest degree any Government ownership of railways, nor does it contemplate any Government operation of railways any more than is constantly practiced in the United States courts and through the judicial arm of the Government by receivers. It proposes the creation of a Pacific railway commission, who shall be charged with the duty of operating these roads as common carriers pending the liquidation of the companies, and who shall immediately institute suits against all parties who may be indebted to the several companies after these recoveries shall have been made; then to make a liquidation, to marshal the assets of the company, to apply them where they belong according to law and equity, and ask for an order of foreclosure to sell the roads in

pursuance of the provisions of the mortgages which the Government has upon them.

Mr. NORTHWAY. I should like to ask the gentleman two or three questions for information.

Mr. BOATNER. Very well.

Mr. NORTHWAY. Suppose your substitute should be voted down and the question should come directly, Shall the bill pass? do you advise us to vote for or against the bill?

Mr. BOATNER. I advise a vote against the bill, and I will state to my friend the reason why.

We have got legislation which will fully protect the rights of the Government between now and the meeting of the next Congress. There is ample money in the sinking fund to meet all the maturities which will intervene between now and the reassembling of the next Congress. If that Congress should decide not to take any action in the premises, existing laws are better than any laws extending this debt on the terms here proposed, because we have the provisions in the act of incorporation providing for the foreclosure. Of course the very execution of a mortgage itself provides for a foreclosure. When the law says that the United States shall have a mortgage, it means that the United States shall have the right to go into court and foreclose that mortgage. We may, by taking up these first-mortgage bonds as they fall due, become subrogated to the rights of the holders of those bonds.

The gentleman will notice that these first mortgages mature on the 1st of February, 1896, and the 1st of January, 1897. They amount to \$7,000,000, falling due, between those two terms, on the Union Pacific. I will not take time to give the amounts on the Central Pacific. Suppose the Government of the United States takes them up out of its sinking fund? It is immediately subrogated to the rights of the holders of those bonds. It may immediately demand a foreclosure upon the property subject to that mortgage.

Its own subsidy bonds will have become due in the meantime. It may demand a foreclosure upon its own subsidy bonds. It may sell these roads to a purchasing company which will pay it in cash the amount of money which is out and give it first-mortgage bonds upon the whole amount, for whatever amount the road may be bid in, and then, under the act of 1878, whatever deficiency of satisfaction there may be of the rights of the United States, it may pursue its remedy by a creditor's bill against the defaulting officers, directors, and stockholders of these companies. And so we have got a better, clear, legal remedy, putting ourselves just in the position of a private individual, taking away from the case anything like any advantage which is given to us by being the Government of the United States—as mere ordinary individuals we possess greater rights for the enforcement of our demands upon the law as it stands to-day than we shall have under this act, and I challenge the gentleman in his reply to say where anything is given to us by the proposed bill which we do not now possess.

Mr. REILLY. If the gentleman will allow me, right there—

Mr. BOATNER. In a moment. I want to yield now to the gentleman from Ohio [Mr. NORTHWAY].

Mr. NORTHWAY. Suppose the question should come up, should the Government foreclose its mortgage and bid in the road or give its indebtedness outright, what would be your advice?

Mr. BOATNER. You mean for the Government to bid in the road and own it?

Mr. NORTHWAY. Own it if it is necessary to foreclose its mortgage.

Mr. BOATNER. It is hardly necessary to contemplate a contingency of that kind, because it can not be conceived that we should go begging for somebody to take a magnificent property like this.

Mr. REILLY. It is not worth its debt.

Mr. NORTHWAY. Some members are discussing just that question in their own minds with reference to voting for or against this bill. Suppose we beat the bill and leave the only remedy, that of foreclosure, what should we do?

The answer to that is this: It can not be conceived that if this road is going to be sold that it will not be properly sold. You know it is a constant practice for courts in decreeing foreclosure to order or to provide for its purchase by a purchasing committee representing all the parties in interest; and provision could be made in this case, if there was anything additional needed, by the court in ordering the sale. It would depend entirely upon the action of the Secretary of the Treasury. If the Secretary of the Treasury went and bid the full amount of the Government indebtedness and the first mortgage indebtedness, there might be a difficulty in organizing a company to take it off the hands of the Government; but if the Secretary of the Treasury would let it be known that he would not bid beyond so many dollars a mile, or so much altogether, a company could be organized for the purpose of taking the bonds to satisfy this debt to the Government of the

United States, and that order could be made by the court ordering the sale.

Mr. REILLY. I do not want to trespass upon the time of the gentleman, but I think my friend from Louisiana, to whom I have listened with a great deal of interest, will, upon a moment's reflection, see that he was mistaken in the statement he just made to the House, that on the application of the money in the sinking fund to the payment of the first mortgage, the United States would be subrogated to the rights of the first-mortgage bondholders. This money does not belong to the United States. It is not money of the United States Treasury. It is money that these companies paid in, and which is held by the Secretary of the Treasury as a trust fund for the purpose of paying out the first mortgage, and this sinking fund is to be used for this purpose. That is all.

Mr. BOATNER. I will refer the gentleman to an act of Congress—the act of March 3, 1887:

SEC. 4. That whenever, in the opinion of the President, it shall be deemed necessary to the protection of the interests and the preservation of the security of the United States in respect of its lien, mortgage, or other interest in any of the property of any or all of the several companies upon which a lien, mortgage, or other incumbrance paramount to the right, title, or interest of the United States for the same property, or any part of the same, may exist and be then lawfully liable to be enforced, the Secretary of the Treasury shall, under the direction of the President, redeem or otherwise clear off such paramount lien, mortgage, or other incumbrance by paying the sums lawfully due in respect thereof out of the Treasury; and the United States shall thereupon become and be subrogated to all rights and securities theretofore pertaining to the debt, mortgage, lien, or other incumbrance in respect of which such payment shall have been made. It shall be the duty of the Attorney-General, under the direction of the President, to take all such steps and proceedings, in the courts and otherwise, as shall be needful to redeem such lien, mortgage, or other incumbrance, and to protect and defend the rights and interests of the United States in respect of the matters in this section mentioned, and to take steps to foreclose any mortgages or lien of the United States on any such railroad property.

SEC. 5. That the sinking funds which are or may be held in the Treasury for the security of the indebtedness of either or all of said railroad companies may, in addition to the investments now authorized by law, be invested in any bonds of the United States heretofore issued for the benefit of either or all of said companies, or in any of the first-mortgage bonds of either of said companies which have been issued under the authority of any law of the United States and secured by mortgages of their roads and franchises, which by any law of the United States have been made prior and paramount to the mortgage, lien, or other security of the United States in respect of its advances to either of said companies as provided by law.

Mr. REILLY. I admit that the \$40,000,000 is still there in the sinking fund, but this can not become segregated. The gentleman has stated that if the sinking fund was paid on the first mortgage it would become segregated, and the United States would become subrogated to the rights of the first-mortgage bondholder.

Mr. BOATNER. I find I was in error in that statement. The seventh and eighth sections of the Thurman Act provide how the sinking funds shall be disposed of and I admit that payment of first-mortgage bonds out of them would operate as a discharge, but the Government is not bound to pay those mortgages out of this fund, and may acquire them under the act of 1887, which I have just cited, the effect of which would be as I stated.

Mr. REILLY. I beg the gentleman's pardon. A bank in Chicago or California might have been made the custodian of this sinking fund, just the same as the Secretary of the Treasury. There is not a dollar of it that belongs to the Government of the United States, and the Supreme Court has so decided.

Mr. BOATNER. That is true, with this qualification, that in the case stated the companies might control the trust fund while here they have no right to do so, and the fund does belong to the United States to the extent that it possesses the absolute right to apply the fund to the payment of the debt which the company owes it and to those which are secured by a lien paramount to it.

Mr. NORTHWAY. I would like to ask the gentleman whether any of it can be applied without legislation.

Mr. BOATNER. If the gentleman will look at the act approved March 3, 1887, and the act approved in 1878, known as the Thurman Act, he will find that legislation does provide for the application of the sinking fund in the manner I have just stated.

Mr. NORTHWAY. It is stated on the other side that it can not be.

Mr. DUNN. I would like to ask the gentleman a question in reference to the question that was asked by the gentleman from Ohio [Mr. NORTHWAY], and which I do not think was entirely understood. In this ghost of a Government ownership of railroads which is reared up by some gentlemen who wish to prejudice the consideration of this case, is there any reason that the railroad could not be disposed of as other property would be disposed of under a judgment?

Mr. BOATNER. I think I have completely answered that question, and it is hardly necessary for me to repeat what I have said. I do not desire to occupy any further time, and yield the floor to the gentleman from Pennsylvania.

Mr. REILLY. I yield to the gentleman from Vermont [Mr. POWERS] as much time as he desires.

Mr. BOATNER. Mr. Chairman, before the gentleman from Vermont takes the floor, I ask the gentleman from Pennsylvania

to yield to me for just a moment. I am informed that I said just now that I would oppose the purchase by the Government of this railroad property under any conditions. I did not intend to say that. What I intended to say was that I was opposed to Government ownership of railways upon any condition.

Mr. REILLY. Permanent ownership.

Mr. BOATNER. Permanent ownership. I did not mean to say that the substitute which I have introduced would prevent the Government from purchasing these roads if that step should be necessary for the protection of its rights, but such a transaction would involve the immediate sale of the roads to private parties.

Mr. REILLY. Does the gentleman contend that the properties are worth anything like as much as the first mortgage and the debt to the Government?

Mr. DUNN. What difference does that make as to the rights of the Government?

Mr. REILLY. It makes no difference as to the rights of the Government, but it may make a difference as to the policy to be adopted in securing those rights.

Mr. BOATNER. If the property is not worth as much as the first-mortgage debt and the Government debt, why is it that these people are willing to agree to pay those debts?

Mr. BRECKINRIDGE. Because they own competing lines, and by owning these roads they can make more money off the others.

Mr. BOATNER. Some reports state that the property is worth the money; others that it is not. I incline to think it is worth the money; but if it is not, I think that the liability and responsibility of the men who have built the road, the men who have handled the funds, are such that if we nail them down to the proposition, "You must comply with the terms of your contract, you must pay the interest on your first-mortgage obligations, and you must pay your indebtedness to the United States as it becomes due, or else we will enforce all our legal rights against you," they will never default.

The Currency.

SPEECH

OF

HON. EUGENE J. HAINER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 5, 1895,

On the bill (H. R. 8705) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire United States notes, and for other purposes.

Mr. HAINER said:

Mr. SPEAKER: It is now evident to every thoughtful observer that no solution of the great questions of finance confronting us will be reached by the Fifty-third Congress.

It is, perhaps, as well, too, that this Congress should as quietly as possible sink into oblivion without further vexing the country with any scheme of its devising.

No plan can afford assurances of success emanating from a source which does not command the confidence of the mass of our people.

The plain truth is, this Congress does not enjoy the confidence of any considerable portion of the nation. It has been repudiated more emphatically than any Congress ever convened. Its work is in derision, and no expressions other than of contempt for its capacity have yet been heard. Its final adjournment will be its only act generally approved, and this act will be an enforced one, for which it can take not the slightest credit.

The discussions now going on here and elsewhere may, however, serve as a thought suggester, stimulating the student, the practical business man in every field of human endeavor, and the patriot to evolve a plan upon which we may safely rest. Many contributions of value have been made to the store of information on the subject, and no better service can be rendered here than to place on record for comparison and considerate judgment the knowledge, experience, and best thought of earnest, successful, fair, brainy, patriotic men whose every purpose and interest is in the direction of such an issue of our difficulties as will insure the greatest good to the greatest number, and whose opportunities, life and character give weight to their opinions and judgment. As fairly representative of this class in my State are the gentlemen whose papers I append hereto and make a part of my remarks.

A PLAN FOR CURRENCY REFORM, BY C. F. BENTLEY, CASHIER OF THE FIRST NATIONAL BANK OF GRAND ISLAND, NEBR.

This paper is written in the belief that the power to issue currency can not safely be diffused, but should, at least to some extent, be centralized, if it is

to be exercised for the best interests of the people; that with a wide diffusion of the currency franchise secured by bonds will be lacking in flexibility, and currency not secured by bonds will be lacking in absolute safety, and will be more often used to subserve private ends than public good that the partial centralization of the currency franchise that exists in Canada can not exist here, because of differences in our banking systems; that the more or less complete centralization existing in Europe through the agency of large government banks can not be effected here, because the traditions of the people are opposed to such banks, but that a salutary degree of centralization can be best attained here by perfecting and perpetuating the greenback and supplementing it with a clearing-house currency for temporary use, when the ordinary supply is evidently insufficient.

In considering the subject of currency reform, the chief questions that seem to confront us are, how shall we make and keep our currency substantially uniform in character and value, and how shall we render it elastic, especially in great emergencies? The following plan is suggested as likely to promote both uniformity and elasticity:

THE PROPOSED PLAN.

1. Provide for the transfer of all business pertaining to Government issues of currency from the bureau of the Treasurer of the United States to a separate bureau—either to a new one to be created for the purpose, or to that of the Comptroller of the Currency. In this paper, for the sake of convenience, the existing bureau will be designated as "the Treasurer's bureau," and the proposed bureau "the currency bureau." Place upon the books of the currency bureau all the liabilities of the Treasury Department on account of circulating notes issued by the Government and transfer to it the custody or control of all reserves of metal held for the redemption of such issues. Place upon its books, also, the liability of the Treasury Department for all bonds hereafter issued for the purpose of paying the Government issues or for providing funds for their payment, and let the net liability of this bureau appear as a separate item in the accounts of the Treasury Department.

2. Retain the one and two dollar silver certificates now in circulation and issue in addition thereto one and two dollar certificates in lieu of all notes of those denominations now outstanding, covering the entire issue of such certificates as now by a deposit of silver dollars in the Treasury. The amount of certificates of these denominations, after the proposed change had been effected, would be about \$67,000,000. Provide for the further issue of one and two dollar silver certificates in exchange for deposits of silver dollars to such an extent as may, from time to time, be needed to meet the wants of the people for bills of these denominations.

3. In place of all remaining currency, including old legal-tender notes, Sherman notes, silver certificates, and national-bank notes, but excluding gold and currency certificates, issue a new Treasury note in denominations of \$5 and upward. The amount of these Treasury notes, after the substitution had been consummated, would be about \$975,000,000.

4. Require the new Treasury notes to be redeemed in silver dollars whenever silver dollars were demanded. When holders of such notes did not want silver dollars, give the Secretary of the Treasury the right to redeem them at his option, either in gold coin or in silver bullion at its current market value.

5. Provide for a reserve to protect these notes, fixing the minimum amount at 50 per cent of all outstanding notes in excess of \$20,000,000 until the amount outstanding reached \$800,000,000, and at 60 per cent of all such notes in excess of that amount. Require not less than 50 per cent of this minimum reserve to be in silver bullion or in silver coin at its bullion value; not less than 25 per cent in gold coin, and not less than 3 per cent in silver dollars.

6. Empower and direct the Secretary of the Treasury to maintain this reserve by issuing bonds, giving him ample discretion as to length of time and rate of interest. Authorize him to require such bonds to be paid for in the medium needed to restore the reserve to its legal condition. Empower him, also, whenever an unusually easy money market indicating a temporary redundancy of currency is accompanied by an increased demand for redemptions or increased exports of the precious metals, to issue in exchange for Treasury notes short-time bonds bearing a low rate of interest and payable in Treasury notes, keeping the Treasury notes so redeemed in the currency bureau, ready for use when needed in the operations of that bureau. These bonds might be made payable on short notice (say three to six months) at the option of either the holder or of the Treasury Department without fixing a date of payment, and some discretion might be given the Secretary as to the rate of interest. Authorize the Secretary, in a tight money market, when demands for the redemption of the Treasury notes had ceased, or had been reduced to a minimum, to pay these currency bonds without the required notes.

7. Allow the Treasurer's bureau to present Treasury notes to the currency bureau for redemption when necessary to obtain coin for the use of the Government, and permit it to deposit coin in the currency bureau in exchange for Treasury notes whenever it had the coin and could use the Treasury notes instead.

"Within narrow limits to be prescribed by law, permit transfers of funds from one bureau to the other to an extent necessary to neutralize such disturbances of the circulating medium as are caused by inequalities between receipts and disbursements of revenues. With these exceptions, forbid all intermingling of the funds of the two bureaus."

8. Prohibit the further issue of the national-bank note and provide for the ultimate retirement of all such notes now outstanding.

9. Permit the banks in the larger cities to associate themselves in corporations to be known as "consolidated national banks," requiring the consent of a majority of banks in any city before permitting the organization of such a bank in that city. Give any "consolidated national bank" the right to issue currency in emergencies whenever a certain majority of its constituent banks asked for and the Secretary of the Treasury approved of the issue. Limit the amount of such issues to a certain percentage of the capital and surplus of all the constituent banks, and make all such issues the first lien on all assets of both the consolidated bank and its constituent banks.

10. Forbid the consolidated bank to use the currency issued by it except by way of loans upon collateral to some one or more of its constituent banks.

11. Place a tax on the circulation issued by such consolidated banks of such an amount as to absorb the greater part of the profits to be derived from its issue and to insure the retirement of such currency as soon as the money market became easier.

12. Require the consolidated banks to maintain in the currency bureau a redemption fund equal to 5 per cent of their circulating notes on a plan similar to that now in force with regard to our present national-bank circulation.

13. Place the taxes collected on such circulation in the United States Treasury to the credit of a special redemption fund; provide that this fund shall belong to the United States, but permit it to be used to redeem the notes of banks that fail to keep their redemption funds good, and provide that the Treasury Department shall collect from the banks in default the amount of the notes so redeemed.

ASSUMPTIONS ON WHICH THIS PAPER IS BASED.

Before proceeding to the consideration of the advantages of the plan outlined above, and without attempting to discuss the question of bimetalism, it may for the purposes of this paper be assumed that, considering the vast

products of our silver mines, considering that we are a debtor nation likely to be called upon at times to purchase vast quantities of our securities now held abroad, and considering that we are a large nation, occupying a vast territory and having legitimate use for an enormous amount of currency; it is not best for us to depend upon gold alone as the basis of our circulation; and, on the other hand, it may in like manner be assumed that for the present at least the free coinage of silver is not consistent with practical bimetalism, but must result in silver monometallism and is therefore to be avoided.

OUR PRESENT GOVERNMENT ISSUES.

Let us take a brief glance at our currency as it is. The public has long been aware that our present monetary system, if system it may be called, is full of incongruities. Originating in a great national emergency, it has been modified from time to time, as other emergencies have arisen, so that instead of manifesting a harmoniously developed plan it is seen to be the outgrowth of varying circumstances and of conflicting motives and theories. In consequence it comprises features that are almost contradictory in their character. This lack of uniformity has in the past been made the subject of frequent adverse comment, and is to-day the just cause of serious foreboding.

Of the currency that is issued by the nation one part represents a vast store of silver coin, another part a large amount of silver bullion, and still another portion is covered in part by a reserve of gold—a reserve, however, with practically no adequate provision for its maintenance. Under such circumstances, and with unprecedented fluctuations in the ratios subsisting between the values of the precious metals which cover the different classes of currency, it would have been marvelous if some doubts had not arisen as to the character of the medium in which redemptions would finally be made; and, however reassuring the repeal of the Sherman law may have been, the uncertainty resulting from the lack of uniformity still remains to vex and disturb our commerce.

FLEXIBILITY.

It is hardly necessary to make any comment at the present time as to the necessity for a certain degree of flexibility in our currency. The panic of 1893, with the urgent need for currency that then existed and the devices that were resorted to for the purpose of providing substitutes, is still fresh in our minds. There are, it is true, those who imagine that the volume of currency should bear some arbitrary ratio to the population; but, in fact, the volume of currency needed in any community, in addition to that part of it which is used as a store of value, must be proportionate to the volume and character of those transactions which require currency for their consummation rather than to the number of inhabitants in the community.

As these transactions vary, and as greater or less use is made of money as a store of value, the amount of currency needed varies. A familiar illustration of the variation in the amount of currency needed is afforded by the demand for currency for moving crops. This demand, however, is generally local and can generally be supplied by moving currency from one locality to another. But the increased demand for currency is not always local. In times of financial distress following periods of inflation, when credits have become uncertain and checks and drafts fail to discharge their ordinary functions in making exchanges, and when a large part of the community sees fit to make an unusually large use of money as a store of value, not only is there a smaller amount of currency than usual available for the work of effecting exchanges, but the work to be done by this decreased amount is largely increased.

At such times there is a legitimate use for a much more abundant supply of good money. And when, during such a period, any considerable part of our circulating medium is used in the settlement of foreign balances, the need of additional currency becomes imperative. When, however, the crisis is past—when values have declined and transactions are fewer in number and less in amount—when domestic exchanges are reduced in volume, when foreign exchanges are again in our favor, when money is no longer hoarded and checks and drafts resume their wonted functions in effecting exchanges, then the former supply of currency is not only adequate, but often temporarily excessive. The wants of the community in such cases are therefore met by a temporary addition to the currency. How to provide this temporary addition without permanent inflation is one of the problems of a flexible circulation.

We must here note the sharp distinction that exists between those local stringencies which are a result of insufficient capital or unwise speculation, and which occur when the national supply of money is abundant, and those stringencies which clearly indicate that the people's stock of money is either temporarily or permanently insufficient. It is clearly the duty of the Government to enact such measures as are calculated to result, either directly or indirectly, in supplying the nation with an abundant stock of money, but it can not guarantee that every individual or every locality shall at all times be able to control such portion of this supply as may seem desirable. If every locality and every bank that finds its stock of cash inadequate while the nation at large has currency in abundance should be permitted to supply its wants by a further issue of bank notes, there might be some force to arguments in favor of granting a similar privilege to every individual who is in embarrassed circumstances, or who is attempting more than his capital warrants, and the Populist subtreasury plan might not be unworthy of serious consideration.

DIFFICULTIES IN THE WAY OF PROCURING A FLEXIBLE CURRENCY THROUGH THE TREASURY.

As to the currency issued directly by the nation it must be noted that the Treasury Department has been restricted to very few means for either placing money in circulation or withdrawing it from circulation. It is true that at times the Treasury has given some relief to the money market by the purchase of bonds, by anticipating payments of interest, or by placing funds in the depository banks, but as a rule its ability to add to or draw from the general circulation has depended upon its revenues and disbursements, means which generally are beyond control and are rarely available at a time when the wants of the public in this regard are the keenest, and which at times tend to aggravate rather than to mitigate the disorders of the money market.

The system of short-time bonds, bearing a low rate of interest and exchangeable for Treasury notes, which is suggested in this paper, would doubtless go far toward rendering the national issues more flexible; but there is no absolute certainty that such bonds, if issued, would, in times of panic, be found in sufficient amounts in the hands of those who would exchange them for Treasury notes, and who would use the currency received for them in meeting the wants of the people. It would seem, therefore, that we can not depend entirely upon the Treasury for a flexible currency, and must look to some other agency for it. The only agency that suggests itself is the banking system of the country.

PRESENT NATIONAL BANK CURRENCY NOT SATISFACTORY.

But the national-bank currency as it now exists is, in respect to flexibility, anything but satisfactory, and, in fact, it fails to give full satisfaction from any point of view, except that of safety. Designed originally to furnish a market for the nation's bonds, and at that time affording the banks oppor-

tunities for making a profit from their circulation, the national banking law resulted in furnishing the people with a large amount of safe paper money, and in instituting and perpetuating to the present date a system of commercial banks that have become noted for their success and safety. But it has long been apparent that the national banking system, so far as the circulation is concerned, has ceased to be of advantage either to the Government, the people, or the banks. That it is a source of profit to the United States, as compared with the issues of United States notes, is a proposition that it would be very hard to maintain; that it is not a source of satisfactory profit to a large majority of the banks is evident from the fact that so many have failed to issue the maximum amount of currency allowed by law; that it has failed to furnish the people with an abundance of currency when most needed is evident from the very moderate increase in national bank circulation that occurred during the panic of 1893.

While the opponents of the national banking system have criticised it for the reason that it gave to the banks, almost gratuitously, an extremely valuable franchise out of which they were enabled to make large profits, the national banker of late years has looked in vain for such profits, and has begun to open his eyes to the fact that the franchise virtually belongs, not to the organizers of a bank, but to the holders of United States bonds who, in an ordinary money market, can often make a careful computation of all the profits likely to accrue from the issue of bank notes, and then collect from the would-be national banker a premium on the bonds that very nearly absorbs such profits.

As a consequence many national banks have been in the habit of buying the minimum amount of bonds that the law requires them to hold, issuing a proportionately small amount of circulation notes, and when an urgent demand has arisen for more circulating it has been found that the difficulties and delays that stood in the way of acquiring the necessary amount of bonds and getting the desired circulation have been such as to prevent the timely issue of an adequate amount of notes. That from April to September, 1893, a period which embraced weeks, even months, of the most acute financial stress and panic, we were enabled by means of the national-bank note to increase our total paper currency but a little over 3 per cent; and that during that period the banks in our large cities were obliged to resort to the clumsy, inadequate, and somewhat questionable, though under the circumstances no doubt justifiable device of the issue of clearing-house certificates, is ample evidence of the inefficiency of the national banking system as a means of providing the people with currency when needed.

RECENT PLANS FOR AMENDING THE NATIONAL BANKING LAWS.

These considerations have led to a very general desire for improvement in our monetary system, and of late many plans have been suggested for the amendment of the national banking laws. In this connection much confusion has arisen in popular discussions, through confounding different kinds of paper money. We have had inconvertible paper money, like the greenbacks before resumption, and like the bills of solvent banks during suspensions of specie payments. We now have convertible legal-tender Government issues that perform all the functions of money throughout the nation and that it is hoped will always continue to be, as now, instantaneously convertible into the equivalent of the money of other nations.

We have also the national-bank notes, so thoroughly secured that they enjoy full credit everywhere and circulate as freely as the national issues. Then there are the emergency currencies like that of Germany, intended for temporary use when the ordinary stock of money seems insufficient. Most of the issues just mentioned may be assumed to be intended to supply the general demand for a circulating medium, or at least they perform that function so thoroughly that that may be assumed to be the chief object of their existence. Besides this, however, there is what may be termed local currency—currency issued chiefly for the purpose of supplying local wants, caused by lack of sufficient local capital. The fallacy of many current arguments will be found to consist in making deductions from premises that may be true as to one class and applying the conclusions to another class.

And here it may be remarked that the evils resulting from the repeal of the 10 per cent tax and the revival of a State-bank currency that, while discredited away from home, would supply local wants, might possibly be less than those resulting from an attempt to lower the standard for the currency of the entire nation, in order to make it possible for localities to supply deficiencies in capital by currency issues.

Without attempting to make a thorough analysis of all recent plans, it may be noted that their prominent features have generally been the abolition of the Government issues either wholly or in part and increased issues of national-bank notes. It has been proposed to protect these bank issues either by the guaranty of the Government by a safety fund accumulated by tax on circulation, by the guaranty of banks collectively, by the deposit of greenbacks, or by the deposit of a new United States bond bearing a low rate of interest. It has also been suggested that in addition to the currency ordinarily issued the banks at large should be authorized to issue an emergency currency, subject to a sufficiently high rate of taxation to insure its withdrawal after the emergency which had called it forth had ceased to exist.

There are many objections to all these plans. In the first place, it does not seem as if the people of the United States would for a moment approve any plan that contemplated the guaranty by the Federal Government of the liabilities of any private corporation unless, as is the case with the present national-bank notes, the Government held unquestioned security. In the next place, a full guaranty by the banks collectively of the liabilities of the individual banks, no matter how well guarded, would have a tendency to drive strong banks out of the system; and this tendency would increase in times of panic when larger supplies of good currency are most needed, for the reason that doubts as to general solvency are then the greatest. If the guaranty were anything less than full and complete there would always remain an undesirable element of uncertainty as to the solvency of the individual banks and consequently as to the value of the currency.

It is useless to say that the experience of the last thirty years shows that a certain light tax on the total circulation would provide a fund sufficient to guarantee the notes of all failed banks. The privilege of issuing notes under some of the proposed systems, when compared with the like privilege under the old system, would be so much more attractive, especially to the weaker banks, both as to profits and as to opportunities for expansion and for relief from the consequences of injudicious banking, that statistics gathered under the old system would be practically worthless for purposes of comparison.

Our experience with our present banking system ought to show the futility of depending for our circulating medium upon issues secured by any specific class of securities. There is no certainty that the proposed bonds would be sufficient in amount for the purpose, or, even if sufficient at the present time, that the supply could be maintained in sufficient abundance for future wants, or, even if always maintained in sufficient abundance, that they would always be available when needed. If bonds were issued at a price that would attract investors, regardless of the currency franchise attached to them, holders of such bonds would be enabled, as now, to charge prospective bankers such a premium as to absorb the profits on currency and thus tend to prevent its issue.

If they drew interest at a rate that made them remunerative only when the currency franchise attached to them was taken into consideration it

would be difficult to find a market for them outside of those who wanted them for banking purposes. In any event the banks would always labor under the difficulties that attend the procuring of the bonds just at the time they are needed, and if intended as a basis for an emergency currency there would be little inducement for banks to use such currency, for the reason that they would, as now, have to advance the money to buy the bonds before they could get the currency, and, although by so doing they added to the total stock of money, they would do so at considerable inconvenience and with little or no direct advantage.

We must not overlook the fact that a strong tendency against the diffusion of the power to issue currency exists in other countries, and the further fact that there are good reasons for this tendency. If the object of diffusing the right to issue currency is, as alleged, to enable banks to supply the people with necessary currency according to the legitimate demands of trade, then it may be noted that many of the plans that have recently been suggested are more likely to accomplish other purposes than this. The issue of currency under reasonable guarantees for its safety, but without the pledge of some specific security, accomplishes two objects.

In the first place, it mobilizes, extends, and strengthens the use of the issuing bank's credit. In the next place, it adds to the people's stock of money. Now, it is reasonable to suppose, where the currency franchise is widely diffused, that each bank will use the right to issue currency as prompted by its opportunities or necessities, and in order to defend such diffusion it is necessary to assume that these necessities and opportunities will be coincident with the actual need for an increase in the circulating medium. It is contended that such an assumption is not justifiable, but that the right would often be used to foster unhealthy local speculations or to ward off the logical consequences of injudicious banking, even when the nation's supply of currency was redundant.

Centralization of the currency franchise, on the contrary, when honest and capable men control it, not only does not prevent a prompt response to the nation's wants, but increases the probability that issues will be made solely in response to actual need of increased circulation. The greater publicity attending its use when centralized, the superior skill of those likely to be charged with its exercise, and the increased opportunities they will have for a commanding view of the whole field of national commerce, all tend strongly to prevent its use except in strict accordance with the public good.

Another objection to most of the recent plans lies in the fact that no provisions are made for the separation of the currency reserves from the deposit reserves, so that when large demands for redemption spring up, deposit reserves are likely to be depleted, resulting in serious embarrassment to commercial interests.

But the chief objection to all of these plans lies in the fact that they contemplate the abolition of the Government issues.

REASONS FOR PERPETUATING THE TREASURY NOTE

The greenback is to-day being tested under circumstances more trying than any that have attended it since the resumption of specie payments. These circumstances, however, are largely the result of injudicious legislation. The endless chain of redemptions which now draws the gold from the Treasury is not a necessary concomitant of Government issues, but is only an unfortunate phenomenon attending the present conjuncture of a temporarily redundant currency, a heterogeneous and inadequate reserve, and a deficient revenue. In spite, however, of the present unsatisfactory condition of the Government issues, and in spite of the difficulties that attend any attempt to place them on a more rational basis, it must not be forgotten that their good qualities and the esteem in which they are held by the people are such as to make any attempt to abolish them or to put any other currency in their place not only unwise but, it is to be hoped, impossible of attainment.

Based upon the faith of a nation of unbounded resources and accepted as the safest possible currency for all domestic transactions, if they were unified and if ample provisions were made for the redemption in a stable medium of that small part of the currency which is at times needed for the settlement of foreign balances, and if, besides, some reasonable degree of flexibility could be given them, they would form an ideal currency, with the exception that the transactions of the Treasury do not come in such close touch with the people as to make its issues always responsive to their need.

In great emergencies almost every nation has been compelled to resort to large issues of paper money—issues either made directly by the nation itself or indirectly through some large banking institution bearing intimate relations to the Government. As the policy of this country is averse to a large Government bank it will readily be seen of what vast advantage it may be to the nation in some great emergency if it has a sound and well-defined policy in regard to its issues of paper currency. It is worth while, then, to make every effort to perfect and perpetuate these issues, and even if they can not be made to meet every want, we should hesitate to endorse any plan, no matter what its apparent merits, that contemplates their abolition.

MONEY SYSTEMS OF OTHER COUNTRIES

The problem of furnishing an emergency currency seems to be subject to special difficulties in this country, for the reason that conditions vary to such an extent that the experience of foreign nations does not always furnish us a precedent that we can safely follow. In Canada a few large banks, with many branches, transact the business of the country, and the responsibility for the proper use of the powers entrusted to them rests in comparatively few hands. Because, under these conditions, a certain system is successful, it does not follow that it would meet with like success in this country, with its thousands of small banks, among which the personal responsibility for the proper use of the power to issue currency would be divided to such an extent that it would practically disappear. And the same distinction may be made with still greater force when we consider the possible adaptability of systems in which there is still greater centralization of the currency franchise, as in England, Germany, and France. Arguments based on the systems employed there are evidently inapplicable here.

But not only are we unable to solve the problem by incorporating into our system of small independent local banks those features which are attended with success when the currency franchise is monopolized by a large Government bank, or is distributed among a comparatively small number of large banks with numerous branches, but we are practically unable to reorganize our banking system so as to make either the large Government bank or systems of large branch banks a part of it. It would take vigorous and persistent effort to domesticate the branch banking system in the United States, and a large Government bank is equally out of the question.

Occupying commanding positions in the world of commerce, managed by men of large experience and acknowledged integrity and ability, standing in direct contact with the business interests of the people, and possessing almost a monopoly of the currency franchise, the great Government banks of Europe are enabled to discharge the responsible duty of regulating the currency supply with far greater precision than is possible where the currency franchise is widely diffused. And they do more than this. As custodians of the Government deposits they prevent the derangements of the money market which result from the locking up of currency when revenues

are in excess of disbursements, and they are able to render temporary aid to the Government when revenues are deficient. But the traditions of this nation are in favor of an independent Treasury, and decidedly opposed to a colonial bank, possessing a monopoly of the currency franchise and receiving and disbursing the Government revenues. And this sentiment is doubtless salutary. As a result of existing laws and customs there is already great centralization of power in the hands of the few, and the people may well hesitate to delegate to gigantic corporations those powers which can be safely exercised by the nation.

THE PROPOSED PLAN FOR EMERGENCY CURRENCY AND ITS ADVANTAGES.

If, then, we conclude that the responsibility of inflating or contracting the currency can not safely be divided among thousands of small banks; if the sentiment of the people forbids the creation of another United States Bank; if the Treasury can not always supply our demands when they become urgent; if, as is the fact, our distance from and our relations to the nations of Europe make it at times both difficult and costly to have our wants supplied by them, to what source can we look when the demand for additional currency becomes imperative? We find our question practically answered by the action of the New York clearing house in issuing its certificates.

The legality of the clearing-house certificate, it is true, has been called in question, but if it is a good thing let it be legalized. It was faulty in that it formed a currency that could not be put into general circulation and that was inferior in other respects to that in general use, but had the law permitted it a better currency might have been issued; one that would have been far more effective in accomplishing the task that the clearing-house certificate was intended to perform. But with all its faults and inconveniences it served a good purpose, and the banks of New York are entitled to the thanks of the nation for their courage and skill in employing it.

The plan suggested above in regard to an emergency currency, it will be seen, is practically the clearing-house certificate in the form of bank notes, with provisions for turning into the Federal Government, in the form of taxes, the profits to be derived from its use—its retirement, when not needed, being provided for by means of taxation.

It is believed that such currency would be safe beyond question. It would, indeed, be a grave and unusual financial disaster that caused all the banks in any locality to become insolvent, and it is not to be supposed that a majority of the banks of any one city would be willing to jeopardize their own interests by lending the currency to competing banks on anything but good security; besides, it is hardly to be imagined, in case of general insolvency, that the total assets could fail to pay the note holders if they were preferred creditors, especially if the maximum amount of currency was limited to a fixed percentage of the total capital and surplus.

It is not thought that any system of currency or banking can save the community from the penalty of excessive speculation; but it is believed that timely issues of currency will mitigate the hardships that liquidation necessarily brings with it; and it is thought that, if such a system as is outlined in this paper had been in existence prior to 1893 many of the most distressing features of the panic of that year would have been avoided. If the consolidated banks of New York, of Chicago, of St. Louis, and of other large cities had been empowered to issue currency, based on the value of their combined assets, there is little doubt but that such currency would have been issued in abundance and would have passed into general circulation and that the action of the banks issuing it would have met with the grateful approval of the nation; and the mere fact that the banks of the larger cities were empowered to issue such currency would have rendered it possible for them, without any sacrifice of prudence, to have adopted a much less rigorous policy than they were forced to adopt. At the same time necessary liquidation would have been no less complete, since the tax on the currency would have compelled its retirement and thus would have brought about liquidation. The currency would have been used, not to promote speculation or to sustain unsound interest, but to ameliorate the harsher features of the panic by making liquidation more gradual, though none the less certain and effective.

SILVER.

It is not intended to discuss the question of bimetalism, but the silver question can not be overlooked in this connection. Whether the present low price of silver is due to the deliberate action of certain countries, or to natural causes, or in part to both, and to what extent the depression in the price of silver could be relieved by free coinage in the United States, are all questions of importance, but, as has already been said, it is assumed for the purposes of this paper that free coinage of silver in the United States at the present time must result in silver monometallism. There is but little prospect that there will be an opportunity for testing the theory of the more conservative bimetalists, who hold that a given ratio can be maintained by international agreement.

The history of hundreds of years has shown divergencies from the various ratios fixed by law—sometimes in favor of one metal and sometimes in favor of the other, and the doubt may well arise whether such divergencies can be avoided; but the most important fact and one that we dare not ignore is, that to-day we are confronted by an enormous discrepancy between the commercial ratio and that which appears on our statute books—a variance so great as to make prudent men hesitate to attempt to close the gap by the mere fiat of law. But because the country is not prepared to attempt the experiment of free coinage, it does not follow that we ought to fly at once to a monetary system in which bank notes and gold are the only currency and thereby force ourselves either to trade with a narrower supply of the precious metals as the basis of our dealings or to sacrifice our securities and commodities in order to obtain a larger supply of gold.

To do so, in the opinion of the writer, would be to increase the probability of widespread bankruptcies and panics, and to cause a further decline in general prices, deprecating still further the Treasury's silver and doing great injustice to our silver interests. Certainly, if use can be made of silver in the Treasury as the basis of our circulating medium without threatening its stability, we ought to so use it, rather than by its issue incur at once the loss resulting from its depreciation and the risks attendant upon contraction, or upon trading on too narrow a margin of the precious metals. But besides utilizing silver largely for the Treasury note reserve, the plan suggested in this paper contemplates the free use of the silver dollar or its representatives—the one and two dollar silver certificates for all the smaller transactions of every day life, giving them a monopoly of the paper currency of these denominations. The five dollar note, for the purpose of outlining this plan, is classed with the larger notes that would form in amount by far the

*Mr. D. G. Ambler, president of the National Bank of the State of Florida, Jacksonville, Fla., in a paper published in the proceedings of the nineteenth annual convention of the American Bankers' Association, outlined a plan for the use of clearing-house certificates as a circulating medium similar to that advocated in this paper. Not long ago Mr. Henry W. Yates, president of the Nebraska National Bank of Omaha, Neb., drafted a bill to enable clearing houses to become the agencies through which emergency issues of Treasury notes could be placed in circulation. This bill was introduced in the United States Senate by Senator MANDERSON.

greater part of our paper currency. If the five-dollar notes were placed in the same category with the ones and twos a larger use for silver would be provided. Much might be said in favor of such classification.

PROPOSED GOVERNMENT ISSUES AND RESERVE.

The new Treasury notes, as has been remarked, would form the great body of our ordinary paper currency. They would be supplemented on the one hand by the small silver certificates and on the other by an emergency currency to be issued by the joint action of the banks in the larger cities as occasion required. The reserve contemplated is already in the Treasury, with the exception of a moderate amount of gold. It is contended that the large silver reserves now in the Treasury may, by means of the plan indicated, be utilized so as to assist, to a very large extent, in supporting and maintaining a stable and uniform currency. The option that the Treasury would possess of paying in silver at its market value, it is thought, would be of great value in the occasional emergencies when it becomes necessary to consider the desirability of its use, and its mere existence might, on occasion, prevent attempts to make raids on the Treasury's gold; and when the Treasury was actually compelled to avail itself of this option, no violence would be done to the stability of the value of the currency or of the vast volume of securities payable in currency.

CURRENCY BONDS.

While Government issues can never have that degree of flexibility which can be obtained in a great Government bank, without making a revolution in the functions of the Treasury that would doubtless be productive of more harm than good, yet a certain degree of flexibility may be attained by redeeming these issues in bonds and in turn redeeming these bonds in currency. It is true that this idea, which is not a recent one, has been a favorite with the flat-money men. It is to be noted, however, that there is a vast difference between those plans of the advocates of flat money which would provide bonds as the sole means for redemption and a plan which provides for redemption in specie and offers an issue of bonds as an alternative. Again, it must not be forgotten that there is a still greater difference between a plan that would pretend to pay a bond in paper issues that in turn could only be redeemed in similar bonds, and one that pays off bonds in paper issues that are themselves redeemable in the precious metals and that would pay the bonds in paper issues only because commerce demanded the paper currency for immediate use.

Admitting the right of the Government to avail itself of the benefits of the circulation of its noninterest-bearing Treasury notes among its citizens as money, it can not be denied that when the people do not want to use these notes or any given quantity of them as money the Government should either pay them in coin or give its interest-bearing obligation instead. And when, in turn, its citizens find that they can once more make profitable use of a larger amount of these noninterest-bearing notes as money the surrender of the bonds in exchange for Treasury notes would be most natural and, moreover, profitable to both parties.

A SEPARATE BUREAU FOR THE NATIONAL ISSUES.

The advantages and disadvantages of a paper currency issued by the Government or by the banks, with suitable provisions for its safety, and the limitations that attend its safe and profitable use are understood with a reasonable degree of certainty and unanimity.

A limited amount of Government legal-tender notes, if receivable for all demands of the Government, could be floated successfully at par, even if no provisions were made for their redemption in coin. A much larger amount can be floated at par without demands for redemption becoming so frequent as to be embarrassing, provided suitable provisions are made for its redemption in coin, and provided the amount issued is so limited that it does not, at any time, become excessive; but when such issues do become excessive, or even when they are large without being clearly excessive and the provisions for redemption are inadequate, then demands for redemptions are likely to be so great as to prove embarrassing, and when, in addition to excessive issues and inadequate reserves, other causes, like the demand for coin for export, supervene, then embarrassment may turn to disaster.

It is necessary, therefore, when a large amount of Government issues is in circulation, to know not only that they are covered by an apparently adequate reserve, but that this reserve will be maintained, and it is therefore desirable that this reserve shall be definitely set apart for their protection, and it is also desirable that some provision should be made for their temporary retirement when temporarily excessive. It is equally desirable that such retirement shall not result in permanent contraction. That the people may know exactly the condition of these issues and their reserves, and that their permanence and the permanence of their reserves may be insured, it becomes desirable to separate all transactions connected with such issues from all other transactions of the Government, to the end that excessive issues presented for redemption may not be paid out again for ordinary disbursements, and that funds set aside to protect them may not be used in like manner. It is also desirable that currency temporarily retired shall be ready for reissue when needed. It is with these thoughts in view that a separate bureau for Government issues is recommended.

The same individuals may own a bank and a factory, but ordinary business prudence suggests that each be incorporated separately, to the end that each may be measurably independent of the other; that the bank, for instance, may maintain its cash reserves, even if the factory is hard pressed for funds. By a similar separation the credit of the Treasury issues might be maintained, although a deficit in the revenues made new loans necessary to meet current expenditures or even threatened delay in making ordinary disbursements.

It has been noted that the independent treasury is at times a menace to the peace of the money market by locking up currency when revenues are largely in excess of disbursements. If the independent treasury is to be maintained some provision should be made to prevent such occurrences. It is thought that transfers within narrow limits to be prescribed by law, if made with discretion, might remedy this evil without jeopardizing the integrity of the reserves. Surplus revenues could be transferred to the currency bureau, to be used there in redeeming currency bonds, thus preserving the equilibrium of the money market. And whenever it became necessary to use the revenues so transferred currency bonds could be reissued and the proceeds retransferred to the Treasurer's bureau without disturbing the money market, as the Treasury's disbursements would go back into circulation to offset the withdrawals of currency caused by the sale of the bonds. Other transfers between the two bureaus might possibly be desirable, but all such transfers would have to be closely limited by law in order to insure the integrity of the reserve.

OBJECTIONS.

It may be urged in opposition to the proposed plan that it neither provides for local expansion in response to ordinary fluctuations in local wants, nor does it make provision for an increase in currency to keep pace with the increased demand that may be reasonably anticipated as the passing years add to our population, to our wealth, and to the volume of our trade. As to the first of these objections attention may once more be called to the probable unwisdom of subdividing the power to inflate or contract the currency

to such an extent as to place it where the thought of general responsibility to the public for its use vanishes, and the mere question of profit and loss is likely to become paramount in deciding the times and amounts of such issues. Besides this consideration, it must be remembered that currency can be moved cheaply and readily from place to place within this country, and with an adequate currency legitimate local wants can generally be supplied from the nearest money centers at a very small expense.

As to the second objection, it may be said that as the demand increases we may reasonably expect a proportionate increase in our stock of gold and silver coin, and if such additions were not sufficient to supply the demand that fact would probably be indicated by a resort to the issue of emergency currency. If for a series of years no use was made of such currency, it would be reasonable to infer that our circulating medium was ample for our wants. If, however, we were obliged to resort to its issue on frequent occasions, it would not be difficult to ascertain the causes that led to its use, and if it were found that our circulating medium was actually insufficient in volume, it would be neither difficult nor unwise to meet the want by a further issue of Treasury notes, provided they were issued in pursuance of a safe, well-planned, and thoroughly understood policy.

Objections will be made to the retention of the greenback issues on account of the grave complications in which they have been involved of late, but it must be remembered that since resumption no serious attempts have been made to place them on a more rational basis, but that all legislation in regard to them has been of a character to bring about the very difficulties which now attend them, and that the resulting defects are now unjustly charged to them as inherent.

Of course, doctrinaires of the "laissez faire" and the State rights school will raise the question of the proper functions of the Government and will claim that the issue of currency is not a proper function of the Federal Government, nor indeed of any Government. The question of constitutionality has fortunately been decided, but as to other objections of this character it may be said that a common-sense view of the question would be that we can safely let the Government do whatever it can do better than we, as individuals, can do, and that we must prefer to have it relegate to individuals or associations of individuals that which they can do better than the Government. This will leave the greenback question to be decided on its merits. As far as Government issues can be made superior to bank issues let us have the greenback, and beyond that point let us have a good bank currency. It is the object of this paper to try to show that the greenback, as far as the great bulk of our paper money is concerned, may be freed from most of its defects, and may be made more serviceable to the people than any bank currency that has yet been suggested.

CONCLUSION.

The plan outlined above may be and doubtless is defective in some of its details, and it is possible that further and fuller consideration may bring to light serious obstacles to its adoption. Everything connected with the question of a circulating medium seems to be fraught with difficulty, and the difficulties attending the solution of the question under the anomalous conditions now existing in this country are greater than ordinary. But however defective the details may be, it is the writer's firm conviction that issues of Government paper money must and by rights ought to continue, that it is essential to the welfare of the people of the United States that these issues should be unified, and that some permanent, harmonious, and well-developed policy should be adopted for their constant protection by means of an adequate reserve, and for the redemption, in a stable medium, of such parts of these issues as may be needed for the settlement of foreign balances, and that such issues should be supplemented by an emergency currency to be issued under Government supervision by the joint action of the banks in the larger money centers.

OUR PAPER CURRENCY.

Since the presentation of the so-called "Baltimore plan" for a national currency, and the countenance it received from the President and Secretary Carlisle, the country has been surfeited with currency discussion and Congress overwhelmed with currency plans, every one of which, it is believed by its projector, will relieve in its operation the existing financial difficulty and prove more beneficial for the interests of the general public than the system we now possess. Notwithstanding the fact that the present system has been in operation for more than a quarter of a century, and covers decades which it is conceded are remarkable for extraordinary national growth and prosperity, the writers and financiers whose plans and papers have secured the most prominence join in the demand for the retirement of the Government legal-tender notes as a condition precedent for successful financial reform.

It is claimed that the Government must go out of the banking business, accepting as granted that the supplying of a nation's currency is a prerogative of banking and not—as it is—one of the highest functions of government. It only becomes a banking privilege when it is conferred by Government and is only then exercised by banks in a representative capacity.

It is also claimed that our present paper money lacks the one essential element of elasticity, which is undoubtedly true, but the elasticity which is needed and is lacking is very different from that suggested and provided in most of these currency plans. Two clearly distinct and opposite modes of treatment are suggested in the formation of a new currency to remove the defects existing in the present system.

THE EXPANSION SCHOOL.

One class, which may be called the expansion school, favors the adoption of a scheme in which the notes shall be issued by banks upon the security of their own means, limited in volume only by the amount of capital that may be shown and the amount of such notes which may be floated upon a confiding public. It should be evident to everyone that this would provide elasticity in one direction only, which would continue until the inevitable crisis was reached, which would burst the bubble and destroy the system.

THE CONTRACTION SCHOOL.

Another class, which may be called the contraction school, and in which it must be admitted is included some of the most eminent financiers of the country, favors the retirement of all Government notes by funding them into long-time interest-bearing bonds, and this it is believed can be accomplished by means of a popular subscription. Slight consideration seems to be given to the immense contraction of capital this plan would occasion if successful, and the severe drain it would necessarily cause upon the deposits of all classes of banks, but especially savings banks. It is asserted that this admitted contraction will be offset by the increased issue of national bank notes, based upon the security of these bonds; and the national-currency law is to be amended so as to permit of a larger ratio of circulation upon the bonds deposited.

It is by no means certain that there would follow a largely increased issue of bank-note circulation. With the withdrawal of the legal-tender notes and the relieving of the Government from the responsibility of maintaining redemption a new and unaccustomed obligation would devolve upon the banks,

that of redeeming their circulation in gold. Cautious and perhaps overconservative institutions may conclude that the risk would be greater than the possible profits to be derived, and decline to take out circulation, just as many banks now issue no circulation, although the liability for redemption is reduced to a minimum. Granting, however, that these notes may be supplied in volume equal to the Government notes withdrawn, what public interest would be served by the substitution? The notes would still have for their security only the public credit represented in the bonds, and to the ordinary mind no good and valid reason would exist for the transferring of this note-issuing privilege to private corporations, with its resulting profits at the public expense, in face of the fact that it has heretofore been exercised directly by the Government at a trivial expense for the benefit of the people, and may continue to be so exercised.

WEAKNESS OF PRESENT SYSTEM.

The foundation for the proposed changes exists in the fact that experience has demonstrated the inadequacy of our paper-money system to meet certain infrequently occurring financial conditions. This weakness is inherent with all paper-money systems that have heretofore existed. The world has not produced a more successful system than our own, in which the currency is based entirely upon public credit and maintained in a volume which overshadows in its magnitude all other successful paper-money systems. The large experience we have gained as a nation during the years of paper inflation should enable us to discern what is required to improve or remove defects, and the correction should be applied to the existing system, rather than at the first manifestation of these defects that we should proceed to destroy the entire financial fabric and substitute for it some new and untried methods.

The quality of elasticity when applied to money should have but one signification. A rubber ball is elastic, but it can not exceed in expansion the limits of its circumference, although it may be contracted at will. Gold is the most elastic of all currencies, and yet its aggregate volume can only be expanded in the comparatively small amount annually produced, which is largely set by what may be lost and destroyed or used in the arts and sciences. In no manner can its value be increased or diminished by a business demand. In this respect it is inflexible, and it is this quality which constitutes it the universal standard by which all other things are valued and exchanged. It holds the entire world in its sway, and, responsive to the great law of supply and demand, it expands and contracts in volume in every market, moving toward that in which it is most needed and away from that in which its use for the time receives insufficient compensation.

Every species of money is subject to the same general law, but the local environment of any paper money supplies a limit to its utility when it is in excess of legitimate demand. When this occurs, exportation naturally follows, but the entire drain must be sustained alone by that portion of the circulation which is gold, and this drain will continue until the business situation changes, or the total volume of currency, including both gold and paper, is contracted to the requirements of the demand for it. Our currency system is now being subjected to the severest test of this character it has ever sustained. Money finds no adequate compensation for its use, and gold is exported in such volume that it causes apprehension as to our ability under existing laws to maintain the world's standard of value, which has prevailed with us since resumption in 1873.

It is not necessary to surmise and discuss here the cause for this unfortunate business situation. The danger which threatens our monetary standard, and the continual discussion in favor of silver remonetization are undoubtedly largely responsible for the business depression, but if our currency laws permitted of some reasonable contraction of our paper money when circulated in excess of the demand for it the situation would be relieved of its most dangerous features. There is no occasion for the fear that the volume of currency may in ordinary times be insufficient for the work it has to perform. Emergencies will occur when this may seem to be the case, but temporary expedients can be depended upon to meet all such sudden demands, and the world's supply of gold will soon restore the normal situation.

A much greater danger is presented from a redundancy, because in that case the entire system of prevailing values may be disastrously affected, not only by the loss of capital which is evidenced in the exportation of gold, but also by the loss of confidence in the money left should redemption cease or its discontinuance be threatened. In my judgment a few simple enactments will so improve our currency as to qualify it to perform the functions of the best paper-money system that can be devised, and thereby meet the demands of the present and any of similar character that may hereafter occur.

When this redundancy occurs the Government should increase the interest rate for money by placing any required amount of its circulation upon an interest basis, and thereby for the time retire it from circulation. The Bank of England, which represents the British Government, accomplishes the same desired results by a similar action, except that its different circumstances require it to adopt the opposite course of charging and receiving the increased interest instead of paying it.

The views I have here endeavored to express can be practically applied in the legislation that I would suggest, and which, it will be noticed, also contains some desired modifications in minor details, which require no special reference to recommend them. Congress should enact as follows:

1. All Government demand notes hereafter issued to be of the same general form and character (say coin notes of 1890) and no denomination to be issued of less than \$10.
2. Provide for a gold reserve fund for the payment of demand notes and the maintaining of the parity of our coins to be, say, 20 per cent of the demand notes outstanding. (This corresponds closely with the amount of the present reserve, based upon \$500,000,000 of circulation.)
3. Provide that the total issue of demand notes shall at no time exceed \$500,000,000 (about the present aggregate), except for the following purposes:
 - (a) Redemption of national-bank notes outstanding (should their retirement be decided upon).
 - (b) For use in emergencies as hereinafter provided.
4. Provide for the issue from time to time of interest-bearing Treasury notes, legal tender for their face and payable say in three years after date and at the pleasure of the Government after one year, with annual coupons attached. These notes to be issued only in payment of gold for the maintaining of the reserve required, and the demand notes redeemed to be retired in an amount equal to the interest notes issued, and not reissued except in payment or redemption of interest notes.
5. Provide for the issue of 5-30 or 10-40 bonds, to be sold only for the purchase of gold for the reserve, should the Government be unable to obtain gold by the sale of interest notes.
6. Should it be decided to retire the national currency, authorize the redemption of the bonds held by the banks at their present worth, figured at an equitable rate of interest, payment to be made in demand notes.
7. Authorize the issue of demand notes in emergencies, to be used in the purchase of interest-bearing clearing-house certificates, issued by associations in central reserve cities, as proposed in Senate bill 484, introduced by Senator MANDERSON at the called session of 1893.
8. Provide that the Treasury shall pay the expense of transmission for redemption upon all mutilated and unfit notes for circulation, so that not only a sound but a clean currency may be guaranteed.

With the exception of the suggested retirement of national-bank notes, no radical proposition is conveyed in these suggestions, and the entire plan is in harmony with the existing currency system.

SILVER.

It will be noticed that nothing is said concerning silver. It may be assumed that the legal-tender portion of the scheme being adjusted, the existing volume of silver dollars and certificates can be easily maintained at par in the future as they have been during the past, the law requiring parity to be maintained remaining un repealed. The requirement of a large gold reserve and the maintaining in circulation of a large volume of gold is directly in the interest of silver. What we gain and hold of gold is lost to the balance of the world, and the loss will eventually so affect foreign sentiment that the use of silver will be increased, its price will be raised, and eventually we may hope a return will be made throughout the world to the old bimetallic system, either at the old ratio or some ratio at which both coining and commercial parties of the metals may be maintained. The use of silver will be increased by the provision limiting notes to denominations of \$10 and upwards. The same provision may also be extended to embrace the silver certificates.

NATIONAL-BANK NOTES.

It may be said concerning national-bank notes that they have at no time fulfilled the functions of a bank currency, as understood and practiced elsewhere. Redemption, except in the case of mutilated notes, has carried with it so slight an obligation that it can scarcely be considered a liability. These notes constitute simply one form of Government currency, no better and no worse than similar currency issued direct from the Treasury, and were originally authorized for the sole purpose of giving additional value to Government bonds, which at that period needed every aid that could be devised. That use having long since terminated, no good reason remains for their continued existence. Should it be decided to retire them, this need not in any manner affect the continued existence of our excellent national-banking system, which requires no circulation privilege to sustain its popularity. The equitable method suggested for dealing with the banks for their bonds would induce them to retire their circulation in their own interest, and no actual loss to the Government would result from the adjustment.

HENRY W. YATES, Omaha, Nebr.

DEAR SIR: In order to prescribe remedies intelligently for the disturbances to our system of banking and currency and the loss of gold, it is well to understand the causes of the disturbances. The country had very little difficulty with this subject until the people, becoming dissatisfied with a management of national affairs that took the reins of Government when it was necessary to pay 12 per cent interest on borrowed money, and so conducted business that it could be borrowed at 2½ per cent, and during the same period paid off one and a half billion dollars of the national debt, increased the per capita circulation of money from \$13.85 to \$24.44 and added over \$600,000,000 of silver to our stock of money, and exercised their right to change the management.

Since the new management was installed, the expenditures of the Government have exceeded its income some \$125,000,000, thus compelling the use of the surplus and the borrowing of money by the sale of bonds to pay the help and other expenses, the same as an individual would be compelled to do, conducting business at a loss.

Then the demonstrated incapacity of the new management to do business, with the immatured ideas of some of the hired men in Congress, who, judging from their actions, think the Almighty made some mistakes which they would correct by amending or changing natural laws, and arguments along this line have caused a fear in the minds of holders of securities at home and abroad that they may be paid in depreciated dollars, and naturally forced them to realize without delay in order to be sure of receiving as good dollars as they parted with. This is another disturbing factor.

Another thing. The people of the United States pay for travel, freights, interest, and profits, in foreign lands and to foreigners, at a conservative estimate, \$350,000,000 annually, which amount exceeded the balance of trade in our favor for 1894 \$96,000,000, that had to be paid in gold, and is a further cause of trouble.

These are the conditions that must be met. The deficit in the national Treasury is the chief cause of the disturbance, and is increasing the national debt, and no theory or argument will disprove or change that fact. Without regard to previous condition of servitude in partisan politics, the experience of the past two years has added to the general stock of knowledge. The people knew some things before that they do not know now, and know some things now that they did not know before.

Someone has said that "Wise men sometimes change their minds, mules never." The people being wise have changed their minds, and last November commenced to apply the remedy. As it will take some time to secure the full benefit of this awakening, the recovery might be hastened if the present management would promptly provide sufficient income to meet expenses. Until this is accomplished, money must be borrowed to meet them. There is absolutely no other way if we continue business.

This deficit has developed a seeming defect in our financial system. But is the defect in the system? If the Government continues in the general banking business and keeps on going in the hole eight million or thereabouts, every month, no system of banking ever invented could meet the case so long as the deficit stares us in the face.

The Government or an individual, as a banker having outstanding paper, demand or otherwise, must meet it on presentation or be discredited, and when business is at a standstill and distrust abroad in the land, the creditors are apt to want their money, and as a general proposition they are in somewhat of a hurry for it.

An individual running behind \$8,000,000 or \$8,000 a month would be in trouble, and his only recourse after exchanging his surplus would be to borrow money, which he may be able to do until such time as his income catches up to his expenditures. But suppose the creditors of the individual, also interested in other directions, should learn through some of the hired men that the individual was considering the advisability of departing from his former conservative methods in business and was disposed to resort to sharp or dishonest practices, the situation would be greatly aggravated, and if persisted in might result in disaster. Is not this about the position the Government is in at the present time? The fact that the Government is rich and able to pay its debts is not satisfying to the financial world, if we propose to juggle things.

It is generally conceded that we have too many kinds of money issued under various laws and that our banking and currency laws should be revised, and some think that the Government should go out of the general banking business. This, however, is not a good time for such revision. Too much grief at any one time is discouraging and disheartening. When the time comes for action on this subject I can give you the names of individuals who will tell you just what should be done. I am not quite so clear, but there are a few general propositions that may be stated.

First. The people want all of the dollars of equal value in circulation that it is possible to secure.

Second. The dollars of whatever character in circulation in the hands of the common people must have behind them an absolute guarantee that they are equal in value to every other dollar to-day and will continue to be anywhere in the United States next week or next year.

Third. The largest use of silver consistent with safety should be incorporated into the revision of the system.

Fourth. Gold is now the measure of value, and it should so remain, unless it is desired to contract the money of the country, an amount equal to the gold money in the country. A free coinage of silver would bring about that result. The fundamental law of coinage is thus stated in a pamphlet published in 1696: "When two sorts of coin are current in the same nation of like value by denomination, but not intrinsically (i. e., in market value), that which has the least value will be current and the other as much as possible will be hoarded or melted down or exported." This is just as natural as that water will run down hill.

The best way to formulate these propositions into law must be solved by our representatives in Congress.

Very truly, yours,

L. D. RICHARDS, Fremont, Nebr.

Hon. E. J. HAINES, Washington, D. C.

The Late Senator Colquitt.

REMARKS

OF

HON. FARISH CARTER TATE,
OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 16, 1895.

The House having under consideration the resolutions paying tribute to the memory of Hon. Alfred H. Colquitt, late a Senator from the State of Georgia—

Mr. TATE said:

Mr. SPEAKER: The announcement made on the occasion of Abner's death, "Know ye not that there is a prince and a great man fallen this day in Israel?" could have been truthfully said of Alfred Holt Colquitt, late Senator from Georgia, when he died.

From young manhood Senator Colquitt, from his noble traits of character, generous impulses, and acknowledged ability, caught the attention of the people and grew in their confidence and esteem to the day of his death. He was a born political leader. His political services to his State began in 1849 as assistant secretary of the State senate, and in 1853, when scarcely thirty years of age, he was elected a Representative in Congress. He was a member of the secession convention of his State, and was a member of the committee that drafted the ordinance of secession when Georgia seceded.

He was an officer with the rank of major in the Mexican war of 1845. When the war of 1861 broke out he organized the first regiment of Georgia troops. His war record was that of a fearless and brave officer who always marched at the head of his men. He won his most signal victory in Florida, which gave him a place among the leading generals of the Confederacy, and gave him the title of "Hero of Olustee." As Alfred H. Colquitt was great in war, so he was great in peace, and great in the hearts of his countrymen. At the close of the war Senator Colquitt returned to his farm.

In 1876 he was nominated by his party for governor, and was elected by 77,854 majority. He administered the affairs of his State as chief executive with ability, prudence, and economy.

It was during his administration that the constitutional convention of 1877 was held, and the present constitution of Georgia is the work of that convention.

About the close of his first term an attack was made on him for having indorsed certain railroad bonds. It was this criticism that brought from him the remarkable letter of which the following is a part:

Nothing but a thorough sifting of my every motive and act in regard to these bonds, as far as human insight and judgment can reach these, can satisfy aggrieved honor or give such entire assurance to the people of Georgia as they have a right to demand in the premises. To a man who values his good name far more than life, it would be an act of supremest injustice to deny the most plenary vindication rendered in the most august and authoritative form known to the law or to public opinion.

My denunciations of an awful and stupendous slander, forged and uttered to dishonor me, will not be enough. The general assembly of this State is appealed to for that justice which, while it will I know full well, exonerate me as a man, will also vindicate the fair fame of Georgia, assailed by cruel slanders on her chief executive.

ALFRED H. COLQUITT.

An investigation by a joint committee of the house and senate of Georgia followed, and Governor Colquitt was fully vindicated and exonerated.

Following soon upon this came the resignation from the United States Senate of the brilliant, chivalric, and patriotic GORDON, and the appointment to the United States Senate by Governor Colquitt of that great and able statesman, Joseph E. Brown.

The convention to nominate Governor Colquitt's successor met in Atlanta on the 4th of August, 1880. This convention lasted more than a week. During this time no candidate received the

requisite two-thirds vote necessary under the rules of that convention to nominate, although Governor Colquitt lacked only a few votes of this two-thirds. After more than a week's balloting a resolution was adopted by the majority of that convention presenting Governor Colquitt to the people of Georgia as the choice of the convention. The minority presented Hon. T. M. Norwood; and then followed one of the bitterest political contests in the history of the State. During this contest Governor Colquitt's eloquent voice rang out in almost every county in the State, and he was reelected governor of Georgia by more than 50,000 majority.

In 1883 Governor Colquitt was elected to the United States Senate, and was again reelected in 1889.

During his long political career he made an able and devoted representative of his State.

Few men possessed the magnetism of Senator Colquitt. A man of fine physique, handsome face, commanding presence, frank and cordial manners, he made a lasting impression upon every one he met, and no son of Georgia, during his political career, was more beloved and admired by his people and State. He was prominent in church as well as State; all over this broad land of ours he was noted for his piety and Christian character. He took a great interest in Sunday school work, in the temperance cause, and in everything that would tend to promote the spiritual welfare of his fellow-man. He wrought—

With human hands, the creed of creeds,
In loveliness of perfect deeds.

His domestic life was an ideal one, surrounded by a devoted helpmate, who for years had shared the joys and sorrows, the triumphs and trials of her distinguished husband, the lovely and accomplished daughters, who cared for, ministered to, and almost idolized their father—it was indeed a model household. As a devoted husband, affectionate father, and loyal friend, Senator Colquitt had no superiors, and to his only son he has left a heritage far more precious than gold—an honored name and a spotless character.

His life was gentle, and the elements
So mix'd in him, that Nature might stand up,
And say to all the world, "This was a man!"

Although stricken by disease, he remained at his post of duty; even when unable to walk he could be seen almost daily being wheeled in his invalid chair across the Capitol grounds to and from the Senate Chamber. When his manly form was emaciated from excruciating suffering and he was almost a shadow of his former self, then his trust in his Heavenly Father was sublime! His faith never wavered. Like Job he could exclaim, "Though He slay me, yet will I trust in Him." And when most men would have remained away, he, despite pain and suffering, discharged the duties of his office almost to the very day of his death.

Sir, when the history of the times in which Alfred Holt Colquitt lived is reviewed there will be no brighter page than that which records the brilliant career and eminent services he rendered his State and country.

In the land he loved, 'neath the blue Southern skies he loved, under the sod he loved, in beautiful Rose Hill Cemetery, we have buried him. While he sleeps the sleep that knows no waking, his memory will be kept fresh by loving and loyal hearts, while his spirit rejoices with angels in the presence of his God.

Can that man be dead
Whose spiritual influence is upon his kind?
He lives in glory; and his speaking dust
Has more of life than half its breathing molds.

The Tariff.

SPEECH

OF

HON. GEORGE W. COOPER,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 25, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration an amendment to the bill (H. R. 4864) placing a duty of 15 per cent ad valorem on cod oil—

Mr. COOPER of Indiana said:

Mr. CHAIRMAN: The oil specified in this amendment is a raw material used by tanners for stuffing and dressing leather.

The effect of it will be to cheapen the cost of that manufactured article. It is an amendment greatly desired by all the tanners of the country. In fact they would have preferred very much that the article should have been placed upon the free list; but the committee thought that the necessities of the Government would justify the imposition of this slight rate of duty.

I wish to call the attention of the committee to a fact in this connection. In 1872 the Government put hides upon the free list. From that time the tanning industry of the United States has flourished. We exported at that time 17,241,746 pounds of sole leather, most of it to Great Britain. The exports of leather and manufactured leather have greatly increased from that day till 1890, when the amount exported was something over 30,000,000 pounds of sole leather alone.

In 1890 the McKinley bill put some additional duties upon articles used in the manufacture of leather, and the result of that was a decrease in the production and export of American leather and American leather-made goods. The effort now is to put back on the free list some of the items which the McKinley bill levied a duty upon, which the tanners were compelled to pay, and to reduce the rate on some others.

I wish to call attention to the fact in this connection, by way of illustration, that at the same time when we put hides upon the free list we put an increased tariff upon raw wool, and that while the tanneries have flourished the woolen industry has languished. This may serve to illustrate the contention made on this side of the House that with free raw material our enterprises will be able to export and to compete in the markets of the world with the products of labor there. I hope there will be no objection to this amendment, and that it will be adopted.

Appropriations Reduced.

Under those of the Fifty-first Congress	\$45,341,418.90
Under those of the Fifty-second Congress	36,765,856.88

REMARKS

OF

HON. JOSEPH D. SAYERS.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 4, 1895.

The House having under consideration the subject of appropriations—

Mr. SAYERS said:

Mr. SPEAKER: The appropriations made by the Fifty-third Congress, including permanent appropriations, show a reduction of \$86,765,856.88 under the appropriations made by the Fifty-second Congress, and \$45,341,418.90 under those made by the Fifty-first Congress.

A tabular history of the appropriation bills, showing also the estimates submitted to Congress and the appropriations made at the last session, will be found in Table A, which I submit as a part of my remarks.

The regular annual appropriation bills are grouped in the table so as to show their aggregates in the several stages through which they passed in the process of legislation, from the estimates submitted until their final enactment. The table shows:

1. That the bills, including deficiencies, as passed by the House, made a reduction under the estimates submitted to Congress of \$19,365,889.52;
2. That the bills were increased as reported from committees to the Senate \$3,494,573.77;
3. That the bills were increased as passed by the Senate \$19,170,136.04;
4. That the bills as they became laws, including miscellaneous, appropriated less than the estimates \$16,434,480.49; more than as they passed the House, \$8,030,909.03; less than as they passed the Senate, \$11,139,227.01; less than the laws for 1895, \$6,121,955.34; and
5. That the permanent appropriations which are not subject to the action of Congress are increased by the estimates of the Departments \$11,999,276.82.

As compared with the laws of the last session of this Congress, the following reductions are shown in the table:

By the Army bill	\$340,276.59
By the fortifications bill	522,446.50
By the Indian bill	1,685,617.15
By the pension bill	10,200,000.00
On account of river and harbor bill (none having passed at this session)	11,643,180.00
On account of deficiencies	3,072,024.87
For miscellaneous	177,956.55
Total reductions	26,641,501.60

The bills showing increases over the last laws are as follows:

Agricultural bill	\$80,126.94
Diplomatic and consular bill	11,155.18
District of Columbia bill	199,964.68
Legislative, etc., bill	587,639.19
Military Academy bill	57,726.58
Naval bill	4,888,950.50
Post-Office	2,309,398.31
Sundry civil bill	12,884,584.85
On account of permanent appropriations	11,999,276.32
Total increases	32,518,822.64

Net increase by all of the bills, including permanent appropriations, over laws passed at the last and extra sessions of this Congress

5,877,320.98

The miscellaneous appropriations of the session are stated at \$400,000. When all of the acts of the session are printed and examined it is not believed that they will be found to appropriate quite so large a sum. But even that amount is smaller than the total of miscellaneous appropriations of any previous session of Congress within the past twenty years; and this fact is the more remarkable when the unusual length of the Congress is considered—a condition invariably favorable to the accumulation and multiplication of miscellaneous appropriations. Such miscellaneous appropriations are never essential to the operations of the Government, but on the contrary characterize the Congress that makes them in great or small degree as wasteful or economical of the public money.

Notwithstanding the considerable reduction made in the total appropriations at the last session under those of both the preceding Congresses, it will be noticed that the appropriations for deficiencies at this session are less than they were at the last session, and even less than the average for the two sessions of the Fifty-first Congress—a result which is to the credit of the present economical administration of the Government. Wasteful and extravagant methods in administration have heretofore made large deficiencies in annual appropriations to be supplied by Congress at each session.

The sum charged under permanent appropriations, \$113,073,956.32, includes \$31,771,796.82 to pay interest on the public debt, including Pacific Railroad indebtedness, and \$49,250,000 to meet the requirements of the sinking fund.

To meet requirements of contracts authorized by laws passed during the Fifty-first and Fifty-second Congresses, appropriations were made by this Congress as follows:

For fortifications	\$1,056,600.00
For increase of the Navy	23,747,896.30
For rivers and harbors	19,837,115.00

Total

43,641,611.30

The present Congress has authorized no contracts for river and harbor works, though it has had to provide nearly \$20,000,000 to meet contracts authorized by the Fifty-first and Fifty-second Congresses.

Toward the new Navy this Congress has appropriated nearly \$23,000,000, while the new ships it has authorized to be constructed in the future will not cost within \$8,000,000 of that sum.

The new public buildings authorized, including one in Chicago to cost \$4,000,000, will not all exceed in cost \$5,660,000 beyond the sums appropriated therefor, while the Fifty-first Congress left to its successors more than \$8,000,000 to be appropriated for public buildings which it authorized.

Except an increase of 1,000 enlisted men in the Navy, rendered necessary in order to put into commission the war ships authorized by laws enacted during previous Congresses, and for an additional force of men in the Internal-Revenue Service, required to enforce the collection of the income tax, the salaried list of the Government has been reduced by this Congress more than 600 persons, with annual compensation amounting to quite three-quarters of a million of dollars.

Considering the growth of the country in millions of population since the close of the Fifty-first Congress four years ago and the enormous obligations entailed by the legislation of that body, I confidently assume that the reduction of expenditures, amounting to more than \$45,000,000, made by this Congress under those authorized by the Fifty-first Congress will meet the expectations of the people and will elicit their cordial approval.

To have checked the biennial billion-dollar pace set by the Fifty-first Congress is an achievement in itself. To have done not only that, but to have reduced the appropriations of the Congress below the billion mark is a triumph vast in its proportions and significant of a return to economical and honest government.

The table which I submit herewith marked B is compiled from the official records, and shows by sessions and fiscal years the appropriations made by the Fifty-first Congress, the Fifty-second Congress, and the present, or, Fifty-third, Congress.

In the appropriations for the Fifty-first Congress there are charged expenditures under indefinite appropriations made by that Congress, and under permanent appropriations authorized by

it, after the estimates for permanent appropriations had been submitted by the Secretary of the Treasury, all of which are fully explained in the footnotes of the table.

TABLE A.—Chronological history of appropriation bills, third session of the Fifty-third Congress; estimates and appropriations for the fiscal year 1895-96; and appropriations for the fiscal year 1894-95.

Title.	Estimates, 1896.	Reported to the House.	Passed the House.	Reported to the Senate.	Passed the Senate.	Law, 1895-96.	Law, 1894-95.

Amount of estimated postal revenues for fiscal year 1896.....86,907,407.00

Total estimated revenues for fiscal year 1896.....476,907,407.00

a No amount is included in the estimates for 1896 for the Agricultural Department for agricultural experiment stations in the several States authorized by the act of March 2, 1887. The amount appropriated for this purpose for 1895 is \$745,000.

b One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1896 at \$24,919.25), which are payable from the revenues of the water department.

c This amount includes \$1,330,606.67 to be placed to the credit of certain Indians for the face value of certain nonpaying State bonds or stocks, including certain abstracted bonds, described on pages 153 and 154 of the Book of Estimates for 1895, and which become the property of the United States; and also includes \$2,422,697 to carry out agreements with various Indian tribes ratified by the Indian appropriation act for 1895.

d Includes all expenses of the postal service payable from postal revenues and out of the Treasury.

e This is the amount estimated for rivers and harbors for 1896, exclusive of \$11,387,115 required to meet contracts authorized by law included in the sundry civil estimates. "The amount that can be profitably expended" in that fiscal year, as reported by the Chief of Engineers, is \$36,665,775. (Book of Estimates for 1896, pages 295-299.)

f No river and harbor bill was passed for 1896, but the sum of \$11,437,115 was appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1896.

g In addition to this amount the sum of \$3,400,000 was appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1895.

h This amount includes \$11,437,115 to carry out contracts authorized by law for river and harbor improvements for 1896.

i This amount includes \$3,400,000 to carry out contracts authorized by law for river and harbor improvements for 1895.

j This amount is approximated.

k This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1895, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year.

TABLE B.—Appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, fiscal years 1891 to 1896, inclusive.

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.	
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.

a Deficiencies included as follows: 1891, on account of 1890, \$25,321,907.35; 1892, on account of 1891, \$29,335,598.34; 1893, on account of 1892, \$7,674,332; 1894, on account of 1893, \$14,149,724.85.

b This amount includes \$1,362,069.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes \$978,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes \$15,227,000 for refund of direct taxes in addition to the specific sum of \$500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, \$101,628,453, there are added expenditures under permanent specific and permanent indefinite appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, \$27,756.79; redemption national bank notes, \$23,553,298.50; expenses of Treasury notes, \$218,332.60; coinage of silver bullion, \$210,893.14; rebate tobacco tax, \$770,082.30; and repayments to importers and for debentures and drawbacks, customs service, \$4,915,285.28; in all, \$29,065,678.70.

The Late Senator Colquitt.

REMARKS

OF

HON. JOHN W. MADDOX,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 16, 1895.

The House having under consideration the resolutions paying tribute to the memory of Hon. Alfred Holt Colquitt, late a Senator from the State of Georgia—

Mr. MADDOX said:

Mr. SPEAKER: I was appointed one of the committee to escort the remains of that great statesman, Senator Alfred Holt Colquitt, back to his native State, where he was so beloved and honored.

We arrived in Atlanta, Ga., just as the day was beginning to dawn and the bright, red sun began to peep from behind the clouds, and it looked as if it was to do special honor to his memory. It was a beautiful day, just the kind of day Senator Colquitt would have to shine on his fair, sunny Southland, of which he was so proud. And as the train rolled into Atlanta there was a deathly silence in the special cars, for nearly all on board were asleep; but pretty soon there was a stir in the cars and the people began to gather around the depot to do honor to their distinguished dead. At 8 o'clock the remains were taken with loving hands and tear-dimmed eyes from the train, and, headed by the governor and his staff, the procession moved off up to the State capitol, where his remains lay in state.

There never was in the history of the State such a funeral as this, where everybody was given holiday that they might do honor to the remains of the State's most distinguished son. Thousands of people came to get a last look at the face they loved and had honored in life and for whose death the whole State was weeping and mourning and would not be comforted. Would to God he could have risen from the dead and seen this picture. It would have made his bosom swell with pride to see and to know that his memory was so honored by his people, for whom and in whose service he had given the greater part of his life.

After the people had taken a look at him they would go into the legislative hall where they were holding memorial services. The galleries and hall were packed with people straining every nerve to catch every word that was said in eulogy of their great leader, and standing room was not to be had. Many people in the audience recalled the time when he was a member of that body which sits in session in the hall where his body lay and how his eloquent voice rang out in the interest of his people. It was indeed a grand sight to witness this scene and it is one that I will never forget. Would to God that I had the language to describe it, but my feeble words can not give the estimation and high esteem in which he was held by his people.

After the memorial exercises were over he was borne with loving hands back to the depot and his remains were placed upon the train, when he was carried to Macon, where he lived and had spent some of the happiest years of his life from young manhood to old age and had grown to be one of Georgia's brightest stars, and whose fame was known all over the entire country, where a more impressive funeral never occurred. In the quietude of the still afternoon, unmarred by a single cloud in the sky overhead, and everything in solemn accord with the sad funeral occasion, the remains of Senator Colquitt, under the shadow of a lone magnolia, on the banks of the Ocmulgee River, in the presence of a vast concourse of Georgians, was tenderly laid to rest in Rose Hill Cemetery. Alfred Holt Colquitt sleeps the sleep that knows no waking, and his spirit has passed over the valley of death, where he is waiting for the coming of the resurrection.

It can truthfully be said of him that a great and good man has fallen, but his good deeds will live after him as the greatest monument that can be erected to his memory and for others to emulate.

There is no death; but angel forms
Walk o'er the earth with silent tread;
They bear our best loved things away,
And then we call them "dead."

Mr. Speaker, I incorporate as part of my remarks the addresses made by our new governor, chief justice, and Dr. Candler, one of our most distinguished educators and ministers, which will show the estimation in which he was held in his native State.

GOVERNOR NORTHEN SPEAKS.

There was another song by the choir and then Governor Northen appeared, saying:

"We stand to-day at the end of a great and useful life.
"Men are great not so much because of what they do for themselves as because of what they do for others.

"Senator Colquitt was great because he was good. Senator Colquitt's life was useful, because it was lived for humanity, for his country, and for God.
"How very solemn is death, how very still and quiet and silent is the grave!

"All men must die. Whatever their condition, their influence, their posi-

tion, or power of their life, you and I and all men must die and leave behind either a stainless record for love and peace or a wicked record for strife and for sin.

"To the pure and beautiful record of love and peace left to us by our distinguished dead we have assembled to pay our final tribute before giving his body to the silence of the tomb.

"To do this it is fitting that the pastor of the church of which he was a devoted and godly member, the mayor of the city of which he was an honored resident, and the representatives of the commonwealth whose highest honors he has deservedly worn, should testify to his strong Christian character, his usefulness as a citizen, his splendid devotion to country as a patriot, and his distinguished ability as a statesman.

"The circumstances of the occasion will not allow me more than a simple statement of the estimate of his character and the sentiment with which he was regarded by his people.

"Visiting a distant State some years ago, a prominent officer of the Federal Army said to me, 'Tell me something of the public men of Georgia.' As I told him of the record of this man, and the reputation of that one, I finally reached the name of our distinguished beloved dead.

"He interrupted me to say that the first time he saw Senator Colquitt was upon the field of the battle of Mexico. 'I remember him,' he said, 'distinctly, and can see him now, his handsome face, his manly bearing, his soldierly devotion to his duty. I have watched his long career, have been proud of his great reputation, have admired his patriotism and devotion to his State; but I never think of the grand man to-day without recollecting the handsome face and soldierly bearing of the gallant young hero in the Mexican war.'

"I thought of the soldierly man as we followed his dead body marching silently behind him, and felt that not only we, but the people of the whole State and of the entire South were stricken with sorrow by the great loss and that the hearts of all his people were filled with sympathy for those who so dearly loved him.

"But if I should attempt to speak at length of his character it is not of his soldierly bearing and handsome, calm face in the midst of danger that I would speak. There was something in the life of the man that impressed me more.

"When I first knew Senator Colquitt there was no war, it was peace. I knew him at his home. I knew him in his life among his neighbors, and what a splendid example his life was to others.

"Just one instance. When he was first chosen to the high position he held at his death, he invited several neighbors, myself among the number, to his home just before he left for Washington. The evening was pleasantly spent, and when it was closed it was not in hilarious revelry, but the great man whom we honor to-day took from the table the word of God and read from it appropriate passages, and then said: 'Let us pray.' And there in the presence of his neighbors, some of whom were already distinguished in public life, this man of God got down on his knees and invoked the blessing of Heaven upon his fellow-men and himself. He was going forth and in new scenes, and would be subjected to new temptations. He prayed that God would keep him for Himself.

"Now, if I had time to pay tribute to the dead, it would not be to the soldier, the hero; it would not be to his commanding intellect, far-reaching, comprehensive, and strong; it would not be to his patriotism that awakened the hearts of his people to purer thoughts, higher aspirations, better life, and nobler purposes; but it would be to his high Christian character, an example for all men, especially for men in public life and in power.

"Thank God for the beautiful Christian life of our beloved dead!"

CHIEF JUSTICE BLECKLEY'S ADDRESS.

Chief Justice Bleckley followed Governor Northen, saying:

"When we gaze at death through our emotions and relate it in our thoughts to survivors and their bereavement, it suggests inexorable calamity, irreparable loss, and is always somber and sorrowful. But seen by the intellect, in the calm light and clear atmosphere of reason, and reacted in our thoughts to the departed, it often suggests gain and glory, and seems grand and beautiful. Thus may we look at it on the present occasion. For a few moments let our hearts be still, our eyes be dry; let our regrets be moderated and our sympathies restrained. Behold death as a benediction, a benediction! There is no felicity greater, no fortune better than to be old enough and good enough to die. This is the true end for all to aim at—for all to pursue from the beginning to the close of life. To be good and to become old in goodness is the interest, as well as the duty, of every man to whom the privilege of so doing is accorded. He who succeeds in this has true success, and needs no other, for in this everything worthy of permanent estimation is comprehended. Whether his sphere of duty be high or low, wide or narrow, easy or difficult, he who fits himself to his place, fills it, meets its responsibilities and discharges its obligations, persevering faithfully through the spring and summer and autumn of life, falling not till winter comes, is ready to die. And his death, viewed in the radiance that streams upon it from his finished life, is beautiful.

"Your own minds will make the right application of these remarks to the statesman, the soldier, the patriot, the citizen, the neighbor, the friend, the great Georgian whose ashes are now here to honor by their solemn presence for a few hours the capitol of his native State. With the waning of one more moon his years would have numbered three score and ten; nor was he less mature in goodness than he was in age. He, if any man, was qualified to die and was eligible to that invisible convocation, the celestial senate, which no candidate can reach save by passing through the valley of the shadow of death."

DR. CANDLER'S ORATION.

After Dr. Morrison had resumed his seat the Rev. Warren A. Candler, president of Emory College, arose and spoke as follows:

"To-day we bury out of sight the mortal remains of a most extraordinary man. No common man could have achieved what Senator Alfred Holt Colquitt has accomplished.

"For more than forty years his people have loved and trusted him, and now he falls to sleep the best beloved son of this Commonwealth. Once he declined office, but he was never defeated when he asked the suffrages of his countrymen.

"The people are good judges of men. The masses do not long continue to give their confidence to a man unable or unworthy to serve them. They may be captivated for a day and gain favor when it is little deserved, but the reaction comes and they punish with distinctive indifference or scornful indignation the objects of their misplaced confidence. But this man they have honored with unwavering trust for nearly fifty years. He was a very tribute of the people. Few men in our day have shown more ability to arouse the people and attach them to his fortunes.

"What did they find in him to enthrall so perfectly their admiration and love?

"It was not by the captivating power of bold and original thinking. In church and state he took pride in standing for well-accepted doctrines, and he was the implacable foe of novelties. The old safeguards of constitutional liberty and the old Bible and the old-fashioned religion were dear to his brave heart.

"He was intellectual, but the strength of his mind was put forth in the defense of well-known truths rather than in the discovery of new principles. He ennobled even common-place truth with the royalty of his devotion and the dignity of his utterance.

"At last had not this feature of his character much to do with his winning and holding the confidence of the people so long? The masses very wisely trust with most assurance not the man whose mind puts forth new and subtle presentations of supposed truth, but the man to whom well-accepted principles are dear as life. The truth we really need to know is not so difficult of apprehension as many suppose. We can always know what is right, and he is most worthy of trust to whom the homeliest virtues seem most sacred and heroic. As Emerson truly says, 'The world is upheld by the veracity of such men. They make the earth wholesome. They who live with them find life glad and nutritious.'

"Such a man was the good man whom we mourn to-day. With Kingsley he believed 'the first and last business of every human being, whatever his station, party, creed, capacity, tastes, or duties, is morality; virtue, always virtue. Nothing that man will ever invent will absolve him from the universal necessity of being good as God is good, righteous as God is righteous, holy as God is holy.' He elevated the tone of public life in this State during the days he went in and out before us. For this the people trusted him, and they were right.

"For this further reason they loved him: He was rich in broad human sympathies. He loved the common people with a true heart fervently. With him it was no affectation of demagoguery, but the spontaneous affection of a noble soul permeated by the spirit of the Divine Man of whom it was said 'the common people heard him gladly.' Descended from patrician stock, well educated at one of the richest universities of our country at a time when educated men were less common among us than now, early possessed of the leisure and comfort of a wealthy planter, had been less great than he was he would have been more exclusive, despising, or coldly condescending to the people. But, great and true hearted as he was, he loved them, and bestowed all his rich gifts on efforts to serve them. None were beneath his brotherly kindness and tender consideration. The lowliest were his especial care. But yesterday a venerable minister gave me, in tearful accents, an account of how this princely man, away back in the fifties, walked as guide and friend among his slaves in Baker County teaching the word of God.

"Much has been said in disparagement of the type of civilization which prevailed in this section of our common country before the war. It was doubtless open to fair criticism at many points. But when we see as the fruit of it such men as our lamented friend, knightly and Christian, in an unchivalric age, we can not justly refuse to acknowledge it had also many excellencies.

"Although he adapted himself to the changed conditions of our times with graceful compliance and was the ardent friend of all true progress, he was nevertheless to the last a gentleman of the old school. And how admirable!

"The elements were so mixed in him that Nature might stand up and say to all the world, 'This was a man.' Gentle and brave, humble and loving, daring and tender, he illustrated in public and in private life, in peace and in war, the noblest traits of mental and moral worth.

"It is but just to say that while he was not unknown to the masses of his people before the war between the States, he greatly endeared himself to them and increased his reputation with them by the brave part he bore in that contest. They could not count it a small or ignoble thing that, like the brave sons of Israel of whom Deborah said, he 'jeopardized his life in the high places' on their behalf and in support of their sentiments. The blood must first be corrupted in their veins before they can hold such services cheap or neglect to repay them with honor. That one should face death daily for four long years at the bidding of his people is no small thing, and the fidelity which has been tried so as by fire may not be lightly esteemed.

"It was therefore no strange thing that his people, when the war was over, honored him with the highest trusts they had to give. Twice they called him to the office of governor, and twice they commissioned him to sit as Georgia's representative in the highest council of the nation, if, indeed, I may not say of Christendom. And he never disappointed their confidence. Through weary months he had fought disease with one hand and served with efficiency his people with the other. His conflict and his constancy have been full of pathos. How earnestly, how tirelessly, how carefully he toiled for them to the end, and amid his work laid down at last when he could go no further. And now that he has fallen on sleep, how stainless is his record!

"He has lived during a time when vast fortunes have been easily acquired. He has been placed where a less scrupulous man would have grasped great wealth. But he died poor. I think he was a little proud of his poverty. The last time I saw him he told me with evident enjoyment of the jocular greeting of him by a Western Senator, who, meeting him a few years ago at Hot Springs, Ark., grasped his hand cordially and said: 'I love to shake the hands of you old-fashioned Southern Senators. You are poor as church mice, and honest as the noonday.' I trust it is not improper to say I wish we may be always delivered from too thrifty statesmen.

"What a noble spectacle was there! An aged man who had spent upward of forty years in his country's service, now worn by disease and stricken in circumstances, but radiant with cheerful smiling, honor undisturbed by poverty, undimmed by disease, fearless in the face of death. Surely the powers of the world to come had gotten hold of him and lifted him to a serene height of Christian repose, far above the influence of the powers of the world that now is. This was, indeed, his case, for after all we may say of his many excellencies, his crowning glory was his Christian faith and life. A distinguished jurist said to me yesterday, 'He seemed to be a Christian by nature.' He had no patience with a captious skepticism or a patronizing condescension toward the religion of our Lord Jesus Christ. To him it was the holiest verity of life. In the storm of war and in the calm of peace he walked with God. Religion sat naturally upon him, as in charming humility and simplicity he walked among us. The simplest forms of faith were his especial delight. On one occasion I went with him to address a religious assembly. In the order of the exercises I spoke first. When I had finished my remarks, and just before he rose to address the meeting, the choir sang one of the sweetest hymns of Watts. It seemed to fill him with holy rapture. When he rose to speak his handsome face shone with supernatural brightness, his lustrous eyes were full of tears, and his utterance was choked with emotion as he said, impulsively: 'Oh, how I love that song. Many a time my mother has sung me to sleep with it when I was a child. And to-day, if I could hear her sing that song it would be a greater joy than if I could hear all the choirs of heaven.'

"Alas! and did my Saviour bleed,
And did my sovereign die!
Would He devote that sacred head
For such a worm as I?"

"That was the song they sang. Because his Saviour bled and gave Himself that we might live, this noble man has found at last an eternal home and the vanished hand for which he sighed and the sound of the voice that was hushed so long ago.

"When the inspired tinker of Bedford jail watched home his Christian soldier and saw him with them who walk in white within the gates of pearl, he said with a sob that cries even in the printed page—the cry of the homesick—'which when I saw I wished I were among them.' Who among us to-day, after watching this grizzled old soldier home, as he has been fading away from us these months, does not feel as he goes within the gates and meets again the loved and the lost, 'I wish I were among them.'

The eulogy of Judge Candler was pronounced by all who heard it as one of the most remarkable tributes every paid to the memory of the dead.

Battle Ships.

SPEECH

OF

HON. JOHN VAN VOORHIS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 20, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the annual naval appropriation bill, containing a provision for increasing the naval establishment of the United States by constructing three seagoing coast-line battle ships, designed to carry the heaviest armor and most powerful ordnance, and to have the highest practicable speed, and to cost \$4,000,000 each; and 12 torpedo boats at a cost of \$170,000 each—

Mr. VAN VOORHIS of New York said:

Mr. CHAIRMAN: I shall vote for the battle ships. Our Navy is the right arm of the nation. It gives us power on the seas. It is a great peacemaker. It will secure the settlement of our national differences by arbitration. It will prevent war. I am for making our Navy strong and powerful. The strength of a nation is measured by its power upon the sea. A strong nation can easily avoid war with honor. A weak nation can sometimes only avoid war by submitting to injustice and humiliation.

A great merchant marine is the necessary sequence of a powerful navy. The construction of war vessels in private shipyards, as a matter of necessity compels those yards to supply themselves with the largest and best tools and appliances for shipbuilding. These yards, thus supplied, build merchant and passenger ships and compete with foreign shipbuilders. Otherwise they could not do it. The result is that American-built ships are rapidly multiplying. The *St. Louis* and the *St. Paul*, new ocean steamers just completed, the equals of the *City of New York* and the *City of Paris*, built in an American shipyard, could not have been built in the United States except for the facilities of an American shipbuilder, acquired in the construction of war ships.

The building up of our merchant marine will continue, and keep pace with our Navy, until our carrying trade upon the seas is done in American vessels, and American steamships transport our passengers over the oceans. There is no good reason that can be given why the United States should not, at no distant time, become the ruler of the seas.

Certain gentlemen oppose the construction of the battle ships because they think an arbitration treaty may be made for the settlement of international disputes, and therefore a strong defensive or aggressive navy is not necessary.

With every effort to substitute arbitration for force in the determination of international differences no doubt we all have the most hearty sympathy. For myself, I will support any honest endeavor to maintain peace and advance civilization. It is apparent that the time has come when all nations should unite in the accomplishment of such reforms in international law as will render war unpopular and impossible. The millenium is not in sight yet; but some progress is being made. A monster Krupp gun was exhibited at the Columbian Exposition, but it attracted less attention than the marvels of electricity. In fact, thousands of people gave it little or no notice. But we must not let our aversion to war and our great desire for a peaceful settlement of national differences deceive us; we must be prepared for whatever may happen.

Just now a great parade is made of the desire of Great Britain to unite with the United States in a treaty of arbitration between the two nations. A member of the British Parliament has presented to the President and to Congress a petition in favor of such a treaty, signed by more than 350 members of that Parliament. Naturally enough, we are led to look into the professions of Great Britain and see how far they extend in the direction of maintaining the peace of the world by arbitration. We find that Great Britain is quite willing to agree to settle her disputes with the United States by arbitration. Her efforts stop there. She is quite willing, and, I might say, eager to tie this country up to arbitration, while she captures as much as she desires of the territory and rights of weaker nations.

In my judgment, it is our duty to refuse proposals for international agreements based on the desire of strong nations to secure themselves against our opposition to their schemes of aggrandizement. It is not enough for us to secure our own peace; we are not troubled about that; we can take care of ourselves. A lieger has been sent to us from the British Parliament, whose mission it was to treat about and see what he could do with this country. He proposed nothing beyond an arbitration treaty with us. When England proposes to the United States to enter into a treaty with her and all the nations to settle national disputes by arbitration we will at once join her in such an undertaking. But now England makes no such proposition.

This country is committed to the Monroe doctrine, the essential feature of which is that the United States will regard as an unfriendly act any attempt on the part of European powers to extend

their systems on this continent, or any interference to oppress or in any manner control the destiny of governments whose independence has been acknowledged by the United States. We will adhere to the Monroe doctrine.

We are bound to see that the lesser American Republics are not overthrown and their territory taken by any foreign power. Certain European powers have designs to carry out in conflict with that doctrine. Let us look at a few facts in the British record on that subject.

There is the little Republic of Honduras. It is not a mighty power with armaments capable of coping with England's navy, nor has it vast wealth reaped from conquered nations. In August, 1873, the British warship *Niobe* approached the seaport of Omon, in Honduras, and fiercely and wantonly bombarded the town. There was no British emissary seeking for peace by means of arbitration, and bearing the indorsement of 350 members of Parliament. Honduras was too feeble a power to be worthy of such diplomacy. England's consul had become engaged in a personal difficulty with a private citizen, and called upon his country's navy to determine the issue. In volume 67 of British Foreign and State Papers for 1875 will be found a full statement of this outrage and an illustration of England's policy of arbitration with weak powers.

Adjacent to Campeche, in Mexico, there is a piece of territory now called British Honduras. The source of this title affords another lesson as to England's foreign policy and her disinclination to indulge in arbitration when no fear stands in the way of her aggrandizement. The right of usufruct, granted by Spain to certain British subjects in that territory, was limited to the cutting down of timber and to trade in other natural products not due to cultivation. This was the entering wedge by which English statesmen, against the protest of Mexico, assumed the full control of the territory, and gave it the present title as a sign of England's theory of international obligations. In his note of February 12, 1873, in answer to a communication from Lord Granville, Señor Lafraga gives the whole story and sets forth in the strongest language the protest of Mexico against this outrage. There was no effort to determine the question by arbitration. England was not treating with the United States. It was perfectly safe for her warships to carry her ultimatum.

Nor was this the only occasion in which Mexico was to suffer because of the British code of ethics. Even in the most highly civilized nations mobs have been known to commit violence. Such an event happened in Mexico, and an English consulate was robbed of a few dollars. The Mexican Government promptly investigated the case and proffered remuneration. But the slow methods of diplomacy were not satisfactory to the British mind. Here was an opportunity to show the wonderful power of her navy, and it was not lost. The money was added to that aggregation of wealth which has flowed into England's coffers through the force of arms.

And there is the Republic of Haiti. A brave people who have given to the world a hero whose name is a household word among lovers of liberty. Struggling against obstacles that might have discouraged a race less determined to work out their own salvation, unskilled in the arts of diplomacy, they were entitled to the sympathy of older nations and to immunity even from British greed. But the bombardment and blockade of Cape Haytien by an English fleet in 1808, showed that not the helplessness of this people, nor the dictates of humanity, could stand in the way of England. There may come a time when England will treat for peace with Haiti. But it will not be hastened by cunningly devised treaties with this country by which the protest of this country can only be made through arbitrators.

Nearly half a century ago English statesmen had cast hungry eyes at Nicaragua. In the occupation of San Juan del Norte and the invasion of Nicaragua by British forces Sir Granville Loch exemplified a policy of infamy and insolence—a policy which holds that weak nations have no rights which England will respect. That policy toward the Republic of Nicaragua continues up to the present moment. Even now the British are contemplating interference with our control of the Nicaragua canal. That canal will be constructed by this Government sooner or later. It will connect the Atlantic with the Pacific Ocean. Its completion will give a tremendous impetus to American commerce. It will give us the supremacy in the Pacific Ocean.

The British build and control the Suez Canal, but are not content. They want to prevent our constructing the Nicaragua Canal if they can. If they can not do that they mean to prevent our having control of it. Only a few days ago the matter of the Nicaragua Canal was brought up in the House of Commons and the ministry interrogated concerning it. The answer of the ministers stated that the British ministry had the whole subject under consideration. Nicaragua would only be a morsel for the British lion, if the United States would keep hands off.

That policy toward Nicaragua continues up to the present moment.

The story of British chicanery in Venezuela is not yet complete. Here is an excellent field for the gentlemen who are now so anxious to secure a treaty of arbitration with the United States of America. Over seventy years ago the Republic of Venezuela succeeded to the

rights of Spain in her territory. There is abundant evidence that the Essequibo River was the western boundary of Guiana. But it was a part of English diplomacy to refrain from making formal declaration of her limits, and to leave them indefinite. Even then there were rumors of vast treasures of ore yet untouched in the little Republic.

As late as 1836 Mr. Robert Ker Porter, the British representative at Caracas, requested the Government of Venezuela to establish and maintain a light-house on Point Barima at the mouth of the Orinoco, thereby recognizing the rights of Venezuela. There was a desire for further explorations by British subjects, and they were willing to accept service from Venezuela, pending their investigations as to further opportunities to extend the dominion of their Government. It cost money to build ships, and the thrifty Britons were not above accepting assistance from a people whom they would make victims of if a gold mine should be found. A few years later a titled representative of England made some surveys in the disputed territory west of the Essequibo, and placed posts to mark his work, but the indignant protest of Venezuela caused the British Government to order their removal. England was not then ready to declare what should be the limits of her greed in this section. Every time a new gold field was opened her statesmen lengthened their telescopes and embraced a wider field over which to exercise dominion.

Here is an opportunity Mr. Cremer and his associates in the British Parliament should not overlook. His request for a treaty of arbitration with Venezuela would be received with a courtesy that would of itself be a valuable lesson for English statesmen. For many years Venezuela has sought for a determination of the boundary question with England. She has asked the friendly offices of this Government to secure for her an arbitration with England. But there are good and sufficient reasons to England why England should refuse. It was once said that Great Britain would go to war at any time over a bale of cotton. Her treatment of Venezuela shows that a gold mine is equally as potent a factor in determining the question of war or peace.

Doubtless England will refuse arbitration with Venezuela so long as new discoveries of gold mines are reported. She will change the line as often as it suits her convenience. It matters little that every year must show constant changes in her demands. It costs but a trifle to engrave new maps, and she can change the maps when she likes. But the opportunity for the United States to demonstrate the better policy should not be lost. Our answer to England's proposal for a treaty must include a demand that it cover every Republic on this Continent. This illustrates a higher public sentiment. It recognizes the obligation of the nation to extend a recognition of human rights beyond our boundaries, and to grant legitimately the benefit of our prestige to struggling republics naturally and properly looking to us for sympathy and support.

That Great Britain's foreign policy has at times been so infamous as to cause her own statesmen to denounce it, is shown by the reports of her officials.

In 1826, on the 15th of July, Mr. Osborne, afterwards Lord Osborne, expressed himself in the House of Commons as follows:

With regard to Brazil, the policy of this Government has not only been tyrannical toward that country but destructive for England. . . . In Brazil public opinion has become so excited against the right of search by our vessels, which the English Government has so terribly abused, and popular discontent so strong that the Brazilian cabinet was obliged to notify England that the ancient treaties with Portugal must no longer be applied to Brazil.

An eminent Brazilian writer on international law, referring to the policy and events alluded to by Osborne, says:

The history of the unjust acts done by Great Britain to Brazil is perfectly summed up in the eloquent speech of the illustrious Osborne.

In 1851, in consequence of illegal seizures of Brazilian vessels in Brazilian ports and harbors, and of attacks upon various points on the Brazilian coast—all of which acts were unauthorized by the treaty between Brazil and Great Britain for the suppression of the slave trade—followed by a demand on the Brazilian Government by the British minister that orders should be given to the ports not to fire on British war vessels entering its ports and harbors for the purpose of exercising the illegal right of search, the Brazilian minister of foreign affairs protested against the act referred to, concluding his note as follows:

That pretended right (of search) Brazil denies and protests against the same, preferring any possible calamity to a recognition of it.

In 1847, in relation to a claim of a British subject against Brazil, the British minister in Rio de Janeiro directed the following threatening note to the Brazilian minister of foreign affairs.

The Government of Her Majesty is fully determined to obtain justice for Mr. Young; it remains, therefore, for the Government of Brazil to decide whether it will voluntarily make the satisfaction demanded, or whether the British Government must employ the means at its disposition to compel that of Brazil to conclude this affair.

In 1862, an English vessel, *Prince of Wales*, was wrecked on the coast of Rio Grande do Sul at a point so near the frontier of Uruguay that it was for a long time impossible to determine in the jurisdiction of which country the accident occurred. In the same year an unimportant conflict between a party of English officers,

landed from a British man-of-war, with the police of Rio de Janeiro assumed the importance of an international question. Of these two events, which conjointly disturbed the relations between the two countries, the latter gave rise to questions which were settled in favor of Brazil by the King of Belgium acting as arbitrator; but the claims arising from the former, Great Britain refused to submit to that, or any other tribunal, preferring to enforce them at the cannon's mouth.

These claims involved cash. England could not risk their arbitration. The British minister at Rio de Janeiro demanded the immediate settlement of these claims, which included not only remuneration for the cargo and seamen's effects, which had washed ashore and were taken possession of by the people in the vicinity of the wreck, but also payment for the vessel itself, hull and rigging. The Emperor was supported in his resistance to these extravagant demands, but after several Brazilian vessels had been seized and condemned as prizes by British war vessels under orders of the British minister, and under the threat of immediate bombardment of the city, he was forced to yield, and the payment in full was made under protest.

The list of Brazilian vessels illegally seized by British cruisers, and for which restitution was never made, may be cited in support of Lord Osborne's declaration that the policy of Great Britain toward Brazil has been one of "tyranny."

Time would fail me to complete the lists of outrages perpetrated on this continent by Great Britain. Enough has been given here to show to the people of the United States that our Government will fail in its duty if it does not insist that any treaty of peace, and for arbitration with England, shall include every nation which needs our moral support. We will not be tied up by a treaty that compels us to look on while England gobbles up the weaker nations.

Pacific Railroad Funding Bill.

SPEECH

OF

HON. HENRY ALLEN COOPER,

OF WISCONSIN,

IN THE SENATE OF THE UNITED STATES,

Thursday, January 31, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7798) providing for the refunding of the debts of the Pacific railroad companies to the Government of the United States—

Mr. COOPER said:

Mr. CHAIRMAN: The subject under discussion is one of great importance to the people of the United States. In the mere amount of money involved the bill is among the most notable of all those which in recent years have engaged the attention of Congress, while, in its broader aspects, it touches upon great questions of public and of governmental policy, and presents features of deep and far-reaching significance.

It is not my purpose, sir, at this late hour in the debate, and within the brief time allotted me, to attempt a speech arranged in orderly sequence of argument and touching upon all of the matters presented by this very important measure. I propose simply to review, and to endeavor to make reply to some of the principal arguments advanced by the advocates of the bill, and especially those presented this afternoon by the distinguished gentleman from Vermont.

At the outset, before entering upon the discussion, Mr. Chairman, I desire, in view of what has been said during the debate by the friends of the bill as to the motives of its opponents, that my own attitude may be clearly understood. I do not pose here or elsewhere as a professional "reformer." I have never assumed, nor am I about to assume, the role of a professional antimonopolist—a person in season and out of season opposed to all corporations simply because they are corporations. I have no sympathy with the familiar indiscriminate denunciation of railroad companies and their management. My observation is that railway managers are human beings like the rest of mankind—just as good, just as bad, as are men engaged in other reputable pursuits. As a rule, they are possessed of very exceptional ability, and some of them I know to be men of the highest character.

I do not propose to discuss railroad management in general nor in the abstract, but in so far as I speak of it at all I shall confine myself to the concrete examples presented to our notice in the history of the Pacific Railroad companies. The facts to which I shall allude are substantially undisputed, and as to none of them is there any conflict of testimony on the part of disinterested witnesses, among whom I include the members of the Wilson committee of 1873 and of the Pacific Railway Commission of 1887.

And now, Mr. Chairman, I invite attention to some of the statements made by the last member who occupied the floor this after-

noon in advocacy of the bill, the gentleman from Vermont. He has at length and with much earnestness presented certain facts which, he intimates, create equities in favor of the directors and officers of the Pacific Railroad companies, and are therefore of importance in determining the action of the House upon the pending bill.

But, sir, every claim of this character advanced here by the honorable Member from Vermont was urged before the Government Commission of 1887, appointed to examine into the affairs of these companies; every one of the things which he has said so well in extenuation of the conduct of the officers and directors of these corporations was urged by the men themselves in their own behalf; all he has uttered in labored commendation of their bravery and by way of description of the hardships they encountered and of the risks they ran in putting money into a great venture was there presented with as much vehemence and with as much eloquence by these gentlemen themselves and by their representatives, among whom were some of the ablest lawyers in the United States. And, sir, the Commission, without a dissenting voice, declared to be utterly frivolous, nonsensical, and unworthy of a moment's consideration the whole elaborate argument in this behalf then presented before them, and to a repetition of which we have just listened from the lips of the gentleman from Vermont.

The gentleman from Vermont spoke of the difficulties attendant upon the construction of these roads. He alleged that the companies expended a vast amount of money in building them, and that they invested, "risked," their capital without any assurance whatever that it would be returned to them, as if in some way these matters, even if proven, were pertinent to the subject under discussion. But, sir, a complete reply to these suggestions, a demonstration of the inaccuracy of some of them, of the unimportance of others, and of the irrelevancy of the rest, is at hand. By the report, which I have in my hand, of the Commission of 1887 we are informed that 31 miles of the Central Pacific road were built prior to the passage of the act of 1864, and not after that event, as has been suggested here to-day, and that the first eighteen sections were constructed at a cost of \$22,250 a mile. Concerning the cost of these sections the report says:

The construction presents no peculiar features excepting that the bridge across the American River was an expensive structure, and may be accepted as furnishing a fair criterion of the average expense of construction when it does not present any exceptional features.

Now, sir, remember over the mountains they were allowed \$48,000 a mile; for other portions of the road \$32,000 a mile, and for all of the road more than \$20,000 a mile; and here is a statement by the Commission that \$22,500 represents the average cost of construction, except under peculiarly difficult circumstances. These sums per mile came from the Government. In addition to these, the companies were allowed to issue first-mortgage bonds to an amount equal to the total of bonds received from the Government.

Mr. BLAIR. The bonds of the Central Pacific road were sold and realized in currency. The cost of construction is expressed in gold, gold being used on the coast.

Mr. COOPER of Wisconsin. I infer from the suggestion of the gentleman from New Hampshire that he means us to understand that these bonds were sold at a discount. But that intimation is answered by the Commission in its report in the following language:

The statement that the Central Pacific Railroad Company was forced to sell the bonds at a discount and thereby lost the sum mentioned, is hardly accurate. The bonds were exchanged for their equivalent value in gold, but they were not sold at any such discount as stated, measured in legal tender. But viewed in the most liberal light, for the purpose of ascertaining any possible equity or compensation to which this corporation could be entitled by reason of the alleged discount of these bonds, the fact that they are to-day outstanding, and that the United States will be called upon to pay the face value thereof at maturity, on behalf of the Central Pacific Railroad corporation, is a complete answer to any such suggestion. The claim for interest on the amount of the alleged discount is covered by the same consideration.

But, Mr. Chairman, let us return to the point at which I was interrupted, concerning the cost of these roads. In the report of the Central Pacific Company for 1865, signed by Mr. Stanford himself, it is set forth that from the bonds alone they received money amply sufficient for the completion of the road.

Mr. BLAIR. The gentleman will remember that the testimony was that the proceeds of the first bonds and of the Government bonds substantially built the Central Pacific road, though they were left some three or four millions of dollars in debt when they arrived at the point of junction at Ogden.

Mr. COOPER of Wisconsin. In reply to that observation I will quote directly from the report of the commission of 1887, so that there may be nothing of hearsay about my statement:

It appears from the official report of the Central Pacific Company for 1865, signed by Mr. Stanford himself, that the company, through the Government and its own mortgage bonds, had abundant resources for the completion of the road.

I see no allusion here to any lack of funds whatever. The money which built these roads came from the Government and from the first mortgage bonds. With that fact in mind the "risk" does not seem so appalling. Moreover, besides the great loan of its money and credit, the Government gave these companies, outright, a total of more than 26,000,000 of acres of land, upon which up to 1887 they had realized nearly \$40,000,000, with more than 12,000,000 of acres then yet unsold.

Now, sir, what about the hardships which these directors of the Central Pacific endured? What about the bravery which they displayed? Would not \$25,000 a year, would not \$50,000 a year, by way of salary to each of these four men, which last sum is the compensation received by the head of this great Republic, have been ample remuneration for all they suffered? Stanford did no work of excavation; neither Crocker nor Hopkins did any; Huntington did none. Neither individually nor collectively did they do any shoveling except as with their pers and by their votes on every side of every contract they shoveled the money of the company out of its coffers into their own.

How does the commission of 1887 treat that sort of a claim?

A very large proportion of the difficulties, labors, and dangers referred to were borne by the engineers, surveyors, subcontractors, and the laborers who actually did the work. The principal directors of the company all received large salaries as compensation for their various services as president, treasurer, secretary, or manager of the company. It is therefore impossible to find in the circumstances alluded to any justification for the transfer to themselves of the entire franchise of this company represented in its stock, and of a considerable portion of its assets obtained through the contract made by their own votes.

Were they entitled, sir, to virtually all of the stock and of the other assets of this company in return for the awful hardships they endured in receiving these millions of money from the Government and the first mortgage bonds, while, under the supervision of contractors and engineers, Chinamen and other laborers did the work? The Government commission say in effect that in this particular the argument of the gentleman from Vermont is utterly devoid of merit. I will not myself say anything by way of characterization of it.

Mr. TALBERT of South Carolina. No wonder some of them are dead if they worked so hard.

Mr. COOPER of Wisconsin. The gentleman from Vermont declares that there was a great saving to the Government in the matter of transportation because of the construction of these roads, and is apparently of the opinion that this fact also creates an equity in favor of these directors. The commission treats that claim likewise, as entirely unworthy of serious consideration.

The evident object and purpose of the construction of this transcontinental route was to reduce the expense and cost of transportation. This object was avowed and declared and urged as a reason for the granting of the United States aid, and it is certainly a somewhat remarkable proposition that those who have received such aid should claim that the United States was not fairly entitled to the reduction in the cost in transportation, which was intended as the natural result of the enterprise. The claim is in direct contradiction of the terms of the act itself.

The commission, sir, treats as also unworthy of consideration the fact, upon which the gentleman from Vermont elaborated so earnestly, that other railroads were built across the continent by which traffic was diverted. The commission say:

This claim is simply monstrous. . . . When corporations or individuals embark in enterprises for purposes of their own, and with the avowed object of making money therefrom, it is mere idle complaint for them to find fault with the development of other kindred enterprises demanded by the advancing needs of an ever-increasing population. There is, in the judgment of the commission, no merit whatever in this claim for diverted traffic.

Thus vanishes another of the alleged equities presented by the gentleman from Vermont. But, Mr. Chairman, there is another fact which still more plainly discloses the weakness of this contention, and that is that the Northern Pacific received its charter on the very day that the amendatory act of 1864 was passed and before any work was done by the Union Pacific. What force is there then in the argument of the gentleman from Vermont and of others who believe as he does, that the Central and Union Pacific companies are entitled to consideration, despite the embezzlement and fraud and perjury which have marked their management, because other and competing roads were built, in view of the fact that the charter of one of those competing roads was obtained at a time when the Central Pacific had built only 31 miles of its line and before the Union Pacific had done any construction work whatever? The whole contention, sir, does not partake of the character of an argument.

The gentleman from Vermont somewhat criticised my use of the word "trick." I did not intend to be unparliamentary, and it was the farthest from my intention, I beg the House to believe, to say anything in the slightest degree reflecting upon the distinguished gentleman from Vermont. I have served with him on the committee and know his ability and honorable character. Nothing was more remote from my purpose than to impute anything like a trick to him.

Mr. VAN VOORHIS of New York. Well, you charged him with supporting a trick.

Mr. COOPER of Wisconsin. Why, very many honest men have been deluded as I believe you are being, if you now propose to support this bill.

Mr. VAN VOORHIS of New York. I am supporting nothing.

Mr. COOPER of Wisconsin. Many an honest man has supported a dishonest project from the best of motives.

Mr. VAN VOORHIS of New York. I suppose they are all fools but you.

Mr. BOATNER. It simply goes to the discernment of the gentleman himself.

Mr. COOPER of Wisconsin. Certainly. The conscience of the gentleman from New York is not attacked; I simply appeal to his

intelligence. I used the word in describing the bill, not its advocates. And in this connection I call the attention of the gentleman from Vermont to the words of Judge Collamer, of his own State, spoken in the Senate of the United States concerning the act of 1862. That act provides that by way of repayment the Government of the United States shall receive annually 5 per cent of the net earnings of the roads. Senator Collamer, a learned and able man, said:

The idea of men putting their money into this road unless it can be made profitable by this donation is all perfectly idle. There is not any man of common sense who will do anything of the sort unless this donation can make it successful. The honorable Senator from Massachusetts says there is not a man in this body who would put money in it expecting to make a good investment. I take it, there are none who would put it there in any other way. That is a very clear thing. Now, when we are put off with the idea of setting aside 5 per cent of the net receipts, as they call it, of this railroad for the purpose of paying the advance, however successful the experiment may be, it is equally fallacious. There never will be any net proceeds to it if it is profitable, never. There is not any railroad in the country where there is anything of rights reserved to the Government that ever had any net receipts. The stock all runs into the hands of a comparatively limited number of people who are the employees, the agents, the superintendents, the president, and the directors of the road, and every one of them is amply paid and no net receipts ever come in.

What a prophet was the then Senator from Vermont!

All of us who have known anything about railroads perfectly understand that. If the repayment to the Government is to come out of the net receipts, they are never to have anything at all. That is as perfectly clear as that there is any road to be laid from here to the Pacific. If it had said that the gross receipts were to be set apart to pay the advance made by the Government it might mean something, but it is not 5 per cent of the gross receipts, and these gentlemen will never agree to have it so. They do not mean that it shall be any security.

The idea that it is any security is all a fallacy from beginning to end. We are to have 5 per cent of the net proceeds of the road. You might as well, and with as much safety, have said 50 per cent. Fifty per cent on nothing will not be any more than 5 per cent on nothing. It is very modest to put in 5 per cent. Why did you not put in 50? Any man who knows anything about such matters knows that there never will be any net proceeds. If there should really be any proceeds those who have charge of the road will take care that they are used up in paying employees whom they select and in other expenses.

What does all this mean that I have read in the fifth section? Is it a gull, a trick? What in the world is it? Do gentlemen desire to be kept in this shape for the purpose of a mere trap to catch woodcocks? Is it a desire to be exceedingly ingenious and contrive it so that you can gull and deceive the community by this sort of duplicity? It goes on to provide for 5 per cent of the net proceeds, and that they shall do certain work for the Government, and the idea is that if they succeed, if they make the road, they shall render these services to the Government; but if it is profitable to them why should they not pay back the bonds? You keep calling it a loan, but when we come to talk really about carrying the security into effect in the event of the success of the road you hesitate and falter.

It is evident, Mr. Chairman, from the history of these roads that the doubts and suspicions of Senator Collamer and his fear that a trick was intended were well founded. In the light of that history the acts of 1862 and 1864 are revealed as very cunningly devised enactments. And that is the reason, as the gentleman from Louisiana has said, why we should examine every syllable of this bill, lest it, too, prove to be a thing "of tricks and traps." I contended, and now contend, that the sections mentioned by the honorable gentleman from Vermont do not reserve to the United States what they apparently reserve and what we all think ought to be reserved to the Government.

The last paragraph in the bill provides that "Nothing herein contained shall be held to affect, exclude, or impair any right or remedy in the premises now existing in favor of the United States." But, sir, there is no right or remedy now existing in favor of the United States. The Government as creditor has no present right of action in the premises. The Supreme Court of the United States has already decided that the Government is without power to institute proceedings until the bonds have matured and the roads have defaulted; so that it has no present right or remedy against these officers and stockholders and therefore as to it this pretended reservation amounts to nothing.

Mr. VAN VOORHIS of New York. Would you have this Congress create a new cause of action?

Mr. BOATNER. The idea is that these rights shall be reserved, to be enforced fifty years from now if anybody wants to do it.

Mr. COOPER of Wisconsin. Yes, sir.

Mr. VAN VOORHIS of New York. Would you have a bill creating a cause of action that does not now exist?

Mr. COOPER of Wisconsin. No, sir.

Mr. VAN VOORHIS of New York. If there is any cause of action, why do you want a cause of action made?

Mr. COOPER of Wisconsin. I propose to tell the gentleman from New York my objection to these features of the bill. Gentlemen have repeatedly asserted that if the bill were to become a law no rights of action would be lost against any persons who have wrongfully taken the assets of these companies. Now, section 14 of the bill provides that the Attorney-General shall be "authorized by the said company or companies to appear for them or it"—observe the language—"as attorney or solicitor in such action."

He is to appear as attorney for "them or it"—that is, for the "company or companies."

Mr. VAN VOORHIS of New York. Will the gentleman allow me to ask him a question?

Mr. COOPER of Wisconsin. Yes, sir.

Mr. VAN VOORHIS of New York. If the action is to be brought for the United States in the name of the company, who would you have the Attorney-General appear for?

Mr. COOPER of Wisconsin. But, sir, under the provisions of this bill he is to appear for the company, and not for the United States in the name of the company, as suggested by the gentleman from New York.

Mr. VAN VOORHIS of New York. He appears for the company—his name is used.

Mr. COOPER of Wisconsin. Let me restate the point. Every action properly in court is brought by, or in behalf of, a party called the party in interest. By section 14 the Attorney-General is to appear "for the company," when the fact is, that both of these companies are already barred by the statute of limitation and by repeated acts of confirmation and ratification. The bill, therefore, simply names the Attorney-General as a lawyer to appear for a party whose right of action is already barred.

Mr. VAN VOORHIS of New York. That is a bad claim.

Mr. COOPER of Wisconsin. That provision ought not to be here, because it authorizes the Attorney-General to bring a suit that can not be maintained.

Mr. VAN VOORHIS of New York. Why do you not put in a provision that the statute of limitations shall not run against this claim, and that it is not barred?

Mr. BOATNER. I would suggest that these claims and the right of action on behalf of the company against stockholders and directors are barred by the Statute, and their action can not be interfered with by action of Congress.

Mr. VAN VOORHIS of New York. By what statute?

Mr. BOATNER. The statutes in different States where these directors have resided and which have jurisdiction over these transactions.

Mr. VAN VOORHIS of New York. The statutes of a great many of the States provide that the statute of limitations never runs against a foreign corporation.

Mr. HEPBURN. Will the gentleman yield to me for a question?

Mr. COOPER of Wisconsin. Yes, sir.

Mr. HEPBURN. Is it not true that any stockholder during all these years of alleged peculation might have himself brought suits against the directors?

Mr. COOPER of Wisconsin. The first fifty-two millions of the Central Pacific stock was voted by four directors to themselves, virtually as a bonus, and kept almost entirely by them for many years.

Mr. HEPBURN. I remember hearing the gentleman from New Hampshire say that there were more than eight thousand of these stockholders.

Mr. COOPER of Wisconsin. That number related to the Union Pacific and to a period subsequent to the principal transactions by which the Government was defrauded.

Mr. HEPBURN. How does the gentleman account, in the absence of these suits, for the presence of continued peculation?

Mr. COOPER of Wisconsin. I will answer that question. I am very glad the gentleman from Iowa has drawn attention to that point.

Mr. BOATNER. These men had control of the majority of the stock.

Mr. HEPBURN. But it was not necessary that the suit should be brought by those controlling the majority of the stock. Any stockholder for himself, or for another, might have brought suit.

Mr. COOPER of Wisconsin. I will answer the question, I think, to the satisfaction of the gentleman of Iowa. Four men, Huntington, Crocker, Stanford, and Hopkins, had taken virtually all the stock of the Central Pacific Company. They voted to themselves a total of \$52,000,000 worth of stock, and although the law required explicitly that nothing but cash should be taken for it, there was, nevertheless, only about \$400,000 in cash paid into the Treasury. They also voted themselves \$34,000,000 in dividends. That was a paying road down to 1884. Every year there was a considerable net profit. Those men took it all. They absorbed substantially all of the assets. They acted in flagrant disregard of the rights of the Government. Suits were brought against them by Samuel Brannan and Charles A. Lambert and others as owners of stock in the road. The complaints in these suits set forth that these four men had been guilty of many violations of their duty as directors, that they had given very profitable contracts to themselves, and that by means of those contracts they had acquired possession of all the assets of the company remaining after the expenditures of the actual cost of construction. What says the commission of 1887 concerning these suits?

The allegations contained in these complaints were such as would compel men of honor, if these allegations were false, to defend themselves at any cost. It appears from the evidence that all these suits were settled, and that the stock owned by the plaintiffs was bought at rates varying from \$400 a share to \$1,000 a share.

Mr. BOATNER. What was the par value?

Mr. COOPER of Wisconsin. One hundred dollars a share. These facts make plain, sir, the reason why the suits which were brought were not prosecuted, and they also afford a complete and suggestive reply to the question of the gentleman from Iowa.

Mr. HEPBURN. It seems to me that the proceedings there described would be likely to operate as an incentive to other stockholders to go and do likewise.

Mr. COOPER of Wisconsin. Yes, sir; but suppose the other stockholders were about to "go and do likewise," and that they went around to these directors—I do not know that they did, but they could have easily done so—suppose they approached them and said, "If you do not pay us our share we will begin suits." Is it not probable that the directors would say, "All right, how much do you want?" "The Central Pacific pays it," "Jones pays the freight." I have no doubt that that is precisely what took place if other suits of similar character were ever brought. There was only a very small amount of stock out besides that issued by these directors to themselves.

Mr. BOATNER. If the gentleman from Wisconsin will permit a suggestion, we are not dealing here with the rights of the stockholders nor seeking to protect them from the consequences of their failure to protect themselves. We are merely insisting that the right of the United States to protect itself against the consequences of fraud shall be preserved. That is all. If the stockholders did not see fit to assert their rights that is no concern of ours; but we ought not for that reason to give up the rights of the United States.

Mr. VAN VOORHIS of New York. Right on that point. This road has been insolvent for some time, I believe. Now, when a road becomes insolvent the directors become trustees for the creditors, and what is the reason the creditors have not enforced their remedy? They certainly had a right to go into court as soon as the road became insolvent.

Mr. BLAIR. The very proposition that is contained in the Reilly bill proposing to pursue these defaulting officials of the Central Pacific Company is copied substantially from the bill prepared by the same Commission which the gentleman from Wisconsin quotes as authority, and is meant to give every possible remedy against the offenders that can be devised.

[Here the hammer fell.]

Mr. BOATNER. How much time have I remaining, Mr. Chairman?

The CHAIRMAN. The gentleman from Louisiana has forty-eight minutes.

Mr. BOATNER. I yield twenty minutes more to the gentleman from Wisconsin.

Mr. COOPER of Wisconsin. There is another point to which the gentleman from Vermont alluded, and to which the gentleman from New Hampshire [Mr. BLAIR] has just made reference; that is, that certain provisions in the pending Reilly bill are also to be found in the bill prepared by the Commission of 1887.

Mr. BLAIR. The Commission bill was prepared years ago, and that part of the Reilly bill was copied from it.

Mr. COOPER of Wisconsin. The Commission of 1887 did prepare a bill, and the Reilly bill is now before the House. I have already shown what value there is in the provisions of the two bills respecting the maintenance of actions against the directors.

Now let us examine some other features common to both of them. Both measures propose, among other things, to take a new mortgage from the Central Pacific Railroad Company. Let us see what there really is in that provision. No amount of unctuousness—only that I do not wish to violate the proprieties of the occasion I would say no amount of oleaginous argument [laughter]—can suffice to delude anybody about the meaning of that proposition who knows anything about the facts. It sounds well, but it signifies very little. By the report of the Commission we find that the entire amount of the funded debt of the Central Pacific Company in 1887 was ninety million forty thousand and odd dollars.

Since that time its condition has not improved. The company even then had no collateral upon which a new mortgage could be taken—so says the report. It states also that the amount of the funded debt of the company, principal and interest, exclusive of the indebtedness to the Government, aggregated in that year more than \$57,800,000, which sum, the report declares, exceeds the estimated cost of reproducing all the roads of the Central Pacific Company. And yet, sir, we are told here repeatedly of the splendid new security the Government would obtain if this bill were to become a law. Concerning this security the report says:

A present mortgage given by the Central Pacific Railroad, embracing the entire 1,357.29 miles of the road as now consolidated, would therefore give but very little additional security to the present statutory lien.

Sir, this statement shows that though I may properly quote the Commission of 1887 as an authority in its findings of facts, yet that I am not bound to adopt all of its suggestions as to proposed new legislation.

Mr. DUNN. Is not the effect of this bill that it involves an acceptance by the United States of that mortgage?

Mr. COOPER of Wisconsin. Yes, sir.

Mr. DUNN. How, then, could the Government, or those who compose the company, pursue the men who have defrauded the roads?

Mr. COOPER of Wisconsin. The company can not do anything of the kind, nor could the United States, at least not for another fifty years.

Mr. Chairman, the gentleman from Vermont dwelt with great force upon the rights of innocent stockholders. He said, "Here are a number of persons who have purchased this stock innocently and they should be protected." I assert, sir, that the word "innocent" can not be used with any sort of propriety in connection with the

purchasers of the stock of these roads. The records of these companies have been open to the public. No man is justified in buying anything in the form of corporate stock without first examining as to the condition of the corporation. These stockholders knew—they were bound to know—the financial condition of these bond-aided companies; they knew that their funds had been fraudulently diverted; that their directors had conspired, and successfully, to render it impossible for the companies to meet the indebtedness to the United States at maturity. They knew all of these things; they took the stock with notice, every one of them, and are in no proper legal sense innocent holders of it.

But, sir, let us inquire a little further as to the soundness of this claim on behalf of the innocent stockholders. The memorial presented to the House by the Union Pacific Railroad Company expressly declares that nothing can be done toward a reorganization without a foreclosure. Every person who has appeared before our committee and been examined on this point has declared that no reorganization can be effected without a foreclosure. Mr. Carr, of Boston, appeared there in behalf of certain Union Pacific interests, and the colloquy between him and the gentleman from New Hampshire is very instructive when read in connection with this plea for the innocent stockholders. Here it is:

Mr. BLAIR. Do you expect the stockholders will ever realize anything in the aided roads?

Mr. CARR. I do not see why they should not.

Mr. BLAIR. I believe the bills provide for foreclosures. * * * The effect of that would be that it would wipe out the original stock?

Mr. CARR. It would practically do that.

Mr. BLAIR. As to the branch lines—what effect would it have upon them?

Mr. CARR. It would be the same with them.

Mr. BLAIR. The stock in the entire system would completely disappear?

Mr. CARR. That would be the practical effect of it.

Mr. BLAIR. Allow me to say—

Mr. COOPER of Wisconsin. Sir, with a foreclosure and a sale under it—when the stock of the entire system has “completely disappeared”—what, I ask, will become of these innocent stockholders, about whom during this debate the friends of the bill have evinced such extreme and anxious solicitude, these persons who have a little stock here and a little there? They will not be called to bid at this foreclosure sale. No, sir. The big men who have the money will do all of that business; to them the roads will be sold, and the innocent little stockholders will be heard of no more, forever. [Applause.]

Mr. BLAIR. Will the gentleman allow me a moment?

Mr. COOPER of Wisconsin. I must refuse just now, because I have only a few minutes.

These men want to use this great line of road for two generations to come. They want to use millions and scores of millions, money and property, of which they are not entitled to a dollar. And we are asked as national legislators making laws for the United States of America, the grandest Republic in the history of mankind—we are asked to discriminate in favor of rich men solely because they are rich, to sanction repeated violations by the past management of these companies of every rule of common honesty, to forgive and condone what we would not forgive and condone in any one except the Union Pacific and the Central Pacific Railroad companies; and all, sir, under the poor, weak, pitiable pretense that we are thereby guarding the interests of innocent stockholders.

But, Mr. Chairman, let us examine this matter of the alleged innocent stockholders from another point of view and assume that there is to be a reorganization without foreclosure. Then, sir, in that event I can conceive of no reason which could be expected to induce us to say that the farmers on the line of the Union Pacific, the farmers on the line of the Central Pacific, the miners on the lines of these roads, all of the people of the United States who travel or ship freight over them, must for long years pay such charges as will enable these companies not only to liquidate the Government debt but also at the same time to pay interest and dividends upon a hundred and seventy millions of fictitious and fraudulent capitalization. For, sir, they must be allowed to charge what the law calls “reasonable rates,” and reasonable rates are such as will furnish a fund to meet indebtedness, and at the same time yield a fair return on the investment.

These companies have \$170,000,000 approximately of watered stock, fictitious capital, bonded indebtedness, the bonds of which were executed by these directors and paid to construction companies and to similar corporations, in some of which they themselves were the sole, and in others the principal, stockholders. This fraudulent stock, this fictitious capitalization exists to-day, and we are asked in effect to say to these companies, go on; do as you please for fifty years more, only give us our money—give us our money.

Mr. CANNON of Illinois. Will my friend allow me, for information, to ask him a question?

Mr. COOPER of Wisconsin. I would like to proceed without further interruption, if possible, as I have but a few minutes.

Mr. CANNON of Illinois. My question bears directly on this point and I will make it brief. As I understand from listening to the discussion, these parties after the passage of the bill, if it should pass, will pay off \$60,000,000 of the first-mortgage bonds. Am I right in that?

Mr. COOPER of Wisconsin. They promise nothing. The Central Pacific says not a word. Attorneys and agents for the Union

Pacific stockholders have said before our committee that their company might clear off the first mortgage from their line. But there is nothing definite, nothing like a contract, no mutuality whatever. The bill simply proposes that if these two companies will pay off the first mortgages on their respective roads, then that certain other things shall follow. The balance on the first mortgages aggregates about \$40,000,000. But it is all “if,” “if.”

Mr. CANNON of Illinois. Is not the amount sixty millions in round numbers?

Mr. COOPER of Wisconsin. There are about \$16,000,000 in the sinking fund of the Union Pacific.

Mr. HAUGEN. But whether they pay off anything will rest altogether on their good faith?

Mr. COOPER of Wisconsin. Yes; it will rest altogether on their good faith.

Mr. CANNON of Illinois. If they do not do it the bill will not amount to anything; but if they should do it I will ask my friend from Wisconsin whether the Government will not be somewhat nearer securing something on its indebtedness than it now is?

Mr. COOPER of Wisconsin. That, if the gentleman will permit me, is the last consideration which ought to affect the decision to be made here. In my opinion it should not weigh an atom in the judgment of any legislator in this Chamber when he comes to contrast it with the other proposition embodied in it—which is, that this fictitious capitalization, this embezzlement, these frauds, are to be recognized by Congress as something inevitable, and that concerning them the Government of the United States is to declare itself not only impotent and remediless, but utterly indifferent. Sir, there is a larger and a more just view which we ought to take of our duty in this relation. This great gift of lands and credit, this enormous loan of money, were made to accomplish a great national undertaking, to promote great public purposes for great public objects. Every consideration which ought to actuate us as Members of Congress, the highest and noblest public policy, demands that we do not compromise offenses like these nor fritter away the rights of the Government, but that we impartially and fearlessly enforce the laws. [Applause.]

I am not advocating, Mr. Chairman, that the Government of the United States shall participate in the ownership of all the railroads of the country; but, sir, I am in favor of foreclosing upon this particular indebtedness and of letting the company or companies which succeed to the interest of the Government have the right, on a legitimate capitalization, to conduct the business and to receive a fair return—as suggested in the proposed substitute bill of the gentleman from Louisiana—as their remuneration for the service and outlay.

Mr. CANNON of Illinois. And that, as I understand the gentleman, whether the Government gets a cent or not.

Mr. COOPER of Wisconsin. No, sir; but I will say again to my friend from Illinois that I do not think the payments proposed by this bill amount to the snapping of my fingers when compared with the other questions here involved. We are legislating, it must be remembered, for a territory which is an empire in extent and concerning matters that will vitally affect it for fifty years to come. Fifty years ago what is now the State of California did not possess a population of 25,000 men. Nebraska, Kansas, Colorado, California, Oregon—the great West—were all a wilderness. We know what that wilderness is to-day.

But, Mr. Chairman, what will it be in fifty years from now, when its fabulous resources of metal and mineral have been developed, when the lands have been irrigated, when millions and tens of millions more of enterprising American citizens are established there? They are to be the people who will ship their products over these roads, and it must be remembered that we are legislating for them. And, sir, I repeat that two or three millions of dollars to go dribbling into the Treasury from these companies annually for fifty years is not worth considering for a moment in comparison with the importance of the other questions presented.

Mr. CANNON of Illinois. The gentleman, I understand, is on the committee. I am not. I must get my understanding of the merits of this discussion from those who do understand it. I desire to ask the gentleman—

Mr. COOPER of Wisconsin. Let me say another thing.

Mr. CANNON of Illinois. I wanted to understand the position. The gentleman is in favor of abandoning the indebtedness of the Government entirely?

Mr. COOPER of Wisconsin. Not at all. The gentleman misunderstands me. I propose to collect the entire indebtedness. Why, the argument of the gentleman from Vermont that we are to lose the Omaha bridge, seems to me to be the giving away of our rights in advance of and in opposition to what clearly ought to be the ultimate determination of the question. The act of 1864 provides for the building of that bridge, and Senator Collamer, in a speech in the Senate, quoted the law of 1862 and said that the Government can take—what? To use his words, “the whole line of the road in the event of the nonpayment of the debt at maturity.” That was the understanding at the time the law was enacted. Senator Collamer said:

If they do not pay the bonds as a security for which they profess to make them, a mortgage on the road, it is to be taken possession of. It expressly says: “And to secure the repayment to the United States, as hereinafter provided, of

the amount of said bonds so issued and delivered to said company, together with all the interest thereon which shall have been paid by the United States, the issue of said bonds and delivery shall, ipso facto, constitute a first mortgage on the whole line of the railroad."

It is expressly provided that the Government may take possession of it.

The majority of the Committee on the Pacific Railroads do not go so far as to declare that the case of the Government is absolutely hopeless. On the contrary, they say it may be doubtful; but the gentleman from Vermont gives up all hope beyond question. The minority of the committee claim that the Government of the United States has a lien on the whole line of road—

Mr. WEADOCK. Did not the Supreme Court of the United States, in the sinking fund cases hold—

Mr. COOPER of Wisconsin. The gentleman will please excuse me, I can not yield.

Mr. BOATNER. If my friend will permit me, he did not answer the question of the gentleman from Illinois in regard to what the minority of the committee proposed to do with the railroad. He asked if we proposed to give away the debt of the United States.

Mr. COOPER of Wisconsin. Not at all.

Mr. BOATNER. I ask him to state if he proposes to subject the roads to the rights of the United States?

Mr. COOPER of Wisconsin. Yes, sir; undoubtedly, and to recover the assets which have been fraudulently converted.

Now, Mr. Chairman, a word about the value of some of the other alleged new security to be received under the proposed fifty-year mortgage and particularly as to the Union Pacific collaterals. The commission of 1887 expressed its belief that if the Government of the United States could obtain a mortgage on the stocks held by the Union Pacific company, which carry the control of the branch lines, it would secure an important and valuable increase of its security.

Now, sir, since this report of the Commission these stocks and collaterals of the Union Pacific have been newly mortgaged. In 1891, as narrated by one of the attorneys who came before our committee, there was a great deal of floating indebtedness, and the holders of the floating debt, each of whom had collaterals, were asked to come in and take new notes, running for three years (maturing shortly prior to the commencement of this session of Congress, it will be observed), and these new notes were secured by a consolidation of the collaterals. These consolidated collaterals were placed in trust with Drexel, Morgan & Co.

Now, what did these collaterals include? They included five millions of the Kansas Pacific and collateral mortgage bonds; about five million of Union Pacific Coal Company bonds; the stock of the Union Pacific Express Company; the controlling interest of practically all the branch lines and a large amount of the bonds issued by the branch lines, and, to quote the language of this attorney, "everything which the Union Pacific Railway Company had which it could pledge or put up as a collateral for these notes."

Now, sir, I want to know what the value would be of another mortgage upon these same collaterals, a mortgage which this bill provides that we take? The present mortgage on them bears 6 per cent interest, and is upon stocks and bonds which absolutely control the branch lines, and which, as a witness, Mr. Coster, of New York, declared, make up also practically the controlling interest in the Union Pacific system.

Mr. BLAIR. Does not the gentleman think he ought to state that that collateral was mortgaged to meet an impending floating debt of \$20,000,000 which was due and upon which the road could be immediately forced into the hands of a receiver, and that they pledged those collaterals to meet that debt of \$20,000,000, and that enough of those collaterals have been sold to reduce that floating debt down to \$11,000,000?

Mr. COOPER of Wisconsin. The mortgage upon those collaterals at present amounts to \$11,000,000 and bears interest at 6 per cent. It is claimed to be a good mortgage upon good property. How unwise then would be the mortgagees to surrender it or in any manner subordinate their claim to that of the Government. And how foolish would be the Government of the United States to take a second mortgage upon collaterals already mortgaged to practically their full value and paying 6 per cent interest. And, sir, this attorney when before the Committee on the Pacific Railroads went on to show what it was meant he should be able to show, that this company has the Government of the United States where they think it is in an "emergency" and must compromise at their terms. He proceeded to say, substantially, that the holders of these securities would lie back and be independent in the matter. From these facts it can be easily determined about what additional security the Government would acquire by the proposed new mortgage on the collaterals of the Union Pacific.

Mr. Chairman, I desire next to inquire a little as to the accuracy of the statements of the gentleman from Vermont and others who have spoken in favor of this bill, that the misfeasance and wrongs of which its opponents complain were all matters of nearly thirty years ago—"too ancient" to be now considered. Their language left the impression that all of the outrageous contracts by which these directors enormously enriched themselves and dispersed the assets of their companies were matters of thirty years ago. But

this, sir, is a mistake. The commission of 1887 in its report says concerning the Central Pacific Company:

The financial inability of the company to meet these requirements is the result as before stated of the prodigal and wanton dispersion of the assets of the company in dividends, the aggregate amount of which exceeded \$34,000,000, and of the extravagant contracts persisted in to the present time, as evidenced in the case of the construction contracts for the northerly end of the California and Oregon Railroad, by the Pacific Improvement Company, entered into in October, 1886.

This contract, made so late as 1886, was of a most extraordinary character. It was a contract for the building of 103 miles of road, entered into by the Central Pacific Railroad Company with the Pacific Improvement Company. The Pacific Improvement Company when organized had four stockholders—Stanford, Huntington, Crocker, and Hopkins. Subsequently David M. Colton was given a small amount of stock. So that in making this contract the first-named four men, who together absolutely controlled the Central Pacific, virtually contracted with themselves. The books of the Pacific Improvement Company were secured by the Commission of 1887, and the cost of these 103 miles of road ascertained to be three million one hundred and thirty-eight thousand and some odd dollars. But the Central Pacific Company—that is, Stanford, Huntington, Crocker, and Hopkins—paid to the Pacific Improvement Company—that is, Stanford, Huntington, Crocker, et al.—for these 103 miles of road stock and bonds the cash value of which was \$3,340,000.

And

Says the report—

this extraordinary transaction is being consummated to-day, in the face of this investigation, and in violation of every duty which the directors owe to the stockholders of that company and to the Government as its chief creditor.

Here, at least, is one matter not too ancient for us to take into consideration at this time.

But, sir, Mr. Anderson, of the Commission of 1887, testified before the Committee on Pacific Railroads during the present month that the contracts of the Union Pacific with the Oregon Navigation Company, which he says contributed largely to cause the bankruptcy of the Union Pacific Company, were made in 1887, while the Commission was in session.

Mr. HAREIS. They were made to defeat the Thurman Act.

Mr. COOPER of Wisconsin. The gentleman from Vermont is wonderfully mistaken if he thinks these ruinous contracts were all made thirty years ago. Seven years ago, while the representatives of the Government of the United States were conducting an investigation of the affairs of these companies, the directors of the Union Pacific made a contract which Ellery Anderson says practically caused the bankruptcy of that company. Under that contract they guaranteed 6 per cent on the capital of the Oregon Navigation Company \$25,000,000; they also guaranteed 6 per cent on the bonds of that company, amounting virtually to another \$20,000,000, which would make 6 per cent on an aggregate of \$45,000,000. The money to pay this guarantee had to come from the earnings of the Union Pacific. What else? Mr. Anderson says he has no manner of doubt that the men who were in the Oregon Navigation Company, and were the beneficiaries of this contract which bankrupted the Union Pacific, were some of them the same men who as directors of the Union Pacific voted the contract, and therefore it is plain they voted it to themselves. And, sir, in one year this contract caused a loss to the Union Pacific of \$1,760,000.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BOATNER. I yield the gentleman the balance of the time.

Mr. POWERS. I ask the gentleman from Wisconsin if I understand him to say that I said the fraudulent contracts of the Oregon Navigation Company were made thirty years ago.

Mr. COOPER of Wisconsin. No, sir; but the gentleman did declare that in discussing these fraudulent contracts the opponents of the bill were going back to transactions of thirty years ago, and he employed language to the effect that such matters should all be shut out and forgotten during this debate. Here, sir, is a contract made seven years ago, which bankrupted the Union Pacific, a contract made by men who voted it to themselves. Mr. Anderson says there is no question about that. That is the substance of his testimony.

Mr. VAN VOORHIS of New York. Does Mr. Anderson favor this bill?

Mr. COOPER of Wisconsin. Yes, he favors this bill.

Mr. VAN VOORHIS of New York. With an amendment?

Mr. COOPER of Wisconsin. With amendments. He desires that the interest be reduced to 2 per cent, and he also wishes other amendments of importance.

Mr. Chairman, this bill is fatally defective, because it entirely ignores certain facts which are of vital importance to a proper solution of this problem. These two companies differ widely from each other in the facts of their creation and subsequent history. The Central Pacific is a corporation created in the year 1861, under the laws of the State of California. By the constitution and laws of that State the life of a corporation chartered in California is limited to a period of fifty years. The present Central Pacific Railroad Company will therefore cease to exist in the year 1911, thirty-four

years prior to the expiration of the fifty-year period of extension proposed by this bill.

The Union Pacific Railway Company, on the contrary, is a corporation created by act of Congress and with no specified limitation as to the term of its existence. The main line of the Union Pacific railroad proper extends from Council Bluffs, Iowa, to a point 5 miles west of Ogden, in the Territory of Utah, where it meets the Central Pacific railroad. From this meeting point the Central Pacific railroad main line runs west to San José on the south end of San Francisco Bay, the main lines of the two companies thus together constituting one great trunk railroad from Council Bluffs to San José.

Now, sir, let us suppose that this bill were to become a law, and that the Union Pacific should carry out its requirements so far as they relate to that company, but that the Central Pacific, in the course of three or four years, should make default. In that event the Government would be compelled to resort to a foreclosure on the Central Pacific road alone—upon a road the eastern terminus of which is at a barren spot 5 miles west of Ogden. Foreclosure on this security would then be the sole recourse of the Government against the Central Pacific Company, for the reason, among others, that by the enactment of this bill into a law, and the acceptance of its provisions by the companies, there would result a complete and perfect novation of the debt and a consequent release of existing personal liability therefor.

Mr. Chairman, this bill is seriously defective in other particulars. If there is to be a foreclosure and sale then of necessity new successor corporations must be chartered. This bill omits provisions essential to the proper regulation of these possible new companies, unless, sir, we desire a repetition in the future of the frauds which have made the past management of the old companies a national scandal and disgrace.

These roads are engaged in interstate commerce. Is the Government of the United States to grant the charter of the successor to the present Union Pacific Company, or is it to be obtained in one of the States? If the new companies are to receive their charters under State laws, is the Government to say nothing as to what the charters shall contain? Are the corporators to be allowed to go to one of the States and after the exercise of a sufficient amount of "influence" secure whatever they may be able to obtain in the way of a charter, such an one, for instance, as was generously granted to the Southern Pacific Company in the State of Kentucky? How much capital stock are the new companies to be allowed to issue? Where is the provision on that point in this bill? Where is the restriction to prevent fictitious and fraudulent capitalization and bonded indebtedness?

Where is the supervisory clause? Where is there anything in the bill to guarantee protection to the patrons of the roads who are to pay this money? For, sir, it is not the stockholders of these companies who will pay it, nor the officers, nor the directors, but every dollar of it is to come from the people of the United States; the people must pay it all. [Applause.] That, sir, is one of the great central facts to be borne in mind here.

Have we learned nothing from the past? Is the future to be left to chance? The gentlemen who have spoken here in advocacy of this bill would apparently allow the companies, or their successors, to go on and do as they please so long as we get the comparatively trivial contribution of two or three millions a year for fifty years—for a generation after the majority of the members of this House are dead and gone. Is that the statesman-like view we should take of a problem so vast as this, fraught with such transcendently important consequences to those who now inhabit, and are hereafter to inhabit, the great territory of the West? The directors of these companies, as is natural under the law, will hereafter recognize no obligation except that of earning dividends, while we, as national legislators, are responsible to the great body of the people.

Are we to legislate as statesmen when a problem of statesmanship is presented to us, or as mere collectors of bad debts. [Laughter and applause.] Avarice was the god which wrecked these railroads. Is avarice the god of the Republic of the United States as represented in its Congress? Are we to fall down and worship the golden calf, surrender to arrogant, conscienceless dishonesty solely because it is rich and powerful, and like a harlot sell the honor of the Government for money? Sir, there is no reasonable excuse which can be urged here for the turning over of these great national trunk-line roads to corporations upon their mere suggestion of a promise—a promise not yet made, and even if it were made, still one which friends of the bill who have addressed the House declare they do not know whether these companies propose to try to keep, or possibly can keep.

But it is said, "if they do not keep their promise we will foreclose." And yet, the very gentlemen who have thus argued here in favor of the bill tell us we must not foreclose; that the Government must never lay its impious hands upon these railroads. They denounce every proposition for the United States to enforce the contract and the law by a foreclosure, because, they say, the Government must never have anything to do with the management of a railroad. But, when we ask them what they themselves propose to do in the event that this bill becomes a law and the companies make default, they promptly reply, "foreclose the mortgage." I am

unable to reconcile these statements, but I think the gentlemen evidently desire to express their belief in the inability of the Government to properly conduct the affairs of these companies for any period, no matter how brief.

Mr. Chairman, Judge Dillon, of the United States court, made an order in 1886 appointing Hon. J. D. Grinnell receiver for the Central Railroad of Iowa, and in that order he said:

The railroads in the hands of the court, and in the circuit there are eight or ten, have all been run with less expense and have made more money than when they were operated by the companies, and we hope and believe, under your supervision, that this road will prove no exception, and that the property will be worth more at the end of the litigation.

After nearly three years of service Mr. Grinnell resigned, and Judge Grant, in asking for the discharge of his bondsmen, said:

I concur entirely in the opinion of the State commissioners, that he has very much improved the condition of the road, and has left it in a far superior condition to that in which he received it.

These quotations I have read from a work on railroads written by an ex-governor of the State of Iowa. Now, sir, in such a matter the Government of the United States could assuredly do all that one of the judges of its courts could do. I see no reason why the Government can not take this line of road, as Senator Collamer said it would take it, and would take the whole of it, if the contract were not lived up to. The control of the main line would secure to it a large proportion of the business of the branch lines. This was admitted to be true by Mr. Simpson, of counsel for the Union Pacific, in his statement before our committee as follows:

Mr. SIMPSON. * * * I do not think it is necessary for the Union Pacific to own, or by contract or otherwise control, the branch lines in order to get a large part of their business, because natural laws would send a large percentage of the business to the Union Pacific.

Mr. HARRIS. As to some of the branch lines, I would rather see them owned by some one else than the Government.

Mr. SIMPSON. I agree to that. Some of the branch lines are not desirable in a reorganization and should not be taken in. There are others which it would be desirable to have.

Mr. Chairman, let the Government enforce its claims by foreclosure rather than enact the pending bill into law.

There is the one hundred and seventy millions of fraudulent capitalization. Wipe it all out by foreclosure; give the management of the road to men who are honest; hedge them about with restrictions and safeguards to protect the interests of the people of the West, and of the United States generally, who must ship over that great trunk line. Limit fairly the amount of the capital. Let it be conducted strictly under Government supervision for a time and then turn it over to a corporation or to corporations with the right to receive an honest return upon an honest investment. But do not give the present corporations, merely at their request, an extension of fifty years. I wish to be entirely fair.

But what claims have they upon the consideration of the Government? They can not deny that their present financial condition is directly chargeable to themselves. It is not the fault of the Government, for it gave to them with lavish prodigality. It is not to be attributed to oppressive laws, nor has ill fortune brought it upon them. They can not rightfully come to the Government and ask for a renewal of its kindness and liberality under the claim that they have been unfortunate, and that their condition is such as honest management could not have foreseen and prevented.

Sir, they can not come here as honest debtors pleading misfortune as an excuse for failure to meet their obligations, and asking the Government, an indulgent creditor, in mercy and justice to extend the time for payment. No, sir: nothing of the kind. They are here unable to deny that their condition is due to fraud and corruption of every sort known to corporate management. Their directors misappropriated funds; they destroyed books of account to hide the evidences of guilt; and in furtherance of their dishonest and disreputable schemes certain of the directors of each company resorted to perjury.

The cost of the Union Pacific road, like the cost of the construction of the Central Pacific, was substantially equivalent to the proceeds of the first-mortgage bonds and of the Government bonds, or about \$50,000,000 in the aggregate, and yet the amount charged to the company was more than \$97,000,000. The directors of both companies bonded the land grants, they bonded the incomes of the companies, they took everything there was in the roads, virtually all of the stock, and then members of each board made affidavits, signed and made oath to them, that all the stock was fully paid, when, in fact, out of a total of more than \$97,000,000 of stock in these companies, less than \$2,000,000 was actually paid in. I do not wish to speak disrespectfully of the dead, but was not that perjury? These men have been called financiers; as such they have been denominated during this debate. Financiers indeed!

Mr. BOATNER. In the modern acceptance of the term.

Mr. COOPER of Wisconsin. Financiers! There have been financiers of a different kind. George Peabody was a great financier, and among all the millions which he left to bless mankind there was not a dishonest penny. His name is immortal for true genius in finance, for nobility of character, for bountiful goodness. It is hallowed forever in the affectionate remembrance of the world. So, in another sphere, we have had great financiers—Turgot, for example, and Hamilton, and Gallatin. You remember, sir, that Webster

said of Hamilton: "He smote the rock of the national resources and abundant streams of revenue gushed forth. He touched the corpse of public credit and it sprang upon its feet."

These "financiers" of the Pacific railroads smote the rock of their company's resources and abundant streams of revenue gushed forth—all of which they carefully turned into their own pockets. [Laughter.] They touched the living credit of their corporation and it fell a corpse at their feet. [Laughter and applause.] Persons of discernment will be able to note a distinction between these two classes of financiers. [Renewed laughter.]

Mr. COOPER of Florida. Let me ask the gentleman a question. Is it a fact that unless we pass this bill now there is no provision to protect the lien of the United States until the meeting of the next Congress?

Mr. COOPER of Wisconsin. No, sir; it is not a fact, and I am pleased to have the gentleman from Florida propound that question. Here is the law of 1887. By the way, four days ago that proposition was presented to me by a very prominent member of this body in the utmost good faith and he expressed much surprise on learning that the statute which I am about to read was in existence. It was read last evening by the gentleman from Kansas [Mr. HARRIS]. By the act of March 3, 1887, it is provided:

SEC. 4. That whenever, in the opinion of the President, it shall be deemed necessary to the protection of the interests and the preservation of the security of the United States in respect of its lien, mortgage, or other interest in any of the property of any or all of the several companies upon which a lien, mortgage, or other incumbrance paramount to the right, title, or interest of the United States for the same property, or any part of the same, may exist and be then lawfully liable to be enforced, the Secretary of the Treasury shall, under the direction of the President, redeem or otherwise clear off such paramount lien mortgage, or other incumbrance by paying the sums lawfully due in respect thereof out of the Treasury; and the United States shall thereupon become and be subrogated to all rights and securities theretofore pertaining to the debt, mortgage, lien, or other incumbrance in respect of which such payment shall have been made.

It shall be the duty of the Attorney-General, under the direction of the President, to take all such steps and proceedings, in the courts and otherwise, as shall be needful to redeem such lien, mortgage, or other incumbrance, and to protect and defend the rights and interests of the United States in respect of the matters in this section mentioned, and to take steps to foreclose any mortgages or lien of the United States on any such railroad property.

SEC. 5. That the sinking-funds which are or may be held in the Treasury for the security of the indebtedness of either or all of said railroad companies may, in addition to the investments now authorized by law, be invested in any bonds of the United States heretofore issued for the benefit of either or all of said companies, or in any of the first-mortgage bonds of either of said companies which have been issued under the authority of any law of the United States and secured by mortgages of their roads and franchises, which by any law of the United States have been made prior and paramount to the mortgage, lien, or other security of the United States in respect of its advances to either of said companies as provided by law.

Mr. CANNON of Illinois. Is there an appropriation?

Mr. COOPER of Wisconsin. The sinking funds are available.

Mr. CANNON of Illinois. I understand that, but I wish the gentleman would read the item appropriating the money out of the Treasury to meet demands on the first-mortgage bonds if there is any such appropriation.

Mr. COOPER of Wisconsin. This law provides that the money shall be paid "out of the Treasury." That is a sufficient appropriation. I am only citing this, and I am very glad the gentleman from Florida has by his question called my attention to it, to show the lack of that emergency which is being urged here as a reason for deciding this matter within two days. The emergency does not exist. We have five dollars for every one which need to be used until more than a year from now. The average maturity of these bonds is January 1, 1897. There are only about \$3,000,000 that need to be attended to at present, or approximately that, and we have \$16,000,000 in one sinking fund and \$7,000,000 in another. The emergency assumed in the question which the gentleman from Ohio propounded this morning to the gentleman from Kansas does not exist. It was simply an assumption, honest on his part, but nevertheless an assumption, baseless in fact.

The President, Secretary of the Treasury, and Attorney-General, under the act of 1887, have ample power to protect the rights of the Government. Therefore there is no immediate emergency, and all of this assertion about the absolute necessity of the prompt passage of this bill, or in the event of a failure to so pass it, the total loss of the Government claim, is, with all due respect to the gentlemen who have uttered the statement, absolute pretense. It has no force behind it. No, sir; there is no such emergency, although a deliberate attempt has been made to create an appearance of one. This matter has been delayed and delayed and delayed.

The bill was reported shortly before the summer adjournment. After the adjournment we were busy preparing for the election. After the election we came here. December passes; nearly the whole month of January passes. The last week of January arrives and then suddenly a great emergency is discovered, and the astounding proposal is made to the House, in the first instance, that we be gagged with only four hours of general debate upon a bill which provides finally as to the disposition to be made of a claim for approximately \$140,000,000, and as to what shall be the management of these great national trunk-line railroads for a half century to come. They talk about an emergency in order to stampede Congress—

Mr. REILLY. On the subject of an emergency I should be glad to make an inquiry of the gentleman, if he will allow me.

Mr. COOPER of Wisconsin. What is it?

Mr. REILLY. During the next three years, if Congress does not legislate on this subject, will not the United States Treasury have to pay out \$60,000,000 in cash to redeem the subsidy bonds, in addition to the amount it has already paid, making an aggregate of \$136,000,000?

Mr. COOPER of Wisconsin. The gentleman's question may or may not assume the fact. But, as Leonard Swett was wont to say, as he rose, twirling his eyeglasses, to reply to any suggestion of this character when addressed to him, "While the gentleman's observation may be entirely sound, and I presume that it is, it is unfortunately not germane." [Laughter.]

Mr. REILLY. It is not germane if Congress does not see fit to take action to secure the payment of a \$136,000,000.

Mr. COOPER of Wisconsin. Three years, as suggested by a gentleman near me, is a longer time than two days. There is ample time and opportunity in which to draft a bill and make of it a law which will more nearly meet the requirements of the situation than would the bill under discussion. You have been struggling with this bill for a year—

Mr. REILLY. Yes.

Mr. COOPER of Wisconsin. Then you came in here and induced the Committee on Rules to say that the whole House—after a year of disagreement among the members of the Committee on the Pacific Railroads as to the provisions of the bill—that we as a House are to make up our minds upon this vitally important matter after a general debate of four hours and a rambling, incoherent, slipshod five-minute debate lasting one afternoon. Sir, there is apt to be a difference between a law enacted after a stormy discussion of this kind, to meet an alleged "emergency" of the sort conjured up here, and one enacted after the people of the United States have had this question brought to their attention and when all the Members of Congress have had an opportunity to become familiar with the facts of the problem. [Applause.]

Mr. Chairman, I observe that my time has nearly expired. As I said in the beginning of my remarks, I do not pose here as a professional "reformer." I have no thought of that kind. I do not assume to be a professional antimonopolist. I do not believe in indiscriminate denunciation of all men engaged in corporate business. I have not, nor have I ever had, any sympathy with such manifest unfairness. Nor, as I said before, am I here to advocate that the Government of the United States take all the railroads of the country. I only believe that the Government of the United States ought to take this line of railroad because that is the way to do justice to all parties concerned—

Mr. HARRIS. And comply with the law.

Mr. COOPER of Wisconsin. And to comply with the law. The gentlemen in favor of this bill must, to be consistent, oppose foreclosure under any circumstances. If the conditions of the mortgage to be given under the bill are not complied with the horror of foreclosure will still be as potent with them as ever. Foreclosure is never to be thought of. To accord with the views now entertained by a majority of the Committee on the Pacific Railroads the proviso in the act of 1862 ought to have been to this effect: "Unless you pay these obligations at maturity we will foreclose on the roads: *Provided, however*, And this great loan of money and gift of lands is upon this express condition—that if you do not pay these obligations at maturity; if you do not voluntarily create any sinking fund; if you seize the stock of the road and pay nothing for it, although we say you shall pay cash; if, more than all other things combined, your conduct tends to destroy public confidence in the integrity of American railway management; if you fraudulently convert the assets of the company to your own use and deliberately enter into a conspiracy to make it impossible for the Government to realize anything on its claim, then, and in that event, we will not foreclose; we will simply give you fifty years more."

Mr. Chairman, I am in favor of an early settlement of this great question. But it must be a fair settlement. For the reasons which I have submitted, sir, the pending bill is unfair to the Government, and nothing can prevail upon me to give it my support. [Prolonged applause.]

The CHAIRMAN. The time of the gentleman has expired.

APPENDIX A.
Cost and capitalization.

Company.	Mileage.	Cost.	Capitalization in bonds and stocks.	Amount of fictitious capital in securities upon completion of roads.
Union Pacific.....	1,038.68	\$38,824,000	\$109,814,812	\$70,990,812
Kansas Pacific.....	283.94	11,800,000	25,028,250	13,228,250
Central Branch.....	100.00	2,731,347	4,200,000	1,468,653
Sioux City and Pacific.....	161.77	2,600,000	5,047,720	2,447,720
Central Pacific.....	737.50	36,000,000	124,211,680	84,211,680
Western Pacific.....	123.16	4,000,000		
Total.....	2,405.05	95,955,347	208,902,462	172,847,115

APPENDIX B.

[Extract from report of the Wilson Committee to the House of Representatives February 20, 1873.]

Your committee can not doubt that it was the purpose of Congress in all this to provide for something more than a mere gift of so much land and a loan of so many bonds on the one side and the construction and equipment of so many miles of railroad and telegraph on the other.

The United States was not a mere creditor, loaning a sum of money upon mortgages. The railroad corporation was not a mere contractor, bound to furnish a specified structure and nothing more. The law created a body politic and corporate, bound as a trustee so to manage this great public franchise and endowments that not only the security for the great debt due the United States should not be impaired, but so that there should be ample resources to perform its great public duties in time of commercial disaster and in time of war.

This act was not passed to further the personal interests of the corporators, nor for the advancement of commercial interests, nor for the convenience of the general public alone; but in addition to these, the interests, present and future, of the Government, as such, were to be subserved. A great highway was to be created, the use of which for postal, military, and other purposes was to be secured to the Government "at all times," but particularly in time of war. Your committee deem it important to call special attention to this declared object of this act, to accomplish which object the munificent grant of land and loan of the Government credit was made.

Appropriations.

SPEECH

OF

HON. JOSEPH G. CANNON,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 3, 1895.

The House having under consideration the subject of appropriations—

Mr. CANNON of Illinois said:

Mr. SPEAKER: In the closing hours of the Fifty-third Congress I avail myself of the opportunity to present, for the information of the House and of the country, a statement of the aggregate of appropriations made by this Congress—the first half of Cleveland's Administration—as compared with the aggregate of the appropriations for the Fifty-first and Fifty-second Congresses, respectively, under Harrison's Administration. For this purpose I insert the following comparative statement, which has been carefully compiled and is correct:

EXHIBIT A.—Comparative statement of appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, fiscal years 1891 to 1896, inclusive.

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.	
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.
Agricultural	\$1,709,100.00	\$5,028,153.50	\$3,223,965.50	\$3,223,500.00	\$3,223,623.06	\$3,303,750.00
Army	24,206,471.79	24,613,529.19	24,306,439.82	24,225,639.78	23,592,884.68	23,252,608.00
Diplomatic and consular	1,710,815.00	1,656,925.00	1,604,045.00	1,557,445.00	1,563,918.76	1,575,073.94
District of Columbia	5,769,544.15	5,507,125.17	5,317,973.27	5,413,223.91	5,545,678.57	5,745,643.25
Fortifications	4,232,995.00	3,774,803.00	2,734,276.00	2,210,055.00	2,427,004.00	1,904,557.50
Indian	7,262,016.02	10,386,284.86	7,064,047.84	7,854,240.38	10,659,565.16	8,973,948.01
Legislative, etc.	21,030,752.75	22,027,674.75	21,900,132.97	21,865,802.81	21,305,583.29	21,883,222.43
Military Academy	435,286.11	402,064.64	423,917.33	432,556.12	406,535.08	464,351.66
Navy	24,139,035.53	31,541,654.78	23,543,385.00	22,104,061.38	25,327,128.72	29,716,077.31
Pensions, including deficiencies *	123,770,398.35	164,550,383.34	154,411,682.00	180,681,074.85	151,581,570.00	141,381,570.00
Post Office	72,226,698.99	77,907,222.61	80,331,276.73	84,004,314.22	87,236,599.55	89,545,997.80
River and harbor	25,139,235.00	21,154,218.00	21,154,218.00	21,154,218.00	11,643,180.00	11,643,180.00
Sundry civil	29,738,282.22	37,410,363.90	27,065,076.90	41,710,311.15	34,253,775.55	47,138,300.40
Deficiencies	13,265,541.61	8,364,148.62	8,230,859.50	8,127,361.61	11,811,004.06	9,738,979.19
Total	354,759,152.52	398,290,393.45	382,527,335.89	409,515,596.11	390,578,048.48	384,634,049.69
Miscellaneous	7,010,905.27	4,271,531.10	3,206,922.82	530,490.18	577,956.55	400,000.00
Total regular annual appropriations	361,770,057.79	402,531,864.55	385,736,308.71	404,036,085.29	391,156,005.03	385,034,049.69
Permanent annual appropriations †	101,628,453.00	122,436,808.00	121,863,880.00	115,468,273.92	101,074,680.00	113,073,953.02
Total	463,398,510.79	525,018,672.55	507,600,188.71	519,504,359.21	492,230,685.03	498,108,002.71
Total Fifty-first, Fifty-second, and Fifty-third Congresses	\$988,417,183.34		\$1,027,104,547.92		\$990,338,691.04	

* Deficiencies included as follows: 1891, on account of 1890, \$25,321,907.25; 1892, on account of 1891, \$29,395,598.34; 1893, on account of 1892, \$7,674,823; 1894, on account of 1893, \$14,149,724.85.

† This is the amount originally submitted to Congresses by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriation.

I call attention to the fact that the appropriations for pensions to the defenders of the Republic in war, and to their widows and orphans, by this Congress under Cleveland are \$42,129,616.85 less than those made by the Fifty-second Congress—the last two years under Harrison. This \$42,000,000 decrease gives in figures the tangible result of an unfriendly—I will go further, and say unjust—administration of the pension laws under Cleveland.

Mr. Speaker, the condition of the country was far different under Harrison's Administration from what it has been and is now under this Administration. Then there was universal prosperity; now there is universal adversity. Then, under wise revenue laws,

From this statement it appears that the appropriations of the Fifty-first Congress, when Mr. REED was Speaker of the House, and the President, House, and Senate were Republican, were in round numbers \$988,000,000, while the appropriations of the Fifty-second Congress, when the House was Democratic and Mr. CRISP was Speaker, were in round numbers \$1,027,000,000, and the appropriations of this Congress, with President, House, and Senate all Democratic, are in round numbers \$990,000,000. Moreover, the late sale of thirty-year 4 per cent United States bonds, the payment of interest upon which is permanent, swells the total of appropriations for this and the next fiscal year by \$2,900,000, making the grand total actually appropriated by this Congress in round numbers \$993,000,000. This exceeds the appropriations made by the Fifty-first Congress, called by our Democratic friends "the billion-dollar Congress," in round numbers, by \$5,000,000.

This Congress, furthermore, in addition to the actual increase of appropriations, has authorized public works to be done under contract, leaving the next Congress to make appropriations therefor, as follows:

By fortification act:	
Fifty 12-inch mortars	\$325,000
By sundry civil act:	
Public buildings	\$5,260,000
Light-houses	210,000
Revenue cutter, Pacific coast	125,000
Denver mint building	400,000
Rock Island bridge	390,000
	6,385,000
By District of Columbia appropriation act:	
Sewers	261,704
By naval appropriation act:	
Two new battle ships, six gunboats, and three torpedo boats	9,905,000
Armament therefor, which will probably cost	4,810,000
	14,715,000
	21,686,704

Thus the appropriations and authorizations of this Congress are seen to be, in round numbers, \$1,015,000,000.

Mr. Speaker, the appropriations for the public service, as a rule, make dry reading, but to the careful student of public questions they tell more of the policies of Administrations and parties than can be gathered from volumes of words and protestations.

tration has issued and sold United States bonds time and again for the avowed purpose, it is true, of maintaining resumption, but in point of fact it has taken the proceeds, is taking the proceeds, and will continue to take the proceeds to pay the current expenses of the Government.

This Congress has wholly failed to provide sufficient revenues, while it has increased appropriations. In the meantime the Administration has rejected every practical effort of the minority to assist in remedying the evils that beset the Treasury.

Mr. Speaker, this is a Government of the people, through parties, and there can come no true relief in the premises until the people correct the error made in 1892, by giving the Republican party full power in 1896, thereby enabling that party to write its policy in legislation and administration.

The Indian Question—Allot them Lands, Educate them, Employ them.

SPEECH

OF

HON. JOHN A. PICKLER,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 19, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8479) making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1896, and for other purposes—

Mr. PICKLER said:

Mr. CHAIRMAN: I wish to submit a few remarks in regard to this Indian question. I do not claim, as a great many men do, to have studied this question so thoroughly that I know all about it, or that I am competent to suggest remedies for all the ills of these people. Mr. Chairman, the discussion of the Indian question arranges itself at the present time under about three heads—the education of the Indians, the allotment of land to them, and the procuring of work for them after they are educated, or after the lands are allotted. We have in this country about 250,000 Indians. These Indians have been pressed westward and westward until in the States, like my own, where we now find them they must remain; there is no further west. We must now assimilate the Indians among our people, and they must remain a part of our population. But I want to impress upon the House the fact that these Indians, 250,000 in number, are the wards of the whole nation, and not the wards of any particular State or locality, and we of the West can not consent that their education shall devolve upon our States and our people alone.

SCHOOLS.

In regard to this educational question, Mr. Chairman, a great deal has been said, and it comes up every time this question is presented in the discussion, as to the future of the Eastern schools; and I was exceedingly sorry to hear the gentleman from Arizona [Mr. SMITH] arraign the Eastern schools in the way he has done. Gentlemen of the committee, how many Indian children of the United States are provided for in the Eastern schools? There are less than 5 per cent of the Indian children receiving their education in these Eastern schools. Only this last fall I was talking with one of the leading Indians of my State, a preacher, who was very desirous of sending his child East to be educated. When I suggested to him that he could secure an education in a Western school he said, no, he wanted to furnish that education which the Eastern schools alone could supply.

EASTERN SCHOOLS.

I must confess I am somewhat surprised at the position taken by the gentleman from Arizona. I want no more Eastern schools instituted. I agree with the gentleman as far as that goes. But I want the schools that are in existence to be continued. I do not want these Eastern people to lose interest in the Indian question; whenever we break up the Eastern schools, whenever we cease to present an object lesson in the East of the Indian question, then Eastern people will cease to a large extent to be interested in the question of Indian education or the care and support of the Indians in any way.

It seems to me that when that time comes they would turn from us, and certainly the gentleman from Indiana, if he is here, would, for he contends for putting all of the schools on the reservations—they will turn from us and say, "Well, we Eastern people have nothing to do with the question." Would our Eastern friends be likely to say, "You have broken up the Eastern schools whereby the interest we had was largely developed in them, and therefore

as they are a part of your people you must take care of and educate them." It seems to me that if we destroy these Eastern schools they can make that claim with very much emphasis. That condition I do not desire.

WARDS OF THE WHOLE NATION.

These Indians, I repeat—these Indians are the wards of the United States. They are the wards of the whole nation, and the nation has taken their land from the Atlantic to the Pacific, and has crowded them as far West as they can go. They must be taken care of where they are now. It is the business of this country to take care of them where they are, and not the business of those localities into which they have been forced.

But, Mr. Chairman, as to the subject of the Eastern schools, there is no gentleman who discusses this question who ever gives the statistics in reference to the Eastern schools. There is simply a theory in the minds of these gentlemen that they want all of the schools on the reservations, and some gentlemen in the office of the Commissioner of Indian Affairs have been so much impressed with that idea that, notwithstanding by an act of Congress giving an appropriation for the institution of two schools in my State, one at Chamberlain and one at Rapid City, and appropriating \$50,000, \$25,000 for each school, although that appropriation is on the books as a subsisting appropriation, although this act of Congress has been passed for that purpose, they have steadily refused to build the schools, and are contending that they should go on the reservation and build them.

Now, there is, of course, a discretion lodged with the Secretary of the Interior as to the building of these schools; but he proposes to disregard the expressed will of Congress and, under this fetich worship of putting all of the schools on the reservation, declines to establish the schools which Congress has directed shall be established adjoining the reservations, where the schools would be far more efficient, and put them on the reservation instead. The gentleman from Arizona [Mr. SMITH] says that it will be much better to take the schools and put them on the reservation.

Now, let us just for a moment consider this great contention, this fetich, as I have said, which is so strong in the minds of some men, that all of the Indian schools should be on the reservations and nowhere else, not even adjacent thereto. Take the instance where the Indian Office, in the worship of that principle, will not build the schools at Chamberlain or Rapid City, in my State. Chamberlain is just across the Missouri River from a large Indian reservation. I contend that it is better in many instances to have the schools off the reservation, but near them.

They propose to build an industrial school 20 miles from the railroad, on an Indian reservation, and another 40 miles, on an Indian reservation, where the gentleman from Arizona contends they will be able to educate the Indians. How can you practically educate Indian children when there is no civilization surrounding them? I mean by going on to unsettled reservations, away from white civilization. Far better, gentlemen, to have the schools at some point adjacent to or near the reservation, where Indian children can be educated, where they can come in contact with white people, where they can come in contact with business men of the country, where they can learn trading or merchandising, farming or some useful occupation, and become acquainted with the methods and the manners of white people and understand how to transact business for themselves. Put the schools on the reservation, where they are surrounded by their own people, and they will learn nothing except what the teachers teach from the books. Moreover, on a reservation the day schools are already established and they are the civilizers of the Indians in so far as schools on reservations civilize. The Indian parents can come to the day schools and see the children, and why is not a day school with a teacher teaching civilization just as good a civilizer as an industrial school would be? Why not?

Now, I am sorry to hear the slander, for it is nothing else, perpetrated upon these Eastern schools. There is not an Indian school west of the Mississippi River that is, in my opinion, doing better if as good work as either Hampton or Carlisle. Just as the gentleman from Georgia states, at Carlisle and at Hampton they are teaching these children blacksmithing, teaching them to make chairs, to make pictures, to make all kinds of woodwork, to saw lumber, to make harness, and many other industries of that kind, and the people come to these schools and buy from these Indians. They learn trades and business. Nothing of this kind could ever happen if you confined these schools to the reservations.

So I am in favor of retaining these Eastern schools. The Eastern schools have not 5 per cent of the Indian children of the United States in them, but this small per cent, and the trifling appropriation that we make for these Eastern schools, give an object lesson to the Eastern people. They keep the Indian question before the Eastern people. They keep the philanthropists interested in this question, and I am firmly of the opinion that we of the West, who have these Indians among us, are making a great mistake when we undertake to uproot these Eastern schools. I am in favor of future schools on or near the reservations, but the present Eastern schools should continue.

ALLOTMENTS.

The allotment of lands is another question which bears also upon an inquiry made by the gentleman from Illinois [Mr. CANNON] the other day. It is a pertinent question that is coming up at all times in regard to this Indian matter, and that is, What shall the Indians do after they are educated? You hear gentlemen upon this floor time and again asking questions of this kind. They say, "Are not the lands allotted to these Indians? Have they not taken their lands in severalty? Are they not American citizens, entitled to all the rights and privileges of American citizens?" Yes, gentlemen, that is true; but because you simply give them their lands in severalty and make them voters, that does not civilize them. And I want to say further, that after their lands are allotted to the Indians in severalty that they then need an Indian agent to look after their affairs more than they did previous to allotment.

And why? Simply because when they were under the tribal relation their headmen and their chiefs did their business. The more ignorant of the Indians listened to the headmen. The chiefs looked after the business of the tribes; but after you have allotted the lands in severalty, of course it brings the question of American citizenship to their knowledge, and they begin to understand that they have the same rights that the chiefs have, and then it is that the white man comes in, when these ignorant Indians undertake to act for themselves, and the white man gets the advantage of them. They need the protecting care of the Government, through an agent more after their lands are allotted than they do before.

Now, my opinion is that in every Indian tribe the lands ought to be allotted, and ought to be allotted now. I do not believe in the theory that the Indians are not ready for the allotment of their lands. I concede that some of them are blanket Indians yet. I concede that they are in a very low state of civilization; but, gentlemen of the committee, there is not an Indian in the United States, male or female, but who knows and understands business well enough to know, if you mark out a certain tract of land and tell that Indian, "This is your land, this is your possession, this belongs to you, this is your property," just what these declarations mean. They are all civilized enough to understand that and to understand it thoroughly.

Now, it is little different where the lands are allotted and where they are not allotted. Where the lands have been allotted they are generally doing very good work. In my opinion the lands ought to be allotted at once, and then let us extend the law so that these Indians can lease their lands to the whites.

RENTING.

Let the Indian understand that he can lease his land, and I am in favor of extending this law of leases. I procured an amendment in the last sundry civil appropriation bill enlarging the law of leasing to some extent, but it should yet be broadened very much. Let the Indian have the privilege of leasing 40, 60, or 80 acres to the white farmer. Let the white farmer come there. Let the Indian build a cabin upon some part of his land. Let the white man come there and raise stock, and make a garden and plow fields, and build fences, and do what the farmer does anywhere in this country. Let the Indian understand, as he will understand, that this is an improvement on his land. He knows it is to his advantage. He knows it is an improvement upon his possession. He becomes interested. He learns to work; he finds what he should do, to improve his condition in life and enhance the value of his property.

Now, I believe that would be the greatest educator that could possibly obtain, because self-interest is just as much of a guiding principle in the Indian as it is in the white man, and you can readily see, I believe, that that would advance the Indian's property in that it would enhance the value of his land in a way that can not be reached in any other direction.

After you have allotted the land and after you have educated these young Indians, the great trouble is to find work for them to do. It is not that these young educated Indians are not generally willing to work. I think they are often as willing to work as young white men and women are.

WANT OF WORK.

But the trouble, gentlemen, is that there is no work for them to do, and that is the reason that there is so much failure in the proposition to educate them exclusively on the Indian reservation. After they have been kept on the reservation where they have not been brought in contact with white men they know nothing of business, and that is the reason why the reservation is not exclusively the place to educate them. They ought to be taken abroad to schools where the whites are. Now, another thing is that they ought to be afforded employment; and I think, gentlemen, that is the great question after all with which the Indian problem is charged—how to find work for the Indian. How to employ the Indian, whether educated or uneducated, is a great question. How to employ these girls and boys who come out of

these schools after we have sent them to the same is a serious question.

After we have solved that I think we have the other matter solved. The Government is committed to educating the Indians. There is no reversal of footsteps to be taken on that. After you have allotted the lands to the Indian you expect him to act as a citizen and be a voter. Then you would expect him to be able to take care of himself. There is nothing for him to do. He has a lot of uncultivated land, and he knows not what to do with it. After these boys and girls come out of the schools, they know nothing about where to find employment.

STOCK RAISING.

Another place where we have made a great mistake is, we have undertaken to locate these Indians on farming lands in many places where a white man can not farm successfully. The Secretary of the Interior ought to be directed to locate them on lands with reference to the adaptability of the country to business and to engaging these Indians in that kind of business. Now, the Indian country, when you go to the far West, where these Indians are principally situated, is largely a grazing and a stock-raising country. Stock raising is profitable nearly everywhere where we find the Indian. That is a pursuit which seems natural to the Indian, and drought does not interfere with that so much as it does with crops. It is a certain crop every year, and instead of confining them to cultivating land let them be engaged in stock raising. The Indian prefers a nomadic life, and likes to take care of stock. By bringing their attention to stock raising by the allotment of land, and by letting the Indian understand that he increases the value of his possession by improvements, when he has the object lesson of the white man on his own land, he soon becomes interested, and very soon these Indians will become self-supporting.

Mr. MORSE. Will the gentleman allow me to ask him a question?

Mr. PICKLER. Yes, sir.

Mr. MORSE. Does the gentleman from South Dakota know anything of his own knowledge as to what becomes of these Indian students of Hampton and Carlisle schools after they have returned from school?

Mr. PICKLER. Yes, sir; I do. I want to say that it is the worst kind of a mistake to say that they have returned to barbarism. If you will go with me, in my State, to the Crow Creek and other reservations, I will show you those students living in houses like white men, farming lands, and raising their families in civilized life. There are no more of these young Indian boys and girls going back into barbarism than there are white women and white boys that are retrograding after they come out of colleges and schools. Of course, when they go back into the tribe you can not expect that they will fully keep up the habits they acquired at school. They ought not to go back to the tribe. They ought not to be compelled to go back to the wigwam and blanket life. They ought to be furnished employment.

Mr. CANNON of Illinois. Does the gentleman know a single Indian who was educated at the Carlisle or Hampton school, or elsewhere off the reservation not employed by the Government, that is of any manner of account?

Mr. PICKLER. Oh, yes; many of them.

Mr. CANNON of Illinois. What are they doing?

Mr. PICKLER. They are farming. They are building houses. They are in the bakeries, and in harness shops, and in many different avocations.

Mr. CANNON of Illinois. I am speaking of those that are on the reservations.

Mr. PICKLER. Those where their lands have been allotted to them, as I understand, if the gentlemen would confine them to the reservation there is generally little chance for any employment there.

Mr. CANNON of Illinois. The gentleman says—and I will be glad to know whether further progress has been made—that where these Indians have been educated in the Carlisle or the Hampton school and they go back upon the reservation and where they are employed by the Government they do well.

Mr. PICKLER. Yes, sir.

Mr. CANNON of Illinois. And where they are not employed by the Government they do well, which is better still. Then, why does my friend dwell so much upon the necessity of work being furnished these Indians if they take care of themselves on the reservation? Because where a man will take care of himself, without somebody else to take care of him, he is much better off.

Mr. PICKLER. I do not contend that the Indian can take care of himself if he can not find any work. Look at the morning and evening papers of this great city of Washington at this very time, where we are told that thousands and multiplied thousands are brought down to want and hunger because they can not get employment; white people suffer for employment, are failures without employment, can not take care of themselves without employment; neither can the Indian succeed without employment. I do

not pretend that the Indians are going to do well unless they have employment; and my contention is that the great problem for the Government now to solve is how to employ the Indians.

Mr. CANNON of Illinois. Now, if the gentleman will allow me, because I am very much interested in his speech—

Mr. PICKLER. I am glad to yield to any inquiry of the gentleman.

Mr. CANNON of Illinois. With the average white man, the American citizen of the United States, the rule is that he controls his own actions and by his own efforts supports himself. When he becomes dependent upon others it is an exception to the general rule. Now, I ask my friend whether the rule is not exactly the reverse with the educated Indian when he goes back to the reservation?

EDUCATION ELEVATES.

Mr. PICKLER. Oh, I do not pretend that the educated Indian youth is on an equality with the educated white boy when he comes out of school. But I claim—and here is my proposition, and there is no escaping it, and it will apply to any of the Indians in the United States—I claim that just so far as education advances a white child, better enables him to gain a livelihood, brings him up to a higher grade of citizenship and a higher civilization, just in the same proportion does education improve the Indian child. I defy anybody to deny that proposition and support the denial by statistics. I do not deny that some of these educated young Indians, when they are compelled to go back to their tribes, partake more or less of the customs of the tribe, but they never sink to the place they were before, not even when they return and live with the tribe.

I have seen them with their tribes drawing rations, and you could tell who had been educated by the difference in their appearance, in their countenance, in their movements, in their general bearing. You could see a difference, for instance, between one young Indian girl who had been educated and her uneducated sister who stood beside her. When you inquired as to the cause of this difference the reply would be, "This one has attended this or the other school." Education does exactly as much in proportion for the Indian as it does for the white man.

COLORED PEOPLE.

Mr. CANNON of Illinois. Now, if the gentleman will allow me, I would like to put another question. There are some seven or eight million colored people in this country who not long ago came out of barbarism. These people, as a rule, work rather than starve or steal, just as the white man does as a rule. Now, does my friend's observation show that by reason of the education of the Indian the same thing is true of him as is true generally of the colored man or the white man?

Mr. PICKLER. I do not know that I correctly comprehend the gentleman's question. Will he repeat it?

Mr. CANNON of Illinois. I say that, as a rule, the seven or eight million colored people in the United States work rather than starve or steal; and the rule is the same with the white man. Now, does my friend claim that the training which the Indian youth receives at Carlisle or Hampton or any of these other institutions off the reservation makes the same thing true of the Indian when, after being educated, he goes back to the reservation?

Mr. PICKLER. Yes, sir; that is my contention; I think it does. Of course, I do not pretend that the Indian young man or young woman is as apt to go to work as the negro. The colored man has been at work for generations; he has been earning his bread by the sweat of his face; for generations he has been laboring for a living. But with the Indians the case is different. We have not been fighting the negro for generations, while we have held the Indian at the point of the sword. The Indians have but recently been savages, and of course we can not expect as much from them as we may expect from these patriotic colored people who have for so long a time intermingled with the white people in the midst of white civilization, who have done so much for this country, who have fought for it, who have been a part of its history and civilization, and who are an industrious, liberty-loving people.

Mr. CURTIS of Kansas. The gentleman from South Dakota will allow me to suggest that quite a number of children educated at Haskell are employed upon farms in Kansas.

Mr. CANNON of Illinois. Off the reservation?

Mr. CURTIS of Kansas. Off the reservation.

Mr. CANNON of Illinois. Certainly.

Mr. PICKLER. Generally there are but few farms on reservations.

Mr. SIMPSON. Oh, there are plenty of farms on the reservations.

Mr. PICKLER. Very few on reservations in my part of the country.

Mr. CURTIS of Kansas. And a large number of these Indian youths go to their original homes and establish farms for themselves.

Mr. PICKLER. In the few minutes remaining I desire simply

to recapitulate the three propositions which I would be glad to have gentlemen consider in acting upon this bill and in dealing with this Indian question. As before remarked, the three questions mainly to be considered are the question of the Indian's education, the question of the allotment of lands, and the great question of providing work for the Indians after they are educated and after their lands are allotted. Upon those three questions hinges this whole Indian problem to-day.

I am pleased that the people of the East have been philanthropic enough to assist in the education of the Indians. I do not doubt that we can do just as good work in our Western schools as has been done in the East. But I do not think it is a good thing to require that all these Indian schools shall be upon the reservations. I am in favor of that being done to a large extent, but I do not think all the schools should be so located. The theory upon which my friend from Indiana [Mr. HOLMAN] is desirous of requiring that all these schools shall be on the reservations is that the children must be where their parents can see them while they are in attendance at the schools. Mr. Chairman, at the Indian Office the other day I learned that when the schools are placed on the reservations the Indian parents come and camp around the schools until the school superintendents have been obliged to ask the Commissioner of Indian Affairs to provide rations for the parents when they thus come to see their children.

It would be far better to have the industrial and boarding schools off the reservations if they were near enough to them for the Indians to still visit their children, but at the same time where the children could get the benefit of contact with the white people. This would enable them to see white civilization, to see the mode of life amongst the white people and how they transact business. That brings the Indian children as well as their parents in contact with whites and with white civilization, and that can not be effected if we break up the Eastern schools and put them, as gentlemen have seemed so anxious to do, on the reservations.

Mr. BOWERS of California. Will the gentleman let me ask if his State is willing that the Indians shall attend the public schools?

Mr. PICKLER. Yes, sir; where it is possible for them to do so.

Mr. BOWERS of California. Well, would it not be better to educate them in that way?

Mr. PICKLER. That would not be possible in all cases. There are a number of so-called reservation Indians, 2,400 in number, in one place in my State who live in a region where there are not half a dozen white families within 20 miles of them. They have no such schools, and could not possibly attend them. The same conditions prevail with reference to the Crow Creek Indians, the lower Brulé Indians, and the Yankton Indians. There is no such opportunity for affording an education to them, because the public schools are not accessible.

Mr. BRODERICK. The gentleman thinks it would be better if the schools were just off the reservations?

Mr. PICKLER. Yes.

Mr. BRODERICK. Is it not true that where they are on the reservation a much larger percentage of the children attend the schools?

Mr. PICKLER. I want to be understood as making this distinction: The day schools must all be on the reservations. I am not talking of them. I am talking now of the so-called industrial schools, and I say that they are far better off and near the reservation than on it.

Mr. HERMANN. The gentleman has elaborated that statement, and I would like to ask him a question in connection with it. Why could not industrial pursuits be taught in the schools on the reservation just as they are at Carlisle and other high-grade schools in the East?

Mr. PICKLER. They can undoubtedly. But that is not the point. After the Indian is educated there he is not acquainted with the white men or their ways. Every Indian child educated in a town knows the white people of the town, gets acquainted with them, and learns something of their habits and manners. But if you take a child and educate him on a reservation, where he is surrounded only by his own people, where he sees no white men, where he does not come even in contact with white civilization at all, when he gets his education he is still an Indian, knows nothing but the traditions of his people, nothing but what he may have gleaned from books; and that species of education, without contact with the white people or learning something of white civilization, is not an education that will enable him to make a living for himself as if educated with and among the whites.

The Indian child can of course get book learning by going to the school on the reservation, but by going to the schools which are off the reservation, established in towns, then he necessarily and insensibly takes up white habits and civilized ways by coming in contact with white people.

Mr. HERMANN. But he can get both on the reservation.

Mr. PICKLER. Not at all. There are many places where that would be utterly impossible; these schools would be far from towns and white people.

The CHAIRMAN. The time of the gentleman has expired.
Mr. PICKLER. I ask to have five minutes additional time granted to me.

The CHAIRMAN. In the absence of objection the gentleman will proceed for five minutes longer.

There was no objection.

Mr. PICKLER. I believe the gentleman from Oregon desired to ask a further question.

Mr. HERMANN. I wish to ask the gentleman whether by educating the Indians exclusively on the reservation if a two-fold object is not accomplished; first, the education of the Indian; and, second, and necessarily connected with the former, the education, to a greater or less extent, of his parents; whereas now, by isolating him, as it were, from his home, sending him to these higher institutions away from his people, he is taken from the association of his parents and the older Indians will thus lose the advantage, or the larger part of it, which could be acquired by daily contact with the people if he is educated on the reservation? Is it not true, also, that at the same time equal industrial advantages could be given him on the reservation as are given at Carlisle and the higher schools of that character?

Mr. PICKLER. The gentleman must understand me. I do not want to build new schools East. I do not advocate that at all. I have no doubt that good work could be done at the industrial schools on some of the reservations. But take a large reservation and put an industrial school in the center, as they propose to do in my State, and no such good conditions could result as would result if the school was built on the border of the reservation in some live town where the students would come in contact with white people. He sees his child making chairs and harness, or working as a blacksmith, or any other like employment and the adult Indian thus learns also. If you would civilize him let his children go to school in some live town and let the parent there visit the child where he can see the mills in operation, mercantile operations, see the transaction of business, see all of the civilization of the town, and not that which he sees in the middle of some Indian reservation, for there he can only see what has met his vision all his life. There are several schools off of the reservations in my State doing excellent work.

Mr. SMITH of Arizona. If the gentleman will allow me, I heartily agree with my friend from South Dakota, and I believe that in the vicinity of a reservation, where there is a prosperous, well-established town, you will there find the best possible place for the establishment of a school, and that more good would be accomplished by a school established in such a town than if established on the reservation.

Mr. PICKLER. Have you not a striking illustration of that in your own Territory?

Mr. SMITH of Arizona. I have a very striking illustration of that in my own Territory.

Mr. PICKLER. I would be very glad if you would state that to the House in your remarks.

Mr. SMITH of Arizona. I believe that; but rather than to remove them any very great distance from their homes—and the reservations are usually pretty far away from the towns in my country—in my opinion the Indian schools should be built on the reservation; and when a school is built on the reservation, a regular Government school, we should have compulsory attendance at that school, as we have in our States. In my Territory, for instance, it is a compulsory law. Children have got to go to school. I simply want the Government school established on the reservation, and compulsory attendance, and then proper regulations to keep the Indians from camping around the school as they do around the day schools, asking for contributions.

Mr. HERMANN. And an industrial education given to the Indian while he is in school?

Mr. SMITH of Arizona. Certainly; that is the primary object with me. I would not put a book in the hands of one of them for ten years.

Mr. HERMANN. Not piano music.

Mr. PICKLER. I do not say anything against piano music. I believe in music. I believe that "music hath charms to sooth the savage breast."

Mr. HERMANN. It seems to me that farming and harness making and such things would be more necessary and appropriate to teach the Indians.

Mr. BOWERS of California. Oh, a few pipe organs scattered over the reservation would be a good thing. [Laughter.]

Mr. PICKLER. If my friend from California would have a little more of the milk of human kindness, and if he would not believe so implicitly that the only good Indian is a dead Indian, it would be a good thing, and he would be more humane and practical in considering the Indian problem.

Mr. BOWERS of California. You do not think a pipe organ would have a bad effect on them, do you?

Mr. PICKLER. I am not discussing pipe organs, but I believe in teaching them as you teach white children, and certainly no one would contend that because you are teaching white children

useful and necessary pursuits you should not also teach them music, and as you educate white children so you should educate Indian children.

Allot them lands, educate them, provide them employment as far as it may be possible, and induce them to engage in practical pursuits, and you are on the highway to the solution of the Indian problem.

The Currency.

SPEECH

OF

HON. JAMES C. McDEARMON,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895.

On the joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds.

Mr. McDEARMON said:

Mr. SPEAKER: I desire to submit my views upon the pending resolution, and the financial questions now agitating the House and the country.

The resolution reported from the Committee on Ways and Means is as follows:

A joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds.

Resolved, etc., That the Secretary of the Treasury be, and he is hereby, authorized to issue and dispose of, at not less than par in gold coin, bonds of the United States, with the qualities, privileges and exemptions of bonds issued under the act approved January 14, 1870, entitled, "An act authorizing the refunding of the national debt, to an amount not exceeding \$65,116,275, bearing interest at a rate not exceeding 3 per cent per annum, principal and interest payable in gold of the present standard of weight and fineness; said bonds to be made payable not more than thirty years after date: Provided, however, That no part of the proceeds of the sale of such bonds, nor of the notes redeemed with such proceeds, shall be available for the payment of current expenses of the Government."

The object of this resolution is to authorize the Secretary of the Treasury to procure gold by the sale of bonds to replenish the gold reserve, which was provided for by the act of January 14, 1875, known as the "resumption act," which provides, in substance, that the Secretary of the Treasury should by the sale of bonds and by the use of the surplus revenues accumulate enough coin in the Treasury to enable him to redeem in specie, upon demand, the outstanding Treasury notes known as greenbacks or legal-tender notes, commencing on the 1st day of January, 1879. Under this statute Mr. Sherman, then Secretary of the Treasury, accumulated and had on hand on the date last named a little over \$133,000,000 of gold and silver coin, and began the "resumption of specie payment" or the redemption of the greenbacks in specie.

During the eleven months following about \$11,000,000 of these notes were presented for payment, and were canceled as fast as they were paid.

The ability and readiness of the Government to pay in coin all its matured obligations were demonstrated.

Confidence was absolutely restored when the act of 1875 took effect and resumption began. There were outstanding about \$346,000,000 of greenbacks; and while it was known that only \$133,000,000 of coin was in the Treasury available for their payment, yet it was also known that the Secretary of the Treasury was armed with plenary power to issue bonds to any amount necessary to enable him to carry out the provision of the act requiring him to pay in coin every note presented.

Greenbacks were "legal tender" in the payment of all debts, both public and private, except duties on imports and interest upon the public debt, and when it was manifest that they could be converted into coin at the pleasure of the holder, the people preferred them to coin; and the demand for their payment practically ceased. During the twelve months following November 1, 1879, less than \$800,000 of these notes were presented for redemption, and they became thereafter a part of the circulating medium, as they were declared to be by the act of June 20, 1874.

By the act of May 31, 1878, it was made unlawful "for the Secretary of the Treasury or other officer under him to cancel or retire any more of the United States legal-tender notes," and it was provided that thereafter "they shall not be retired or destroyed, but they shall be reissued and paid out again and kept in circulation." These notes have been very popular with the people, as all paper money which is perfectly sound and convertible into coin at the will of the holder always is. Together with silver and gold certificates and national bank notes they have constituted the great bulk of the circulating medium of the country ever since the late war between the States.

The gold fund accumulated by Mr. Sherman became known as

the "gold reserve," and it has been the policy of all Secretaries of the Treasury who have succeeded Mr. Sherman to keep that fund up to the minimum of \$100,000,000.

After resumption of specie payment became an accomplished fact, about November 1, 1879, very few greenback notes were presented for redemption until after the passage of the "Sherman Act of 1890," providing for the purchase of silver bullion and the issue of "Treasury notes" in payment therefor, under which act over \$150,000,000 of notes were put into circulation, which became, under the policy of the Treasury Department of paying all demands against the Government in gold when demanded by the holders, an additional charge upon the gold reserve. There were then about \$500,000,000 of paper money outstanding.

When silver was demonetized and gold made the standard of value silver became also a charge upon gold, inasmuch as the Government was pledged to keep the two metals at a parity; in other words, to exchange gold for silver, which is practically redeeming it. Confidence in the ability of the Government to promptly pay this great amount of greenbacks and Treasury notes in gold, and also to keep gold and silver coin at a parity, with only \$100,000,000 of gold in the Treasury, became impaired. As early as November, 1890, about \$24,000,000 of these notes were presented for payment in gold, and the raid upon the gold reserve then began and continued to a greater or less extent during the remainder of Mr. Harrison's Administration; and when the Treasury was turned over to Mr. Carlisle the gold reserve had been depleted to about \$100,000,000. The presentation of notes continued, and Mr. Carlisle, following the precedent of his predecessors, continued to pay them in gold, although by the plain terms of the statute he was authorized to pay them in gold or silver, at his option.

The gold reserve melted away, and in January, 1894, there remained of it only \$69,757,824, when, under the power given him by the act of 1875, he issued \$50,000,000 of United States bonds drawing 5 per cent interest, payable in coin at the pleasure of the Government after ten years. These bonds were sold at a premium which yielded the purchasers about 3 per cent interest, the Government receiving for them a little over \$58,000,000 in gold, which was placed in the gold reserve, thus bringing it back to more than \$100,000,000.

Mr. Carlisle continued the policy of paying these notes on demand in gold and immediately reissuing them (waiving his right and power to pay them entirely, or in part, in silver) until the reserve fund was again raided by a lot of brokers and bankers, who took advantage of the absurd policy of the Secretary to draw out the gold, not entirely for the purpose of exportation, nor because of any real or pretended fear that the Government was unable or unwilling to redeem its obligations in strict compliance with its contracts, but for the palpable purpose of again exhausting and depleting the gold fund, and thus forcing another bond issue. This was continued until November, 1894, when there was less than \$50,000,000 of gold in the Treasury, and another issue of coin bonds followed, which, as before, were sold for gold and made payable after ten years, and at figures that yielded the purchaser and cost the Government less than 3 per cent interest.

Over \$58,000,000 in gold was received for them, as in the first instance.

Now, it appears that the process has been continued and the gold reserve fund has again melted away and is now below \$50,000,000, and another burden is to be laid upon the shoulders of the people in the shape of bonds payable thirty years after date, drawing 4 per cent interest, in order that this reserve fund may be replenished and increased to \$100,000,000.

Mr. Speaker, I dislike to criticize the acts and doings of the Administration, and but for the extraordinary nature of, and the peculiar circumstances attending, the transaction which, by special message of the President, is submitted to Congress, I should have contented myself with casting my vote and have remained silent.

But the President has appealed to Congress to change existing laws so as to enable the Secretary of the Treasury to issue a different kind of bond drawing a lower rate of interest than those he has agreed to issue, and I feel that it is not only appropriate but my duty to myself and my constituents to give my reasons for refusing to vote for this measure.

Instead of pursuing the policy heretofore adopted by the Administration of calling upon the public for bids for the bonds to be issued, and thus obtaining the money upon the best terms as to rate of interest and time to run, it appears that Mr. Cleveland and Mr. Carlisle have entered into a secret contract with a syndicate of European and American capitalists whereby it is stipulated and agreed that thirty-year 4 per cent bonds payable in coin are to be sold to the syndicate at 104½ unless gold bonds, as provided for in this resolution, are authorized to be issued within ten days from the date of contract.

I shall record my vote against the pending resolution for the following reasons:

First, I do not think that the financial policy of the Administration is conducive to the best interests of the people of the

country. Upon the contrary, I think it is unwise, violative of the pledges and promises made by the Democratic party to the people, and calculated to intensify and add to the cruel and almost unbearable burdens now crushing the masses of our people; and I am unwilling to indorse it, directly or indirectly. The Secretary is authorized by plain and unmistakable language of the law to redeem Treasury notes of all kinds in coin (gold or silver) at his option. It is true that the act of 1890, known as the Sherman Act, and the act of 1893, which repealed the purchasing clause of the Sherman Act, declare it to be the policy of this Government to maintain the parity between the gold and silver coins of the United States, and the duty of carrying out this policy devolves upon the Secretary of the Treasury; and I confess that it was not only proper, but necessary for him, as a general rule, to pay the obligations of the Government in gold or silver at the option of the holder, whenever and at all times that it was necessary to do so in order to maintain that parity.

But I insist that he could have adopted the policy now in vogue in England, France, and other great nations of Europe of refusing to pay out gold for exportation. Under the policy now pursued the proceeds of the bonds are applied practically to current expenditures. It is true that the bonds heretofore issued have been sold for gold, but the gold was paid out in redemption of "greenbacks" and "Sherman notes," and these notes were immediately placed among the available assets of the Treasury and paid out daily to defray current expenses, to be again collected up to do further duty in the "endless chain" process of depleting the gold reserve for the purpose of forcing new issues of bonds.

I respectfully suggest that neither the credit nor the honor of the nation would have been affected if the Administration had exercised its prerogative of paying those Treasury notes partly or entirely in silver, when it was manifest that they were presented for gold payment to embarrass the Treasury.

And I further insist that under the clear and indisputable power granted him by the statute the Secretary of the Treasury should have coined the bullion now in the Treasury known as the seigniorage, amounting to over \$50,000,000, and have paid out that upon the current expenditures, and retained the redeemed notes in the Treasury as long as possible. There is a "comfortable surplus" in the Treasury amounting to over \$60,000,000, and I make the point that redeemed Treasury notes should be kept in the Treasury until it becomes absolutely necessary to pay them out; and that all the silver which is authorized by existing law to be coined should at once be coined and used to pay current expenses.

Second, I am not willing to vote for the issue of bonds payable in gold under any circumstances. To my mind, and to the minds I believe of three-fourths of all the people between the oceans, this proposition is monstrous and astounding. It is the unmasking of the fixed and determined purpose of the Administration to destroy silver and establish gold monometallism as the settled policy of this country. If this resolution is adopted, and the Secretary of the Treasury is permitted to issue bonds payable in gold, the holders of all outstanding bonds will insist that a law or resolution should be adopted making their bonds payable specifically in gold, and they will be fortified in their demand by every argument and reason that exists for the adoption of the pending resolution. And all further contracts of States, municipalities, counties, and corporations would, by stress of circumstances, doubtless be compelled to bespecific gold contracts. Besides, the adoption of this resolution would forever seal the doom of bimetalism in the United States. And, Mr. Speaker, I am confident that this is the real object sought by its advocates.

Third, This issue of bonds will, in my opinion, meet the fate of its predecessors. The gold proceeds of such bonds will, I fear, be drawn out by the same process that was practiced in the past.

It is true that the "parties of the second part," who are great capitalists and financiers, have kindly, for a very valuable consideration, agreed that they, "as far as lies in their power, will exert all financial influence, and will make all legitimate efforts, to protect the Treasury of the United States against the withdrawal of gold pending the complete performance of this contract."

But, Mr. Speaker, admitting, for the sake of argument, that the great banking houses of the Rothschilds, the Morgans, and the Belmonts are able to "protect the Treasury of the United States against the withdrawal of gold pending the complete performance of this contract," the important question arises, Who will protect the Treasury against withdrawals of gold after this contract is completely performed, and at what figures will they agree to protect it?

The poet says:

If hoarded gold possessed the power
To lengthen life's too fleeting hour,
And purchase from the hand of Death
A little span, a moment's breath,
How I would love the precious ore,
And every day should swell my store,
That when the Fates would send their minion
To bear me off on shadowy pinion
I might some hours of life obtain
And bribe him back to hell again.

But he further says:

The light of gold can ne'er illumine
The dreary midnight of the tomb.

It strikes me that this most remarkable "private contract between gentlemen" is a very "cowardly makeshift," a temporary expedient, an offered bribe "to purchase from the hand of death a little span, a moment's breath."

When this contract is performed the parties of the second part will not be bound to further "protect the Treasury," and it will again be exposed to the rapacity of the brokers and bankers.

Mr. Speaker, it is enough to cause a blush to mantle the cheek of every American citizen to contemplate this humiliating spectacle, The President and Secretary of the Treasury of the United States of America, the greatest, the grandest, and the richest Government "that ever valor lost or won," "like fawning publicans," "having neither money nor commodity," to raise a present sum therefore go forth to try what the credit of the United States can in Venice do, that shall be racked even to the uttermost and become supplicants at the counting houses of Shylock, and "Tubal, a wealthy Hebrew of his tribe," and negotiate a treaty by the terms of which the great contracting "parties of the second part," graciously condescend to agree to protect the Treasury of the United States.

Mr. Speaker, the grotesque absurdity of this transaction serves to demonstrate the fallacy and unwisdom of the policy of the Administration in paying Treasury notes and greenbacks in gold in every case, and neglecting and refusing to pay in silver, even when the knavish purpose of buncoing the Government into the issuance of bonds on the part of those presenting notes and demanding their payment in gold is most palpable and manifest.

Unstinted criticism of this Congress has been indulged in by flippant "penny-a-liners" and others who have taken only a superficial view of the matter. This Congress has been denounced and ridiculed most mercilessly for not "doing something," as the current phrase goes.

But, Mr. Speaker, in my opinion the great tribunal which shall pass judgment upon the proceedings of the Fifty-third Congress, the masses of the people, will not condemn it for not approving the measures recommended by the President upon the financial questions which have been and are now being considered. The platform upon which Mr. Cleveland was nominated and which we all indorsed, and upon which we challenged the allied enemies of Democracy to the "wager of ballots" in November, 1892, contained a clear and explicit declaration in favor of bimetallism and a solemn pledge that the labor and effort of the Administration and Congress, if intrusted with the conduct of affairs of this great nation, should be directed toward the accomplishment of the full and complete restoration of silver as one of the standards of value.

I do not contend that the language of its platform committed the party to the unconditional and immediate adoption of the free and unlimited and independent coinage of silver, regardless of circumstances; but I do contend, and I challenge contradiction of the proposition, that its platform committed and solemnly bound the party and the Administration to bimetallism and to the honest, sincere, and conscientious endeavor and persistent effort to return to the policy of bimetallism as rapidly as prudence and sound policy would admit of, and to put this Government in an attitude of friendliness to silver; and to align this country with the other great powers which are known to be anxious for bimetallism, and to concur in and originate suggestions and movements for international monetary conferences, treaties, or diplomatic agreements looking to the accomplishment of the desired end; in the meantime to open its mints and coin as much silver as could be kept at a parity with gold. There is not a gold monometallist, nor an Administration man, nor a piping little cuckoo, who, like paroquets, attempt to repeat what they think their master says, who will contend that by any species of sophistry or jesuitry the platform could be tortured into a construction antagonistic to silver into a declaration in favor of monometallism.

The plain, old-fashioned Anglo-Saxon words used are to be taken in their ordinary and universal signification, and were not intended to "juggle with us in a double sense." The platform was a covenant with the people that this Administration would be favorable to silver and would do everything that was deemed practicable to restore it to free coinage. It surely was not a declaration of war against silver, nor an avowal of a purpose to adopt gold monometallism. But, Mr. Speaker, has not every message and every utterance which has come from the White House been in advocacy of a policy absolutely antagonistic and inimical to the further coinage of silver? We were convened in extraordinary session during the summer of 1893 by a message which was as doleful in its tenor as a funeral dirge and read like a chapter from Jeremiah's Lamentations, "Presaging death and ruin near among the sons of men."

The commercial world, already panic-stricken, was told that the cause of existing evils was the effect of purchasing silver under the act of July 14, 1890, and Congress was advised and urged to

promptly pass a law unconditionally repealing it. After months of wrangling the advice of the President was followed; but it turned out that his prognostications were false, and his predictions were not fulfilled.

A bill was subsequently passed by both Houses of Congress providing that the seigniorage, that is the profit made by the Government in the purchase of silver bullion under the Sherman Act, amounting to less than \$60,000,000, should be coined into silver dollars. This moderate, reasonable, and conservative measure was vetoed by Mr. Cleveland, and his fixed and unalterable purpose was unmasked. He was determined that no more silver should be coined under any circumstances, if he could prevent it. And when his message to Congress last January was received, it became manifest that his intention was to assume the aggressive and bulldoze Congress into the most extreme and radical measure that was ever proposed in favor of gold monometallism.

We were calmly and seriously advised and besought to pass a law authorizing the Secretary of the Treasury to issue \$500,000,000 of bonds, principal and interest payable in gold, to run fifty years, to be sold, and the proceeds applied to the redemption and extinguishment of the greenbacks and Treasury notes, thereby contracting the circulation at least 33½ per cent. This monstrous and startling proposition was summarily rejected by an overwhelming majority. This Congress, or rather the majority of its Democratic members, have simply stood by the platform of the party and have refused to adopt the views of Mr. Cleveland upon financial questions, and we appeal to the people and crave judgment upon the issue joined.

Mr. Speaker, I appreciate the awkward and perilous condition of the Treasury and the difficulties which confront and beset its able and patriotic Secretary, but I believe that they are the logical and natural results of the unwise policy which has been pursued.

I believe that the malady which now afflicts the country and the whole civilized world lies deeper than the mere embarrassment and annoyance to which its Treasury is subjected, and that a more heroic remedy is required than its mere temporary relief, as I think the measure proposed would prove. Up to the change of the standard of values by this country in 1873 all the wealth of the world was measured by the aggregate gold and silver coin in existence, estimated to be about \$4,000,000,000 of each, making about \$8,000,000,000.

For centuries past the products of the gold and silver mines combined kept pace with or slightly exceeded the increase of population and the growth of civilization and commerce.

The increase of gold and silver over population of course expanded the measure of values and tended to enhance prices, but it is a remarkable historic fact that the production of precious metals for hundreds of years had approximately marched abreast with the enlightenment and civilization and progress of the human race. There was a general level of prices; no abnormal nor sudden advance or decline in values, but a gradual upward tendency. Each discovery of new mines or invention of a new process of mining gave a fresh impetus to enterprise and adventure, and was followed by great prosperity.

When the gold mines were discovered in California and Australia mankind was electrified. Thousands of young, ambitious, and intrepid spirits in all the States of this Union caught the gold fever and soon hundreds of caravans of enthusiastic and adventurous men boldly plunged into the wilderness of the great transmississippi region, then vaguely known as the "Louisiana Purchase," a vast expanse of almost uninhabited country, and marched afoot across the continent, braving the savage red men, the ferocious wild beasts, and the privations and hardships of that inhospitable land. The California mines were developed and poured out their rich flood of yellow gold by hundreds of millions.

Australia, too, added to the world's stock of gold her great treasures. It has been stated that within twenty years after their discovery the mines of Australia and California turned out more gold than had been produced prior to that time in the whole world. Mankind was not injured by this wonderful outpouring of gold from the Western mountains. But upon the contrary the world was immeasurably blest—made richer and happier and more progressive.

The pioneers of California remained and were joined by millions of their fellow-citizens. The "Louisiana Purchase" was rapidly filled up with patriotic and enterprising people, and soon great Commonwealths emerged from the darkness of its wilderness and now shine with splendor in our galaxy of States. Australia has been converted from a land of barbarians into a powerful, populous, and enlightened country. The vast volume of gold which these mines added to the world's stock of money did not affect the parity between the two metals. Gold and her twin sister silver continued to measure as our double standard the wealth of the world, although for a time the amount of gold greatly exceeded that of silver at the existing ratio.

About the time the gold mines were exhausted the restless, pro-

gressive, and enterprising miners of the West unearthed great treasures of silver, and bountiful nature again poured out into the lap of mankind streams of wealth in the shape of silver, which would have been equally as great a blessing to this generation as the discovery of gold in 1848 was to that but for the iniquitous and infamous interference with the laws of nature by the statute of 1873, whereby silver was divorced from gold and changed from a standard of value into a commodity.

The fact that only some eight millions of silver dollars had been coined by our mints up to 1873 has been frequently commented upon and used as an argument against silver coinage.

The truth is, that up to that time every ounce of silver taken from the mines was worth more than its coinage value at our mints, for the reason that our ratio was 16 to 1 while the ratio of France, Spain, and other countries of Europe was 15½ to 1, and the products of our silver mines were shipped to Europe and exchanged for gold or other valuable property which was brought home. Hence the silver mines were sources of wealth to this country and every ounce of that metal was converted into money at the ratio of 15½ to 1.

From the day that silver was stricken from the list of coins authorized by law to be turned out by our mints it began to decline. The principal use to which that metal had been put was thereby destroyed and prohibited by law. It was made a commodity, and its use restricted and curtailed. Hence, in obedience to the universal laws of trade and commerce, it naturally declined, as would any other commodity. When the Indian mints were closed to silver coinage the work of silver demonetization was completed. Over four billions of the standard money, the money of ultimate redemption, was destroyed. The measure of all the wealth of the world was diminished just one-half. Thereafter all wealth has been measured alone by the gold coin in existence. The result has clearly demonstrated the truth of the doctrine laid down by all writers on political economy and finance that the decrease of the volume of money lowers and the increase raises prices.

A gradual but steady and constant shrinkage and decline in almost every commodity, including silver, began simultaneously with the demonetization of silver, and has continued ever since, not only in this country but in every nation of the civilized world.

If I am correct in my premises, the remedy is apparent. Undo by law the wrong which was done by law. Increase the measure of values by reestablishing the double standard. Restore to silver its principal use—that of being converted into money at the ratio of 16 to 1, and it will, by the inexorable laws of trade and commerce, enhance in value and be equal with gold.

Mr. Speaker, the perpetrators of the crime of 1873, by which silver was degraded and dishonored, against the wishes and without the consent of the American people, may go unwhipped of justice; but that cruel and villainous wrong will be righted. The masses of the country are overwhelmingly in favor of bimetalism; and they have a right to rule America, an inestimable transcendent right; a right that cost the blood of patriots and millions of treasure; a right that can not be wrenched from them by force, nor purchased by alluring gold, nor obtained by blandishment nor cajolery.

The common people, the yeomanry, who constitute nine-tenths of the population, are our rulers and masters, and their will is the supreme and inviolable law of the land. They have never declared in favor of monometallism; but have repeatedly thundered their anathemas upon the heresy. Their approval of the doctrine of bimetalism has been voiced in every national platform and almost every State platform, promulgated of every party, since silver was demonetized; and any attempt to thwart their will is simply moral high treason.

The crushing defeat of Democratic candidates at the last election was not a repudiation of Democratic principles, but was the indignant outburst of disapprobation of the financial policy of the Administration, and a cry of distress from an over-taxed, unemployed, and poverty-stricken people.

The doctrines and theories of government which we call Democracy will live as long as the present Constitution of the United States remains the bulwark of our liberties, the sheet anchor of our hopes. They will endure so long as truth, even hard justice, and the eternal principle of right are esteemed among men as virtues—equal rights to all, special privileges to none. The exercise by the Federal Government only of those powers specifically conferred upon it by the Constitution and those necessarily implied: The levy and collection of taxes sufficient to defray the expenses of the Government economically administered; no tax to be levied except for the exclusive purpose of raising revenue.

These are the foundation stones upon which our party is established. They are immutable, self-evident truths, and right doctrines; and will be contended for and advocated throughout the years to come, as they have been ever since the Constitution was ratified by the States. The rank and file of the Democratic party are in favor of free and unlimited coinage of silver, and if they

assert their manhood and take the conduct of the next campaign in their own hands and promulgate a platform emblazoned with the ancient and historic and immortal principles of the party, together with a clear and bold declaration for a tariff for revenue only and free and unlimited coinage of silver at the ratio of 16 to 1, we will sweep the country west of the Alleghenies and south of the Potomac in 1896.

The Pacific Railroads and the Reilly Bill.

Sugar coat their propositions as they may they are made of material from which they have spun the webs and traps of the past thirty years. Rather than toy with wily schemers and stockbrokers, let us arouse the sleeping power of our Government charged with the enforcement of the law.

REMARKS

OF

HON. A. CAMINETTI,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 2, 1895.

On the bill (H. R. 7798) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Mr. CAMINETTI said:

Mr. SPEAKER: A great deal has been said about the so-called "California idea" for the settlement of the Pacific Railroad question. As some have spoken of it in derision I feel called upon to explain it in its application to a bill (H. R. 8213) to enforce existing laws relating to these railroads and provide for their management by the United States as military and post roads.

There is nothing utopian about it. It is the logical result of tendencies in the existing system that can not be avoided under private control. What has happened was foretold over a half century ago. The California idea is national and in sympathy with the highest aspirations of the people for better government and a more equitable distribution of its beneficial features among the masses.

COUNTRY ROADS AND THE HIGHWAYS OF THE SEA HAVE INTRODUCED UNIVERSAL PROGRESS AND FREEDOM.

Ever since the dawn of civilization it has been the first duty of organized government to provide means of transportation. Roads were the first highways upon which nations rose above the plane of barbarism. Then followed the use of the open way upon the sea, which led to the present civilization of the world and introduced universal progress and freedom.

To-day, as in the past, the advantage in a commercial as well as progressive point of view rests with those nations and communities that furnish the best methods of transportation on land and water routes for internal traffic, and encourage shipping interests on the ocean to foster commerce with foreign nations.

CANALS.

The next step in improvement of inland transportation methods can be seen in the various canal systems, such as are found in New York and in some foreign countries. With the application of electricity as a motive power on canals and many river routes the canal boat of the future will play as important a part in the development of interior sections of the country as when originally introduced in the limited area of the old States.

RAILROADS.

The next era represents the railroad in progressive stages of development as the outgrowth of the increasing necessities of the age. It has to a great extent superseded the ordinary highway, and will continue, even with the best that can be done by navigation facilities, in certain lines of commerce, to maintain its position where time enters as an element of successful exchange between the producer and consumer.

CONTROL OF HIGHWAYS A PUBLIC FUNCTION.

From time immemorial the control of highways has been considered a public function to be exercised for the welfare of the community. When built at private expense, necessitating a tax or toll upon traffic thereon, it was inaugurated by the authority of the sovereign or state, under a system of regulation. Modern times have in nowise varied these conditions. Thus it was that the construction of railroads commenced and has continued under charters granted by governments maintaining this doctrine.

STRICT ADHERENCE TO THIS PRINCIPLE A PUBLIC NECESSITY.

With the progress of nations and the activities of trade on the one side, and the increase of power and influence by railroads, in combinations or otherwise, on the other, a more strict adherence to this principle has become a national necessity.

New safeguards to check encroachments on the rights of the people, gradually advancing by the aid of crafty devices, have become imperative.

Indeed, that nation which permits its commercial arteries to become instruments in the hands of corporations, and the people a prey to corporate rapacity, is guilty of treason to the most sacred duty it owes to its citizens.

A MONOPOLY.

Statesmen of foresight at home and abroad have long since realized that the possession of these privileges constitutes a monopoly; hence the duty devolves on Governments to prevent its existence, or if it is unavoidable, it should be in the hands of the State in trust for the benefit of all.

GOVERNMENT OWNERSHIP OF RAILROADS.

I appreciate the sentiment existing against Government ownership of railroads, but a careful examination will develop the fact that it has not been based on the ground that it could not flourish or be safely conducted at reduced cost to the people; for if such a position is assumed the same argument would hold good as to the public management of our roads, river channels, and post-offices. The marked success of these under government operation effectually disposes of that fallacy. Where is the party or community that advocates the placing of either under private control?

With some people this opposition is encouraged, both for and by selfish motives. It can be readily imagined that powers so pregnant with resources, possessing influential ramifications, can find supporters as well as apologists.

A great many, in fact by far the largest number, entertain in good faith such opinions. They grow out of patriotic considerations. They believe as their ancestors before them, that government under our institutions should have as little to do with the affairs of the people as is consistent with its safety and security; and that if the people are fit for self-government in the political sense of the term, they are also qualified individually to enjoy commercial freedom as well, in the exercise of all of its privileges. Theoretically this statement can not be assailed, but how has the second conclusion worked in practice?

Let the experience of the last twenty-five years, with its railroad scandals, its pooling agreements, its strikes, its riots, and its spurious capitalization unjustly burdening commerce, answer. Let the management and history of the Pacific railroads bear witness.

The principal source, however, of this opposition can be traced to the fear that such ownership, owing to the great influence it would lodge in the party in power over a vast army of officeholders and indirectly over the masses, would be prejudicial to the Republic.

The civil-service system has illustrated by its results that this danger is greatly magnified.

The powers now in control of the railroad interests of this country are a thousand times more dangerous to the well-being of the citizen, to the free exercise of the public functions by the various branches of our Government, and to the existence of our institutions than the strongest conditions that their ownership by the Government could possibly produce even under the spoils system. It would at least possess the element of accountability to the people, while that to which we are now subject is an irresponsible authority not recognized by our Constitution, usurping governmental prerogatives at every opportunity, and abetting the worst form of political corruption. The couplet—

No pent-up Utica contracts our powers,
The whole boundless continent is ours—

is its motto.

GOVERNMENT OWNERSHIP NEED NOT INCLUDE THE CONDUCT OF TRANSPORTATION ENTERPRISES.

Government ownership need not be general, nor does it necessarily imply that the Government will engage in the business of transportation.

We have already vast transportation systems, besides the ordinary highway, in the inland navigable waters, which have been improved and are in the process of development at great cost to the national Treasury. Where nature has overlooked the possible wants of man in a civilized state, we have cut canals and otherwise overcome its inequalities of surface. This has been done honestly, efficiently, and unobtrusively under the auspices of the Corps of Engineers of the Army. The benefits of Government should be distributed as evenly as possible. No one can honestly condemn the building of the canal systems connecting the Great Lakes, nor the costly locks and ship railways found in many of our rivers.

They have been elements of progress from which commercial and industrial greatness have resulted, gratifying to our pride and

remunerative to our people. But other portions of the land are blessed with resources and elements of prosperity, different, perhaps, from those wherein these great works have been constructed, though of equal value in building up the Republic, yet because great rivers traverse them not and vast sheets of water are absent, shall they not enjoy that which the inventive genius of man has given as a substitute for canals and ship railways, which have, at the expense of all the people, been furnished to certain portions of our country?

DECLARE GOVERNMENT ROADS A PUBLIC HIGHWAY OPEN TO ALL ON EQUAL TERMS.

The ownership of the roadbeds of trunk lines east and west and north and south, between the centers of production and the marts of commerce, open to all on equal rates of toll, fixed so as to make the earnings meet the expense of maintenance when fairly organized, would effectually hold in check the tendency to create monopolies, and prevent the exercise of their abuses without the aid of an army of officers and employees.

This will ultimately, in my judgment, prove the only effective remedy for the correction of the abuses of corporate power in railway management—the only practical solution of this problem.

The engineering operations and management under the supervision of the Army would render better service at less cost, and with more security to life, than can possibly be hoped for under private management.

All connecting lines, or transportation companies possessing or leasing trains, passenger as well as freight, would enjoy the use of the Government highway.

This would obviate the employment by the Government of the large number of employees to operate a train service, including maintenance of stations, shops, and other necessary adjuncts to such work. This part could be left with safety under proper regulation to private enterprise at each point requiring the use of either branch of labor; or might be furnished, by any company using the road, to all others at a uniform rate fixed by the Government.

COMPETITION A REAL ENTITY.

Competition would then be a real entity, not a delusion as now. If the railroad companies attempted to pool their issues the producers, fruit growers, merchants, or shippers generally could protect themselves immediately by leasing or hiring trains from freight dispatch companies, or secure trains of their own, as they now do steamers and other craft, on the lakes, rivers, and in the coast and ocean traffic when existing lines become inordinate in their demands. They thus control without the aid of the machinery of the law or intervention of commissions, State or national, the fixing of rates within reasonable limits. Why? Because they have a free highway over which king monopoly can exercise no sway.

A free highway will put at rest all the complaints against transportation on land by present means, and enable the toilers and producers to obtain equitable treatment and their just share of protection from a Government which they do more proportionately to maintain than any or all other classes combined.

We must have a check of some kind.

The tendency now is to concentration of interests, consolidation of lines, and pooling of rates.

ROGIER AND LAWS GAVE TIMELY WARNING.

In 1894 when the establishment of a state railroad was agitated in Belgium, Rogier, answering the claim that private enterprise fostered competition, with prophetic vision declared:

Not the state of affairs in which competition arrests the evil does not apply here. Whoever holds the railways holds a monopoly, and that should only be allowed to exist in possession of the state.

In 1844 Gladstone, as a member of a Parliamentary committee, had this colloquy on the subject with Captain Laws:

MR. GLADSTONE. Does the consideration that the railroad companies possess, in many respects, something in the character of a monopoly enter materially into the grounds of your opinion?

Captain LAWS. Yes, it does; and not only monopoly now, but every extension is calculated to increase immensely that monopoly and a continuation of monopolies.

This danger was anticipated early in railroad history. How fortunate those nations which took advantage of the advanced thought of these readers of human character!

CONSOLIDATION THE INEVITABLE RESULT.

E. Porter Alexander, president of a Southern road, an advocate of pooling legislation, frankly avows the spirit directing the course of these gigantic powers in the commercial world. Speaking of the "pooling bill" he said:

Should it be enacted there can be but one result. All wars end in peace, and peace between rival railroads can only last when there is some community of interest. That may obtain in two ways, by a pool or by consolidation under one ownership. The best that a pool can accomplish, after all, is but a partial community of interest; and where rivalry is bitter consolidation is very apt to result. Now, let pooling be forbidden, or let it fail, and consolidation must be the inevitable result. It will become simply a commercial necessity, as resistless as the downward flow of the Mississippi to the sea. It may be temporarily checked in any manner theorists think good, but it will have its way in the end.

"COMPETITION IS KILLING."

C. P. Huntington, of overland railroad fame, testified before the Pacific Railway Commission that "competition is killing" and "that there ought to be only one railroad for the whole country."

The enactment into law of the pooling bill, now pending in the Senate, verifies the predictions of Mr. Alexander, and enables the railway kings to effectually carry out Mr. Huntington's idea.

I fear very few have paused to consider the outcome.

If the people would realize what it means to weld in one compact the railroad interests of the United States they would rise in their might and demand its defeat. It passed this House under a misapprehension, produced mainly by resolutions of the boards of trade of the leading cities of the country.

DANGERS OF ORGANIZED COMBINATIONS.

Talk about Government ownership creating a power inimical to the Republic! How infinitesimal in comparison with such an organized combination of capital in control of a vast volume of business, and in touch with the various bodies of officers and employees throughout the land, equaling in number nearly as many men as composed the population of the original thirteen Colonies!

Its very vastness defies contemplation of results.

Can we escape them by legislation?

The recent tariff fight with the sugar and other trusts demonstrates the influence of a combination of itself less powerful than this would be. It is futile to base any hopes in that direction.

The various State commissions have either proved subservient to railroad influence or unable to successfully solve the questions presented to them in the various phases in which they have appeared at times throughout the land.

Will the interstate-commerce law effect the people's wishes?

Not in its present form, and whether it can ever be amended so as to give it such authority is a question beyond human ken to answer.

THIS POWER ONLY SAFE AS A SERVANT OF THE LAW, OPERATED BY AND FOR THE PEOPLE.

What we already know of the workings of the system under present tendencies, and of the record of its master spirits, may well cause the patriotic citizen to ask of the future, Whither are we drifting?

Its encroachments are already felt on every side, in every avenue of industry and trade, in the political councils; aye, even in Government circles.

Mr. Speaker, such power can only be safe when a servant of the law, operated by and for the people.

CAN THE GOVERNMENT PROFITABLY OPERATE RAILROADS?

The Commissioner of Railroads in 1892 discussed the question, "Could the Government profitably operate railroads?" and gave it as his opinion that it could not do so and make them profitable.

It should not be the aim to make profits therefrom any more than is done with our canals and improved river channels.

To afford the people cheaper transportation facilities and prevent monopoly are the leading reasons advanced for river improvement and canal building. Those are the tests by which their efficacy are measured. None other should be applied in considering this question.

When, however, he says that no nation has been benefited by such operation, recent history is overlooked.

EXPERIENCE OF EUROPEAN NATIONS.

Prussia in 1878 possessed 3,066 miles of road, while 11,066 miles were in private hands. In 1893 she had increased her mileage to 15,969, while that of individuals was reduced to 1,354 miles.

The receipts and expenses for the year ending April, 1893, were:

	Marks.
Gross earnings	967,624,000
Expenses	606,816,327
Net	360,807,673

This only presents the financial success; the benefits accruing to the people were in like ratio.

Russia, by her great system of railroads, has opened out her vast empire to the great advantage of her commerce and the betterment of the conditions of her peasantry.

Belgium and other nations on the Continent have found it beneficial to own their railway lines.

MEXICO THE OWNER OF A TRANSCONTINENTAL LINE.

Mexico has recently completed a transcontinental line over the Tehuantepec route. The press dispatches last December announced that Mr. Huntington, fearing the new competitor, offered to buy the road, but the wise ruler of Mexico refused to consider the proposal.

Pending the building of a canal across the Isthmus, the Mexican

road promises to become an important factor in commercial affairs between Atlantic and Pacific points.

What other nations have done and are now doing we can do.

I do not despair of success. Only a few years ago leading statesmen denied the right of the General Government to expend money in river improvements; now no appropriation is more popular, and none so beneficial in results. Thus it will be with Government railroads to and from the great centers of commerce and production. They will come as public necessities and be welcomed as blessings by the people.

In case of nonpayment of the debt due by the Pacific railroads a magnificent opportunity is presented for the beginning of the new era in transportation which will emancipate the toilers and producers of the land, and scatter its benefits in every direction.

The bill I had the honor to introduce aims to lay the foundation for such work.

Mr. Speaker, my principal object in availing myself of the privilege to print remarks on what is known as the "Reilly bill" (H. R. 7797) was to place in the RECORD some of the amendments I intended to offer had the bill been read before the operation of the cloture rule stopped its further consideration.

It will be remembered that the day was consumed before the fourth section was reached, leaving fifteen sections untouched. Fortunately the people secured the first advantage in years in their contest against the greed of railroad combinations, and thus the dangers certain to follow the passage of this bill in the present form were avoided.

RAILROADS WILL AGAIN TEMPT FATE.

It is certain that, notwithstanding the crushing defeat met by its supporters and friends, the vast interests affected, aided by an army of mercenaries, will again tempt fate either in this or the next Congress.

Should the subject be again considered, ample time ought to be allotted not only to discuss the general questions involved but to read the bill section by section to the end and afford the House an opportunity to act on such amendments as may be presented to protect the rights the Government has secured at great cost and sacrifice.

If the purposes of the Pacific railroads are accomplished by the enactment of laws without necessary restrictions and safeguards, privileges now possessed by the Government, worth untold millions to it, will be lost. They alone are worth the struggle, as by such legislation these companies practically become subject only to the ordinary conditions affecting common carriers.

I invite consideration of this view of the proposed law.

I respectfully call attention to some omissions in the measure and to the absolute necessity for supplying the same, either by the amendments suggested herein or others better calculated to subserve public interests and prevent encroachments on the rights of the people, which should not be jeopardized by trusting them to the tender mercies of the companies, the past actions of the directors of which caused President Cleveland, in his message transmitting the report of the Pacific Railway Commission to Congress, to express astonishment at the claim advanced by them that they "owed no duty except to themselves" and "need regard no interest but their own."

CONDITIONS OF ORIGINAL CONTRACTS TO KEEP ROADS IN REPAIR AND USE AND PERFORM TRANSPORTATION SERVICES FOR THE UNITED STATES ON CERTAIN SPECIFIED CONDITIONS SHOULD BE PRESERVED AND ENFORCED.

First proposed amendment.

Nothing in this act contained shall be deemed to in any manner affect the obligation of the said companies to keep said railroads and telegraph lines in proper repair and use, and at all times transmit dispatches over said telegraph lines, and transport mails, troops, munitions of war, and supplies of public stores upon said railroads for the Government, or any Department thereof, whenever required to do so at fair and reasonable rates of compensation, not to exceed the lowest rates paid by private parties for the same kind of service, except where a lower rate, or free transportation, is now prescribed by law, in which case such laws shall continue in force as to the companies to which they apply. In the discharge of these duties the said companies shall be subject to and bound by the provisions of any act of Congress, and the authority exercised thereunder relating to postal, military, or any other Government transportation, and shall give the Government preference in the use of the same for all the purposes aforesaid as mentioned in the sixth section of the act of July 1, 1862, and all acts amendatory thereof.

A similar provision was inserted in the bill recommended by the majority of the Pacific Railway Commission.

It should be borne in mind that without this any of these companies accepting the terms proposed could, if desired, or if it was to their interest, cease to use and operate any portion, or even all, of their respective lines, thus defeating the main purpose of their construction.

Hon. E. Ellery Anderson was of the opinion that it was required to maintain the privileges of the Government, hence he included it in the bill recommended by the Pacific Railway Commission.

Sections 3, 5, and 6 of the act of 1862 grant lands and bonds to aid in their construction and to secure "safe and speedy transportation of the mails, troops, munitions of war, and public stores thereon."

Said bonds and lands are granted on the conditions set forth therein (in section 6) as follows:

That said companies shall keep said railroad and telegraph line in repair and use, and shall at all times transmit dispatches over said telegraph line, and transport mails, troops, and munitions of war, supplies, and public stores upon said railroad for the Government, whenever required to do so by any Department thereof, and that the Government shall at all times have the preference in the use of the same for all purposes aforesaid (at fair and reasonable rates of compensation, not to exceed the amounts paid by private parties for the same kind of service).

GOVERNMENT RIGHTS SUPERIOR TO ALL LIENS.

Section 10 of the act of 1864, which makes the Government's lien a second mortgage, was declared subordinate to the first mortgage in all respects. I quote therefrom:

Except as to the provisions of the sixth section, * * * relating to the transmission of dispatches and the transportation of mails, troops, munitions of war, supplies, and public stores for the Government of the United States.

Just set forth in full, thus maintaining its superiority over all liens of whatsoever character.

Even the reckless liberality of the Congress which changed the original status of the Government lien signified a due regard for this important and valuable reservation.

PROPERTY OR TROOPS OF THE UNITED STATES TRANSPORTED FREE OF CHARGE.

The act of July 25, 1866, providing for the construction of a railroad and telegraph line from the Central Pacific Railroad in California to Portland, Oreg., has a more favorable condition in favor of the Government. Section 5 thereof reads as follows:

And be it further enacted, That the grants aforesaid are made upon the condition that the said companies shall keep said railroad and telegraph in repair and use, and shall at all times transport the mails upon said railroad, and transmit dispatches by said telegraph line for the Government of the United States, when required so to do by any Department thereof, and that the Government shall at all times have the preference in the use of said railroad and telegraph therefor at fair and reasonable rates of compensation, not to exceed the rates paid by private parties for the same kind of service. And said railroad shall be and remain a public highway for the use of the Government of the United States, free of all toll or other charges upon the transportation of the property or troops of the United States; and the same shall be transported over said road at the cost, charge, and expense of the corporations or companies owning or operating the same, when so required by the Government of the United States.

This road is now under the control of the Central Pacific.

PAYMENT OF MONEY FORBIDDEN ON CERTAIN ROADS.

In 1875 the following was enacted concerning the transportation of property or troops of the United States:

[Act of March 8, 1875.—An act making appropriations for the support of the Army for the fiscal year ending June 30, 1876, and for other purposes.]

Provided, That no money shall hereafter be paid to any railroad company for the transportation of any property or troops of the United States over any railroad which, in whole or in part, was constructed by the aid of a grant of public land, on the condition that such railroad should be a public highway for the use of the Government of the United States, free from toll or other charge, or upon any other conditions for the use of such road for such transportation; nor shall any allowance be made for the transportation of officers of the Army over any such road when on duty and under orders as military officers of the United States. But nothing herein contained shall be construed as preventing any such railroad from bringing a suit in the Court of Claims for the charges for such transportation, and recovering for the same if found entitled thereto, by virtue of the laws in force prior to the passage of this act; Provided, That the claim for such charges shall not have been barred by the statute of limitations at the time of bringing the suit, and either party shall have the right of appeal to the Supreme Court of the United States: And provided further, That the foregoing provision shall not apply for the current fiscal year, nor thereafter, to roads where the sole condition of transportation is that the company shall not charge the Government higher rate than they do individuals for like transportation, and when the Quartermaster-General shall be satisfied that this condition has been faithfully complied with.

THE REILLY BILL WAIVES THESE CONDITIONS.

The Reilly bill, as far as it is applicable to these railroads, in case of acceptance, makes no mention of this important feature. In fact it is waived.

It is claimed by some that sections 8 and 17 thereof meet all requirements. The former section perpetuates the statutory lien; that is, the Government mortgage; the latter continues existing provisions "until the settlement and the execution and delivery of the bonds and mortgage" therein mentioned.

The expression in section 18—

Nothing herein contained shall be held to deny, exclude, or impair any right or remedy in the premises now existing in favor of the United States—can hardly be claimed to preserve these conditions in making the proposed settlement and contract, particularly when mention thereof is made where a sale on foreclosure is provided for, and entirely omitted in that part setting forth on what terms an extension of time will be granted.

The doubt would be removed by making the same applicable in case of acceptance.

The enactment of such a law discharges beyond doubt the original trust, and creates a new obligation. Whatever reservations are to be made must be specified in the new contract. It will not do to trust to chance in dealing with these corporations. The proneness exhibited by some courts to find technicalities and

loopholes in passing upon disputed points in railroad legislation should admonish Congress to beware of ambiguities.

NO MORE SIDE SHOWS LIKE THE CREDIT MOBILIER AND CONTRACT AND FINANCE COMMITTEE SHOULD BE COUNTEANED.

Second proposed amendment.

That no contract or order for the improvement, repair, or betterment of said roads, or for furnishing fuel, ice, material, and other supplies thereto, shall be awarded or given, by contract or otherwise, to any person, firm, company, or corporation, in which the officers or the directors of said companies, or either of them, are directly or indirectly interested, or in which they, or either of them, constitute in whole or in part the board of directors or trustees, if any exist, or have the controlling or other interest.

The history of the Pacific railroads as set forth in the Credit Mobilier and Pacific Railway Commission investigations demonstrates the necessity for this amendment.

The Government finds itself in the present unsatisfactory condition as a creditor mainly by reason of its absence in the law.

The majority report of the Commission just mentioned says:

The result of the Commission's investigation is that those who have controlled and directed the construction and development of these companies have become possessed of the surplus assets through issues of bonds, stocks, and payments of dividends, voted to themselves, while the great creditor, the United States, finds itself substantially without adequate security for the repayment of its loan.

Innocent stockholders and shippers generally have likewise suffered.

INTERSTATE COMMERCE COMMISSION SHOULD REGULATE FARE AND FREIGHT RATES—NO SPURIOUS CAPITALIZATION AND WATERED STOCK TO BE CONSIDERED.

Third proposed amendment.

That the rates of freight and fares established by said companies shall be subject to regulation by the Interstate Commerce Commission, and may be reduced by said Commission when considered excessive, either on its own motion or petition of any shipper after due hearing and investigation thereof. The said Commission, in so doing, shall disregard existing capitalizations and rate the respective roads at their market value.

When it is considered that the Government exercises supervision and control over freights and fares charged by interstate roads which we have neither aided with subsidy bonds nor land grants, how much more reason exists to retain control over charges on railroads to which we have given munificently of both, and in which we have certain reserved rights.

Particularly should we do this when the fictitious capitalization of these roads is kept in view.

OVER \$172,000,000 OF FICTITIOUS CAPITALIZATION.

I submit a statement taken from a report of the evidence of said Commission which speaks louder than words in favor of this contention:

	Cost.	Capitalization.	Fictitious capitalization.
Union Pacific	\$38,824,000	\$109,814,812	\$70,990,812
Kansas Pacific	11,800,000	25,028,250	13,228,250
Central Branch Union Pacific	2,731,347	4,200,600	1,468,653
Sioux City and Pacific	2,600,000	5,047,720	2,447,720
Central Pacific	26,000,000	124,211,080	84,211,080
Western Pacific	4,000,000		
Total	95,955,347	268,902,462	172,347,115

A BOLD FRAUD SHOULD NOT BE CONFIRMED BY LAW.

The people of California and the remaining Western States are in equity entitled to relief from this unjust imposition.

No sufficient reason can be advanced in favor of confirming a bold fraud by a law of Congress to perpetuate its baneful effects.

Our people have longed for a judgment day before the supreme tribunal of their country, and confidently expect a correction of past abuses and just treatment in the future when it does dawn.

THE GOVERNMENT SHOULD RETAIN ALL EARNINGS FOR SERVICES RENDERED PENDING EXISTENCE OF INDEBTEDNESS.

Fourth proposed amendment.

That hereafter so long as said companies, or either of them, continue indebted to the United States no money shall be paid from its Treasury for or on account of services rendered thereto, or any department of the Government thereof, over or upon railroads or telegraph lines heretofore aided by the advance of subsidy bonds, or upon any railroads or telegraph lines owned, leased, or operated by the said companies, or either thereof, or the successors by grant, lease, or otherwise of either of said companies; but the amount thereof shall, when ascertained, be credited on the indebtedness of the respective companies.

It is manifestly just for the Government in any proposed settlement to retain at least the value of the services thus rendered. This would be the rule as between man and man. It should be followed by the Government in dealing with a debtor of the class described by the evidence before the Commission, to which reference has hitherto been made.

THE COMPANIES SHOULD BE REQUIRED TO OPERATE THE SEVERAL RAILROADS AS ONE CONTINUOUS LINE, AND WITHOUT DISCRIMINATION FOR OR AGAINST ANY SHIPPERS THEREON.

Fifth proposed amendment.

That said companies are hereby required to operate and use said roads and telegraph for all purposes of communication, travel, and transportation, so far as the public and the Government are concerned, as one continuous line; and, in such operation and use, to afford and secure to each equal advantage

and facilities as to rates, time, and transportation, without any discrimination of any kind in favor of the road or business of any or either of said companies, or adverse to the road or business of any or either of the others, and without any discrimination for or against any shipper thereon.

This is practically the law now applicable to the Pacific railroads, though it must be admitted that it has been "honored more in the breach than the observance."

Its continuance, followed by strict enforcement, is demanded as a safeguard for the people.

The efforts made by various companies to break away from its effects demonstrate the immense value of maintaining it for the benefit of commerce.

EQUAL RIGHTS TO ALL EXPRESS COMPANIES.

Sixth proposed amendment.

That all express companies duly organized under the laws of any State or Territory shall be entitled to equal privileges on all trains of said companies on paying the fixed rate for such service and complying with all necessary regulations, both of which shall in all cases be uniform.

This is made necessary by the arbitrary manner in which some of these roads have acted. In California they have secured control of Wells, Fargo & Co.'s Express, and as a consequence the latter enjoys exclusive rights over the Central Pacific and other bond-aided lines. This community of interest, destructive to competition, leads to many abuses and the establishment of privileges entirely at the expense of shippers.

Public policy dictates that these railways should be open to all express companies on equal terms.

The same rule should apply to all telegraph lines connected therewith.

SUITS SHOULD BE INSTITUTED TO RECOVER UNLAWFUL APPROPRIATION OF BONDS AND PROPERTY.

That the President of the United States is hereby requested to cause actions to be instituted and prosecuted in the proper courts of the United States against all persons, companies, estates, or corporations, and the assigns and successors in interest of either, which, by investigations already made, or such as may be hereafter undertaken, are shown to have unlawfully appropriated and diverted funds, bonds, securities, and property contrary to law and to the prejudices of the United States, with the view of securing an accounting from each thereof, and the recovery of the funds and the value of the bonds, securities, and property, if return of the same can not be had, so unlawfully appropriated and diverted.

It will be noticed that the above differs from section 14 of the Reilly bill mainly in requiring the Government to commence suits in its own name.

In many instances the directors of these companies have anticipated action by their successors in office by having resolutions releasing them from all liability adopted at a stockholders' meeting.

I quote an instance as follows:

April 14, 1885, a release in the following form was thus adopted, and, as the evidence shows, actually executed to the directors of the Central Pacific Railroad:

Know all men by these presents, that the Central Pacific Railroad Company, for value received, remises, releases, and forever discharges, and by these presents does, for itself, its successors, and assigns, remise, release, and forever discharge (here insert the name of the party) of and from any and all liability and all manner of action and actions, cause and causes of action, suits, debts, dues, sums of money, claims, and demands whatsoever which said Central Pacific Railroad Company ever had, or now has, or which it or its successors or assigns can, shall, or may have by reason of any acts or doings of said — as (here insert the office) or director of said company, or of any matter or thing arising or growing out of any such acts or doings.

In witness whereof, the said Central Pacific Railroad Company, by an order of its board of directors and by an order of its stockholders, has caused these presents to be signed by its secretary and its corporate seal to be hereunto affixed as its act and deed this — day of —, 1885. (See page 3077, Testimony Pacific Railway Commission. Senate Executive Document No. 51, Fiftieth Congress, first session.)

It is natural to suppose that this method became contagious, and that all officers and directors are thus secured.

A suit by any company, as contemplated, would be a useless undertaking; besides, the statute of limitations would form a bar in most cases. This plea could not be invoked against the United States. Hence the necessity for action by the Government if these frauds are ever to be unearthed and restitution had of funds and property unlawfully diverted.

The Pacific railroads should be purged, again quoting from the President's message, of "all that is fraudulent, fictitious, or unconscionable."

There are other amendments of more or less importance that are necessary to perfect a measure of this kind, viewed from the standpoint of the Government, but those presented more intimately affect the industrial and commercial interests of the country, and are sufficient to clearly show the effect of their omission in any contemplated legislation.

In the light of experience we would be justly held responsible did we not at least try to avoid the practices and evils under which our people have suffered in any future dealings with these companies.

Personally, I am opposed to all the funding schemes so far proposed.

I believe the laws we now have should be strictly enforced, and unless payment is made the Government should take possession of all the roads in default, and, by virtue of the forfeiture clause of the law of 1863, proceed, by proper legal proceedings, to declare the same Government highways.

A TAX ON THE WEST.

If this plan is not pursued considerations of duty and patriotism should dictate some method that will not draw the lifeblood of commerce and industry from the communities in the West, from Omaha to San Francisco, furnishing local traffic to these corporations.

All plans so far devised throw the burden of payment upon them, thus imposing additional charges over and above those to which they are ordinarily subjected. They have long since reached the limit of endurance.

They have a right to expect from their fellow-countrymen exemption from such a fate, and to demand that in the event of a settlement the companies shall be made to pay the debt from the funds of their owners, or from earnings accumulated in the legitimate course of business on a bona fide capitalization, representing the true value of the investment.

Whatever may be thought of the California idea, no one can dispute the justice of this request.

I had occasion on another measure closely connected with this to present the following in support of this issue:

While on this branch of the discussion, I purpose to direct the attention of the House to the effect of the passage of any funding legislation which may be reported.

When the Reilly bill was before us it was denied by its supporters that the local traffic would be compelled to pay the bulk of this debt.

I took issue with them and was prepared to substantiate my view, had an opportunity been afforded.

I assert now that the passage of any law postponing payment, or organizing a system such as proposed by the remodeled Reilly bill, will mortgage the labor, productions, and enterprise of the people inhabiting the country through which these lines run for an indefinite period. This particularly will be the case with California.

There are many things Congress can do; there are some things Congress should refrain from doing. This is of the latter class.

Whatever errors of omission or commission it may commit on the tariff, silver, or bond issue, it ought not to yoke us against our solemn protest to a fate so unmerited and so indefensible as that proposed.

Now for the proofs:

The Senate Committee on Pacific Railroads, in its report to the Senate, filed in anticipation of the passage of the original Reilly bill, said of the funding proposition:

"Whichever plan may be adopted will require the consent of the company, and ought to take into consideration the interests of the people living along the line and depending wholly upon them for railroad facilities. As the honorable Commissioner of Railroads well says in his special report of April 1, 1882, above referred to:

"The interests of the people living along the lines and depending wholly upon the Union and Central Pacific roads for their transportation facilities are directly and vitally involved in this controversy. There is only one way in which the railroad companies can pay their debts—that is, by earning the money to pay them with. They have no surplus funds and no sources of income except from the operation of their roads. If the terms of settlement enforced by Congress demand too speedy payments or too high a rate of interest, then if the roads attempt to comply with such terms they can do so only by levying exorbitant rates upon their traffic. This would be a hardship upon the people living along their lines. There would be no escape for those who depend entirely upon these roads for their transportation. Through rates can not be advanced; competition would prevent that. The forces of commerce are more potent than any railroad company in fixing the rates from competing centers. The burden would inevitably rest upon local traffic."

"A failure of crops, the closing down of the mines, and a general stagnation in business of all kinds have prostrated the affairs of nearly all the Western roads. With little to sell, and that little bringing a low price, and with the general scarcity of a circulating medium, the condition of the Western producer is far from satisfactory. The railroads, as before stated, must depend upon local traffic almost exclusively for their earnings."

The opinion of the Commissioner included in this quotation should have weight with us. We should impress upon our minds the pertinent suggestion with which he closes:

"The burden would inevitably rest upon local traffic."

The Senate report proceeds:

"As we have stated with reference to the Union Pacific, the earnings of these roads must come almost wholly from local traffic. The competition for through business has become very sharp since the completion of the other transcontinental lines of road, so that now that business pays little or nothing beyond the cost of its transportation. Along the whole line of the main stem of the Central Pacific from Ogden to Reno, a distance of nearly 600 miles, there is no local traffic of any consequence whatever. The State of Nevada, through which this line extends, is not increasing in wealth and population at all. Its population is not now as great as it was some years ago."

"The mining industry in that State has for years been on a decline, and now what mines remain are all practically closed down. That industry almost alone in former years made up the business of the Central Pacific in Nevada. Without it, and with nothing else to take its place, the long line of road from Ogden west to the mountains, in the language of Mr. Huntington, might as well be '1,000 feet in the air,' so far as its value for local traffic is concerned, it being simply 'what you might call a bridge to connect the East and the West.'"

"The local traffic, therefore, of the Central Pacific system must come from the country along the lines west of the Sierra Nevada; that is, along the line of the old Western Pacific from Sacramento down to San Jose, along that portion of the main line from Sacramento east to the base of the mountains, and along the branch lines. All that country is very rich, and the business of it will, in all probability, increase from year to year. It is from those pieces of road that the Central Pacific must derive its income for many years—in fact, until, if ever, the State of Nevada takes on new life and is more fully developed."

Who has or can successfully dispute these conclusions?

The Government directors of the Union Pacific Railway, in their report for 1886, add their testimony as follows:

Like all other great railroads of the West, the Union Pacific must in future look almost entirely to the development of its local business for its principal revenue.

HUNTINGTON AND STANFORD'S ADMISSIONS.

C. P. Huntington himself, in a pamphlet bearing his signature and lately distributed to the members of the House, said on this question:

The money has to come mostly from the people who live along the line; that is, from the local business, as the interstate-commerce law has enabled the Canadian Pacific Railway Company to take most of the through or overland business.

Again, on page 4154, Volume VII, Testimony of the Pacific Railway Commission, he admits that—

The through business does not leave any, or very little, net earnings, and the amount to be paid must come from the local traffic.

The report submitted on a similar bill by Senator FRYE, of Maine, in the Fifty-first Congress, first session, contains a letter from Senator Stanford, of California, in which occurs the following:

If the Government is to be paid it must be chiefly out of the earnings of the local roads in the State of California; therefore, while the benefit has been and is national, the burden of payment will be local.

Of course he had reference only to the Central-Pacific debt.

I feel that we can safely rest our case on this point without fear of the rebuttal evidence of our opponents.

The local traffic, and not the manipulating syndicates, would pay this debt.

It is to be hoped that Congress will not reverse the judgment lately rendered. To retreat now would wipe away a record which, if adhered to, will cause the Fifty-third Congress to live in history as having made the first turn in that long lane which the oppressed toilers of the country had almost believed had no ending.

An incident illustrating the truth of this prediction took place soon after the now famous roll call, when, amid the applause of the victors and the excitement of the moment, a lady in the members' gallery, answering the query of the representatives of the English stockholders of the Central Pacific Railroad, "What have they done?" said:

They have recommitted your bill without instructions. Go tell your English friends that you to-day have witnessed an exhibition of American manhood and honesty.

That is the universal verdict. Good effects are noticeable everywhere. People have renewed their faith in our institutions and in the honesty of purpose of their public servants.

In California, where for twenty years it was sought without avail to organize a competitive system from San Francisco to the interior of the State, over \$2,000,000 were subscribed in a week after that memorable day.

Counties, cities, and towns are vying one with another in fostering the great enterprise.

The organization is now complete, and ground will be broken in a few weeks.

Encouraged by the victories gained in this Congress, the people have awakened to a just conception of the responsibilities resting upon this body in the future.

Woe to the man or party taking a backward step in this battle against the usurpations of corporate power.

APPENDIX A.—THE REILLY BILL.

A bill to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for the settlement of claims growing out of the issue of bonds to aid in the construction of certain railroads, and to secure to the United States payment of all indebtedness of certain companies therein mentioned.

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to ascertain the amounts of the respective indebtedness of the Union Pacific Railroad Company, the Kansas Pacific Railway Company, the Central Branch Union Pacific Railroad Company, the Central Pacific Railroad Company, and the Western Pacific Railroad Company, to which the subsidy bonds of the United States were advanced in aid of the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean pursuant to the acts of Congress approved July 1, 1862, and July 2, 1864, as of the 1st day of January, 1896, to be computed and ascertained as follows:

First. To the total amount of the principal of said bonds of the United States shall be added the interest which shall then have been paid and the interest then and thereafter payable by the United States thereon, until the respective dates of maturity of said bonds, as if no payment had been made or credit given thereon.

Second. From the aggregate amount so ascertained shall be deducted any and all payments or credits of the said indebtedness to the United States as shall appear in the bond and interest accounts of said companies, respectively, with the United States, as of January 1, 1895.

Third. The present worth of the balance so found shall be computed as of January 1, 1895, by discounting the said balance at the rate of 3 per cent per

annum for the period between the last-mentioned date and the average date of maturity of the said bonds of the United States. The amount so computed and ascertained shall be deemed to be the amount due to the United States on January 1, 1896.

SEC. 2. When the said companies, or either of them, shall provide as herein-after required for the payment of the first-mortgage bonds issued by any of said companies which now have priority over the lien of the United States, the bonds of such company secured by a mortgage upon all its franchises and property as hereinafter authorized, shall be received as collateral security for the amount of its indebtedness to the United States, so as aforesaid ascertained, but all liens, mortgages, securities, and remedies under existing laws to secure the payment of said indebtedness are hereby continued in full force and effect. The bonds to be received by the United States shall be dated January 1, 1896; shall be payable, principal and interest, as hereinafter provided; shall bear interest at the rate of 3 per cent per annum, payable semiannually on the 1st day of January and July in each year, any overdue interest on said bonds being payable in cash at the time of delivery of the bonds, and shall be in such sums and in such form as the Secretary of the Treasury shall approve.

SEC. 3. That upon the acceptance of and compliance with the provisions of this act by the said Union Pacific Railway Company and the said Central Pacific Railway Company, and the delivery to the United States of such bonds as herein provided, the securities and moneys to the credit of the said company so accepting and complying, in the sinking fund, created pursuant to the act of Congress May 7, 1878, shall be disposed of as follows, to-wit: All bonds held in said sinking fund, secured by first mortgage upon any part of the railway of such company covered by the existing lien of the United States, shall be canceled. All other securities and cash in said fund shall be applied in extinguishing, in such manner as shall be approved by the Secretary of the Treasury, any portion of the remainder of the bonds secured by said first mortgages; but said sinking fund shall not be so applied or available under the provisions of this act until said company shall have made provision satisfactory to the Secretary of the Treasury for the payment at or prior to the maturity thereof of all of said bonds secured by said first mortgage and the discharge of such mortgage.

SEC. 4. That the said Union Pacific Railway Company, successor to the Union Pacific Railroad Company, and the Kansas Pacific Railway Company, and the said Central Branch Union Pacific Railway Company be, and they are hereby, authorized to make, issue, and deliver to the Secretary of the Treasury each its certain indentures of mortgage, which shall bear date of 1st day of January, 1896, covering and embracing the entire property of the said Central Branch Union Pacific Railway Company, real, personal, and mixed, and the property of the said Union Pacific Railway Company as existing and constituted since the consolidation of the Union Pacific, the Kansas Pacific, and the Denver Pacific Railroad companies, effected January 24, 1880, including all the right, title, and interest of such company in any stocks, bonds, or securities, or lands, or any branch lines or auxiliary companies in which said company now has any interest, and which said mortgage shall cover and embrace the railway line of said company from Council Bluffs, Iowa, to the western terminal thereof west of Ogden, Utah, and from Kansas City, Mo., to Cheyenne, Wyo., by way of Denver, Colo., including all terminals at Council Bluffs, Iowa; Omaha, Nebr.; Kansas City, Kans., and Kansas City, Mo.; the Omaha Bridge, and all other terminal properties of said company, and all branch lines, so as to make said mortgage embrace and include the entire line of said company as constituted by said consolidation, extending from Council Bluffs, Iowa, to the terminal west of Ogden, Utah, and from Kansas City, Mo., to Cheyenne, Wyo., making a total mileage of 1,832.59 miles, and all railroads hereafter acquired or constructed by said company or companies, and all their franchises, telegraph lines, rolling stock, fixtures, and property of every kind and description, as well as that which it, its successors or assigns, may hereafter acquire subject to any bona fide, lawful, and paramount lien, claim, or mortgage. A proper and complete description and inventory of all property affected by such mortgage shall be prepared, under the direction of the Secretary of the Treasury, which, when approved by him, shall be filed in his office. But this section of said mortgage shall not be construed to prevent said company from using or disposing of any of its property or assets in the ordinary, proper, or lawful course of its business, in good faith and for valuable consideration, after notice to and with the approval of the Secretary of the Treasury, nor from using or disposing of any of its real or personal property not necessary to the operation of its railroads: *Provided*, That the proceeds of any such property and any property acquired with the proceeds of any such property owned by said company, whether realized by sale, pledge, or otherwise, shall in like manner and with the same power to dispose of the same be subject to the lien of the said mortgage: *Provided*, That the said Union Pacific Railway Company shall relinquish and abandon any and all claim, right, title, interest, and demand to or in a right of way exceeding 100 feet in width, through the lands formerly known as the Delaware and Pottawatomie Indian Reservations in the State of Kansas.

SEC. 5. That the Union Pacific Railway Company shall execute and deliver its said mortgage and bonds for the amount of its indebtedness and the indebtedness of the Kansas Pacific Railway Company to the United States, and the Central Branch Union Pacific Railroad Company shall execute and deliver its mortgage and bonds for the amount of its indebtedness to the United States; and the said bonds of each company shall be numbered consecutively from one to a number which will include the whole amount thereof, and shall be payable in lawful money of the United States. So long as any of said bonds remain unpaid each of said companies shall semiannually, on the 1st days of January and July of each year for a period of ten years, commencing on the 1st day of July, 1896, pay to the Secretary of the Treasury of the United States, in addition to the interest which shall then be due on its indebtedness, one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1905, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1915, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 and one-fourth of 1 per cent of the whole sum for which it gave its bonds and mortgage, as herein provided; and for a period of ten years, commencing on the 1st day of July, 1925, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 and one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage. The said payments of principal shall be applied in payment of said indebtedness so as aforesaid ascertained, and the bonds of said company to an amount equal to such payment, and in the order of the numbers of such bonds, beginning with the lowest unpaid number, shall thereupon be canceled and surrendered to the company.

SEC. 6. That the said Central Pacific Railroad Company, successor to the Central Pacific Railroad Company of California and the Western Pacific Railroad Company, be, and is hereby, authorized to make, issue, and deliver its certain indenture of mortgage, which shall bear date of 1st day of January, 1895, covering and embracing the entire property of such company as at present consolidated, real, personal, and mixed, including all the right, title, and interest of such company in any stocks, bonds, or securities, or lands, or any branch lines or auxiliary companies in which such company has now any interest, and all beneficial interest which it may have in the certain lease of its property to the Southern Pacific Company as hereinafter provided, and all railroads now owned or hereafter acquired or constructed by said Central Pacific Railroad Company, and all their franchisees, telegraph lines, rolling stock, fixtures, and property of every kind and description, as well as those which it, its successors or assigns, may hereafter acquire, subject to any bona fide, lawful, prior, and paramount lien, claim, or mortgage upon any of the railroads, franchisees, or property now owned by such company, or which such company may hereafter acquire, except as hereinafter provided. A proper and complete description and inventory of all the property affected by such mortgage shall be prepared under the direction of the Secretary of the Treasury, which, when approved by him, shall be filed in his office. But this section or such mortgage shall not be construed to prevent such company from using and disposing of any of its property or assets in the ordinary, proper, and lawful course of its current business, in good faith and for valuable consideration, nor from using and disposing of any of its real and personal property not necessary to the operation of its railroads, after notice to and with the approval of the Secretary of the Treasury, provided that the proceeds of such property, and any property acquired with the proceeds thereof, owned by said company, whether realized by sale, pledge, or otherwise, shall in like manner and with the same power to dispose of the same be subject to the lien of the said mortgage. Until the mortgages, liens, and claims upon the mortgaged premises junior and subordinate to the existing liens of the United States shall have been extinguished the existing liens of the United States shall not be extinguished, but shall remain in full force.

SEC. 7. That the said Central Pacific Railway Company shall execute and deliver its said mortgage and bonds for its indebtedness to the United States, and the said bonds shall be numbered consecutively from one to a number which will include the whole amount thereof, and shall be payable in lawful money of the United States. So long as any of said bonds remain unpaid said company shall semiannually on the 1st days of January and July of each year for a period of ten years, commencing on the 1st day of July, 1895, pay to the Secretary of the Treasury of the United States, in addition to the interest which shall then be due on its indebtedness, one-half of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1905, said company shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, three-quarters of 1 per cent of the whole sum for which it gave its bonds and mortgage as herein provided; and for a period of ten years, commencing on the 1st day of July, 1915, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 per cent of the whole sum for which it gave its bonds and mortgage, as herein provided; and for a period of ten years, commencing on the 1st day of July, 1925, each of said companies shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 and one-fourth of 1 per cent of the whole sum for which it gave its bonds and mortgage, as herein provided; and for a period of ten years, commencing on the 1st day of July, 1935, said company shall semiannually pay to the Secretary of the Treasury, in addition to the interest which shall then be due on its indebtedness, 1 1/2 per cent of the whole sum for which it gave its bonds and mortgage. The said payments of principal shall be applied in payment of the said indebtedness so as aforesaid ascertained and the bonds of said company to an amount equal to such payment, and in the order of the numbers of such bonds, beginning with the lowest unpaid number, shall thereupon be canceled and surrendered to the company.

SEC. 8. That the statutory lien created and subsisting under and by virtue of the act of Congress approved July 1, 1862, and the act of July 2, 1864, and the act of May 7, 1878, and under any and all other acts of Congress, to secure the payment of said subsidy bonds, and the interest thereon, as set forth in said acts, and upon all the property subject to said statutory lien, shall be and remain in full force for security for the debts owing by each of said companies mentioned in this act to the United States, until the same are fully paid.

SEC. 9. That each of the mortgages authorized by the foregoing provisions of this act shall contain a covenant providing that, in the event of any default continuing for ninety days in the said semiannual payments, the entire debt due to the United States from the company making such default shall immediately mature, and shall also contain such other terms and stipulations in conformity with the provisions of this act as may be deemed necessary to efficiently secure the said bonds and the application thereto of the moneys paid to the Secretary of the Treasury for retiring the principal thereof, and as may be approved by the Secretary of the Treasury of the United States. The said mortgages shall be delivered to the Secretary of the Treasury, and upon the delivery thereof shall, respectively, be valid and subsisting mortgages each of all the property of said mortgagor company, real, personal, and mixed, embraced, covered, or required by the terms of this act, and such delivery shall have all the effect of recording the same in any place. Said mortgages shall at all times be open to public inspection, under such rules and regulations as the Secretary may prescribe, and copies thereof, certified by the Secretary of the Treasury, shall, as soon as may be after their respective delivery, be deposited with and recorded by each of the clerks of the supreme courts of the Territories of the United States in which the roadbed, or any part thereof, of said companies, respectively, is situated, which copies and records shall at all times be open to public inspection. All such copies and the recording thereof shall be at the expense of said company.

SEC. 10. That so long as any of the bonds issued by either of the companies, according to the provisions of this act, shall belong to the Government, no money shall be paid from the United States Treasury for or on account of services rendered to the United States, or any Department of the Government thereof, over or upon the said railroads or telegraph lines heretofore aided by the advance of subsidy bonds, or upon any railroads or telegraph lines owned, leased, or operated by the said companies that issued such bonds, until the installments of principal and interest upon such bonds next maturing after such services are rendered shall be fully paid by such company as herein provided; but the obligations to pay such installments so to be paid to the United States by said companies, and the obligation of the United States to pay for services, shall be deemed otherwise independent.

SEC. 11. That hereafter, so long as any of the bonds authorized by the provisions of this act shall remain outstanding and unpaid, no dividend shall be paid by the company whose bonds are so outstanding unless the same shall have been actually earned, or unless such company shall have paid all interest due on its bonded debt having a lien prior to the Government and all matured indebtedness and interest then due and payable on its debt to the United States under this act; or unless the said earnings, after deducting all

interest accrued but not payable at the time of the declaration of such dividends, shall be sufficient to warrant the payment thereof. In no event shall either of said companies whose bonds are so outstanding pay any dividend exceeding the rate of 4 per cent per annum, unless the said company shall, at the time of declaring such dividends in excess of 4 per cent per annum, so long as any of the said bonds are held by the United States, pay an amount equal to the excess over 4 per cent per annum so declared to the Secretary of the Treasury, to be applied upon the lowest numbered bonds of the principal of the debt of such company to the Government, and unless the earnings of the said company shall suffice to warrant the payment of such excess and also the payment to the Government. Any director or officer who shall declare or pay, or aid in declaring or paying, a dividend prohibited by this act shall, upon conviction in any court of competent jurisdiction, be punished by imprisonment not exceeding two years or by a fine not exceeding \$5,000, or by both such fine and imprisonment. And that said companies heretofore mentioned, their successors, lessees, and assigns, shall cooperate in making track connections with all railroads of other companies now or hereafter built to points of junction with their roads, and at any point where any railroad shall connect with their roads, or either of them, they and their successors, lessees, and assigns shall afford to all such connecting roads equal times, terms, rates, and facilities for the interchange of traffic, both passenger and freight, between such connecting roads and their respective roads and every part thereof. And any contract, arrangement, or device, by sale, lease, consolidation, through-car service, or otherwise, intended for or resulting in any preference or advantage whatsoever to any such railroad so connecting at any such common point, or which shall subject any such railroad so connecting at any such common point to any prejudice or disadvantage whatsoever, is hereby declared to be unlawful.

SEC. 12. That this act shall take effect as to each of the said companies and their branches, respectively, as hereinbefore described, upon the acceptance of its terms by the board of directors of such company in writing, over the corporate seal of such company, signed by its president and attested by its secretary, being filed or deposited with the Secretary of the Treasury within six months after the passage of this act, subject, however, to the completion of the settlement and adjustment in this act proposed and provided; but any company which shall not so file its acceptance shall take no benefit from this act.

SEC. 13. That either of said companies may, at any time after the execution and delivery of their said bonds, but only so long as said bonds are held and owned by the United States, pay the whole or any portion of said bonds, by paying the amount thereof, together with the accrued interest thereon, to the Secretary of the Treasury, who shall thereupon cancel the bonds so paid and deliver the bonds so canceled to the said company.

SEC. 14. That the said companies accepting the provisions of this act, and each of said companies, shall, whenever requested in writing by the Department of Justice of the United States, and so long as the United States shall be the holder and owner of any of the bonds authorized by this act, cause any actions at law or suits in equity, or other proceedings, to be instituted and prosecuted in the name of said company or companies against any person who is, or has been, a director, officer, agent, or employee of the said company, for the purpose of enforcing any cause of action whatever arising, or which may hereafter arise, out of any alleged violation of duty, misappropriation of assets, or any other act or transaction whatsoever, in respect of which the said Department of Justice shall allege that it desires such action, suit, or other proceeding to be instituted and prosecuted. All such actions, suits, and proceedings shall be conducted by the Attorney-General of the United States, and he shall be fully authorized by the said company or companies to appear for them or it as attorney or solicitor in such actions, suits, or proceedings, and shall have the entire control of the same from the inception thereof to the end of such prosecution, and also the right to take and prosecute any appeal or appeals from any decision or determination made therein. Any sums of money which may be recovered under the provisions of this section shall be paid to the Treasurer of the United States, and by him applied as payment upon the lowest numbered bond or bonds of the company interested in such recovery outstanding under the provisions of this act; the balance remaining after all said bonds are paid shall be paid to the company in whose name the said sums were recovered.

SEC. 15. That whenever there shall be default in respect of any obligation or condition for which any lien now exists in favor of the United States upon any property of any Pacific railway company the Attorney-General is hereby authorized to enforce the claim and foreclose any such lien of the United States, by sale or otherwise, by any appropriate legal proceedings to be initiated and prosecuted in the court of appeals of the District of Columbia, which court shall have jurisdiction in the premises, both at law and in equity. In case any suit for the sale of any part of the property upon which the United States have a lien, as aforesaid, shall be brought by or on behalf of any person claiming to be the holder or holders of any other lien thereon, the Attorney-General, in his discretion, may enter the appearance of the United States and file such pleadings and take such action as may be appropriate for the protection of the interests of the United States or for the foreclosure of its lien by sale or otherwise in such suit. Upon said proceeding the said property shall be sold to the highest bidder, subject to any prior lien or incumbrance thereon, and for a sum not less than the amount of the debt due to the United States and of interest thereon to the date of confirmation of the sale, and at such sale the Attorney-General, if in his judgment the interests of the United States so require, may bid the amount of said debt, including interest.

SEC. 16. That the purchaser or purchasers at such sale shall keep said railroads and telegraph lines in repair and use, and shall at all times transmit dispatches over such telegraph lines and transport mails, troops, and munitions of war, supplies, and public stores upon such railroads for the Government whenever required by any Department thereof; and the Government shall at all times have the preference in the use of the same for all purposes aforesaid at fair and reasonable rates of compensation, not to exceed the amounts paid by private parties for the same kind of service.

SEC. 17. That it shall be the duty of the Attorney-General to cause the provisions of this act to be enforced, and he shall take all steps needful to that end, and shall make report to the President each year or oftener thereon, which report shall be laid before Congress. And until the settlement and the execution and delivery of the bonds and mortgage in this act provided for shall be completed all existing provisions of law relating to said companies, respectively, shall remain in force.

SEC. 18. That this act and each and every provision thereof shall severally and respectively be deemed, taken, and held as in alteration and amendment of said act of 1862, and of said act of 1864, and of said act of 1878, respectively, and of all of said acts so far as they are inconsistent with this act; nor shall anything in this act be construed or taken in anywise to affect or impair the right of Congress at any time hereafter further to alter, amend, or repeal the said acts hereinbefore mentioned; and this act shall be subject to alteration, amendment, or repeal, as in the opinion of Congress justice or the public welfare may require; and nothing herein contained shall be held to deny, exclude, or impair any right or remedy in the premises now existing in favor of the United States. This act shall be published and printed as a public act, and all proceedings may be cited as such.

APPENDIX B.

Mr. CAMINETTI introduced the following bill:

A bill to amend section 4 of "An act authorizing an investigation of the books, accounts, and methods of railroads which have received aid from the United States, and for other purposes," approved March 3, 1867, and to add a new section thereto relating to the indebtedness due the United States from such railroads, and the enforcement of the provisions of "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862, and to provide for the management of such railroads by the United States as military and post roads in case default is made in the payment of said indebtedness as provided by law.

Be it enacted, etc., That section 4 of an act entitled "An act authorizing an investigation of the books, accounts, and methods of railroads which have received aid from the United States, and for other purposes," approved March 3, 1867, is hereby amended to read as follows:

"SEC. 4. That upon the failure or refusal of either of said railroad companies to pay the debt due from each respectively to the United States as the same becomes due, together with interest thereon, at the time and in the manner set forth in the act of Congress entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 1, 1862, and the several acts amendatory thereof, the Secretary of the Treasury, in order that the securities and claims of the United States in respect of its lien, mortgage, or other interest in any of the property of any or all of the said companies upon which a lien, mortgage, or other incumbrance prior to all or either of those of the United States on the same property, or any part thereof, may exist, and be then lawfully liable to enforcement, be fully protected and preserved, shall immediately take possession of such road or roads with all the rights, functions, immunities, and appurtenances thereunto belonging, and also all the lands granted to either thereof by the United States, which at the date of such default shall remain in the ownership of the respective companies. He shall thereupon without delay request a conference with the holders of the prior lien, mortgage, or other incumbrance, or their duly authorized agents, for the purpose of securing an extension of time for the period of twenty-five years, on or before the expiration of which payment thereof may be made, with interest at such a rate as may be agreed upon not exceeding — percent per annum. And for this purpose he is hereby authorized for and in behalf of the United States to assume payment of the same. If such holders do not elect to accept such terms as the Secretary of the Treasury may offer in such conference, then he is hereby authorized to issue bonds equal in amount to the aggregate of such prior lien, mortgage, or other incumbrance and the interest due thereon, payable on or before the expiration of twenty-five years, in denominations ranging from — dollars to — dollars, bearing interest at the rate of — per cent per annum from date of issuance until paid, and out of the proceeds pay such prior lien, mortgage, or other incumbrance: *Provided*, That none of said bonds shall be sold at less than par.

"It shall be the duty of the Attorney-General to take such steps and proceedings in the courts and otherwise as shall be needful to protect and defend the rights and interests of the United States in respect to the matters in this section mentioned; also, to secure and make operative and final by virtue of the provisions of sections 5 and 6 of the act last above referred to, the forfeiture of the road or roads of such companies so defaulting as aforesaid, with all the rights, functions, immunities, and appurtenances thereunto belonging, and also all the land granted to such companies by the United States, which, at the time of such default, shall remain in the ownership of such road or roads.

"The President of the United States shall, when such forfeiture has become final, by proclamation, declare the said roads military and post roads, and shall place the same with all their appurtenances under the care, management, and control of the Secretary of War.

"No indebtedness in excess of the earnings thereof for each year shall be created without the authority of Congress.

"The Secretary of War shall engage, or cause to be engaged, all agents, assistants, clerks, and employees needed, and shall fix their salaries; but no agent, assistant, clerk, or employee of any kind shall receive a salary exceeding \$5,000 per annum except by authority of Congress, nor shall any of them be removed or discharged unless for cause. The Civil Service Commission shall prescribe rules and regulations governing the tenure of office of such agents, assistants, clerks, and other employees.

"Within three months after the issuance of said proclamation the Secretary of War shall cause an estimate to be made of the cost of operating said military and post roads, and shall fix the rate of fares and freights thereon so that the total receipts shall not exceed all operating expenses and the sums required to create a sinking fund to liquidate the bonds herein authorized and pay the interest thereon: *Provided*, That the salaries now paid to the officers of the Government in the various departments referred to in this act, and the actual expense of operating trains in the postal, military, and other service of the United States, shall, as now, be paid by the respective departments employing and conducting the same.

"The Secretary of the Treasury and the Secretary of War shall determine how much of the principal of said bonds may be conveniently paid each year, which amount, together with that required to pay interest thereon, shall be set aside by the latter and transmitted to the Treasurer of the United States for such purposes.

"It is hereby declared not to be the object of the United States to enter into the railroad transportation business in the full sense of that term, and with a view to avoid doing so as much as possible the Chief of Engineers, United States Army, under the supervision of the Secretary of War, shall cause to be established and published a schedule of rates, based on equal terms as to charges and equal rights as to privileges, for freight and passenger trains belonging to connecting or other railroad lines, or to associations or individuals, and shall regulate the time and manner of running same so as to give prompt service and the greatest possible security to life and property.

"Whenever in the opinion of the Secretary of War the wants of the public and the necessities of commerce are adequately supplied by this method, at reasonable rates and without discrimination, and a sufficient amount is realized to meet all the charges of maintaining said roads, including the sums necessary to pay interest on said bonds and redeem such portion of the principal as may be directed by the Secretary of the Treasury and Secretary of War, then the latter officer may withdraw the train service entirely or gradually, as the best interests of the Government and the patrons of said roads may require: *Provided*, That such trains as may be necessary in the postal, military, or other service of the United States may be continued, unless satisfactory terms are agreed upon with the companies, associations, or individuals using the military and post roads with their trains, as in this section provided: *And provided further*, That the Secretary of War may resume the train service after such discontinuance whenever such companies, associations, or individuals, by pooling and combinations, are unreasonable in their charges, or discriminate between persons and places, or either.

"The Secretary of War shall place the engineering operations and the

running of trains under the supervision of the Chief of Engineers, United States Army, who is hereby authorized to detail as many of the officers of the Corps of Engineers, United States Army, as may be necessary to properly maintain and protect the roadbed, bridges, buildings, shops, etc., and the management and control of the other departments shall be assigned to other branches of the Army.

"The Secretary of War is hereby authorized and empowered to make such rules and regulations, and employ and use such means as may be necessary, not inconsistent with law, to enforce the authority hereby vested in him, and alter and amend the same as occasion may require.

"The Secretary of War, and all the officers upon whom authority is conferred by this act, shall annually make a report to Congress, detailing the operations of their respective departments, accompanied with such recommendations which experience and the public welfare may seem to demand."

SEC. 2. That a new section is hereby added to said first-named act, to be numbered section 6, and to read as follows:

"SEC. 6. That the President of the United States is hereby requested to cause actions to be instituted and prosecuted in the proper courts of the United States against all persons, companies, estates, or corporations, and the assigns and successors in interest of either, which, by investigations already made, or such as may be hereafter undertaken, are shown to have unlawfully appropriated and diverted funds, bonds, securities, and property contrary to law and to the prejudice of the United States, with the view of securing an accounting from each thereof, and the recovery of the funds and the value of the bonds, securities, and property, if return of the same can not be had, so unlawfully appropriated and diverted."

SEC. 3. That the sum of — dollars, or so much thereof as may be required, is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, to carry out the provisions of this act.

The Late Hon. Charles O'Neill.

REMARKS

OF

HON. THOMAS J. HENDERSON,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 31, 1894.

The House having under consideration the resolutions paying tribute to the memory of Hon. Charles O'Neill, late a Representative from the State of Pennsylvania—

Mr. HENDERSON of Illinois said:

Mr. SPEAKER: My acquaintance with the late Hon. Charles O'Neill, of Pennsylvania, began at the meeting of the first session of the Forty-fourth Congress. He was at that time an old member of the House, having served as such for ten years. There were but few members, as I remember, who had served longer than he had. Charles O'Neill was then in the vigor and prime of life, and was one of the most faithful, painstaking, laborious members I have ever known since in all my twenty years' service as a member of the House of Representatives.

Mr. Speaker, he was more uniformly in his seat in the House than almost any member I have ever known, and he was always at work for his constituents and in the discharge of his public duties when the House was in session. I do not think, Mr. Speaker, that Charles O'Neill was indifferent in any manner to the general welfare of his country. I think he was proud of the whole country, and wanted to see every part of it prosper, yet he was devoted to his immediate constituents—to his own district and State—to a degree that I have never seen equaled by any other member of any of the Congresses in which I have served.

His correspondence with the people of his district and city and State was an extensive and burdensome one; and yet he bore the burden with a patient, untiring industry. He wrote at his desk from the meeting of the House until the hour of adjournment, unless some other duties demanded his attention, and he took pride, as he once told me, in answering all his letters on the day they were received. I felt that such constant labor as he performed was telling upon his physical strength, and expected him to break down sooner than he did. Our relations were always intimate and pleasant, and I sometimes remonstrated with him for such unremitting labor; but it was unavailing, and when this, the Fifty-third, Congress, met in extraordinary session, in August, 1893, it was painful to witness the wonderful change which had taken place in him in a few months. It was manifest that the end was near.

Mr. Speaker, I can not well repress a feeling of sadness to-day when I think of the many able and distinguished members of the Forty-fourth Congress, with whom I had the honor of serving, who have since departed this life and are now over on the "other shore." Garfield, Blaine, Wheeler, Kelley, Kerr, Randall, Hill, Lamar, and many others, distinguished for great ability and for their long and eminent public service, have gone to

The undiscovered country, from whose bourn
No traveler returns.

And now our departed friend, Charles O'Neill, the kind and courteous gentleman, the faithful friend, and the able, watchful, vigilant Representative and legislator, has followed them to that better land, where I trust he, and all of us who shall follow him, may find rest and peace and joy forever.

Mr. Speaker, others have spoken at length of the life and character and of the public services of him to whose memory we pay tribute to-day; and I can add but little to what has been so well and so eloquently said by them. But I can not permit the opportunity given me to pass without expressing the very high regard which I entertained for our departed friend, and the deep sorrow which I felt when I heard of his decease.

Mr. Speaker, the life of Charles O'Neill was full of good deeds. He worked with a wonderful energy and industry for the people of his district and State. It has been my pleasure to notice in many ways and on many occasions during our long service here how devoted and earnest he was in his efforts to promote the commercial interests of Philadelphia and, I may say, of Pennsylvania. While he was liberal and generous in the support of all public measures intended to benefit and promote the prosperity of the entire country, still whatever was proposed to advance the interests of his own city and State aroused and excited every effort which he was able to put forth for its accomplishment.

In the Forty-sixth Congress he and I served on the Committee on Commerce, a committee in which the city of Philadelphia had a great interest, and it was then that I learned to know Charles O'Neill more fully for his real worth as a representative of his constituents and as a man. And afterwards, serving as I did upon a committee for many years which had before it for consideration from year to year matters of deep interest to his district and to the city of Philadelphia, I had an opportunity of knowing how untiring he was in looking after their interests. That he was ever watchful and vigilant, and served his constituents and his country with unswerving fidelity and with industry, energy, and ability no one familiar with his service will question.

Remembering, as I do, his kindly nature, his dignified and gentle deportment, his faithful friendship, and his long, able, and patriotic public service as a Representative in this body, I offer with a feeling of inexpressible sadness this tribute to the memory of Charles O'Neill, who was always a kind friend and a faithful public servant.

Not a Billion-Dollar Congress—Appropriations Reduced.

Under those of the Fifty-first Congress.....	\$45,341,418.90
Under those of the Fifty-second Congress.....	36,765,856.88

REMARKS

OF

HON. A. M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 4, 1895.

The House having under consideration the subject of appropriations—

Mr. DOCKERY said:

Mr. SPEAKER: It is not my purpose to enter upon an elaborate discussion of the fiscal situation, but rather to succinctly review its more important features. The surplus in the Treasury, including the gold reserve, at the close of Mr. Cleveland's first Administration, March 1, 1889, upon the present basis of stating the Treasury account, amounted to \$183,827,190.29, and in addition thereto there was an available balance of \$47,905,423.30 deposited to the credit of disbursing officers for the payment of current liabilities.

The Administration of Mr. Harrison covered the period from March 4, 1889, to March 4, 1893, during which time the Republican party, in addition to the ordinary Treasury receipts, covered into the general Treasury to meet current obligations \$54,207,095.75 of trust funds belonging to the holders of national bank notes. The Republican Administration also, as the result of the legislation of the Fifty-first Congress and the profligate appropriations of that body, was coerced into an extension of \$25,364,500 of 4 per cent bonds, which matured September 1, 1891, and also defaulted in the requirements of the sinking fund to the extent of \$52,201,687.86.

The receipts of the Government during the Harrison Administration were \$157,235,240.86 in excess of the receipts of the Government during Mr. Cleveland's first Administration; while the expenditures of Mr. Harrison's Administration, including all bonds purchased and premiums paid, were greater than the expenditures under Mr. Cleveland by \$240,301,786.77. More bonds were purchased under Cleveland than under Harrison—Cleveland having purchased \$838,074,850, Harrison \$259,093,650.

This, Mr. Speaker, in brief, is a summary of the salient fiscal features of the Harrison Administration. It is not, therefore, a matter of surprise that when Mr. Cleveland began his second term he should find a depleted Treasury.

When the Democratic party regained control of the Government on the 4th of March, 1893, it found that the surplus had practically

vanished, notwithstanding the default in the sinking fund, the extension of the bonded indebtedness, and the covering into the Treasury of the national bank redemption fund. The Treasury was without adequate income to meet the lavish demands entailed by the legislation and appropriations of the Fifty-first Congress. The so-called surplus in excess of the gold reserve consisted, in large part, of subsidiary and minor coin, unavailable for the payment of current expenses, and, including the gold reserve, was but \$124,128,087.88, the disbursing officer's balance available for the payment of current liabilities having dwindled to the meager sum of \$23,515,033.70.

This untoward Treasury situation at the beginning of this Administration has been intensified by unfavorable business conditions which had their origin in the autumn of 1890 after the failure of the Baring Brothers. The industrial paralysis which began then has since enlarged its scope, until it now substantially encircles the globe.

The income of the Government, including postal receipts, for the fiscal year ending June 30, 1894, was but \$372,802,498.29, while its actual expenditures, including postal, amounted to \$442,605,758.87, thus leaving a deficiency of \$69,803,260.58. This deficiency in revenue subsequent to July 1, 1894, and prior to the beginning of this session of Congress, continued at the rate of about \$4,000,000 monthly. Not only this, Mr. Speaker, but the demands upon the Treasury became so urgent that the Administration issued \$100,000,000 of Government bonds to restore the gold reserve and meet maturing obligations. This, Mr. Speaker, was the unfavorable financial situation confronting the Fifty-third Congress at the beginning of this session. The necessity for economy was therefore obvious.

When discussing the condition of our national finances on this floor March 3, 1893, I challenged the attention of the House to the fact that the chasm between income and liabilities was constantly widening, and suggested that the proper remedy was to be found in a speedy and substantial reduction in the aggregate of national expenditures. I said then that unless this policy obtained there must be an increase of the interest-bearing bonded debt or a heavy increase in the burden of taxation. I am opposed to the issue of Government bonds. The Democratic party is opposed to an increase of the interest-bearing debt so long as it is possible to escape it; and this House has endeavored to avoid the necessity of a bond issue by reducing expenditures. It has not accomplished all that was possible to be done, but in the presence of the official figures this Congress is fairly entitled to the commendation of the people.

It is unfortunately true, Mr. Speaker, that the taxpayers have been burdened with an appropriation of \$5,238,000 for the benefit of the sugar producers; but with the exception of this unwarranted gratuity, and a few others which aggregate but a small amount, this Congress, so far as practicable under existing laws, has reduced appropriations to the necessities of an efficient, economical administration. We have substantially reached the limit of reduction except by repealing statutes authorizing expenditures.

COMPARISON OF APPROPRIATIONS.

I append to my remarks an official table showing the appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, which include the fiscal years from 1891 to 1896. The table shows that the appropriations of the Fifty-first Congress were \$1,035,680,109.94; of the Fifty-second Congress, \$1,027,104,547.92; and the appropriations of the present Congress, \$990,338,691.04. In other words, this Congress has reduced the appropriations under those of the Fifty-first Congress \$45,341,418.90, and below those of the last Congress, \$36,765,856.88. The memorable Forty-fourth Congress reduced appropriations \$30,000,000 and received the plaudits of the people. This Congress makes ample provision for every branch of the public service and reduces the burdens of taxation \$36,765,856.88.

It may be well at this point to notice the statement persisted in by the Republican minority, that the appropriations of the Fifty-first Congress, commonly known as the Reed Congress, were but \$988,417,183.34. It is true that the "specific" appropriations of that Congress amounted to this sum. But it is also true that the specific and indefinite appropriations together exceeded the billion by more than \$35,000,000.

A "specific" appropriation is an appropriation which states on its face the exact amount authorized to be paid. An "indefinite" appropriation is an appropriation which, in the language of the law, authorizes the payment by the Treasury of "so much as may be necessary." The "indefinite" appropriations of the Fifty-first Congress amounted to \$47,262,926.60; \$2,340,247.90 being for back pay and bounty claims, \$15,227,000 for the refund of direct taxes to the States, and \$29,695,678.70 for the redemption of national bank notes, repayments to importers, and various other minor items, fully stated in Note E of the table which I will submit at the conclusion of my remarks.

Mr. Speaker, I assert that the Republican minority have not included these items in their comparative statement of appropri-

tions. I challenge a denial of the accuracy of this statement. That is to say, I assert that these items of appropriations, aggregating \$47,362,926.60, have been omitted in the estimate of the minority and do not enter into the total of \$988,417,183.34, submitted by them as embracing the total of appropriations of the Fifty-first Congress. A reference to the laws of the Fifty-first Congress will substantiate in every particular the truth of this statement. It was the obvious intention of the Fifty-first Congress to make these appropriations in an "indefinite" form, so as to mislead the people; but, sir, no juggling with figures can change the rugged fact that the stupendous total of appropriations of that Congress amounted to \$1,035,680,109.94.

It is also proper to add that the Fifty-first Congress not only made these enormous appropriations, but entailed obligations on its successors by reason of continuing contracts for rivers and harbors, fortifications, war ships, and public buildings amounting to \$49,641,779. Indeed, sir, this Congress has provided in its appropriations \$43,641,611.30 to meet the requirements of contracts authorized by laws passed during that Congress and the Fifty-second Congress.

The liabilities we impose upon future Congresses amount to but \$21,690,764. These continuing obligations are largely on account of new ships, public buildings, fortification defenses, and other public works, and are to be provided for by the next or succeeding Congresses, for the reason that the money will not be required during the coming fiscal year. In other words, this Congress has not evaded any obligation that should be met during the ensuing fiscal year; neither have inadequate amounts been appropriated with the view of meeting the liabilities by deficiency appropriations in the future.

Mr. Speaker, the appropriations of this Congress are \$16,434,490.49 less than the estimates submitted by the Departments, and \$8,090,909.03 more than as they passed the House. The bills were increased by the Senate \$19,170,136.04, of which amount the House, in order to reach an agreement before the close of the session, was compelled to yield to the Senate \$8,090,909.03.

In conclusion, Mr. Speaker, I desire to invite especial attention

to the fact that for the first time in a long series of years the regular annual appropriations which come within the supervision of Congress are smaller at the concluding session than at the first regular session. In all other Congresses for many years past, notably the Fifty-first Congress, the larger expenditures have been reserved for the last session, whereas the appropriations of the present Congress were larger at the first regular session than they are at this session. In other words, appropriations have heretofore been smaller at the sessions preceding the Congressional elections than after the elections, while at the present Congress the appropriations were larger before, than after, the election.

Moreover, Mr. Speaker, let me say that, whatever may be the judgment of the people in respect to the failure of this Congress to enact into law some measure of currency reform, it will not be denied by fair-minded citizens that this Congress has reduced the appropriations of the Government in a greater amount than any Congress since the late civil war.

In this connection it is but just to say that no member of either branch of Congress has contributed more to this auspicious result than Governor SAYERS, the accomplished chairman of the House Committee on Appropriations.

During the last ten days of the session, when the appropriation bills were being loaded down in the Senate with old, stale, musty claims, appeals were made to the House to be true to the record of the party and reject these extraordinary demands upon the Treasury. These appeals were heeded, the claims were disagreed to, and our appropriations have thus been brought below the billion-dollar limit.

I can truthfully close by saying that the expenditures of administration have been enormously reduced; no new taxes have been levied, except to equalize taxation by laying its burdens upon the rich as well as the poor, while every description of undue appropriation of public money, with the exceptions noted, has been prevented. The business methods of the Government have been greatly simplified. These results have been achieved by the House, and in this respect we have fully met the demands of the people.

TABLE B.—Appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, fiscal years 1891 to 1896, inclusive.

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.	
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.

Total Fifty-first, Fifty-second, and Fifty-third Congresses.....	1,035,680,109.94		1,027,104,547.92		990,338,691.01	

a Deficiencies included as follows: 1891, on account of 1890, \$25,321,907.25; 1892, on account of 1891, \$29,335,598.34; 1893, on account of 1892, \$7,674,332; 1894, on account of 1893, \$14,149,724.85.

b This amount includes \$1,362,059.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes \$978,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes \$15,227,000 for refund of direct taxes in addition to the specific sum of \$500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, \$101,628,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, \$27,756.70; redemption national bank notes, \$23,533,298.50; expenses of Treasury notes, \$218,362.60; coinage of silver bullion, \$210,893.14; rebate tobacco tax, \$770,082.50, and repayments to importers and for debentures and drawbacks, customs service, \$4,915,285.28; in all, \$29,695,678.70.

APPENDIX.

A REVIEW OF THE WORK DONE BY THE JOINT COMMISSION.—REORGANIZATION OF THE ACCOUNTING SYSTEM AND BUSINESS METHODS IN THE EXECUTIVE DEPARTMENTS.

Mr. DOCKERY, chairman of the Joint Commission of Congress to Inquire into the Status of Laws Organizing the Executive Departments, submitted the following report:

CREATION OF THE COMMISSION.

The Commission was created by the act of Congress approved March 3, 1893, and organized by the appointment of Messrs. ALEXANDER M. DOCKERY of Missouri, JAMES D. RICHARDSON, of Tennessee, and NELSON DINGLEY, JR., of Maine, on the part of the House, of which Mr. DOCKERY was chairman; and Messrs. FRANCIS M. COCKRELL, of Missouri, JAMES K. JONES, of Arkansas, and SHELBY M. CULLOM, of Illinois, on the part of the Senate, of which Mr. COCKRELL was chairman, Mr. DOCKERY being chairman of the Joint Commission.

Messrs. James C. Courts and Thomas P. Cleaves, clerks of the House and

Senate Committees on Appropriations, respectively, were appointed clerks of the Commission.

On May 24, 1893, the following experts were appointed: Messrs. J. W. Reinhart, C. W. Haslins, and E. W. Sells. The active work of the experts began June 6, 1893, with an investigation of the methods of accounting in the Treasury Department. Expert J. W. Reinhart served in a supervisory capacity until the date of his resignation, August 18, 1894. Messrs. Haslins and Sells continued without interruption until the close of the Fifty-third Congress, March 4, 1895.

The total expenses of the Commission were \$41,264.03.

The members of the Commission were called to Washington during the vacation of Congress on the business of the Commission, and although authorized to charge for their traveling and other expenses, no member of it has presented a bill for or been reimbursed any expense incurred.

As is shown by the foregoing exhibit, it appears that the entire cost of the Commission aggregates \$41,264.03, while the actual annual reductions in the Government expenditures as a result of the work of the Commission amount to \$907,591. This reduction is not for the time being only, but will continue

through each of the coming years. The Commission, however, feel that the expedition of public business and added security to the Government in its methods of accounting under the new systems inaugurated would have fully justified its existence, even if there had been no diminution of expenditures.

WHAT THE COMMISSION HAS ACCOMPLISHED.

Compilation of laws.

The first work of the Commission was the preparation, for the use and information of Congress, by the clerks of the Commission of a compilation of references to laws creating the Executive Departments and the several bureaus and offices thereof and other Government establishments at the national capital. This compilation of the laws relating to the Executive Departments is the first work of this character since the organization of the Government, and has proved not only invaluable in prosecuting the work of the commission, but will be found useful to the committees of Congress for all time.

Census of the Departments.

The Commission then submitted for the information of Congress statements from the several Executive Departments and other Government establishments at the national capital, prepared by the heads thereof, pursuant to inquiries addressed to them by the Commission under date of May 24, 1893.

A general summary of this report discloses the fact that the Executive Departments and other establishments at the national capital are divided into 136 offices or bureaus and 498 divisions; that there are 17,599 persons employed therein, 11,067 males and 5,537 females; that of the number employed in the eight Executive Departments, the Department of Labor, Civil Service Commission, and Fish Commission, which are under the civil-service law, 8,057 are in the class subject to competitive civil-service examination preliminary to appointment, and 3,205 of that number entered the service after such examination; the residue, 4,394, were employed in the Departments at the time they were classified and placed under the civil-service law by Executive order; that the ages of those employed, stated in multiples of five years, range from 20 years to 90 years, and the length of service of all employees ranges from one year to sixty years each; and that of the whole number employed 5,610 have from one to nine relatives each in the Government service at Washington.

Enrollment of bills.

The Commission next reported a concurrent resolution which provided for the engrossing and enrolling of bills by printing.

This legislation received the approval of both Houses of Congress, and by the legislative, executive, and judicial bill which has just become a law the system was made permanent. Its value from the standpoint of both accuracy and economy is illustrated by the fact that not a single error has occurred under the system up to this moment, and the saving to the Government may be indicated by the following extract from a letter of Acting Secretary Hamlin, dated January 28, 1895, which shows the loss to the Government under the old system in the enrollment of one bill only:

"I venture to suggest that your inquiry relates to an apparent error in regard to 'fruit-plants' occurring in the free list of the act of June 6, 1872, which, as signed, provided for 'fruit, plants, tropical and semitropical, for the purposes of propagation or cultivation.' The intention of Congress was evidently to put 'fruit-plants' on the free list, and not fruit, as appears by the text of the bill which was passed. In engrossing the bill, however, for the President's signature, a comma was placed between the words 'fruit' and 'plants,' thus making the text 'fruit, plants,' instead of 'fruit-plants,' as was intended. In consequence of this error refunds were made to the amount of about a half million dollars, and an act was subsequently passed correcting the error."

Purchase of supplies.

The commission next reported a bill which established a board to fix uniform rates for inviting proposals for fuel, ice, carpets, stationery, and other miscellaneous supplies for the Executive Departments and other offices in Washington.

This bill is now a law.

Treasurer's report.

The next bill reported by the Commission was a bill to repeal section 311 of the Revised Statutes, which required the Treasurer of the United States to make a certain report to Congress.

The bill is now a law.

Certificates of deposits by postmasters.

The Commission next reported a bill to amend section 407 of the Revised Statutes. The object of the bill was to require the Government depositories to send duplicate certificates of deposits by the postmasters direct to the Auditor for the Post-Office Department, thus expediting the settlement of postmasters' accounts about one month.

This bill is now a law.

Methods of accounting in the Post-Office Department.

The Commission then reported a bill "to improve the methods of accounting in the Post-Office Department." This act abolished the postal note. The advisability of this was generally conceded, inasmuch as the postal note afforded no security, and if lost no duplicate was allowed by law.

This law revised the money-order system and reduced the schedule of fees so as to meet the rates charged by the express companies.

The act also provided for an ingenious coupon, which, when detached from the order, designates the amount for which it was drawn. It also provided that the coupon shall be forwarded to the Auditor's Office with the postmaster's report of money orders sold. This device enables the accounting office to settle the money-order accounts of postmasters without waiting until all the money orders sold are received by the Department, as had been the practice under the former system.

This important measure had the approval of the Postmaster-General, and took effect on and after the 1st of July, 1894.

Evidence of the successful operation of the changes made by this legislation is set out in the following extract from the letter of the honorable the Postmaster-General, dated February 11, 1895:

"The changes recommended, which were carried out by departmental regulation and by the act of January 27, 1894, were more nearly related to the office of the Auditor for the Post-Office Department than to this Department proper, but I take pleasure in testifying to the value of the changes so far as this Department is concerned, and the increased facility afforded the Auditor benefits this Department by bringing about a more expeditious settlement of postmasters' accounts and resulting in a closer check being kept upon them. The new form of money order is being handled successfully in the Auditor's office; no friction whatever has followed its introduction."

Property returns.

The next bill reported by the Commission was a bill "to regulate the making of property returns by officers of the Government."

Under the existing laws it had been the practice to pass what is known as "property returns" to the accounting officers of the Treasury for audit. This audit could not accomplish any useful purpose, for the reason that the auditing officers were compelled to accept the returns of the administrative departments.

This bill is a law.

Destruction of old money orders.

An act approved July 10, 1894, authorized the Secretary of the Treasury and the Postmaster-General to destroy all money orders and postal notes more than ten years old and all papers relating thereto. The result of this legislation has been to dispose of several hundred tons of paid money orders and postal notes which, by their sale as waste paper, yielded to the Treasury \$1,655.90, and there will also be saved to the Government a large sum of money annually for rent of buildings to store this worthless paper.

Warrants and drafts.

The act reorganizing the accounting system of the Treasury Department, approved July 31, 1894, had a provision that admitted of consolidating the draft and the warrant into one piece of paper in the office of the Secretary of the Treasury, obviating the necessity for copying from the warrant after it reached the office of the Treasurer on to another piece of paper the draft, the essential information that was contained in the warrant. The plan is working admirably and saves time not only in the office of the Secretary of the Treasury in the Division of Bookkeeping and Warrants, but in the Treasurer's office also.

Reports of purchases of military supplies.

As recommended by the Commission, section 229 of the Revised Statutes was repealed. This section required reports of purchases of supplies by the Quartermaster's and Commissary General's Departments to be made annually to Congress. The reports were never referred to, and any information they would contain can be obtained from these Departments.

Statistics of international money orders.

The report upon this subject was adopted whereby the Auditor for the Post-Office Department dispensed with a very considerable amount of statistics relating to the volume of money-order business between States of the United States and foreign countries, statistics which did not seem to have any value, going much further into the analysis of the international money-order business than was the case with reference to the domestic money-order business.

General Land Office.

This report provided for the consolidation of certain divisions of the General Land Office and the preparation of patents in the office of the recorder as now required by the statutes. These two matters can be accomplished by departmental regulation. A bill approved March 2, 1895, permits the preparation of patents in the Land Office by the use of typewriting machines, and dispenses with certain of the principal clerks of the Land Office who heretofore have been appointed by the President, making the several heads of the divisions, except the recorder, to be appointed by the head of the Department. It also provides for the consolidation of abstracts from registers and receivers, so that an immense amount of labor will be saved in the local land offices and in the General Land Office on these very voluminous abstracts; and it provides for discontinuing the printed reports made by the board of equitable adjudication of the land cases acted upon.

The work of the General Land Office is considerably in arrears, and as the introduction of the new plan of preparing patents will have to be done gradually, it is not expedient to reduce the staff of this office now; but within another year the saving claimed by this report, estimated at \$20,000 additional, can, if the recommendations are put into effect, be made.

Customs service.

In a part of this report it was recommended that the original papers be sent to the Auditor for the Treasury Department, and that masters of vessels mail a copy of the manifest direct to the Department, so that a check can be made upon the disposition of all importations, and a similar arrangement for consignments coming into the country by rail under consular seal. At ports where there are no naval officers there is now absolutely no check upon the collectors except their integrity and official bonds. This requirement puts a check upon the collector and will operate to prevent fraud in the collection of the customs revenue.

Bonds of Government officials.

In accordance with a recommendation of the Commission, a law was passed requiring that all official bonds be examined at least once every two years as to the amount and sufficiency of the sureties thereon; that they be renewed every four years, or renewed and strengthened as much oftener as may be deemed necessary; and that all such bonds shall remain in force until the appointment and qualification of a successor.

It is impossible, of course, to estimate what will be saved to the Government under this provision, but it will undoubtedly protect the Government to a very large degree. The loss on bad debts on suits that have been determined so far have averaged about \$68,000 a year.

Names of employees in Departments.

Upon the recommendation of the Commission section 194 of the Revised Statutes was repealed.

Compliance with the law required a great deal of clerical labor, which can now be otherwise much more profitably engaged.

The printing of the documents, when ordered by Congress, amounted to no inconsiderable expense, and if all were printed as they are submitted the cost would amount to many thousands of dollars each year.

Condition of business in the Departments.

The Commission made a careful inquiry as to the condition of business in the several Departments of the Government at Washington. The result of the inquiry, embodied in the reports of the Commission, is gratifying in the extreme. Of the 8 Executive Departments and 12 other Government establishments at the national capital, embracing 135 bureaus and 498 divisions, it is shown that the public business is in arrears in but 63 of the divisions. With but little effort it is believed that this arrearage could be brought up with the existing force, and thus have public business current in every Department of the Government.

In the report there is an estimate of the force required in the Land Office for reproducing the press-copy letter books, and should the plan recommended by the Commission be adopted it would cost \$25,800 less than the amount estimated for by the General Land Office.

Purchases of coal and wood.

As recommended by the Commission, section 3711 of the Revised Statutes was so amended as to prohibit the future payment of fees of 20 cents per ton for coal and 9 cents per cord for wood to persons designated to inspect the coal and wood purchased for the use of the Government, and requiring, except as to the Navy Department, that the inspection shall be done in the future by persons already in public employment and without additional compensation.

Books, stationery, rent, etc.

It is estimated that the recommendations of the Commission which have been adopted will incidentally effect an annual saving to the Government of at least \$50,000 on account of books, stationery, furniture, and printing in the offices of the Commissioner of Customs, Second Comptroller, First Comptroller, Register of the Treasury, and others affected, and for which no estimate heretofore has been made; and for the rent of rooms occupied by the Treasury outside of the Treasury building proper which may be vacated, and

the rooms vacated by reason of the abolition of the offices within the Treasury building utilized in their stead.

Accounting system of the Government.

The new accounting system adopted is by far the most important matter disposed of by the Commission, and the most fruitful of results. It was the result of months of careful and diligent study. The change from the old system to the new, while involving some very important and extensive changes, was accomplished with very little friction and is now in practical working order. The old system was laborious, and the business became congested. Under the new system the accounts of disbursing officers are promptly audited and balances found.

The Commission confidently believe that a large saving to the Government will be effected by reason of the administrative examination now given the accounts of marshals and other United States court officials by the Department of Justice, for during the brief period of the existence of the new system the Department of Justice has been enabled to exercise administrative oversight and discipline which promises to save the Government a very large sum each year; and there is reason to expect under the operation of the system, with the close scrutiny that will result in the administrative oversight consequent upon the audit by the Department, many reforms of long existing abuses of the fee system that will save to the Government hundreds of thousands of dollars each year.

The following extracts from letters of the Secretary of the Treasury, the accounting officers of the Treasury, and the Attorney-General bear directly upon the efficient and successful operation of the new accounting law:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY, Washington, D. C., February 27, 1895.

SIR: In compliance with your verbal request I transmit herewith copies of letters received from the accounting officers of the Treasury Department in regard to the practicability of the methods of conducting the business therein inaugurated October 1, 1894.

The reports of these officers show the system to be working satisfactorily, and I may add that from the limited observation I have been able to give the matter, I am of the opinion that the operation of the system has served to greatly expedite the business of the Government without the sacrifice of accuracy or the removal of safeguards for the protection of public interests.

Respectfully, yours,

J. G. CARLISLE, Secretary.

Hon. A. M. DOCKERY,
Chairman Joint Commission.

Auditor for Treasury Department.

"Any system devised for the transaction of the public business and the settlement of public accounts in the office of the Auditor for the Treasury Department (or any office) should, in my opinion, insure: First, accuracy; second, safety; third, dispatch. Possessing perfect familiarity with both the old and the new system of auditing public accounts, I unhesitatingly say that the new system is a great improvement upon the old.

"It is fully as accurate, and has safeguards against error that are as effective as any that existed in the system abolished. It is not only as safe as was the old system, but in some cases safer.

"The time saved in the dispatch of public business is the greatest merit of the new system, and if it were even more expensive than the old (which it is not) the fact that the public business in this office is disposed of in one half the time formerly required would justify the increased expenditure.

"I am not only fully satisfied that the new system will prove more efficient and satisfactory than the old, but know that under it many things that are necessary to the full and complete adjustment and settlement of public accounts are done that were not done under the old system."

Auditor for the War Department.

"In compliance with your request of the 15th instant for a report as to the merit and practicability of the new system of transacting the official business assigned to this Bureau, as set forth in the act of July 31, 1894, I have the honor to state that the new method has greatly facilitated and expedited almost every branch of work affected thereby, and appears to be safe, businesslike, and economical."

Auditor for the Interior Department.

"The new system possesses the advantage of working at short range. The prompt transmission of accounts by disbursing officers and the prompt action by the administrative office, which is required under the new system, render it much easier to settle accounts than under the old system.

"The concentration of responsibility under the new system is another very important feature that is producing good results. The many inquiries that are now made by clerks into the law, and the apparently careful manner in which they investigate every new question, would seem to show that they feel that "my investigation of this is final and I must be sure of my ground."

"From my standpoint the new system possesses the benefit of promptness, economy, and safety, is less cumbersome, and more easily understood. It is modern and in harmony with the spirit of the age."

Auditor for the Navy Department.

"Replying to your letter of the 15th instant, requesting me to furnish you with my opinion as to the merit and practicability of the new system of transacting the public business assigned to the office of the Auditor for the Navy Department, I have the honor to inform you that in my opinion the new system of accounting is working satisfactorily, that the interests of the Government appear to be fully protected, and there is no delay in the settlement of accounts nor in the transaction of public business coming before this Bureau."

Auditor for the State and other Departments.

"In response to your request I beg leave to say that, from my observation and experience, I am strongly of the opinion that the new system is an improvement on the old."

Auditor for the Post-Office Department.

"These changes have been favorable to the dispatch of business, and, while they are radical, they have been put in operation without friction.

"The general effect of the change of system as it relates to auditing the accounts of postmasters is beneficial.

"There is no loss of any check material to accurate auditing. I believe that we shall begin the coming fiscal year with this office in good condition."

Comptroller of the Treasury.

"I have every reason to believe, therefore, that time will show the merit and practicability of the new system of transacting the official business assigned to the office of the Comptroller of the Treasury, and justify fully the changes made in the accounting system of the Government."

Chief Division of Bookkeeping and Warrants.

"The concentration in one office of this class of work necessarily brings it under closer and more effective supervision, and is found in all respects well adapted to the new requirements of the service.

"So far as the general operations of the new accounting system have come to my notice (and I may add parenthetically that a large proportion of the work of the auditing offices passes through my hands) I may say that it has so far worked satisfactorily. It has brought about a more prompt and regular rendition and settlement of accounts than existed under the old system, and without the abandonment of any safeguard deemed necessary for the protection of the public interests. The practicability of the system is beyond question, so far as anyone may predict from the experience gained during the period in which it has been in operation."

DEPARTMENT OF JUSTICE, Washington, D. C., January 26, 1895.

SIR: I have the honor to acknowledge yours of the 24th instant, inquiring what opinion I have formed respecting the operation of section 13 of the act of July 1, 1894, requiring an administrative examination of accounts and expenditures by this Department before transmission of the accounts to the Treasury Department.

In my judgment the act works well, and will continue to do so for these, among other, reasons:

In the first place, an examination of accounts by this Department, by which many of the items of expenditure have been authorized before being actually incurred, is necessarily more intelligent and more likely to be correct in its results than an examination by the officials of another Department.

In the second place, there is no doubt that one beneficial effect of the statute is to prevent a good deal of unnecessary, irritating, as well as expensive, friction between the two Departments of Justice and the Treasury.

Respectfully, yours,

RICHARD OLNEY,
Attorney-General.

Hon. ALEXANDER M. DOCKERY, M. C.,
Chairman Joint Commission.

Statement of Hon. Charles S. Hamlin, Assistant Secretary of the Treasury.

"The new system of accounting in the Treasury Department is now working smoothly. It has been a matter of great surprise and satisfaction to those interested that such radical changes could be made with so little friction and trouble. Many advantages of the new system have developed since it went into operation, particularly as to the accounts of disbursing officers. The new system does not allow advances to be made to disbursing officers until their former accounts have been rendered and the Auditors have full evidence as to the condition of the accounts before the advances are approved. Heretofore advances have been made to disbursing officers simply upon requisitions without any investigation of the accounts in the Treasury Department.

"Under the new system no safeguards of the Treasury have been taken down; on the contrary, the careful supervision and close check upon the disbursing officers of the Government by the Auditors affords the greatest possible check on the expenditures that can be devised."

Recommendations not acted on.

The following are changes recommended by the Joint Commission, or reported to Congress for information, but which, owing to lack of time, have not been enacted into law or have not yet been put into effect by departmental regulations.

Supervising Architect.

A report was made relating to the reorganization of the office of Supervising Architect of the Treasury Department.

Contested land cases.

A report relating to the method of hearing contested land cases appealed from the registers and receivers, and the establishment of a board to hear such cases.

Repeal of the "contest" act of 1890.

The Commission recommended the repeal of section 2 of the act approved May 14, 1890, which provided a bonus to successful contestants in land cases. This act, as the records of the General Land Office indicate, occasioned a very large increase in the contest work, and consequently the number of clerks engaged thereon.

The bill to repeal this section passed the House of Representatives, but failed in the Senate.

Receivers of local land offices.

A report was made which recommended that the duties of the receivers be transferred to the registers and the receivers be constituted inspectors of public lands.

Public surveys.

A report on the system of surveys by the Government, recommending the establishment of a bureau of public surveys by combining the geodetic and topographic part of the United States Coast and Geodetic Survey with the United States Geological Survey and the transfer of the land surveys to this bureau of public surveys, and the consolidation of the hydrographic work of the United States Coast and Geodetic Survey with the Hydrographic Office of the Navy Department. This would make uniform and systematic all the public surveying of the Government.

Solicitor of Internal Revenue.

A report recommending the abolition of the Solicitor of Internal Revenue and the performance of his duties by the Solicitor of the Treasury.

Bonds of Government officials.

A report upon this subject, a part of which, as hereinbefore mentioned, was adopted, contained further recommendations which, if adopted, would admit of having bonds from surety companies more general than is practicable under existing law.

Checking of money orders.

A report recommending the checking of paid money orders whereby the work of checking the reports of orders paid against the reports of orders sold can be dispensed with.

Customs service.

A part of the recommendations contained in the report of the Commission on the customs service, as previously referred to, have been adopted. The portion which has not been acted upon relates to the abolition of the naval officer at all ports and the establishment of a substitute therefor at the port of New York, which officer should be an assistant to the Auditor for the Treasury Department and omit some of the detailed work that is now performed by the naval officer.

Writing and recording letters sent.

A report was made on the manner of keeping a record of letters written in the various Departments, in which the Commission recommended that the hand-written record of letters sent be dispensed with; that they be written upon the typewriter with one or more carbon copies and be press-copied in tissue books, the carbon copy being retained in a convenient place, without handling, for the purpose of binding into volumes, and paged to correspond with the numbers of the pages in press-copy books.

Aggregate estimated annual saving to the Government effected and to be effected if all the measures proposed by the Commission are adopted.

	Clerks.	Salaries.	Miscellaneous.	Total.
Put into effect	251	\$200,610	\$246,981	\$607,591
Proposed but not yet acted on.....	252	236,928	113,000	449,928
Total	503	607,538	359,981	1,057,519

In concluding this final report of the work accomplished by the Joint Commission, it is unnecessary to further speak of its beneficial results, either from the standpoint of economy, accuracy, or expedition. The testimony of the officials in charge of the various Departments, in so far as it relates to the changes which have been put into operation, fully attests their wisdom.

The Commission has been unanimous in all its recommendations, and at no time has its work been hampered by personal interests or vexed by partisan controversies.

ALEX. M. DOCKERY,
JAMES D. RICHARDSON,
NELSON DINGLEY, JR.,

Members on the part of the House of Representatives.

F. M. COCKRELL,
JAMES K. JONES,
S. M. CULLOM,

Members on the part of the Senate.

The Currency.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 6, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire greenbacks, Treasury notes, and for other purposes—

Mr. NEWLANDS said:

Mr. CHAIRMAN: I am opposed to any financial legislation that does not provide for the enlarged use of silver, for I believe that the evils from which we suffer arise from legislation which has given to gold the monopoly of the exchanges of this country. I know of but one way of defeating the disastrous effects of monopoly, and that is to use something else than the thing monopolized; and I believe, therefore, in starting again in competition with gold its time-honored rival, silver, which throughout the ages, prior to 1873, was distinguished, coequally with gold, as the efficient medium of the exchanges of the world.

We have tried various kinds of remedial legislation within the past two years. We were told that if we would repeal the Sherman Act we would have prosperity. Prices have fallen from 15 to 30 per cent since the repeal of the Sherman Act. We were told if we would pass a reformed-revenue bill we would have prosperity. We have passed the Wilson bill, and yet adversity is with us. If the McKinley Act were in operation to-day it would not stay the decline in prices, for we all know that with a contracting money volume protection itself does not protect. We might raise a wall around this country mountain high and exclude the products of the labor of other countries altogether, giving the products of this country the monopoly of our markets, and yet the pressure within those walls of a contracted currency would steadily press down the prices of domestic products and the values of domestic property.

Now, what do we complain of? We complain of the export of gold. Why is gold being exported? They tell us that the interest on foreign investments in this country is not being reinvested here; that American bonds and stocks held abroad are being sold and turned into coin, and the coin taken from this country. Why is this so? Simply because America is not prosperous, and the money lenders always seek a prosperous country for investment. Prosperity attracts and adversity repels loanable funds. They are withdrawing their gold not because they distrust our financial system but because they can not make money in this country. And the reason that they can not make money is that, by our legislation, we have steadily raised the value of the unit of gold

and steadily lowered the value of each unit of every other kind of property in this country, whether it be the bushel of wheat, the pound of cotton or wool, the acre of land, the mile of railroad, or the square foot of city real estate. We have increased the value of the gold that we owe; we have diminished the value of the products with which we pay foreign debts. Enterprise offers no prospect but disaster, and so effort lags, and our money lies idle in our banks. If we can not employ domestic funds, how can we expect to retain, much less attract, foreign funds?

Now, what is the drain of gold from this country? We have to pay annually more than \$100,000,000 for interest on securities held abroad; \$100,000,000 annually spent for freight on foreign bottoms; \$100,000,000 annually spent abroad by our people who seek pleasure there; and we have perhaps \$100,000,000 more to pay as profits on foreign investments in this country—\$400,000,000 in all. How have we met this demand in times of prosperity? How have we met it in the exchanges of the world in London? By sending our surplus wheat, wool, cotton, and meats abroad for sale. We used to pay a sovereign of debt how? By surrendering 4 bushels of wheat at \$1.25 per bushel? We now pay a sovereign of debt how? By surrendering 8 bushels of wheat at 60 cents per bushel. And so it is with cotton. We used to pay a sovereign of debt by delivering 50 pounds of cotton. We now are compelled to deliver 100 pounds. We have to deliver in the English market, in payment of the interest and principal of our debt, twice as much of wheat, twice as much of wool, twice as much of cotton, twice as much of all our products as we used to, in order to pay a sovereign of English debt. The balance used to be in our favor, and gold flowed in to pay it. Do you wonder that the balance is now against us and that gold flows out?

And why is it that the prices of our staple products have declined? The answer is easy. We have given gold, limited in quantity and in annual production, a monopoly of our exchanges. We have increased the value of foreign gold, we have increased the burden of our debts, and we have diminished by our legislation the value of our staple products with which we paid those debts, and by increasing the chasm between gold and silver we are brought into competition with silver-using countries in the production of our cotton, wheat and wool. The countries which are in competition with us in the production of these staples are countries that are outside of the influence of the gold contraction. They are India, on a silver basis; Russia, on a paper and silver basis, and the Argentine Republic, on a paper basis and hence outside of the gold contraction.

Take competition with India as an illustration. For the past twenty years an ounce of silver would buy in India 1 bushel of wheat, with trifling variations from time to time owing to the scarcity or abundance of supply. The silver rupee buys to-day in India as much of human labor and of the products of human labor as it ever would. When silver was worth \$1.25 per ounce the English importer of wheat or cotton could with his sovereign buy only about 4 ounces of silver. Hence, he could buy in India only 4 bushels of wheat, and consequently we were compelled to surrender only 4 bushels of wheat to pay an English sovereign of debt. The Englishman now buys with his gold sovereign 8 ounces of silver, and with each of these ounces buys a bushel of wheat in India, and so we are now compelled to surrender 8 bushels of wheat in order to pay a sovereign of English debt. And so it is with cotton and wool and all of our staple products.

Restore the use of silver and you restore its value, and to the extent that you restore its value you diminish the purchasing power of the sovereign of gold and increase the debt-paying power of your staple products. What we wish to do is to restore the debt-paying capacity of our cotton, wool, and other products, and the argument and illustration I have used in reference to wheat applies to all the great staple products of this country.

Throughout the gold-standard countries universal depression prevails. It is only in the silver using countries that prosperity is found. Japan, on a silver basis, has conducted a great war without borrowing from foreign countries, and is gradually becoming the manufacturing center of the Orient. Her people are tired of purchasing English manufactured products by turning their silver into gold at a great discount, and are now manufacturing on their own account, and have established a great manufacturing emporium which bids fair to rival Manchester itself.

Mexico is on the up grade. Her leading financial papers advise discontinuance of the purchase from gold-standard countries because of the loss in changing from silver into gold, and the result is that all kinds of manufacturing enterprises are being established which are rapidly making her independent of the two countries she used to rely upon the most—England and the United States. There is not to my knowledge a single railroad in Mexico in the hands of a receiver, and yet in the United States one-quarter of the mileage of the country is in the hands of receivers. Look at the map and mark the railroads which are in the hands of receivers, and you will find that they are mainly the transcon-

tinental lines which were dependent upon the silver-mining regions for their patronage and support, and which have gone down with the suppression of the silver-mining industry, the granger roads which traverse the wheat-growing region and which find that they can not live on 50-cent wheat, and the cotton roads which traverse the cotton-growing section of the South and which can not live on 5-cent cotton. With the depression of these varied products all the enterprises of the country have sympathized. The transportation interests have suffered the most severely, but general trade, commerce, and manufacturing are also suffering greatly because of the depression in the silver-mining regions and the wheat and cotton-growing sections of the country.

The revenues of the country also suffer. The consuming power of the entire nation has been diminished about one-third and the reduced imports to this country occasioned by diminution of our purchasing power, account for the diminished revenue of the Government. All along the line there is but one story of disaster, depression, and distress.

The only property which has not entirely surrendered to the blighting influences of the gold trust is labor, which resists with intelligence, will power, and organization, the general decline in values of all nonsentient property. The bushel of wheat is put up in the auction mart and its value is effected by all depressing influences. But man refuses to allow his labor to be put up at auction. All the various classes of labor have determined upon a certain compensation which each individual shall receive, and though in distress and suffering and almost starvation, conscious of his obligation to his class, each individual refuses to accept less. Yet though in a measure able to maintain the daily or weekly wage they find that owing to the prevailing depression they have less days of employment, and so at the end of the year, though the daily or weekly compensation is maintained, the laboring man finds that he has received in the aggregate from one-third to one-half less than in more prosperous years. Meanwhile both employer and employee are in the deadly grasp of the gold contraction. The employee refuses to recognize the force of the great economic law which is pressing down both, and regards the efforts of his employer to reduce the expenses of his business as a part of the general hostility of capital to labor, and so strikes and lockouts are inaugurated, business is destroyed, commerce suffers, and the entire laboring element, desperate through want and suffering, threaten the destruction of the very social organization which is the only protection of advanced civilization.

Such are the effects of gold monometallism, and we have not yet attained the ultimate reach and finish of its destructive influence.

Gold will continue to be exported from the country as long as our staple products remain at their present prices. The only way in which a debtor country can maintain its gold is to sell its products for such low prices as to hold it. This involves a complete readjustment of the whole labor of the country to the level of India, Russia, the Argentine Republic, etc., and the severe struggles of the past year in Chicago, Brooklyn, and other places manifest the magnitude of the task of readjustment.

The only other way of preventing the drain of gold is to issue bonds. Foreign investors, realizing that the country is not prosperous, that our cotton and wheat fields are declining in value, that our railroads are in the hands of receivers, refuse now to accept any security save a Government bond which has the entire property and the taxing power of the nation behind it. That they are not afraid of our financial system or of our financial legislation is proved by the prices paid for our Government bonds, which, according to the terms stated, are payable in either gold or silver. That they do fear that the country will not continue to prosper is evidenced by their refusal to take the gold bonds of our railroads and other private enterprises.

There is but one way of relieving the Government and the people of their difficulties and that is to restore the value of the ounce of silver and to restore the debt-paying capacity of our staple products. When that is done our transcontinental railroads will go out of the hands of receivers; for our mining industry, which stands at the basis of every other industry of the intermountain region, will be restored; our granger roads will pass out of the hands of receivers, for the value of the bushel of wheat will be raised; our Southern railroads will regain their business, for the value of every pound of cotton will be restored, and domestic manufactures and domestic commerce of all kinds will thrive, for the consuming power of the nation will be restored. The imports of the country will be revived by reason of the increase in our consuming power, and the revenues of the Government will thus be restored. No word can picture the immediate relief which would be given to the Government and to every class of industries and to every class of our people if the value of the ounce of silver in the terms of gold could be immediately increased.

But how can its value be increased? I am asked. I can only answer, by increasing its use. The monetary use of silver consti-

tutes the principal element of its value, and the restoration of that use will restore its value.

But we are told that the monetary use can only be restored by international agreement; that otherwise, if this country attempts the task alone, it will become the dumping ground of silver. While I admit that the most satisfactory form of bimetalism would be that which results from the joint agreement of the most powerful nations of the world, yet I can not admit that this is the only means of restoring the value of silver. America alone can by free coinage restore the link between gold and silver, and even should she drift to a silver basis the result would be most favorable for there are two kinds of bimetalism. One, which consists in the joint use of both metals by all nations of the world; the other, which consists in uniting the gold-using nations of the world into one class and the silver-using nations into another class, and if the two classes are equal to each other in population and power the parity of the metals can be easily maintained. Let America put herself at the head of the silver-using nations of the world, and with her great population, her large area, her power of development, her great capacity to absorb money, she will quickly restore, by the unlimited use of silver, its old value in terms of gold. If even she does not fully restore it, partial restoration will effect great improvements in existing conditions, for just to the extent that the value of the ounce of silver can be increased the value of our staple products and the productiveness of our transportation systems will be increased.

It should be remembered that we shall not be compelled to absorb the accumulated silver of the world that is already in the shape of coin in the various countries. It is in the hands of these people and can not be withdrawn. Besides, the free coinage of silver can easily be limited by law to the current product of the mines, and thus the melting of foreign coin into bullion and its presentation to our mints could be prevented. We would only be compelled to absorb the current production of the mines and we would get only a small portion of that, for China, Japan, Russia, South America, Central America, and Mexico would still continue to absorb a large proportion of the world's product. We could not expect to add to our supply more than a hundred million of ounces annually, which would be equal to about as many dollars.

We would require sixty millions of annual increase to meet the increase of our population and to maintain the present per capita, and should we determine to retire our greenbacks and national bank notes we would require a hundred millions more per annum for a period of five years to accomplish this. But our present per capita is not sufficient. A debtor nation always needs a larger per capita than a creditor nation. England can do business on a less per capita because of her limited area, because her local enterprises are completed, because her population is fixed and is not increasing, and because, above all, whenever her reserves fall below a proper level she can easily call upon her debtors for relief. No nation owes us, whilst we largely owe other nations. It is therefore all important that we have larger reserves of coin to meet unexpected emergencies. The money lender who owes nothing requires no cash reserve. The money borrower who owes money upon call obligations or obligations maturing at different times always requires a cash accumulation to meet demands. The per capita circulation of a nation, therefore, like England or Germany, small in area, fixed in population, and completely built up, furnishes no parallel for a young and growing country, vast in area, rich in natural resources, and only on the threshold of a development which will maintain the largest population of all the countries of the world.

I see no prospect of an international adjustment of this question, particularly if it is to embrace the creditor nations of the world. England owns the accumulated gold of the world and has loaned it out to other nations. She will continue to be satisfied with the financial system which increases the value of her gold and makes other nations subject to her. The only way of making her take hold of bimetalism is through suffering, and she can be made to suffer only through the loss of her securities.

What does that mean? It means that the margin between the debt we owe and the value of the property held as security has vanished and that the property equals in value only the amount of the debt. Are we, the debtors of the world, to endure and suffer bankruptcy in order to teach England a great economic lesson? Are we to default in our interest, surrender our property, and go into bankruptcy in order to teach England that gold monometallism is fatal to the creditor as well as the debtor? Which country will suffer most from this process? The debtor country, of course. The creditor country will suffer last and least.

It is true that the world realizes the violation of economic lessons only through suffering. It is instructive to observe the advance of the silver movement in this country as the result of suffering. The first people who suffered from the demonetization of silver were the inhabitants of the silver-mining region. They found that the value of their bullion was falling, and they ascer-

tained that it was due to its rejection by the mints. Their public men took up the question and became the leaders here of thought in questions of monetary science.

The next class that suffered were the wheat growers of the West. They found that the wheat had greatly declined in value with the ounce of silver, and upon inquiry they ascertained that the silver price in India of wheat determined the gold price of our wheat in the Liverpool market. So they studied the question, and their public men joined the silver miners in the silver agitation.

Then came the cotton growers, who found that the value of their products was dependent upon the same economic law which governed the wheat market, so they joined the silver men.

Meanwhile the people of the Eastern States who had become the beneficiaries of a beneficent tariff system, and who had obtained the monopoly of the Western and Southern markets for their manufactured goods, and who had made profit from it, entered largely into the business of loaning these profits to the South and West. They contended against what they regarded as a "silver craze," because they constituted the creditor sections of the country. They felt that the English policy which increased the value of the money owing to them was an advantage which they could not forego, but they are beginning to realize that they have a proprietary interest in the West and South. They have large investments there. They are largely the owners of the stocks and bonds of the railroads which wind their way through the silver-mining, the wheat-raising, and the cotton districts of the country, and they find that the policy which has brought disaster to those regions is now affecting them not only in their proprietary interest, but in the diminished consumption and purchase of their manufactured goods. And so suffering has taught the people of the United States, and is day by day impressing the lesson, that the destruction of one-half of the world's metallic money is the greatest misfortune known to history.

The people outside of the great monetary centers, in which the metropolitan press endeavors to suppress all intelligence and prevent all correct thinking concerning this great movement, are moving resistlessly toward the restoration of silver. They are becoming convinced that the hope of an international conference is a delusion, and that while the creditor nations may, as a matter of courtesy, confer with them they will do nothing else. And the question before the American people to-day is whether they shall continue to submit themselves to all the horrors of the gold contraction or whether, taking the risk of drifting to a silver basis, they will restore silver to its old place by passing a law for its free coinage in this country. Should we drift to a free-silver basis, our position will be eventually better than if we remain upon a gold basis. The experience of silver-using countries of the world proves this. Should all the gold in this country drift out to foreign nations what would they do with it? This is a favorite field for foreign investments. Where else will they invest their gold? If we do not use foreign gold will it not fall in value? If we do use silver and thus increase the demand for it, will we not increase its value and thus by withdrawing the demand for gold and substituting the demand for silver by one of the most powerful nations in the world could we not do much toward restoring the old parity of the two metals? And remember that just to the extent that we increase the value of silver we increase the debt-paying capacity of our wheat, wool, and other staple products.

Is it not better to have gold at a premium than to have our products at a discount? The premium on gold would, at best, be trivial; the discount on our products is to-day 50 per cent, and we have not reached the bottom yet.

There is no danger of the world having too much metallic money, both gold and silver. It is estimated that there is in the world to-day about \$4,000,000,000 of gold coin, \$4,000,000,000 of silver coin, and \$4,000,000,000 of uncovered paper money. The very existence of this paper money proves that there never has been enough metallic money. We are to-day considering the retirement of a portion of this uncovered paper money. We have in this country about three hundred and fifty millions of greenbacks and one hundred and fifty millions of national-bank notes, which are mere representative money, not covered by actual gold or silver. We are considering to-day the retirement of these greenbacks because we say that they constitute an endless chain which draws gold out of our Treasury.

While I believe that this endless chain would not be operative if the Government would exercise its option of paying either gold or silver, an option exercised by France and a great many other nations in the interest of their gold reserves, yet if this uncovered paper money is to be retired in order to get rid of the endless chain, why should we substitute in its place other uncovered paper money in the shape of paper currency issued by State or national banks, merely representative money, not primary money, but mere promises to pay metallic money obligations, which will increase the strain on gold and will not prevent in any way its ex-

port? If the greenbacks are retired and national-bank notes are substituted for them, the demand for gold for export will be thrown upon the banks instead of upon the United States Treasury, and people will be watching the bank reserves just as they are watching the United States Treasury, with apprehension lest they may fall below the danger line. Under our present system, which gives the note holder the option as to which metallic money shall be paid, gold will be demanded for all these obligations, and if the country continues in adverse circumstances the balance of trade will be against us, the export of gold will continue, and the banks will be in constant apprehension.

How long, at the rate of a hundred millions of dollars a year, will it be before all the gold is withdrawn, unless we so reduce prices and values as to give our foreign creditors the property where they now have loans?

I would like to dwell at length upon the imaginary dangers always conjured up when it is proposed that this country should take independent action, but time will not permit.

For my part, I believe in a true American policy. I do not believe in increasing the value of foreign gold. I do believe in increasing the value of American silver, American wheat, American wool, American cotton, and all American staples. I do not believe in subjecting this country to financial dependence upon creditor nations. I believe in independence, political and financial. I do not believe in the gold standard. I would rather this country should be on a silver than a gold basis. I believe, however, that we can maintain the use of both metals in this country by means of wise laws, opening our mints to the free coinage of silver equally with gold, and thus by their equal use restoring the old parity, the old values, and the old-time prosperity.

The Appropriations.

SPEECH

OF

HON. WILLIAM J. COOMBS,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 4, 1895.

The House having under consideration the subject of appropriations—

Mr. COOMBS said:

Mr. SPEAKER: I have carefully noted the comments of my colleagues on the Committee on Appropriations, and, by the suggestion of the chairman, submit a few remarks in relation to them, without repeating the details of figures which they have given, and which will be found extended in the RECORD.

The chairman [Mr. SAYERS] has shown conclusively that there have been some reductions of the gross amounts appropriated by the Fifty-first and Fifty-second Congresses. Messrs. HENDERSON and CANNON have endeavored to show by different calculations that while there has been an apparent, there has been no real, reduction.

I shall not attempt to reconcile these different conclusions drawn from the same tables. The continuous contracts for river and harbor improvements and the construction of the new Navy authorized by one Congress and appropriated for by succeeding Congresses account for a large portion of the differences in the exhibit.

This Congress has not in this respect left so large a legacy to its successors as either the Fifty-first or Fifty-second, while it has been obliged to make most liberal appropriations to carry out the obligations incurred by its predecessors.

As I have faithfully attended every meeting of the committee, and have done my full share of the work of investigation, I am prepared to certify that nothing has passed without the most rigid scrutiny and the most exhaustive attempts toward economy, in which we have been seconded by the various Departments of Government.

In this work there has been no division of honors between the members of the two parties of which it is composed. I can say with certainty that I have in no case found a Democratic member insisting upon a larger appropriation than was thought necessary by a Republican associate. Every item of the various bills was carefully scrutinized in the committee, and in nearly every case unanimously agreed upon.

We can not, of course, find fault with any effort that is made by our Republican friends to make political capital out of the situation. Their effort is fully justified by precedent, but I would have been more gratified if both parties had attempted to improve

the occasion by drawing from it some lessons or indications to guide in the future government of the country.

THE NECESSITY OF AN INCOME.

The failure of one Congress after another to materially reduce appropriations, notwithstanding every honest effort in the direction of economy, should teach us that the necessary expenses of governing the country, and meeting its constantly increasing demands, are unavoidably large, and that if they keep pace with its growth will increase year by year.

These expenses must be paid whether the business of the country is prosperous or depressed. In fact, we have learned from experience that the demand for large expenditures is greater in seasons of depression than in years of prosperity. There is only one class of expenditures which in the natural course of events will decrease, and that is in the Department of Pensions, with the passing away of the old soldiers who are now receiving pecuniary recognition for their services in the dark days of the civil war. In fact, the indications that the decrease has already begun are unmistakable.

OUR SOURCES OF REVENUE.

Nearly all of our annual revenue is derived from two sources.

First, our collections from internal-revenue taxes. We can look with confidence for an increase from this source, which seems to be capable of expansion under wise legislation, without a material increase of burden upon the people. I do not refer in this statement to the income tax, which I can not regard as a part of the permanent policy of the Government, or one that will be accepted by the people.

Our other chief reliance for revenue is the tax on imports collected at our custom-houses. This I regard as uncertain and likely to decrease, whether the tariff be high or low. I am warned that I must explain my reasons for this expectation, and will do so as briefly as possible.

The country has decided that we can not embarrass our manufacturing interests by levying duties on raw materials drawn from abroad, and this Congress has wisely enacted it into law.

During a business experience extending over forty years I have watched the steady advance of our manufacturing industries in their ability to compete with those of other nations, and to constantly increase the number and value of the articles that they could export to markets open to the competition of all manufacturing nations. This ability has increased to a marvelous extent within the last five or six years, and has already received an additional impulse from the removal of duties on raw materials. There is scarcely a manufactured article that we produce in large quantities that can not meet foreign competition both in quality and in price.

Only those whose business brings them into immediate contact with it can appreciate the extent of our export of manufactured articles, not only to Spanish and Portuguese markets, but to England, Germany, and France, and their colonies, as well as to the markets of the East. Although our merchants and manufacturers are hampered by insufficient banking facilities, and are consequently unable to grant as favorable terms of credit as their European competitors, they are taking a good share of the trade. Statistics will show that they exceed in value the combined exports of our wheat and cotton. Although this branch of the subject is very attractive to me, I must not spend any more time upon it.

It needs no argument to convince you that whatever articles we can supply to the foreign market we can sell on more favorable terms to our own consumers than can be done by the foreign manufacturer, resulting in a constant decrease of imports and a corresponding decrease of revenue from our customs duties. Imports will of course never cease, but the natural tendency will be to confine them to articles of luxury and taste used almost exclusively by the rich or of such articles as can not be produced here on account of unfavorable conditions of climate. If you agree with me in these conclusions you will appreciate the necessity of a timely provision for raising revenue from other sources to meet the gradual falling off of duties.

I shall not attempt to make any suggestions upon this point. Those of you who will hereafter be clothed with the responsibility of legislation must take up the question.

You will not find it an easy task to provide new sources of revenue from the people without encountering their prejudices. They have been accustomed for so many years to contribute to the expenses of government in an indirect way that a change to direct and palpable assessments will meet with great opposition.

The same problem confronts every civilized nation, but in a more serious form. England, France, Germany, Spain, Greece, and Russia have exhausted every device in the way of direct and indirect taxation. Staggering under an immense load of indebtedness, with ever-increasing expenses caused by unsettled political conditions, with their industries and commerce menaced and made less profitable by new competition, they are facing a dark future.

We, on the contrary, during the thirty years that have succeeded the war, paid off nearly six billions of the obligations incurred by that unfortunate conflict, and an equal amount in the improvement of our rivers and harbors, building up of the Navy and fortifications, public buildings and running expenses of the Government, while our net permanent debt, including Government notes, does not at this time much exceed one and one-quarter billion dollars. So our condition in this respect is not a desperate one, but full of hope, provided intelligent, patriotic statesmanship is brought to the solution of the problems as they present themselves.

OUR FINANCIAL POLICY.

I should close my remarks at this point only that I think it proper to reply to the criticisms of the gentleman from Iowa [Mr. HENDERSON] upon the financial policy of the Administration, and the unsatisfactory condition in which that question is left by this Congress.

That the reforms begun by the repeal of the Sherman law were not followed up until every disturbing element, everything that stands in the way of a sound and safe monetary system, was removed is to be regretted. But that the blame for failure of action is entirely due to the Democratic party can not be truthfully maintained. Our Republican brethren must take their full share of the responsibility.

An analysis of the votes of the House on the various propositions looking to the funding of the notes issued by Government will show that a very large percentage of the members of that side of the Chamber voted against them. It was reasonable for those of us on this side of the House who were in favor of the reforms to count for support upon the members of the party that had made sound money an article of their faith, but they deserted us when the test came. They must be jointly responsible with those who have insisted that Government shall remain in the banking business, subject to all of its risks with none of the powers or resources accorded to bankers by every civilized nation.

They must not criticize our Executive or Secretary of the Treasury if, when driven to the wall and denied help by Congress, they were forced to avail themselves of the aid of private bankers in sustaining the credit of the nation. The financial world has approved of their policy in employing the same means to protect our gold reserve through the manipulation of exchange and other devices employed by the recognized bankers of European nations to protect their reserves.

It would have been better if the necessity had not existed, but that it did exist was clearly the fault of Congress and not of the Executive, and the nation to-day applauds him for his courage in assuming the responsibility.

The gentleman makes a mistake when he says that the sacrifice involved in the operation lowered the credit of the Government. On the contrary, it increased the price of our bonds, for the financial world recognized the fact that we had at the head of affairs a man able and willing to use every power in his possession to sustain the integrity and credit of the nation.

The Democratic party was unfortunate in coming into power at the time of the culmination of unfortunate conditions in the creation of which it had no part. The whole world was in the throes of financial and industrial distress, from which we naturally could not be exempt. No party can be justly held responsible for conditions that affect the whole world. We have, however, been held, in the public estimation, responsible for not only that, but for the results of the conflict on the silver question, which has been more persistent than ever before. While its advocates have not been able to carry a single point in the contest, they have succeeded in preventing much necessary financial legislation.

It is unfortunate that our country and our Congress should have been the chosen field in which its battles have been fought, but it is a matter of congratulation to us, who believe that the adoption of the silver standard by our nation would have resulted in the greatest misfortune, to know that the Fifty-third Congress has not yielded one inch to the demands of its advocates, and that the question has been left open for the decision of the world at large.

Now, Mr. Speaker and gentlemen, in closing my remarks, the last that I shall probably make to this House before retiring to private life, I wish to thank you sincerely for all the kindness that I have experienced at your hands. I came to you from my vocation as a merchant, unaccustomed to the ways of legislative bodies, having nothing to contribute to your deliberations aside from my experience in the ways of commerce. Of that experience I have contributed to the extent of my ability, and you have kindly listened to me.

Although differing from many of you radically upon many of the questions that have engaged our attention, and frankly expressing my convictions upon them, it has never been at the expense of personal friendship and esteem. I am not aware that there is a single man on either side of the House who is not my friend, and for whom I do not entertain a cordial regard which I shall carry with me into the walks of private life.

The Currency.

SPEECH

OF

HON. RICHARD PARKS BLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895,

On the joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds.

Mr. BLAND said:

Mr. SPEAKER: As further remarks on the question of issuing the sixty-five million gold bonds I will submit a review of the record made in Congress on the silver question since the act of 1873 demonetizing silver, for silver restoration is the true remedy for bond issues, and the past battles on this line are instructive.

Forty-fourth Congress.

Executive—Republican.

Senate—Republicans, 40; Democrats, 20; vacancy, 1.

House—Republicans, 107; Democrats, 188.

ACT TO REDEEM FRACTIONAL CURRENCY.

[Proceedings in House.]

A bill (H. R. 2450) to provide for a deficiency in the Printing and Engraving Bureau in the Treasury Department, and for the issue of silver coin of the United States in place of fractional currency. Reported from the Committee on Appropriations.

March 27, 1876, Mr. HOLMAN submitted the following as a new section:

"SEC. 3. The Secretary of the Treasury is hereby prohibited from making any further increase in the interest-bearing debt of the United States by the issue and sale of bonds for the purchase of silver bullion for coinage. But silver bullion shall, under regulations to be prescribed by the Secretary of the Treasury, be received by the several mints for fabrication into subsidiary coins, and paid for in such coins at a rate or price per ounce to be fixed from time to time, according to the market rate, by the Director of the Mint with the approval of the Secretary of the Treasury, on the basis of the difference between the par value of such coin and the value of such bullion, and an addition not exceeding 1 per cent, in the discretion of the Secretary of the Treasury, shall be made to the purchasing price as an allowance for the transportation of coin. And the excess of the par value of such coin over the value of the bullion so deposited, less the amount that shall be allowed for transportation, as aforesaid, determined as above provided, shall be from time to time covered into the Treasury, as the Secretary of the Treasury shall direct: *Provided, however*, That such silver coins of the denominations aforesaid, and the silver bullion now owned by the United States, shall not exceed in par value the par value of the fractional currency now authorized by law."

Mr. E. Wells (Democrat) moved the following proviso to the proposed new section:

"*Provided*, That if silver bullion is not presented for coinage in sufficient quantity for the redemption of fractional currency the Secretary of the Treasury may, under the provisions of the act entitled 'An act to provide for the resumption of specie payments,' approved January 14, 1875, purchase silver bullion for the purpose of coinage as provided in said act."

Which was agreed to—yeas 118, nays 100.

Yeas—Democrats, 45; Republicans, 72; Independent, 1.

Nays—Democrats, 88; Republicans, 16; Independent, 2.

Mr. Reagan (Democrat) of Texas offered the following amendment:

Insert as section 4 the following:

"That the silver coins of the United States of the denomination of \$1 shall be a legal tender at their nominal value for any amount not exceeding \$50 in any one payment. And silver coins of the United States of denominations of less than \$1 shall be a legal tender at their nominal value for any amount not exceeding \$25 in any one payment."

Which was agreed to—yeas 122, nays 94.

Yeas—Democrats, 90; Republicans, 22; Independent, 1.

Nays—Democrats, 28; Republicans, 65; Independent, 1.

March 31, 1876, the amendment offered by Mr. HOLMAN, as amended on motion of Mr. E. Wells, was disagreed to—yeas 68, nays 77.

The bill as amended by the amendment of Mr. Reagan was then passed—yeas 122, nays 100.

Yeas—Democrats, 50; Republicans, 70; Independent, 2.

Nays—Democrats, 80; Republicans, 18; Independent, 2.

[For foregoing proceedings see CONGRESSIONAL RECORD, volumes 14 and 15.]

[Proceedings in Senate on H. R. 2450, April 10, 1876.—CONGRESSIONAL RECORD, volume 15.]

Mr. SHERMAN reported the bill from the Committee on Finance with amendments.

The bill was amended by striking out all after the second section.

Mr. SHERMAN moved to add the following words to the second section:

"And all fractional currency redeemed under the act shall be held to be part of the sinking fund provided for by existing law, the interests to be computed thereon as in the case of bonds redeemed under the acts relating to the sinking fund;" which was agreed to.

The bill then passed without division.

[Proceedings in House on the Senate amendments to H. R. 2450, April 11 and 12, 1876.]

The House concurred in the Senate amendments. The vote on concurring in the amendment striking out the third section (Mr. Reagan's amendment) was—ayes 90, nays 55.—*Congressional Record*, volume 15.

[NOTE.—In the Senate it was stated that the object in striking out was to disambarrass this bill of the provision, leaving it to the future to consider the question as an independent one. The same statement was made in the House.]

The bill became a law April 17, 1876. (Stat. at L., volume 19.)

BILL FOR THE ISSUE OF SILVER COIN.

June 10, 1876, Mr. Cox (Democrat) of New York, from the Committee on Banking and Currency, reported the following joint resolution (H. Res. 109) as a substitute for the original resolution introduced by Mr. Frost (Republican) of Massachusetts:

"That the Secretary of the Treasury, under such limits and regulations as will best secure a just and fair distribution of the same through the country, may issue the silver coin now in the Treasury to an amount not exceeding \$10,000,000 in exchange for an equal amount of legal-tender notes; and the notes so received in exchange shall be kept as a special fund, separate and apart from all other money in the Treasury, and be reissued only upon the retirement and destruction of a like sum of fractional currency received at the Treasury in payment of dues to the United States; and said fractional currency, when so substituted, shall be destroyed and held as part of the sinking fund, as provided in the act approved April 17, 1876."

The previous question was ordered—yeas 106, nays 80.

Yeas—Democrats, 40; Republicans, 55; Independent, 2.

Nays—Democrats, 75; Republicans, 9; Independent, 2.

The joint resolution then passed without a division, the yeas and nays being refused.—*Congressional Record*, volume 16.

[Proceedings in Senate on H. Res. 109.]

June 21, 1876, considered, and amended by striking out the word "now" after the word "coin," and by adding the following as section 2:

"SEC. 2. That the trade dollar shall not hereafter be a legal tender, and the Secretary of the Treasury is hereby authorized to limit from time to time the coinage thereof to such an amount as he may deem sufficient to meet the export demand for the same."

The joint resolution then passed without division.—*Congressional Record*, volume 16.

[Proceedings in House on Senate amendments to H. Res. 109.]

June 28, 1876, Mr. Payne (Democrat), from the Committee on Banking and Currency, reported the Senate amendments, recommending concurrence.

On concurring in the amendment to strike out the word "now," after the word "coin," the yeas were 82, nays 97.

Yeas—Democrats, 19; Republicans, 61; Independent, 2.

Nays—Democrats, 88; Republicans, 7; Independent, 2.

The vote on concurring in the amendment adding a new section was—yeas 59, nays 108, but was reconsidered on motion of Mr. Randall (Democrat) of Pennsylvania, who moved to concur in said amendment with an amendment as follows:

"SEC. 2. That in addition to the amount of subsidiary coin authorized by law to be issued in redemption of the fractional currency it shall be lawful to manufacture at the several mints and issue through the Treasury and its several offices such coin to the amount of \$20,000,000."

"SEC. 3. That the silver bullion required for this purpose shall be purchased, from time to time, at market rate, by the Secretary of the Treasury, with any money in the Treasury not otherwise appropriated; and the resulting coin may be issued in the ordinary disbursement of the Treasury; but no purchase of bullion shall be made under this act when the market rate for the same shall be such as will not admit of the coinage and issue as herein provided without loss to the Treasury; and any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed \$1,000,000."

Mr. Frederick Landers (Democrat) submitted the following amendment to the amendment of Mr. Randall:

"And it is further provided that the Secretary of the Treasury is directed to authorize the coinage of the standard silver dollar of the same weight and fineness in use January 1, 1861; and said dollar shall be a legal tender in payment of all debts, public and private."

Which was agreed to—yeas 110, nays 55.

Yeas—Democrats, 85; Republicans, 23; Independent, 2.

Nays—Democrats, 16; Republicans, 37; Independent, 2.

The amendment offered by Mr. Randall, as amended, was agreed to—yeas 110, nays 45.

Yeas—Democrats, 84; Republicans, 23; Independent, 3.

Nays—Democrats, 15; Republicans, 29; Independent, 1.

[Conference appointed on H. Res. 109.]

In Senate, July 1, 1876, House amendments to Senate amendments disagreed to, and Messrs. SHERMAN (Republican), Boutwell (Republican), and Bogy (Democrat) appointed conferees.

In House, July 6, 1876, House agreed to conference and appointed Messrs. Payne (Democrat), Randall (Democrat), and F. Landers (Democrat) conferees.

[Report of the conference on H. Res. 109.]

July 13, 1876, the committee of conference submitted the following report, signed by all the members except Mr. Landers (Democrat) of Indiana:

The committee of conference on the disagreeing votes of the two Houses on the amendments to the joint resolution (H. Res. 109) for the issue of silver coin, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the first amendment of the Senate to said joint resolution, and agree thereto amended as follows: In line 4 strike out the word "now" and insert "at any time;" and the Senate agree to the same.

That the Senate recede from its disagreement to the amendment of the House to the second amendment of the Senate to said joint resolution, and agree to a substitute for said House amendment as follows:

Add to the second amendment of the Senate the following:

"SEC. 3. That in addition to the amount of subsidiary silver coin authorized by law to be issued in redemption of the fractional currency it shall be lawful to manufacture at the several mints and issue through the Treasury and its several offices such coin to an amount that, including the amount of subsidiary silver coin and of fractional currency outstanding, shall in the aggregate not exceed at any time \$50,000,000."

"SEC. 4. That the silver bullion required for the purposes of this act shall be purchased, from time to time, at market rate, by the Secretary of the Treasury, with any money in the Treasury not otherwise appropriated; but no purchase of bullion shall be made under this act when the market rate for the same shall be such as will not admit of the coinage and issue, as herein provided, without loss to the Treasury; and any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed \$300,000."

And the House agree to the same.

The conference report was agreed to—yeas 123, nays 70.

Yeas—Democrats, 66; Republicans, 62; Independent, 1.

Nays—Democrats, 50; Republicans, 15; Independent, 2.

The report was agreed to in the Senate without division.
[For proceedings see CONGRESSIONAL RECORD, volume 17.]
The joint resolution became a law July 22, 1876. (Stat. at L., volume 19.)

BILL FOR THE ISSUE OF SUBSIDIARY COIN.

June 10, 1876, Mr. Cox (Democrat), of New York, from the Committee on Banking and Currency reported the bill (H. R. 3308) for the issue of coin, and for other purposes, introduced by Mr. Randall (Democrat), of Pennsylvania, with the following amendment striking out all after the enacting clause and inserting:

"That, in addition to the amount of subsidiary coin authorized by law to be issued in redemption of the fractional currency, it shall be lawful to manufacture at the several mints, and issue through the Treasury and its several offices, such coin to the amount of \$20,000,000.

"SEC. 2. That the silver bullion required for this purpose shall be purchased, from time to time, at market rate, by the Secretary of the Treasury, with any money in the Treasury not otherwise appropriated; and the resulting coin may be issued in the ordinary disbursement of the Treasury or in exchange for legal-tender notes at par; but no purchase of bullion shall be made under this act when the market rate for the same shall be such as will not admit of the coinage and issue or exchange as herein provided without loss to the Treasury, and any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury as provided under existing laws relative to the subsidiary coinage: *Provided*, That the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed \$1,000,000.

"SEC. 3. That the trade dollar shall not hereafter be a legal tender; and the Secretary of the Treasury is hereby authorized to limit, from time to time, the coinage thereof to such an amount as he may deem sufficient to meet the export demand for the same."

An amendment submitted by Mr. Reagan (Democrat) of Texas, striking out in section 2 the words "or in exchange for legal-tender notes at par," and after the words "coinage and issue," the words "or exchange," was agreed to, and the bill as amended was passed without division.—*Congressional Record*, volume 16.

[Proceedings in Senate on H. R. 3308.]

June 27, 1876, the Committee on Finance reported an amendment, striking out all of the House bill and inserting four sections, providing—

First. For the coinage of silver dollars at 412.8 grains, to be legal tender for sums not exceeding \$20.

Second. For exchanging such dollars and minor coins for legal tenders, to be canceled and not reissued or replaced.

Third. For purchasing silver bullion at market rates for such coinage, to be made without loss in coinage and issue.

Fourth. Prohibiting legal tender of the trade dollar and limiting its coinage to export demand.

June 28, 1876, Senator Boggs (Democrat) moved to strike out in the first section the words "not exceeding \$20;" on which the vote was—yeas 15, nays 14. (No quorum.)

Yeas—Democrats, 7; Republicans, 11.

Nays—Democrats, 3; Republicans, 10; Independent, 1.

June 29, 1876, bill and amendments recommitted to the Committee on Finance, and was not reported back.—*Congressional Record*, volume 17.

RESOLUTION FOR ISSUE OF SILVER COIN.

In House, May 15, 1876, Mr. Payne (Democrat) moved to suspend the rules and pass a joint resolution authorizing the Secretary of the Treasury to issue \$10,000,000 in exchange for an equal amount of legal-tender notes; which was disagreed to (two-thirds not voting in favor thereof—yeas 126, nays 73; as follows:

Yeas—Democrats, 71; Republicans, 62; Independents, 2.

Nays—Democrats, 65; Republicans, 6; Independents, 2.

(See CONGRESSIONAL RECORD, volume 16.)

COINAGE OF SILVER DOLLARS.

[In House.]

July 24, 1876, Mr. Kelley (Republican) of Pennsylvania moved to suspend the rules and pass a bill (H. R. 3923) to provide for the coinage of the standard silver dollar of the United States and for restoring its legal-tender character; which was disagreed to—yeas 119, nays 66 (two-thirds not voting in favor thereof).

Yeas—Democrats, 84; Republicans, 33; Independents, 2.

Nays—Democrats, 27; Republicans, 46; Independent, 1.

(See CONGRESSIONAL RECORD, volume 17.)

SILVER COINAGE BILL.

[In House.]

July 19, 1876, Mr. BLAND (Democrat), Missouri, from the Committee on Mines and Mining, reported a bill (H. R. 3835) to utilize the product of gold and silver mines, and for other purposes.

December 13, 1876, Mr. BLAND offered the following substitute therefor: "That there shall be, from time to time, coined at the mints of the United States silver dollars of the weight of 412½ grains standard silver to the dollar, as provided for in the act of January 18, 1837; and that said dollar shall be a legal tender for all debts, public and private, except where payment of gold coin is required by law;" which was agreed to without a division.

The bill as amended by the substitute of Mr. BLAND then passed the House—yeas 168, nays 63; as follows:

Yeas—Democrats (in italics), 123; Republicans (in roman), 45.

Nays—Democrats, 17; Republicans, 16.

BILL TO REMONETIZE THE STANDARD SILVER DOLLAR.

In the House, November 5, 1877, Mr. BLAND moved to suspend the rules and pass a bill (H. R. 1003) to authorize the coinage of a dollar of 412½ grains silver standard, and for other purposes; which was agreed to—yeas 164, nays 34; as follows:

(Democrats in italics; Republicans in roman.)

10 Democrats, 24 Republicans.
(See CONGRESSIONAL RECORD, volume 23.)

In Senate (H. R. 1003), November 21, 1877, Mr. ALLISON (Republican) of Iowa, from the Committee on Finance, reported the bill striking out the last clause of section 1, commencing "and any owner," etc., and inserting a provision for the purchase of not less than \$2,000,000 nor more than \$4,000,000 of silver per month.

February 15, 1878, the amendment of the committee was agreed to—yeas 40, nays 22.

Yeas—Democrats, 16; Republicans, 20.
Nays—Democrats, 17; Republicans, 4; Independent, 1 (Davis).
The second amendment of the committee to add section 2, providing for an international monetary conference was agreed to—yeas 40, nays 30.
Yeas—Democrats, 10; Republicans, 20; Independent, 1.
Nays—Democrats, 24; Republicans, 6.
Sundry amendments were submitted, only a few of which were agreed to. (See CONGRESSIONAL RECORD, volume 7, part 2.)
The bill as amended was then passed—yeas 48, nays 21; as follows:
(Democrats in italics; Republicans in roman; Independent in small caps.)

YEAS—48.
Allison, DAVIS, ILL. Johnston, Oglesby,
Armstrong, Davis, W. Va. Jones, Fla. Paddock,
Bailey, Dennis, Jones, Nev. Plumb,
Beck, Dorsey, Kellogg, Sanlebury,
Booth, Easta, Kirkwood, Saunders,
Bruce, Ferry, McCreery, Spencer,
Cameron, Pa. Garland, McDonald, Teller,
Cameron, Wis. Gordon, McMillan, Thurman,
Chaffee, Grover, Matthews, Voorhees,
Cockrell, Hereford, Mayes, Wallace,
Coke, Howe, Morrison, Windom,
Conover, Ingalls, Morgan, Withers.

24 Democrats, 23 Republicans, 1 Independent.

NAYS—21.
Anthony, Conkling, Lamar, Sargent,
Barnum, Dawes, McPherson, Wadleigh,
Bayard, Edmunds, Mitchell, Whyte,
Blaine, Hamlin, Morrill,
Burnside, Hoar, Randolph,
Christiancy, Kernan, Rollins.

7 Democrats, 14 Republicans.

So it was
Resolved, That the bill pass, and that the title be amended to read, "An act to authorize the coinage of the standard silver dollar, and to restore its legal-tender character."

In House of Representatives, H. R. 1003, with Senate amendments.
February 21, 1878, the House concurred in the second amendment of the Senate, being the purchasing clause—yeas 203, nays 72.

Yeas—Democrats, 74; Republicans, 129.
Nays—Democrats, 68; Republicans, 4.
The amendment of the Senate for an international conference was agreed to—yeas 106, nays 71.

Yeas—Democrats, 77; Republicans, 119.
Nays—Democrats, 63; Republicans, 8.
The other amendments were concurred in without a division.
The bill then went to the President (Hayes), who vetoed it on February 23, 1878. (For veto message see CONGRESSIONAL RECORD, volume 28.)

In House (H. R. 1003), the House passed the bill over the President's veto on the same day (February 23, 1878)—yeas 196, nays 73.

Yeas—Democrats, 118; Republicans, 78.
Nays—Democrats, 22; Republicans, 51.

In Senate (H. R. 1003) February 28, 1878, the Senate passed the bill over the President's veto—yeas 40, nays 19.

Yeas—Democrats, 25; Republicans, 20; Independent, 1.
Nays—Democrats, 9; Republicans, 10.

The bill therefore became a law, and is known as the Bland-Allison Act, or the act of February 28, 1878. (See Statutes at Large, volume 30.)

FREE COINAGE OF GOLD AND SILVER.

In House, March 5, 1878, Mr. SPRINGER (Democrat) of Illinois moved to suspend the rules and pass a bill to authorize the coinage of gold and silver upon the same terms, and to permit deposits thereof in the Treasury for the same purposes.

Which was disagreed to—yeas 140, nays 102 (two-thirds not voting therefor).

Yeas—Democrats 102, Republicans 38.
Nays—Democrats 25, Republicans 77.
(See CONGRESSIONAL RECORD, volume 28.)

PAYMENT OF BONDS IN SILVER.

In Senate, January 16, 1878 (before passage of Bland-Allison Act), Mr. Matthews submitted a concurrent resolution declaring that all United States bonds issued under the refunding and redemption acts of July 14, 1870, and January 14, 1875, could be paid at the option of the Government in standard silver dollars of 412½ grains without violation of public faith, etc.

All amendments proposed were voted down, and the resolution was agreed to—yeas 43, nays 22.

Yeas—Democrats, 23; Republicans, 19; Independent, 1.
Nays—Democrats, 7; Republicans, 15. (CONGRESSIONAL RECORD, volume 27.)

In House, January 29, 1878, the preamble and concurrent resolution of the Senate were agreed to—yeas 189, nays 79.

Yeas—Democrats, 116; Republicans, 73.
Nays—Democrats, 23; Republicans, 56.
(See CONGRESSIONAL RECORD, volume 27.)

RECOINAGE OF TRADE DOLLARS.

In House, December 9, 1878, Mr. Durham (Democrat) moved to suspend the rules and pass a bill to provide for the exchange and recoinage of the trade dollar, and to cease the further coinage of the trade dollar; which was disagreed to—yeas 153, nays 91 (two-thirds not voting therefor).

Yeas—Democrats, 104; Republicans, 49.
Nays—Democrats, 30; Republicans, 71.
(See CONGRESSIONAL RECORD, volume 33.)

LEGAL-TENDER QUALITY OF SILVER DOLLARS.

In House, December 9, 1878, Mr. Fort (Republican) moved to suspend the rules and pass a resolution declaring any discrimination against standard silver dollars by national banking associations a defiance of law, and instructing the Committee on Banking and Currency to report a bill for withdrawing their circulation.

Disagreed to—yeas 51, nays 89 (not two-thirds in favor).

Yeas—Democrats, 100; Republicans, 45.
Nays—Democrats, 16; Republicans, 75.
(See CONGRESSIONAL RECORD, volume 33.)

FORTY-SIXTH CONGRESS.

Executive—Republican.
Senate—42 Democrats, 33 Republicans, 1 Independent.
House—148 Democrats, 130 Republicans, 15 Nationals.

EXCHANGE OF SUBSIDIARY COINS.

H. R. 4, to provide for the interchange of subsidiary coins for legal-tender money under certain circumstances, and to make such coins a legal tender in all sums not exceeding \$10.

April 16, 1879, reported from the Committee on Coinage, Weights, and Measures by Mr. Stephens (Democrat).

April 19, 1879, Mr. SPRINGER (Democrat) moved to amend the bill in the third section by making fractional silver a legal tender for \$20, instead of \$10, as provided in the bill.

Agreed to—yeas 123, nays 100.

Yeas—Democrats, 97; Republicans, 14; Nationals, 12.
Nays—Democrats 15; Republicans 88.

April 22, 1879, bill passed without a division.
(See CONGRESSIONAL RECORD, volume 37.)

In Senate (H. R. 4): May 28, 1879, an amendment of the Committee on Finance striking from the first section the word "twenty" and inserting "ten" was agreed to—yeas 38, nays 22.

Yeas—Democrats, 11; Republicans, 22.
Nays—Democrats, 21; Republicans, 0; Independent, 1.

Several other unimportant amendments were agreed to.
The House concurred in the amendments of the Senate. (See CONGRESSIONAL RECORD, volume 38.)

The bill became a law June 9, 1879. (Statutes at Large, volume 21.)

EXCHANGING TRADE DOLLARS FOR LEGAL-TENDER SILVER DOLLARS.

In House, H. R. 13, to provide for the exchange of the trade dollar for legal-tender silver dollars, introduced by Mr. Fort (Republican).

June 18, 1879, reported and passed with amendments, without a division.
(See CONGRESSIONAL RECORD, volume 38.)

Not acted upon in the Senate.

REMONETIZATION AND FREE COINAGE OF SILVER.

In Senate, June 27, 1879, Mr. VEST (Democrat) offered the following resolution:

"Resolved by the Senate (the House of Representatives concurring), That the complete remonetization of silver, its full restoration as a money metal, and its free coinage by the mints of the United States are demanded alike by the dictates of justice and wise statesmanship."

June 30, 1879, this resolution was referred to the Committee on Finance, on motion of Mr. ALLISON (Republican)—yeas 23, nays 22.

Yeas—Democrats (in italics), 4; Republicans (in roman), 19; as follows:

Allison,	Carpenter,	Kellogg,	Platt,
Anthony,	Chandler,	Kernan,	Rollins,
Bayard,	Conkling,	Kirkwood,	Saunders,
Blair,	Estlin,	Logan,	Wayte,
Burnside,	Ferry,	Morrill,	Windom—23.
Cameron of Wis.	Hill of Colo.	Paddock,	

Nays—Democrats (in italics), 21; Independent, 1 (Davis); as follows:

Beck,	Garland,	Mazey,	Vest,
Butler,	Harris,	Morgan,	Voorhees,
Call,	Hereford,	Pendleton,	Walker,
Cockrell,	Houston,	Saulsbury,	Williams—22.
Coke,	Jones,	Slater,	
DAVIS of Ill.	Jones of Fla.	Vance,	

The resolution was not reported from the committee. (See CONGRESSIONAL RECORD, volume 38.)

COINAGE AND COIN AND BULLION CERTIFICATES.

In House, April 30, 1879, Mr. A. J. Warner (Democrat) reported from the Committee on Coinage, Weights, and Measures the bill introduced by him (H. R. 564) to amend certain sections of the Revised Statutes of the United States relating to coinage and coin and bullion certificates, and for other purposes.

May 15, 1879, Mr. Killinger (Republican) moved to lay the bill on the table; which was disagreed to—yeas 109, nays 126.

Yeas—Democrats, 14; Republicans, 95.

Nays—Democrats, 107; Republicans, 10; Independents, 9.

The bill was considered on May 16, 17, 20, 22, 23, and 24, and sundry amendments offered. (For proceedings see CONGRESSIONAL RECORD, volume 38.)

May 24, 1879—The bill passed—yeas 114, nays 97.

Yeas—Democrats, 90; Republicans, 6; Independents, 9.

Nays—Democrats, 8; Republicans, 89.

In Senate February 3, 1880, the bill (H. R. 564) was reported by Mr. Bayard (Democrat), from the Committee on Finance, adversely. No further action.

FORTY-SEVENTH CONGRESS.

Executive—Republican.
Senate—37 Republicans, 37 Democrats, 1 Independent, 1 Readjuster.
House—130 Republicans, 131 Democrats, 10 Nationals, 2 Readjusters.

SILVER CERTIFICATES AND Bimetallism.

In Senate, March 17, 1882, Mr. Brown (Democrat) offered the following resolutions:

"Resolved, That it is inexpedient and unwise to contract the currency by the withdrawal from circulation of what are known as silver certificates or to discontinue or further restrict the coinage of silver."

"Resolved further, That gold and silver coin, based upon a proper ratio of equivalence between the two metals, and issues of paper, predicated upon and convertible into coin on demand, constitute the proper circulating medium of this country."

The resolutions were referred to the Committee on Finance—yeas 30, nays 24.

Yeas—Democrats, 2; Republicans, 23.

Nays—Democrats, 23; Independent, 1.
(See CONGRESSIONAL RECORD, volumes 52-53.)

RETIREMENT OF TRADE DOLLARS.

In House, June 19, 1882, on motion of Mr. D. C. Smith (Republican) the rules were suspended and a bill (H. R. 4671) passed without division for the retirement of trade dollars from circulation. No action by the Senate. (See CONGRESSIONAL RECORD, volume 55.)

FORTY-EIGHTH CONGRESS.

Executive—Republican.
Senate—40 Republicans, 36 Democrats.
House—201 Democrats, 110 Republicans, 4 Independents, 1 Greenbacker.

REDEMPTION OF TRADE DOLLARS.

April 1, 1884, House bill 4976, reported by Mr. George E. Adams (Republican), from the Committee on Banking and Currency, pending in the House of Representatives, authorizing receipt to January 1, 1886, of trade dollars for all dues to United States; section 2, exchangeable for standard dollars; section 3, to be sent to mints for coinage; section 4, to be part of coinage under act of February 28, 1878.

Mr. BLAND moved to strike out section 4. Agreed to—yeas 131—115 Democrats, 14 Republicans, 2 Independents; nays 119—37 Democrats, 81 Republicans, 1 Independent.

Passed—yeas 198—140 Democrats, 56 Republicans, 2 Independents; nays 45—11 Democrats, 33 Republicans, 1 Independent.

(See CONGRESSIONAL RECORD, volume 66.)
In Senate (H. R. 4976). In the Senate, second session Forty-eighth Congress, the Finance Committee reported a substitute of five sections. Section 1 authorized exchange for standard dollars to July 1, 1885; section 2, to be sent to mints for coinage as part of bullion under act of February 28, 1878; section 4, to renew negotiations with Latin Union and other foreign powers for treaties to open mints to free coinage; section 5, if no such treaties be ratified before August 1, 1886, then suspension of act of February 28, 1878. February 4, 1885, Mr. Ingalls moved to strike out section 5. No other action.
(See CONGRESSIONAL RECORD, volume 72.)

SUSPENSION OF BLAND-ALLISON ACT.

In the House of Representatives, February 26, 1885, House bill 6256, being the sundry civil appropriation bill, was pending with a clause in it to suspend the operations of the law of February 28, 1878. In other words, to suspend the further purchase of silver, just as is proposed in this bill.

Mr. Randall moved to suspend the rules and consider said clause. It was disagreed to—yeas 118, nays 132; and it was abandoned and stricken from the bill.

(See CONGRESSIONAL RECORD, volume 73.)
To prohibit issue of Treasury notes of less than \$5, and to provide for the issue of silver certificates of \$1, \$2, and \$5.

In House, December 15, 1884, Mr. LACEY (Republican) on behalf of the Committee on Coinage, Weights, and Measures, moved to suspend the rules and pass H. R. 7232. Disagreed to—yeas 50, nays 219.
(See CONGRESSIONAL RECORD, volume 71.)

FORTY-NINTH CONGRESS.

Executive—Democratic.

Senate—41 Republicans, 35 Democrats.

House—184 Democrats, 139 Republicans, 2 Labor-Greenback.

FREE COINAGE OF SILVER.

April 8, 1886, in the House of Representatives, House bill 5690, for the free coinage of silver dollars and placing silver on an equality with gold, reported adversely by the Coinage Committee, was pending. Mr. Dibble's amendment to strike out and substitute a provision for the repeal of the act of February 28, 1878, unless silver be remonetized by the concurrent action of the nations of Europe with the United States, was disagreed to—yeas 84—33 Democrats, 51 Republicans; nays 201—139 Democrats, 71 Republicans.

(See CONGRESSIONAL RECORD, volumes 77, 78.)

REDEMPTION OF TRADE DOLLAR.

December 17, 1886, in the Senate, Senate bill 190, for the exchange to July 1, 1887, of trade for standard dollars, and to be sent to mints for coinage as part of the bullion to be purchased under act of February 28, 1878, was passed without division.
(See CONGRESSIONAL RECORD, volume 84.)

In the House of Representatives, February 12, 1887, Senate bill 190 was pending. Lanham's amendment, as substituted, authorizing the receipt of trade dollars for Government dues and for exchange for standard dollars, and for coining the same into standard dollars, not as part of the bullion and coinage, under act of February 28, 1878, was agreed to on division—yeas 127, nays 90—and passed—yeas 174, nays 36, and went to conference. The committee of conference reported a substitute, providing for the exchange for six months from date of trade for standard dollars or subsidiary coins, and for coining of the same not to be counted, under act of February 28, 1878. In the Senate this amendment was agreed to. Yeas 49—23 Democrats, 26 Republicans; nays 5—2 Democrats, 3 Republicans. In the House of Representatives it was agreed to without division.

(See CONGRESSIONAL RECORD, volume 85.)

The bill became a law without the approval of the President.

FIFTIETH CONGRESS.

Executive—Democratic.

Senate—46 Republicans, 37 Democrats.

House—169 Democrats, 152 Republicans, 2 Labor, 2 Independents.

PURCHASE OF UNITED STATES BONDS.

In the House of Representatives, on February 29, 1888, House bill 5034, authorizing the application of the surplus in the Treasury to the purchase or redemption of United States bonds, was passed.

(See CONGRESSIONAL RECORD, volume 101.)

[H. R. 5034.]

In the Senate, on March 26, 1888, Senator Spooner's substitute, declaring section 2 of the sundry civil appropriation law of June 30, 1882, "a permanent provision," was agreed to. Senator Beck offered a section, directing the Secretary of the Treasury on the retirement of national bank circulation and failure of other such banks to take out equal amount, then to purchase an equivalent amount of silver bullion in excess of the minimum required under the law of February 28, 1878, to be coined and used as provided in said act; which was agreed to—yeas 38—22 Democrats, 16 Republicans; nays 13—2 Democrats, 11 Republicans. No action in the House of Representatives.

[Declaratory resolution of the House on subject of purchase or redemption of bonds.]

April 16, 1888, Mr. Wilkins (Democrat) offered a resolution declaring it to be the sense of the House that the provision in the sundry civil bill of March 3, 1881, permitting the Secretary of the Treasury to apply the surplus to the purchase or redemption of bonds, was intended to be a permanent provision of law and in full force and effect. Agreed to—yeas 138, nays 64. (See CONGRESSIONAL RECORD, volumes 90-91.)

FIFTY-FIRST CONGRESS.

Executive—Republican.

Senate—47 Republicans, 37 Democrats.

House—173 Republicans, 154 Democrats, 1 Wheeler, 1 vacancy.

SILVER BULLION BILL.

[In House.]

June 5, 1890, in the House of Representatives, House bill 5381, known as the Windom silver bullion purchase bill, was pending. Mr. BLAND moved to recommit, with instructions to report back a bill for the free coinage of silver. Yeas 116—101 Democrats, 14 Republicans, 1 Independent; nays 140—12 Democrats, 128 Republicans.

130 Republicans, 22 Democrats.

The Senate amendments were then nonconcurrent in and conference had. The conference report was agreed to in the Senate July 10, by a vote of 59 yeas, all Republicans, and 26 nays, all Democrats, and in the House of Representatives, July 12, by 122 yeas—121 Republicans, 1 Independent (Featherstone), and 90 nays, all Democrats.

The conferees agreed to a bill with sundry amendments. The conference committee substituted in the bill as it passed 4,500,000 ounces for \$4,500,000, and they modified the legal tenders "except where otherwise expressly stipulated in the contracts," and they substituted for the bullion redemption provision a requirement that upon demand the Secretary of the Treasury shall redeem the notes in gold or silver coin in his discretion—and the declaration that it is the established policy of the United States to maintain a parity between the two metals at the present legal ratio, or such ratio as may be provided by law, and to require 2,000,000 ounces of the bullion purchased to be coined monthly into dollars until July 1, 1891.
(See CONGRESSIONAL RECORD, volume 110.)

FREE COINAGE.

[In Senate.]

On January 5, 1891, Mr. STEWART moved to consider Senate bill 4675, replacing the Federal election bill. That was agreed to. Yeas 34—26 Democrats, 8 Republicans; nays, 29 Republicans.

On January 14, 1891, Mr. STEWART moved a free-coinage amendment to the bill, which had been laid aside up to that time. That was agreed to. Yeas 42—35 Democrats, 16 Republicans; nays 30—5 Democrats, 27 Republicans.

Mr. Vest offered a free and unlimited coinage provision as a substitute, and that was agreed to. Yeas 39—24 Democrats and 15 Republicans; nays 27—1 Democrat and 26 Republicans.

[CONGRESSIONAL RECORD, volume 116, page 1223.]

(See CONGRESSIONAL RECORD, volume 23, part 6.)

In the House of Representatives, July 5, 1892, the bill (S. 51) was referred to the Coinage Committee. July 6, Mr. TRACER's motion to refer the bill to the Committee on Banking and Currency was disagreed to—yeas 43, nays 129. Other filibustering motions were resorted to.

July 13, Mr. CATCHINGS, from the Committee on Rules, reported a resolution to consider Senate bill 51. The previous question on the same was ordered. Yeas 102—101 Democrats, 61 Republicans; nays 130—114 Democrats and 16 Republicans and Independents. The resolution was then rejected. Yeas 136—118 Democrats, 9 Republicans, and 9 Alliance; nays 151—94 Democrats, 60 Republicans. (See CONGRESSIONAL RECORD, volume 125.)

FIFTY-THIRD CONGRESS.

Executive, Senate, and House—Democratic.

BILL TO REPEAL "SHERMAN" ACT.

On August 11, 1893, Mr. WILSON of West Virginia introduced a bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

For this bill Mr. BLAND proposed the following substitute:

"A bill for the free coinage of silver, and for other purposes.

"SECTION 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act all holders of silver bullion to the amount of \$100 or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

"SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver. Said dollars to be a legal tender for all debts, dues, and demands, both public and private.

"SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and receive silver certificates in the manner now provided by law for the standard silver dollars.

"SEC. 4. That so much of the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' as requires the monthly purchase of 4,500,000 ounces of silver bullion be, and the same is hereby, repealed."

Mr. BLAND also submitted the following special order, to wit:

"Ordered, That the bill H. R. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

"Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fail, on one proposing a ratio of 18 to 1; if that fail, on one proposing a ratio of 19 to 1; if that fail, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison Act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions."

This resolution was agreed to, and under its provisions the House considered and debated the various propositions mentioned therein, and on August 23, 1893, the House voted on the several propositions, as follows:

Free coinage at 16 to 1:

Nays—Democrats, 74; Republicans, 24; Populists, 11.

In Senate, August 23, 1893, H. R. 1 reported from the Committee on Finance by Mr. VOORHEES (Democrat) with an amendment, substituting Senate bill 570.

This report of the substitute by Mr. VOORHEES represented the majority of the Finance Committee of the Senate, composed of 11 Senators—6 Democrats and 5 Republicans—and was favored by 2 Democrats (Messrs. VOORHEES and MCPHERSON) and 4 Republicans (Messrs. MORRILL, SHERMAN, ALDRICH, and ALDRICH), and was opposed by the minority, 4 Democrats (Messrs. HARRIS, Vance, WEST, and JONES of Arkansas) and by 1 Republican (Mr. JONES of Nevada).

[October 17, 1893.]

Amendment intended to be proposed by Mr. QUAY to the amendment reported by the Senate Committee on Finance to the bill (H. R. 1), etc.

This act shall take effect on the 1st day of January, 1894.

[October 27, 1893.]

By Mr. PEPPER:

The SECRETARY. After the word "repealed," at the end of line 13 of the amendment of the committee, insert the following additional sections:

"SEC. 2. That any owner of gold bullion or silver bullion in condition fit for coinage, and of the coin value of \$50 or more, may deliver the same at any mint to the proper officers thereof, and it shall be formed into coins for the benefit of the depositor in the manner provided by the act of Congress approved January 18, 1837, and in all respects according to the provisions of said act, all of which provisions, so far as the same are or may be applicable hereto, are hereby revived and reenacted, except that the inscriptions and devices of the coins of like denominations now current shall be placed on the coins authorized by this act, and double eagles may be coined as provided in the act of February 12, 1873.

"SEC. 3. That all acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

"SEC. 4. That this act shall take effect and be in force thirty days after its passage."

The result was announced—yeas 23, nays 39; as follows:

Wilson.

So the amendment was agreed to.

Mr. PERKINS. Mr. President, I desire to offer an amendment to the pending bill, which I ask may be read.

The VICE-PRESIDENT. The amendment proposed by the Senator from California will be read.

The SECRETARY. It is proposed to strike out all after the word "repealed," in line 13 of the substitute of the Committee on Finance, and insert:

"SEC. —. That the mints of the United States shall be open to the coinage of silver of proved American production at the same ratio now existing between gold and silver, with a minting or seigniorage charge of 20 per cent, which shall be paid into the Treasury of the United States."

"SEC. —. That hereafter no gold pieces for circulation of a less denomination than \$10 be coined, and no more legal tender, national currency, or Treasury notes of a less denomination than \$5 be issued."

"SEC. —. That the holder of any standard silver dollars which have been or may hereafter be coined may deposit the same with the Treasurer or any assistant treasurer of the United States in any sum, and receive therefor notes of denominations less than \$10 only, which notes shall have the same legal-tender quality as the coin for which they are exchanged. The coin deposited for or representing the said notes shall be retained in the Treasury for the payment of the same on demand."

"SEC. —. That in order to protect the mints against imposition no silver shall be coined under this act except such as is produced by smelters situated in the United States, and shall be stamped, marked, or molded as directed by the Secretary of the Treasury, who is hereby authorized to appoint such officers or agents and fix their compensation and prescribe such rules and regulations as may be necessary to carry this act into effect."

"SEC. —. That there shall be appointed a commission of five monetary experts, the members whereof shall not be otherwise connected with the Government, whose duty it shall be to keep Congress and the Executive advised on all necessary matters relating to the currency."

[October 28, 1893.]

Mr. SHERMAN. Mr. President, I was nearly through. I intended to offer an amendment, if it had been thought wise to offer any amendments to the bill, but I do not think now, under the circumstances, it is wise. It is better to let the amendments fall, and let the bill, which has been debated so fully, stand. But, in order to express my idea in the fewest possible terms, I ask the Secretary to read the proposed section which was intended to be offered to the bill. I do not offer it, but simply ask that it be read as part of my remarks.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

"SEC. —. That to enable the Secretary of the Treasury to maintain the parity of all forms of money coined or issued by the United States, and to strengthen and maintain the reserve in the Treasury authorized and required by the act entitled 'An act to provide for the resumption of specie payment,' the Secretary of the Treasury is authorized to issue from time to time as required for such purposes, in a sum not exceeding in the aggregate \$200,000,000, coupon or registered bonds of the United States in such form as he may prescribe and of denominations of \$50, or some multiple of that sum, redeemable in coin of the present standard value at the pleasure of the United States after three years from the date of their issue and bearing interest payable semiannually in such coin at the rate of 3 per cent per annum. The said bonds and the interest thereon shall be exempt from the payment of all taxes or duties of the United States as well as from taxation of any form by or under State, municipal, or local authority, and the said bonds shall have set forth and expressed upon their face the above specified conditions, and shall with their coupons be made payable at the Treasury of the United States. The proceeds of such bonds shall be used for the purposes defined in this section and none other."

[October 28, 1893.]

Mr. STEWART. I offer my amendment, then, as a substitute for the amendment of the Senator from California, and upon it I shall ask for the yeas and nays.

Mr. HARRIS. Let the amendment be reported.

The VICE-PRESIDENT. The amendment proposed by the Senator from Nevada will be reported.

The SECRETARY. After section 1 it is proposed to insert:

Amendment intended to be proposed by Mr. STEWART to the bill (H. R. 1) to repeal the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," viz: After section 1 insert the following:

"SEC. 2. That the silver coins of the United States shall be composed of standard silver. That of the silver coins the dollar shall be of the weight of 412 grains; the half dollar of the weight of 206 grains; the quarter dollar of the weight of 103 grains; and the dime, or tenth part of a dollar, of the weight of 41 grains. And that dollars, half dollars, quarter dollars, and dimes shall be legal tenders of payment, according to their nominal value, for any sum whatever."

"SEC. 3. That silver bullion brought to any mint of the United States for coinage shall be received and coined by the proper officers for the benefit of the depositor: *Provided*, That it shall be lawful to refuse, at the mint, any deposit of less value than \$100, and any bullion so base as to be unsuitable for the operations of the mint: *And provided further*, That it shall be lawful to refuse, at the mint, any deposit of silver coin or bullion which is not the product of the mines and smelters of the United States."

"SEC. 4. That the depositor of silver bullion at any mint of the United States for coinage, as hereinbefore provided, shall receive therefor 80 per cent of the coinage value thereof either in silver coin or in Treasury notes of the United States hereinafter described, and the remaining 20 per cent of such bullion shall be coined and covered into the Treasury; such Treasury notes shall be prepared and issued by the Secretary of the Treasury in such form and in such denominations, not less than \$1 nor more than \$1,000, as he may prescribe; and such Treasury notes shall be redeemable on demand at the Treasury of the United States or at the office of any assistant treasurer of the United States in silver coin; and such Treasury notes shall be a legal tender in payment of all debts, public and private."

The yeas and nays were ordered.

The result was announced—yeas 29, nays 30; as follows:

YEAS—29.

Allen,	Daniel,	Martin,	Teller,

Hoar,	Mitchell of Wis.	Quay,	Vilas,
Lindsay,	Morrill,	Ransom,	Voorhees,
Lodge,	Murphy,	Sherman,	Washburn,
McMillan,	Palmer,	Smith,	White of La.
Manderson,	Pasco,	Squire,	

NOT VOTING—17.

Allison,	Gorman,	Mitchell of Oreg.	White of Cal.
Cameron,	Hansbrough,	Morgan,	Wilson.
Chandler,	Hawley,	Pettigrew,	
Colquitt,	Hunton,	Platt,	
Gordon,	McPherson,	Turpie,	

So the amendment to the amendment was rejected.

The VICE-PRESIDENT. The question recurs on agreeing to the amendment proposed by the Senator from California [Mr. PERKINS].

Mr. PERKINS. I desire to have the amendment offered by me yesterday read by the Secretary for the information of the Senate, after which I desire to call for the yeas and nays upon the question.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. Strike out all after line 13 in the amendment of the committee already agreed to, and insert:

"SEC. —. That the mints of the United States shall be open to the coinage of silver of proved American production at the same ratio now existing between gold and silver, with a minting or seigniorage charge of 20 per cent, which shall be paid into the Treasury of the United States."

"SEC. —. That hereafter no gold pieces for circulation of a less denomination than \$10 be coined, and no more legal-tender, national currency, or Treasury notes of a less denomination than \$5 be issued."

"SEC. —. That the holder of any standard silver dollars which have been or may hereafter be coined may deposit the same with the Treasurer or any assistant treasurer of the United States in any sum, and receive therefor notes of denominations of five and ten dollars only, which notes shall have the same legal-tender quality as the coin for which they are exchanged. The coin deposited for or representing the said notes shall be retained in the Treasury for the payment of the same on demand."

"SEC. —. That in order to protect the mints against imposition no silver shall be coined under this act except such as is produced by smelters or other saving devices situated in the United States, and shall be stamped, marked, or molded as directed by the Secretary of the Treasury, who is hereby authorized to appoint such officers or agents and fix their compensation and prescribe such rules and regulations as may be necessary to carry this act into effect."

"SEC. —. That there shall be appointed a commission of five monetary experts, the members whereof shall not be otherwise connected with the Government, whose duty it shall be to keep Congress and the Executive advised on all necessary matters relating to the currency."

Mr. PERKINS. That the question may be voted upon without any corollary, on the straight proposition whether Congress will protect American silver at the average American price at which it has prevailed for the past thirty years, I desire to strike out the last section, blank number, relating to the appointment of a monetary commission, as before stated.

Mr. FRYE (to Mr. PERKINS). You have a right to modify your amendment.

Mr. HARRIS. The Senator from California has a right to modify his amendment.

Mr. PERKINS. Then I desire to withdraw from my amendment the last five lines, 27 to 31, inclusive, relating to the appointment of a commission of five monetary experts.

The VICE-PRESIDENT. The amendment will be so modified.

Mr. PERKINS. Now, I desire to have the question taken on the amendment by yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The result was announced—yeas 30, nays 41; as follows:

YEAS—30.

Allen,	Daniel,	Kyle,	Stewart,
Bate,	Dubois,	Martin,	Teller,
Berry,	Faulkner,	Perkins,	Vance,
Blackburn,	George,	Pettigrew,	Vest,
Butler,	Harris,	Power,	Walthall,
Call,	Irby,	Pugh,	Wolcott,
Cockrell,	Jones of Ark.	Roach,	
Coke,	Jones of Nev.	Shoup,	

NAYS—41.

Aldrich,	Gibson,	Manderson,	Smith,
Brice,	Gorman,	Mills,	Squire,
Caffery,	Gray,	Mitchell of Wis.	Stockbridge,
Camden,	Hale,	Morrill,	Turpie,
Carey,	Higgins,	Murphy,	Vilas,
Cullom,	Hill,	Pasco,	Voorhees,
Davis,	Hoar,	Peffer,	Washburn,
Dixon,	Lindsay,	Proctor,	White of La.
Dolph,	Lodge,	Quay,	
Frye,	McMillan,	Ransom,	
Gallinger,	McPherson,	Sherman,	

NOT VOTING—14.

Allison,	Gordon,	Mitchell of Oreg.	White of Cal.
Cameron,	Hansbrough,	Morgan,	Wilson.
Chandler,	Hawley,	Palmer,	
Colquitt,	Hunton,	Platt,	

So the amendment was rejected.

Mr. BERRY. I offer an amendment as a proviso to the bill.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. Add to the amendment of the committee already agreed to the following proviso:

"*Provided*, That the act of February 23, 1878, entitled 'An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character,' requiring the purchase monthly of not less than two million and not more than four million dollars' worth of silver bullion and the coining of the same as fast as purchased into standard silver dollars, be, and the same is hereby, revised and reenacted into full force and effect."

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Arkansas.

Mr. BERRY. I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The result was announced—yeas 33, nays 37; as follows:

YEAS—33.

Allen,	Dubois,	Pasco,	Stewart,
Bate,	Faulkner,	Peffer,	Teller,
Berry,	George,	Perkins,	Vance,
Blackburn,	Harris,	Pettigrew,	Vest,
Butler,	Irby,	Power,	Walthall,
Call,	Jones of Ark.	Pugh,	Wolcott,
Cockrell,	Jones of Nev.	Roach,	
Coke,	Kyle,	Shoup,	
Daniel,	Martin,	Squire,	

NAYS—37.

Aldrich,	Gibson,	McPherson,	Smith,
Brice,	Gorman,	Manderson,	Stockbridge,
Caffery,	Gray,	Mills,	Turpie,
Carey,	Hale,	Mitchell of Wis.	Vilas,
Cullom,	Higgins,	Morrill,	Voorhees,
Davis,	Hill,	Murphy,	Washburn,
Dixon,	Hoar,	Proctor,	White of La.
Dolph,	Lindsay,	Quay,	
Frye,	Lodge,	Ransom,	
Gallinger,	McMillan,	Sherman,	

NOT VOTING—15.

Allison,	Colquitt,	Hunton,	Platt,
Camden,	Gordon,	Mitchell of Oreg.	White of Cal.
Cameron,	Hansbrough,	Morgan,	Wilson.
Chandler,	Hawley,	Palmer,	

So the amendment was rejected.

Mr. ALLEN. I offer the amendment which I send to the desk.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add after the word "repealed," in line 13, the following:

"Provided, That hereafter standard silver shall be coined at the several mints of the United States into dollars, half dollars, quarter dollars and dimes, at the mint ratio of 16 grains of standard silver to 1 grain of standard gold, under the same conditions as to mintage and other charges that are now or may hereafter be in force with reference to the coinage of gold. And it shall be the duty of the Secretary of the Treasury, without necessary delay, to cause all uncoined silver bullion owned by the Government of the United States to be coined into standard silver dollars. All money coined under the provisions of this act shall be a full legal tender for all debts, public and private."

The VICE-PRESIDENT. The question is on agreeing to the amendment of the Senator from Nebraska.

Mr. ALLEN. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The roll call having been concluded, the result was announced—yeas 31, nays 41; as follows:

YEAS—31.

Allen,	Daniel,	Kyle,	Shoup,
Bate,	Dubois,	Martin,	Stewart,
Berry,	George,	Pasco,	Teller,
Blackburn,	Harris,	Peffer,	Vance,
Butler,	Hunton,	Pettigrew,	Vest,
Call,	Irby,	Power,	Walthall,
Cockrell,	Jones of Ark.	Pugh,	Wolcott,
Coke,	Jones of Nev.	Roach,	

NAYS—41.

Aldrich,	Gibson,	McPherson,	Smith,
Brice,	Gorman,	Mills,	Squire,
Caffery,	Gray,	Mitchell of Wis.	Stockbridge,
Carey,	Hale,	Morrill,	Turpie,
Cullom,	Higgins,	Murphy,	Vilas,
Davis,	Hill,	Perkins,	Voorhees,
Dixon,	Hoar,	Proctor,	Washburn,
Dolph,	Lindsay,	Quay,	White of La.
Faulkner,	Lodge,	Ransom,	
Frye,	Manderson,	Sherman,	
Gallinger,	McMillan,		

NOT VOTING—13.

Allison,	Colquitt,	Mitchell of Oreg.	Wilson.
Camden,	Gordon,	Palmer,	
Cameron,	Hansbrough,	White of Cal.	
Chandler,	Hawley,		

So the amendment was rejected.

Mr. BLACKBURN. I desire to submit an amendment, which is on the Secretary's desk. I ask that it may be now read.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. It is proposed to add to the bill the following:

"SEC. 2. That on and after the 1st day of January, 1894, any mine owner or smelter producing silver which is derived exclusively from mines situated in the United States or its Territories, and which is of the required fineness, may present the same at any of the mints of the United States, and the same shall be coined free into silver dollars of the present standard, except the seigniorage hereinafter provided for, if presented in sums not less than \$100.

"SEC. 3. That on the 1st day of each month the Secretary of the Treasury shall establish the seigniorage for each following month.

"SEC. 4. That the seigniorage for the coining of silver shall be the difference between the market price of silver bullion and the minted value after coining, which seigniorage shall not be coined, but shall be sold by the Secretary of the Treasury in open market, at home or abroad, at the highest price for gold, which gold shall be held in the Treasury and used only for the purpose of maintaining parity between the two metals.

"SEC. 5. That in fixing or establishing the seigniorage the average price of silver sold by him the month preceding shall control, when he has sold any; otherwise the average price in the cities of London and New York.

"SEC. 6. That in order to protect the mints against imposition no silver shall be coined under this act except such as is produced by smelters situated in the United States, and shall be stamped, marked, or melted as directed by the Secretary of the Treasury, who is hereby authorized to appoint such officers or agents and fix their compensation and prescribe such rules and regulations as may be necessary to carry this act into effect.

"SEC. 7. That the silver bullion sold as heretofore provided shall have its earmarks removed and shall, after sale, lose its privilege."

Mr. WASHBURN. I call for the yeas and nays on the amendment.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The result was announced—yeas 23, nays 42; as follows:

YEAS—23.

Allen,	Dubois,	Martin,	Shoup,
Bate,	Faulkner,	Pasco,	Squire,
Berry,	George,	Perkins,	Teller,
Blackburn,	Hunton,	Pettigrew,	Vance,
Butler,	Irby,	Power,	Vest,
Call,	Jones of Nev.	Pugh,	Walthall,
Daniel,	Kyle,	Roach,	Wolcott,

NAYS—42.

Aldrich,	Gallinger,	McMillan,	Sherman,
Brice,	Gibson,	McPherson,	Smith,
Caffery,	Gorman,	Manderson,	Stewart,
Camden,	Gray,	Mills,	Stockbridge,
Carey,	Hale,	Mitchell of Wis.	Turpie,
Coke,	Harris,	Morrill,	Vilas,
Cullom,	Higgins,	Murphy,	Voorhees,
Davis,	Hill,	Peffer,	Washburn,
Dixon,	Hoar,	Platt,	White of La.
Dolph,	Lindsay,	Proctor,	
Frye,	Lodge,	Quay,	

NOT VOTING—15.

Allison,	Colquitt,	Jones of Ark.	Ransom,
Camden,	Gordon,	Mitchell of Oreg.	White of Cal.
Cameron,	Hansbrough,	Morgan,	Wilson.
Chandler,	Hawley,	Palmer,	
Cockrell,			

So the amendment was rejected.

Mr. STEWART. I offer the amendment which I send to the desk as an additional section to the bill.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add to the bill the following:

"SEC. —. That the President of the United States be, and he hereby is, authorized and directed to invite the several Governments of the Republics of Mexico, Central and South America, Haiti, and Santo Domingo to join the United States in a conference to be held in Washington, in the United States, within nine months from the passage of this act, for the purpose of the adoption of a common silver coin to be issued by each Government, the same to be a legal tender in all commercial transactions between the citizens of all the American States represented in the conference; and when such common coin shall have been agreed upon by the majority of the Governments represented in such conference, and when the mints of the Governments so invited and participating in such conference shall have been opened to the free and unlimited coinage of the common silver coin so agreed upon by the conference for the benefit of depositors of silver bullion, the United States will also open its mints to the free and unlimited coinage of such common silver coin."

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Nevada.

Mr. STEWART. I call for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

The roll call having been concluded, the result was announced—yeas 22, nays 41; as follows:

YEAS—22.

Allen,	Daniel,	Kyle,	Shoup,
Bate,	Dubois,	Martin,	Squire,
Berry,	George,	Peffer,	Stewart,
Blackburn,	Harris,	Perkins,	Teller,
Butler,	Hunton,	Pettigrew,	Vance,
Call,	Irby,	Power,	Vest,
Cockrell,	Jones of Ark.	Pugh,	Walthall,
Coke,	Jones of Nev.	Roach,	Wolcott,

NAYS—41.

Aldrich,	Gallinger,	McPherson,	Sherman,
Brice,	Gibson,	Manderson,	Smith,
Caffery,	Gorman,	Mills,	Stockbridge,
Camden,	Gray,	Mitchell of Wis.	Turpie,
Carey,	Hale,	Morrill,	Vilas,
Cullom,	Higgins,	Murphy,	Voorhees,
Davis,	Hill,	Pasco,	Washburn,
Dixon,	Hoar,	Platt,	White of La.
Dolph,	Lindsay,	Proctor,	
Faulkner,	Lodge,	Quay,	
Frye,	McMillan,	Ransom,	

NOT VOTING—12.

Allison,	Colquitt,	Hawley,	Palmer,
Camden,	Gordon,	Mitchell of Oreg.	White of Cal.
Chandler,	Hansbrough,	Morgan,	Wilson.

So the amendment was rejected.

Mr. SQUIRE. I offer the amendment of which I heretofore gave notice, and ask that it may be read.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. It is proposed to strike out all after the enacting clause of the bill and insert:

"That hereafter any owner of silver bullion, the product of mines or refineries located in the United States, may deposit the same at any mint of the United States to be formed into standard dollars of the present weight and fineness, for his benefit, as hereinafter stated; but it shall be lawful to refuse any deposits of less value than \$100, or any bullion so base as to be unsuitable for the operation of the mint: *Provided, however,* That there shall only be delivered or paid to the person depositing said silver bullion such number of standard silver dollars as shall equal the commercial value of said silver bullion on the day of deposit, as ascertained and determined by the Secretary of the Treasury; the difference, if any, between the mint or coin value of said standard silver dollars and the commercial value of the silver bullion thus deposited shall be retained by the Government as seigniorage, and the gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury: *Provided, That the deposits of silver bullion for coinage into*

silver dollars under the provisions of this act shall not exceed the sum of \$2,000,000 per month. The amount of such seigniorage or gain shall be retained in the Treasury as a reserve fund in silver dollars, or such other form of equivalent lawful money as the Secretary of the Treasury may from time to time direct, for the purpose of maintaining the parity of value of every silver dollar, issued under the provisions of this act, with the gold dollar issued by the United States: *Provided further*, That when the number of standard silver dollars coined under the foregoing provision shall reach the sum of \$100,000,000 then all further coinage of silver dollars shall cease.

"Sec. 2. That the said silver dollars shall be a legal tender in all payments at their nominal or coin value.

"Sec. 3. That no certificate shall be issued to represent the silver dollars coined under the provisions of this act.

"Sec. 4. That so much of the act approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding \$1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed.

"Sec. 5. That the Secretary of the Treasury is hereby authorized to issue, sell, and dispose of, at not less than par in coin, bonds of the United States bearing interest not to exceed 4 per cent. per annum, payable semiannually, and redeemable at the pleasure of the United States after five years from their date, with like qualities, privileges, and exceptions provided for the bonds at present authorized, to the extent of \$20,000,000, and to use the proceeds thereof for the purpose of maintaining the redemption of the United States notes according to the provisions of the act approved January 14, 1875, and for the further purpose of maintaining all the money of the United States at par with the gold dollar.

"Sec. 6. That hereafter national banking associations shall be entitled to receive from the Comptroller of the Currency, upon compliance with all other terms and requirements of law therefor, circulating notes of different denominations, in blank, registered and countersigned as required by law, to the value at par of the United States bonds on deposit with the Treasurer in trust for the association: *Provided*, That the aggregate sum of such notes for which any association shall be liable at any time shall not exceed the amount of its capital stock at the time actually paid in."

Mr. SQUIRE. I propose to make a change in two places in the text of the amendment in regard to the rate of interest on the bonds and the time for which they shall run. I would modify the amendment by making the rate of interest 3 per cent. and the number of years for which the bonds shall run three instead of five, and I ask the Senate to take a vote on the first two sections of the amendment separately, not including the questions of bonds or the additional national bank circulation; and then I shall ask for separate votes on the bond section and the section authorizing national bank circulation.

The VICE-PRESIDENT. The Senator from Washington desires his amendment to be divided.

The VICE-PRESIDENT. The question is on the amendment proposed by the Senator from Washington.

Mr. HOAR. Let it be read again.

Mr. SQUIRE. The Senator from Massachusetts asks that the amendment be read again.

Mr. MILLS. The two sections to be voted on.

Mr. SQUIRE. Let the Secretary read the two sections to be voted on.

The VICE-PRESIDENT. The first and second sections of the amendment proposed by the Senator from Washington will be read.

The Secretary read as follows:

"That hereafter any owner of silver bullion, the product of mines or refineries located in the United States, may deposit the same at any mint of the United States, to be formed into standard dollars of the present weight and fineness, for his benefit, as hereinafter stated; but it shall be lawful to refuse any deposit of less value than \$100, or any bullion so base as to be unsuitable for the operation of the mint: *Provided, however*, That there shall only be delivered or paid to the person depositing said silver bullion such number of standard silver dollars as shall equal the commercial value of said silver bullion on the day of deposit, as ascertained and determined by the Secretary of the Treasury; the difference, if any, between the mint or coin value of said standard silver dollars and the commercial value of the silver bullion thus deposited shall be retained by the Government as seigniorage, and the gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury: *Provided*, That the deposits of silver bullion for coinage into silver dollars under the provisions of this act shall not exceed the sum of \$2,000,000 per month. The amount of such seigniorage or gain shall be retained in the Treasury as a reserve fund in silver dollars, or such other form or equivalent lawful money as the Secretary of the Treasury may from time to time direct, for the purpose of maintaining the parity of value of every silver dollar issued under the provisions of this act with the gold dollar issued by the United States: *Provided further*, That when the number of standard silver dollars coined under the foregoing provision shall reach the sum of \$100,000,000 then all further coinage of silver dollars shall cease.

"Sec. 2. That the said silver dollars shall be a legal tender in all payments at their nominal or coin value."

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Washington [Mr. SQUIRE], on which the yeas and nays have been demanded.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The roll call having been concluded, the result was announced—yeas 20, nays 42; as follows:

Bate,	Coke,	Hunton,	Pugh,
Berry,	Daniel,	Irby,	Squire,
Blackburn,	Faulkner,	Martin,	Vance,
Butler,	George,	Pasco,	Vest,
Call,	Harris,	Perkins,	Walthall.

Aldrich,	Gallinger,	McMillan,	Ransom,
Allen,	Gibson,	McPherson,	Sherman,
Brice,	Gorman,	Manderson,	Smith,
Caffery,	Gray,	Mills,	Stockbridge,
Camden,	Hale,	Mitchell of Wis.	Turpie,
Carey,	Higgins,	Morrill,	Vilas,
Cullom,	Hill,	Murphy,	Voorhees,
Davis,	Hoar,	Pfeffer,	Washburn,
Dixon,	Kyle,	Platt,	White of La.
Dolph,	Lindsay,	Proctor,	
Frye,	Lodge,	Quay,	

NOT VOTING—23.

Allison,	Gordon,	Morgan,	Stewart,
Cameron,	Hansbrough,	Palmer,	Teller,
Chandler,	Hawley,	Pettigrew,	White of Cal.
Cockrell,	Jones of Ark.	Power,	Wilson,
Colquitt,	Jones of Nev.	Reach,	Wolcott.
Dubois,	Mitchell of Oreg.	Shoup,	

So the amendment was rejected.

The VICE-PRESIDENT. The Senator from Washington has withdrawn the remaining sections of his amendment.

Mr. ALLEN. I desire to appeal from the ruling of the Chair in permitting the Senator from Washington to withdraw his amendment.

The VICE-PRESIDENT. The question is, Shall the decision of the Chair stand as the judgment of the Senate?

Mr. HOAR. I move to lay the appeal on the table.

The motion was agreed to.

Mr. BUTLER. I give notice of an amendment to the bill—the amendment providing for the repeal of what is known as the 10 per cent. tax on State bank circulation. After consultation with the Senator from Indiana and other Senators favorable to the amendment, I have concluded not to press it upon the pending bill. I am assured by the Senator from Indiana that the Committee on Finance will give it prompt consideration as a separate measure, and report it to the Senate. Inasmuch as the indications are that it would be defeated here, possibly by the votes of some Senators who are in favor of it, I shall not insist upon it at this time, and ask leave to withdraw it.

The VICE-PRESIDENT. The Chair hears no objection.

Mr. PEPPER. I move an amendment to be inserted immediately after the repealing clause.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. Add after the word "repealed" in line 13 of the amendment of the committee already agreed to:

"That the Secretary of the Treasury be, and he is hereby, authorized and directed to cause to be prepared immediately Treasury notes to the amount of \$250,000,000, said notes to be in form, dimensions, and general appearance similar to those which have been prepared under the provisions of the act of July 14, 1890. They shall be of the denominations of \$1, \$2, \$5, \$10, and \$20, one-fifth part in value of the total issue to be in each of said denominations; they shall be made payable in lawful money; they shall be received by the Government of the United States, and the officers thereof, for taxes and all public dues, and they shall be lawful money and legal tender, at their face value, in payment of debts to any amount whatever.

"Sec. 3. That said notes shall be printed on paper of the same character, quality, and grade as that now used for United States notes; they shall be prepared in accordance with laws, rules, and regulations now in force applicable to such work, and as fast as they are ready for delivery they shall be deposited in the Treasury and treated as so much available cash, and they shall be paid out the same as other public moneys.

"Sec. 4. That when any of said notes are received in the Treasury in the course of business, they shall be reissued and thus kept in circulation.

"Sec. 5. That this act shall take effect immediately after its passage."

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Kansas.

The result was announced—yeas 7, nays 58; as follows:

YEAS—7.

Allen,	Irby,	Peffer,	Stewart.
Call,	Kyle,	Pettigrew,	

NAYS—58.

Aldrich,	Dolph,	Lodge,	Sherman,
Bate,	Dubois,	McMillan,	Shoup,
Berry,	Faulkner,	McPherson,	Smith,
Blackburn,	Frye,	Manderson,	Squire,
Brice,	Gallinger,	Mills,	Stockbridge,
Butler,	George,	Mitchell of Wis.	Turpie,
Caffery,	Gibson,	Morrill,	Vance,
Camden,	Gorman,	Murphy,	Vest,
Carey,	Gray,	Pasco,	Vilas,
Cockrell,	Hale,	Perkins,	Voorhees,
Coke,	Harris,	Platt,	Walthall,
Cullom,	Hill,	Proctor,	Washburn,
Daniel,	Hoar,	Quay,	White of La.
Davis,	Hunton,	Ransom,	
Dixon,	Lindsay,	Reach,	

NOT VOTING—20.

Allison,	Hansbrough,	Martin,	Pugh,
Cameron,	Hawley,	Mitchell of Oreg.	Teller,
Chandler,	Higgins,	Morgan,	White of Cal.
Colquitt,	Jones of Ark.	Palmer,	Wilson,
Gordon,	Jones of Nev.	Power,	Wolcott.

So the amendment was rejected.

Mr. ALLEN. I submit the amendment which I send to the desk.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. Add to the bill the following additional sections:

"SECTION 1. That from and after the date and passage of this act the unit of value in the United States shall be the dollar, and the same may be coined of 412½ grains of standard silver, or 23.8 grains of standard gold; and the said coin shall be legal tender for all debts, public and private. That hereafter any owner of silver bullion may deposit the same at any mint of the United States, which deposit, less 30 per cent, which shall be deducted therefrom as seigniorage, shall be coined into standard dollars for his benefit and without other charge for coinage than said deduction as seigniorage, which seigniorage shall be coined into standard dollars and covered into the Treasury; but it shall be lawful to refuse any deposit of less value than \$100, or any bullion so base as to be unsuitable for the operation of the mint.

"Sec. 2. That the provision of section 3 of an act to authorize the coinage of the standard silver dollar and to restore its legal-tender character, which became a law February 22, 1873, is hereby made applicable to the coinage in this act provided for.

"Sec. 3. That the certificates provided for in the second section of this act shall be denominations of not less than one nor more than one hundred dollars, and such certificates shall be redeemable in coin of standard value. A sufficient sum to carry out the provisions of this act is hereby appropriated, out of any money in the Treasury not otherwise appropriated.

"Sec. 4. That the certificates provided for in this act, and all silver and gold certificates issued, shall be receivable for all taxes and dues to the United States of every description, and shall be a legal tender for the payment of all debts, public and private.

"Sec. 5. That the owners of bullion deposited for coinage shall have the option to receive coin or its equivalent in the certificates provided for in this act, and such bullion shall be subsequently coined.

"SEC. 6. That on the passage and approval of this act, an act entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' approved July 14, 1890, shall stand repealed."

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Nebraska [Mr. ALLEN].

Mr. STEWART. On that I ask for the yeas and nays.

The yeas and nays were ordered and taken.

The result was announced—yeas 28, nays 42; as follows:

YEAS—28.			
Allen,	Daniel,	Kyle,	Shoup,
Bate,	Dubois,	Martin,	Stewart,
Berry,	George,	Perkins,	Teller,
Blackburn,	Harris,	Pettigrew,	Vance,
Call,	Hunton,	Power,	Vest,
Cockrell,	Irby,	Pugh,	Walthall,
Coke,	Jones of Nev.	Roach,	Wolcott.
NAYS—42.

Butler,	Gordon,	Jones of Ark.	White of Cal.
Cameron,	Hansbrough,	Mitchell of Oreg.	Wilson.
Chandler,	Hawley,	Morgan,	

So the amendment was rejected.

Mr. PEPPER. I offer an amendment and ask that it may come in after the repealing clause.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. After the word "repealed," in line 13 of the amendment already agreed to, insert:

"SEC. 2. And be it further enacted, That all coins and paper now circulating among the people as currency, including gold coin, silver coin, gold certificates, silver certificates, United States notes, Treasury notes, and national currency shall, according to their several denominations, be of equal exchangeable value and purchasing power; they shall be receivable for taxes and all public dues, and they shall be lawful money and legal tender in payment of debts to any amount whatever."

Mr. PEPPER. * * * I ask for the yeas and nays upon agreeing to the amendment.

The yeas and nays were not ordered.

The VICE-PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Kansas (Mr. PEPPER).

The amendment was rejected.

Mr. HARRIS. I believe I will ask the Secretary to read an amendment that I gave notice I would offer, but I do not think I shall ask the Senate at this late hour to vote upon it. It is an amendment that I prepared in a broad spirit of compromise, not even satisfactory to myself, but I want to put it on record.

The VICE-PRESIDENT. The Secretary will read as requested.

The SECRETARY. Strike out all in line 14, page 2, to line 28, inclusive, and insert the following:

"That the seigniorage or profit fund which has resulted from the purchase or coinage of silver bullion shall be coined into silver dollars of standard weight and fineness, with full legal-tender quality, at the rate of not less than \$3,000,000 per month, and such dollars shall be covered into the Treasury."

"SEC. 2. That when all the seigniorage or profit-fund bullion shall have been coined as required by the first section of this act, it shall be the duty of the Secretary of the Treasury to purchase each month silver bullion at the market value in quantities sufficient to coin not less than—dollars each and every month; and he is hereby directed to coin the said bullion monthly, as fast as purchased, into standard silver dollars, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated."

"SEC. 3. That when any paper circulating notes or certificates of whatever character, of denominations less than \$10, issued under authority of the United States, except national bank notes or certificates redeemable only in silver dollars, shall be received at the Treasury or any subtreasury, they shall not be reissued, but shall be assorted, counted, and recorded, and immediately destroyed in accordance with existing provisions of law; and as rapidly as said notes or certificates are destroyed they shall be replaced by an equal amount of like notes or certificates of denominations not less than \$10."

"SEC. 4. That hereafter no national bank note shall be issued of a less denomination than \$10, and all such national bank notes, when received at the Treasury or any subtreasury, shall be destroyed in accordance with law; and the national banking associations whose notes are destroyed under the provisions of this section shall be respectively required to substitute notes of denominations not less than \$10 in lieu of those destroyed."

"SEC. 5. That from and after the passage of this act the coinage of the two-and-one-half-dollar gold piece and the five-dollar gold piece is hereby prohibited, and the coins above named shall not be struck or issued by the mint of the United States; and such coins when received at the Treasury or any subtreasury shall be withdrawn from circulation and recoined into eagles and double eagles, in accordance with law."

"SEC. 6. That the holder of any standard silver dollars which have been or may be coined may deposit the same with the Treasurer or any assistant treasurer of the United States in any sum, and receive therefor notes of denominations less than \$10 only, which notes shall have the same legal-tender quality as the coin for which they are exchanged. The coin deposited for or representing the said notes shall be retained in the Treasury for the payment of the same on demand."

Mr. HARRIS. I left the blank as to the amount of silver that should be monthly purchased or coined in order that any or every Senator might test the sense of the Senate as to such amount. But knowing as I know now that the decree has been entered that no amendment of any character is to be made to the bill, I will not subject the Senate to a vote upon my amendment or any phase of it. I decline to offer it or to ask a vote upon it, but simply desire to put it upon record as an amendment suggested in a broad spirit of

compromise on a question about which there are very honest differences of opinion. It is not entirely satisfactory to myself, and I suppose would not be entirely satisfactory to any other Senator.

Mr. PASCO. I have an amendment to submit which I desire to have printed, and I shall offer it on Monday morning. I have no objection to the arrangement suggested by the Senator from Indiana.

The amendment intended to be proposed by Mr. PASCO is as follows:

Strike out all after the enacting clause and insert:

"SECTION 1. That a commission, to be composed of three citizens of the United States, shall be appointed by the President, by and with the advice and consent of the Senate, to ascertain and determine by the 1st day of January next the fair and just ratio between the actual and intrinsic values of silver and gold, as a basis for the future coinage of silver, as hereinafter provided, without discrimination against either metal for charge for coinage, so that the dollar unit of coinage of both metals may be of equal actual and intrinsic value. And the said commission shall report to the Secretary of the Treasury the result reached by them as soon as practicable after the date hereinbefore named, and he shall thereupon fix and determine the weight of pure and standard silver to be contained in the silver dollar authorized to be coined by this act according to the said report; and the said silver dollars so authorized and thereafter coined shall be of the standard and weight thus fixed and determined by the Secretary of the Treasury."

"SEC. 2. That the coins mentioned in the previous section shall have on them the devices and superscriptions provided for coins of like denomination now coined, and shall be legal tender at their nominal value for all debts and dues, public and private, except when otherwise expressly stipulated by contract; and any owner of silver bullion may deposit the same at the mints of the United States to be coined into dollars of the fineness and weight fixed in accordance with the provisions of the first section of this act."

"SEC. 3. That any holder of the coins authorized by this act may, after the 1st day of March, 1894, deposit the same with the Treasurer or any assistant treasurer of the United States in sums of not less than \$10, and receive therefor certificates of not less than \$10 each, corresponding with the denominations of the United States notes. The coin deposited or representing the certificate shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when received may be reissued."

"SEC. 4. That the silver bullion deposited for coinage purposes under the provisions of this act shall be subject to the requirements of existing law and the regulations of the mint service governing the methods of determining the amount of pure silver contained and the amount of charges or deductions, if any, to be made."

"SEC. 5. That the Secretary of the Treasury shall, within two years from and after the passage of this act, cause all the silver dollars of the United States heretofore minted, as well as the Treasury notes issued under the law of July 14, 1890, to be withdrawn from circulation by exchanging the same, or causing the same to be exchanged at their nominal value for silver certificates of like denominations, representing silver coins of the weight and fineness provided by this act; and the silver certificates thus issued shall be in all respects similar to those provided for in the preceding section, and shall, like them, be receivable for customs, taxes, and public dues, and when received may be reissued; and that on and after the expiration of the two years above mentioned all the silver dollars as well as the Treasury notes issued under the law of July 14, 1890, shall cease to be legal tender."

"SEC. 6. That all silver dollars coined prior to the passage of this act shall be recoined as early as practicable into coins of the same denomination of the weight and fineness authorized by section 1 of this act."

"SEC. 7. That the Secretary of the Treasury is hereby authorized to adopt such rules and regulations, in accordance with the coinage laws of the United States, as may be necessary to enforce the provisions of this act."

"SEC. 8. That a sum sufficient to carry out the provisions of this act is hereby appropriated out of any moneys in the Treasury not otherwise appropriated."

"SEC. 9. That the act entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' approved July 14, 1890, and all other acts and parts of acts authorizing the purchase of silver bullion for the purpose of coining the same into silver dollars be, and the same are hereby, repealed."

The bill was reported to the Senate as amended.

The VICE-PRESIDENT. The amendment made as in Committee of the Whole will be considered as concurred in, if there be no objection.

Mr. HARRIS. Let the vote be taken upon concurring in the amendment.

The VICE-PRESIDENT. The Chair will state that the bill is in the Senate, and the question is upon concurring in the amendment made as in Committee of the Whole.

Mr. VOORHEES. Which was the report of the Finance Committee.

The VICE-PRESIDENT. Which was the report of the Finance Committee.

The amendment was concurred in.

[October 30, 1893.]

Mr. STEWART. I have another amendment which I desire to offer for the reduction of the gold in our gold coinage 25 per cent. I ask that the amendment be read at the desk, and then I shall give a word of explanation.

The VICE-PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add to the bill the following:

"That the gold coins of the United States shall be a one-dollar piece, a quarter eagle, or two-and-a-half-dollar piece, a three-dollar piece, a half eagle or five-dollar piece, an eagle or ten-dollar piece, and a double eagle or twenty-dollar piece; and the weight of standard gold of the gold dollar shall be 19.35 grains; of the quarter eagle or two-and-a-half-dollar piece, 48.375 grains; of the three-dollar piece, 58.06 grains; of the half eagle or five-dollar piece, 96.75 grains; of the eagle or ten-dollar piece, 193.50 grains; of the double eagle or twenty-dollar piece, 387 grains, which coins shall be a legal tender in all payments at their nominal value."

The VICE-PRESIDENT. There is no other amendment pending.

Mr. PASCO. I ask that my proposed amendment be read.

The VICE-PRESIDENT. The Secretary will read the amendment.

The SECRETARY. It is proposed to strike out all after the enacting clause and insert:

[For amendment see above.]

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The result was announced—yeas 20, nays 47; as follows:

YEAS—20.			
Bate,	Cockrell,	Hunton,	Perkins,
Berry,	Coke,	Irby,	Pugh,
Blackburn,	Daniel,	Jones of Ark.	Vance,
Butler,	Faulkner,	Martin,	Vest,
Cameron,	Harris,	Pasco,	Walthall.

NAYS—47.

Aldrich,	George,	McMillan,	Ransom,
Allen,	Gibson,	McPherson,	Roach,

Call,	Hansbrough,	Power,	Wilson,
Chandler,	Jones of Nev.	Shoup,	Wolcott.
Colquitt,	Mitchell of Oreg.	Stewart,	
Dubois,	Morgan,	Teller,	

So the amendment was rejected.

The VICE-PRESIDENT. If there be no further amendment to the bill, the question is, Shall the amendment be engrossed and the bill be read a third time?

The amendment was ordered to be engrossed and the bill to be read a third time.

The VICE-PRESIDENT. The question is, Shall the bill pass?

Mr. STEWART and Mr. TELLER called for the yeas and nays; and they were ordered.

The Secretary proceeded to call the roll.

The result was announced—yeas 43, nays 32; as follows:

YEAS—43.

Aldrich,	Gallinger,	Lodge,	Ransom,
Brice,	Gibson,	McMillan,	Sherman,
Caffery,	Gorman,	McPherson,	Smith,
Camden,	Gray,	Manderson,	Squire,
Carey,	Hale,	Mills,	Stockbridge,
Cullom,	Hawley,	Mitchell of Wis.	Turpie,

Butler,	Harris,	Perkins,	Vance,
Call,	Irby,	Pettigrew,	West,
Cameron,	Jones of Ark.	Power,	Walthall,
Cockrell,	Jones of Nev.	Pugh,	Wolcott.

NOT VOTING—10.

Allison,	Gordon,	Morgan,	Wilson.
Chandler,	Hansbrough,	Palmer,	
Colquitt,	Mitchell of Oreg.	White of Cal.	

So the bill was passed.

IN THE HOUSE.

[October 31, 1893.]

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Cox, its Secretary, announced that the Senate had passed, with an amendment, the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," in which the concurrence of the House was requested.

[November 1, 1893.]

The SPEAKER also laid before the House a bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," with amendment of the Senate thereto.

The SPEAKER. The Clerk will report the amendment.

The amendment was read, as follows:

"Strike out all after the enacting clause and insert:

"That so much of the act approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding \$1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetalism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts."

Mr. WILSON of West Virginia. Mr. Speaker, I move to concur in the amendment of the Senate to the House bill which has just been read, and on that I demand the previous question.

The SPEAKER (having put the question on ordering the previous question). The previous question is ordered. [Applause.] There will now be fifteen minutes for debate on each side. The Chair recognizes the gentleman from West Virginia [Mr. WILSON] to control the fifteen minutes in favor of the

proposition, and will afterwards recognize the gentleman from Missouri [Mr. BLAND] to control the time in opposition.

Mr. BLAND. Mr. Speaker, I desire to have read at the Clerk's desk an amendment that I expect to offer to this bill. At the proper time I shall move to recommit this bill to the Committee on Coinage, Weights, and Measures, with instructions to report it back with this amendment.

The Clerk read as follows:

"Add to the Senate amendment the following:
"And to provide for carrying into effect the policy of the foregoing declaration and that so much of the act of January 18, 1837, in regard to the establishment of a mint and relating to the coins of the United States as relates to and provides for the coinage of the standard silver dollar of 412½ grains of standard silver, be, and the same is hereby, revived and reenacted into full force and effect."

The SPEAKER. The gentleman from Missouri [Mr. BLAND], as the Chair understands, desires to make a motion to recommit.

Mr. BLAND. I move to recommit the bill to the Committee on Coinage, Weights, and Measures, with instructions to report it back with the amendment which I ask the Clerk to read.

The Clerk read as follows:

"Add to the Senate amendment the following:
"And to provide for carrying into effect the policy of the foregoing declaration and that so much of the act of January 18, 1837, in regard to the establishment of a mint and relating to the coins of the United States as relates to and provides for the coinage of the standard silver dollar of 412½ grains of standard silver is hereby revived and reenacted into full force and effect."

The SPEAKER. The question is on the motion to recommit, as made by the gentleman from Missouri.

Mr. WILSON of West Virginia. I demand the previous question on that motion.

The SPEAKER. Without objection, the previous question will be considered as ordered.

There was no objection.

The SPEAKER (having put the question on the motion to recommit). The yeas seem to have it.

Mr. BLAND. I call for the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 100, nays 176, not voting 68; as follows:

YEAS—100.

So the motion to concur was agreed to.

ENROLLED BILL SIGNED.

Mr. PEARSON, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," when the Speaker signed the same.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had agreed to the amendment of the Senate to the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

[November 2, 1893.]

MESSAGE FROM THE PRESIDENT.

A message from the President, by Mr. PRUDEN, one of his secretaries, announced that the President had approved and signed an act (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

SUMMARY OF PROCEEDINGS ON H. R. 4956—A BILL DIRECTING THE COINAGE OF THE SILVER BULLION HELD IN THE TREASURY, AND FOR OTHER PURPOSES.

[CONGRESSIONAL RECORD INDEX TO PROCEEDINGS.]

Debated in the Senate	3236, 3276, 3281, 3283, 3342, 3405, 3478, 3511, 3559, 3631
Passed Senate	3638
Examined and signed	3702, 3709
Vetoed by the President	4100, 4101
Reconsidered and rejected	4229

IN THE HOUSE.

[January 3, 1894.]

Introduced by Mr. BLAND and referred to the Committee on Coinage, Weights, and Measures.

[February 7, 1894.]

Mr. BLAND. Mr. Speaker, I desire to present a privileged report. I am instructed by the Committee on Coinage, Weights, and Measures to report to the House the bill which I send to the desk, with the recommendation that it do pass; and I move that the House now resolve itself into Committee of the Whole on the state of the Union for its consideration.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

"A bill (H. R. 4956) directing the coinage of the silver bullion held in the Treasury, and for other purposes.

"Be it enacted, etc., That the Secretary of the Treasury shall immediately issue silver certificates of the same denominations and monetary functions as is now provided by law for silver certificates, in the amount equal to the seigniorage of the silver bullion purchased under the provisions of the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' to wit: The sum of \$55,156,981. That such silver certificates shall be immediately available for the payment of the current expenditures of the Government, and all laws relating to silver certificates, as far as practicable, shall be applicable to the silver certificates herein authorized. That said seigniorage shall be coined as fast as possible into legal-tender standard silver dollars and the coins held in the Treasury for the redemption of the silver certificates.

"Sec. 2. That the remainder of the silver bullion purchased in pursuance of said act of July 14, 1890, shall be coined into legal-tender standard silver dollars as fast as is practicable, and the coin held in the Treasury for the redemption of the Treasury notes issued in the purchase of said bullion. That as fast as the bullion shall be coined for the redemption of said notes, the notes shall not be reissued, but shall be canceled and destroyed in amounts equal to the coin held at any time in the Treasury, and silver certificates may be issued on such coin in the manner now provided by law.

"Sec. 3. That a sufficient sum of money is hereby appropriated to carry into effect the provisions of this act."

[February 12, 1894.]

The SPEAKER. The gentleman from Missouri [Mr. BLAND] asks to have read and printed in the RECORD a proposed amendment to the coinage bill.

The proposed amendment was read, as follows:

"That the Secretary of the Treasury shall immediately cause to be coined as fast as practicable the silver bullion held in the Treasury, purchased under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' to the amount of the gain or seigniorage of such bullion, to wit: The sum of \$55,156,981 of such coin or the silver certificates issued thereon shall be used in the payment of public expenditures, and the Secretary of the Treasury may, in his discretion, if the needs of the Treasury demand it, issue silver certificates in excess of such coinage: *Provided*, That said excess shall not exceed the amount of the seigniorage as herein authorized to be coined."

[February 14, 1894.]

Mr. BLAND. I ask unanimous consent that the pending coinage bill, with the proposed amendments, be printed in the RECORD, and also in bill form. There was no objection.

The bill as originally reported is as follows:

"A bill (H. R. 4956) directing the coining of the silver bullion held in the Treasury, and for other purposes.

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury shall immediately issue silver certificates of the same denominations and monetary functions as is now provided by law for silver certificates, in the amount equal to the seigniorage of the silver bullion purchased under the provisions of the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' to wit, the sum of \$55,156,681. That such silver certificates shall be immediately available for the payment of the current expenditures of the Government, and all laws relating to silver certificates, as far as practicable, shall be applicable to the silver certificates herein authorized. The said seigniorage shall be coined as fast as possible into legal-tender standard silver dollars and the coins held in the Treasury for the redemption of the silver certificates.

"Sec. 2. That the remainder of the silver bullion purchased in pursuance of said act of July 14, 1890, shall be coined into legal-tender standard silver dollars as fast as is practicable, and the coin held in the Treasury for the redemption of the Treasury notes issued in the purchase of said bullion. That as fast as the bullion shall be coined for the redemption of said notes, the notes shall not be reissued, but shall be canceled and destroyed in amounts equal to the coin held at any time in the Treasury, and silver certificates may be issued on such coin in the manner now provided by law.

"Sec. 3. That a sufficient sum of money is hereby appropriated to carry into effect the provisions of this act."

The proposed amendments are as follows:

By Mr. BLAND: Amend by striking out the first section, and inserting the following in lieu thereof:

"That the Secretary of the Treasury shall immediately cause to be coined as fast as practicable the silver bullion held in the Treasury, purchased under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issuing of Treasury notes thereon, and for other purposes,' to the amount of the gain or seigniorage of such bullion, to wit, the sum of \$55,156,681, and such coin or the silver certificates issued thereon shall be used in the payment of public expenditures, and the Secretary of the Treasury may, in his discretion, if the needs of the Treasury demand it, issue silver certificates in excess of such coinage: *Provided*, That said excess shall not exceed the amount of the seigniorage as herein authorized to be coined."

By Mr. BLAND: On page 2, in section 2, line 9, after the word "Treasury," insert the words "derived from the coinage herein provided for."

[February 23, 1894.]

The SPEAKER. The gentleman from Ohio submits a report from the Committee on Rules. The gentleman from New York [Mr. TRACY] enters a motion to reconsider the vote by which the previous question was ordered. The Clerk will report the resolution of the Committee on Rules.

The Clerk read as follows:

"Resolved, That immediately after the adoption of this resolution the Committee of the Whole House on the state of the Union be discharged from the further consideration of H. R. 4956; that the House shall then proceed to consider the same; that after two hours' consideration therein the previous question shall be considered ordered on the pending amendments, if there be any, and the bill to its final passage. That without other motions the vote shall then be taken on the pending amendments, if there be any, on the engrossment and third reading, on a motion to recommit with or without instructions, should such motion be made, on the final passage of the bill, and on a motion to reconsider and lay on the table."

Mr. OUTWATER. On that I demand the previous question.

The question was taken on ordering the previous question, and the Speaker announced that the yeas seemed to have it.

Mr. REED. Division.

The House divided; and there were—yeas 135, nays 3.

Mr. REED and Mr. WILLIAM A. STONE. No quorum.

Mr. OUTWATER and Mr. BLAND. The yeas and nays, Mr. Speaker.

The yeas and nays were ordered.

The Clerk proceeded to call the roll.

The question was taken; and there were—yeas 170, nays 10, not voting 173; as follows:

So the previous question was ordered.

[March 1, 1894.]

The SPEAKER. Yesterday the previous question was ordered upon a resolution from the Committee on Rules; and on the adoption of the resolution the yeas and nays were ordered. The question is now upon the adoption of that resolution, which the Clerk will report.

The Clerk read as follows:

"Resolved, That immediately after the adoption of this resolution the Committee of the Whole House on the state of the Union be discharged from the further consideration of H. R. 4956; that the House shall then proceed to consider the same; that after two hours' consideration therein the previous question shall be considered ordered on the pending amendments, if there be any, and the bill to its final passage. That without other motions the vote shall then be taken on the pending amendments, if there be any, on the engrossment and third reading, on a motion to recommit with or without instructions, should such motion be made, on the final passage of the bill, and on a motion to reconsider and lay on the table."

The SPEAKER. The question will now be taken on agreeing to the resolution reported by the Committee on Rules. The House will please be in order so that members may hear their names called and that the Clerk may hear the responses.

The question was taken; and there were—yeas 136, nays 13, not voting 174; as follows:

YEAS—136.

Abbott,	Cockrell,	Hare,	Montgomery,
Alderson,	Coffeen,	Hartman,	Morgan,

--	--	--	---

At the conclusion of the second call,
The SPEAKER said: The Clerk will call my name.
The Clerk called the name of the Speaker, and the Speaker voted "aye."

Mr. BLAND. I submit the substitute for the bill which I send to the Clerk's desk.

The SPEAKER. The Clerk will report the substitute.

The Clerk read as follows:

Strike out all after the enacting clause, and insert:

"That the Secretary of the Treasury shall immediately cause to be coined as fast as possible the silver bullion held in the Treasury, purchased under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issuing of Treasury notes thereon, and for other purposes,' to the amount of the gain or seigniorage of such bullion, to wit: The sum of \$55,156,681, and such coin or the silver certificates issued thereon shall be used in the payment of public expenditures, and the Secretary of the Treasury may, in his discretion, if the needs of the Treasury demand it, issue silver certificates in excess of such coinage: *Provided*, That said excess shall not exceed the amount of the seigniorage as herein authorized to be coined.

"SEC. 2. After the coinage provided for in the first section of this act, the remainder of the silver bullion purchased in pursuance of said act of July 14, 1890, shall be coined into legal-tender standard silver dollars as fast as possible, and the coin shall be held in the Treasury for the redemption of the Treasury notes issued in the purchase of said bullion; that as fast as the bullion shall be coined for the redemption of said notes, the notes shall not be re-issued, but shall be canceled and destroyed in amounts equal to the coin held at any time in the Treasury derived from the coinage herein provided for, and silver certificates shall be issued on such coin in the manner now provided by law: *Provided*, That this act shall not be construed to change existing law relating to the legal-tender character or mode of redemption of the Treasury notes issued under said act of July 14, 1890. That a sufficient sum of money is hereby appropriated to carry into effect the provisions of this act."

Mr. BLAND. Mr. Speaker—

Mr. BYNUM. I make the point of order that amendments to the bill are in order before the substitute.

The SPEAKER. Amendments to the bill will be voted upon before any vote is taken upon the substitute, of course. The Chair recognizes the gentleman from Ohio [Mr. OUTHWAITE] to offer an amendment.

Mr. OUTHWAITE. The amendment I offer is simply to strike out the second section of the substitute.

Mr. CANNON of Illinois. I desire to offer an amendment to the substitute, to strike out the second section.

The SPEAKER. That is the amendment of the gentleman from Ohio [Mr. OUTHWAITE].

Mr. CANNON of Illinois. I understood his amendment to be to strike out the second section of the original bill.

The SPEAKER. What was the amendment of the gentleman from Ohio [Mr. OUTHWAITE]?

Mr. OUTHWAITE. I moved to strike out the second section of the substitute.

Mr. SPRINGER. The gentleman from Illinois [Mr. CANNON] is in order to move to strike out the first section of the original bill.

The SPEAKER. That was not his motion.

Mr. OUTHWAITE. I desire to strike out the second section of the bill or the substitute, whichever is agreed to. As I understand it, I would like to have the amendment pending to the original bill if the substitute should not be adopted.

Mr. RICHARDSON of Tennessee. I suggest to the gentlemen from Ohio [Mr. OUTHWAITE] that the second section of the substitute is not the same as the second section of the original bill.

Mr. OUTHWAITE. I will change my amendment. I move to strike out the second section of the original bill.

Mr. CANNON of Illinois. Mr. Speaker—

The SPEAKER. The Chair will state the question. The gentleman from Missouri offers an amendment in the nature of a substitute, which has just been read. The gentleman from Ohio [Mr. OUTHWAITE] offers an amendment to the original text, as the Chair understands.

Mr. OUTHWAITE. Now, Mr. Speaker, I make the same motion in regard to the substitute.

The SPEAKER. The Chair can not recognize the gentleman to make two motions, because other members ought to have an opportunity to offer amendments.

Mr. OUTHWAITE. I would like to have that amendment pending.

The SPEAKER. The gentleman has an amendment pending.

Mr. OUTHWAITE. I will adhere to my motion to strike out the second section of the substitute, and trust that someone will submit an amendment to strike out the second section.

The SPEAKER. The Chair would like to recognize some gentleman from the minority of the committee to offer an amendment, if it is desired.

Mr. BLAND. The gentleman from Pennsylvania [Mr. CHARLES W. STONE] can offer an amendment.

Mr. JOHNSON of North Dakota. I wish to offer an amendment to the substitute.

The SPEAKER. There is one amendment pending, and there can be no more amendments pending to the substitute.

Mr. JOHNSON of North Dakota. Then I offer an amendment to the original bill.

Mr. HARTMAN. I desire to offer an amendment to the original bill.

The SPEAKER. The amendment of the gentleman from North Dakota will be read.

The Clerk read as follows:

Add to section 1 the following:

"The Secretary of the Treasury shall afford to holders of standard silver dollars the same right and facilities as to redemption and exchange as now accorded to the holders of silver dimes, quarter dollars, and half dollars."

Mr. BLAND. I make the point of order that that relates to subsidiary coinage and is not in order in this bill. This bill provides for the coinage of standard silver dollars and the issue of certificates. That is a proposition to change the law in regard to the subsidiary coin.

Mr. JOHNSON of North Dakota. No, sir; I beg the gentleman's pardon; not at all. It simply proposes to put the holder of the silver dollar on the same footing as the holder of dimes and quarters as to redemption and exchange.

It does not propose to change the law as to the subsidiary coinage, but simply gives the holder of the standard silver dollar the same right as the holder of subsidiary coin.

Mr. BLAND. It has always been held in Committee of the Whole, in consideration of a proposition relating to the subsidiary coinage, that we could not add to it one relating to the coinage of standard silver dollars.

The SPEAKER. As at present advised, the Chair will hold that it is in order. The Chair will look further into the matter. The gentleman from New York [Mr. STRAUS] desires to offer an amendment.

Mr. CANNON of Illinois. I desire to offer an amendment, if it is in order.

The SPEAKER. Of course the gentleman knows there are only a certain number of amendments that can be pending at one time, but the House can vote them out of the way, so that other amendments can be offered. The order does not at all contemplate that the House shall wait until the end of the two hours before voting upon the amendments, if the House desire to do so.

Mr. CANNON of Illinois. Have all the amendments been offered that are in order at this time under the rule?

The SPEAKER. The Chair will ascertain and find out. There is a substitute offered, and an amendment to the substitute, and one amendment to the original bill. The Chair recognized the gentleman from New York [Mr. STRAUS] to offer an amendment, which the Clerk will report, and see whether it is in order as an amendment to the amendment.

The Clerk read as follows:

"That the Secretary of the Treasury be, and he is hereby, authorized to issue from time to time coupon and registered bonds of the United States in denominations of \$20 and multiples of that sum, payable in coin after five years from date, and bearing interest at a rate not exceeding 3 per cent per annum, payable quarterly in coin, and to sell and dispose of the same at not less than par in coin; and the proceeds of such bonds shall be paid into the Treasury and held and used for the purposes now authorized by law."

Mr. REED. That is not in order.

Mr. BLAND. I make the point of order that it is not germane.

The SPEAKER. It does not seem to the Chair, after some reflection on this question—because it is only fair to say that the Chair had notice of the amendment—it does not seem to the Chair that the amendment is germane. The pending proposition is a proposition to coin the seigniorage in the Treasury and also the fund of bullion that is contained therein belonging to the United States.

This proposition to deal with a bond issue the Chair does not believe is germane either to the amendment or to the text of the original bill. Therefore the Chair must sustain the point of order against the amendment. The Chair now recognizes the gentleman from Illinois [Mr. CANNON] to offer an amendment to the amendment.

The SPEAKER. The gentleman from Illinois [Mr. CANNON] offers an amendment, as the Chair understands, to the amendment of the gentleman from North Dakota. It will be read.

The Clerk read as follows:

"That any owner of silver bullion may deposit the same at any coinage mint or at any assay office in the United States that the Secretary of the Treasury may designate, and receive therefor Treasury notes hereinafter provided for, equal at the date of deposit to the net value of such silver, at the market price, such price to be determined by the Secretary of the Treasury under rules and regulations prescribed, based upon the price current in the leading silver markets of the world."

"SEC. 2. That the Secretary of the Treasury shall cause to be prepared Treasury notes in such amounts as may be required for the purpose of the above section, and in such form and denomination as he may prescribe: *Provided*, That no note shall be of a denomination less than \$1 nor more than \$1,000."

"SEC. 3. That the notes issued under this act shall be a legal tender in payment of all debts, public and private, except when otherwise expressly stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when received into the Treasury may be reissued, and such notes, when held by any national banking association, shall be counted as part of its lawful reserve."

"SEC. 4. That the notes issued under the provisions of this act shall be redeemed upon demand at the Treasury of the United States or at the office of an assistant treasurer of the United States, by the issue of a certificate of deposit for the sum of the notes so presented, payable at one of the mints of the United States, in an amount of silver bullion equal in value, on the date of said certificate, to the number of dollars stated therein, at the market price of silver, to be determined as provided in section 1; or such notes may be redeemed in gold coin, at the option of the Government: *Provided*, That upon demand of the holder such notes shall be redeemed in silver dollars.

"SEC. 5. That when the market price of silver, as determined by the Secretary of the Treasury, shall exceed \$1 for 371.25 grains of pure silver, it shall be the duty of the Secretary of the Treasury to refuse to receive deposits of silver bullion for the purposes of this act: *Provided*, That when the market price of silver, as determined in accordance with section 1 of this act, is \$1 for 371.25 grains of pure silver, it shall be lawful for the owner of any silver bullion, the deposit of which for notes is herein provided for, to deposit the same at any coinage mint of the United States, to be formed into standard silver dollars for his benefit as provided in the act of January 18, 1837.

"SEC. 6. That it shall be lawful for the Secretary of the Treasury, with the approval of the President of the United States, to suspend, temporarily, the receipt of silver bullion for Treasury notes at any time when he is satisfied that through combinations or speculative manipulations of the market the price of silver is arbitrary, nominal, or fictitious.

"SEC. 7. That the silver bullion deposited under this act, represented by Treasury notes which have been redeemed in gold coin or in silver dollars, may be coined into standard silver dollars or any other denomination of silver coin now authorized by law, for the purpose of replacing coin used in the redemption of the notes.

"SEC. 8. That any gain or seigniorage arising from the coinage which may be executed under the provisions of this act shall be accounted for and paid into the Treasury as provided by existing law.

"SEC. 9. The silver bullion received under the provisions of this act shall be subject to the requirements of existing laws, and the regulations of the mint service, governing the methods of receipt, determining the amount of pure silver contained, and the amount of charges or deductions, if any, to be made.

"SEC. 10. That nothing in this act shall be construed to prevent the purchase, from time to time, as may be required, of silver bullion for the subsidiary silver coinage, nor to affect the legal-tender quality of the standard silver dollar.

"SEC. 11. That a sum sufficient to carry out the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

"SEC. 12. That this act shall take effect thirty days from and after its passage."

MR. BLAND. Mr. Speaker, it has been very difficult to hear the reading of this proposition on account of the confusion in the House, and I do not know that I get at its whole purport. But it seems to me it is hardly germane to this bill, which provides for the coinage of the silver bullion in the Treasury. This proposition of the gentleman from Illinois, so far as I can gather its purport, proposes to deposit bullion and issue certificates therefor, to be redeemed in gold or silver when demanded—

MR. CANNON of Illinois. It gives the Government the option to redeem in gold or in silver bullion at its then value.

A MEMBER. At its gold value?

MR. CANNON of Illinois. Yes, sir.

MR. BLAND. This bill provides for the coinage of silver now in the Treasury into standard dollars, to be paid out in redemption of outstanding notes when demanded by the holders. It does seem to me that this amendment is not germane to the measure under consideration. I shall have to make a point of order on the original amendment and on the amendment to the amendment.

THE SPEAKER. The Chair is not familiar with, and has not been able to carefully consider, all of the provisions of this proposed amendment; but it is a well-established rule that if any part of an amendment is out of order, or is not germane, that fact taints the character of the whole; and the Chair thinks that in order to authorize an amendment to the pending proposition, the gentleman must have his amendment in such shape that no part of it is out of order. Now it is clear to the Chair—

MR. HARTMAN. Mr. Speaker—

THE SPEAKER. The Chair can not be interrupted. It is clear to the Chair that the first proposition contained in the amendment is out of order and not germane. Whereas the pending bill proposes to deal with the silver now in the Treasury, this is a proposition to permit all holders of silver to take it to the Treasury and have it coined under a free-coinage proposition, a proposition dealing with silver which is outside of the Treasury; and therefore the Chair does not think it in order, and so holds.

MR. ABBOTT. I desire to offer an amendment to the amendment of the gentleman from North Dakota [Mr. JOHNSON].

THE SPEAKER. The gentleman will send it up.

The amendment was read, as follows:

"Amend the bill (H. R. 4956) by striking out all after the enacting clause and insert the following:

"That the Secretary of the Treasury is hereby authorized and required to transfer to the several mints of the United States and cause to be coined into legal-tender standard silver dollars, and into such minor silver coins as he may deem advisable, at least 2,000,000 ounces per month of the silver bullion purchased under the provisions of the act entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' approved July 14, 1890, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

"Second. That after the passage of this act the Secretary of the Treasury is directed that whenever the Treasury coin notes issued in accordance with the provisions of the said act of July 14, 1890, or whenever the silver certificates issued by virtue of any act of Congress authorizing the issue of such certificates on the deposit of silver dollars are presented for redemption, to redeem such notes and certificates in either gold or silver: *Provided*, That in case the amount of coined gold in the Treasury exceeds the amount of the coined silver the Secretary of the Treasury shall redeem such notes and certificates in gold coin, but in case the silver coin in the Treasury exceeds the amount of gold coin, such notes and certificates shall be redeemed in silver coin.

"Third. That the Secretary of the Treasury is authorized and directed to issue Treasury coin notes in amount equal to the gain or seigniorage of the silver bullion purchased under the provisions of said act of July 14, 1890, and such Treasury notes shall be immediately available for the payment of the current expenditures of the Government: *Provided*, That hereafter no Treasury notes of less denomination than \$5 shall be issued.

"Fourth. That upon the deposit in the Treasury of any gold or silver coin the Secretary of the Treasury shall issue Treasury coin notes to the nominal amount of such deposit, and all laws authorizing the issue of gold and silver

certificates are hereby repealed, and all laws in conflict herewith are hereby repealed."

MR. NEWLANDS. Mr. Speaker, I understand that under the rules of the House no further amendment can be offered until one of the pending amendments is disposed of. In that event I shall ask permission to introduce an amendment to the first section, as follows:

"No silver certificates, Treasury notes under the act of 1890, United States notes commonly called greenbacks, or national-bank notes shall hereafter be issued of a denomination less than \$10."

MR. HARTMAN. Is an amendment for the free coinage of silver now in order? I did not understand the statement of the Chair.

THE SPEAKER. It is not. No other amendment is in order, because the previous question is ordered. The Clerk will first report the amendment of the gentleman from North Dakota [Mr. JOHNSON].

The Clerk read as follows:

"Add to section 1 the following words:

"The Secretary of the Treasury shall afford to holders of standard silver dollars the same rights and facilities as to redemption and exchange as are now accorded to the holders of silver dimes, quarter dollars, and half dollars."

THE SPEAKER. To this the gentleman from Texas [Mr. ABBOTT] offers an amendment, on which the vote will first be taken. The Clerk will now report the amendment of the gentleman from Texas [Mr. ABBOTT].

The Clerk read as follows:

"Amend the bill (H. R. 4956) by striking out all after the enacting clause and insert the following:

"That the Secretary of the Treasury is hereby authorized and required to transfer to the several mints of the United States and cause to be coined into legal-tender standard silver dollars, and into such minor silver coins as he may deem advisable, at least 2,000,000 of ounces per month of the silver bullion purchased under the provisions of the act entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' approved July 14, 1890, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

"Second. That after the passage of this act the Secretary of the Treasury is directed that whenever the Treasury coin notes issued in accordance with the provisions of the said act of July 14, 1890, or whenever the silver certificates issued by virtue of any act of Congress authorizing the issue of such certificates on the deposit of silver dollars are presented for redemption, to redeem such notes and certificates in either gold or silver: *Provided*, That in case the amount of coined gold in the Treasury exceeds the amount of the coined silver, the Secretary of the Treasury shall redeem such notes and certificates in gold coin, but in case the silver coin in the Treasury exceeds the amount of gold coin, such notes and certificates shall be redeemed in silver coin.

"Third. That the Secretary of the Treasury is authorized and directed to issue Treasury coin notes in amount equal to the gain or seigniorage of the silver bullion purchased under the provisions of said act of July 14, 1890, and such Treasury notes shall be immediately available for the payment of the current expenditures of the Government: *Provided*, That hereafter no Treasury notes of less denomination than \$5 shall be issued.

"Fourth. That upon the deposit in the Treasury of any gold or silver coin the Secretary of the Treasury shall issue Treasury coin notes to the nominal amount of such deposit, and all laws authorizing the issue of gold and silver certificates are hereby repealed, and all laws in conflict herewith are hereby repealed."

THE SPEAKER. The question is on this amendment to the amendment offered by the gentleman from Texas [Mr. ABBOTT].

The question was taken; and the amendment to the amendment was rejected.

THE SPEAKER. The question now is on the amendment of the gentleman from North Dakota [Mr. JOHNSON], which the Clerk will report.

The Clerk read as follows:

"Add to section 1 the following words:

"The Secretary of the Treasury shall afford to holders of standard silver dollars the same rights and facilities as to redemption and exchange as are now accorded to the holders of silver dimes, quarter dollars, and half dollars."

The question was taken on the amendment of Mr. JOHNSON of North Dakota, and the Speaker announced that the "noes" seemed to have it.

MR. THACHER. Division, Mr. Speaker. I think that is a good amendment.

The House divided; and there were—ayes 71, noes 156.

Accordingly the amendment was rejected.

THE SPEAKER. There is a substitute offered by the gentleman from Missouri [Mr. BLAND]. The question is upon the amendment to that substitute offered by the gentleman from Ohio [Mr. OUTHWAITE]. The Clerk will first report the substitute.

The Clerk read as follows:

"Strike out all after the enacting clause and insert:

"That the Secretary of the Treasury shall immediately cause to be coined as fast as possible the silver bullion held in the Treasury, purchased under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issuing of Treasury notes thereon, and for other purposes,' to the amount of the gain or seigniorage of such bullion, to wit: The sum of \$55,153,661, and such coin or the silver certificates issued thereon shall be used in the payment of public expenditures, and the Secretary of the Treasury may, in his discretion, if the needs of the Treasury demand it, issue silver certificates in excess of such coinage: *Provided*, That said excess shall not exceed the amount of the seigniorage as herein authorized to be coined."

THE SPEAKER. Section 2 of the substitute, which the Clerk is now about to read, is the section which the gentleman from Ohio [Mr. OUTHWAITE] proposes by his amendment to strike out. He proposes to strike out the section which the Clerk will now report.

The Clerk read as follows:

"SEC. 2. After the coinage provided for in the first section of this act the remainder of the silver bullion purchased in pursuance of said act of July 14, 1890, shall be coined into legal-tender standard silver dollars as fast as possible, and the coin shall be held in the Treasury for the redemption of the Treasury notes issued in the purchase of said bullion; that as fast as the bullion shall be coined for the redemption of said notes the notes shall not be reissued, but shall be canceled and destroyed in amounts equal to the coin held at any time in the Treasury derived from the coinage herein provided for, and silver certificates shall be issued on such coin in the manner now provided by law: *Provided*, That this act shall not be construed to change existing law relating to the legal-tender character or mode of redemption of the Treasury notes issued under said act of July 14, 1890."

THE SPEAKER. The gentleman from Ohio proposes as an amendment to strike that section out.

MR. BLAND. I understand that following that is a provision providing that a particular sum of money be appropriated.

THE SPEAKER. The amendment of the gentleman from Ohio does not reach

to that. The amendment of the gentleman from Ohio is to strike from the substitute the second section, which has just been read.

The question was taken on the amendment of Mr. OUTHWAITE, and the Speaker announced that the yeas seemed to have it.

Mr. OUTHWAITE. Division.

The House divided; and there were—ayes 64, yeas 130.

Mr. OUTHWAITE. I should like to have the yeas and nays on that.

The yeas and nays were ordered.

The question was taken; and there were—yeas 130, nays 144, not voting 73; as follows:

YEAS—130.

Mr. OUTHWAITE. Mr. Speaker, I will ask for a recapitulation of the vote.

The vote was recapitulated.

The SPEAKER. On this question the yeas are 130, the nays are 144. The yeas have it, and the amendment is not agreed to. [Applause on the Democratic side.] The question now is on the substitute offered by the gentleman from Missouri for the original bill.

The question was taken; and the Speaker announced that the yeas seemed to have it.

Mr. TRACEY. Division.

The House divided; and there were—ayes 165, yeas 14.

Mr. TRACEY. Tellers, Mr. Speaker.

Mr. BLAND. Let us have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 172, nays 94, not voting 86; as follows:

YEAS—172.

Covert,	Hicks,	Rayner,	
Crain,	Hilborn,	Reed,	

So the substitute was agreed to.

The SPEAKER. The question now is on the engrossment and third reading of the amended bill.

The bill was ordered to be engrossed and read a third time; and it was accordingly engrossed and read the third time.

Mr. TRACEY. Mr. Speaker, I move that the bill be recommitted to the Committee on Coinage, Weights, and Measures without instructions.

The question was taken on the motion of Mr. TRACEY; and the Speaker declared that the yeas seemed to have it.

Mr. TRACEY. I ask for a division.

The House divided; and there were—ayes 72, yeas 160.

Mr. TRACEY. I ask for the yeas and nays.

The yeas and nays were ordered, 72 members voting in favor thereof.

The question was taken; and there were—yeas 132, nays 129, not voting 52; as follows:

YEAS—132.

So the bill was passed.
Mr. RYAN. I ask for a recapitulation of the vote.
The vote having been recapitulated—
The SPEAKER. On this question the yeas are 103 and the nays 120. So the bill is passed. [Loud applause on the Democratic side.]
On motion of Mr. BLAND, a motion to reconsider the last vote was laid on the table.

IN THE SENATE

[March 5, 1894.]

Received from the House, read the first time by its title, and laid on the table.

Mr. STEWART. I give notice of an amendment which I intend to submit to the bill, which I ask may be read and lie on the table.

The VICE-PRESIDENT. The proposed amendment will be read.

The SECRETARY. It is proposed to add to the bill the following sections:
"SEC. 3. That the silver coins of the United States shall be composed of standard silver. That of the silver coins the dollar shall be of the weight of 412 grains; the half dollar of the weight of 206 grains; the quarter dollar of the weight of 103 grains; and the dime, or tenth part of a dollar, of the weight of 41 grains. And that dollars, half dollars, quarter dollars, and dimes shall be legal tenders of payment, according to their nominal value, for any sum whatever.

"SEC. 4. That silver bullion brought to any mint of the United States for coinage shall be received and coined by the proper officers for the benefit of the depositor: Provided, That it shall be lawful to refuse, at the mint, any deposit of less value than \$100 and any bullion so base as to be unsuitable for the operations of the mint.

"SEC. 5. That the depositor of silver bullion at any mint of the United States for coinage, shall, as soon as the coinage value thereof can be determined, receive therefor, at his option, such coinage value in silver coin or silver certificates of the description now provided by law; and such silver certificates and all other silver certificates heretofore or hereafter issued by the United States shall be a legal tender in payment of all debts, public and private."

[March 7, 1894.]

Read the second time.
Mr. SHERMAN. I desire to enter a motion to refer the bill to the Committee on Finance, if it has already been taken up.

Mr. HARRIS. The bill has been read a second time by title, and I ask unanimous consent that it be taken up for consideration.

Mr. SHERMAN. Before that is done, I move that the bill be referred to the Committee on Finance.

The PRESIDING OFFICER. The question recurs on the motion of the Senator from Ohio [Mr. SHERMAN] to refer the pending bill to the Committee on Finance.

Mr. STEWART. On that motion I ask for the yeas and nays.
The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The result was announced—yeas 6, nays 50; as follows:

YEAS—6.

Davis,	Morrill,	Sherman,	Vilas.
Gallinger,	Palmer,		

NAYS—50.

Aldrich,	Faulkner,	Lindsay,	Quay,
Allen,	George,	Ransom,	Roach,
Allison,	Gibson,	Manderson,	Shoup,
Bate,	Gordon,	Martin,	Squire,
Berry,	Hale,	Mills,	Stewart,
Butler,	Hansbrough,	Mitchell of Oreg.	Stockbridge,
Call,	Harris,	Pasco,	Teller,
Carey,	Hawley,	Peffer,	Turpie,
Cockrell,	Hoar,	Perkins,	Voorhees,
Coke,	Hunton,	Pettigrew,	Wolcott.
Daniel,	Irby,	Platt,	
Dolph,	Jones of Ark.	Power,	
Dubois,	Kyle,	Pugh,	

NOT VOTING—29.

Blackburn,	Dixon,	McMillan,	Vest,
Brice,	Frye,	McPherson,	Washburn,
Caffery,	Gorman,	Mitchell of Wis.	White, Cal.
Camden,	Gray,	Morgan,	White, La.
Cameron,	Higgins,	Murphy,	Wilson.
Chandler,	Hill,	Proctor,	
Colquitt,	Jones of Nev.	Smith,	
Cullom,	McLaurin,	Vance,	

So the Senate refused to refer the bill to the Committee on Finance.

The PRESIDING OFFICER. The Chair is informed that the pending bill has not been read at length, as in Committee of the Whole. The Secretary will therefore read the bill at length.

The Secretary read the bill, as follows:

"Be it enacted, etc., That the Secretary of the Treasury shall immediately cause to be coined as fast as possible the silver bullion held in the Treasury, purchased under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issuing of Treasury notes thereon, and for other purposes,' to the amount of the gain or seigniorage of such bullion, to wit: The sum of \$35,150,881, and such coin or the silver certificates issued thereon shall be used in the payment of public expenditures; and the Secretary of the Treasury may, in his discretion, if the needs of the Treasury demand it, issue silver certificates in excess of such coinage: *Provided*, That said excess shall not exceed the amount of the seigniorage as herein authorized to be coined.

"SEC. 2. After the coinage provided for in the first section of this act, the remainder of the silver bullion purchased in pursuance of said act of July 14, 1890, shall be coined into legal-tender standard silver dollars as fast as possible, and the coin shall be held in the Treasury for the redemption of the Treasury notes issued in the purchase of said bullion. That as fast as the bullion shall be coined for the redemption of said notes, the notes shall not be reissued, but shall be canceled and destroyed in amounts equal to the coin held at any time in the Treasury, derived from the coinage herein provided for, and silver certificates shall be issued on such coin in the manner now provided by law: *Provided*, That this act shall not be construed to change existing law relating to the legal-tender character or mode of redemption of the Treasury notes issued under said act of July 14, 1890.

"SEC. 3. That a sufficient sum of money is hereby appropriated to carry into effect the provisions of this act."

The PRESIDING OFFICER. The bill is before the Senate as in Committee of the Whole, and open to amendment. If there be no amendment, the bill will be reported to the Senate.

The bill was reported to the Senate without amendment.

The PRESIDING OFFICER. The bill is in the Senate and open to amendment. If there be no amendment, the question is, Shall the bill be ordered to a third reading, and read the third time? If there be no amendment, the question is, Shall the bill be ordered to a third reading? [Putting the question.] The yeas have it. The bill will be read a third time.
The bill was read the third time.

The PRESIDING OFFICER. The bill has been read the third time, and the question now before the Senate is on the passage of the bill.

Mr. ALLISON. Then I move a reconsideration of the vote whereby the bill was passed to a third reading.

[March 4, 1894.]

The PRESIDING OFFICER. The question is on the motion of the Senator from Iowa [Mr. ALLISON] to reconsider the vote whereby the bill was ordered to a third reading. [Putting the question.] The yeas appear to have it.

Mr. QUAY and Mr. ALDRICH called for the yeas and nays; and they were ordered.

The Secretary proceeded to call the roll.

The result was announced—yeas 28, nays 45; as follows:

YEAS—28.

Aldrich,	Davis,	Lodge,	Proctor,
Allison,	Dolph,	McMillan,	Quay,
Brice,	Frye,	McPherson,	Smith,
Caffery,	Gallinger,	Manderson,	Stockbridge,
Carey,	Hale,	Mitchell of Wis.	Vilas,
Chandler,	Hawley,	Morrill,	Washburn,
Cullom,	Hoar,	Palmer,	Wilson.

NAYS—45.

Allen,	Dubois,	Mills,	Shoup,
Bate,	Faulkner,	Mitchell of Oreg.	Squire,
Berry,	Gibson,	Morgan,	Stewart,
Blackburn,	Gordon,	Murphy,	Teller,
Blanchard,	Hansbrough,	Pasco,	Turpie,
Butler,	Harris,	Peffer,	Vest,
Call,	Hill,	Perkins,	Voorhees,
Camden,	Irby,	Pettigrew,	White,
Cockrell,	Jones of Ark.	Power,	Wolcott.
Coke,	Kyle,	Pugh,	
Colquitt,	Lindsay,	Ransom,	
Daniel,	Martin,	Roach,	

NOT VOTING—12.

Cameron,	Gorman,	Hunton,	Platt,
Dixon,	Gray,	Jones of Nev.	Sherman,
George,	Higgins,	McLaurin,	Vance.

So the Senate refused to reconsider the vote by which the bill was ordered to a third reading.

Mr. HARRIS. Under the consent rule agreed upon some days since the Senator from Nebraska [Mr. MANDERSON] has now the right, if he chooses to exercise it, to move to commit the bill.

Mr. MANDERSON. Understanding that it is no violation of the unanimous-consent rule, I move that the bill be committed to the Committee on Finance with instructions to amend the bill so as to provide that the silver certificates which are to be issued by the first section shall be issued only in anticipation of or in lieu of the seigniorage provided to be coined.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nebraska [Mr. MANDERSON] to commit the bill with instructions.

Mr. MANDERSON. On that question I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The roll call having been concluded, the vote was announced—yeas 27, nays 44; as follows:

YEAS—27.

Aldrich,	Davis,	Lodge,	Proctor,
Allison,	Dolph,	McMillan,	Smith,
Brice,	Frye,	McPherson,	Stockbridge,
Caffery,	Gallinger,	Manderson,	Vilas,
Carey,	Hale,	Mitchell of Wis.	Washburn,
Chandler,	Hawley,	Morrill,	Wilson.
Cullom,	Hoar,	Palmer,	

NAYS—44.

Allen,	Dubois,	Martin,	Quay,
Bate,	Faulkner,	Mills,	Ransom,
Berry,	Gibson,	Mitchell of Oreg.	Roach,
Blackburn,	Gordon,	Morgan,	Shoup,
Blanchard,	Hansbrough,	Murphy,	Stewart,
Butler,	Harris,	Pasco,	Teller,
Call,	Hill,	Peffer,	Turpie,
Camden,	Irby,	Perkins,	Vest,
Cockrell,	Jones of Ark.	Pettigrew,	Voorhees,
Coke,	Kyle,	Power,	White,
Colquitt,	Lindsay,	Pugh,	Wolcott.

NOT VOTING—14.

Cameron,	Gorman,	Jones of Nev.	Squire,
Daniel,	Gray,	McLaurin,	Vance.
Dixon,	Higgins,	Platt,	
George,	Hunton,	Sherman,	

So the Senate refused to commit the bill to the Committee on Finance.

[March 15, 1894.]

The PRESIDING OFFICER. The bill before the Senate having been ordered to a third reading, and read the third time, the question is, Shall the bill pass? Mr. GALLINGER. On that question I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

The roll call having been concluded, the result was announced—yeas 44 nays 31; as follows:

YEAS—44.

Allen,	Dubois,	McLaurin,	Quay,
Bate,	Faulkner,	Martin,	Ransom,
Berry,	George,	Mills,	Roach,
Blackburn,	Gordon,	Mitchell of Oreg.	Shoup,
Blanchard,	Hansbrough,	Morgan,	Stewart,
Butler,	Harris,	Pasco,	Teller,
Call,	Hunton,	Peffer,	Turpie,
Cockrell,	Irby,	Perkins,	Vest,
Coke,	Jones of Ark.	Pettigrew,	Voorhees,
Colquitt,	Kyle,	Power,	White,
Daniel,	Lindsay,	Pugh,	Wolcott.

NAYS—31.

Aldrich,	Dolph,	Lodge,	Platt,
Allison,	Frye,	McMillan,	Proctor,
Brice,	Gallinger,	McPherson,	Smith,
Caffery,	Gibson,	Manderson,	Stockbridge,
Carey,	Gorman,	Mitchell of Wis.	Vilas,
Chandler,	Hale,	Morrill,	Washburn,
Cullom,	Hawley,	Murphy,	Wilson.
Davis,	Higgins,	Palmer,	

Camden, Gray, Jones of Nev. Vance.
Cameron, Hill, Sherman,
Dixon, Hoar, Squire,

So the bill was passed.

[March 17, 1894.]

Signed by the Speaker of the House.

[March 19, 1894.]

Signed by the Vice-President.

[April 4, 1894.]

The bill was vetoed, and following is the vote on passage over the veto:

YEAS—144.

BONDS TO MAINTAIN GOLD RESERVE.

In House, February 7, 1895, on H. R. 8705, to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve, and to redeem and retire United States notes, and for other purposes, introduced and reported by Mr. SPRINGER (Democrat), from the Committee on Banking and Currency, the following substitute, submitted by Mr. REED (Republican), was disagreed to:

"Be it enacted, etc., That to enable the Secretary of the Treasury to provide for and maintain the redemption of United States notes according to the provisions of the act approved January 14, 1875, entitled 'An act to provide for the resumption of specie payments,' he is authorized, in addition to the power he now has under said act, from time to time, at his discretion, to issue, sell, and dispose of, at not less than par in coin, either of the description of bonds authorized in said act, or coupon or registered bonds of the United States, to an amount sufficient for the objects herein stated, bearing not to exceed 3 per cent interest per annum, payable semiannually, and redeemable, at the pleasure of the United States, in coin, after five years from their date, with like qualities, privileges, and exemptions provided in said act for the bonds therein authorized. And the Secretary of the Treasury shall use the proceeds thereof for the purposes herein provided for, and none other."

"Sec. 2. That to enable the Secretary to pay the current expenses of the Government so long as the current revenues shall be deficient he is authorized and required from time to time, in his discretion, to issue, sell, and dispose of, at not less than par, such an amount of certificates of indebtedness of the denomination of twenty-five, fifty, and one hundred dollars, or any multiple thereof, as may be needed for that purpose, bearing not to exceed 3 per cent interest per annum, payable semiannually, and redeemable at the pleasure of the Government, in coin, after two years from their date, with like qualities, privileges, and exemptions provided in the act approved January 14, 1875. The Secretary may at his discretion sell and dispose of the same for not less than an equal amount of lawful money of the United States, at designated depositories of the United States, and at such post-offices as he may select, and the Secretary shall use the proceeds thereof for the purpose provided for in this section, and for none other."

ISSUE OF GOLD BONDS.

In House February 14, 1895, Mr. WILSON of West Virginia, (Democrat) introduced the following joint resolution; which was considered on this day:

"A joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds.

"Resolved, etc., That the Secretary of the Treasury be, and he is hereby, authorized to issue and dispose of at not less than par in gold coin, bonds of the United States, with the qualities, privileges, and exemptions of bonds issued under the act approved July 14, 1870, entitled 'An act authorizing the refunding of the national debt,' to an amount not exceeding \$65,116,275, bearing interest at a rate not exceeding 3 per cent per annum, principal and interest payable in gold coin of the present standard of weight and fineness, said bonds to be made payable not more than thirty years after date: *Provided, however, That no part of the proceeds of the sale of such bonds nor of the notes redeemed with such proceeds shall be available for the payment of the current expenses of the Government.*"

After debate the resolution was disagreed to.

INTERNATIONAL MONETARY CONFERENCE.

February 27, 1895, the Senate added the following amendment to the sundry civil appropriation bill:

That whenever the President of the United States shall determine that this Government should be represented at any international conference called with a view to secure, internationally, a fixity of relative value between gold and silver, as money, by means of a common ratio between those metals, with free mintage at such ratio, the United States shall be represented at such conference by nine delegates, to be selected as follows: The President of the United States shall select three of said delegates; the Senate shall select three members of the Senate as delegates; and the House of Representatives shall select three members of the House as delegates. If at any time there shall be any vacancy such vacancy shall be filled by the President of the United States. And for the compensation of said delegates, together with all reasonable expenses connected therewith, to be approved by the Secretary of State, including the proportion to be paid by the United States of the joint expenses of such conference, the sum of \$100,000, or so much thereof as may be necessary, is hereby appropriated."

March 2, 1895, the House agreed to the Senate amendment with an amendment providing that the members of the commission on the part of the House shall be members of the Fifty-fourth Congress.

The members appointed on the part of the House are: DAVID B. CULBERSON, of Texas; CHARLES F. CRISP, of Georgia; ROBERT B. HITT, of Illinois.

The Currency.

SPEECH

OF

HON. ADOLPH MEYER

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1895.

The House having under consideration the joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds—

Mr. MEYER said:

Mr. SPEAKER: Upon a consideration of the arguments for and against the pending joint resolution authorizing the issue of \$65,116,275 of gold 3 per cent bonds, I have resolved to vote in the affirmative. The arguments which lead me to this conclusion have been stated by other speakers, and it is not necessary for me to dwell upon them at this stage. I vote for the resolution because it will save some \$16,000,000 in the loan, and is deemed necessary for the public good by the the national Administration; but I appreciate the objections to the measure, and I take this course, with some reluctance, as probably the best under all the environments of our situation. But this joint resolution is only one of a series of measures which I consider to be important to the public credit and advisable in order to restore prosperity to the country, revive our languishing industries, and give employment and bread to the suffering and unemployed poor of our population.

REPEAL OF THE TAX UPON STATE-BANK ISSUES.

I had occasion in June last to present some observations to the House in favor of House bill No. 3825, to suspend the operations of the law imposing a tax of 10 per cent upon notes of State banks issued during the period therein mentioned. I endeavored to show upon that occasion that this repeal which had been recommended by the national Democratic convention which met at Chicago in 1893 was a wise act of government, and was called for by our pledges to the country, by fidelity to the Federal Constitution, and by the best interests of all the people. I showed that the senseless cry about a "wild-cat currency," used to defeat this reform, had no foundation in the history and condition of our leading banks of issue throughout the Union anterior to 1861, and that these banks were eminently sound and conservative in their management. I adduced the testimony of the most eminent financial authorities of the East in support of this statement. I quoted at length the provisions of the State-bank system of Louisiana.

I am proud, and every citizen of my State has a right to be proud, of that system. Louisiana was the first State to require of her banks a specie reserve of 33 per cent against all liabilities. The system has received the highest encomiums from the highest authorities. But, sir, the State banks of the whole country were generally sound. The notes of New England banks in 1859

were at a very small discount; those of the Southwest somewhat larger; New York City and Louisiana were at par; and all made a good showing except those of Iowa and Illinois. There were during the year 1859 only trifling fluctuations, and the discount represented merely the prevailing current rates of exchange, which was higher than at present because transportation was slower and involved a greater loss of interest.

I regret, sir, exceedingly that the measure for the repeal of this palpably unconstitutional and unjust tax has failed to become a law. I adhere to the position which I took on that occasion. I have nothing to withdraw. At the same time I feel free to support any well-matured scheme of banking and finance which will give reasonable assurance of relief to the people, though in some respects it may not go as far as I could desire.

WHAT ARE THE ILLS THAT AFFECT THE COUNTRY?

In advance of the consideration of remedies it is well to inquire, What are the principal troubles that afflict the country? In answer to this question we have different responses from different minds. The remedies suggested for the admitted disorders are numerous and various, as they usually are in periods of great financial disturbance. In such times every financial quack rushes to the front with his patent nostrum. This is bad enough, but we have certain bankers themselves each propounding his scheme of relief, and we have members of this House whose dogmatism and conceit are so great that their every word is a covert or direct reflection upon the intelligence, knowledge, and patriotism of all who come here from the South and West, and especially of those whose constituents are chafing under a financial system which denies them the blessings of a Government which they are aiding to support not only by heavy taxes, but by great products of wheat, cotton, and the like, which maintain our balance of trade abroad and build up the marts of Eastern commerce, whose representatives begrudge us a hearing in the settlement of the question.

SECTIONAL ARROGANCE.

There are those who seem to believe that it is sheer impudence for anyone to speak on these questions who does not hail from the great centers where money is held as a close monopoly. We are warned, sir, that we must not refer even to the utterances of so great an intellect as that of Calhoun. His genius was equal to the most difficult problems of government; but he was a planter, not a banker, and hailed from the hated section of the South. It will next be in order to inform us that Jefferson and Madison were merely country attorneys, but we know the one as the author of our splendid land system, and, with Hamilton, the founder of our monetary system; the other as the father of the Federal Constitution.

Robert J. Walker, the author of the tariff bill of 1846, we shall be told was a lawyer of a mere rural community. Robert M. T. Hunter, the author of the bill of 1857 and of our warehousing system, was merely a Virginia farmer. They never sat behind a bank counter or shaved money or engineered panics; how should they know aught of finances and why should their ghosts be allowed to disturb the counsels and suggestions of wise and dogmatic representatives of the money centers? It would be well for those who, in or out of Congress, share this spirit and speak thus arrogantly to inform us when they have ever contributed one great name to our history or one great financier to solve these questions for the people.

REPUBLICAN PARTISANSHIP.

Added to this spirit of sectional arrogance and class dogmatism we behold also the unworthy effort to make capital for the party whose policies were rejected by the people in 1890 and 1893 by the pretense now made that the Democrats are responsible for the present hard times. If we ask how responsible, we are told that it is because we reduced taxation and curtailed the profits that the manufacturers have drawn from the body of the people. We have made nearly all the products which enter into consumption cheaper to the body of the people, and by lessening their taxes and burdens have created public distress. The logic of all this is that we must go back to the McKinley bill, develop a new class legislation, pile up the tariff on everything higher and higher, and then forsooth prosperity will come back with golden wings. Prosperity to whom? To the people, or to the vampires who wish to prey upon them? I reject this absurd and monstrous explanation of the financial distress. Whatever may have been the cause or causes of the present distress, the reduction of our customs duties did not cause it. It would be as wise to say that the protective tariff of 1873 and of the war financial measures occasioned the great collapse of 1873, which lasted, as we remember, for four or five long years.

At the time that this great financial convulsion occurred the Republican protectionists sat in high places. The tariff on textile and metallic fabrics averaged 44 per cent, according to Senator SHERMAN. Senators SHERMAN and MORRILL, the great apostles of high protection, led the Senate, Messrs. Dawes, Blaine, and Garfield ruled the roost in these Halls, and protection held high carnival. The magic of their names and an overwhelming party

majority in each branch, with Grant at the head of the Government, however, did not suffice to stay for one moment the tide of distress which, beginning with the bankruptcy of the Northern Pacific Railroad, swept into one common ruin corporations and individuals all over the land who were supposed to be strongest in financial resources.

It was at that time that a proposition to fix the volume of greenbacks at four hundred millions instead of a somewhat smaller amount, with the power in the Secretary, or claimed by him, to expand or contract within that limit at pleasure, or as Wall street might demand, led to an Executive veto and a rupture between the President on the one hand and on the other such great leaders as Morton, Logan, and Ferry, who had put the bill through the Senate. It was about that time, also, that silver was quietly, secretly demonetized without the knowledge of the people, without a vote or a wish from the people, without even the knowledge of the President or of a dozen men in Congress.

I suppose we shall be told by our adversaries that this chapter of our financial history—this record of shame and fraud, this period of public distress—is a grand illustration of their ability to govern the Republic; and that if more proof be wanting it may be found in the McKinley tariff bill of 1890 and the enormous additions made to our annual appropriations, to say nothing of the destruction of the large surplus bequeathed by a Democratic Administration and in the preparation of bonds by the Secretary of the Treasury just before the close of President Harrison's Administration to meet the deficit it had created. Such is the financial record of the great party that produced the carpetbagger and conducted the hideous era of reconstruction and pillage of the Southern States. Such are the monuments of financial genius which warrant their champions to taunt the Democracy with the present distress.

DEFICIENCY OF THE REVENUES DURING THE REPUBLICAN PANIC OF 1874-1875.

There is one incident in the history of the panic of 1873 and subsequent years which deserves our special attention just now. In the winter of 1874-1875 the revenue was found to be deficient. The expenditures were running ahead of the receipts. In this stress of affairs the Ways and Means Committee acted promptly. They reported a bill adding largely both to the customs and internal-revenue taxation. The duty on whisky was raised from 70 to 90 cents per gallon; the duty on tobacco was augmented from 20 to 24 cents per pound; the duties on all sugars were increased 25 per cent, and the horizontal reduction of 10 per cent made in a former act on all customs duties was abolished, thus making an addition of one-ninth to all customs duties as they then stood, except sugar, which was increased 25 per cent, as I have stated.

It did not take more than a month to accomplish all this legislation and put it on the statute book. No time was spent by the Republican leaders of that day in bewailing their sins or apologizing for this deficiency. They could not charge it on the Democracy, because the Democrats had not been in power for twenty-four years. It was their own deficiency—their own splendid trophy of financial skill.

When this bill to "further protect the sinking fund" went to the Senate, Mr. MORRILL of Vermont had it in charge. Some of his remarks will bear quotation. Said he:

But it may be asked, why is it that the exigencies of the Government are so great at this present time? I answer that three years ago our revenues from customs were \$216,000,000, that they were two years ago \$188,000,000, and last year they were but \$163,000,000—\$53,000,000 reduction in a single year. It is apparent, therefore, that we have reduced the revenues of the country below the point at which they ought to stand for the ordinary support of the various departments of the Government. And since the panic of 1873 and the disasters that have befallen the business of the country, it is very likely that our revenues will diminish considerably more the present year. The business of the world at the present moment is depressed, and our own country is not an exception. Notwithstanding we reduced the duties upon \$150,000,000 or \$160,000,000 of articles imported in 1873 by 10 per cent, we imported of these articles alone \$55,000,000 less last year than we did before.

The business of the world was depressed, according to Senator MORRILL, and yet only two or three years previous silver had been demonetized by the action of Germany and the United States, and the great Latin Union had stopped its silver coinage.

Mr. SHERMAN, who followed Senator MORRILL, quoted the letter of the Secretary of the Treasury on this deficiency of 1874-1875. The statements of the Secretary are also worthy of attention by the critics of the present Secretary of the Treasury. They are as follows:

In page 6 of my report to Congress I stated that unless the revenues should increase beyond the amount anticipated there would be a deficiency in the sinking fund account for the current fiscal year of \$22,003,748.43. It must be apparent that it is difficult at all times to estimate in advance the probable receipts into the Treasury. The present depression in trade and commerce has more seriously affected the revenues from duties on imports than was anticipated at the time the estimate above referred to was made. They have already fallen below that estimate in a period of forty-one days \$3,800,000. Should this reduction continue during the remainder of the year the deficiency will reach the sum of about \$35,000,000, and it is hardly probable that business will revive to such an extent as to materially lessen that sum.

Mr. Speaker, the vote on this bill to provide for a deficiency estimated by the Secretary at \$35,000,000 passed the Senate by 1 vote, many Republicans, including Mr. SHERMAN, voting against it. There were only a few short hours remaining before the Con-

gress would expire, and it would have been easy for the Democrats to have defeated the bill, not by a resort to the reading of long, dull essays and statistics compiled outside the Senate, but by legitimate and orderly discussion of the financial question. But they refrained from such a legitimate resort, and suffered the bill to pass. We are told now, however, that any attempt in Congress to correct an error in the present tariff, though it may have been caused by the ignorance of a Republican, and any effort to supplement our revenues which, owing to the panic are falling short, at least for a while, is to be met and defeated by filibustering on the part of our political adversaries.

Dilatory methods are revolutionary methods, and are only excusable when the rights of a minority are invaded or an attempt is made to subvert the Constitution and the public liberties, as in the case of the infamous force bill.

THE PRESENT DEFICIENCY IN THE PUBLIC REVENUES.

Mr. Speaker, it may be that these pretended champions of the public credit would resort to extreme measures in order to defeat a proposition to provide addition revenue, but if they do so they will take a very serious responsibility. The Secretary of the Treasury, in his last annual report, estimated a deficiency of some twenty millions, or, speaking more correctly, that the revenues for the present fiscal year will fall below the usual appropriations by the sum of \$20,000,000. After the 1st of July next he anticipates an improvement in all the great sources of revenue.

It is claimed that at this day there is a comfortable surplus in the Treasury of about \$65,000,000 over and above the \$100,000,000 reserve kept there to maintain gold payments, but the gentleman from West Virginia [Mr. WILSON], chairman of the Ways and Means Committee, whose opportunities for acquiring information are second to none, has admitted in debate that a large part of the \$117,000,000 purchased by the sale of bonds has been used to meet the existing deficiency in the revenue. Another gentleman puts this amount so used at \$109,000,000. In any case, it is obvious that the revenues have fallen short, and owing to the great stagnation of business and consequent inability of the people to purchase and consume, are still falling short of our expenditures, and I need not point out that the Secretary's estimates of an improved revenue after the 1st of July next are mainly predicated upon an improvement in business which may or may not take place as soon as he expects and as we all desire. It may be a long waiting before it occurs. If the deficiency lasts it must be met by increased taxation or by using the proceeds of bonds, carrying with it an increase of our bonded debt.

AN INCREASE OF REVENUE.

Under these circumstances and with the prospect that Congress will not meet before December, 1895, I think it would be a wise precaution to do at once as was done in March, 1875, and to make a provision for an increase of \$30,000,000 of additional revenue. I need only suggest some of the sources of this new revenue. An increased tax of one-half of 1 cent per pound on all sugars would raise more than half the required sum. It would be a very light burden, indeed, not over 25 cents per head on each citizen of the United States. There is in this sugar tax little or nothing of the heavy indirect taxation or burden resulting from ordinary customs duties. In addition to these considerations, I may add that it would help to protect our cane-sugar and beet-sugar industry from the dangerous and, I fear, destructive competition of foreign countries. Then there might be added a tax on successions, so graduated as to impose no hardship, and a tax on stamps for bank checks.

There are other simple methods of raising revenue; but these will suffice for our purpose. Very probably in less than a year the revenue will grow and expand as the Secretary estimates it will, and then these taxes may be repealed. When the present hard times shall disappear I have no doubt that the present customs and internal-revenue taxes will yield us an abundant revenue. If this occurs the surplus should be promptly applied to the reduction of the interest-bearing debt of the United States.

I regard this method of meeting the deficiency mentioned in the Secretary's report as infinitely preferable to any increase in the bonded debt of the United States, even if the power of the Secretary to issue bonds and apply the proceeds to current expenses were clear and unquestionable. It is needless to assign the reasons for this opinion. The public judgment on the question is made up finally and forever. The good sense of the people has taught them that a public bonded debt is an evil to be incurred only for the greatest public necessity, and ought to be curtailed or abolished as soon as the ability of the Government will permit. John Randolph said once with great force that the philosopher's stone was "pay as you go."

If this additional revenue can be raised at this session it should be done. It can be done unless partisan malice and folly shall stand in the way. If partisans do stand in the way of it, they must take the odium of their position, and they may find in the end that the road to political power does not always consist in resisting by

unscrupulous means the measures framed for the support of the Government and the public credit.

THE DRAIN OF GOLD FROM THE TREASURY.

I have spoken of one great and serious mischief in our condition, namely, a deficient revenue. The second evil that confronts us is the drain of the Treasury for gold to carry abroad. The causes of this export are various. Men differ, even financial minds, as to the causes. I shall not discuss that branch of the question. I merely suggest in passing that those newspapers which are continually holding up the Government as bankrupt or about to become bankrupt because their own peculiar financial views have not been promptly followed, are more apt to influence European than American opinion. We know well, all of us know, the wealth, the strength, the vast resources of our country and the integrity of our people; but if a foreigner reads in an American journal that half or a majority of our people are dishonest and our Government one of financial folly and helplessness, he is very apt to sell out his American investment, and that means a drain of gold.

There are other causes. There is no unfavorable balance of trade. There are no large, bloated importations of foreign goods. But the evil, great or small, of a shipment of gold to foreign parts, drawn from the Federal Treasury, is one that is apparently easy to cure. The statutes of the United States make no difference between United States gold and silver coin as money of ultimate redemption. Why should we make a difference or allow a foreigner or his representatives here to make a difference? The able Representative from New York [Mr. HENDRIX] gave us an interesting statement the other day of the practice of the Bank of France when parties seek to obtain considerable sums in gold from its coffers. He told in words that the easiest place in the world to obtain gold is the Treasury of the United States, and that while we expose our gold supply to the demands of the whole world, not one of the great Government banks of Europe does the same thing.

They protect their gold by one regulation or another that puts a stop on the work of the gold speculator. If you go to the Bank of France and ask for a large sum of gold they will give you only 5 per cent of your notes in gold and pay you the rest in silver. If gold is still demanded the applicant has to pay for it a special charge, and that charge it is for the bank to regulate at its own discretion. The credit of the bank is not impaired by this step, nor is the credit of the French Government impaired. The Bank of France is one of the strongest in the world. It was able to lend twenty millions of gold on a moment's notice to the Bank of England not long ago. Now, sir, can we not borrow a leaf from their books across the water?

Our statutes reserve the option to this Government to pay in gold or silver coin. The great mass of our people accept freely all the notes of the Government, without prejudice or discrimination. The Government accepts this confidence, and pays all its obligations to Americans without discrimination as to its issues. The law for us is surely good enough for the foreigner who may deal with us. A very simple Treasury order would solve the problem, and it could be copied from what the gentleman from New York correctly tells us is the practice of the Bank of France.

There is another method of meeting this trouble, which is so very simple that it may be wondered why it is not resorted to. At one time all our customs dues were made payable in gold. Why not now require one-half of these dues to be paid in gold? That would give us from seventy-five to eighty millions of gold per annum, far more than enough to pay all the interest on our public debt. We have a right to do this. To do so does not discriminate against our silver coinage or its representative in silver certificates or coin certificates; for the other half of these customs dues could be made payable in this way, and as all our internal-revenue taxes, amounting to \$160,000,000 or more annually, would be payable in silver or silver certificates, their value and credit would not be impaired by the Government, but maintained. The greenback would be received also for this purpose. There is no danger of its being discredited. It may be slandered for a purpose by venal men, but it is and deserves to be a favorite with all our people, rich and poor. There is no man so humble or so ignorant in all this land that he would hesitate to take it.

Sir, I am weary of these slurs and covert insinuations against the public credit. One gentleman told us the other day that the Government had promises outstanding that it will pay one billion one hundred and fifty-nine millions. Admit this. The aggregate wealth of the country is over \$70,000,000,000—sixty times the debt—and every dollar of it, every dollar of our vast productive industry is by the power of taxation in the Federal Government responsible for this debt and pledged to pay it. Do we remember what we have paid of our public debt? Why, sir, in the four years of Mr. Cleveland's Administration of 1885 to 1889 the net reduction of the debt was \$341,448,449.20. These are the figures supplied by the gentleman from Iowa [Mr. LACEY], an opponent of the Democratic party.

According to his statement the debt was reduced in President

Harrison's time by the sum of \$236,527,666.10. Let it be noted, too, that this last reduction was made notwithstanding the criminal abolition of the duty on raw sugars in 1890 in order to have a pretext for high protection duties, and despite also the very large additions made by the Republicans to the permanent annual expenditures in the same year. If in such hands the public debt could be paid off at the rate of nearly \$80,000,000 per annum what can not be done by wise finance, honest administration, economy, and retrenchment under a Democratic Administration when the present period of financial disturbance shall have passed away?

RELIEF TO FINANCIAL DEPRESSION BY REPEAL OF THE 10 PER CENT TAX ON STATE-BANK ISSUES.

Mr. Speaker, I come now to the third great item of trouble in our financial affairs. It is one of far more real consequence to the public than the two evils which I have previously discussed. It is the present paralysis in business, stagnation, distrust, and the low prices in farm products. The effect of the measure which has been proposed in this House to allow State banks to issue circulation would be to relieve, at least in part, this state of affairs. That it would do so to some extent I can not doubt, and while the measure might not remove all the causes which have conducted to the present depression of business, its effect would be salutary. There is no direction that I can see where it would do harm or make our condition worse than it is now. Wherever the plan proposed changes our existing laws it will put our affairs on a better footing than heretofore.

THE PLAN NOT UNFAVORABLE TO SILVER.

In the first place, it is not an essential feature of the plan that the national banks shall be required to surrender their bonds by a given date and abandon their present system in its general features. I have no wish to deal harshly or rashly with these institutions. Even if it were conceded, as alleged by some, that the present system possessed radical defects, or that its usefulness had passed away, it would not be prudent in the present condition of business affairs to take any steps that would embarrass these institutions. They should be allowed, not forced at this time, to avail themselves of the new system. So far from putting any stress or burden upon the national banks, I would allow them to issue notes up to the full face of their bonds, and I would reduce the present tax upon their circulation to a merely nominal amount, sufficient barely to pay the Federal expense of administration. There are also features in the existing law which might be amended so as to give these banks greater facility in procuring their notes from the Treasury in seasons of stringency and to remove the obstructions to the retiring of their currency when it is no longer needed for business purposes. I will willingly and freely vote for such changes as these, and for others not inconsistent with the public interests. These changes I have indicated would benefit both the public and the national banks.

Next, sir, I wish to remove, if possible, from our pathway another ground of objection to the scheme. There are many gentlemen who regard this bill as a formal surrender of the idea of silver coinage. They deem it a blow against silver. Possibly some persons may favor the bill with the idea that it will remove or lessen the popular demand for a restoration of the silver coinage. It can only accomplish this by promoting the restoration of business prosperity, and by placing that prosperity upon a permanent basis equal to that of the past, and such as we have a right to expect in a country so great as our own, and overflowing with such variety and extent of production. But what is there in this bill unfavorable to the use of silver? Does it not put silver really on a better footing than heretofore? We find in the ninth section of the Carlisle bill a provision for the gradual retirement of United States notes and Treasury notes issued under the act of 1890, thus leading to an enlarged use of silver and silver certificates in the multiplied transactions of daily life. The notes of the new national banks to be organized under this act are to be \$10 or upward, thus further clearing the field for silver or its direct representative, the silver certificate of deposit. Surely this legislation is favorable to silver. It may not and does not coin a single new silver dollar, but it creates an additional necessity for its use among the people, and may lead to an enlarged coinage at a future day.

Again, sir, all the banks to be organized under the Carlisle bill, both State and national, are required to redeem their notes on presentation at par. They may redeem these notes either in gold or silver coin, for both are a legal tender under our laws for all debts, public and private. The silver certificate, it is true, does not have this broad function, but it is by law receivable by the United States Government for customs, taxes, and all public dues, and so long as they possess this great debt-paying power, and can moreover command from the Government silver coin which is a full legal tender for all debts, there can be no doubt that the banks in their ordinary practice can redeem their notes in these silver certificates. The new banks will not be the enemies of silver or the silver certificates, for their interest will point the other way.

So far from this Carlisle bill being unfavorable to silver, I ap-

prehend that some of the strongest opposition came from those who would gladly wipe out all our silver and its paper representative, except, perhaps, a small subsidiary coinage.

It has been suggested in debate on the measure that one ground for opposition to the bill, and the principal one on the part of the national banks, is that the new plan exempts the Government of the United States from all liability for the redemption of the national-bank notes and places the whole responsibility upon the banks themselves. Why should the Government be obliged to redeem these notes? Is it not enough that the precaution is taken to require for the notes issued a guaranty fund of 80 per cent in lawful money of the United States, a safety fund of 5 per cent, besides making the stockholders individually liable and the circulating notes, which are limited to 75 per cent of the unimpaired capital of the bank, to constitute a first lien on all the assets of the bank?

These provisions are for the benefit of the note holder and are admitted to be ample for his protection in the case of the failure of a bank. But in the case of ordinary redemptions we require of the national banks of issue by this bill that they shall redeem their notes at their own counters or at such agencies as they may individually select for the purpose. What right has the bank to ask any more than this privilege, and what possible objection is there to the requirement? It is well answered by the Secretary of the Treasury that the United States ought not to pledge their faith and credit in a business in which they have no pecuniary interest whatever. The same duty of redemption and the same securities are imposed on the State banks allowed to be created by the bill. I have already stated that I do not desire to legislate against the national banks. I would be willing to allow these banks to continue to hold their bonds and issue on them up to their full face value, and I would diminish the tax levied upon their circulation, or I would allow them to reorganize under the provisions of this bill if they so desire. What hardship is there in this policy?

NO PRIVATE MONOPOLY FOR ISSUING CURRENCY.

But there is a point at which concession and liberality must stop. The people have rights as well as the national banks. There must be no private monopoly of the function of issuing paper money, and there must be no cast-iron system under which large communities in the South and West are denied the right to use their own credit locally for their own business, and be forced at the very times when money is most needed to pay 8 and 10 per cent for its use, when local banks, armed with the privilege of issue as provided for in this bill could and would gladly furnish it to them at 5 and 6 per cent. It is no answer to this just and righteous demand to be told that money is plentiful in New York and that some Eastern man, well known in a Wall-street bank, can go there and get all the money he wants in his business, even without an indorser, at 1½ to 3 per cent. It is no answer to our demand to say that the local bank of Mississippi or Nebraska can borrow its money from the New York bank at 6 per cent and then use that money to supply its customers, charging, of course, an additional sum for its interest. Gentlemen do not seem to realize that this Government of ours is contrived and maintained for some other purpose than the interests and convenience of a class of wealthy men and financiers located in the Eastern cities.

A WIDE FIELD FOR BANKING.

Sir, there was a time when even this present narrow spirit was exceeded, and the numbers and location of the national banks was made a sectional matter. We should now throw open the field of banking to the agricultural communities, and allow them to use their own credit locally with each other. Their notes are not to be made a legal tender. Nobody proposes that. If the cotton grower or the wheat grower is ready and anxious to take these notes, and the Eastern banks are not willing to take them, then we can be happy all around. These prophecies that the money will not circulate at the money centers are only in substance a prophecy that the money will stay at home, where it is most needed, and not be lying heaped up and idle at the money centers, only to be obtained by agricultural communities in times of trouble or of moving crops at high rates of interest. The advantage of these State or local banks has been so ably stated by gentlemen who have preceded me that I do not feel it necessary to travel again over this field of argument. They embody, sir, a sentiment in the South and West which is nearly unanimous, and which can not be safely defied or trampled upon.

If these States are unprosperous it is not the fault of the population. They are industrious, intelligent, economical, and enterprising. They have fertile plains unsurpassed on the globe, special sources of production, abundant water and rail communication, all the natural opportunities of wealth and happiness, and if they are suffering instead of advancing the cause can only consist and be found in vicious, narrow, sectional, and burdensome legislation. If they are to be allowed to get on their feet again the first aid they can have from you is to give them back their constitutional right of using their own credit among themselves. It seems like a small privilege, after all, and yet you refuse it. Their crops will command cash and credit abroad. For that they ask no favors at

your hands. But do not burden their production or impede its shipment for consumption by your interest charges. Let them have their own banks and use their own credit without paying you this constant, pitiless, blighting tribute to the money lender.

One of the gentlemen from New York in debate enlarged upon the cost of redemption of the national-bank issues. He thought distance would compel a discount, that the cost of securing redemption and the loss of the use of the money while in transit will create a charge upon the business of handling such notes and will attract brokers to the business. The gentlemen thought that under this new plan even the national-bank notes would be at a discount. All this prophecy and criticism ignores the modern facilities of mails, express companies, and insurance. Distance is practically annihilated by modern civilization. The time for transmission between any points in the great Mississippi Valley and the Eastern States is practically no element of cost. Currency can be sent speedily through the mails and insured at a nominal cost, say one-sixteenth of a cent per \$100. It can not be doubted that the banks will establish redemption agencies at all financial centers. If there be any force in the gentleman's suggestion it will apply chiefly to the new State banks to be created and whose currency it is not desirable shall go to the money centers, but on the contrary stay at home to quicken and invigorate the channels of our trade, inspire commerce, strike off needless shackles, and develop a new and great prosperity.

The question of the causes of our present unfortunate situation is so vast a one, the legislation and policy required so varied and comprehensive, that I have felt it to be my duty in this imperfect way to review the general subject rather than discuss in detail the subject of the issue of some sixty-five millions of gold bonds. If we are to legislate, it should be on some broad basis and wide policy having due regard to all the sections and all the interests of this great country. In the suggestions I have made to-day I claim no merit for originality. I present nothing new, startling, or empirical. I propose simply a recurrence to old and tried methods and systems of finance which have worked well in our own country and in other lands besides our own. The policies under which this country has prospered so greatly in the past can not be unsafe or dangerous for us in the future. [Applause.]

The Tariff—Income Tax.

SPEECH

OF

HON. JERRY SIMPSON,
OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 30, 1894.

The House having under consideration the bill (H. R. 4984) to reduce taxation, to provide revenue for the Government, and for other purposes—

Mr. SIMPSON said:

Mr. CHAIRMAN: In the short time allotted to me I shall not undertake to discuss the great subject or question of taxation. It is one that covers the whole system of politics in this country. I stood with the rest of my Populist associates on this floor in favor of a graduated income tax in preference to the one offered by the Committee on Ways and Means. I supported the bill from the Committee on Ways and Means, even though our amendment did not pass, because, like the gentleman from Ohio [Mr. JOHNSON], when I am confronted with a choice of evils I always take the one that presents the less evil.

It has been asserted on the floor of this House that this income tax is a Populistic measure. I agree that it is; that it has not been set forth in Democratic or Republican platforms; but gentlemen should not refuse to vote for it because it comes from the Populists; they should decide in their own minds whether it is right or whether it is wrong. The gentleman from Ohio [Mr. HARTER], in a speech a few weeks ago, said that some of the ideas and principles which the Populist party now advocate were held many hundred years ago in China. That is only another evidence, Mr. Chairman, that the principles of right and justice are immortal and will live forever.

The principles which I advocate to-day are the principles which have been advocated in defense of the toiling masses in every country and in every age; and they will continue to be discussed and advocated until we arrive at a higher plane of civilization. Although we are here few in number and somewhat despised and ridiculed by gentlemen on this side and on the other side, you must sooner or later stand up here and advocate the principles that we advocate, because they are right.

The question of an income tax—whether you shall levy taxation upon the accumulated wealth of a country which receives the

protection of the Government, or whether you shall levy it upon the necessities of the people—turns simply upon the question whether you will vote in the interest of the toiling masses or in the interest of the millionaires. I admire the candor, and manhood, and statesmanship of Millionaire JOHNSON from Ohio in preference to the position of Millionaire WALKER from Massachusetts. [Laughter.] Millionaire WALKER from Massachusetts stands up here and attempts to defend his opposition to the income tax on the ground that at last this tax must fall upon the poor man—the laboring class. Like all these millionaires he is the self-constituted guardian of the poor laboring man! Why, bless your old soul [turning to Mr. WALKER], you protect the laboring man in the same way that we protect our hogs and cattle out in Kansas, when we shut them up in the corral about a big feed trough filled with corn and beside it a big tank of water. We protect and feed and fatten them that we may eat them at last! That is the kind of protection that the gentleman from Massachusetts proposes to give to laboring men! [Laughter and applause.] No, Mr. Chairman, he knows as well as he knows he is living (and that is the reason he opposed this measure) that this tax upon net incomes will fall upon the millionaire, and he can not shift it upon the laborers. That is the reason of his opposition to an income tax.

Now, Mr. Chairman, I believe that with the Wilson bill, which is a long stride toward removing restrictions on trade and a long stride toward ultimate free trade, we properly put the income tax, which is a direct tax, to supply revenue to sustain the Government in lieu of that which has been heretofore collected upon what the people have spent for the support of their families. Therefore I am for the income tax first, last, and all the time—whether it is a Populistic or a Democratic or a Republican measure. [Applause.]

[Here the hammer fell.]

The Currency.

SPEECH OF

HON. JERRY SIMPSON,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 21, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8149) to amend the laws relating to national banking associations, to exempt the notes of State banks from taxation upon certain conditions, and for other purposes—

Mr. SIMPSON said:

SOPHISTRIES, BLUNDERS, AND MISSTATEMENTS.

Mr. CHAIRMAN: As we are about to close the discussion of the money question for this session of Congress, I believe it is a fitting occasion to review some of the palpable sophistries, gross errors, and unpardonable misstatements that have been made upon this floor, in the press, and in official documents upon this topic. There are certain matters of public interest upon which every executive officer and every member of the legislative branch of this Government and every editorial writer who assumes to discuss political questions should be well informed. Yet, in spite of this, our debates have been filled with statements having no warrant in fact, with arguments most palpably absurd, and with assertions whose authors must have known could not be sustained. Let me refer briefly to a few of these.

CUSTOMS PAYABLE IN COIN.

It has been seriously proposed upon this floor that we should enact a law making customs dues payable in coin. Perhaps the author of such propositions may have supposed that the Secretary of the Treasury would not evade two statutes upon the same topic, and having the same end in view, while he had refused to obey one. There has been a law upon the statute books for more than the lifetime of a generation providing that all duties upon imports should be payable in coin. This provision of law was suspended by act of the Secretary of the Treasury upon the 1st day of January, 1879, yet it is as binding upon the Secretary of the Treasury to-day as would have been one or a dozen statutes to the same effect passed by this Congress. Upon the 1st day of January, 1879, this Government resumed paper payments, not specie payments. For the first time since February, 1863, our Government honored its own notes.

While the war was pending it was the policy of the party in control of that Government to depreciate the value of United States

notes. That was at a time when we were paying those notes for the grandest sacrifices that ever were made in behalf of a Government. But when the men to whom we were paying the Government notes depreciated by act of Congress laid down their arms and returned to their homes to help pay the debt that had been incurred during the war, the policy of the Government suddenly changed. It was no longer "our policy to depreciate the value of United States notes." It was then our policy to increase the value of the notes. We were then to take those notes from the hands of the soldiers and the sailors and the pensioners in form of taxes and pay them over to the bondholder for interest upon the bonds which they had bought in a depreciated currency. It was then the policy of the party in power to increase the value of the tribute wrung from the producers of this country in the interest of the men who had stood here driving the same kind of a hard bargain with the Government in its extremity that the bond-holding and banking class has always driven with governments or other creditors. It was a matter of surprise to me to hear so able and so well-informed a gentleman as the chairman of the Ways and Means Committee, in his attempt to defend a bill—which I believe he is convinced was not defensible—make the assertion here "customs dues were payable in coin I should have said, and gold is about the only coin of the country." As to what would have been the effect of carrying out this provision of payment of coin in interest I shall have something to say further on.

If Mr. WILSON would consult the statutes he would see that the statement I have made in regard to the payment of customs dues in coin is absolutely correct, and that if such a policy were deemed necessary the Secretary of the Treasury and the President of the United States would have no occasion to come to this House to secure authority to carry into effect an existing statute.

PARITY OF METALS.

And I was surprised, too, at another statement of the honorable chairman of the Ways and Means Committee. He said:

Under these circumstances it became necessary for the Secretary of the Treasury, in order to maintain the gold reserve at the sum required by law, in order to maintain a ready and instantaneous redemption of the legal-tender note obligations of the Government, in order to carry out the pledge contained in the Sherman law, and of the law that repealed the Sherman law, to maintain at a parity all the coin circulation of this country, I say it became necessary for the Secretary of the Treasury to seek some other supply of gold than that he could obtain in this country.

Where in all the statutes of the United States will the gentleman find a requirement for the maintenance of \$100,000,000 in gold coin? Where in all the statutes will he find a law that commands this Government "to maintain at a parity all the coin circulation of this country"? Let me call the gentleman's attention to two facts in this connection. The author of that law in another branch of this Government has repeatedly stated that the Sherman law pledged the Government to maintain the parity of our coins. There is no such expression in the law. That gentleman has been repeatedly informed of this fact and his attention has been repeatedly called to it when he has made the false assertion from his seat. There is a vast difference between the attempt of a Government to maintain a parity of its coins and to maintain a parity of value of the materials of which they were made. Under the Sherman law it is stated that it is the policy of this Government to maintain the parity of these metals. That refers plainly and distinctly to the metals as commodities. It has nothing to do with the coins. We maintain the parity of value of our nickel coins with all other money issued by the Government, but we have nothing to do with the value of the material of which they are made. We maintain the parity of value of our copper coins and of our paper money, but we do this without any regard to the market value of those commodities, or to the success of manufacturers of paper or miners of copper.

Now, upon this point I would like some of these gentlemen who assume all the virtue and all the intelligence in this country, who seek to close all arguments upon this question by epithets and denunciation, to explain what they mean by maintaining a parity of value between two metals. The expression is in itself an absurdity. It hinges upon the old idea, long since exploded, of intrinsic value. These gentlemen have yet to learn that value resides in use, supply, and demand. If they believe that the value of a commodity is intrinsic, how will they explain the disappearance of one-half of the value of the commodity called silver since the passage of the Sherman Act in 1890? If it was intrinsic in the metal it would be there to-day. It is not there. It has disappeared under the operation of the natural law.

If the Sherman Act had provided that this Government should purchase 75 per cent of all the wheat produced in this country and store the same in vaults specially prepared for that purpose, the immediate result of the passage of such an act would have been to cause an advance in the selling price of the wheat. But after one season's crop had been harvested the "visible supply" of wheat, acting as a threat upon the market, would have caused a constantly decreasing price of that commodity and the people

would have found the operation of the same natural law upon the price of wheat that caused the depreciation of silver after the passage of the Sherman Act. But, the intrinsic qualities of the wheat would have remained the same, unless by storage it had become weevil-eaten or musty. The value, however, would have been changed because of influences extrinsic to the commodity—influences which affect the price of all commodities and expose the idiotic absurdity of the proposal that a Government shall seek "to maintain the parity" of any two commodities.

And another point in this connection it may be well for the gentlemen to consider who know all about the money question. They may be able to furnish an explanation of a query which has been troubling the minds of men who do not stand at the street corners and chink their dollars and think they are thinking. Suppose it had been provided in the Sherman law that it was the policy of this Government to destroy the parity of value between these two metals; and suppose an admirer of the great and thrifty financier had been asked to defend the action of his party and to sustain the policy expressed in that law, would he not have pointed to the fact that after the passage of the Sherman law the parity of value between silver and gold constantly widened? Would he not show conclusively to a partisan audience that the policy of the Government announced in the Sherman law had been fully sustained and the parity of value absolutely destroyed? Would he not be able to demonstrate that they had done this under the operation of a natural law which they understood as well in 1890 as they did in 1862?

The author of that statute is no child in finance. He was the leader of his party at a time when the same gentlemen who are seeking to-day to increase the value of their holdings—to increase their power over future production by increasing the value of the coin in which the debts of the Government and of the people shall be paid—were strenuous in their demands that a use should be provided for gold, to be discharged by no other kind of money in this country. They proceeded just as gentlemen would who are thoroughly acquainted with the law of value. They had issued \$450,000,000 of paper money of this Government. They had paid it to soldiers who were fighting for the Government's protection. They had provided that those notes should be fundable in a bond at the option of the holder, and after having so issued those notes, after they had gone into the hands of the producing classes and of the men bearing arms in defense of their Government, they purposely depreciated their value by destroying one of their uses. They boasted of this fact as the war progressed. They boasted of it after the war was over. They declared upon both occasions that they understood what would be the effect of the legislation for which they were responsible. By that declaration they confess that they understand the effect of a lessening of use upon the value of an article. By that confession also they admit to-day they understand what will be the effect of the increase of the use upon the value of an article. By these confessions they stand convicted of an attempt to increase the burdens of the people by increasing the value of the money in which their debts are to be paid.

And, sir, I deem it very significant that a Democratic chairman of a Democratic committee in a Democratic House, acting as the spokesman for an alleged Democratic Administration, should think he strengthened his cause by quoting the action of a gentleman who, though noted as a financier, though successful personally in financing, has given his name not only to a statute which under his own confession brought us to the verge of bankruptcy and ruin, but also to a bank building altogether too notorious to be discussed upon this floor, in view of the obligations of parliamentary law. There is, undoubtedly, substantial basis for the criticism against this Administration in selling a bond at much less than its value. But the learned chairman of the Ways and Means Committee is far from strengthening his cause by quoting prior action of a former Secretary of the Treasury in this direction.

It is to be hoped that the leaders of the Democratic party in this House will not be forced to carry with them into that retirement of private life to which they have been relegated by a disgusted people the memory that they have out-Heroded Herod; that they have made it possible for banks and bankers with small capital to imitate the success of the First National Bank of New York under another Secretary of the Treasury of an opposing political party. Everyone knows the history of that institution. Everyone knows the reason why on "the street" a certain appellation is given to that famous bank building on the corner of Wall street. Men who have studied the debates in the other House of Congress recall the speech of an able Senator, now dead, who advised one of the New York Senators who had interrupted him in the course of his argument that if he would seek a fortune beyond his present dreams all he needed to do was to go back to New York and be able to assure any of the great banking houses there that he had the "confidence" of the Secretary of the Treasury, and he would be taken in as an equal partner.

That friendship and that confidence resulted in a bank having but \$500,000 capital declaring \$1,000,000 dividends in a single year and carrying one-half as much as that to a surplus account. Thrifty financiers these, skilled in the art of making money for themselves and understanding thoroughly the value of use and also the value of confidence, especially when that confidence pertains to a Secretary of the Treasury inclined to thrift and to aid his friends. Many misfortunes have attended the efforts of the Democrats in this House during the present session. I conceive that there is not one which will react so forcefully upon their future prospects as their present appeal to a former Republican Secretary of the Treasury, whose very name excites the anger of every honest man who has studied the financial history of this Government for the last thirty years.

THAT ENDLESS CHAIN.

And this learned chairman has become very anxious about this "endless chain" which, he says, is drawing coin out of the Treasury. He believes that if he can destroy the greenback, under which this Government suppressed the rebellion and restored its authority throughout the land, he will break this endless chain. Does not the gentleman understand that an interest-bearing bond will form just as good an endless chain as the noninterest-bearing greenback? Does he not understand that if any new demand for a coin shall arise these bonds now being sold across the Atlantic will return as fast as speedy ships can bring them and draw coin again from our Treasury, whether there is a greenback in existence or not, unless it shall be provided that this "sound currency," this "honest money," which is to be devised for this people, shall no longer be redeemable in gold. If the money which is to be paid for the products of this country and for the labor of our people is to be redeemable in gold, that redemption must be at the hands of the Government.

There can be no such thing as redemption of paper money by the banks. Every gentleman who has studied this question, every gentleman who has argued upon this question, and the bankers themselves, understand the absolute impossibility of maintaining coin payment of a paper obligation. The honorable gentleman who has been referred to so often as an illustrious financier, himself, in discussing this question a quarter of a century ago, stated in terms that no coin reserve, however large or however carefully guarded, could be maintained during the pressure of panic or adverse trade. He understood then, as he understands now, that this pretense of coin redemption, whether in silver or gold, is a word of promise to the ear to be broken to the hope. He understands perfectly that the coin reserve of \$100,000,000 is but a provision in the interest of men who can control the volume of the currency and thus minister to their greed.

I know it has been claimed by some of the gentlemen who have proposed financial plans for the consideration of this Congress that the bank notes which they are to provide will be redeemable in coin; but when outside of this House in private conversation they are challenged to explain this provision they are forced to admit that they proposed practically to surrender all coin redemption. The plan is that the banks issuing the notes shall redeem them. And it is stated with a smile when the gentlemen have escaped from under this roof. That smile is caused by the fact that they understand perfectly well that so few notes could be presented for redemption, if the people were forced by the retirement of the greenback to use them, as to practically annul the provision.

Let any gentleman go into a bank in this city and ask to examine a package of national-bank notes. He will fail to find one in fifty issued within a hundred miles of the bank in which he stands. Let him go into any bank in the city of New York, or in any of our business centers, and he will find the same condition of affairs. Suppose he were to draw those notes and seek their redemption; he would not have money enough to pay the fees of the Pullman porter on his journey to secure redemption. And he would learn then what we "Populists" and "crazy lunatics" understand now, that coin redemption had been overthrown in the interest of the banks. I sincerely trust that during what I deem to be the unfortunate retirement of this worthy chairman of the Ways and Means Committee from public life he will have opportunity in the quiet of his own study to examine some of these matters more carefully than he has done in the past, and that when next he graces this House, or any other public position, he will bring to his duties a better understanding of the laws of finance than he has exhibited in this debate.

CHANGING THE CONTRACT.

It will be remembered that when the honorable Secretary of the Treasury first appeared before the Ways and Means Committee to explain the blind contract he had made with the representatives of the banking interests, he urged that the terms of that contract should be kept secret, but when the gentleman had been smoked out by the demands for publicity it was discovered that

the contract called for the delivery of certain ounces of gold. I recall that some of the journals which have never failed to come to the assistance of every plan proposed by the Administration called attention to this fact as an evidence of the skill in financiering displayed by the Treasury Department and by the President of the United States. It was calculated in one of these organs that the Government would make a large profit because it would receive a great deal of gold coin which, though not abraded below the point of tolerance, was still of light weight in ounces. One journal boldly claimed that this amount would be counted by the millions. It explained that the Government would receive these abraded coins at their value as a commodity and that the bankers would lose what the Government gained.

Such a claim as this could only deceive some of the members of the majority of the Committee on Coinage and the Committee on Ways and Means. There are many schoolboys in my district who will not be able to vote for the next ten years who stood on the street corners and laughed at the absurdity of the proposition that the bankers were going to lose anything in a deal with the Government. I had thought that the plummet of subserviency to the Administration had struck the depths of ignorance and impudence long before this last attempt to foist upon the people a gold bond had been made. I will confess to having pitied the chairman of any committee when he was forced to bring a new child into this House every two or three weeks only to see it disowned by its alleged parents and so badly mutilated that its author did not recognize it.

It must have been humiliating for a gentleman with his long service in this House to have been forced into an argument the fallacy of which he appreciated, and then to see all of his efforts absolutely futile. I earnestly trust that there is held for him in the future—during the brief months which remain of the present Administration—some high reward that shall be a balm for his wounded feelings. It may be possible that the judicial ermine shall fall upon his back. I trust he will prove a better judge of law than he has of argument. And I trust that his decisions will not be so often reversed by a higher court as have been his efforts in this House by higher power than that of his committee. It now turns out, however, after all these claims have been made in behalf of this contract, that the Government is actually receiving light-weight coin as coin. They no longer weigh the coin which is tendered by these bankers. The gentlemen bring to them their own coin, and now we hear the argument that it will never do for this Government to disown any of its money issues.

It is true that in the past this Government has disowned its money repeatedly, but that has been done upon occasions by men who have rendered some service to the Government. There never has been known in the history of the United States an instance when such discourtesy has been shown to a capitalist, to a banker, to a great financier, to one who knows it all when the subject of finance is under discussion. These gentlemen are always treated with great respect. The money they tender and the money they handle seems, in the eye of the Secretary of the Treasury, to have received a new power, new sanctity. And so we understand that when the gentlemen bring the coin they not only take advantage of this changed law, but they fill the number of ounces required by carefully culling from the hoard which they have previously drawn from the Treasury, deducting therefor full-weight coin and giving the Government that which has been abraded nearly to the point of intolerance.

Perhaps it is improper for me to criticise this action. I know that, measured by the standards of the gentlemen I am criticising, I can not be deemed a financier. I was not as careful in the selection of my parents as some of those who are now posing as leading lights in financial circles. I have not been as thrifty as some of the gentlemen whose names have been given to bank buildings and financial schemes. I do not regret this on my own account. One of the consolations of a poor man is that he can appreciate thoroughly how little the Lord thinks of money by the class of people he gives it to. And yet I am one of the plain people of this country upon whom the burden of taxes falls most heavily. We may not pay our thousands, and after this year I shall probably not pay an income tax—unless there shall be such a change in that law as I would gladly vote for making it cover a smaller income—but we have been forced to study this question. As we were once forced to study the incidence of taxation, so we have been forced to examine into the laws relating to finance. To our humble intelligence there seems a strange discrepancy between the contract submitted by the Secretary of the Treasury and the action under his orders. If the contract called for ounces of gold it is not discharged by anything less than the full weight in ounces of the metal which was contracted for. And if under the orders of the Secretary of the Treasury there shall be received a single light-weight coin at its normal weight that act is as properly the subject of examination by a grand jury and a criminal court as the stealing of a ham by a poor man who has been plundered by such reality as I am characterizing.

But this is not the only change that has been made in this contract with the syndicate of bankers. Already we hear it whispered that there has been a verbal "understanding" between the Secretary of the Treasury and the bankers. These unofficial gentlemen are to be treated with great courtesy in case they find it difficult to carry out their agreement with the Government. If their "endless chain"—extended by the addition of millions of coin interest-bearing bonds—shall continue to withdraw gold from a subservient Secretary, then these unofficial defenders of 70,000,000 people are not to be required to continue the deposit of their gold, but shall be allowed to use it in the purchase of exchange on London. I know there is an impression in certain quarters that the Administration has reason to fear a called session of the next Congress because of a threat that this bond deal may be severely analyzed and criticised. But the gentlemen indulging in such prognostications forget that the incoming Congress will be dominated by a party whose great financial hero in the other House will stand between the present Administration and any such investigation which will most certainly result in drawing attention to his own efforts in this direction, and to his own favors granted to the bankers who secured his confidence to their great pecuniary profit. There is no possibility of a full and fair investigation of these questionable transactions until the people shall have relegated to private life every representative of the political parties responsible for them. There has been too perfect an alliance between the men of both the old parties to allow of a reasonable hope that the transactions of the Secretaries of the Treasury will be properly investigated and adequate rebuke and punishment inflicted upon the guilty ones.

REPUBLICAN FINANCIAL POLICY.

Let us turn now to the remarks of a gentleman who attempts the very difficult task of defending the Republican financial policy. The gentleman from Illinois [Mr. HOPKINS] can be pardoned on the ground of his youth when he makes misstatements in regard to the financial policy of the Republican party. It is true that a Congressman holding his prominent position is assumed to have read something of the financial history of the country. That assumption should not be a violent one when applied to a gentleman who during the financial debate posed as the opponent to the recognized leader of his party upon this floor. He says:

For more than thirty-five years the settled policy of this Government has been to issue our Government bonds payable in coin. The bonds that have been heretofore issued are not payable in gold, or silver, or greenbacks, but are payable in coin.

The gentleman forgets that the bonds issued during the war within the period named by him were specifically payable in greenbacks. He forgets that, having made that contract, as the war progressed his party, aided by a few nominal opponents who were really Republicans in disguise, although called Democrats, "made a new contract for the benefit of the bondholders," to use the words of the great Senatorial financier of the Republican party. Those bonds having been made specifically payable in greenbacks, the party found it necessary, in order to curry favor with the representative bondholders in this country and Europe, to make that new contract under what was called "the credit-strengthening act," March, 1869.

And when this gentleman, whose youth is his only possible excuse, proceeded in his argument he referred to an incident which should never be mentioned upon this floor by anyone who recalls the debates on the action of Congress in 1879. He boasts of the fact that "when Judge Folger, of New York, was Secretary of the Treasury, in 1882, he expended \$300,000,000 of our obligations for 3 per cent on a coin bond at a time when the condition of our country was not as good as it is to-day." Let me recall the facts connected with the action of Secretary Folger. It was stated by the Secretary of the Treasury in 1879 that a large number of our bonds were falling due and payable within the next few years. The party represented on this floor by the gentleman from Illinois [Mr. HOPKINS] proposed to refund about \$600,000,000 of these bonds, falsely alleged to be falling due, in a thirty-year bond bearing 4 per cent interest.

The gentleman claiming to represent the Democratic party upon this floor proposed another measure which involved the issuance of about \$600,000,000 of bonds bearing 3½ per cent interest and running fifty years. Under the Republican plan the people would have been forced to pay over \$900,000,000 in interest during the thirty years and then hand down to their descendants a legacy of debt equal to the amount of the original bonds issued. The Democrats were not to be outdone in their subserviency to the money power. They saw this \$900,000,000 bid and went \$400,000,000 better in their proposal for a 3½ per cent bond running fifty years, under which the Government would have been forced to pay \$1,300,000,000 in interest and then refund the same principal over again. But there was another danger foreseen by the little handful of currency reformers upon the floor at this time. The proph-

edices of these gentlemen were well fulfilled. They asserted that if that bonded debt were refunded in a long bond and the taxation continued so that the revenues of the Government should pile up millions in the Treasury, it would be absolutely necessary, in order to prevent such a contraction of the currency as would have ruined every business man in the country, to go in the market and buy these long bonds at whatever premium could be commanded by their holders.

A cursory examination of the transactions of the Treasury Department during the years from 1885 to 1890 will show how well these predictions were fulfilled. The people have been forced to pay heavy premiums upon Government bonds in order to relieve the country from the stringency which had been predicted in 1879. It happened that this small handful of currency reformers, called "greenbackers," were enabled to defeat both of these propositions after the election of 1890. It was a fortunate circumstance for the country that the then Republican President of the United States vetoed the bill which was passed by Congress, but it was a still more fortunate circumstance that after the election of 1880 the little handful of greenbackers had the courage of their convictions and the power to prevent the passage of any refunding act, and thus forced upon the incoming Secretary of the Treasury the issue of a bond redeemable at the option of the Government at any time. By this act they secured the privilege so valuable to the Government and at a lower rate of interest than was alleged to be necessary by representatives of the money power in both political parties. The so-called "Windom bonds" were paid out of our surplus without the addition of a single penny of tribute. After these bonds had been retired the Government was forced to go into the open market and purchase its own bonds at a high premium to relieve the stringency of the money market. It has been conservatively estimated that the saving thus caused exceeded more than 40 per cent of the face value of the bonds sought to be refunded by Democrats and Republicans.

But, says this valiant, if ignorant, defender of Republican financial policy, there are objections to the policy of stating in the bond that it is payable in gold because "if he (the Secretary of the Treasury) can drive gold to a premium and drive the Government upon a silver basis he enhances the value of the bond that is payable in gold." If the gentleman who thus assumes to discuss the financial policy of the Government were better acquainted with the legislation of his own party he would be more careful in his use of terms. I challenge the gentleman or any member of his party to show that this has not been the uniform policy of the Republican party in its financial legislation. I charge that party with having constantly legislated for the purpose of increasing the amount to be paid to the bond-holding class in return for their loans to the Government. It was so during the war. It was so after the war had closed. It was so while the Government was paying the soldiers and producers of this country while they were patriotically seeking to maintain the Government. And it was so after their efforts had been successful and the fighters had returned to their occupations to earn the money necessary to discharge the obligations of the Government they had saved. It was Republican legislation that depreciated the money paid for bonds during the war, and then turned around and increased the value of the money in which they should be paid after the war had closed. And this valiant gentleman from Illinois rushes in where angels would fear to tread, appealing to the history of the most corrupt political organization that ever trifled with the liberties of a free people.

A BANKER'S PLEA.

And now comes another gentleman from the prairie State [Mr. CANNON] and adds his voice to the discussion. He adds his mite to the hodgepodge of absurdities and misstatements with which this discussion has been crowded. With the usual assurance of his class he opens his remarks with the declaration that he is in favor of "maintaining the Government faith." Sir, I am always inclined to look out for my purse when I hear such declarations. Verily, these gentlemen do protest too much. They would "maintain the national faith" if they may perform that task by increasing the tribute to be wrung from the people through dishonest legislation. The gentleman from Illinois [Mr. CANNON] shows how he would "preserve the national faith" by his declaration that all Government obligations are payable in gold where coin is specified.

He declares that this is to be done at the option of the holder and in accordance with law. This declaration is made in face of the fact that a statute distinctly provides to the contrary. If there is any meaning in the English language the Sherman law provided that certain obligations should be redeemed in gold or silver "at the option of the Secretary of the Treasury." During this present discussion we have been offered an opportunity to save some three-quarters of 1 per cent in interest if we would put the statement the gentleman makes definitely into our bonds. The

representatives of the American people have distinctly refused to do this. They have preferred to pay the extra interest rather than adopt a policy that would forever place them in the hands of a money oligarchy. Accepting this decision, the money changers have bought our bonds at a lower price and thus confessed that they have not the right to demand gold at their option. Here, then, may be found both a statute affirmatively giving the negative to the gentleman's proposition and also the absence of the statute desired by the Administration and its allies among the money changers of two continents. Whoever hereafter repeats this senseless claim does so at the risk of his reputation for intelligence and honesty.

REPAYMENT IN KIND.

And there has come from the very citadel of privilege through the mouth of its chief spokesman another statement that must not be forgotten in this discussion. He who has given his name to the mutilated silver law of 1890 and to the famous bank building on the corner of Wall street in New York now rises to explain how he would "preserve the national faith." He declares that the Government must always pay its obligations in the kind of money it received for them. He says that our bonds are now being sold in gold and that therefore they must be paid in the same kind of coin. Methinks I have heard some such claim as this before from this very successful and thrifty financier, once a Secretary of the Treasury, now Senator of the United States. I recall a letter he wrote to a Mr. Mann and afterwards published in a volume of his speeches, edited by himself. In that letter he declared that the Government had a perfect right to pay the 5-20 bonds in legal-tender paper money, because they were sold for that kind of money. He was then opposing the policy of payment in coin. But no man came more quickly to the rescue of his friends in the banks than this same statesman when it was proposed to make a new contract for the benefit of the bondholder. He stood as the defender of the financial policy of the Republican party when, in 1869, the so-called credit-strengthening act was passed and bonds that were specifically payable in greenbacks were made payable in coin.

Like the gentleman from Illinois [Mr. HOPKINS], this great Senator now disavows the financial policy he helped to frame and denounces his own party as guilty of treason to the plain people of the country. The time may come before the last of these infamous bonds are paid when the privilege of paying them in any kind of coin will be of value to the people. It is more than possible that we shall so far progress as to demonetize both these metals and regain for the people the sole function of issuing their money. If such a happy fortune shall lie in the womb of the future for this generation these gentlemen who are now clamoring for a coin bond will be the first to join in another demand even now put forth by the paid agents of the money power in this Congress—that the bonds shall be paid in the most valuable money at the time of payment, regardless of the specifications of the contract.

MAINTAINING THE RESERVE.

Wherever we touch the arguments of the defenders of this system of metallism we expose either an absurdity or a misstatement. The crowning absurdity and false pretense is found in the claim that it is absolutely necessary for the preservation of the national faith and the maintenance of "sound money and an honest currency" to keep \$100,000,000 of gold coin locked up in the Treasury. Let us briefly examine this proposition.

It is heralded by every little mouthpiece of the Administration that the present Secretary of the Treasury has achieved a most notable success in making some kind of a contract with certain bankers by which the so-called reserve is to be once more piled up to the \$100,000,000 mark and then maintained. In other words, they are to so manage the finances that this vast sum shall always be kept in the Treasury vaults as a basis for the confidence of the bondholders. And when we challenge this policy as one lacking in every principle of honesty and intelligence, when we declare that there is no possible use for such a waste of the people's substance and demand that the coin be paid out for Government obligations, we are met with the declaration that we are "Populists" and know absolutely nothing of the needs of commerce. They declare that we must have the same kind of money recognized by the civilized world. They point to what they call the balance of trade, and declare that we must have gold for export in settlement of those balances which are constantly arising, but never settled.

Now, what does this mean? If they mean that we need gold for export because of a balance of trade against us, then will some great financier of the bank parlors please inform a puzzled Populist how it is to make it easier for us to get this gold for export if the Secretary of the Treasury shall actually succeed in a scheme by which \$100,000,000 shall be locked in his vaults so that it can not be withdrawn? If the locking up of \$100,000,000 of gold in

the Treasury vaults makes it easier for the people to get it for export, then why, in the name of common sense, do not these great financiers lock up twice as much, and make it just so much more easy to get it? We are a gold-producing people. Every dollar of our surplus that we may export adds to our power to purchase the surplus products of other people. Every dollar locked up in a useless reserve to that extent limits and restricts our power of exchange of our products. Every such limitation reduces the value of every dollar's worth of products offered for sale in this country. This adds to the power of capital over future production, and the ability of gorged monopoly to satisfy its greed at the expense of the producing classes.

Suppose we were to pass a law under which it became the policy of the Government to lock up one-half of the wheat and corn produced in this country. Would it not necessarily follow that we had thus limited our possible exports and reduced the selling price of every bushel of wheat produced after the first year of such folly? It is impossible to conceive of a more palpable absurdity than this hoarding of gold in the Treasury so that we may have it for export. No answer has ever been made to this demonstration. None is possible. Like the clamor against the inquisitorial nature of the income tax, the defenders of this policy show their intent in their discussion. They understand what it would mean for the money magnates of the land to be deprived of their control over the volume of the people's money. They have given evidence of their power during the session of this Fifty-third Congress. They have demonstrated that the little finger of the banks is more potent in influencing legislation and administration than the whole power of 75,000,000 people. They have piled Pelion upon Ossa of misstatement, sophistry, and absurdity, in their attempt to defend a false financial policy.

THE IMPUDENCE OF IGNORANCE.

And who are these gentlemen who claim a monopoly of financial knowledge? What has been the record of their past efforts in behalf of their class? How have their predictions and forecasts been justified by the logic of events? It is time for plain speaking by the representatives of the people on this floor. We have been denounced by all the epithets that ignorant and tricky defenders of privilege have been able to call from the dictionary. They seek to close the discussion of financial questions by the declaration that they are in favor of "honest money." They do this in spite of a record which places upon them and their class the just charge of having violated the national faith by every act they have succeeded in placing on the statute books. They plundered the people by wicked legislation while we were struggling to maintain the Government against the attacks of traitors with arms in their hands and far worse traitors standing here in Congress and legislating in favor of a bond-holding class. They stand now for the class they have enriched by law, and pose as great statesmen simply because they have been thrifty in their service of monopoly.

Wherever we attack their policy we show their false pretense. They dare not meet us in fair argument. They feel the coming of the storm that shall sweep them from power, whether they wear the tarnished robes of Democracy or Republicanism. All through the sessions of this Congress Republicans and Democrats alike in both Houses of Congress have stood firmly allied to prevent the honest representatives of the people from enacting laws in the common interest. They will go out from these Halls and seek to further humbug the people with their sophistries and frauds. Meantime the alleged Democratic Administration will put forth every effort to strengthen the chains that bind this people to the altar of money monopoly. But there is coming a wave of reform that will put in power men who shall have bowed no knee to the Baal of money. The people have been looking into the economic questions now pressing for solution. They have discovered the absurdity of supposing that their interests will be fairly protected by the men who have so constantly erred in the past. I have no fear of the result of the contest into which we have entered. I have an abiding faith in the intelligence of the American people and in their capacity for self-government. They are a long suffering people. But when awake to the danger that impends they will make short work of their oppressors, whether they find them posing as followers of Jefferson or of Lincoln.

The financial question is not to be closed by epithets. It is not to be settled in accordance with the desires of men who seek only their own aggrandizement and the continuance of that system of monopoly under which one legislative body has been made a millionaires' club and the stronghold of privilege. Into this contest I shall go with a firm belief that the truths we have taught will be accepted by the American people to their great benefit and to the overthrow of the power which has degraded American statesmanship to the level of the men whose prototypes were scourged from the temple by the great Teacher.

The Currency.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1896.

The House having under consideration the joint resolution (H. Res. 275) authorizing the issue of \$65,116,275 of gold 3 per cent bonds—

Mr. McMILLIN said:

Mr. SPEAKER: It will be impossible for me, in the brief time allotted to anyone in this debate, to give that clear, consecutive, and succinct statement of the circumstances which surround this measure which would be pleasing to me and gratifying to the House.

On last Friday we received a message from the President of the United States, acquainting us with the fact that there had been negotiated by the Secretary of the Treasury a sale of bonds, bearing interest at 3½ per cent, to run thirty years, the principal and interest to be paid as the law now allows our other outstanding bonds to be paid. That message also informed us that the right had been reserved in that contract to substitute, within ten days, a gold obligation for the one negotiated, and in that event to reduce the rate of interest to 3 per cent. The law of the contract allows us to pay all our bonds heretofore issued, and these when issued, in either gold or silver, at the option of the Government.

It is, I suppose, conceded by all that in the brief time remaining before this contract goes into effect, it will be impracticable to have legislation on this subject. If the House should pass this bill it has no possible chance of passing the Senate. Therefore, perhaps all we can do is to state what we conceive to be the correct principle in issuing these new bonds.

Sir, the Democratic party has had almost every difficulty that can be conceived to contend with since its accession to power on March 4, 1893. It had left nearly two hundred millions of money in the Treasury when it yielded up the Administration on the inauguration of President Harrison, in March, 1893. The greater part of this had been squandered when we came back, and the system of bookkeeping, or of stating the public debt and the condition of the Treasury, had been changed to prevent that statement from showing the deficiency, outside of the gold reserve fund, which really existed.

Vast debts already long past due had not been paid for the reason that to pay them would tend to show the deficiency which really existed, but which every effort was being made to conceal. Trust funds, not heretofore counted as assets of the Government, were counted as assets for the same purpose. By these several means of changing the form of debt statement, of deferring the payment of honest debts, of appropriating trust funds, and others, the Republicans were able to bridge over to the 4th of March, and to conceal from some, and deceive others as to, the true condition of the Treasury and its bankruptcy. It is known to many that, realizing this stranded state of public revenues and knowing that expenditures made by the "billion-dollar Congress" were daily exceeding our revenues, steps had been taken by the Administration of President Harrison to issue bonds. I believe some of the plates for printing them are said to have been prepared. But at last it was seen that by the devices I have named they could bridge over to the 4th of March and vacate the White House and leave an empty Treasury at the same time. And they did it.

But, sir, not only was there a present deficiency, but by the McKinley tariff law the daily revenues had been so diminished by reason of high tariff rates and the payment of bounties that the condition of the Treasury became more serious every day. Stringency had characterized our money market so long that the panic that has since raged with such fury had fairly set in. It may be truly said that when we came to power we inherited a bankrupt Treasury, a tax system so defective that the deficiency became greater diurnally, and a panic so far advanced that nothing could put an instant stop to it. These were the conditions of our accession to power and the conditions under which the issuance of bonds began. The President assures us in his message that he can place these bonds at 3 per cent interest, and save about \$500,000 a year in interest thereby, if we will give authority to make them payable, principal and interest, in gold instead of issuing them as now authorized by law. The question is, will we save that amount or pay the higher rate of interest on the old form of bond? The present law authorizes him to issue that. No new authority is asked or required. It is only the gold bond which requires new authorization.

The principal of our debt now outstanding, whether interest-bearing or noninterest-bearing, may under existing law—the law of the contract—be discharged in gold or silver at the option of the Government. This proposition is to surrender this right and make, to the extent of this bond issue at least, a new contract binding the Government to pay in gold alone, and forcing the Government to discredit by legislative enactment a large portion of the currency it has put in circulation among its citizens. The inducement to this action, as I stated, is the fact that the loan made and to be affected by it can be secured at 3 per cent interest instead of $\frac{3}{4}$ per cent interest if the discrimination is made. However desirable the saving may be, and however commendable it would under other circumstances be, I do not believe that it is wise to surrender the long-existing right of the Government to pay its debts in either gold or silver at its option and according to the terms of its creation.

Sir, I am not willing for the Government by this act to cast discredit or suspicion upon six hundred and eighty-five millions of bonds heretofore issued and now outstanding.

I believe that to pass this bill and issue these gold bonds would make it impossible to float any future loan that was not secured by the issuance of gold bonds, should it become necessary from any cause for the Government to borrow money or renew bonds now outstanding.

We have now outstanding \$346,000,000 of Treasury warrants, commonly known as greenbacks. We have outstanding, also, about one hundred and fifty millions of Treasury notes of 1890, issued on bullion purchased. This Congress has been urged to retire these, amounting in all to about half a billion dollars, by issuing in their stead gold bonds. The demand would be made to not only redeem these in gold, principal and interest, but to contract in advance that the Government's option to redeem them in any legal-tender coin should be given away. Under the plea of maintaining the parity of gold and silver, we would legislate against silver as one of the coins of ultimate redemption. No greater power could be exerted to cause the two metals to separate than this legislative act by which one is cast aside and declared unfit to be used in the payment of these debts.

The same influences that now clamor for the writing of this contract in gold would with equal plausibility and earnestness demand the writing of all others in gold, and the abolition of silver as legal-tender money. If acknowledged not to be good enough to tender to one class of creditors now, how long would it be accepted by others?

Another consequence likely to flow from this legislation would be the demand of all lenders of money that those who borrow should imitate the Government of the United States, and sign contracts not to tender any currency but gold in the discharge of their debts. States, counties, municipalities, corporations, and individuals would alike be forced to the use of gold alone, and the greatest possible blow would be struck against bimetalism.

However much, Mr. Speaker, I might be inclined at any time to save \$500,000 a year in interest I must, in the brief time allowed me, give some reasons why I prefer to forego that saving now, let the \$500,000 a year go, and let the bonds run at $\frac{3}{4}$ per cent interest under the present law rather than 3 per cent in gold.

This Government has had a terrific trial in the last thirty years, growing out of the great expenses consequent upon our civil war. Our indebtedness at the close of the war amounted to \$2,300,000,000. The interest on that vast sum was more than \$150,000,000 a year. With a country distracted and divided, with a South dismantled and dismembered, Southern men, Northern men, Eastern men, Western men—men from all parts of the country—came up and heroically and patriotically stood by the Government; and they have kept its obligations as good as gold, without issuing any gold bonds. [Applause.] There need be no fear, and in the mind of any man who understands the American people there will be no fear, that this people—divided then, united now; this people, poor then, rich now—will continue to keep the credit of this Government good. All the powers of earth and hell will not prevent it. [Applause.]

Sir, some gentlemen talk as if we will evince bad faith and destroy the credit of the Government if we do not issue gold bonds.

Mr. Speaker, it is not a question of bad faith or good faith. It is not a question of credit or discredit. We will keep faith; we will maintain national credit. The question involved here is, Will we, as the representatives of the people, take our obligations that are written in "coin" and convert them into those to be written in "gold"? If the amount involved were \$1,000,000 per annum, were \$5,000,000 per annum, were \$10,000,000 per annum instead of a half million I would not send this country on that line which I regard as so dangerous. [Applause.] We will take care of the credit of the Government. Give yourself no fear. There are 67,000,000 patriotic, industrious people pledged to that, and they may be trusted to do it. Sir, what will be the consequence of this action? Does the gentleman from West Virginia insist, do the other gentlemen who stand by him insist or claim that this meas-

ure is a panacea for the ills that afflict us? Will this prevent speculators from raiding our gold reserve? It will probably be a little more troublesome, but still within the power of those who want to raid the Treasury and take out the gold, to do it after this bill passes, just as they have been able to do it before its passage.

But there is a consequence that is to flow from this measure; there is an ill that I fear more than I can express. We owe now, it is estimated by different statisticians, not less than four billions of money abroad—four thousand millions. Does any man suppose that when the Government discredits the silver and paper that it has put in circulation among the people anybody on earth will take anything but a gold obligation from an American citizen or an American corporation?

Mr. KYLE. While the gentleman is enumerating the troubles to grow out of this bill, I want to call his attention to the last clause, the proviso of the bill, with which no doubt he is familiar, as he is a member of the committee. Is not the effect of the proviso at the close of the bill, which reads as follows—

Provided, however, That no part of the proceeds of the sale of such bonds, nor of the notes redeemed with such proceeds, shall be available for the payment of the current expenses of the Government—

to permanently retire the notes referred to without putting any currency in their place, and thereby to the extent they are redeemed contract the currency?

Mr. McMILLIN. I am glad my distinguished friend from Mississippi has called my attention to that question, for it presents one of the most serious defects of this measure and one which I regard as exceedingly grave. I intended to comment briefly on that later on, but had as well do so now. I will state candidly that I believe it will have the effect suggested by the gentleman from Mississippi. Whether intended or not, I fear this is the entering wedge not only to write every other obligation of the Government, issued or to be issued hereafter, in gold, but it is the entering wedge to the ultimate destruction of the greenback currency that saved this country once from peril, and which can be utilized to bless the people and make them prosperous if used wisely and judiciously in the future. [Applause.] If there were nothing else in the bill but that I should feel unalterably opposed to its passage, because the effect would be the retirement of that currency without substituting anything in its stead, and thereby a great contraction of the currency. I object to any provision of law that will accomplish such a result as that in a country like this. We hear talk of panics, of ruin, of devastation, and of hard times—why, Mr. Speaker, it is a fact that every political economist in this world will recognize as an unvarying principle that you can not have permanent prosperity in any country while you have a constantly increasing population and an increasing commerce, and at the same time a decreasing currency. [Applause.] To the extent that this is a depreciation of the currency or a contraction of the currency its effects must be disastrous.

Mr. BYNUM. If the gentleman will permit me a suggestion?

Mr. McMILLIN. With pleasure.

Mr. BYNUM. Does the gentleman from Tennessee insist that this provision of law will retire the greenback from circulation?

Mr. COX. It takes it out of circulation to some extent at least.

Mr. BYNUM. Not at all. They can be used in the redemption of the national-bank notes.

Mr. McMILLIN. I will answer my distinguished friend from Indiana. It does not destroy them. It does not take them out of circulation. That was done once—the attempt to destroy them—but the people of the United States resisted the effort and stopped it after about one hundred millions had been destroyed. But this locks them up in the Treasury and for all practical purposes to the people of this country they had just as well be consumed in fire. [Applause.]

Mr. BYNUM. I think that, if the gentleman will permit me, he is entirely in error in regard to that. The Treasury has to redeem the national-bank notes in lawful money, and it will have to pay these out for the redemption of the national-bank notes. So that it only permits their payment in the current redemption, and does not permit their use in the current expenditures. That is the only difference.

Mr. McMILLIN. To the extent that it restricts their use it impairs their usefulness.

A MEMBER. Why did not you propose something of that kind in one of the bills that was acted upon some time ago?

Mr. BYNUM. It was in the bills, but the House would not accept it.

Mr. McMILLIN. Suppose, sir, that we get one hundred millions of greenbacks in the Treasury by paying out gold for them, and only fifty millions thereof is demanded for redemption of national-bank money. This bill prevents the payment of the remaining fifty millions on the current obligations of the Government. It would have to be kept out of circulation, and to that extent this would produce the contraction I predicted.

Now, Mr. Speaker, I repeat that this is the entering wedge to the writing of all of the obligations of the Government in gold,

as well as the obligations of the private citizen. When the Government yields to the demand for gold alone, what citizen, what corporation can resist it? You had as well expect one citizen of China to carry on successfully the war with Japan after his Government had signed a treaty of peace as to expect it.

Mr. STOCKDALE. And all the bonds issued would likely be at this rate of interest.

Mr. SNODGRASS. If my colleague will allow me, the next step will be to fund all of the obligations of the Government and make them all gold-bearing.

Mr. McMILLIN. And that is not all. This is a very far-reaching bill in its ultimate results. Our counties have to borrow money, our municipalities must borrow money, in addition to the corporations and individuals who must borrow money to carry on their business. Now, pass this bill and you announce to the world that the five hundred millions of silver that the Government of the United States has to-day is fit for nothing but to weight down dead men's eyes, and that you will write every other obligation of the Government and force every citizen to meet every obligation in gold. [Applause.]

Mr. Speaker, for one I am not willing to enter upon a career so destructive, so disastrous, so dangerous, so inevitably ruinous as I conceive this to be.

The Secretary of the Treasury appeared before the Committee on Appropriations, I believe, during this Congress, and he was called upon to know whether it would not be good policy to redeem in either gold or silver at the option of the Government. He answered with all the candor that characterizes him—great man that he is, patriotic as he is; I saw him here for twelve years as member of the House, as Speaker, and as Senator, and I bear willing testimony to the fact that one purer in patriotism, loftier in devotion to his country, and more honest in his convictions can not be found—with that candor and patriotism he always evinces, he said he thought it a mistake that originally, when we began the redemption of our obligations in coin, we did not begin to redeem in both gold and silver at the option of the Government. I believe he is correct in that. But when he became Secretary of the Treasury he was beset by evil times. The Administration was in great peril. Our friends on the other side had taken everything in sight, and were weeping because nothing more was in sight to take. [Laughter and applause.]

I have already described to you how he found a bankrupt Treasury and a tariff system so high in its rates that it did not yield the necessary revenue to the support of the Government. I doubt not he did that which he thought was wise in the emergency. He did not think it was a wise thing to reverse the policy which had been in force since 1879 while the panic was raging. But if the worst comes to the worst, if the speculation in gold is to go on and we are to have five hundred or a thousand millions more of bonds put on the people of the United States by means of taking gold from the Treasury with one hand with which to draw out bonds with the other, then I say the Government has this last right, this ultimate reserve power, to check the fellow who demands the right to raid the Treasury for pure speculation, and pay hereafter in silver or gold according as it may be convenient or desirable to the Government. [Applause on the Democratic side.]

[Here the hammer fell.]

Collection of the Income Tax.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 12, 1894.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8148) making appropriations to supply urgent deficiencies in the appropriations for the fiscal year ending June 30, 1895, and for other purposes—

Mr. McMILLIN said:

Mr. CHAIRMAN: Probably I shall not detain the committee for the full length of time that has been so kindly yielded to me by my friend from Kentucky, but I wish to say a few words in response to the position taken by my distinguished friend from New York [Mr. BARTLETT] on this very important question. In the first place, I deny one position that he has taken, namely, that this income-tax law is contrary to the Democratic platform, for the reason that the Democratic platform is silent upon the subject. His next position is that it is an unconstitutional tax. That I deny, because we have had the question submitted to the Supreme Court of the United States, the highest tribunal in the land, and it has been passed upon by that tribunal, in the case of a tax bill similar

to this in many respects, but a tax that made an exception to which the gentleman very much objects. As the author of this bill and chairman of the subcommittee framing it, I will be pardoned for taking the time of this body in defending it. We were careful, in framing the income-tax bill, to follow, so far as we could, the former law, in order that the decisions that had been made upon that law should apply to this, and that we should not be going out into terra incognita. I had sworn to support the Constitution of the United States before framing this law, and I will show you, or try to show you, before I am through, that in advocating it and in furthering its passage I did not violate that oath.

Mr. Chairman, those who oppose this measure on constitutional grounds, including my distinguished friend from New York, who has just addressed you, claim that it violates one or other of the following provisions of the Constitution of the United States:

Representatives and direct taxes shall be apportioned among the several States which may be included within this Union according to their respective numbers. (Article I, section 2.)

No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be taken. (Id., section 9.)

The Congress shall have power: To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States. (Id., section 8.)

Sir, I deny that the income-tax law violates either one of these provisions of the Constitution. It is fortunate for us that these provisions of the Constitution came before the Supreme Court of the United States for construction and application in 1796, when three members of that court had been members of the constitutional convention which framed these clauses. Congress had imposed a tax in 1794 on carriages. Mr. Hylton, a citizen of the United States owning carriages, held that it was a direct tax not apportioned according to population, and therefore unconstitutional. It is evident from this decision that by "direct taxes" the delegates to the convention meant certain taxes and no other. They meant poll taxes and taxes on real property, including slaves, which in some of the States were real property descending to the heirs.

This was an "act laying duties upon carriages for the conveyance of persons" and levied upon all carriages certain "duties and rates" following the rule of uniformity instead of the rule of apportionment, and providing regulations for the collection of these "duties." It was insisted by those who favored the tax that it was an excise and not a direct tax. Congress thus in the sixth year of the Government construed personal property taxes to be "duties" and not "direct taxes" in the meaning of the Constitution. The Supreme Court of the United States, in the eighth year of its existence, when three members of the constitutional convention were sitting as judges, held that this construction was correct and sustained the tax on carriages.

Justice Chase said:

I think an annual tax on carriages for the conveyance of persons may be considered as within the power granted to Congress to lay duties. The term "duty" is the most comprehensive next to the general term "tax;" and practically in Great Britain, whence we take our general ideas of taxes, duties, imposts, excises, customs, etc., embraces taxes on stamps, tolls for passage, etc., and is not confined to taxes on importation only. It seems to me that a tax on expense is an indirect tax, and I think an annual tax on a carriage for the conveyance of persons is of that kind, because a carriage is a consumable commodity, and such annual tax on it is on the expense of the owner. I am inclined to think, but of this I do not give a judicial opinion, that the direct taxes contemplated by the Constitution are only two, to wit: A capitation or poll tax simply, without regard to property, profession, or any other circumstance, and a tax on land. (Page 175.)

Again, in *Veazie Bank vs. Fenno* (8 Wall., 533), this same doctrine was upheld, and on pages 546 and 547 the learned judges say:

It may further be taken as established * * * that the words "direct taxes," as used in the Constitution, comprehended only capitation taxes and taxes on land, and perhaps taxes on personal property by general valuation and assessment of the various descriptions possessed within the several States. It follows, necessarily, that the power to tax without apportionment extends to all other objects. Taxes on other objects are included under the head of taxes not direct, duties, imposts, and excises, and must be laid and collected by the rule of uniformity. The tax under consideration * * * may be said to come within the same category of taxation as the tax on incomes of insurance companies, which this court at the last term, in the case of *Pacific Insurance vs. Soule* (7 Wall., 434), held not to be a direct tax.

Mr. Chairman, the income-tax law provides for a tax on successions or a tax on incomes derived from successions. In the case of *Scholey vs. Rew* (23 Wall., 331) the succession tax laid by the act of July 13, 1866, was brought in question. It was claimed to be a tax on real estate in some instances, as the property devised in this case was real estate. Mr. Justice Clifford, delivering the opinion of the court overruling this claim, said:

Whether direct taxes in the sense of the Constitution comprehend any other tax than a capitation tax and a tax on land is a question not absolutely decided, nor is it necessary to determine it in the present case, as it is expressly decided that the term does not include the tax on income, which can not be distinguished in principle from a succession tax, such as the one involved in the present controversy. (Pages 347, 348.)

Nor are these the only decisions bearing on this question. In the case of *Springer vs. United States* (102 U. S., 586) the constitutionality of the income tax imposed by the Government from

1862 to 1870 was again brought in question. Again it was decided to be constitutional, and decided that Congress had not transcended its power when it imposed this tax to meet the heavy expenses of the Government.

Sir, I submit that it is neither wise nor safe to override a long line of constitutional decisions running through the whole history of the Government to shield from taxation that part of the community that is most able to pay taxes. Surely the Supreme Court of the United States knew how to construe the Constitution at a time when three members of the constitutional convention composed that body, and at a period removed less than ten years from the sitting of the constitutional convention.

If these decisions may be overturned now, after one hundred years of prosperity and adversity, where can we find a decision of the Supreme Court that may be safely called a part of "the law of the land"? If you can do this, if you can turn over this long line of precedent and practice, if you can throw up a barrier against just taxation, which all the powers of earth have not been able to throw up heretofore, I submit that you had as well announce the opinion that no judicial decision is permanent and no judicial precedent safe to follow in this country. Where, sir, will you find precedents so numerous and cases more thoroughly considered upon which to found a line of permanent judicial decisions?

Not only are we thus fortified by judicial decisions in our contention, but learned commentators on the Constitution of the United States have also taken the view we here present of this question. There is no sounder and more learned expounder of the Constitution than Judge Cooley. In defining a direct tax he says:

The term "direct tax," as employed in the Constitution, has a technical meaning, and embraces capitation and land taxes only.—*Cooley on Constitutional Limitations*, 6th edition, page 388.

Sir, it is insisted that the income-tax law, by exempting \$4,000 in the hands of each family from tax, and imposing the tax on corporations without this exemption, violates the Constitution for want of "uniformity" in the tax. There is no better way to settle these controverted points than by quoting from the decisions of the Supreme Court.

In the *Head Money Cases* (112 U. S., 580, 594), Mr. Justice Miller said:

The uniformity here prescribed has reference to the various localities in which the tax is intended to operate. "It shall be uniform throughout the United States." Is the tax on tobacco void because in many of the States no tobacco is raised or manufactured? Is the tax on distilled spirits void because a few States pay three-fourths of the revenue arising from it? The tax is uniform, and operates with the same force and effect in every place where the subject of it is found. * * * The law applies to all ports alike, and evidently gives no preference to one over another, but is uniform in its operation in all parts of the United States. * * * Perfect uniformity and perfect equality of taxation in all the aspects in which the human mind can view it is a baseless dream, as this court has said more than once.

Again, Mr. Justice Miller has elsewhere said:

They are not required to be uniform as between the different articles that are taxed, but uniform between the different places and different States. Whisky, for instance, shall not be taxed any higher in the State of Illinois or Kentucky, where so much of the article is produced, than it is in Pennsylvania. The tax must be uniform on the particular article, and it is uniform within the meaning of the constitutional requirement if it is made to bear the same percentage over all the United States. That is manifestly the meaning of this word as used in this clause. The framers of the Constitution could not have been meant to say that the Government in raising its revenue should not be allowed to discriminate between the articles which it should tax. (Miller on Constitution, pages 240, 241; see also Pomeroy's Constitutional Law, sections 280, 287.)

Mr. Chairman, if the contention of our adversaries were right the principle they clamor for would overturn almost all other tax laws on our statute books. It would overturn any tariff law framed in the last quarter of a century, because we have a higher rate of taxes on silks than on cotton goods. Under the present tariff law we have a higher rate on fine woolen goods than on coarse goods. We have a higher rate on fine cotton than on coarse cotton; a higher rate on champagne than on sugar. Under the law which this supplanted this rule was reversed, and a higher rate was placed on coarse cottons and coarse woollens than on fine.

Sir, it is objected that there ought to be no exemption of \$4,000 to the head of a family. I submit that this is an objection going to the expediency of the matter and not to its constitutionality. Every income-tax law heretofore framed has had some exemption. The first was \$600, then there was a \$1,000 exempted in the hands of each family, and next \$2,000. All these were held to be constitutional. I do not conceal the fact that I would have preferred to see the exemption \$3,000 instead of \$4,000, but whether one amount or another is exempted, it is not obnoxious to the Constitution because there is an exemption. The tax on corporations is on their net income. Their living or running expenses are first taken out. So the law also takes the living expenses of the family out, and fixes the tax on what remains. In view of the difficulty of keeping accounts to show every item that was expended in a family's living—each sack of coffee, each barrel of flour, each barrel of sugar, each sack of potatoes—Congress determined to fix

a lump sum, to wit, \$4,000, as the living expenses of a family, and to tax all above that.

But again, sir. This tax was imposed for the purpose of equalizing the burdens of Government. Almost all our other taxes are placed on consumption. We obtain from import duties over a hundred and fifty million dollars. From the tax on spirits consumed in table use, in manufactures, in dyes, in the compounding of drugs, and in other ways, over one hundred millions. The beer tax amounts to \$31,000,000. All these are taxes on consumption and not on accumulated wealth. It is argued by some that they are voluntary taxes, and may be assumed or avoided according to the inclination of the taxpayer. Whilst this is true as to beverage whisky and beer, it is not true of spirits used in compounding medicines, nor of clothes; for since the ancient episode in the Garden of Eden it has not been the custom for the human family to go unclad, and a tax on clothes and the necessities of life is in no sense a voluntary tax. But all of these are taxes on consumption, and this Congress concluded, and as I think wisely, that there ought to be some tax put on accumulations, and for the purpose of meeting this just demand imposed this income tax. It is not only constitutional, but it is just.

Sir, we are told that the income tax heretofore decided constitutional was a war tax, levied for war purposes. Is any man in this Hall so deluded as to believe that we are beyond the expenses incident to the war? If so, let him examine our interest account on our public debt, amounting to millions of dollars a year. Let him examine our pension roll, which costs the Government nearly half a million dollars a day, and he will see that whilst the war is past the expenses incident to it are still upon us.

Sir, the pension payments under the act of 1890 alone amounted last year to \$57,900,173.54; and still we are told that consumption—the necessities of the people—should pay all these taxes and incomes should go untaxed.

Mr. Chairman, Mr. MORRILL, of the Ways and Means Committee, advocated a tax of 10 per cent on all incomes over \$3,000.

When the proposition to repeal the income tax came before Congress it was opposed strenuously by Mr. SHERMAN of Ohio in the following able manner:

There has been a great deal of clamor against the income tax. It is the same clamor that induced the Parliament of England in 1816 and 1817 to repeal the income tax. When a little colloquy occurred here the other day between the honorable Senator from California [Mr. Casserly] and myself on that subject, I told him that when the proper time came I would show that this tax was sustained by principle, by writers on political economy, by the experience of Great Britain, and that it is just, and the most just and equitable tax that is now levied by the United States of America without an exception. I propose to make good that promise.

The only discrimination in our tax laws that will reach wealthy men as against the poorer classes of people is the income tax. There is no other tax on property levied by the United States of America. The tax on legacies and successions, which was in the nature of a property tax, is about to be repealed by the agreement of the committees of both Houses; and the income tax is the only tax levied by us that bears upon property in any shape or manner. All the rest of our taxes, both internal and external, are taxes on consumption.

Now, according to every true theory of taxation, a large portion of the taxes ought to fall upon property or income derived from property. * * * I do not find fault with them because they complain of it; but if they would see that it was their property and their rights and their income that was saved by the operation of the war, and that most of the people who pay the taxes on consumption necessarily pay nine-tenths of all the taxes, the property holders and wealthy people of this country ought not to complain if we deem it necessary to maintain this tax at 5 per cent instead of, as we propose, at 3 per cent.

We levy nine-tenths of all our taxes upon food and clothing and those things which are consumed by the use of them. For property holders, wealthy people, those who derive a large income from their profession or employment, from their brains or intellect, to complain of this tax, it seems to me, is very unjust.

Again, Mr. SHERMAN said:

A few years of further experience will convince the body of our people that a system of national taxes which rests the whole burden of taxation on consumption, and not one cent on property or income, is intrinsically unjust.

* * * It will not do to say that each person consumes in proportion to his means. This is not true. Everyone must see that the consumption of the rich does not bear the same relation to the consumption of the poor as the income of the one does to the wages of the other.

As wealth accumulates, this injustice in the fundamental basis of our system will be felt and forced upon the attention of Congress. Then an income tax, carefully adjusted, with proper discriminations between income from property and income from personal services, and freed from the espionage of our present law, will become a part of our system, just as such a law proposed by Sir Robert Peel, after a disuse of twenty-five years, was the basis of the revolution in the tax system of Great Britain.

Mr. Chairman, I have no desire whatever to establish class legislation in this country. It is to prevent class legislation that I have advocated and still favor this measure—a class legislation which taxed consumption and not wealth, which placed burdens on the necessities of people and not on their accumulations. I have no sympathy with that fear expressed by some that if we impose this tax we will drive wealth from our borders. If the wealthy man in his vain effort to escape the burdens necessary to good government flees from our land, turns his back on our flag, whither will he fly and find no income tax? If he goes to England he will escape a 2 per cent tax and get under one twice as large; if to Germany, Italy, or almost any great country of the

world, he should wend his way, he will find a greater income tax than is imposed by this country, and when, moved by so ignoble a sentiment as that of escaping this just tax, he gets there, whether proudly or not, he can look around at those who fled with him to escape equitable taxation and truly exclaim:

True patriots we, for he it understood
We left our country for our country's good.

Sir, there is no retrogression in this question. The English ministry, always conservative and oft pandering to wealth, are about proposing to the Parliament a graduated succession tax, ascending as high as 8 per cent on the estate of the decedent.

Sir, let me next address myself to the second position taken by my distinguished friend from New York [Mr. BARTLETT], that "This is an unjust tax." To this proposition I propose to pay my respects for a moment. I agree to the proposition which the gentleman quoted, that "an unnecessary tax is an unjust tax," and still I defend this one. Let us see what the condition of the country is at present. I quote from the report of the Secretary of the Treasury, in which he states that the deficiency for the year ending June 30, 1894, was \$89,808,200, and that the receipts for that year have fallen off \$88,914,008. I further quote from him the statement that, even with the income tax in full operation, collecting what we may be able to obtain from this source, we are still to have a deficit for the year ending June 30 next of \$20,000,000. And yet my distinguished friend from New York proposes to augment that deficit \$30,000,000 by repealing or abrogating this income-tax law. Rather than put this pittance of taxation on accumulated wealth or the fixed incomes derived from it, he would make that deficiency fifty millions instead of thirty millions dollars.

Mr. BARTLETT. Will the gentleman permit a question?

Mr. McMILLIN. Certainly.

Mr. BARTLETT. I would like to ask the distinguished gentleman what has become of his tariff for revenue, constructed on revenue lines, if he has to come in here now with a proposition for a deficit?

Mr. McMILLIN. The tariff for revenue was constructed with the income tax to aid it. We put it there for the purpose of supplementing the tariff, and it is there now and will stay there. [Applause.] That is what has become of it. But before the gentleman comes to that he will remember that the law does not become operative until the first of next fiscal year; that under it the taxes could not be collected until the middle of July, and that the tariff bill was framed with this income-tax provision in it, but for which we would have been guilty of sending to the Senate a bill to provide revenue to run the Government, but which created a deficit of \$75,000,000. I think I have some bravery, but I am not and was not bold enough to deliberately legislate a seventy-five-million-dollar deficiency. It will be remembered the sugar tax was not inserted in the House.

Mr. COCKRAN. May I ask the gentleman a question?

Mr. McMILLIN. Certainly.

Mr. COCKRAN. Does the gentleman mean that the tariff bill, as reported here from the Democratic Committee on Ways and Means, by its reduction in tariff rates created the deficit?

Mr. McMILLIN. I do say emphatically that till we inserted the income-tax bill in it it showed on its face a deficiency of about that amount, whether by the reduction of rates or otherwise. I believe that the deficit would not have been seventy-five millions because the reduction of rates would increase importations. Therefore, there would not have been probably a reduction of full \$75,000,000; but if we count the revenues on the importations of the year preceding there was a deficiency on its face of \$75,000,000.

Mr. COCKRAN. But I understand that the gentleman would not be guilty of the folly of making such a computation, and that it is his whole contention, and the contention of all tariff reformers, that reduction in the rates of tariff taxation means a stimulus to importations with a corresponding increase of revenue, not a decrease.

Mr. McMILLIN. There would be increased importations; but I do not believe that any man calculating fairly and honestly can come to the conclusion that there would have been a sufficient increase to make the revenues meet the expenses of the Government and prevent a deficiency; and therefore we imposed the income tax. After the bill went to the Senate that body taxed sugar, which will add forty or more millions to our revenues.

Mr. COCKRAN. Now permit me—

Mr. BARTLETT. I believe I am entitled to the next interruption.

Mr. McMILLIN. I do not care which gentleman I yield to, but I only wish to yield to one at a time.

The CHAIRMAN (Mr. BAILEY). Does the gentleman from Tennessee yield to the gentleman from New York nearest to him [Mr. BARTLETT] or the gentleman from New York farthest from him [Mr. COCKRAN]?

Mr. McMILLIN. I would be "happy with either, were t'other dear charmer away." But I will take the gentlemen in their order.

Mr. COCKRAN. I yield to the gentleman nearest to my friend from Tennessee. That position of distinction ought to make everybody yield.

Mr. McMILLIN. In one sense both these gentlemen are very "near" to me; they are both my warm personal friends.

Mr. BARTLETT. I should like to ask the gentleman from Tennessee why there was not inserted in the last platform of the Democratic party some such provision as this: "We believe in a tariff, and a tariff for revenue only, but, that tariff inadequate, to be supplemented by an income tax."

Mr. McMILLIN. I am unable to tell the gentleman why such a provision was not inserted in the platform of our party. It may be that the extent of our deficiency was neither known nor anticipated. But a large majority of the representatives of the whole people, irrespective of party, when they assembled here, thought it ought to be inserted; and they did insert such a provision in our legislation. It is the law to-day; and the question is whether you will enforce the law or whether you will abrogate it by refusing to make this appropriation. The gentleman from New York by his actions says that, having failed to defeat the law when up for passage, he will now defeat it by refusing to appropriate money to enforce it.

Mr. BRECKINRIDGE. Let me ask one question: Was it ever contemplated in the Democratic platform or by the Democratic Ways and Means Committee that all the revenue of the Government should be raised by customs, and that the internal revenue, including the tax on whisky, tobacco, etc., should be repealed?

Mr. McMILLIN. It never was intended. On the contrary, the Democratic party has taken strong ground against that position in this Hall and elsewhere. It has refused in the past, it will refuse in the future, to take all tax off whisky to put more on clothes. It passed this tax that it might reduce the burdens on clothes and other necessities.

Mr. STRAUS. Will the gentleman allow me to ask him one question?

Mr. McMILLIN. With pleasure, if my time can be extended by unanimous consent.

Several MEMBERS. Oh, yes.

Mr. STRAUS. The Secretary of the Treasury reports, I believe, that there will be a surplus of revenue to the extent of \$20,000,000 for the year ending June 30, 1895. Now, if there should be a surplus of revenue, is not the gentleman willing to have the income tax repealed?

Mr. McMILLIN. The gentleman from New York is in error. There will be no surplus June, 1895. Again, I regard this a just law and want it to help pay our pension roll of \$140,000,000 a year. That there may be a surplus any time in the near future what must we do? We must, as we have done for three years past, violate the law of the United States and refuse to pay one dollar upon the sinking fund. When you pay up the hundreds of millions dollars arrearages, which have accumulated in that way—when you comply with the law and pay \$50,000,000 a year upon the sinking fund and our enormous pension list and other heavy expenses—then if we have a surplus I shall be ready to discuss the question of the repeal of this tax. But even then (to be perfectly candid with the gentleman) I do not hesitate to say I would take taxation off clothing and other necessities of life rather than off wealth. [Applause on the Democratic side.]

Mr. Chairman, as I was going on to say when interrupted, the gentleman from New York complains of this tax as an unjust tax. Why unjust? Whence the injustice? Whom does it hurt? He says it falls upon the poor man, because his rent will be increased. The poor man is paying it now. He will not be in any worse condition if the taxation is put on some other things than clothes.

Mr. BARTLETT. How is the poor man paying the income tax now?

Mr. McMILLIN. The poor man is not paying the income tax. But I want to tell you how taxes are paid, and you will very readily see who pays them.

The internal-revenue tax is over \$147,000,000. Now, there is not a man in his senses in this Hall or anywhere else who will claim for one moment that these taxes are paid in proportion to the wealth of the people from whom they are derived.

Mr. BARTLETT. What taxes are you speaking of?

Mr. McMILLIN. The whole internal-revenue system—the taxes on whisky, on beer, on tobacco, on oleomargarine, on privileges; every tax that is internal in its nature outside of this tax that we are now proposing to collect by this appropriation.

Mr. BARTLETT. I will answer, with the consent of the gentleman, and say to him that this tax is paid by the individual in proportion to the consumption.

Mr. McMILLIN. In proportion to the consumption! That is just the point. Not in proportion to what he has, not in propor-

tion to his wealth, but he has to pay the tax exactly in proportion to what he is compelled to consume. It has no reference to the wealth he may have accumulated, but only to his necessities. He has to pay as many dollars on the camphor his family uses as does his neighbor who could buy his whole earthly possessions multiplied a thousand times over.

Mr. BARTLETT. Does the gentleman mean to assert that one man should pay a different tax on a glass of whisky from what another one pays?

Mr. McMILLIN. I do not; but each should pay to the support of the Government that blesses him, that protects him, in proportion to the blessing he receives through the protection of his property and himself. If he has a big estate, then he should pay a big tax. If he has a little estate he should pay a little tax, and the man with only a thousand-dollar income ought not to pay the same tax to the support of the Government of the United States that is paid by the man who has five millions of annual income. [Applause.] Sir, under the government established by God himself for the government of his chosen people they paid tithes; the more a man made the more he paid.

Mr. BARTLETT. Will the gentleman yield for a question?

Mr. McMILLIN. With pleasure, if I can have my time extended, and the House has always been so courteous to me that I suppose I need not fear about that. Ask your question.

Mr. BARTLETT. I would like to ask the gentleman from Tennessee whether he is ignorant of the fact that the man who is most protected by the Government of the United States is the poor man, the idiot, or the man who is dependent upon the community? The rich man needs no protection. He has money and can afford to defend himself. He has money enough to employ a body of armed retainers, just as much now as was done in the middle ages—

Mr. McMILLIN. Well, I would prefer not to yield to the gentleman for a speech.

Mr. BARTLETT. I did not mean to consume the gentleman's time except with his consent.

Mr. McMILLIN. I can not do more than yield to questions. This I am always glad to do for the gentleman from New York.

Now, Mr. Chairman, to illustrate the point I am arguing, and in reply to the remarkable statement of the gentleman from New York that the wealthy require no protection, I shall depart from my usual course. In the whole of these discussions, Mr. Chairman, I have never been in the habit of using on the floor of the House, as an illustration or otherwise, the names of individuals. But, moved by the gentleman's astonishing declaration, and in order to show the flagrant wrong that is done by a system of taxation under which we have been living, I will call your attention to the name of one man which is not unfamiliar to many of you and certainly not to every citizen of the State and city of New York. I speak of Mr. William Waldorf Astor.

This gentleman ran for Congress once against the present governor of New York, Mr. Flower, and was defeated. He permitted that defeat to do for him what no man ought to permit to be done in this country, that is, it soured and embittered him against the Government of the United States and our institutions generally. He moved abroad, and not content with what he could say against America himself and our American institutions, he purchased one of the ablest journals in the great Government of Great Britain, the *Pall Mall Gazette*. I believe he ultimately added one or two other journals to his list. He lives there now, and this newspaper which he owns and controls is doing its work against our institutions. And yet, Mr. Chairman, the income of this man, I am credibly informed on what I believe to be good authority, derived from property in New York, is more than \$5,000,000 a year. He does pay a State tax, he does pay a county tax, and he does pay a municipal tax, it is true, but he does not pay the Government of the United States one dollar, and has not paid five dollars in five years, although he has this colossal fortune, which is protected by our Army and defended by our Navy.

Now, we say that notwithstanding his foreign residence, his voluntary expatriation, he should be compelled to pay something to support the Government that blesses and protects his vast estate in this country. [Applause.] What say you? [Addressing Mr. BARTLETT.] Where is the man who will contend that there is any injustice in requiring him to bear a portion of the burden of taxation? If he is here, let him rise up and proclaim it.

Mr. BARTLETT. I will answer that, if the gentleman will yield to me for a moment.

Mr. McMILLIN. I will yield to the gentleman if I can have an extension of my own time.

Several MEMBERS. That will be done, if possible.

Mr. BARTLETT. The gentleman has asked me a question and has yielded me time to answer, as I understand.

Mr. McMILLIN. Then please be brief, as I have to be brief myself.

Mr. BARTLETT. I will answer the gentleman, that there is no better taxpayer in the State of New York than Mr. William Wal-

dorf Astor. I will answer him further, that there is no family in the State or county of New York that contributes more largely to taxation purposes—State, county, and municipal—than does the Astor family.

Mr. CRAIN. He admitted that.

Mr. McMILLIN. How about the Federal tax? That is what I was talking about. I admitted that he paid his State and county taxes. But they do not run the General Government, and its taxes are about as much as all these others combined.

Mr. BARTLETT. If it be your purpose to proscribe the rich—

Mr. McMILLIN. That is not the purpose, and I will not be misrepresented.

Mr. BARTLETT. That was an inquiry only. I say, if it is your purpose—

Mr. McMILLIN. I say protect each alike, I respond to the gentleman from New York, and tax the rich and the poor in proportion to what they possess and not in proportion to what they need.

Mr. SMITH of Arizona. Make the dollars pay the taxes.

Mr. McMILLIN. Now, I wish to have read for the benefit of the Committee of the Whole the utterance of a distinguished Senator of the Republican party on this question, formerly Secretary of the Treasury, Mr. JOHN SHERMAN.

The Clerk read as follows:

If you leave your system of taxation to rest solely upon consumption, without any tax upon property or income, you do make an unequal and unjust system.

Mr. McMILLIN. There is no question about the truth of that proposition. Now, there is no claim that we ought to raise all the revenues of the Government by this method.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McMILLIN. If I can have a few minutes, by unanimous consent, I should be very glad—the time not to come out of the time of my friend from Kentucky [Mr. BRECKINRIDGE].

Mr. COCKRAN. I ask unanimous consent that the gentleman have more time.

There was no objection.

Mr. McMILLIN. Now, Mr. Chairman, as I intimated in another connection, we have been forced to the necessity of increasing the bonded indebtedness of the United States \$100,000,000 within the last year. For one, I do not want to see that policy persisted in by the Government of the United States. Each generation, except in times of great trouble and trial, when the doctrine is impossible of enforcement, ought to pay the current expenses of that period. And I am unwilling, for one, to let this tax go, to let it become inoperative, and to see as the inevitable result of that folly the still further increase of the bonded indebtedness of this country. I do not want to lay a lien on the pockets of posterity. I do not propose to perpetuate the public debt, with all the excuses that that gives for excessive taxation in every form conceivable, both high tariffs and high internal taxes.

Now, as the gentleman has spoken of tariff taxes, let me utter to him one truth: That the only sure hold he has upon a permanent and thorough tariff reform is by collecting some of the taxes, and a good portion at that, from other than customs sources. So long as you so frame your policy that all the manufacturer has to do to get more protection is to make more expenditures and increase the cost of the Government, so long will you be debarred the blessings of economic government to the country.

Mr. COCKRAN. Will the gentleman allow me to ask a question?

Mr. McMILLIN. Just one word first, lest I shall be cut off again, and then I will try to yield to my friend.

Now, as I stated, we collect \$147,000,000 from internal revenue sources. That can not be claimed to be an equal imposition upon the wealth of the citizen in proportion to what he possesses. Then we collect from customs sources \$131,000,000. So that all the revenues which we obtain from these two sources, which are nearly three-fourths of all we obtain, are levied upon the things that men use, not in proportion to what they possess, but in proportion to the necessities of consumption. Now I, for one, am very anxious to see that policy reversed.

I would not clamor for the discharge of all the obligations of the Government by an income tax; but you already have the poor taxed out of all proportion to what they possess through your internal-revenue tax and your tax upon the necessities of life. Put a little of it—less than one-tenth has been proposed by this measure—put a little of it on the wealth of the country and interest the rich in the administration of public affairs.

Mr. COCKRAN. Will the gentleman permit me a question?

Mr. McMILLIN. Yes.

Mr. COCKRAN. It is a question which I desired to put a moment ago in the line of my prior question. I want to ask the gentleman this question: Does he contend that a reduction in tariff rates will work a reduction in the revenues of the Government, or does he contend that a reduction of the rates of tariff taxes will work an increase in the revenues of the Government?

Mr. McMILLIN. I will answer that in this way: You can make such a reduction in the tariff rates as would work a great reduction of revenue, of course; but to the revenue point a decrease of the high rates we had under the act of 1890 will tend to work an increase of the revenue.

Mr. COCKRAN. Did the bill known as the Wilson bill reduce tariff rates down to the revenue point, or did it leave them above it?

Mr. McMILLIN. The rates were not reduced to the revenue point on all articles. They were on others; but I beg of my friend to remember that there was an enormous free list created by that bill, which deprived us of the revenues that those articles had yielded; and I do not believe that the Wilson bill as framed will have the effect to raise the revenue necessary to carry on the Government without this income-tax.

Mr. COCKRAN. I understand the gentleman's contention, then, to be based upon the assertion that the Wilson bill as it passed this House, and the tariff law as it passed both Houses, will operate to reduce the revenues of the Government below the volume of revenue which the Government enjoyed under the McKinley act?

Mr. McMILLIN. If the gentleman wants information from me, I will deal candidly with him, and will say that without this provision of law they will fall below the revenues necessary to carry on the Government for a year or two at least. The sugar tax, added by the Senate, will of course add many millions. The House bill without this and the income tax both would have left a permanent deficiency.

Sir, one other point to which I desire to call the attention of the House is that the gentleman who preceded me laid great stress on the fact that "we were not in a war period." I beg him to remember that nearly one-half of all the taxes now raised have to be paid out for the purpose of meeting expenses that grew out of the war. As I have before stated, one hundred and forty millions in pensions alone, \$28,000,000, if I remember the figures correctly, in interest, to say nothing of that other law that I speak of as being in abeyance, of \$50,000,000 a year to meet the sinking fund.

Mr. Chairman, moved by the oppressions of unjust taxation, our forefathers rebelled against the mother country and established this the greatest of all the Republics. In committing it to us, Jefferson, the immortal author of our immortal Declaration of Independence, admonished us to do "equal and exact justice to all men of whatever state or persuasion, political or religious." The Supreme Court has told us that the income tax is a constitutional tax. The observation of anyone who examines our entire tax system will show him that it is a just tax when taken in connection with the vast taxes we impose on consumption. Let us appropriate this money to collect it, and show our people that it is our purpose to tax all to maintain the blessings of free institutions and perpetuate the greatest and grandest Government that man ever devised. [Applause.]

[Here the hammer fell.]

Mr. McMILLIN. I am profoundly grateful to the committee for its courtesy and attention.

Proposed International Monetary Conference.

REMARKS

OF

HON. IRVING P. WANGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 4, 1895.

The House having under consideration the resolution to refer the bill (H. R. 3800) to the Court of Claims—

Mr. WANGER said:

Mr. SPEAKER: The views expressed by my friend from Ohio [Mr. GROSVENOR], touching the importance and possible utility of the proposed conference for the purpose of securing, internationally, a fixity of relative value between gold and silver, as money, by means of a common ratio between these metals, with free mintage, have my hearty concurrence, and, as far as they extend, need no elaboration. But there are besides his suggestions others equally pertinent to the matter, which I shall endeavor to briefly state.

It is to be remembered that when the International Monetary Conference was held at Brussels in 1892 our representatives were asked what they had, in behalf of the Government of this country, to propose for the promotion of the object of the conference, and they were criticised by other representatives for, and their influence was doubtless weakened by, their not being able to definitely outline the international policy we desired, or that failing,

the national policy the United States would probably adopt toward silver for the future. The latter could only be judged then, as now, by the legislation on the subject.

We now hold a position of decidedly greater advantage and probable influence than in 1892 by reason of the repeal of the purchasing clause of the Sherman Act and the demonstration thereby that it is not possible for other nations, equally interested in the proper solution of the problem, to stand idly by and leave our country hewing their wood and drawing their water, financially, without any aid or cooperation from them. And if they wish the cessation of falling prices, so far as the latter are the result of discrimination against silver as a primary money for final redemption, it is essential for them to unite with us in using silver in order that the equilibrium between gold and silver at an agreed or at a proper ratio may be restored and maintained. And if they will not do that then this country will pursue a policy from which they will derive scant satisfaction so long as their unfriendly and selfish attitude is maintained.

In April, 1892, the late Hon. S. Dana Horton stated in the preface to a then new edition of his work, "Silver in Europe," the forceful fact, as true now as then:

Europeans will never remonetize silver merely because Americans wish them to do so; they will do it only when they recognize it to be to their interest. * * * Once it is recognized that the European outlawry of silver is a blunder, a blunder for Europe, and there is daylight ahead.

From the action of the German Reichstag and of various bodies in England and France, it seems as if a conviction was growing that the outlawry of silver was a blunder for Europe no less than for America, and the fact lends hope to the possibility of important results to be achieved through the coming conference. This is largely the logical results of our latest legislation on the subject, and we may properly congratulate ourselves thereon.

But to my mind we have not gone far enough, and it is to be regretted that our conferees are not armed with definite instructions and authority to be enabled to point to legislation providing, among other things, that after a certain period the duties upon articles imported from or the product of a particular country shall be paid in the coin which in such country is unlimited legal tender and of the metal given free and unlimited mintage by the laws of such country, and that in every possible way the United States proposes to favor those nations which assist in sustaining its financial policy, and to secure from the other nations an equivalent for the failure of the latter so to do.

International bimetalism is the ultimate hope and the only safe and permanent solution of the financial problem, but failing an early agreement to that end a vigorous and distinctive American policy, promotive of the same, is a pressing duty of American statesmanship.

The gentleman from Nebraska [Mr. BRYAN] states his belief that this country can alone maintain bimetalism, and the gentleman from Kansas [Mr. SIMPSON] supplements the declaration by citing the example of Jefferson and Hamilton, and says:

Let us profit by the example these patriotic citizens and leaders of the two great parties gave us.

What was that example? When the coinage act of 1792 was passed the commercial ratio of gold to silver was 15.17 to 1, and the legal ratio was made 15 to 1, with the effect of all the gold which was coined leaving us.

The commercial value of gold to silver is to-day 34.40 to 1; and although Jefferson and Hamilton were mistaken in supposing our country could maintain bimetalism when they dropped a mere fraction of seventeen-hundredths from the commercial value, gentlemen contend that we can now maintain it although we should drop eighteen and forty-hundredths below the commercial value!

If Hamilton had acted upon the principle declared by the gentlemen from Nebraska and Kansas he would have advocated a ratio of about 7 to 1 instead of 15 to 1 and cited in justification of the act that that ratio prevailed for a time during the reign of Julius Caesar!

No, gentlemen; the free coinage of silver by this country alone, at the ratio with gold of 16 to 1, means silver monometallism here as it does in Mexico, in India, or in China. And while favoring effectual legislation by this country toward the white metal, let it be with the certainty of eventual bimetalism, and without the sacrifice of our financial integrity or of any other advantages we now enjoy. The cost of our present credit has been too enormous and its value is too great to be idly thrown away; and no occasion exists for such stupendous folly.

Among the beneficent results of the restoration of Republican supremacy in the legislative councils of the nations I trust to witness measures which will give certain assurance that the days for the outlawry of silver are numbered, and that the dawn of restored financial equilibrium throughout the world is breaking, permitting the revival of hope and restoration of prosperity. [Applause.]

State Taxation of National-Bank Notes and United States Treasury Notes.

SPEECH

OF

HON. THOMAS J. HENDERSON,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 6, 1894.

The House having under consideration the bill (H. R. 4336) to subject to State taxation national-bank notes and United States Treasury notes, and for other purposes—

Mr. HENDERSON of Illinois said:

Mr. SPEAKER: The question of taxing national bonds and Treasury notes or greenbacks is not a new question. That subject has been discussed in almost every campaign since the close of the war. Like the gentleman from Ohio [Mr. NORTHWAY], I have discussed the question of taxing the bonds of the United States, and also the Treasury notes, in many political campaigns, for I have found quite a number of people in my Congressional district who have insisted that both bonds and greenbacks issued by the United States should be subject to taxation by the States, just the same as other property and money; and with such people the term "bondholder" is a term of reproach, as if it was disreputable to be a holder of a bond of the United States. But I have always believed, and still believe, that it was not only right and proper to exempt the bonds and other credits of the United States from State and municipal taxation, but that a sound public policy demanded such exemption. And why should not the greenback, or Treasury note, be exempt from taxation as well as the interest-bearing bond of the United States?

I confess I am not able to see any good reason why the one should not be exempt from taxation as well as the other. The Treasury note or greenback is as much a credit of the United States as the interest-bearing bond is; and the reasons seem to me to be just as strong for exempting the Treasury note from taxation as they are for exempting the interest-bearing bond. My friend and colleague from Illinois [Mr. CANNON] says we can not tax the bond, for it would be a violation of the contract to do so. Well, is it certain that it is not a violation of the contract to authorize and permit the taxation of the Treasury notes? Every Treasury note or greenback in circulation to-day has been issued and put in circulation under laws which exempted them from taxation, and it may well be doubted whether Congress has the power now to authorize States and municipalities to tax the Treasury notes in circulation.

In the Forty-ninth Congress, as I remember, the gentleman from Maine [Mr. DINGLEY] made an able report from the Committee on Banking and Currency against a bill to authorize the taxation of the Treasury notes of the United States by States and municipalities; and I believe that committee held that Congress had not the power to authorize such taxation. It seems to me, Mr. Speaker, that it is not only bad faith in the Government but that it is bad policy now to authorize the taxation of its credit by any State or municipality. And to authorize the taxation of greenbacks, as proposed, is certainly to authorize the taxation of the credit of the United States.

But whether Congress has the power to authorize the taxation of the greenbacks or not, having issued and put them in circulation under laws exempting them from taxation, still I put my opposition to this bill to authorize such taxation upon higher ground. I believe the Government ought not to adopt the policy of permitting States and municipalities to tax its credit. It is a dangerous policy in my judgment. Is it correct, Mr. Speaker, to say that a Treasury note is a credit of the United States? There can be no doubt about it in my judgment.

In a very well-considered decision made by the supreme court of the State of Indiana in the case of *The Board of Supervisors of Montgomery County and Another vs. Elston*, found in the thirty-second Indiana Reports, page 31, that court held that the issue of Treasury notes to circulate as money among the people was but a borrowing of money without interest from the people.

Mr. COOPER of Indiana. Does not that same decision hold that the money so issued is money?

Mr. HENDERSON of Illinois. I do not understand it. The court says in substance that the Treasury notes were issued to circulate as money, and they are in fact nothing but a promise to pay so many dollars. And the decision was to the effect that they were exempt from taxation, but that the notes of the national banks were not exempt and might be taxed by the States and by municipalities authorized to levy taxes the same as money. That was the decision.

Mr. COOPER of Indiana. I understand it is.

Mr. HENDERSON of Illinois. I have said that the greenbacks or Treasury notes were credits of the United States, and that it was dangerous to authorize States and municipalities to tax such

credits. Some gentlemen who favor the passage of the proposed bill admit that it would be dangerous to permit the taxation of Treasury notes by the States in time of war. Why, Mr. Speaker, is it dangerous to permit such taxation in time of war? I answer that if the Government in time of war permitted the taxation of its credit it would be difficult to borrow money or to circulate its Treasury notes as money among the people, and the Government would not only be crippled in its efforts to obtain money to carry on the war, but its very existence might be endangered.

But, Mr. Speaker, are we not on the verge of war to-day? The military arm of the Government has been found necessary to preserve peace and good order in some parts of the country, and as our revenues are not sufficient to meet the expenses of carrying on the Government, we may find it necessary within thirty days from to-day to borrow money on the credit of the Government, or to issue Treasury notes, to be used as money, to meet the enormous expenses and burdens that are now being imposed upon us, to protect life and property and to prevent the entire transportation facilities and business interests of the country from being paralyzed and suspended. And is it not wiser and better for the Government to maintain its credit and to permit no act of any State or municipality to impair it in any way?

It seems so to me, and I would not allow, in war or in peace, any State or municipality whatever to impose a tax upon any credit of the United States, whether a bond bearing interest or a Treasury note which bears no interest and yet is just as much a credit of the Government. In fact, Mr. Speaker, it would seem more necessary to impose no burden upon the greenback or Treasury note, for the reason that it does not bear any interest.

It is true, I know, as my friend from Ohio [Mr. GROSVENOR] says, that the greenbacks are as good as gold. But may not that be one of the ways of keeping them as good as gold—not to permit them to be subject to taxation at the pleasure of States and corporations in States? That is the reason why we keep in the Treasury of the United States \$100,000,000 in gold to keep the greenback as good as gold. But to-day we have only some sixty odd millions of the gold reserve in the Treasury, and very soon we may not have gold enough in the Treasury to maintain the greenbacks at par. We should, therefore, be very careful in our legislation not to do anything which may depreciate the value of the Treasury notes of the United States. It would be far better to retire them, in my judgment, from circulation altogether than to adopt the policy of permitting States and municipalities to tax the credit of the United States at their pleasure.

Mr. Speaker, no better reason can be given against permitting States and cities and other municipalities to tax the credits of the United States than was given by Chief Justice Marshall, in the case of *Weston vs. The City of Charleston*, which will be found in 2 Peters, page 449. In giving the opinion in that case, Chief Justice Marshall said:

No one (power) can be selected which is of more vital interest to the community than this of borrowing money on the credit of the United States. No power has been conferred by the American people on their Government the free and unburdened exercise of which more deeply affects every member of our Republic. In war, when the honor, the safety, the independence of the nation are to be defended, when all its resources are to be strained to the utmost, credit must be brought in aid of taxation, and the abundant revenue of peace and prosperity must be anticipated to supply the exigencies, the urgent demands of the moment.

The people, for objects the most important which can occur in the progress of nations, have empowered their Government to make these anticipations, "to borrow money on the credit of the United States." Can anything be more dangerous or more injurious than the admission of a principle which authorizes every State and every corporation in the Union which possesses the right of taxation to burden the exercise of this power at their discretion? If the right to impose the tax exists it is a right which in its nature acknowledges no limits.

It may be carried to any extent within the jurisdiction of the State or corporation which imposes it, which the will of each State and corporation may prescribe. A power which is given by the whole American people for their common good, which is to be exercised at the most critical periods for the most important purposes, on the free exercise of which the interest certainly, perhaps the liberty, of the whole may depend may be burdened, impeded if not arrested, by any of the organized parts of the confederacy. * * *

We have considered it as a necessary consequence, from the supremacy of the Government of the whole, that its action in the exercise of its legitimate powers should be free, and unembarrassed by any conflicting powers in the possession of its parts; that the powers of a State can not rightfully be so exercised as to impede and obstruct the free course of those measures which the Government of the States, united, may rightfully adopt. * * * The tax on Government stock is thought by this court to be a tax on the contract, a tax on the power to borrow money on the credit of the United States, and consequently to be repugnant to the Constitution.

Now, as was well said by Judge Ray, of the supreme court of Indiana, in the decision referred to, after quoting the foregoing extract from the opinion of Chief Justice Marshall, the Treasury notes of the United States (or greenbacks) had their origin in the very exigency contemplated by Chief Justice Marshall. They were issued at a moment when the Government, stripped of her property and menaced in her capital, was compelled to demand of her citizens the peril of property and life alike, on the faith of her promise.

Now, Mr. Speaker, the greenback or Treasury note was a forced loan upon the people. It was made a legal tender by law, and the people were compelled to take it without regard to its value. It was not originally made receivable for duties on imports, but

has since been made so. It was, as I have said, a forced loan from the people, and the people received it as money when it was worth only 40, 50, or 60 cents on the dollar. But finally the Government made the greenback good and proposed to keep it at par with gold; and it seems to me that the good faith of the Government is as strongly pledged to-day to prevent its taxation by the States and municipalities in the States as it was at the time the law was enacted which provided for its issue and circulation as money.

It has been said, "Suppose I have greenbacks in my pocket, another gentleman has silver in his, and a third has gold; while the gold and the silver are taxed, the greenbacks are not." I admit the force of this; I admit that it is bad to have one kind of money in circulation which is subject to taxation and another kind which is exempt from it; but it is better to have it so, in my opinion, than to adopt the dangerous policy of permitting the credit of the United States to be taxed by States and municipalities. And these Treasury notes having been issued and put in circulation, under a law which provided that they should be exempt from taxation, why is it not beyond the power of Congress now to say that they shall be subject to taxation? It certainly can not be done without at least bad faith on the part of the United States.

Is not the law authorizing the issuing of Treasury notes a part of the contract; and, as the law exempted these notes from taxation, is it not now a violation of the contract to authorize their taxation? It seems so to me, Mr. Speaker; and it is no answer, in my judgment, to say that they are now redeemed in gold.

But has the Government no interest in keeping the greenback in circulation and keeping it at par? Suppose we subject them to State and municipal taxation, suppose it should be held constitutional and proper to permit States and municipalities to impose taxes upon them, what may be the result, whether it will be to retire them from circulation or to depreciate their value, I do not know.

I do not know whether you can compel my friend from Missouri [Mr. HALE] to surrender his greenbacks or not; but if he does not do it, that does not answer the argument of the gentleman from Ohio [Mr. HULICK]. The argument of that gentleman was that the greenbacks were put in circulation and are in circulation with an express provision of law that they are exempt from State and municipal taxation, and that it is not constitutional now for the United States to exercise this power and say that the States may tax them; and further that it is a violation of good faith. And in that position I am inclined to agree with him.

Cases have been referred to, Mr. Speaker, where, to encourage industries, State legislatures have exempted certain property from taxation, and subsequently such property was taxed; but such cases, it seems to me, are not analogous to this in any manner. Here the Treasury note has been issued by the Government of the United States, in the form of a promissory note or obligation of the Government to pay a coin dollar, and it was exempted from taxation because it was a credit of the United States. The Government issued the greenbacks; it put them in circulation, and it was essential to the national existence that credit should be given to them. It was in this way that the Government was enabled to go on with the war, to put down the rebellion, and maintain and preserve the Union of the States.

Under these circumstances, Mr. Speaker, I am of the opinion that we can not without violating good faith now provide that these greenbacks issued and put in circulation among the people, under a law exempting them from taxation, may be taxed by the States at their pleasure.

Mr. COOPER of Indiana. What consideration does the holder of the greenback yield up more than the holder of a gold dollar?

Mr. HENDERSON of Illinois. Only the consideration that the greenback has been exempted from taxation. But that suggestion does not meet the question. The greenbacks have become as good as gold, because the Government proposes to redeem them in gold whenever presented for redemption. But as they were issued and put in circulation under laws which exempted them from taxation, the Government should redeem and retire them from circulation rather than permit its own credit to become the subject of taxation by the States.

My friend and colleague on the Committee on Banking and Currency, Mr. Cox, admits that if the greenbacks were simply Treasury notes issued by the Government of the United States and promising to pay a dollar or dollars, that then he would say they ought to be exempted from taxation. But inasmuch as they have been made a legal tender, therefore they ought to be subject to taxation the same as any other money is. Now, it does seem to me, that the mere fact that the Treasury note was made a legal tender by the Government does not warrant its being made subject to taxation, for, legal tender as it is, it is but a promise to pay money, and the value it possesses is, after all, the value which the credit of the United States gives to it; and the fact that it is made a legal tender, and that people may be compelled to receive it as money when it is not money and is only good because the Government will redeem it in gold, only seems to me to create a

stronger obligation on the part of the Government to keep good faith with the holder of greenbacks, and not allow them to be taxed by States and municipalities. I, however, Mr. Speaker, rest my whole opposition to the passage of this bill—authorizing, as it does, the Treasury notes of the United States to be taxed by the States—upon the higher ground that the Government should never permit its credit to be burdened in any manner by State and municipal taxation. I think the bill should not pass.

Pension Legislation.

REMARKS

OF

HON. AUGUSTUS N. MARTIN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 2, 1895.

The House having under consideration the subject of pension legislation—
Mr. MARTIN said:

Mr. SPEAKER: Under the leave given to me by the House of Representatives during the last hour of the third session of the Fifty-third Congress, I make the following brief statement as to the work of the House Committee on Invalid Pensions and of the House itself during that Congress in the line of pension legislation.

The list and residences of the members constituting that committee and the clerks and subcommittees of the committee, are as follows, to wit:

COMMITTEE ON INVALID PENSIONS.

AUGUSTUS N. MARTIN of Indiana, chairman; ROBERT W. FYAN of Missouri, DARIUS D. HARE of Ohio, MICHAEL J. McETRICK of Massachusetts, MELVIN R. BALDWIN of Minnesota, WILLIAM RYAN of New York, JOHN J. McDANOLD of Illinois, CONSTANTINE J. ERDMAN of Pennsylvania, GEORGE B. FIELDER of New Jersey, ALFRED A. TAYLOR of Tennessee, JOHN A. PICKLER of South Dakota, JOHN F. LACEY of Iowa, LEWIS D. APSLEY of Massachusetts, GEORGE D. MEIKLEJOHN of Nebraska, and LUTHER M. STROSG of Ohio.

Clerk—Homer L. Martin.

Assistant clerks—William H. Wilson and Royal Denny.

Special detail from Pension Office—T. Fletcher Dennis.

Bills introduced by members from the following States and Delegates from the Territories are referred to the member of this committee whose name is given in the following list of subcommittees:

A. N. MARTIN—Indiana, Arizona, and New Mexico.
ROBERT W. FYAN—Missouri and Indian Territory.
DARIUS D. HARE—Twelfth to Twenty-first districts of Ohio; West Virginia, and Texas.
MICHAEL J. McETRICK—Seventh to Thirteenth districts of Massachusetts; Connecticut, and Rhode Island.
MELVIN R. BALDWIN—Minnesota, Wisconsin, and Michigan.
WM. RYAN—New York and Utah.
JOHN J. McDANOLD—Illinois, Arkansas, and Florida.
CONSTANTINE J. ERDMAN—Pennsylvania, Mississippi, and Oklahoma.
GEORGE B. FIELDER—New Jersey, Maryland, and Delaware.
ALFRED A. TAYLOR—Tennessee, Kentucky, North Carolina, South Carolina, Virginia, and Georgia.
JOHN A. PICKLER—South Dakota, North Dakota, Montana, Nevada, Oregon, and Washington.
JOHN F. LACEY—Iowa and Kansas.
LEWIS D. APSLEY—First to Sixth districts of Massachusetts; Maine, New Hampshire, and Vermont.
GEORGE D. MEIKLEJOHN—Nebraska, Colorado, California, Wyoming, and Idaho.
LUTHER M. STROSG—First to Eleventh districts of Ohio; Alabama, and Louisiana.

Mr. Denny, one of the assistant clerks, resigned January 1, 1894, and the place remained vacant thereafter.

The general statement of the number and nature of bills and resolutions referred to said committee is as follows, to wit:

Number of general House pension bills and resolutions referred to the committee	96
Number of similar bills from the Senate	3
Resolutions reported by the committee	4
General bills favorably reported by the committee	11

As follows:

1. To supplement the act of June 27, 1890, so as to give pensionable status to the widows of soldiers who died in the service but not in line of duty. This bill passed the House, but was not considered by the Senate.

2. To repeal the law prohibiting the payment of pensions to non-residents. This provision was enacted into law as an amendment to the pension appropriation bill.

3. To give the same weight to testimony of private soldiers as to that of officers. This bill passed the House, but was not considered by the Senate.

4 and 5. House and Senate bills providing for the payment of accrued pensions and as to the effect of pension checks mailed to pensioners after their death. This was enacted into law March 2, 1895.

6. To punish officers for postdating vouchers. This did not pass the House, not having been reached for consideration.

7. To pension members of State militia, and others not regularly mustered, for wounds or injuries received in battle. This bill did not pass the House, not having been reached.

8. To restore pensions to soldiers' widows whose pensions had ceased because of remarriage but who had again become widows. This did not pass the House, never having been reached for consideration.

9. To permit fourth-class postmasters to execute vouchers for pensioners. This was enacted into law.

10. To amend the act of June 27, 1890, as to insane, idiotic, or otherwise permanently helpless children. This passed the House, but was not considered by the Senate.

11. To restore the status of members of the Missouri State militia under the act of June 27, 1890. This was enacted into law.

There were referred to the House Committee on Invalid Pensions 1,236 private pension bills introduced in the House and 71 similar bills which had passed the Senate, and of these bills that committee reported 143 favorably and 23 adversely.

The 1,236 House bills referred to said committee may be classified as follows:

To pension quartermasters' employees and others not regularly mustered into the service of the United States or the widows of such	202
Bills containing no sufficient data to classify	122
Bills improperly referred to this committee and hence returned for reference to other committees	81
To pension alleged permanently helpless children of soldiers	73
To restore pensions to soldiers' widows who had remarried but again become widows	74
To pension persons whose claims are still pending in the Pension Bureau	57
Bills to pension those already pensioned, the passage of which would be of no benefit	20
To pension soldiers or widows of soldiers who served less than ninety days	33
To pension army nurses	24
To pension soldiers not disabled in a ratable degree	28
To allow arrears of pensions	23
Exact duplicates of other bills	17
To pension deserters or their widows	19
To pension widows of soldiers who died in the service but not in line of duty, such widows not being pensionable under the act of June 27, 1890, because the soldier was not discharged	16
To pension mothers of soldiers whose death was not due to the service	29
To pension mothers of soldiers who left a widow or child having prior title	14
To pension stepmothers or foster mothers of soldiers	17
To pension fathers of soldiers	10
To pension stepfathers or foster fathers	4
To pension sisters of soldiers	12
To pension stepister of soldier	1
To pension women not legally married to soldiers	11
To pension supposed widows where soldier's death is not positively proved, but presumed on account of long absence	25
To pension adult daughter of soldier	1
To pension minor children by first wife of soldier who left a widow by second marriage	1
To pension widow married since June 27, 1890	1
To pension brother of soldier for personating him in the regiment for some weeks	1
To pension soldier whose disability resulted from vicious habits	2
To pension soldier who had served for a time in the Confederate Army, and also in the Union Army	5
To pay accrued pension to relatives of soldiers	10
To pension widow who is not dependent under act of June 27, 1890	1
To restore pension stopped because illegally allowed	3
To repeal former private acts procured by fraud	3
Bill identical with one enacted into law in Fifty-second Congress	1

INCREASE.

To increase soldiers' pensions	220
To increase widows' pensions	61
To increase mothers' pensions	3
To increase daughter's pension	1
To increase brother's pension	1
Total	1,236

Of the private pension bills which passed both branches of Congress and were sent to the President three were vetoed.

One of these was a bill to pension a widow whose claim in the Pension Office it was found could be allowed by that office under a ruling made by Assistant Secretary Reynolds, of the Interior Department, since the bill had been favorably reported by the committee to the House. This veto will benefit the widow several hundred dollars.

The second of these bills was favorably reported by the committee to the House on erroneous information from the Pension Bureau that no pension was being paid by the United States to any one, when in fact the soldier's widow, a second wife, has long been drawing a pension.

The third veto was of a bill which would have effectually repealed a private pension act of March 3, 1871, alleged to have been procured by fraud, but which the President vetoed under, as I have reason to believe, a misapprehension. This was the Hiram R. Rhea bill. The effect of this veto is to leave the alleged fraudulent pensioner upon the pension roll, a thing never intended by the President in vetoing this bill.

These three vetoes all occurred during the last session of the Fifty-third Congress and near its close.

Of the 143 private pension bills which were favorably reported by the House Committee on Invalid Pensions 79 became laws, 3 were vetoed by the President, 8 died in the hands of the President for want of his signature, having reached him within less than ten days before the last day of the Fifty-third Congress, and the residue died upon the House or Senate Calendars for want of time to consider them. Of the 8 bills aforesaid which died in the President's hands 4 were House bills and the other 4 Senate bills.

Of the 1,236 House private bills which I have stated were referred to the House Committee on Invalid Pensions a reliable record entry has been made as to the merits of each of them, in substantial bound volumes, which will be left in the room of said committee for the use of future Congresses.

These entries are based upon written reports, furnished to said committee by the Pension Bureau, in each of said cases where a claim for pension had ever been filed there to secure a pension.

I desire to state here, of course, not for the information of members of Congress, but of others not familiar with the facts, that bills for the removal of the charge of desertion, and bills covering services rendered in other wars than the War of the Rebellion, are never considered nor reported upon by the Committee on Invalid Pensions.

As to general pension legislation growing out of the civil war, enacted by the Fifty-third Congress, I will endeavor to hurriedly recall the same.

The first of such general legislation was a proviso placed, upon my own motion, upon the urgent deficiency bill approved by the President on December 21, 1893, generally known as the "vested right" bill forbidding the suspension of pensions without notice, and is in the following words, to-wit:

Provided, That any pension heretofore or that may hereafter be granted to any applicant therefor under any law of the United States authorizing the granting and payment of pensions, on application made and adjudicated upon, shall be deemed and held by all officers of the United States to be a vested right in the grantee to that extent that payment thereof shall not be withheld or suspended until, after due notice to the grantee of not less than thirty days, the Commissioner of Pensions, after hearing all the evidence, shall decide to annul, vacate, modify, or set aside the decision upon which such pension was granted. Such notice to grantee must contain a full and true statement of any charges or allegations upon which such decision granting such pension shall be sought to be in any manner disturbed or modified.

One effect of this proviso was to stop the practice which had been followed in the Bureau adjudicating claims for pensions for about a hundred years, of suspending pensions without giving notice to the pensioners.

Another, and the immediate, effect was to annul all such suspensions without notice then pending, and to cause the immediate payment of such suspended pensions to the pensioners entitled thereto.

A few cases have been cited, among the thousands of suspended pensions restored by this act, to show that injustice had been done to the United States by the effect of this act, but a careful examination of the cases thus cited will show that almost all, if not all, of these cases were not affected by said act at all, or that the United States had already had abundant time to have acted finally thereon long before the passage of said act. Notably was this the case in the Jane Hill claim.

The vital principle of said act was to give effect to the long accepted rule of law that neither a Government bureau, a court, nor a person shall be allowed to interfere with the adjudicated right of another without first having given due notice to the latter.

Another general law was the proviso engrafted upon the general pension appropriation act approved July 18, 1894, making the reports of medical examining boards open to the inspection of applicants for pension, or increase thereof, or the attorneys representing such claimants.

Another general act was the proviso upon the general pension appropriation act approved March 2, 1895, expressly repealing the proviso of the general pension appropriation act approved March 3, 1893, taking away the pensions of certain nonresidents. The effect of the proviso of March 2, 1895, was to restore to the pension roll the names mostly of mothers and widows of deceased soldiers, and the repeal was recommended by both Commissioner Lochren and the House Committee on Invalid Pensions.

Another general law was the act of March 2, 1895, as to the payment of pensions accrued prior to the death of any pensioner, and also declaring that, where a pension check is forwarded by the United States to a pensioner who dies after executing the proper pension voucher but before receipt of the check, such check shall be considered as a payment and shall be paid to the proper person representing the deceased pensioner.

Another general law gives to fourth-class postmasters authority to administer oaths in the execution of pension vouchers.

Another general law was one to restore the status of members of certain Missouri State Militia who had been granted pensions under the act of June 27, 1890, but whose right to draw the same had recently been overthrown by a decision of Assistant Secretary of the Interior Reynolds.

These militia were a class who had seen and rendered service to the United States in the civil war of an arduous and dangerous character, of much more than ninety days' duration, but who had not been regularly mustered in and discharged from the military service of the United States.

Another general law is a proviso on the general pension appropriation act of March 2, 1895, authorizing and requiring medical pension examining boards to state ratings for the various disabilities of applicants whom they examine, and to make these ratings parts of their reports to the Pension Bureau.

Another, and perhaps the only other, general pension law enacted by the Fifty-third Congress was a proviso of said general pension appropriation act of March 2, 1895, declaring that all pensions already granted, or that may hereafter be granted, at a rate less than \$6 per month shall be increased at once to \$6 per month, to date from the approval of said act or the date of any subsequent allowance of a pension for disabilities heretofore ratable at and aggregating less than \$6 per month.

The effect of this act will be to at once increase to \$6 per month more than 48,000 pensions granted for disabilities incurred in the military service of the United States, and rated at less than \$6 per month.

All these general bills were signed by President Cleveland.

I do not care to extend my remarks further except to thus publicly extend my thanks to my colleagues on the Committee on Invalid Pensions for their faithful attendance upon the duties of that committee. No partisan bias ever came into our considerations of matters of legislation, and good feeling and courtesy ever prevailed.

I likewise bear testimony to the careful, efficient, and courteous performance of duty by the clerks of said committee and the principal examiner detailed from the Pension Bureau.

With these remarks I bid adieu to a six-years service in Congress, during which I have never been appointed upon any other committee than Invalid Pensions, with the hope that my own efforts have been of some use.

Gen. Philip Sidney Post.

REMARKS

OF

HON. CHARLES A. BOUTELLE,

OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 26, 1895.

The House having under consideration resolutions paying tribute to the memory of Gen. Philip Sidney Post, late a Representative from the State of Illinois—

Mr. BOUTELLE said:

Mr. SPEAKER: I can hardly hope to add anything to the appreciative tributes that have been paid to the memory of our distinguished friend and associate, and yet I should be unresponsive to my own impulses if I should fail to make some expression of my sincere sorrow for his loss and reverence for his memory. My own acquaintance with General Post has been confined entirely to the period of his public life here. While we served under the same flag and in the same cause during the late war, in which he gained such merited distinction, we first became acquainted in this capital city as members of this body, and although my acquaintance with him has always been of an exceedingly pleasing character, that of the past few years has assumed an intimacy of social friend-

ship which caused his sudden death to prove a sharp and severe personal bereavement.

No word has been said here to-day in eulogy of General Post that has failed to elicit the most warm and heartfelt response from my own convictions and feelings. He was eminently of the true type of an American citizen. He was a gentleman in the highest and noblest sense of the term, and often, during my acquaintance with him, when I have reflected upon the modesty which marked his entire demeanor, while all the time I had full knowledge of the glorious record he had made in his country's service, I have thought how aptly his name was given in his infancy, for, of all those who have rendered the history of that great war period of our nation's life illustrious and splendid, I know of no man on either side better entitled to have borne the name of the chivalrous and gentle Philip Sidney than my friend, General Post.

He was of the very essence of chivalry. His nature was composed of those elements of honor, truth, and gentleness that go to form the very highest examples of what we revere as real manhood. I was particularly struck this afternoon by that portion of the eloquent tribute of my friend from Alabama, Mr. CLARKE, in which he alluded to one of General Post's most remarkable characteristics as his modesty. I never heard him speak of any episode of personal prowess or personal achievement with which he had been identified during the war. It was not through lack of interest in his personal service or in his relations as a soldier, for he was very proud of his comradeship with those who bore the burden of battle, proud of the associations of those eventful years, proud of the victories that were won and of the results that were achieved.

He liked to talk about them in an impersonal way, and was generous in awarding praise to others, and yet in all the conversations that I had with him and those in which I heard him mingle, I never heard him refer to a personal achievement or a personal sacrifice. So it happened that while I had that general public knowledge which we all obtain in regard to men who have figured prominently and brilliantly in times of great importance in our history, it was not until General Post had passed away while under the same roof with myself that I became fully conscious that during all the years in which we had associated with him here, when his face was habitually wreathed with a pleasant smile and when he met us all day after day with his characteristically cordial and kindly greeting, he was bearing about with him mortal wounds; that his body had been shot and lacerated and torn by grape and canister on more than one field of battle, on one of which he had been left for dead.

I have no doubt, Mr. Speaker, that General Post fell at last as a victim of injuries received in his military service. While the frightful wounds that he had received on various occasions were not immediate in their fatal effect, I am confident that his taking off at so early a period of his maturity is directly attributable to the injuries he had sustained in the performance of his duty as a citizen and a soldier. I need not allude further to his record in the war. It is a part of history, and to-day that history has been illuminated by the testimony of men who served with him under the same flag and of men who served against him on many bloody fields. That record will stand. It will stand to his honor through all time to come. The grand State of Illinois and the great nation which he so faithfully served in war and in peace will see to it that his memory is kept green. His comrades will cherish it as the dearest heritage a true soldier and a good man can leave when he passes beyond the veil that hides from mortal vision the joys of the better life.

But, Mr. Speaker, to my mind the highest proofs of manhood are not found on the field of battle or in the public forum. I believe the true test of the highest manhood is to be found in domestic relations, in the sanctity of home, in the discharge of those sacred duties and obligations which come to us day by day and hour by hour, outside of the excitements and distractions of public life, but which call upon all that is best in our natures in the gentle and kindly relations of husband, father, neighbor, fellow citizen, friend.

And it is in that respect that I love to remember Gen. Philip Sidney Post. For the past two years, my social relations with him have been of an intimate character; and no history of his achievements in the field, no record of public effort or public success in legislative life could commend him to me as he has been endeared by my knowledge of the simple beauty and affection of his private life.

It has been said, Mr. Speaker, that "all the world loves a lover." That is true. And to my mind the most lovable of all love is that which endures through all the years of conjugal life and parental experience and only brightens as the days go by. To my mind there is something especially beautiful in that kind of affection which enables the true lover, as the years roll away and the silver threads steal in among the chestnut tresses, to see beneath them only the beloved features and sweet smile of the bright-eyed girl who was so proudly led to the altar in the "auld lang syne."

Such was the relation of General Post to his wife and his children. It was a delight to mingle with them in their family relations. It is a delight to me to remember now how beautiful were all those associations of the family in which his life was passed. And to those to whom his death came as the most severe of all calamities that can befall, what immeasurable comfort there must be in the remembrance of that steadfast devotion, that unflinching affection, which kept them here with him through all the long and scorching weeks of last summer's session, caring for his comfort, cheering him amid labors of public life, and giving to him that which I know was dearer to him than all else, the constant support of the presence and companionship of those he best loved.

And what a consolation, too, it must be to them that when the summons came it was not at the time of his first sharp illness four or five weeks previous, when all of his household were away at their home in Illinois, but that his family were enabled to come here with him, and that when he knew that he was passing away he could feel upon his forehead the soft hand of affection and realize that he was surrounded by the wife and daughter and son who had so loved him to the end, and who will cherish his memory as a precious inheritance.

The hero lies still where the dew-dropping willows
Like fond-weeping mourners lean over his grave.
The lightnings may flash, the loud thunders rattle;
He heeds not, he hears not; he's free from all pain.
He sleeps his last sleep; he has fought his last battle;
No sound can awake him to glory again.

That, Mr. Speaker, is true of earthly life and earthly glory; but, thanks be to Him who gave us the family altar and the affections which twine around it, our deceased friend lived and died in the full confidence and faith, which we share with him, that there is a glory and a happiness brighter than any that has blessed us here, and that beyond the shores of time he will be reunited in immortal joy with those now left sorrowing here.

The Navy and the Revenue-Cutter Service.

SPEECH

OF

HON. JAMES W. COVERT,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 19, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8063) making appropriations for the naval service for the fiscal year ending June 30, 1896, and for other purposes—

Mr. COVERT said:

Mr. CHAIRMAN: Were it at all permissible under the rules of the House I would be most glad at this juncture to offer an amendment to the measure now under consideration. This amendment would call for the transfer of the Revenue-Cutter Service from the control of the Treasury to the Navy Department.

Ever since I have held a seat in this body I have by voice and vote aided to the extent of my ability in every effort looking to the upbuilding and advancement of the American Navy. My vote shall go in that direction to-day, but with it shall go a feeling of deep regret that the measure under consideration will not accomplish the result I have indicated—the making the Revenue-Cutter Service in name as in fact a part of the naval establishment.

This measure makes provision for the immediate enlistment of 1,000 additional men in the naval service. I believe this added force will be rendered imperatively necessary if the other provisions of the measure calling for the construction of additional battle ships and war vessels shall be enacted into law. It requires no argument to show that some time must of necessity elapse before the services of these men thus newly enlisted can be fully utilized. They must be drilled and thoroughly instructed in their duties; they must be taught the art of naval warfare before they can become able seamen and efficient members of the naval force. The transfer of the Cutter Service to the Navy would at once secure, as a part of the naval establishment, a body of thoroughly trained and admirably equipped men, fully prepared for any service that might be required of them.

The Cutter Service is an organization of 220 officers and 850 seamen, manning 36 vessels of various classes.

As I pointed out to the House in the brief discussion yesterday, when the matter of the Cutter Service was under consideration, these officers and men are not only thorough sailors, made so by hard and practical experience, but they have been fully drilled in all the arts of marine warfare.

They are to-day as competent to perform the duties of any

branch of the naval service as the ablest officers and most experienced men of the Navy. They should form part of the naval force of the country, and this measure should have made provision for their transfer to that branch of the Government service.

In the remarks I had occasion to submit yesterday I called attention to the fact that the Revenue-Cutter Service was in fact so essentially a part of the naval organization that its men had taken active part in every naval warfare in which the country had been engaged. I had not the time to particularize then. I have not sufficient time to do so now, except to say that so far back as the year 1790 the President was authorized by Congress to direct the Cutter Service to cooperate with the Navy at any time, either in peace or in war. During the century which has almost elapsed since then, whenever the exigency demanded it, this executive direction has been given, and has been most faithfully and loyally observed.

In the war of 1812 this branch of the service captured ten merchantmen, three barges, and over 800 officers and men.

During the Seminole war seven cutters were employed in active operations, and their officers and men rendered most gallant and effective service. In the war with Mexico nine cutters cooperated with the Army in offensive operations, and with infinite credit to the brave officers and men by whom they were manned.

But it was reserved for the late civil war to establish beyond all question the naval character of the Revenue-Marine Service. All the vessels of the cutter establishment were at this juncture manned, armed, and in every way equipped as naval vessels. These conditions were maintained during all the long years of the war. I do not propose now to speak at any length of the valuable services rendered to the Government by the officers and men on board our revenue cutters at that trying period.

The record speaks for itself. The echo of the first gun at Sumter had scarcely died away when the cutter *Harriet Lane* speeded on her course to the relief of the devoted garrison. Only a few months later the guns of the same vessel aided in the reduction of Forts Clark and Hatteras. The occupation of Norfolk, the attacks on Drewry's Bluff and Fort Anderson, the engagement at Tulifiny River, the operations of the Potomac flotilla in the Chesapeake Bay—all these engagements witnessed the heroic and earnest endeavor of the officers and men of the Revenue-Marine Service.

The Government at that juncture regarded this branch of the service as a part of its naval establishment, and a grateful and patriotic people were proud and glad to so regard it.

In return for services thus promptly and gallantly and most efficiently rendered what has this Government done? What benefits has it bequeathed to the officers and men of the Revenue Marine?

I was constrained to speak yesterday, Mr. Chairman, of unjust discriminations made by Congress between twin branches of our sea service. To the credit of the American people, they have sustained our efforts here to upbuild and strengthen the American Navy. To the discredit of the Federal Congress, it has for years practically ignored the claims and merits of the Revenue-Cutter Service. Bear with me for a moment only while in addition to the suggestions made yesterday I submit one additional fact in support of this assertion. It is found in a simple comparative statement of the pay of naval and revenue-cutter officers of corresponding grade and rank.

Naval officers' pay.

	Sea pay.	Retired pay.
Lieutenant-commander	\$3,000	\$2,250
Lieutenant, senior grade	2,670	1,950
Lieutenant, junior grade	2,000	1,500
Ensigns	1,400	1,050
Cadets	900	

Revenue-cutter officers' pay.

	Sea pay.	Waiting orders pay.
Captain	\$2,500	\$1,800
First lieutenant and chief engineer	1,800	1,500
Second lieutenant and first assistant engineer	1,500	1,200
Third lieutenant and second assistant engineer	1,200	900
Cadet	600	

Since the discussion yesterday over the proposition to place the superannuated officers of the Cutter Service on waiting orders, it has been rumored that an effort will be made at a compromise by which it is claimed partial justice will be done to this branch of the service. This proposed compromise embodies a plan to place on waiting orders the very few officers who are now too old or infirm for active service, but makes no provision in this regard for the future, leaving that to be accomplished by subsequent legislation. The point to which I desire to direct particular attention is

that under the terms of this proposed compromise this arbitrary granting of unequal benefits for substantially the same service is italicized and emphasized. It is proposed that the officers of the Cutter Service thus to be placed on permanent waiting orders shall receive only half pay while borne on this list. Compare this allowance with that accorded to naval officers under similar conditions, as I have just given it, and the absolute injustice of this new proposition is at once made manifest.

Mr. Chairman, on behalf of the patient, faithful, and gallant body of men constituting the Revenue-Cutter Service, I protest against the adoption of this proposed compromise. The time has come, I submit, sir, when simple, even-handed justice should be done to this branch of the service.

I have said that Congress has been unfair in its treatment of this matter in the past, but for years there have been members of this body who have recognized the claims of the Revenue-Marine Service, and who have done loyal work for its advancement.

The plan for the transfer of the service to the control of the Navy Department is no new proposition. In the Fifty-first Congress a measure for the accomplishment of this purpose passed the House by an overwhelming majority—only 19 votes, if I remember correctly, being recorded against it. Lack of time alone seemingly prevented the concurrence of the Senate in this proposition. The adoption of this measure then would have given added strength to the Navy and would have promoted the efficiency of both these branches of the Government service. The measure of relief discussed yesterday—the retirement of the superannuated officers of the service—should have been adopted without difference and in lieu of the compromise now suggested.

To this Congress, and not to the one that shall succeed it, should belong the honor of adopting this measure of simple justice. Let us not be deceived. The Revenue-Cutter Service is, with the people, deservedly the popular branch of the sea service. The people know and understand its make-up and its nature. They understand the character and the value of the services it has rendered. They know and realize that it stands ready to give the same effort, the same zealous services, again when they shall be demanded in the defense and protection of the flag of our common country.

Just as the people have approved our efforts to strengthen the American Navy, in the same measure will they applaud every act on our part to benefit and advance the Revenue-Cutter Service.

While I regret the omission in the pending bill to make adequate provision for the service in the directions I have indicated, I shall give hearty support to this measure as it stands.

Let us build the battle ships and torpedo boats for which provision has been made; let us enlist the additional men required for the service, and let the grand work of enlargement and improvement go on until the American Navy shall assume its rightful rank among the navies of the world.

The Late Philip Sidney Post.

REMARKS

OF

HON. JONATHAN P. DOLLIVER,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 26, 1895.

The House having under consideration the resolutions paying tribute to the memory of Hon. Philip Sidney Post, late a Representative from the State of Illinois—

Mr. DOLLIVER said:

Mr. SPEAKER: I desire to join with my friend from Illinois and his associates in this House in a few words of tribute to the memory of General Post. I remember upon my entrance into the Fifty-first Congress the kindly greeting of General Post, and in the latter years of his service it was my privilege to enjoy a somewhat intimate personal acquaintance with him. Long before his death I had often thought and spoken of him as a splendid example of what a man of great ability and great character was able to achieve in a generation such as that in which he lived. It seldom happens to anybody to be great both in military and civil life.

The records of the war of the rebellion show that among the really great military commanders developed by that struggle General Post's name ought to occupy a notable place. Not only measured by his sacrifices, but measured by his achievements, he will take a position in the history of the country as a successful soldier. Of course behind such services as he rendered the United States in the hour of public danger there lay a foundation of patriotism

and an intelligent comprehension of the duties of citizenship in a Republic like ours; and that comprehension of the duties of citizenship gave to his career in civil life as long as he lived an eminence and distinction such as falls to the lot of but few men to attain.

If I were called upon to point to the characteristic of General Post which most impressed those who came in contact with him, I would say that it was extraordinary originality and strength of his character. There are only few men that go through life in places of high official distinction and in the discharge of great duties who take so little of color from their surroundings as did General Post. I heard General Sherman, shortly after the death of General Grant, say of him that he had been in situations more lowly and more exalted than any man who ever lived in the world, and had been absolutely unaffected by either.

It is to that small group of men General Post belonged. He was not bewildered by his distinction won in the military service of his country; he was not encumbered by the offices of trust which betokened the confidence of his fellow-citizens. Thirteen years of continued public service in an eminent position in one of the most glittering capitals of the world, very far from coloring General Post's views of life, only served to emphasize and illustrate the sterling Americanism of his character.

The House of Representatives gave to General Post a field of activity well suited to his tastes and intellectual gifts. He was both a student and a debater. His long residence abroad had familiarized him not only with the conditions of social and industrial life in other countries, but with the practical measures brought forward by statesmen in other lands for the solution of social and industrial problems. No man has occupied a seat in this Chamber since the war who was able to bring to the discussion of these questions a greater store of actual knowledge or more thoroughly considered convictions. He takes his place among the leading thinkers of his time upon the complex problems which relate to the industrial life of the Republic. His opinions sometimes led him into an open disagreement with his party associates, but that disagreement never led him into the field of factional politics, never lost him the good will of those from whom he differed or the confidence and respect of the leaders with whom he associated. He never quarreled. In fact, his great strength in the House came in part from the persuasive affability of his manner and the modest reserve of his opinions.

While others clamored for public notoriety and wasted their influence in spectacular advertisements, he relied with cheerful assurance, upon the well-tryed weapons of debate and argument. It is no small tribute to the intellectual power of our departed friend to say that his own Congressional district never faltered in its support of any position relating to public affairs which General Post assumed after he had presented his views and defended his opinions before the people upon the hustings; and no man here will question the sincerity which he brought into every speech which he delivered and every vote which he recorded on this floor. But whatever General Post accomplished in this Chamber, and however important his public service may have been as the representative of his country in foreign capitals, those who knew him, as they reflect upon his career, will always be drawn to the splendid years of his early manhood when he offered his sword for the defense of the flag of our common country.

His comrade, General GROSVENOR, has spoken beautifully of him as a representative of the youth of 1861 who forgot the interests of home and business, and out of a pure patriotism entered the ranks of the Union Army to maintain the integrity of the Republic. To have served even in an humble way in that Army gives to a man an honor that does not belong to the walks of peace and to his children an inheritance that can not fade. But General Post, though he began his service in an humble station, by the force of military genius, joined with a courage that knew neither failure nor danger, ended his career with the record of a distinction that has become a passport to renown wherever the history of the United States attracts the interest and attention of men.

It was a record based upon achievements, upon sacrifices, upon success, and not gained by accident or by favor. He fought at the front, and his maimed and broken body carried to the grave the cruel marks of the battlefield. When I think of what this generation owes to the men of 1861, of the loss and sorrow of those memorable years, I can but feel a new sense of gratitude to the heroic leaders whose courage and wisdom guided the armies of the Republic and won the final victory for the Union. Their names will be embalmed in the reverent memory of their countrymen and their fame become a precious heritage to all generations.

I would like to speak of General Post as I knew him in the relations of friendship and daily association which make up so large a part of the reward of membership in this House. I have never known a man whose heart was fuller of good fellowship, of kindly sentiment, than his. He was a master of the art of conversation, and the group that gathered about him in the office of

the hotel in which we both lodged, after the labors of the day were over, will not forget those quiet hours, passing often far into the night, which were enlivened by the wisdom of his discourse, by his kindly philosophy of life, and by the subtle influence of his gracious personality.

He lived for his family in an atmosphere made beautiful by all the graces that adorn domestic life. We can not hope by the poor words we speak here to lighten the affliction which has fallen so suddenly upon those he loved. They have the consolation which comes from the knowledge that the American people bring to the grave of General Post the tribute of honor, which belongs to the soldier and statesman, and that his life was literally given to defend his country and render service to his fellow-men. We can only commend them to God and the word of His grace, and as we turn away from these memorial ceremonies to the stirring and arduous affairs in which we are engaged, we will often think and often speak of that interesting and picturesque figure in the public life of our time whose face we are to see no more among us.

Issue of Short-Term Certificates.

SPEECH OF HON. ARTHUR P. GORMAN, OF MARYLAND, IN THE SENATE OF THE UNITED STATES, Wednesday, February 27, 1895.

The Senate having under consideration the bill (H. R. 3518) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1896, and for other purposes, the question being upon the following amendment reported from the Committee on Appropriations:

SEC. 2. That in order to provide the moneys not supplied from current revenues and miscellaneous receipts, and necessary for the execution of this act and necessary for the execution of any act, or all the other acts passed or to be passed during the present session of Congress appropriating money to be paid out of the Treasury for the fiscal year ending June 30, 1896, and also in order to provide the moneys necessary to be paid out of the Treasury on account of appropriations heretofore made for the fiscal years ending June 30, 1893, June 30, 1894, and June 30, 1895, and not covered into the Treasury, the Secretary of the Treasury, with the approval of the President, be, and is hereby, authorized to, from time to time, borrow on the credit of the United States such sums of money as may be necessary to meet said expenditures, and to issue, sell, and dispose of, at not less than par, for lawful money of the United States, such an amount of certificates of indebtedness, payable to the bearer, of the denominations of twenty, fifty, and one hundred dollars, or any multiple of \$100 not exceeding \$1,000, as may be needed for said purposes, bearing at the rate of not exceeding 3 per cent per annum, payable semi-annually, and redeemable at the pleasure of the United States after two years from their date; and the Secretary of the Treasury is hereby authorized, with the approval of the President, to cause such portion of said certificates as may be deemed expedient to be issued by the Treasurer in payment of warrants in favor of public creditors, or other persons lawfully entitled to payment, who may choose to receive such certificates in payment at par.

And the Secretary of the Treasury may, in his discretion, under rules and regulations to be prescribed by him, sell and dispose of the certificates herein authorized at designated depositories of the United States, and at such post-offices as he may select; and the Secretary shall use the moneys received for such certificates for the purposes herein prescribed, and for none other: *Provided*, That the total amount of such certificates shall not exceed \$100,000,000: *And provided further*, That the power to issue such certificates shall determine on the 1st day of July, 1896.

And hereafter any United States bonds sold or disposed of shall first be offered to the public for a period of not less than twenty days, under rules and regulations to be prescribed by the Secretary of the Treasury, and shall be sold to the highest bidder, in case such bids or any of them are satisfactory—

Mr. GORMAN said:

Mr. PRESIDENT: The point of order having been submitted to the Senate, naturally the main question comes upon the first vote, whether this proposition shall be considered, whether it is in order, whether it is proper, for this provision to be inserted upon an appropriation bill, and necessarily the merits of the question involved must be touched upon in the discussion. I hope to be very brief and simply to state the facts as the Committee on Appropriations understood them, which made it, in our judgment, necessary that such a provision should be inserted in an appropriation bill. It is well known that at this hour in the session, if relief is to be given to the Treasury, if additional authority to issue certificates of indebtedness is necessary to maintain the credit of the Government, the only possible way in which it can be done is on an appropriation bill.

I regret exceedingly, Mr. President, that it has become the duty of any of us to inaugurate and to suggest here any proposition of this kind. I regret exceedingly that such a proposition did not reach us from a coordinate branch on a separate measure early in the session, when it could have been deliberated upon and fully discussed.

As intimated by the Senator from Rhode Island [Mr. ALDRICH] and by the Chair, two years ago this identical question was before the Senate, as to whether it was proper to authorize the issu-

ing of bonds for the purpose of supplying deficiencies in the Treasury. It was held in that case, as will be seen by reference to the Journal of the Senate, that the Senate by a vote of 28 to 18 determined, as they had previously in years gone by, that it was perfectly legitimate, perfectly proper, to put such a provision upon an appropriation bill if the requirements of the Treasury demanded it. So much for that.

Mr. President, I trust that in the discussion of a question so simple as this we may be able to confine ourselves to the one question, the needs of the Treasury Department—whether it is absolutely necessary for the proper conduct of that Department to have the provision of law contained in this amendment. I know how difficult it will be to keep out of the discussion all of the questions involved in our financial policy which have been suggested and discussed in both Houses. Here, where debate is unlimited, I know it is going very far to make such an appeal, and yet I must appeal to the Senate to determine this question upon the one proposition.

Mr. WOLCOTT. Will the Senator permit me to ask him a question, which I do solely for information, he being a member of the Committee on Appropriations? Has not the Secretary of the Treasury advised the Senate that he does not need more money at this time?

Mr. GORMAN. If the Senator will only permit me in my crude way to go along and make my statement, I shall be indebted to him.

Mr. WOLCOTT. I shall do so with pleasure, but I hope before the Senator sits down he will answer my question.

Mr. GORMAN. I shall be very glad to do so; and that is the whole question involved.

Mr. WOLCOTT. Oh! I did not know that.

Mr. GORMAN. If we can by common consent take up in these closing hours of the session, in that spirit alone, the question as to whether it is necessary for the honor of the Government to maintain its credit and enable the Secretary of the Treasury to discharge his duty in such a way as not to trench upon the rights of anybody, I trust we may do it, and eliminate all question as to the kinds of currency we are to have. If that can not be done, as a matter of course the Senator from Colorado and other Senators who, after the facts are presented, do not believe that such a provision is necessary for the Treasury, will vote against the proposition. If there is a determination on the part of any number of Senators to take advantage of this opportunity to go into all the questions which are involved in our financial structure in the closing hours of the session, as a matter of course they must take the responsibility for preventing action and leaving the Treasury embarrassed, if it would be embarrassed without this provision.

Mr. President, as to the necessities of the Government—

Mr. VILAS. I wish to make a parliamentary inquiry.

The VICE-PRESIDENT. The Senator will state his parliamentary inquiry.

Mr. VILAS. I wish to ask whether when the question of order is submitted to the Senate it opens for discussion the whole subject, which is only to be discussed if in order?

The VICE-PRESIDENT. It opens for discussion the question as to whether the point of order shall be sustained or overruled. That is the question now before the Senate. The Chair can not, however, limit Senators or indicate to them the line of argument they shall pursue.

Mr. TELLER. Mr. President, I should like to suggest to the Senator from Wisconsin [Mr. VILAS] that the Senator from Maryland [Mr. GORMAN] or any other Senator is at liberty to discuss any question he sees fit, there being no rule which will prevent the discussion of this or any other question when a Senator has the floor.

Mr. GRAY. Except the general parliamentary rule.

Mr. TELLER. There is no parliamentary rule which has been applied in this Chamber which requires a Senator's speech to be germane to the subject pending before the body.

Mr. GRAY. The parliamentary law is stated in Jefferson's Manual.

The VICE-PRESIDENT. The Chair has stated, in reply to the parliamentary inquiry of the Senator from Wisconsin, that the pending question, being the question of order, has been submitted to the Senate, but it is not for the Chair to indicate to Senators the line of argument they shall pursue in discussing the question. The Senator from Maryland [Mr. GORMAN] is entitled to the floor.

Mr. GORMAN. Mr. President, I have no desire to detain the Senate. If we could come to a vote on this question without discussion I would be content. That, however, can not be. Therefore, as a member of the Committee on Appropriations, which reported this proposition, I will briefly and frankly state, without reflecting upon anybody, what we believed to be the necessities for such a grant. That is the question, as I understand it, to be determined when we vote to consider this proposition.

There is, therefore, in my view, Mr. President, but one question involved in this matter. Is the Treasury in such condition

that it can provide for the wants of the Government under the present laws? Are the revenues of the Government up to this hour brought in by the existing laws sufficient to meet the appropriations made annually by Congress and the permanent appropriations?

Mr. President, if it should appear from the official reports of the Treasury that we have appropriated more money than can be supplied from the revenues of the Government, if it should appear that our actual expenditures are greater than our receipts, then I submit to the Senate we can not afford to adjourn until provision shall have been made to meet that deficiency, unless the Senate and the House of Representatives desire that bonds of the United States running for thirty years, at 4 per cent interest, or bonds of the United States running for ten years and bearing 5 per cent interest, shall be sold to meet the deficiency. I take it for granted that there is not a Senator upon this floor who would have the Government repudiate a single obligation or have a payment which ought to be made by the Government postponed because of the lack of revenue.

The Senate has asked the Secretary of the Treasury in various resolutions whether or not the revenues of the Government are equal to the expenditures; whether, in fact, it is necessary to give him further authority to meet the appropriations made by Congress. The Secretary has answered those inquiries. I am bound to say, sir, that the form of the answers that have been made is on its face somewhat misleading, and that those unfamiliar with the condition of affairs in the Treasury might draw the conclusion that there is a sufficient amount already provided to meet the demands on the Treasury. But I will try to give to the Senate the exact condition of the Treasury.

The Secretary of the Treasury states that on July 1, 1890, we had in the Treasury from revenue from all sources an actual balance available for the payment of debts of the Government of \$89,993,104.20. We began on that date with that amount. Every dollar that has been received into the Treasury, except the postal receipts, from June 30, 1890, to the 31st of December just past, 1894—that is to say, to the 1st day of January of this year—amounts to \$1,590,481,336.90. The expenditures—that is, the payments out of the Treasury during the same period—from June 30, 1890, to December 31, 1894, four years and a half, have been \$1,737,290,560.93, showing that the expenditures during that whole period have been \$146,809,224.03 more than the Treasury received from all sources. I speak of the actual expenditures and actual payments out of the Treasury. We expended—paid out—not only every dollar received from July 1, 1890, to December 31, 1894, but all of the \$89,993,104.20 on hand July 1, 1890, and \$56,816,119.83 more, every dollar of which was from the proceeds of the sale of bonds.

The statement in detail, which is taken from the books of the Department, is as follows:

Cash balance available for current expenses of the Government (excluding gold reserve), July 1, 1890.....	\$89,993,104.20
Revenues for fiscal year ending June 30, 1891.....	\$202,612,447.31
Revenues for fiscal year ending June 30, 1892.....	354,937,784.24
Revenues for fiscal year ending June 30, 1893.....	385,819,628.78
Revenues for fiscal year ending June 30, 1894.....	297,722,019.25
Revenues for six months ending December 31, 1894.....	159,389,457.32
Total available.....	1,590,481,336.90
Expenditures for fiscal year ending June 30, 1891.....	400,730,016.72
Expenditures for fiscal year ending June 30, 1892.....	382,597,510.56
Expenditures for fiscal year ending June 30, 1893.....	390,186,698.99
Expenditures for fiscal year ending June 30, 1894.....	367,746,867.03
Expenditures for six months ending December 31, 1894.....	186,979,467.63
Total expended.....	1,737,290,560.93
Expenditures in excess of revenues and available cash.....	56,816,119.83

The above statement of expenditures includes amounts paid for deficiencies in the postal revenues and amounts applied to the sinking fund. The deficiencies in the postal service being thus taken into the account on the expenditure side, it is unnecessary to add the revenue and expenditure to the totals on either side, as the balance of the expenditures are paid from the revenues of the Post-Office Department—one offsetting the other—and would not change the final result.

Excess of payments over receipts from June 30, 1890, to December 31, 1894 (four years and six months)..... \$146,809,224.03

Mr. President, the question arises whether that condition of affairs will continue during the next year. The Secretary of the Treasury in his answer to a resolution of the Senate has said that during the calendar year of 1895 he will have revenue enough to meet the expenses of the Government. That is misleading. The accounts are made up from July 1 to June 30. I shall demonstrate, I think, that the Secretary of the Treasury is entirely mistaken in that statement; that with all the revenues he will get this calendar year he will have a deficiency of over \$30,000,000 if he pays the

debts contracted or appropriations made; and for the fiscal year which ends June 30 next he will have a deficiency of from \$40,000,000 to \$60,000,000, unless he suspends payments on various accounts to a greater extent than heretofore. It is only by neglecting to audit or by postponing the payments that the deficiency can be kept within the limits I have named.

Mr. ALDRICH. Will the Senator from Maryland permit me? I understand him to state, as his opinion, that there will be a deficiency of \$60,000,000 in the present fiscal year, instead of a surplus of \$22,000,000, as is estimated by the Secretary of the Treasury.

Mr. GORMAN. For the fiscal year. But the Secretary of the Treasury does not estimate a surplus for the fiscal year. He estimates a deficiency of twenty-odd million dollars during the fiscal year.

Mr. ALDRICH. What is the estimate of the Senator from Maryland for the calendar year?

Mr. GORMAN. I say, taking the condition of the appropriations as they are to-day and the revenues—of course it is a guess from now until December next, but I will take the average for the past three or four years and the appropriations—that if the appropriations we are now making are met, if the obligations of the Government are discharged, there will be a deficiency of \$30,000,000 for the calendar year. But for the fiscal year there can be no question as to the deficiency. The Secretary admits that. But the Secretary of the Treasury, in the report to the Senate which is dated February 18, says:

The available cash balance in the Treasury at the close of business this day (18th of February, 1895), exclusive of gold reserve, is \$99,875,334.32.

Then he says:

It is not probable that such deficiencies will occur during the remainder of the current fiscal year as will exceed the available balance now on hand, and it is estimated that during the next fiscal year the receipts will exceed the expenditures.

It will be noted that this entire balance came directly from the sale of bonds. The Secretary thinks it is sufficient, with current revenues, to carry him through to July 1, 1895. If you count that balance and want to continue the process of selling bonds for gold and then permitting the holders of United States and Treasury notes to present them and draw the gold out, as the Secretary frankly says is done, and then turn the Treasury notes into the general accounts to pay the expenses of the Government, then of course there will be no necessity for the provision which we have reported. But I submit that it is not wise for Congress to adjourn without making some other and more advantageous provision, such as that now proposed, when the President of the United States, in his message to us, has frankly stated that if the emergency arises he will continue to sell those bonds. It is too expensive; it is piling up the public debt in a form that is distasteful to the people of the country. I do not criticize the President for his action in the past. I have not one word to say in regard to it except what I have said heretofore, that the honor and the credit of the Government must be maintained; and if Congress refuses or fails to provide sufficient money otherwise, and we proceed under the construction of law given by the Department and by the President, which I think is a mistaken one, not warranted by the act of 1875, but which is one that has been acted upon and one that the President declares to Congress he will continue to act upon, then the responsibility will be upon us. I wish to change that policy, Mr. President; I wish to make provision in this matter for a certificate of indebtedness, running only for two years, redeemable at the option of the Government, so that there can be no excuse hereafter for the Department to sell bonds running ten or twenty years or thirty years.

Mr. PLATT. As the Senator from Maryland is going on, will he at some time state, if he can, the amount of the surplus now in the Treasury, which we all know is the result of borrowing money? But there is some surplus in the Treasury.

Mr. ALDRICH. That depends in some degree upon the extent of the reserve fund, of course.

Mr. GRAY. The Secretary of the Treasury, in his letter of February 18, states the amount up to that date.

Mr. DANIEL. Will the Senator from Maryland allow me to ask him a question somewhat in extension of that of the Senator from Connecticut?

Mr. GORMAN. Certainly.

Mr. DANIEL. How much of the money realized from the sales of bonds has been used for current expenses?

Mr. GORMAN. I will answer the Senator from Virginia with great pleasure. In the reply of the Secretary of the Treasury, which I said was so involved that it would take an accountant to understand it, he says what I will read, so that there shall be no mistake about it. On page 4 of the communication, if the Senator will refer to Executive Document No. 73, he will see that the Secretary says, in answer to the resolution of inquiry of the Senate as to the balance of cash in the Treasury on December 31, 1894, that is, last December—the balance of cash in the Treasury on

December 31, 1894, available for the current expenses of the Government, but not including the gold reserve fund, was \$106,375,740.55.

This is the statement of the Secretary of the Treasury to the Senate of the actual amount of money on hand, which included everything—ordinary receipts and the amount of greenbacks that he had redeemed in gold—placed in that fund.

This statement is misleading. It is not true to the extent that against that were thirty-odd million dollars in the shape of checks and drafts which had gone out and were in the hands of paymasters and others. So the actual balance which the Secretary had on that day available for all classes of expenditures, as shown in his statement to me later, was \$67,093,134.99. On the 1st day of January of this year we had only \$67,093,134.99 in the Treasury available—

Mr. CAREY. Including gold?

Mr. GORMAN. No, sir; exclusive of gold; available for current expenses to meet appropriations by Congress—including everything he had in the Treasury except the amount of gold that was there to redeem greenbacks.

Mr. GRAY. May I ask the Senator from Maryland where he finds the deduction on account of checks in the hands of disbursing agents that is to be taken from the balance of \$106,375,000 which the Secretary of the Treasury gives as the cash balance on December 31, 1894?

Mr. GORMAN. If the Senator from Delaware will send for the statement of the Secretary of the Treasury made on the first day of every month, if he has it not before him, he will find the exact amount. I will hand the Senator the statement, if he has not one.

Mr. GRAY. But how does that qualify the statement made by the Secretary of the Treasury that on December 31, 1894, that was the actual cash balance?

Mr. GORMAN. I am trying to explain to the Senator that the statement was made up by some official in the Department, showing the exact amount the Treasury had on hand without taking into account the checks and the drafts that had been given and were outstanding. Therefore it is misleading. The statement of the Secretary of the Treasury, which was made on the 1st day of January of this year, gives the correct, the exact amount.

Mr. GRAY. That is what I want to get.

Mr. GORMAN. As soon as I discovered this statement in the report to the Senate I went to the Treasury Department and said, "This statement is misleading; it is not accurate, or else your regular statement made on the 1st day of January is incorrect." When they went to the books and went over them they said, "Certainly; the correct balance is \$67,093,134.99, and not \$106,375,740.55, as reported to the Senate."

Mr. GRAY. That is the statement I wish to see.

Mr. GORMAN. I will send and get one for the Senator if he desires it. It is the statement of December 31.

Mr. STEWART. I should like to call attention to the statement of February 18, 1895, wherein the Secretary of the Treasury says he has a cash balance of \$99,875,284.33, exclusive of \$55,101,704.63 of gold reserve.

Mr. GORMAN. That is the statement to which I referred a few moments since. Will the Senator permit me to go on with the monthly and yearly statements? I will come later to what he refers to. I will read first the figures, so that the Senator from Delaware can ascertain them for himself. On the first day of each month the Secretary of the Treasury makes an actual statement from the books of the Treasury, and he reported there that the net cash on hand was \$67,093,134.99. That is the actual money on hand available for ordinary expenditures. His subordinates—some of the new ones, I do not know who—in answering the resolution of the Senate failed to deduct from that the checks that had already been passed away or given out. That was misleading. There is no hesitation on the part of the Secretary of the Treasury, and no question, that instead of its being \$106,000,000 it is \$67,000,000. The Senator can look over the statement if he desires. There is no question about it. Nobody doubts it. That is a difference of thirty-odd million dollars, to begin with.

But the Secretary of the Treasury estimates that the revenue from now on will be sufficient to meet the ordinary disbursements, provided he uses the balance in the Treasury that he has received in the shape of greenbacks for which he has paid gold. In that I think he is mistaken. We do not believe that if we permit him to use every dollar in the Treasury so received, giving the most liberal estimate for all the possible revenue from now until July, 1895, he will have enough money to meet the current expenses of the Government by \$60,000,000, taking into account the amount that is due on account of former appropriations, a part of which must be paid. The Secretary of the Treasury has great power in the way of suspending payment on any account which has been appropriated for by Congress.

Up to this date the balance unexpended, other than the sinking fund, is about \$105,449,301.59, that has been appropriated by Con-

gress, and the sinking fund, \$150,506,888.35, making a total of \$255,955,089.94, which is available for expenditure.

But, deducting the sinking fund, there is over \$100,000,000 owing now for public buildings, for rivers and harbors, on account of the Navy, and on account of the other appropriations made. As a matter of course if you suspend payment, refuse to pay your debts, paralyze all these enterprises and works which Congress has determined are necessary, there may be a forced balance in the Treasury in 1896. But it will be simply by piling up your debt obligations to the extent of sixty or eighty million dollars more.

The Secretary of the Treasury has estimated—I will give his figures, because I received them from the Department (the Senator from Missouri [Mr. Vest] has stated what he understood to be the case, which turned out to be accurate, and the Senator's statement was accurate as to what the Secretary said)—that for this calendar year, with which we are dealing now, he would receive in revenues from customs \$174,000,000 (I do not give the odd figures), from internal revenue \$190,000,000, and from miscellaneous receipts \$15,000,000; that his whole receipts during the year would be \$380,000,000. That is, from last January to next January. He estimated that his expenditures during the same period would be \$358,000,000. That is the full estimate; all they can guess will be received. The question is whether that is a fair estimate of his receipts. If it is, then that item would be correct.

The estimate of the Secretary is as follows:

TREASURY DEPARTMENT, February 21, 1895.

SIR: In reply to your communication of the 19th instant I have the honor to state that the items of estimated revenue and expenditure during the calendar year beginning January 1, 1895, and ending December 31, 1895, both inclusive, are as follows:

Revenue—	
Customs	\$174,335,070
Internal revenue	190,850,230
Miscellaneous	15,455,659
Total	380,640,959
Expenditures—	
Civil and miscellaneous	90,697,530
War	52,075,000
Navy	32,930,000
Indians	11,805,000
Pensions	139,540,000
Interest	31,000,000
Total	368,047,530

This is the estimate upon which the Secretary's response to Senate resolution of January 23, 1895, was based.

Respectfully, yours,

J. G. CARLISLE, Secretary.

Hon. A. P. GORMAN,
United States Senate.

If any Senator will take up the receipts in the last three years and will average them per month he will find that that estimate of receipts is \$25,000,000 greater for the whole year than it has averaged in the months we have already passed. There is some reason to believe that the revenues will increase, that there will be a very considerable increase after July and until December 31. But it is not safe to estimate such a decided increase as the Secretary hopes to have.

But take it on the other hand. He says the expenditures will be \$358,000,000. Let us see what the expenditures actually are and what is appropriated for. Now, remember that the Secretary's estimates for expenditures are only \$358,000,000. The appropriations for the fiscal year from July, 1891, to July, 1892, were \$385,736,308.71 and the permanent appropriations were \$121,863,880; making the whole appropriation for that year \$507,600,188.71. A part of the permanent appropriation is the sinking fund, which they can ignore, that is about \$49,000,000, making the amount to be provided for about \$460,000,000. For the fiscal year of 1894 and 1895 the total appropriations were \$492,230,685.03.

Now I come to this year's appropriations, which we are making now for the fiscal year beginning July 1, 1895, and ending June 30, 1896. The bills which have passed the other House already amount to \$374,170,111.61. Add to this amount the increases we must make and the permanent appropriations, and they will be about \$490,000,000.

I will insert in this connection a statement of the appropriations for several years past and an estimate as to the appropriations for the approaching fiscal year:

Appropriations for the fiscal year 1891 and 1892.

Regular appropriations	\$385,736,308.71
Permanent appropriations	121,863,880.00
Total	507,600,188.71

Appropriations for the fiscal year 1894 and 1895.

Regular appropriations	\$391,156,005.03
Permanent appropriations	101,074,680.00
Total	492,230,685.03

Appropriations for the fiscal year 1895 and 1896.

The bills that have passed the House of Representatives so far, not including miscellaneous appropriations, but only the regular appropriations, amount to.....	\$374,170,111.51
It is perfectly safe to say that the additions in the Senate that have been and will be made will exceed.....	20,000,000.00
Making the total appropriations by the regular appropriation bills at this session about.....	390,000,000.00
Add the permanent appropriations for this fiscal year.....	113,073,956.00
And the total will be about.....	500,000,000.00
Which includes the sinking fund, of about.....	49,000,000.00
Deduct the sinking fund and the amount to be provided for it, in round numbers.....	450,000,000.00
As against the Secretary's estimate of.....	358,047,520.00
Or a difference of about.....	91,000,000.00

Mr. President, if the Secretary of the Treasury, in the light of what is being passed here now, were to revise that estimate, he would have to admit that the figures which I have given are correct. The truth is—and I have the highest regard for the Secretary of the Treasury—one year ago he made an estimate (or his subordinates made one to which he agreed) of the revenues and the expenditures of the Government, and he made a mistake on the wrong side of about \$60,000,000. The Treasury officials have been adhering to that mistake in all official communications which have been made, when the fact stares them in the face that day by day, as the daily report shows, they are running behind in receipts and that the payments exceed his estimate. That the receipts will increase when business resumes its normal condition I believe as firmly as does the Senator from Indiana [Mr. VOORHEES] who reported the revenue bill last session. I believe the revenue act will give a surplus of from forty to fifty million dollars per annum under normal conditions of trade, but it can not do it in this year; it will not do it in the first six months or the next year. There is the deficiency. It stares you in the face with \$100,000,000 appropriated prior to the year 1895 that has not been paid, and with the proceeds of bonds sold to pay current expenditures.

I appeal to Senators whether it is wise or patriotic for us to permit Congress to adjourn without making some provision which will meet this deficiency, which will make it impolitic, unwise, yea, Mr. President, impossible, for any executive officer to sell ten or thirty year bonds and to continue to pay current expenses from the proceeds of such sales of bonds.

Mr. GEORGE. Will the Senator allow me to ask him a question?

Mr. GORMAN. Certainly.

Mr. GEORGE. What is the objection to requiring the Secretary of the Treasury to coin the seigniorage in the Treasury?

Mr. GORMAN. I have just said—I think the Senator was not present—that I trust we will be able to settle this question purely of deficiency in the Treasury, and I appealed, as far as I could, to every Senator to abandon for the time being all the theories and ideas as to the character and kind of currency, but simply to provide a certificate that shall be redeemable within two years at the option of the Government, that being the only thing we can do in these expiring hours of Congress so as to prevent the sale of gold bonds hereafter. That is the point.

Mr. GEORGE. It seems to me to be very bad economy to borrow money when we have it already in the Treasury if we would just coin it.

Mr. GORMAN. Oh, the Senator knows that would open up the whole question of silver and gold. Now, what would be the result if this proposition should be adopted? I have in my hand, which I will publish in full in the RECORD, a statement from the Treasurer of the United States showing the exact operation of this matter of the sale of bonds and how the plan now proposed would have saved any necessity for the last issue of bonds.

TREASURY DEPARTMENT, OFFICE OF THE TREASURER,
Washington, D. C., February 25, 1895.

SIR: In compliance with your oral request, I have the honor to submit the following statement of the receipts and disbursements of gold and United States notes and Treasury notes from July 1, 1892, to December 31, 1894. For convenience of comparison with statements previously furnished the time is divided into periods of six months:

	Gold.	Notes.
On hand July 1, 1892.....	\$114,342,366	\$8,096,590
Received during 6 months ending Dec. 31, 1892:		
For gold.....	30,908,201	
For notes.....		28,341,343
For other money.....	4,509,861	
From surplus revenues.....	5,071,283	
During 6 months ending June 30, 1893:		
For gold.....	71,102,144	
For notes.....		45,380,895
During 6 months ending Dec. 31, 1893:		
For gold.....	5,454,146	
During 6 months ending June 30, 1894:		
For gold.....	70,388,004	
For notes.....		4,708,744
From sale of bonds.....	58,680,684	

	Gold.	Notes.
Received during 6 months ending Dec. 31, 1894:		
For gold.....	\$25,008,923	\$22,357,100
For notes.....	58,719,598	
From sale of bonds.....		
Total.....	344,683,707	257,996,185
Paid out during 6 months ending Dec. 31, 1892:		
For gold.....	30,908,201	28,341,343
For notes.....		
During 6 months ending June 30, 1893:		
For gold.....	71,102,144	45,380,895
For notes.....		6,872,539
For other money.....		9,863,287
During 6 months ending Dec. 31, 1893:		
For notes.....	5,454,146	1,550,188
For other money.....		18,019,738
For expenses.....	9,139,667	
During 6 months ending June 30, 1894:		
For gold.....	70,388,004	4,708,744
For notes.....		11,427,244
For other money.....		32,775,049
For expenses.....		
During 6 months ending Dec. 31, 1894:		
For gold.....		25,008,923
For notes.....	62,357,100	
For expenses.....		10,760,122
Total.....	258,439,262	194,712,077
On hand Dec. 31, 1894.....	86,244,445	63,284,108

Summarized, this statement shows the following net results:

	Gold.	Notes.
On hand July 1, 1892.....	\$114,342,366	\$8,096,590
Received—		
For gold.....	108,379,910	240,290,265
For notes.....	4,509,861	
For other money.....	5,071,283	
From surplus revenues.....	117,380,283	
From sale of bonds.....		
Total.....	344,683,707	257,996,185
Paid out—		
For gold.....		103,379,910
For notes.....	240,290,265	
For other money.....	9,139,667	19,919,971
For expenses.....		71,412,196
Total.....	258,439,262	194,712,077
On hand Dec. 31, 1894.....	86,244,445	63,284,108

From the foregoing it appears that out of \$249,290,505 of notes received for gold the sum of \$19,919,971 was afterwards paid out for other kinds of money and \$71,412,196 was applied to current expenses. Of the \$19,919,971 of other moneys so acquired, however, the sum of \$14,522,514 was also paid out during the six months ending December 31, 1894, for current expenses. The total application of the gold fund to expenses was therefore as follows:

Coin.....	\$9,139,667
Redeemed notes.....	71,412,196
Other moneys received for redeemed notes.....	14,522,514
Total.....	95,074,377

Hence the statement of the receipts and disbursements on account of the gold fund, in the simplest form, is as follows:

On hand July 1, 1892.....	\$114,342,366
Received—	
For notes and other money.....	107,889,771
From surplus revenues.....	5,071,283
From sale of bonds.....	117,380,283
Total.....	344,683,707
Paid out—	
For notes and other money.....	163,384,865
For expenses.....	95,074,377
Total.....	258,439,262
On hand December 31, 1894.....	86,244,445

You will observe that the receipts of \$5,071,283 from surplus revenues were confined to the six months ending December 31, 1892. The \$95,074,377 applied from the gold fund to current expenses, during the two years ending December 31, 1894, increased by the sum of \$9,927,766 so applied during January, 1895, makes a total of \$105,002,143 for the twenty-five months, as stated in the first part of the Secretary of the Treasury's reply to the Senate resolution dated January 31, 1895.

Respectfully, yours,

D. N. MORGAN,
Treasurer United States.

Hon. A. P. GORMAN, United States Senate.

For the two purchases of bonds that were made prior to the last, the \$100,000,000, for which \$117,000,000 was received into the Treasury, the gold was all drawn out by bankers and others, who presented greenbacks or Treasury notes for redemption. During the period included in the last twenty-five months, when the Treasury authorities had sufficient money that they could use as a

utilize, they took the same greenbacks for which the bankers and others had demanded gold, went out into the open market, presented them, and received gold for them to the amount of \$107,000,000. It is completely demonstrated that if they had had in the last twenty-five months a surplus of money in the Treasury, greenbacks and Treasury notes and bank notes or silver notes, the credit of the Government was so perfect that the Secretary of the Treasury could have had all the gold he wanted in exchange for these noninterest-bearing notes. Nobody questions it who looks at the Treasury statements.

There is not a man who has had years of experience in the Treasury who does not know that what I now state is true. There is not a man who is familiar with the operations of the Treasury who does not know that from the date of resumption under the distinguished Senator from Ohio [Mr. SHERMAN] the credit of the Government has been so good, the knowledge of the people so perfect that every obligation would be redeemed in money of equal value with that of any other, that you could go and get gold for Treasury notes.

Mr. President, just prior to the first Administration of President Cleveland the public became somewhat alarmed, as they have been in the last six months. A run was made upon the Treasury for gold, and the then Secretary of the Treasury, a very great man, Mr. McCulloch, became alarmed, as others since have become nervous. He thought we were going upon a silver basis, that his gold was disappearing. I read a telegram in the Senate nearly eight years ago from that distinguished Secretary to the sub-treasurer in New York, stating that we would be upon a silver basis in thirty days.

But President Cleveland came into power, and he had a grand, courageous man for Secretary of the Treasury. He had in the Treasury over \$200,000,000 of greenbacks and Treasury notes; and what did he do? He went over to New York and said to the men who had made a corner against the Treasury gold, as they made it recently, "You may precipitate a panic. The Government is strong; the Government can stand a panic; but you will have the panic if you continue to embarrass the Government as you have done." He had greenbacks, he had Treasury notes, and he had silver dollars which he could use for the purpose of teaching them a lesson. He said, "Here are \$20,000,000 in round silver dollars, not certificates. Give me your gold for it and stop this raid upon the Treasury, or else you shall have the panic." And they agreed to give him \$20,000,000 of gold for the \$20,000,000 of silver. The transaction was not completed, because there was no necessity for it; gold came rolling back into the Treasury, and the panic was passed.

Mr. GEORGE. Why not treat them the same way now?

Mr. GORMAN. Ah, Mr. President, the Senator must not put such a question to me.

Mr. GEORGE. Why?

Mr. GORMAN. I am dealing with the condition as it stands now. You have no money in your Treasury as you had then, and that is the point of my remarks. Secretary Carlisle came into the Department stripped of the power to do as Secretary Manning had done. I know from my own personal knowledge that he tried to do it; that he proclaimed to the world he intended to do it. His desire was in that direction; but when he came to look at his coffers he found he was unlike Mr. Manning; that he had no balance to pay his current debts with. He was helpless. I want to relieve him. I appeal to the Senator from Mississippi now to give him this authority to the extent of \$100,000,000, so that he may say to them from now henceforth, "You can not embarrass the Government. Our credit is perfect. We have the money that the people will take. We have the right to issue certificates of \$20 and up to \$500, which any patriotic citizen will take. I am master of the situation. The Government of the United States shall not be at the mercy of a few powerful banks."

Mr. GEORGE. I understand the Secretary of the Treasury does not want any of these certificates; that he has plenty of money. That is his statement. The Senator from Maryland seems to treat the Secretary of the Treasury as a sort of a ward, as though we are his guardians here to take care of him. I understand the Secretary says he has money enough.

Mr. GORMAN. Mr. President, I do not understand the Secretary to say so, and I challenge the Senator from Mississippi or any other Senator to produce the evidence that he has ever said so. It is not in existence, so far as I know.

Mr. President, I am not the guardian of the Secretary of the Treasury, but as a Senator on this floor I am the servant of a portion of the people of the United States. I represent a people who would not permit me to remain here if I did not advocate the payment of every just obligation of the Government. I stand here, Mr. President, to do what I think to be right to maintain the integrity of the Government in every way and to prevent the sale of bonds running for a long term of years.

Mr. VOORHEES. I know the Senator from Maryland does not intend to do anybody an injustice.

Mr. GORMAN. No; I would not.

Mr. VOORHEES. Certainly not the Secretary of the Treasury.

Mr. GORMAN. Oh, no; certainly not.

Mr. VOORHEES. I think it proper and right in this connection in his remarks to have stated what the Secretary of the Treasury has said on this subject. In a communication to the Finance Committee he stated that he thought, as he has heretofore said, he ought to have the general authority to issue Government securities to aid the Treasury in case of a deficiency, but that he would not exercise the power now if given to him, because he said it was not necessary.

Mr. VILAS. Will the Senator from Indiana permit me to call attention to the exact language in the communication of the Secretary of the Treasury to the President of the Senate under date of the 18th of February?

Mr. VOORHEES. Certainly.

Mr. VILAS. After stating that there was in the Treasury on the 18th of February, exclusive of the \$55,000,000 gold reserve, nearly \$100,000,000, "as shown by the inclosed statement," the Secretary of the Treasury says:

It is my opinion that the Secretary of the Treasury ought to be permanently invested with authority to issue and sell short-time bonds or other obligations of the Government for the purpose of raising money to meet such deficiencies in the ordinary revenues as may occur from time to time; but I do not think that there is any necessity at the present time for the exercise of such authority if it existed. It is not probable that such deficiencies will occur during the remainder of the current fiscal year as will exceed the available balance now on hand, and it is estimated that during the next fiscal year the receipts will exceed the expenditures.

Mr. VOORHEES. I am very much obliged to the Senator from Wisconsin. That is the communication I referred to.

Mr. CULLOM. If the chairman of the Committee on Finance has an official letter from the Secretary of the Treasury stating exactly what the condition of the Treasury is and what he wants, I should like to have it put in the RECORD.

Mr. GRAY. That is the letter referred to.

Mr. VOORHEES. The Senator from Wisconsin has read the letter from the Secretary of the Treasury to which I alluded.

Mr. CULLOM. The Senator from Wisconsin read only an extract from it, I understand.

Mr. VILAS. I read substantially all of it.

Mr. VOORHEES. It is not a long letter. I want to supplement that statement by simply observing, what we all remember, that the President of the United States has assured us that he has a comfortable surplus on hand and he was not clamoring for such legislation as this.

Mr. GEORGE. "Comfortable" there meant "plenty."

Mr. VOORHEES. "Plenty."

Mr. GORMAN. The Senator from Indiana and the Senator from Wisconsin will please take note of the fact that the Secretary says: "It is my opinion that the Secretary of the Treasury ought to be permanently invested with authority to issue and sell short-time bonds or other obligations of the Government for the purpose of raising money to meet such deficiencies in the ordinary revenues as may occur from time to time." There is an express declaration that a provision such as we propose is wise and ought to be granted. There can be no question as to the correctness of that opinion.

It is true that the Secretary further adds: "But I do not think there is any necessity at the present time for the exercise of such authority, if it existed." That may be, Mr. President; but the Senators who are pressing this proposition must remember that with all the deficiencies that have occurred in the revenues, amounting already to over \$100,000,000, neither the President nor the Secretary has ever called the attention of Congress to such deficiencies and asked for such relief as is now proposed. This is the first communication from the Secretary of the Treasury, brought out, it is true, in reply to a resolution of the Senate, in which he suggests short-time bonds instead of the use and sale of ten and thirty year bonds. And the authority ought to be given to him, and I am amazed that Senators oppose it on the ground that the Secretary does not desire the enactment.

Mr. STEWART. I also call the attention of the Senator from Maryland to the fact that the \$100,000,000, in round numbers, was exclusive, the Secretary states, of the \$55,000,000 then in the Treasury; but under the sale of bonds, the President tells us, and we know it to be a fact, enough money will come in on the bonds already sold to make the reserve over \$100,000,000; and then he will have \$100,000,000 of available funds for current expenses and \$100,000,000 in the Treasury.

Mr. CAREY. The Senator from Maryland is familiar with the reply of February 18 made by the Secretary of the Treasury to the inquiry of the Senate. He states that there were \$99,000,000 in the Treasury exclusive of the gold reserve. Will the Senator state, if he knows, what amount of checks and certificates are out against the \$99,000,000?

Mr. GORMAN. I am dealing with the statements by calendar years and for the six months from July 1 to December 31, 1894.

I am not unaware of the letter of the Secretary of the Treasury, which the Senator from Wisconsin read, nor am I unmindful of the statement of the President of the United States in his recent message communicated to the Senate of the United States, which is Executive Document No. 257 of the present session, dated January 28, 1895.

There need be no fear—

Says the President—

that we can not pay our current expenses with such money as we have.

Now mark it, "with such money as we have."

There is now in the Treasury a comfortable surplus of more than \$63,000,000, but it is not in gold, and therefore does not meet our difficulty.

But every dollar of it was a part of the proceeds of the sale of the bonds. The Treasury notes were presented and redeemed in gold, and his entire balance was from the sale of bonds. Not in gold. No, Mr. President. The act of 1875 that authorized the issue of these bonds provided for keeping up the gold reserve alone. It was intended for the purpose of keeping up the gold reserve alone; but it was afterwards construed, and stated by the Secretary frankly, that after he had thus bought his gold and I took my greenbacks there and presented them he gave me the gold back for them and then put my greenbacks into his general receipts. That never was in contemplation.

Now, I am not criticising the President or the Secretary of the Treasury. On the contrary, I have said over and over again, and I desire to repeat it, that under the circumstances there was nothing else for them to do. The credit of the Government had to be maintained. What I do say is that Congress, in my judgment, would be recreant to the duty they owe the people of the country if they did not give the President and the Secretary of the Treasury power to issue certificates of two years, bearing 3 per cent interest, to let the Secretary of the Treasury meet any emergency of the Treasury Department. We do not direct him to dispose of them. I have that confidence in every President and every Secretary which leads me to believe that they would not abuse a trust of this sort and dispose of them if it were not necessary; but we ought to give the power to them.

Then, Mr. President, we ought to say to them, and I will, so far as I can, publicly and privately, that "Having given you this power there will be no necessity for you to sell thirty-year bonds hereafter, and the people of the country will not sustain you if you do it." But if Congress fails to give this power, then, as the President has said to you, he will continue the sale of bonds. Who can complain of him hereafter if there is a failure here and now? Senators who are on more intimate terms than I am and may know more of the personal views of the Executive may have some intimation that this is distasteful to the Administration. That would not control me, because my view is that I must represent the interests of the people of the country as I understand them. I would not desire to force upon a coordinate branch any power that they did not want, unless in my judgment it was absolutely necessary to protect the taxpayer. I can not, with my view, permit the session to close without making the effort to give some such power as will save a repetition of the transactions of the past. I refer to all three sales of long-year bonds.

Now, Mr. President—

Mr. GRAY. Before the Senator leaves the general discussion of the resources of the Treasury and its present condition, which is so interesting to the people of this country, will he explain how it is that January 1, 1895, the available cash balance was about \$67,000,000, after making the deductions which I admit ought to be made, the checks in the hands of disbursing agents, and that February 18, by the statement of the Secretary of the Treasury, there was an available cash balance, exclusive of gold reserve, of \$99,000,000, and there has been about that available cash balance from that day to this?

Mr. GORMAN. Yes; I can explain it to the Senator.

Mr. GRAY. How can the Senator explain it except by the improving condition of the Treasury?

Mr. GORMAN. Not at all. I can explain it to the Senator, and when he reads the RECORD he will find the figures all here from the Treasurer of the United States. There was some small increase in the current revenue, which I say is going on to increase under the present law, but not enough to meet the wants until a year hence in my judgment. But the difference in the cash that he names there is just the precise point I have stated. They came down here and bought 5 per cent bonds and paid gold for them. Then when they were about to induce another sale of bonds they came in with greenbacks and drew the gold out, drawing out \$70,000,000 within two or three months. They handed the Secretary of the Treasury greenbacks, and he turned them over to the other side of the counter and counted them as so much cash in the Treasury.

Mr. GRAY. From an analysis of the figures given on the back of the letter of February 18 I do not find those figures sustained.

Mr. GORMAN. Let me show the Senator.

Mr. GRAY. There is undoubtedly an increase in greenbacks

by reason of their having been redeemed in gold and held by the Secretary of the Treasury for current purposes.

Mr. GORMAN. For the six months ending June 30, 1894, which covers the period the Senator talks about, \$79,000,000 of notes were received for gold. In the six months ending December 30, 1894, the very period the Senator is talking about, they brought in \$62,337,100 in greenbacks or Treasury notes and took the gold out of the Treasury; and the Secretary under his rule turned it over into the cash book and said, "I will count this as surplus." That is the whole point in the case. The Treasury has been maintained. It would have represented \$117,000,000 more of debt than it has but for that gold transaction.

At this point I submit Treasury statements showing the condition of the Treasury from July 1, 1884, to January 1, 1895:

Condition of the Treasury from July 1, 1884, to January 1, 1895.

Cash balance July 1, 1884	\$161,306,577.18	
Receipts to March 1, 1885	214,732,476.33	
		\$376,120,053.51

Cash in Treasury as per debt statement.....		153,337,579.99

This statement includes gold and available cash.

NOTE.—Many deposits of cash included in the cash balance in the Treasury are not taken into the receipts of the Government until adjustments of accounts are reached and the amounts finally covered into the Treasury by warrants. This will explain the difference between the receipts and expenditures as shown in this statement, and the cash balance as shown by the public debt statement.

The amount of debt annually required to be redeemed on the sinking-fund account aggregates about \$49,000,000. The amount redeemed for the fund for the fiscal year 1892 fell short of the requirement by \$11,397,825.36, and for the fiscal years 1893 and 1894 \$41,994,543.72 and \$48,480,014.27, respectively, making a total balance due the fund on June 30, 1894, of \$101,782,383.35.

Public debt redeemed.

Fiscal year—		Fiscal year—	
1891.....	\$85,432,381.05	1888.....	\$74,813,563.05
1892.....	166,270,955.55	1889.....	121,264,438.35
1893.....	134,057,906.98	1890.....	104,642,149.50
1894.....	99,861,684.50	1891.....	*124,542,604.87
1895.....	45,984,485.43	1892.....	†40,565,557.98
1896.....	44,543,993.30	1893.....	‡9,724,654.50
1897.....	127,018,408.15	1894.....	55,466,050.55

From this statement it appears that on July 1, 1895, the total balance in the Treasury, including gold, Treasury notes, United States notes, and fractional coin and silver dollars, was \$153,337,579.99. Deduct the reserve fund..... 100,000,000.00

Available..... 53,337,579.99
Balances appropriated and unexpended January 1, 1895, including the sinking fund..... 255,955,099.94

The amendment reported by the committee is intended to equip and arm the Secretary of the Treasury so that hereafter, if he

* Includes \$23,553,296.50 national-bank notes redeemed under act of July 14, 1890.

† Includes \$16,232,721 national-bank notes redeemed under act of July 14, 1890.

‡ Includes \$9,037,651.50 national-bank notes redeemed under act of July 14, 1890.

chooses to exercise it, when the Senator from Delaware [Mr. GRAY] goes to the Treasury Department and says, "I want my money," he will say, "We will give you greenbacks or we will give you these certificates if you desire them." It makes it a popular loan, and enables the Secretary of the Treasury to dispose of a security that runs only two years at the option of the Government, and at a rate of interest far below that which he has paid for the gold which he now has.

Mr. GRAY. If the Senator will allow me, as this statement is a very interesting one, I wish to ask him whether it does not bear out the hopefulness of the Secretary of the Treasury that we find that since December 31, 1894, there has been an increase from whatever cause in the available cash balance, and that increase or that—

Mr. ALDRICH. How much does the Senator say the increase has been?

Mr. GRAY. From about \$67,000,000 to about \$100,000,000—\$99,000,000; and that available cash balance (so called) has been steadily maintained for a period of thirty days.

Mr. ALDRICH. Will the Senator from Maryland permit me?

Mr. GORMAN. That comes exactly as I have stated—and I tried to make myself understood—not from any increase in the ordinary receipts of the Government, but from the redemption of United States notes and Treasury notes.

Mr. GRAY. If the Senator will understand my point, I admit the greenbacks that have come into the Treasury and have been redeemed in gold have been carried to the account of the general fund and made available as part of the cash balance; but since that operation ceased the available cash balance has been maintained at that figure, to wit, at about \$100,000,000, for a period of nearly thirty days.

Mr. ALDRICH. If the Senator from Delaware will permit me, the statement of the Senator from Maryland is easily explainable.

Mr. GRAY. I understand the statement.

Mr. ALDRICH. The available cash balance as shown on the 31st of December, 1894, was obtained by deducting \$100,000,000 as a reserve from the cash on hand. The statement of February 18 only deducts \$55,000,000 from the cash on hand as the amount of the reserve. According to the Secretary of the Treasury the reserve has diminished from \$100,000,000 to \$45,000,000 from the 1st of January to the 18th of February.

Mr. GRAY. It only bears out what the President said in his message, that the revenues promised to be ample, but that they do not come in the shape of gold, which was what he asked Congress to arm him with the power of obtaining.

Mr. ALDRICH. But there has been a great change in the available cash balance from the 1st of January to the 18th of February, as can be easily seen by an examination of these two statements.

Mr. GRAY. That is what I say.

Mr. ALDRICH. If you place the reserve at \$100,000,000 in both cases there was no such increase, in fact there was no perceptible increase between the 1st of January and the 18th of February.

Mr. GRAY. It shows that there has been no decrease in the cash balance. The Secretary of the Treasury is maintaining our position.

Mr. GORMAN. Mr. President, there is no escape from the general proposition, and that is the one which is to be met by Congress. You have only paid the expenses of the Government by using the proceeds of the sale of \$100,000,000 of bonds in the last twenty-five months.

Mr. President, that was the case before the present Administration came into power. During the last Administration the very question was presented here, and I stated the views then as I do now, that the revenue laws up to that date had failed to produce a sufficient amount of money by \$150,000,000. It was nearer \$250,000,000. When the present Administration came into power they were interfered with by the commercial conditions that no legislation in Congress was responsible for. They have been intensified in the last two years. The revenues have fallen off and the expenditures have increased year by year.

I will place the statement in my remarks to show, as I did three years ago, that our expenses were about \$500,000,000 a year, and there was no possibility in the near future of decreasing them:

Revenues for fiscal year ending June 30, 1891.....	\$392,612,447.31
Revenues for fiscal year ending June 30, 1892.....	354,937,784.24
Total revenues for fiscal years ending June 30, 1891, 1892.....	\$747,550,231.55
Expenditures for fiscal year ending June 30, 1891.....	400,780,016.72
Expenditures for fiscal year ending June 30, 1892.....	382,587,510.56
Total expenditures for fiscal years ending June 30, 1891, 1892.....	783,367,527.28
Excess of expenditures over revenues for fiscal years ending June 30, 1891, 1892.....	44,817,295.73

Total expenditures for fiscal year ending June 30, 1894, and for six months ending December 31, 1894.....	554,726,334.66
Excess of expenditures over revenues for fiscal year ending June 30, 1894, and for six months ending December 31, 1894..	97,614,858.09
Revenues, other than postal receipts, for the fiscal years ending June 30, 1891, 1892, 1893, 1894, and for six months ending December 31, 1894.....	1,500,481,336.90
Expenditures for the fiscal years ending June 30, 1891, 1892, 1893, 1894, and for six months ending December 31, 1894, including deficiencies paid in the postal service.....	1,737,290,560.96
Expenditures for the fiscal years ending June 30, 1891, 1892, 1893, 1894, and for six months ending December 31, 1894, exceed the revenues for the same period by.....	146,809,224.06
The Secretary estimates, in his answer to resolution of January 28, 1895, that the revenues from customs, internal revenue, and miscellaneous, all revenues except that from the sale of bonds, will be.....	380,610,543.00
Which is an average rate for each month in the year of.....	31,717,545.00
From the 1st day of July, 1894, to the 20th day of February, 1895, about seven and two-third months, the total receipts have been.....	202,532,595.67
Which is an average rate during each month of.....	30,417,251.00
The total receipts during the month of January (which is the first month embraced in the Secretary's estimate) were.....	27,804,309.71
As against his average of.....	31,717,545.00
For the first twenty days of February the total receipts were.....	15,336,736.64
This shows that the estimated receipts are unquestionably largely in excess of the actual result.	
The expenditures for the calendar year are estimated at.....	\$358,047,520.00
While the average actual payments per year out of the Treasury for the four fiscal years ending June 30, 1891, 1892, 1893, and 1894 were.....	387,577,793.32
Which is greater than his estimate for this calendar year by over.....	29,000,000.00

The question arises, whether it is possible to reduce expenditures \$29,000,000 when the appropriations are as large as heretofore. Mr. President, I do not think it possible to make such reductions. There is nothing to warrant such a statement.

Mr. President, the Government has been like any individual would be. We have spent more money than we have made, and there was but one alternative, bankruptcy or to borrow money. We borrowed \$150,000,000 or \$160,000,000. The question now arises whether we will continue to borrow upon the onerous terms which have been imposed upon us, or whether we will give the patriotic people of the country an opportunity to take an obligation of the Government as good as gold, one that is perfectly good and bears only 3 per cent interest, and will be redeemable when the act which the distinguished Senator from Indiana [Mr. Voorhees] and those of us on this side passed will produce the revenue, as it will produce the revenue in two years, to retire these very securities.

There is no reflection upon the President in any proposition that we submit. There is no reflection upon the Secretary of the Treasury, whom I admire. But I say that if this proposition is to be defeated, and if we are to run the risk of suspending payment, paralyzing works of public enterprise, preventing the Navy from being fairly increased and the Army from being properly conducted, that responsibility must be understood by the people to be taken by whatever official has the power to say that he does not want this grant of power, and that he will not exercise it if he has it.

Economy in Public Expenditures, Not an Increase of the Public Debt and Taxation, Is What the True Interests of Our Country Demand.

REMARKS

OF

HON. WILLIAM S. HOLMAN,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 7, 1895.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8705) to authorize the Secretary of the Treasury to issue bonds to maintain a sufficient gold reserve and to redeem and retire United States notes, and for other purposes—

Mr. HOLMAN said:

Mr. CHAIRMAN: I am opposed to both of the measures involved in this bill. I am opposed to an increase of the public debt, and I am equally opposed to the retirement of the United States notes, the "greenbacks," so called, which have so long constituted an important quality in the money of our country, and of the Treasury notes issued under the act of July 24, 1890, both amounting to \$497,886,173. I am unalterably opposed to both of the leading provisions of the pending bill.

It seems absolutely incredible that such a bill should come before a Democratic House of Representatives from a committee of the House, a majority of whom claim to be Democrats, for consideration.

How many of you gentlemen of the West and South will appear before your constituents to defend this bill? I admit that, unfortunately, the creditor portion of the United States, the Eastern section of the Union, has an interest, financially, in reducing the volume of our money and enhancing its value; but to the great mass of our people, the producers of our wealth, all of the laboring people of our country, farmers, miners, and the manufacturing establishments of the South and West, and especially the debtor class everywhere so great as shown by the last census especially in the West and South, and generally throughout the Union—to them this bill, if it becomes a law, means poverty and desolate homes and cheerless firesides, for its object is to reduce the volume of money and thus increase the wealth of the few, and that can not be done without reducing multitudes of homes to poverty and wretchedness.

Is labor in this country so overpaid? Does the patient toil of the farmer yield such excessive remuneration that by arbitrary legislation you must reduce its gains? Will a nation of laboring men, will the farmers whose industry is the foundation of our greatness as a nation, consent to a measure that will necessarily increase taxation for an indefinite period and reduce prices of lands and all products of industry by reducing the volume of money—submit to this?

Gentlemen who are supporting this bill misapprehend the spirit of the American people.

Some British lord a century or more ago uttered the sentiment, "A public debt is a public blessing." This sentiment is said to have been repeated by an American statesman in the early period of our history but never approved by our people. A blessing to whom? To the holders of public securities; poverty to the people! By the passage of this bill this maxim of the British autocrat would become a part of our national policy.

This bill very clearly expresses the spirit of this extraordinary attempt to overthrow the policy of the Democratic party—a policy to which that party has unflinchingly adhered for a century, and which antedates even the great utterances of Jefferson—

That free institutions and the equal rights of the people can only be maintained by frugal government and that a great and permanent public debt is fatal to such a government.

Yet this bill, now before a Democratic House, as originally reported, provided for the issue of bonds "to maintain a sufficient gold reserve and to redeem and retire United States legal-tender notes and Treasury notes (a legal tender) issued under the act of July 14, 1890;" the bonds "payable in fifty years after date in gold coin of the United States."

The Republican party never dared to propose such a measure even in the late war. I admit that this barefaced attempt to fasten on our country the British policy was so obnoxious to even friends of the permanent debt policy that it has been amended as follows:

Payable at the pleasure of the United States after ten years from the date of their issue and due fifty years after date.

This amendment does not change the measure. The purpose is manifest to create a permanent public debt, the policy of which has been denounced by the Democratic party ever since the foundation of the Government.

AS TO UNITED STATES NOTES.

The following table issued by the Treasury Department shows the state of the money in the Treasury and supposed to be in circulation in the United States:

Statement showing the amounts of gold and silver coins and certificates, United States notes, and national bank notes in circulation March 1, 1895.

	General stock, coined or issued.	In Treasury.	Amount in circulation Mar. 1, 1895.	Amount in circulation Mar. 1, 1894.
Gold coin.....	\$502,631,656	\$94,065,558	\$468,568,100	\$496,890,383
Standard silver dollars.....	422,826,740	368,177,389	54,649,350	54,574,546
Subsidiary silver.....	77,071,742	16,131,145	60,940,597	59,921,912
Gold certificates.....	51,587,869	80,100	51,507,769	70,935,729
Silver certificates.....	333,107,504	7,291,089	325,816,415	331,119,247
Treasury notes, act July 14, 1890.....	150,705,157	33,455,457	114,249,700	141,088,766
United States notes.....	346,681,016	84,692,758	261,988,258	293,610,528
Currency certificates, act June 8, 1872.....	37,355,000	430,000	36,925,000	47,805,000
National bank notes.....	205,043,651	5,154,293	199,889,358	194,839,041
Total.....	2,187,012,346	612,477,789	1,574,534,557	1,890,675,132

So the money of the people, legal tender, to be "retired" by the proposed permanent interest-bearing debt, is as follows:

Treasury notes, act July 14, 1890.....	\$150,705,157
United States notes.....	346,681,016

Total..... 497,386,173

And what is all this for? Why should I ask the question? We who have been denouncing so many years the infamy of legislation that created imperial estates are now asked to retire from circulation money of as much value for all purposes in our own country as so much gold and silver for the benefit of the national banks. Here all men can see is the beginning, if this scheme is consummated, of an ever-growing national debt, and that, remarkable to say, deliberately, in a time of profound peace! It means, of course, increased taxation, a large reduction of money in the country, increased burdens on the debtor class, lower prices, greater poverty, and some more overgrown private estates, the owners of which spend their lavish incomes at fashionable resorts in Europe.

Is it possible that such a bill can pass this Democratic House?

What will the sensible, plain people say about a measure that is to increase the public debt, not including bonds already issued, \$497,386,173 in a time of profound peace to begin with, and for the benefit of gentlemen of ample fortunes in New York and elsewhere, who wish Government bonds for banking purposes and for permanent investments?

Think of it, gentlemen! This withdrawal of \$497,386,173 of legal-tender money from circulation leaves our people to the tender mercies of the banks. They are not charitable institutions! And yet Democrats are, or at least have been, denouncing the artificial methods of legislation by which the few are made rich and poverty in our country is increased! This bill far surpasses any measure ever suggested to ultimately "make the rich richer and the poor poorer."

EXPENDITURES.

There is a feature in the present state of our affairs that, singularly enough, has not been touched upon—the enormous increase in the expenditures of our Government. The Fifty-first Congress entered upon schemes of extravagance unexampled in the history of any other nation. I submit the following statement of the expenditures of our Government as expressed in the appropriations made by four Congresses—the Forty-third, Forty-fourth, Fiftieth, and Fifty-first. I submit the expenditures of these Congresses, as they fairly represent the policies of the Democratic and Republican parties during the last twenty-five years:

	Total appropriations.
Forty-third Congress.....	\$653,794,991.21
Forty-fourth Congress.....	595,597,832.28
Fiftieth Congress.....	817,963,859.80
Fifty-first Congress.....	988,417,183.34

The Forty-third Congress was Republican in both Houses; the House was Democratic in the Forty-fourth Congress, and also in the Fiftieth Congress; in the Fifty-first Congress both Houses were Republican. It will be seen from this table how rapidly the expenses of our Government have increased—enormously beyond the proportion of our increase in population. It will be seen that the increase in appropriations made by the Fifty-first Congress (Republican) over those made by the Fiftieth Congress (the House Democratic) is the extraordinary sum of \$170,453,333.54. I do not think that in the history of any other Government such an increase of expenditure in a time of profound peace has occurred. The effect of this increase has greatly affected the two succeeding Congresses. The pension legislation of 1890 did not materially affect the appropriations of the Fifty-first Congress, as the reports

show; the increased appropriation fell on the Fifty-second, and in some degree on the Fifty-third, Congress, but still no increase has been made in the Fifty-second and Fifty-third Congresses (House Democratic), yet severe reductions ought to have been made, not in pensions but in the expenditures not necessary to the efficient administration of the Government.

While the money of the world is being contracted to the basis of gold coin see how the indebtedness of the world has been enlarged. I quote from the census report of 1890. (Page 3, part 1, Public Debt.)

According to the best authorities the debt of the principal countries of the world has increased in the aggregate since 1848 as follows:

Years.	Aggregate debt.
1848.....	\$7,627,692,215
1860.....	10,399,341,688
1870.....	17,117,640,428
1880.....	27,421,037,643
1890.....	27,524,976,925

And on the same page it is stated that "the aggregate national and local debt, less sinking fund, of the world on July 1, 1890, was \$30,349,927,609."

The national, State, and local debt of the United States is stated thus:

National debt of the United States.....	\$891,900,104
State and local debt of the United States.....	1,135,210,442
Total.....	2,027,170,546

Add to these enormous sums of National, State, and local debts the individual indebtedness of our country and of the world, and the burden that rests on the labor of the world becomes appalling.

The magnitude of the indebtedness of the world is shown in the fact that the whole of the money of the world, gold, silver, and paper, is estimated at \$12,533,900,000 (gold, \$3,901,900,000, silver, \$3,931,100,000, paper, \$2,700,900,000). (See Report of the Comptroller of the Currency, 1892.)

In view of the growing tendency to promote private interests and build up private fortunes by legislation and the ever growing increase of taxation, soon after the opening of the Fifty-second Congress (January 15, 1892) I submitted to the House the following resolutions, on each of which a ye-a-and-nay vote was taken, and they were adopted:

Resolved, That in the judgment of this House the granting of subsidies or bounties by Congress, in money, public lands, bonds, or by indorsements, or by pledge of the public credit, to promote special private industries or enterprises of corporations, independent of the question of the constitutional power of Congress to make such grants, is unjust and impolitic, and in manifest conflict with the spirit of our republican institutions, as it directly tends to create and foster the wealth of favored classes at the expense of the whole people who bear the burdens of government, and manifestly furnishes undue facilities for the enlargement of great private estates—a policy which a government of the people can not justly or safely encourage by any form of favoritism in legislation.

Resolved, In view of the present condition of the Treasury, and because efficient and honest government can only be assured by the frugal expenditure of the public money, while unnecessary and lavish expenditure, under any and all conditions, leads inevitably to venal and corrupt methods in public affairs, no money ought to be appropriated by Congress from the public Treasury except such as is manifestly necessary to carry on the several departments frugally, efficiently, and honestly administered.

January 15, 1892.

Vote on adoption of first resolution—yeas 228, nays 40, not voting 63.

Vote on adoption of second resolution—yeas 164, nays 95, not voting 72.

The census of 1890 shows the astounding fact that while the circulating medium of our country was only a little over \$1,600,000,000, the tax collected by the Federal, State, and local governments amounted to \$1,040,473,013. So instead of ours being, as was the boast of our fathers, less burdened by Government than the people of any other nation, we are now in the front ranks. With silver demonetized, a remorseless reduction of the circulating medium, and ever-increasing taxation, how can the country prosper?

Gentlemen, if the Democratic party is to be a controlling force in the affairs of our Government in the future you must retrace your steps. If that great party which established the policy on which our republican system rests will compel the old-time economy in Government, restore the coinage of money as established by our fathers, and cut loose from Great Britain in financial affairs, the future prosperity of our people will be assured.

No one can explain the present condition of our industries, the extraordinary reduction of prices of labor and of lands and of all products of industry, especially products of lands, except as a necessary result of the movement which began in 1872 to reduce the volume of money in Europe and America, a measure consummated as to our country by the act which demonetized the silver dollar in 1873, and excessive taxation, Federal, State, and local.

I am in favor of the free coinage of silver for the same reason that I have always opposed banks of issue. Under our system of government—equal rights to all men, all money should be a legal-tender, and issued by the Federal Government—why should a laboring man receive the wages of a day and find the paper he

received worthless the next morning? Why should money be issued that is not for all purposes a legal tender?

Under our Federal system, as now expressed by the decision of the Supreme Court of the United States, legal-tender notes issued by the United States are a legal tender for all debts, public and private. And why not? This final decision will never be reversed. Why should it be reversed?

We have now in circulation of these United States notes (greenbacks) \$346,681,016, and \$150,705,157 issued under the act of 1890; in all, \$497,386,173. All legal tender money drawing no interest. Why should this vast sum be withdrawn from circulation? Who is to be benefited by the withdrawal of such a volume of money from circulation? The national banks!

On the basis of 15 to 1, 15½ to 1 in Europe and on the basis of 16 to 1, the American ratio of gold and silver, the two metals have been comparatively stable, and have formed a reliable and satisfactory basis for the final money of redemption both in Europe and America. Although England, as far back as 1816, saw an advantage on account of the indebtedness of continental Europe to her in adopting an exclusive gold standard, yet all the nations of continental Europe, until the close of the Franco-German war, found the use of both gold and silver equally necessary to their prosperity.

Since 1872 it is obvious a movement has been on foot to reduce the volume of money to correspond substantially with the basis of the currency of England, based on a single standard—gold alone, recognizing silver only as a subsidiary coin.

Germany, on account of the enormous fines she levied on France at the conclusion of the Franco-German war, saw the advantage of adopting a single standard.

Sweden, Denmark, Norway, Italy, Austria-Hungary, and even Belgium, have been influenced by the British policy. As the wealth of the world has increased the capitalists of all the nations have seen that to the capitalized wealth of the world a single standard was enormously beneficial, as it necessarily increased the value of money, and capital of late years has controlled the financial policy of the world.

In 1873 a movement in harmony with the policy of England and Germany became obviously beneficial to the capitalists of the United States; hence the covert legislative procedure by which the silver dollar was eliminated from our monetary system. No one pretends now that there was an intelligent legislative purpose in 1872 and 1873 to abandon the coinage of the silver dollar on the old basis of 16 of silver to 1 of gold, and it is clear that the act of 1873, by which the silver dollar was eliminated from our monetary system, was not an act of open and honest legislation. It can be only claimed that in consequence of the suspension of specie payments at that time the subject did not receive serious attention in either House of Congress.

It is well known that the bill which demonetized the silver dollar passed the House of Representatives without having been read in the House, although the reading of the bill was called for; but the bill, upon a suspension of the rules, passed that House without being read.

It has been claimed repeatedly in both Houses that no large number of silver dollars had been coined in our mints. This is misleading; for the Mexican dollar and the Spanish milled dollar were, up to 1837, and, I think, to a much later day, in large circulation in the United States, and recognized in our monetary system as legal-tender money.

Why should we retire the greenback money and the United States notes issued under the act of 1890—legal-tender money? For whose benefit is this to be done? Certainly not for the benefit of the people.

The demand of the bankers is that we should have honest money; that the issue of paper money is a business that belongs to banks. With the fact established that the issue of paper money is within the province of Congress, and may be made a legal tender, how can it be said that money issued by banks, not a legal tender, is a more honest money than notes issued by the United States—issued upon the faith of the whole people of the United States, and a full legal tender for the payment of all debts, public and private? But on what basis rests the pretension that banks alone should have the right to issue paper money? Does not the Government alone possess the power to issue gold and silver money and to give paper money a legal-tender power and value?

Of course the issuing of paper money, ultimately redeemable in coin, either gold or silver, or both, is very profitable, but why should a few gentlemen of ample fortunes have the monopoly of this as against the whole people of the United States? Why should the legal-tender notes now in circulation be retired for the benefit of the bankers? As legal-tender notes, the benefit of this money inures to the whole people, as the issue of national banks to a few bankers! Of course, all paper money ought, in the interest of stability, to be redeemable in coin.

It is said that if paper money is issued by national banks it will have elasticity. Some of the accomplished financiers demand an

elastic currency, others demand a stable currency. The management of these accomplished financiers during the last hundred years in this country shows very conclusively that banks are carried on for the benefit of bankers—not for the general welfare; that an elastic currency, so called, can be readily employed to promote the fortunes of the few by contraction and expansion, to the impoverishment of the people.

For years the friends of the national-bank system have spoken of the greenbacks as a dishonest money, and more recently of the silver dollar as a disgrace and dishonor to our country on account of the depreciation of the commercial value of silver. The avarice and selfishness of all this must be manifest to all men. I do not know that in all the history of monetary affairs a more thoroughly honest paper dollar has ever been issued than the greenback dollar. It is in our own country, for all purposes, exactly equal to a gold or silver dollar. Its existence and circulation inures to the benefit of the whole people. In any view it is a loan made by the people to themselves, without interest, and yet for all purposes in our own country absolute money.

If you retire the \$497,386,173, for all purposes real money, you do it for the benefit of the national bankers, they furnish the money, based upon exactly the same security—the credit of the United States—the whole people having the benefit of the one currency without interest, a few bankers holding bonds, the profits and benefits of the other. This is all there is in it.

It is said, however, that under the redemption act of 1875, under which \$100,000,000 was placed in the Treasury to redeem greenback money, you are bound to keep up that fund, and that whenever the skillful financier can use the greenback under that law to enable him to withdraw gold from the Treasury for sale in Europe or India, you can use and reuse and reuse greenbacks for that purpose. In other words, you borrow gold from the English banks, and a few days later the Rothschilds, through their agent in New York, gather up greenbacks and present them at the Treasury for redemption in gold.

Nothing in the whole history of the financial world has tended so completely to make the people subservient to capital, enriching the few and impoverishing the many. And who is responsible for that act of 1875?

Did any Government in the history of mankind so completely place its treasury at the mercy of shysters?

And yet all men know that there is no excuse for this, except sheer favoritism of capital. We pay the current expenses of the Government in greenbacks, silver, gold, as is the most convenient, but if the broker comes with his greenbacks for gold to be shipped to the Rothschilds, in Europe, we reduce the gold reserve without hesitation, and issue interest bearing bonds to get the gold back!

There are outstanding some gold certificates issued for gold deposits amounting to comparatively little. Of course these certificates must be paid in gold, but the amount is unimportant. There is not a word in all the statutes that commits the Government to the payment of any other securities in gold coin.

Our public debt was created on a paper-money basis. The fifties, which constituted the great body of our public debt, were payable the interest in coin and the principal in lawful money. By the act of 1869 the interest and principal were made payable in coin. No act of Congress has ever gone beyond this.

Congress has never provided for the payment of any portion of our liabilities in gold except our gold certificates. "Coin" is the word uniformly used in the statutes. It is the word used in the act of 1875 as well as the act of 1869. It was Secretary McCulloch, of the Treasury, who suggested the idea that the Government should pay on the gold basis, and, with a subserviency to capital never before known in the history of the world, that suggestion has been followed to the present time by Government officials.

With the present policy accepted (not supported by law) you may issue bonds and increase the taxation of the people by buying gold from the Rothschilds, and you will still continually suffer the dishonor of increasing the public debt in time of profound peace! Will the American people acquiesce in this?

The remedy for all this is very simple. Adopt the policy of such a Government as France—a Government that has always maintained, under all conditions, its credit and honor. If a demand is made, as the House has been informed, for a small amount of gold, it will be readily paid. If the amount is large, the authorities will determine for themselves whether the payment should be made in gold or silver, and of course France is never dishonored by her agents knocking at the bank of the Rothschilds for gold. On the contrary, England, with a gold standard, has within three years been asking France, a bimetallic country, to help her out in her trouble with the Argentine Republic.

Our people are mortified and astonished at the issuing of bonds and the increase of our public debt. The sensibilities of the people of our country have never been so profoundly aroused on a financial question as on this. The general feeling is that reasonable economy and the payment of our debts on an honest basis

would have prevented this discredit to our nation, this dishonor to our people. Were we in honor bound to pay in gold? Did not Congress expressly declare in the Forty-fifth Congress that our debts were simply payable in coin?

On the 12th of January, 1874, the condition of affairs in our country was not dissimilar to what it is now, and the following proceedings occurred in Congress:

[Forty-third Congress, first session, CONGRESSIONAL RECORD, page 590, date of January 12, 1874.]

INCREASE OF TAXES.

The SPEAKER. There comes over from a previous Monday's proceedings a motion by the gentleman from Pennsylvania [Mr. Kelley] to suspend the rules and agree to the resolution which the Clerk will report in full.

The Clerk read as follows:

"Resolved, That it is the sense of this House that the taxes which now burden the people should not be increased, but that the extraordinary means, if any be required, for the support of the Government during the temporary paralysis in the industries of the country now prevailing should be met by a temporary loan or loans bearing a low rate of interest in currency and redeemable in United States notes."

Mr. GARFIELD. Will the gentleman from Pennsylvania allow me to make a suggestion? He must know that everybody recognizes the great importance of the subject which is brought up by his resolution, and I am sure that no one would be readier than he to debate this question and show the reasons for his opinions on this, as well as on all other political topics. Therefore I hope he will allow a debate on the very important issues involved in his resolution. I appeal to the gentleman from Pennsylvania to consent to this.

Mr. Kelley declined agreeing to delay, and on a ye-and-nay vote the resolution failed to receive a two-thirds vote. Immediately afterwards the following proceedings occurred:

[January 12, 1874, CONGRESSIONAL RECORD, page 591.]

REVENUE EXPENDITURES.

Mr. HOLMAN. I ask for action at this time upon the resolution which I send to the Clerk's desk and desire to have read, and I move that the rules be suspended and the resolution passed.

The Clerk read as follows:

"Resolved, That in the judgment of this House there is no necessity for increased taxation or an increase of the public debt by a further loan if there shall be severe economy in the public expenditures; and, in view of the condition of the national finances, this House will reduce the appropriations and public expenditures to the lowest point consistent with a proper administration of public affairs."

This resolution was adopted on a ye-and-nay vote—yeas 231, nays 3.

[January 12, 1874, CONGRESSIONAL RECORD, page 592.]

The Clerk read Mr. HAWLEY's resolution, as follows:

"Resolved, That in the opinion of this House the expenditures of the nation can, and should, be so reduced and regulated that they can be met by the existing taxes; and in no event should there be an increase of either interest-bearing or noninterest-bearing obligations of the Government."

The question was taken; and (two-thirds voting in favor thereof) the rules were suspended, and the resolution was adopted.

It is not necessary for me to say that after this emphatic action of the House no increase of the public debt was permitted or bonds issued, temporary or otherwise. During that Congress—the Forty-third—in view of the then condition of our financial affairs, a heavy reduction was made in the expenses of the Government. In the next Congress—the Forty-fourth, the House being Democratic—the reduction made under the appropriations of the preceding Congress was over \$58,000,000, and no public interest suffered.

The whole country can see that the trouble is over the increased expenditures of the Government and the gradual reduction in the volume of our money by the adoption of the gold standard. There would not be the slightest embarrassment in the affairs of our Government and but little in the commercial affairs of our country if there was reasonable frugality in the conduct of our affairs, and if the Government paid its debts, as an honest man would, with lawful money under its control.

We have treated our public creditors with a magnanimity unexampled in modern history. Our public securities were acquired on a paper basis. Our public creditors afterwards secured the law of 1869 to pay in coin, and now the holders demand gold!

I wish to repeat that the favoritism shown by this Government to its public creditors and holders of its securities has no precedent in history.

Democrats, if you hope to secure again the confidence of the Democratic masses of our people you must retrace your steps and go back to the teachings of the men who laid the foundation of the Government.

Gentlemen, you can not maintain the confidence of our people while you increase year after year an already overgrown Navy and maintain an Army beyond the necessity of the Government, with ever-increasing expenditures, in great and splendid establishments everywhere, making ours the most extravagant Government in the world in proportion to population and wealth.

If the Democratic party will go back to the teachings of its founders it will renew its youth. Jefferson demanded a Government that should not take "from the mouth of labor the bread it had earned." Jackson expresses the same great thought in the following words:

*** to persuade my countrymen, so far as I may, that it is not in a splendid Government, supported by powerful monopolies and aristocratic estab-

lishments, that they will find happiness or their liberties protection, but in a plain system, void of pomp—protecting all, and granting favors to none—dispensing its blessings like the dew of Heaven, unseen and unfeigned, save in the freshness and beauty they contribute to produce. It is such a Government that the genius of our people requires; such a one only under which our States may remain for ages to come united, prosperous, and free.

Democrats, whenever you assure the people of our country that you will go back to the teachings of the fathers, and administer the affairs of our Government frugally and only for the general welfare, as a republican government ought to be administered, and must be if free institutions are to be maintained, you may confidently hope that the people will restore the Democratic party to power. Not till then.

The Late Senator Zebulon B. Vance.

REMARKS

OF

HON. F. A. WOODARD,

OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 26, 1895.

The House having under consideration the resolutions paying tribute to the memory of Hon. Zebulon B. Vance, late a Senator from the State of North Carolina—

Mr. WOODARD said:

Mr. SPEAKER: When Senator Vance died North Carolina lost its foremost citizen. He will go down in history as the greatest man the State has ever produced. The people gave him their highest honors. He was a member of the legislature four years; a member of this body, elected at the age of 28; elected governor at the age of 32; again elected governor at the age of 34; elected United States Senator in 1873, but refused admission by the Republican Senate; elected governor in 1876; elected to the Senate in 1878, and a member of that body until his death. This is a brief summary of his public life. In these positions there is a record of over thirty-five years of continuous, faithful, and unselfish public service, and no man has ever lived in North Carolina who ever merited or received such love and confidence from the people. He was incomparably the most popular North Carolinian who ever lived.

His commanding intellectual force and versatile genius would have won preeminence anywhere, but the true basis of his success and the secret of his marvelous popularity was to be found in the rugged honesty, the fearless frankness, the genial humor, and the sincere desire to promote the welfare of the people which characterized him.

Senator Vance was a man of varied gifts. Elected to Congress when only 28 years of age, yet he soon was recognized as one of the ablest and most brilliant men in that body. It was at this period of his life that Hon. George C. Badger, then the ablest man in North Carolina, a United States Senator for many years, said to a friend, in speaking of the exciting canvass of 1860, "You should hear Vance, the young Congressman from the mountain district. There never lived such a stump speaker as he." When Lincoln issued his call for troops Senator Vance enlisted as a private soldier in the Confederate army and at once went to the field. The people of his mountain district desired to elect him to the Confederate Congress, but he declined in the following letter to a friend:

HEADQUARTERS TWENTY-SIXTH REGIMENT, N. C. T.,
Camp Burgwyn, near Morehead City, September 18.

DEAR SIR: Your letter of the 2d instant, addressed to my brother, was forwarded by him and received this day. In it you ask, first, if I will be a candidate for congress, and, second, if not a candidate, will I consent for my name to be run? To both questions I answer in the negative. To this course I am impelled by what I consider the most conclusive of reasons.

You remember well the position I occupied upon the great question which so lately divided the people of the South. Ardently devoted to the old Union and the forms which the Federal fathers established, I clung to it so long as I thought there was a shadow of a hope of preserving, purifying, or reconstructing it. And you will also remember that in the last official communication I had the honor to make to my constituents as their Representative I pledged myself in case all our efforts for peace and justice at the hands of the North should fail that their cause was mine, their destiny was my destiny, and that all I had and was should be spent in their service. Those hopes did fail, as you know, signally and miserably fail; civil war was thrust upon the country and the strong arm of Northern despotism was stretched out to crush and subdue the Southern people. I immediately volunteered for their defense, in obedience not only to this promise, but also, as I trust, to patriotic instincts; and I should hold this promise but poorly fulfilled should I now, after having acquired sufficient knowledge of military affairs to begin to be useful to my country, escape its obligations by seeking or even accepting a civil appointment.

Certainly if there lives a man in North Carolina who ought to do all and suffer all for his country, I am that man. Since the time of my entering upon

man's estate the people have heaped promotion and honors, all undeserved, upon my head. In everything I have sought, their generous confidence, their unflinching kindness have sustained me. Whilst I can never sufficiently repay it, I am determined, God helping me, to show them I was not altogether unworthy of their regard. I am therefore not a candidate for congress, nor will I consent for my name to be run. I am perfectly satisfied to be represented again by the sound sense and sober judgment of the gentleman who has so lately represented us at Richmond, or by a dozen gentlemen who live in our district not connected with the army, some of whom I hope the common peril and the common cause will induce our people to elect without bickering and strife.

I can not close this hasty letter without assuring you that I am not insensible to the compliment conveyed by your own and a hundred other similar interrogations which have reached me from different parts of the district. No man can feel prouder or more grateful at such manifestations. Surely God has never blessed a man with more sterling and devoted friends than I can number in the mountain district! May my name perish from the memory of my wife and children when I cease to remember these friends with gratitude. Among the many who have adhered so faithfully to my poor fortune, through good and through evil report, I am always proud to remember you, unfalteringly and unmistakably.

Please to accept, in conclusion, every assurance of my regard and good wishes for you and yours.

Most truly, yours,

Z. B. VANCE.

N. G. ALLMAN, Esq., Franklin, N. C.

He was elected captain of his company and soon thereafter colonel of his regiment, and his service in the army was characterized by signal bravery and faithful devotion to the welfare of his troops. While in this service the eyes of the people of the State turned to him as the best man they could select for governor during this trying period in the State's history. After careful deliberation he accepted the nomination, and addressed the following letter to his life-long friend Mr. E. J. Hale, the able editor of the then leading paper of the State, the Fayetteville Observer:

HEADQUARTERS TWENTY-SIXTH REGIMENT, N. C. TROOPS,
Kinston, June 16, 1863.

EDITORS OF THE OBSERVER: A number of primary meetings of the people and a respectable portion of the newspapers of the State having put forward my name for the office of governor, to which I may also add the reception of numerous letters to the same purport, I deem it proper that I should make some response to these flattering indications of confidence and regard.

Believing that the only hope of the South depended upon the prosecution of the war at all hazards and to the utmost extremity so long as the foot of an invader pressed Southern soil, I took the field at an early day, with the determination to remain there until our independence was achieved. My convictions in this regard remain unchanged. In accordance therewith I have steadily and sincerely declined all promotion save that which placed me at the head of the gallant men whom I now command. A true man should, however, be willing to serve wherever the public voice may assign him. If, therefore, my fellow-citizens believe that I could serve the great cause better as governor than I am now doing, and should see proper to confer this great responsibility upon me, without solicitation on my part, I should not feel at liberty to decline it, however conscious of my own unworthiness.

In thus frankly avowing my willingness to labor in any position which may be thought best for the public good, I do not wish to be considered guilty of the affectation of indifference to the great honor which my fellow-citizens thus propose to bestow upon me. On the contrary, I should consider it the crowning glory of my life to be placed in a position where I could most advance the interests and honor of North Carolina, and, if necessary, lead her gallant sons against her foes. But I shall be content with the people's will. Let them speak.

Sincerely deprecating the growing tendency toward party strife amongst our people, which every patriot should shun in the presence of the common danger, I earnestly pray for that unity of sentiment and fraternity of feeling which alone, with the favor of God, can enable us to prosecute this war for liberty and independence, against all odds and under every adversity, to a glorious and triumphant issue.

Very sincerely, yours,

Z. B. VANCE.

He was elected governor in 1862, and during the stormy period of these years he exhibited the highest executive ability in the discharge of the exacting duties of his position. He exalted personal liberty and its safeguard. He equipped and sent to the Confederacy more men according to population than were furnished by any Southern State. North Carolina soldiers were better clad, the people at home had more comforts of life, all due to his wise forethought in the exports of cotton to Europe and purchase of supplies in the European markets. So conspicuous were his services during these years, that he became known throughout the South as the great war governor. He frequently visited the soldiers in their camp and was always a welcome and honored guest. A member of his staff has written a most graphic account of the visit of Governor Vance to the Army of Northern Virginia. Says this gentleman:

Among the most pleasant incidents of my service as a member of the governor's staff was a visit which I made with him to the Army of Northern Virginia in the winter of 1863.

He was then a candidate for reelection to the gubernatorial chair, having filed it for one term with great eclat, but being opposed by a certain faction at home, which proclaimed itself for "peace and reconstruction" on any terms. This appeal, it was feared, had produced some impression upon the minds of the soldiers in the field, and though the ostensible object of the visit was the advancement of his political interests, its real purpose was to rekindle the fires of patriotism in the hearts of the North Carolina troops, and to cheer and stimulate the entire army. I had supposed that I knew him thoroughly and appreciated him fully, but I had no conception of his gifts as an orator and of the potency of his personal magnetism until this memorable occasion.

Inspired alike by the peculiar surroundings and the importance of his mission, he transcended himself and produced an impression upon the army, from its great captain to its humblest private, which displayed itself in the wildest enthusiasm for the cause and the most intense idolatry for its eloquent advocate.

That he should have been thus inspired is not surprising, for the circumstances which surrounded him would have stirred the heart of any man.

General Lee ordered a general review in his special honor—an incident, I believe, without parallel in the history of the army.

Upon an immense plain, in the immediate neighborhood of Orange Court House there were assembled the troops which composed the then unconquered Army of Northern Virginia. These were clad in rags, but wreathed with victory; their flags were soiled and tattered, but upon them were inscribed the immortal names of Cold Harbor, Manassas, and South Mountain; their arms were battered and blackened, but their fire startled the nations and reverberated around the world; their hands were decimated and out of tune, but they still discoursed the inspiring strains of "Dixie," "The bonny blue flag," and "The girl I left behind me." And though many a gallant leader was absent because "off duty" forever, Jackson, Longstreet, Stuart, Early, Ewell, Hill, Rhodes, Gordon, Hampton, Pettigrew, and Fitzhugh Lee were there to do honor to Carolina's illustrious son.

Arrayed in two confronting lines, and with their bronzed faces beaming with pleasure and expectancy, the noble veterans awaited the coming of the old chieftains whom they had followed in triumph so long, and of the youthful governor, whose devotion to the cause and tender care of his own troops had already made him the idol of them all. Finally the cannon boomed and General Lee and Governor Vance appeared, and, amid a storm of enthusiastic cheers and an avalanche of friendly greetings, rode slowly along the excited lines.

It was a stirring scene, and as I rode with this distinguished company and gazed into the battered but radiant faces around me and listened to the grand "Confederate yell" which met their great commander and his honored guest, I felt that it was indeed an occasion to be remembered, and realized that I stood in the presence of heroes and conquerors—of the men who had made history, and even from their enemies the reputation of being "the bravest soldiers who ever marched to the music of battle."

So soon as the review—if that military love feast can be so designated—was ended the men and officers came crowding around the elevated platform which had been prepared for the orator and for two hours gave him their most earnest attention.

The day was truly a proud one for North Carolina and for her gifted son, and a more appropriate, effective, and eloquent address was never uttered by human lips. Under the influence of his rich and varied imagery, his happy and graphic illustrations, his masterly grasp and inner meaning, trenchant thrusts and touching allusions, his stirring appeals and deep pathos, and, in a word, his magnificent and resistless eloquence, the audience was stirred, enraptured, enthused, and carried away as if by the spell of a magician. Not a man who heard the impassioned outburst of patriotic inspiration would have hesitated to die for his country; and I am convinced that in many an hour of supreme peril afterwards it rang like trumpet tones through the souls of those who heard it, inspiring them to a higher courage, a nobler effort, a purer patriotism, and a more heroic martyrdom for the cause which they loved so well. If aught of lukewarmness or despondency had been produced by the machinations of a selfish faction at home, they vanished as the morning mist before the rising sun under the spell of this good man's matchless eloquence. I heard General Lee remark that Governor Vance's visit to the army had been equivalent to its reinforcement by 50,000 men; and it sowed the seed of a friendship between those two true-hearted patriots which fructified even amid the dark days preceding the surrender, and grew and strengthened long after the land which they loved so well had drained the cup of sorrow to the dregs.

It was then that he made classic the term "tar heel," which others had hitherto applied in derision to the North Carolina soldiers by addressing them as "fellow tar heels" and demonstrating that the sobriquet was but a synonym of that tenacious courage which made them stick to their post in the hour of danger upon so many hard-fought fields to their own imperishable honor and to the eternal glory of the mother State, and even afterwards, during the war and up to the present moment, the most subtle compliment which can be paid to a North Carolinian who followed the banner of the Confederacy in all of its vicissitudes of fortune until it was furled forever at Appomattox, is to call him by that homely but blood-baptized appellation of "tar heel."

It was of this speech that Gen. J. E. B. Stuart said that "if the test of eloquence is its effect, this speech was the most eloquent ever delivered." At the close of the war he was arrested and imprisoned here in the Old Capitol Prison. He was soon released, returned to his home, and engaged in the practice of his profession. He was a well-equipped and successful lawyer. He often told with keen enjoyment of the compliment paid him when a young lawyer attending the court of his mountain district. Many of the ablest lawyers in the State lived in this district.

Several of the mountaineers were on the court green discussing the merits of the lawyers who were in attendance upon the court. At the close of the discussion one of them said: "Well, if that young man, Zeb Vance, ever gets by the judge I would rather have him than any of those old lawyers." While not a high compliment to his legal ability at the time, yet it was a marked tribute to his power before the people; but it was not long before he could "get by the judge," for he soon became one of the leading lawyers in the State.

One of the last speeches made by Senator Vance in the Senate was a legal argument to sustain the position that the governor of a State had no power to appoint a Senator to fill a vacancy caused by the failure of the legislature to elect. This speech was an able and luminous constitutional argument, and, though the views sustained by him were not at that time entertained by a majority of the Committee on Privileges and Elections or of the Senators, his argument convinced a majority of that body that his was the correct view of the question. The distinguished gentleman who now presides over the Senate with so much ability, in speaking of Senator Vance, said to me that this speech was the ablest presentation of the question made by any Senator, although many of the ablest lawyers of that body engaged in the discussion. No higher compliment could be paid to his ability as a lawyer. He was a great political leader. The people of his State gladly gave him every position of honor in their gift. I doubt, Mr. Speaker, if there ever lived a man in our country who

had the influence and power in his State that was accorded Senator Vance. He had their love and confidence. In almost every home in North Carolina, whether it be a cabin in the mountain cave or the brick mansion of the city, upon its walls the genial and kindly countenance of Senator Vance looks down upon you. Hundreds of children of the State bear his name. The people confided in his wisdom, revered his integrity, and loved him for his own sake.

One has well said:

His wise sayings, his sparkling witticisms, his charming humor, were the guide, the light, and cheer of every hearthstone in the State. His kindly nature, his true manliness, his peerless intellect, his clear judgment, made him the welcome, honored guest of the cottage of the poor and the mansion of the rich. The Jewish theocracy guarded the law with such jealousy that he who but laid his hand upon the ark was stricken with death. With that same care he stood before our constitution in times of peril, when elsewhere the law was silent amid the clash of arms. Did he ever fail in his devotion to North Carolina? Had he an enemy who was not also her enemy?

As a campaign speaker he was unequalled, and I doubt if in the last quarter of a century there was a public speaker in this country who was so effective on the stump. He was a great orator. His wit, his eloquence, his logic, charmed his audiences, and no one who came to hear him ever grew wearied. He was a masterful humorist. He had superior literary tastes. His lectures and literary addresses are all models of a clear, chaste, and vigorous style, oftentimes eloquent, and always evidencing thorough acquaintance with the best literary thought of the day. It will be fortunate if the lectures and addresses he delivered on various subjects and his speeches in the Senate can be preserved in some permanent form. The volume containing them would be a most valuable contribution to the literature of our country.

But, Mr. Speaker, the work which entitles Senator Vance to a most conspicuous position among the great men of the country is his labors in the United States Senate. Coming to that body preceded by a reputation as a statesman of ability, he was soon recognized as one of its ablest members and was assigned to membership on the leading committees of that body. Recognizing at that time that in the near future the great questions which would confront Congress for settlement would be the proper adjustment of the tariff taxation and a just settlement of the financial question, he began the thorough study of these questions, and it has been well said by his associates in that body that no Senator discussed them with more power and ability than did Senator Vance. When the McKinley bill was pending in the Senate Senator Vance, as a member of the Finance Committee, was the recognized leader of his party, and the burden of the debate of that bill fell largely upon him. The student of the difficult and complex question of the tariff can find in the literature of that subject no more valu-

able material for its mastery than the speeches of Senator Vance, and upon most of the important questions coming before that body he spoke and always with singular force and ability. As Senator GRAY has so well said:

His equipment as an orator was strong and unique. There are few of us who can not recall the delight occasioned by the display of his wit, and how story, epigram, and apt illustration lighted up many a tedious discussion, his clearness of mental vision making many a crooked path straight. No debate was ever dull in which he was engaged, and no one cared to leave this Chamber when Vance was on the floor.

Senator Vance gave much thought and study to the financial question and was a strong advocate of the restoration of silver to the position it occupied prior to 1873, believing that the free coinage of silver would promote the best interests of the people of the whole country.

The last speech he made in the Senate was in opposition to the unconditional repeal of the Sherman law. I always considered it a great privilege to have heard this speech, considered by many as one of the ablest ever delivered in the Senate.

Fatal disease had already laid its hand upon him. His stalwart frame had grown feeble and weak, his voice had lost much of its peculiar charm and power. He was speaking when I entered the Senate. Almost every Senator was in his seat, listening eagerly to the powerful argument he was making. He had not proceeded long before all evidence of his feeble condition had seemingly passed away, and feeling, as he no doubt did, that this might be his last appeal for legislation believed by him to be vital for the best interests of his people, he husbanded all his strength and for nearly two hours held the undivided attention of the Senate. It was a great speech, enlivened by the flashes of his wit and humor, his argument sustained by his powerful logic. It deserves to rank among the ablest delivered by any Senator during that memorable debate.

At the close of the extra session he went to Black Mountain hoping to regain his health in the bracing and health-giving air of his beautiful mountain home.

He returned at the regular session, but it was apparent to his friends that his career was ended. At his home in this city he was confined for many weeks. I saw him often. He was the same genial, kindly man. An hour spent with him was always a pleasant memory.

He was buried in the beautiful cemetery at Asheville, at the foot of the mountains he loved so well. Others have spoken of the deep grief manifested by all classes of our people, and of the honors paid his memory. In every town in the State services were held, addresses made, and resolutions adopted expressive of the sorrow of our people and of their appreciation of his character and services. He sleeps well, awaiting the resurrection morn.

INDEX
